It doesn't look like the Administrati will face the fury of the beef raisers a let in more foreign beef. A telegram se by Secretary of Agriculture Bergland last month's meeting of the Nation Cattlemen's Association said: "Pres dent Carter has no plans to increase t 1979 imports of fresh, chilled and froz beef, mutton and goat meat above th levels announced December 29."

As for soyburgers, a recent bulleti from the National Cattlemen's Asso ation warned: "Much of extender u may be in restaurant/institutional ma kets, but retail use may grow some to Actually, this is not all bad for beef bu ness. Availability of cheaper, extend product can again keep some lower-i come people buying beef. Without e tender, price could force them out of th beef buying habit." What the cattlem are saying, of course, is: "Let's ke prices high and supply limited; let's fe some of those soybeans directly to pe ple instead of running it through cattle.

So, here's the prospect: Although th supply of beef will be down in 1979, by much as 6%, poultry is expected to be u by over 10% and the pig crop maybe 7% Coq au vin, anyone? Roast pork? Ma aroni and cheese? ■

If getting to the meeting takes longer than the meeting, there's no place like Hilton.

Traveling is part of business. But traveling between your hotel and your meetings doesn't have to be. Not if you're staying at a Hilton. Because Hilton has a knack of being where your business is.

There's a Hilton to serve you in the downtown of most major cities. There are Hiltons in the suburbs. And if your business keeps you out by the airport, you'll appreciate the many Airport Hiltons.

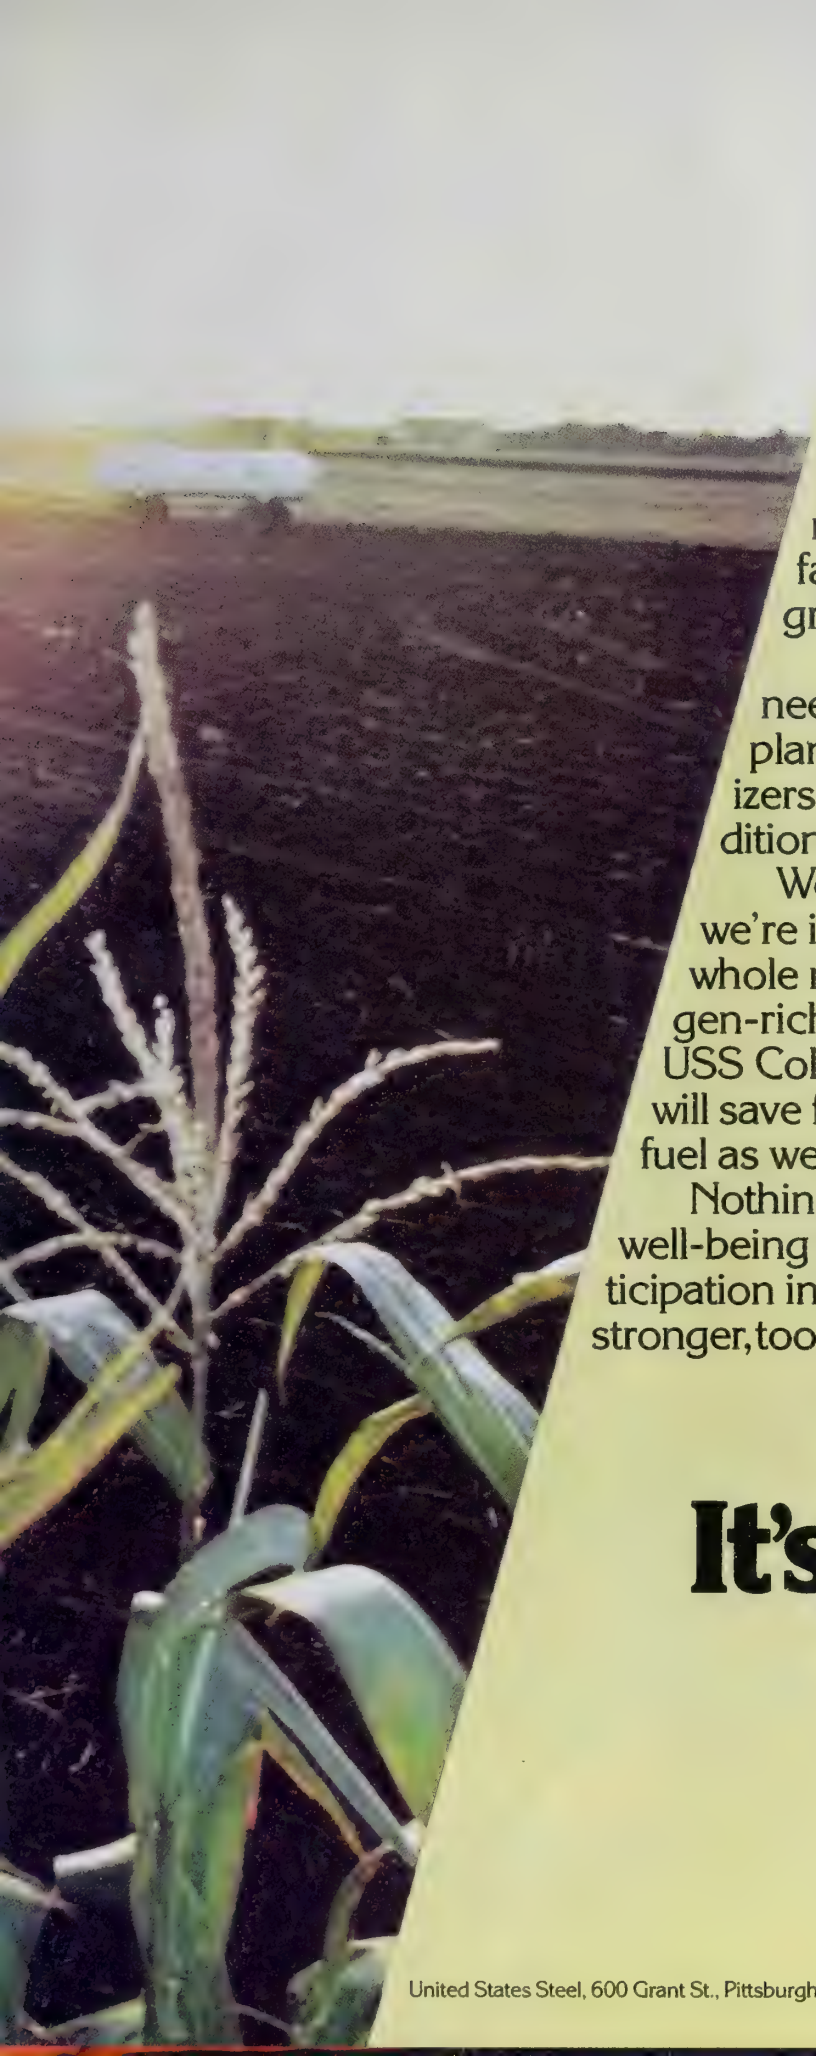
Each conveniently located Hilton offers comfortable rooms, full meeting facilities and famous Hilton Rainbow Service.

So the next time you go on a business trip, remember there are more than 174 Hiltons in the country to help you take care of business.

For reservations and information, call your travel agent or your local Hilton Reservation Service.

There's no place like HILTON.

Some of our best
customers buy a lot
more than steel...
because they're farmers.



Not everybody is aware that America's leading steelmaker is also a leading supplier of fertilizers and crop-protection chemicals.

The fact is our USS Agri-Chemicals Division sells a vast variety of farm products through more than 7,000 independent farm supply stores. And we're growing.

To meet farmers' increasing needs, we're expanding two of our plants that produce nitrogen fertilizers. We've already completed an addition to one that makes phosphates.

We're innovators, too. For example, we're involved in the development of a whole new method of applying nitrogen-rich ammonia using the patented USS Cold-flo™ Converter. This technique will save farmers enormous amounts of fuel as well as time and labor.

Nothing is more basic to this country's well-being than agriculture. Our broad participation in agriculture makes U.S. Steel stronger, too.

Versatility. It's one of our strengths.

Farrah smiled. Jimmy grinned.

And America celebrated its 200th birthday. Gathering the strength and resources to meet the challenge of tomorrow. While renewed vigor and vitality lit the nation, Avco helped lead the way into a new era of confidence.

Confidence for the millions who fly in airliners, helicopters, and executive aircraft powered by piston and gas turbine engines from Avco Lycoming.

Confidence for people in five nations, whose lives are a little easier with loans from Avco Financial Services.

Confidence for Paul Revere life insurance policyholders in all fifty states and Canada. And for thousands living in Avco Community Developers' award winning residential communities.

Confidence for fifty years. From consumer loans and insurance protection to research and manufacturing. Where Avco leads, confidence follows.

Today, families around the world rely on Avco Financial Services and Paul Revere Life Insurance.

AVCO CORPORATION

Where Avco leads, confidence follows.

ou couldn't buy a going business at any-ping like these bargain prices.

Will lightning strike again?

Statistical Spotlight

OUR ISSUE of July 15, 1974, when the ock market looked as if it were sinking ward oblivion, we published in this ace a special list. It was made up of nerican Stock Exchange companies nose stocks were ridiculously cheap by the standard statistical measures. We used tough, Benjamin Graham-type criteria. To get on our list, an Amex stock had to meet all five of them:

1) a price/earnings ratio of five or less;
2) discounts of 50% or more;
3) dividend payouts;
4) a current ratio of at least 2-to-1;
5) a debt ratio that did not exceed 35%.

Out of 1,170 then-listed Amex stocks, just 30 met all 5 criteria.

What happened to investors who bought these stocks then? You should be so lucky. Of the 30, 6 merged or sold their assets. The remaining stocks have had an average increase of 86%. Nine have more than doubled—2 of those have quadrupled. Only 4 of the 30 are slightly lower now than in 1974.

Pleased with the results, we decided to try the same test again. Alas, only six Amex stocks now meet all the criteria. They are listed below.

Since six seemed a lonely number we decided to broaden our search by extending it to the over-the-counter market. Here, too, we had rather slim pickings with our tough criteria. We found just nine stocks, almost entirely concentrated in retailing, textiles and furniture. They are listed below.

Will 1979's super-value stocks do as well as 1974's? You get no guarantee, but this much is certain: You couldn't buy a going business at anything like the low prices at which you can get shares in these businesses—which is what Ben Graham and the investment thinkers who follow him are all about.■

The most loaded laggards

The stocks listed below are selling at unusually deep discounts from book value, despite good current ratios, healthy earnings, low price/earnings ratios and reasonable debt.

Company (Industry)	Discount from book value	Book value per share	Recent price	Latest 12-month earnings per share	Price/ earnings ratio	Yield on common	Revenues (millions)	Current ratio	Debt ratio*	Five-year price range

*Debt as percent of total capital.

Wallace Rasmussen was slated to be interim chairman at $7.3 billion Beatrice Foods. But the former dairyman had other ideas.

The man who came to dinner

WALLACE RASMUSSEN, chairman and chief executive officer of giant Beatrice Foods Co., is a man full of surprises. He certainly surprised the man who gave him the CEO's job back in 1976 when he was 62. Then there was the man who was supposed to replace him this year, but was forced out of the company instead. Now it doesn't look as though Rasmussen is going to be replaced by anybody else for a while. This from a man who only made the top spot at 62 and was expected to be an interim boss.

When William Karnes, chairman and CEO, was getting set to retire in 1976 after 24 years at Beatrice's helm, he set up what he thought was the line of succession: Karnes' protégé, William Mitchell, the chief financial officer, was made chairman; Rasmussen got the titles of president and CEO. Since Mitchell was then 45 and Rasmussen was 62, apparently Karnes assumed that when Rasmussen turned 65 this coming July, he would retire and hand the big job over to Mitchell.

But, as Robbie Burns said, the best laid schemes. . . . Within 15 months Mitchell was out of the company altogether, and last December Rasmussen completed the coup. He did so by getting the company's mandatory retirement rule amended so he will be able to hang on to the job he has apparently coveted for a long time.

The job was a real prize. Through a shrewd acquisition program orchestrated by Karnes, Beatrice blossomed from a $250 million butter-and-egg operation to a $5 billion conglomerate. Today, Beatrice's $7.3 billion in sales and $255 million in earnings for 1978 spans a string of food and nonfood products in some 400 profit centers, making it one of the biggest outfits in its field. Its biggest sales and profitmakers include recently acquired citrus juice seller Tropicana

Beatrice Foods' Dannon yogurt
Mixing milkman's products with management politics.

($280 million in estimated sales l year), specialty meats producer Pe Eckrich & Sons ($275 million), ster maker Harman International ($170 m lion), Samsonite luggage ($165 millio Dannon yogurt ($100 million), Airstrea touring trailers ($85 million), LaCh oriental foods ($75 million), plus sco of small-town dairies supplying mi butter and ice cream, mostly under t Meadow Gold brand. And the pay is bad: $460,000 a year.

Karnes should have seen the diff ences in the two men as the seeds trouble long ago. Mitchell, like his me tor Karnes, graduated from Northwe ern University law school; Rasmusse only academic credential is a high sch diploma. Mitchell, like Karnes, spe most of his 19 years at Beatrice in cor rate administration. Rasmussen, an erating man who started life hauling i for railroad refrigerator cars, ran Beatri dairies for years. After taking the t spot, the big, burly Rasmussen wou arrive to work at Beatrice's Chica headquarters at 6:00 a.m.; Mitch would stroll in at 8:45.

Mitchell felt strongly that he and Ra mussen ought to digest and consolida Karnes' long string of acquisitions. Ra mussen, on the contrary, believed th Beatrice had the resources and the ma agement skills to keep on acquiring. l let Mitchell take his case to the board the summer of 1977. The majority directors, operating people like Rasmu sen, wouldn't go along with Mitchel conservatism. Mitchell quit in Septe ber 1977, taking $770,000 in severan money as a consolation. He now ru $480 million (sales) Central Telephone Utilities Corp.

From then on, Rasmussen had a fr hand. And he has used it to make hims chairman and, according to one oust executive, "to clean out anyone who h a close connection to Karnes." Besid Mitchell, several other corporate offic have left recently, through firing forced retirement. And last summer Ra mussen acquired orange juice-mak Tropicana Inc. in a deal that we against several of the company's tra tional acquisition rules. For one thing, put Beatrice into a commodity-depe dent business. For another, the merg which cost Beatrice $230 million in ca and $258 million in stock, diluted t company's earnings by 5 cents a share the current fiscal year and 3 cents a sha in 1980.

A Chicago securities analyst, Rona Strauss of William Blair & Co., sees th purchase as expressing new willingne on Beatrice's part to accept dilution sufficiently attractive acquisitio Karnes steered clear of targets that dilu ed Beatrice stock. But Rasmussen c nies that it's more than "a one-sh case. We looked at its aftertax return

You may not know my company yet, but you know my partner.

Jack Cochran, President of Qwip Systems, has good reason to be smiling.

His company is part of Exxon Information Systems, Exxon's fast-growing business activity in the information systems field.

Qwip and Exxon Information Systems combine the resources of a large organization with the unique technological skills and entrepreneurial drive of a not so large one.

In this case, the result of the marriage is a brilliantly simple machine called Qwip®, which can send words, pictures, and copies of just about anything else on paper over your phone to another machine at any other phone in the nation. In two minutes flat.

Founded by Rik Nelson, an Exxon Enterprises Inc. vice president, Qwip Systems has decisively beaten the high cost and technical bugs that plague other facsimile machines. It's so simple, you practically have to make an effort to make a mistake. And if anything should go wrong with your Qwip unit, it gets replaced immediately under Qwip Systems' service-by-replacement policy.

Amazingly, Qwip today costs less than competing machines. Which further explains why, less than five years after its introduction, Qwip is placing more facsimile machines than any other company, even the office equipment giants.

The Tiger would like you to know more about how Qwip Systems and his other partners can help streamline information handling in your organization. For your copy of a brochure which details products and services, call 800-223-2479 toll free (in New York State, call 212-398-3141), or write to "Exxon Information Systems Brochure," 1251 Avenue of the Americas, N.Y., N.Y. 10020

Habit-forming.

Which may be why more and more businessmen who take our Concorde once take it again and again. For only $144 more than First Class it will take you from New York to London in 3½ hours. To arrive refreshed, invigorated, and ready to do the competition in.

Take our 10 a.m. flight (every day but Wednesday and Friday), and you'll have same-day daylight connections to 47 cities in Britain, Europe, and the Middle East.

Also, you can now fly to Europe the same day from more than 120 cities in the U.S.—by connecting with the midday Concorde in New York (12:15 p.m. daily) or Washington, D.C. (12:30 p.m., Sunday, Wednesday, Friday).

You can even fly Concorde direct between Dallas/Ft. Worth and London via Washington. And newest of all, from London to Singapore—saving 6 hours.

Call your Travel Agent, Transportation Department, or British Airways, and make your next flight to London on Concorde. Tell them Robert Morley says it's never too soon to start a good habit.

British airways

We'll take more care of you.

9.1% and decided to spend our loot one good food company," he says, "bu won't take another one like that to t board." Tropicana now becomes B atrice's biggest single product line. A Rasmussen justifies the price on the fa that since its market is concentrat along the East Coast, with 37% in t New York City area, there's a lot room for expansion.

Rasmussen has also put his own m in top spots since Mitchell's departu All come out of operations, of cour James Dutt, 53, president, is a veter dairyman who followed Rasmussen the corporate ladder and is consider the leading candidate for Rasmusse job when he retires; Donald Eckrich, 5 vice chairman and head of grocery bu nesses, is a tough, production-mind man who came to Beatrice in 1972 w the acquisition of his family's meat co pany; Richard Voell, 45, deputy cha man, is an aggressive, "new breed" ma

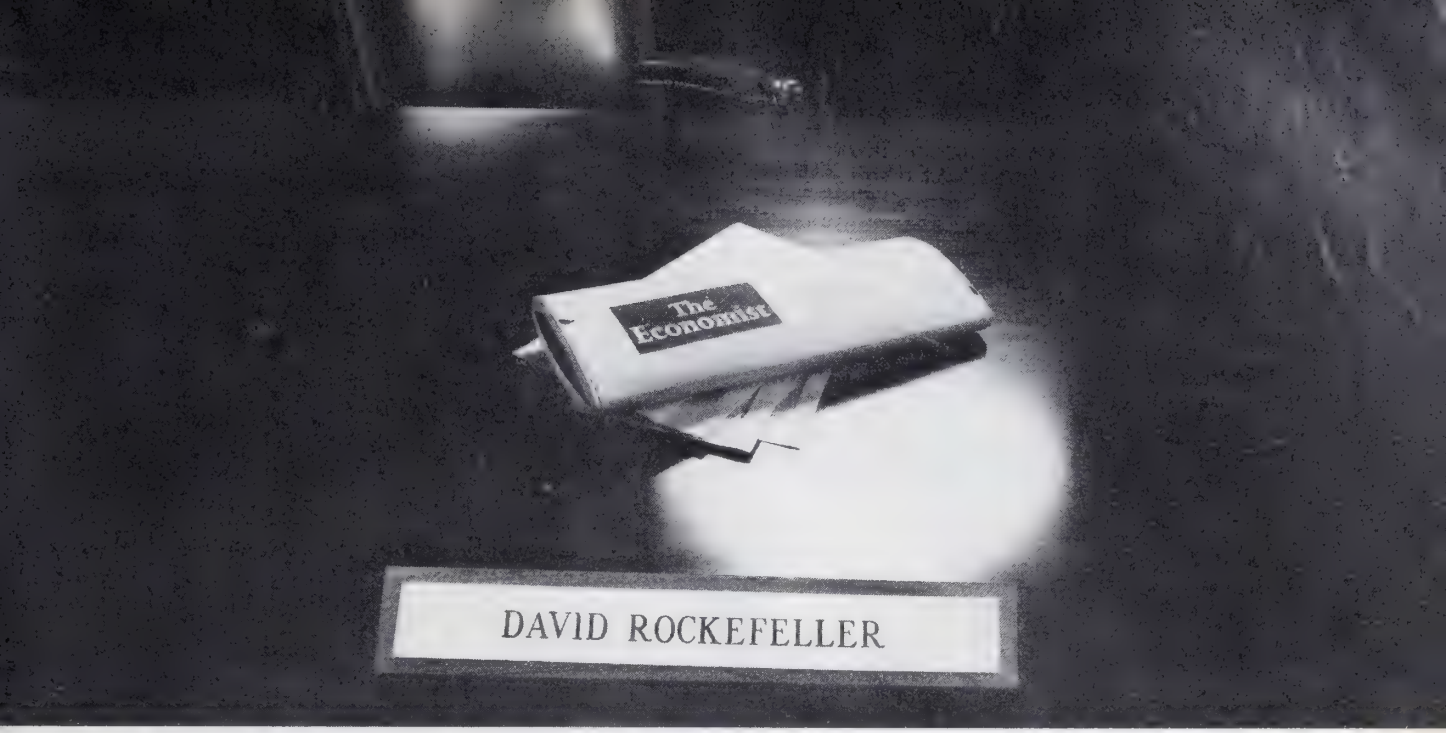
Rasmussen is doing a little r writing of Beatrice history. wasn't Karnes who made B atrice what it is, he say. "This company saw its grea est growth under Don Gra tham," an operating man wh was Karnes' president.

ager who headed nonfood operatio (about 25% of revenues) until he to over acquisition activities.

It's not clear when any of these new promoted dairymen will get a shot at t top title since the board at the end of 19 eliminated mandatory retirement at a 65. What is clear is that Beatrice, trad tionally a highly decentralized group operations, is subtly becoming more ce tralized. One executive insists that "pe ple at the operating level are being tc more by the people on high." Rasmuss doesn't deny that, but he says that it is just a matter of making sure that t operating people comply with the welt of new government regulations.

Having constructed his power ba Rasmussen now confidently states th Beatrice will always be run by an ope ations man. Karnes, however, was a la yer, not a dairyman. That prompts Ra mussen to do a little rewriting of B atrice history. It wasn't Karnes wh made Beatrice what it is, says Rasmu sen: "This company saw its greate growth under Don Grantham," an ope ating man who was Karnes' preside between 1972 and 1976, just before Ra mussen took over.

That is a tough and determined ma and even though he is pushing 65, doesn't sound like anybody is going to to Wallace Rasmussen what he has do to others. ■



Perhaps you need The Economist, too.

It gives you a view of world politics and business you just can't get anywhere else.

ıternational events reported weekly —with a difference.

r 135 years, the world's leaders have been ding The Economist for a penetrating ight into international affairs, politics, siness, science, technology and world trade d the consequences. It is coverage you just not get elsewhere—no matter how much u are willing to spend.

The Economist presents a total view of at's happening in America and abroad that reases your understanding of the interrelanships between global affairs and the reali- s of today's marketplace.

To those who say we're just or economists, we say "RUBBISH!"

the uninitiated, our name conjures images ivory towers. Of dust-dry academics. Noth- could be further from the truth.

The Economist is one of the most lively, grossing newsweeklies you can read. No e and nothing is sacred as we report on ger-than-life leaders...national goals merica's and others)...the jockeying for wer here and abroad...how new legislation, reements, treaties affect the business of ng business worldwide.

More than any other newsweekly, we dare to pin down the future.

metimes we've been wrong.

More often, we've been right. And that too es you an advantage hard to come by in a rld where talk is cheap and guesswork can costly.

A few of our recent "right" predictions: e oil producer's cartel. The energy crisis. ergers and demises in industry (like lvo/Saab-Scania). The tanker glut (we *warned* banks not to over-invest) and the Wall Street boomlet in early 1978.

But that's all history now. What you probably want to know is—

What we've been up to lately.

In recent issues we told why Mexico could be the next oil power...revealed the next step for international terrorists...zoomed in on Hollywood and the future of the world film industry...warned of deadly Soviet weapons ignored by SALT negotiators...and spun a report of a new recording disc that stores up to 15,000 pages of information for 10 cents.

And much more...including a view of—

America...as you rarely see it.

Our weekly six-page "American Survey" is a stimulating look at American news in the context of international affairs—a cool, level-headed perspective you would expect a critical and expert outsider to deliver.

The sun never sets on readers of The Economist.

The Economist is airmailed weekly to 160 world capitals. In North America, 28,000 leaders at "the pinnacles of power" turn to it weekly. *Newsweek* has called us "required reading on Wall Street and in the White House."

That's not surprising. The Economist has a knack for knowing—in advance—who's doing what to whom in Bonn, Zurich, Moscow, Peking...what's up (or down) with the dollar, the yen, the D-mark, the rand...what's new with the EEC, AEC, SEC, OPEC, even the CVP, the OECD and Comecon countries.

1979 will demand innovative solutions to a host of world problems. Businesses will falter, expand, turn venturesome, turn inward. Old markets will evaporate, new ones rise up unexpectedly. And The Economist will report it all—often first, with consistent accuracy, always from its special objective vantage that today's decision-makers cannot be without.

Sample 4 issues RISK FREE.

Get a different view. Get The Economist regularly. *You can sample 4 weekly issues risk-free* simply by returning the card bound in at left. (If someone's beat you to it, use the coupon below.) You'll get a special savings of over ONE-HALF the newsstand price and full assurance of a prompt, full refund if you wish.

Little Bohemia Inc. has custom-cut a profitable niche for itself among the giants of the forest products industry.

Can you outrun a famine?

By Anthony Spaeth

EUGENE, ORE., tucked away in the scenic Willamette Valley, likes to call itself America's jogging capital: After all, it did host the last two Olympic track and field trials. But the fanciest footwork around Eugene lately has been at Bohemia Inc., a relatively tiny forest products company that has neatly avoided being trampled by the big outfits that dominate the industry. Bohemia, however, operates with one major disadvantage: It possesses few trees of its own, and it remains to be seen whether Bohemia is just doing some very good short-distance sprinting in a race that is decidedly long distan

Like other forest products compar in the region, Bohemia is at a disadv tage because the Pacific Northwe timberland is in very short supply. example, 47% of Oregon's commer acres are owned by the government, pressure from environmentalists to these acres off limits to industry is c stant. Moreover, the prices of the p Douglas fir logs that are available ar record levels. Bohemia's giant comp tors are looking to the South's fast-gr ing, privately owned forests for their s ply *(see* FORBES, *Dec. 11, 1978)*, but Bo mia is too small to consider a m How, then, has Bohemia managed to vive and prosper so far?

It has done so by furnishing speci items, such as odd-size wood beams massive high-strength laminated bea to the construction industry. Some 6 of Bohemia's output consists of such cialty products, whose profit margins as much as a third higher than for c modity items like two-by-fours. Bo mia made a respectable $8.6 million sales of $146 million in its 1978 fi year ended last April. It did even bette its fiscal first half ended Oct. 31: Ope ing net was up 84% to $7.87 million sales of $91 million.

Bohemia's origins go back to one sm mill established before the turn of century. In those days, an official hist recalls, the company "rarely got a re amount of logs down to the mill and mill itself was just occasionally a beeh of activity. Only when the crew re ered—along about midweek—from t boisterous weekend activities, was producing outfit. The weekends came too often." But Bohemia survi these shaky beginnings and, under leadership of L.L. (Stub) Stewart, ran the company from 1946 until he tired three years ago, it found its nich

"Most other companies revampe high volume operations," says Stew successor, President S.E. Pittman, who started with the company in 1 and who still visits the mills every before going to the office. "We mod ized to where we can cut specialty p ucts and bring in more money."

Part of Bohemia's fast footwork sists of keeping its facilities runnin tune with the market. The company do this because 6 of its 13 mills plants are clustered around its Eug headquarters. "We have enough mill that we can switch logs around to plant that gives the best return," plains Pittman as he pads around company offices, checking the daily der slips. This means that if orders running high for plywood, logs ca diverted from other mills to feed plywood plant. "This plant location g us the flexibility to make decisions fa says Financial Vice President Fred G

Bohemia's retired president—and course setter—L.L. (Stub) Stewart
He steered the company away from less profitable two-by-fours.

© Eastman Kodak Company, 1978

"I have here six copies...six copies of what, Mr. Osgood?"

Sure, your copies are readable...mostly. But what kind of impression do those gray, bespeckled things make on customers and colleagues? Kodak copiers can turn out crisp blacks and spotless whites at a rate of 4200 pages an hour. It's quality that makes you look good.

People tell us ours is the best in the business. Let a few of our machines around your place make everybody look good. Dependability is great. You probably can't get a better deal. We'd like to demonstrate.

Write: A. Angert, Eastman Kodak Company, CD9320, Rochester, NY 14650.

People say it's the best quality in the business. Kodak

Logging by balloon: a skyhook to get at those problem spots

Up, up and away

At times the Pacific Northwest's rugged terrain is too difficult for even the most dedicated loggers, and they just can't get the logs out. At other times the terrain is too delicate: The rough ways of loggers can harm the environment, and the government can put tough restrictions on the retrieval of logs from its millions of acres of national forests. What's a logger to do?

Enter Faye H. Stewart. Stewart, who helped build Bohemia along with brother Stub, pioneered the concept of balloon logging 18 years ago, and both the old firm and his new one—Flying Scotsman, Inc.—have balloon logged ever since.

Normally logs are dragged by cable from where they fall to the "landing," where they are carted away by trucks. If the logs are on a steep cliff, or surrounded by soil that can't tolerate any erosion, they must be plucked out of the area gently. Bring in the balloon.

With two cables attached, the balloon is rooted to both the landing and the logging site. A specially designed "yarder" reels the balloon down to the logging site where a log is attached. The cable is let out again and the balloon lifts the log clear of the area. The second yarder then pulls it into the landing, where the log is detached. The diesel-powered yarders are made especially heavy to keep the balloons from taking them with it; the balloons are capable of hoisting 30,000 pounds worth of Douglas fir.

Balloon logging allows companies to retrieve logs that are otherwise inaccessible, and although the cost is higher than regular logging methods, it is cheaper than the alternative. Helicopters, which can handle longer hauls, cost over $7 million, while a balloon system costs only $1.25 million. The cost of hauling 1,000 board feet of timber by chopper is $150; a balloon can do it for less than half that amount.

As an idea, balloon logging had trouble getting off the ground. After five years of fruitless collaboration with Goodyear, Stewart was ready to junk the idea. "Their balloons were like kites," he growls. Dropping Goodyear (to sue them later for the wasted time and money—and win), he linked up with Raven Industries of Sioux Falls, S.D. Together they designed the balloons that Bohemia and Flying Scotsman use now. "Faye should be commended for having the guts to stay with it," says older brother Stub. Then he grins, "And I guess it was a bunch of damn fool people who backed him up."

Some analysts don't consider the idea a high-flying success. But with 50 employees, several jobs behind them and a couple of onion-shaped balloons, Faye Stewart doesn't pay them much mind. "We are definitely making money," he asserts. Somebody up there must like it. **—A.S.**

A larger company, with many mi widely scattered, can't turn so nimbly.

In most large companies a log is cc verted into dimensional lumber a stored; orders are filled from invento At Bohemia, however, each mill ma ager consults a list of outstanding ord before putting a blade to a log. Thus t mills don't produce unneeded produc nor do they chop up high quality l into standard two-by-fours. Such flexib ity also allows Bohemia to switch fr industrial to residential constructi items quickly. Since the cycles in th markets are usually staggered, Bohen can ride each cycle to advantage.

Another plus is Bohemia's ability offer mixed packages of products, givi it an advantage over larger compan that have to ship different products fr different facilities. It also bypasses t wholesalers and sells directly to large tailers and large distribution agents—' pick up a few bucks," Pittman says.

Another cost-cutter is Bohemi mechanization: Its nearby Saginaw pl forms laminated beams hydraulical while even huge competitors often c tinue to use hand clamps. Bohemia a works hard at squeezing more yield of waste products. A bark process plant, after a couple of losing years, now in the black, and Bohemia is on of such state-of-the-art techniques burning a sawdust-air mixture for en gy. The company has also pioneered concept of balloon logging *(see b* which it still practices every summer

But what about that shortage of ti berland? "If there was more availal we'd buy it," says Pittman. He has employee whose sole job is to sc available small woodlots, and Bohe screens every takeover candidate to if it owns a good amount of timberla But some people see no future at all forest products companies without l in those burgeoning southern fore "The walls are closing in," says one dustry analyst, who believes that com nies like Bohemia have only one m housing cycle before tightening costs come fatal.

Bohemia made a stab at diversificat in 1969 when it acquired a marine c struction division. Aided by a virtual sence of competition in the region, division contributed over 12% of 1 operating profits. But given the unp dictability of government contracts, company expects the marine divisio contribute less of a share of earning the future.

Pittman still thinks he has a winne his small, fast, efficient custom-cut o ation, the "have it your way" of forest products industry. If indeed Bo mia's future—and that of many s companies—is limited, it won't be cause it couldn't see the forest for trees. It just couldn't get hold of them

WE KEEP THINGS MOVING IN ARGENTINA.

This country faced a tough economic problem – improving its critical trade balance. And we felt a particularly strong interest in helping; after all, Buenos Aires was our first overseas branch, dating back to 1917.

So in 1969 we founded an Export School which has already trained 5,000 Argentine executives. Now the nation's products are kept moving through the ports, contributing towards a positive trade balance. And those products are more and more often non-traditional – the result of modern technology. (Our educational program has brought us several awards from Argentina's Government for contributing to the economy.)

Bank of Boston has never felt that we're simply "open for business" in the 40 countries where we're located. We've always felt a strong obligation to work with them. And tough financial problems are right down our alley: we have more than 10,000 people around the world ready to tackle them and more than $2 billion currently committed to overseas lending. In the U.S. itself we have full-service facilities (Bank of Boston International) in New York, Los Angeles, and Miami – as well as our headquarters staff in Boston who specialize in financing, factoring, leasing, foreign exchange, and all related services.

Where in the world can we tackle the next tough project for your company?

ENERGY IS TOO VALUABLE TO BE USED ONLY ONCE.

Faced with a finite amount of oil and gas, everybody is trying to squeeze the most from every unit of energy used. Including the oil industry itself.

In the past, waste heat from the refining process was simply sent out the smoke stack or only inefficiently recovered. Today, that won't do.

Elliott Company, a division of Carrier Corporation, can recycle that energy. It makes sense. And it makes a market — with a $300 million potential in the U.S. alone.

Elliott is building gas expander systems designed to recover up to 50% of the available energy in a refinery's waste heat stream, while sharply reducing pollution. The hot, dirty gases are cleaned up and used to drive a turbo-expander, which drives a compressor, which does additional work in the refining process. And in the Elliott-patented system, the turbine can also generate electricity.

For refineries around the world, it's almost like getting something for nothing.

Elliott pioneered power recovery in the 1950s and was also the first to make it work with dust-laden refinery gases. Today, we have ating experience in power reco turbines up to 23,000 horsepo with a 34,000 hp order in the w And we can deliver the whole power recovery package — turb compressors or generators, con and lubrication.

Recycling energy gives you good idea of how we think. Bes our work in oil, gas and petro-

mical production, Carrier
rporation deals with many other
as the world can use. Ideas that
at work in the widest range of
h-efficiency heating and cooling
uipment; inks and coatings;
rigeration for nuclear power, food
cessing and transport; automotive
nts and trim; and electronics.
een separate divisions, operating
31 countries, serving hundreds
markets.

We have built a strong, growing business by helping to expand the world's supply of usable energy and by helping people to use it more efficiently. And what could be more valuable today?

CARRIER CORPORATION. ENERGY IDEAS AT WORK.

Big time saver.

Use our bigger roll and save on tissue maintenance time.

The less time your maintenance crew spends changing rolls of toilet tissue, the more time they have for more important jobs. That's the idea behind our big-roll Billow® tissue.

Because Billow is 1800 sheets long, it can last almost twice as long as standard one-ply rolls. So there are fewer run-outs. And your maintenance crew doesn't have to change rolls as often.

Consider the bottom line. It takes about 60 seconds to change a tissue roll. If your maintenance time costs $5 an hour or more, each roll change costs almost a dime. Add it up over a year and you'll see a real cost saving.

See how Billow tissue can save you maintenance time. Just call the Fort. Dial (312) T-H-E-F-O-R-T. And put a big time saver to work for you.

nerican Quasar Petroleum is one of the S.' hottest little oil companies. But it may t be little for long.

They shoot elephants, don't they?

By Lawrence Minard

EXAS OILMEN have a slang word for the really big oil and gas finds: "elephants." Companies with tations for gutsy and successful ex- tion are said to "shoot a lot of ele- ts." Meet a little-known elephant ter—Ft. Worth, Tex.-based Ameri- Quasar Petroleum Corp.

elephant standards, American Qua- s a flea. Revenues last year were t on a par with 1977's $27 million; ts a meager $5 million (50 cents or er share). The company has about million in long-term debt, $1.50 h for every equity dollar. Off the ce sheet reposes a potential liability h over $300 million.

nebody obviously likes this stock, ever. Recently priced (over-the- ter) at $20 per share, Quasar's 9.8 on common shares sold at 40 times ngs and at a 50% premium to the k-up value assigned by John S. Her- nc., the oil valuation experts. It is ult to thumb through the highly re- ed *Oil and Gas Journal* without find- one mention after another of the outfit. Why all the excitement?

nerican Quasar is not your ordinary erous, prudent outfit. It puts every it can lay hands on into excruciat- complex and expensive onshore ex- tion. "You've got two basic strate- n oil today: exploitation and explo- n," says Charles Strain, a Colorado ol of Mines petroleum engineer and ard M.B.A. who follows oil for ston's investment banking and bro- ge house of Underwood, Neuhaus & "At one extreme is Superior Oil, h spends $300 million a year ex- ing acreage; that's shooting fish in a l. The other extreme is American ar, which spends almost $100 mil- to accumulate and explore land in own high-potential areas."

ter three years of losses starting in , when the company went public, Quasar is now solidly profitable. Its *proven* gas reserves have climbed 50% since 1973, to about 160 billion cubic feet; oil reserves are up 500%, to about 7 million barrels. These are *proven* reserves; geologists believe one field alone in which Quasar is well positioned may have 135 billion cubic feet in *probable* recoverable natural gas deposits.

Now *that's* shooting elephants!

Quasar was formed in 1969 by five independent oilmen—Ted Collins Jr., Wilford Fultz, David McMahon, Walter (Mickey) Schmid Jr. and Richard Lowe—who anted up pieces of their personal oil property holdings. Fultz owns about 16% of Quasar's 9.8 million shares; each of the others holds about 9%. All sit on the executive committee.

"Back in 1965," explains cofounder Dick Lowe, 50, the Texas Christian University-bred geologist who serves as Quasar's chief executive, "the five of us agreed that the future of the domestic oil industry would be in drilling deep wells in unexplored areas, particularly Canada. We recognized that large oil companies *are* large because they have found big reserves of oil and gas. We wanted to become a large oil company, so we had to go after those big fields."

American Quasar's best successes have come in the Canadian and U.S. portions of the so-called Overthrust Belt. This belt, formed hundreds of millions of years ago by continents smashing into each other, snakes south from Alaska through British Columbia and Alberta, through our Rocky Mountains, and southward still, through some rich new Mexican fields, and beyond. Most of this decade's important oil and gas discoveries—from Sohio's and Arco's North Slope finds, to British Petroleum's Western Canada plays—have been made in the Overthrust.

Curiously, the U.S. Overthrust went largely ignored until the late 1960s when Standard Oil of Indiana began exploring the 7 million acre land grant given in Abraham Lincoln's presidency to the Union Pacific Railroad. Flushed by a 1971 discovery at Grizzly Valley, in British Columbia Overthrust country, Dick Lowe moved south and began acquiring pieces of U.S. Overthrust in 1972.

In January 1975 Quasar bagged its first trophy elephant: the Pineview Field in northeastern Utah, the U.S. Overthrust's first significant discovery. Geologists now believe Pineview alone has at least 50 million barrels in proven recoverable oil reserves and 50 billion cubic feet of proven recoverable gas deposits.

Lowe immediately scrambled for acreage and within months had put together 1.1 million net acres. Average cost: $1.50 per acre. Timing: perfect. Early in 1976 Amoco struck gas in southwestern Wyoming. The rush was on. Cities Service is now on the scene. So are Gulf Oil, Standard of California, and Union Pacific's Champlin Oil, to name a few.

But Quasar is the clear winner so far. Those $1.50 acres are probably worth $100 a piece today; Amoco owns more acres (1.3 million), but Quasar owns

American Quasar Petroleum President Dick Lowe
"To be big you have to find big reserves, and we want to be big."

more *per share*—one acre for every nine shares. This land position, plus some 400,000 acres in the Canadian Overthrust Belt, and 900,000 more acres scattered throughout Louisiana, Oklahoma, Nevada, Oregon, California and western Texas, give the tiny company a big start on becoming the giant it wants to be.

Of course, you can't shoot an elephant with a peashooter and you can't hunt oil and gas in the Overthrust without massive doses of capital. Last year Lowe spent some $75 million to drill 80 wells—five *times* Quasar's cash flow. This year he plans to spend $100 million. How? Enter the U.S. Tax Code.

Through its Can-Am subsidiary, American Quasar sells tax-sheltered drilling programs to wealthy doctors, dentists and the like. In the past, Quasar has put up 15% of a given project's cost; a limited partnership put up the other 85%. If the project was a success, the limited partnership got 60%, Quasar the rest. You can argue whether doctors should be able to find oil with 30-cent dollars. But you cannot debate Can-Am's popularity. Since 1970 it has raised over $364 million for Quasar. It is by far the nation's largest public exploratory drilling fund; it will raise approximately $70 million for Quasar this year.

But what if Congress wipes out drilling's tax advantages? No longer a problem, says Lowe: "Luckily we've gotten far enough down the road that we are no longer wholly dependent on the drilling programs for money. Our internal cash flow ($14 million last year *vs.* less than $1 million in 1973) is much better and will be even better as we begin to develop the fields we have already discovered."

Immediate goal for American Quasar: to increase its asset value to $100 per share, about three times current worth.

Lowe figures that in two or three years he can begin phasing out the limited partnerships altogether. And starting this year, American Quasar will begin putting up 25% of the projects' costs, *vs.* 15% to date; the share of successes for limited partnerships will consequently drop from 60% to 50%.

A sophisticated Quasar *stockholder* might wonder: why? Lowe laughs. "Hell! You sound like one of my executive committee members. The reason is that I am confident we can make more money looking for oil and gas with our *own* capital—why share the equity? If you don't think you can find oil and gas, then you should use those partners forever. It's that simple."

Earnings? Lackluster so far. Quasar reported red ink until 1973; last year's profit of about 50 cents a share hardly
the world on fire. But this year shoul
better. A 100-mile pipeline was comp
ed last December by West Coast Tra
mission Co. and the British Colum
government; Quasar will be able to
about $3.5 million worth of "swe
(nonsulfurous) gas into this conduit. T
will produce profits of about 25 cents
share after taxes. In 1980 or 1981, L
continues, a processing plant will
complete in the same area, enabling C
sar to market over $12 million annu
in sweet *and* sour gas. Total earni
impact: about $1 per share.

For the U.S. Overthrust, Peoples
Co., Columbia Gas System and Coa
States Gas recently asked the gov
ment for permission to build an 8
mile, $430 million pipeline from Uta
a Chicago-bound line; the line coul
completed by the early 1980s.

Dick Lowe says he has this immed
goal for American Quasar: to increas
asset value to $100 per share, about t
times what he believes the compan
currently worth; he believes he can
complish that in five years. If so, L
Lowe's holding in the company woul
worth nearly $100 million—a nice
for a man who earned his college de
on a football scholarship. It's big mo
even by Texas standards. These are g
times—the best of times—for eleph
hunters. ■

Today's management techniques are not new to him.

Kieran Fitzpatrick has learned to work with cost control, quality control, flexible production schedules, and increased employee responsibility. Many international companies have shown that innovative management can be very successful in Northern Ireland. It works for Du Pont, Goodyear, ITT, for Grundig, Michelin, Telefunken—for firms of all sizes in a range of industries.

The Northern Ireland work force fits new methods into a manufacturing tradition as old as the industrial revolution. We combine innovation with positive attitudes toward company loyalty, productivity, and labor relations. We apply to the task skills from the basic to the sophisticated.

And to help put all this to work for you, we offer the best overall package of economic incentives in the EEC.

Find out how well we fit your business style. Get the facts from Reg Browne or George McLaren at the Northern Ireland Industrial Development Office in New York. They will quickly tailor an offer of assistance to suit your plans. Call (212) 593-2258. Or write: NIIDO, British Consulate-General, 150 E. 58th Street, New York, NY 10022.

Kieran Fitzpatrick works. He's building a career in electronics at Grundig.

Northern Ireland works.

Here's a little-known Canadian company that has turned a doubtful investment into a big pile of cash. Is Brascan happy? No, worried.

Out of the frying pan

ONE HAS TO LOOK over one's shoulder," says Brascan Ltd.'s Finance Vice President William R. Miller, gazing thoughtfully out his office window at Commerce Court West in Toronto. "Rumors have reached my ears."

What's bothering Bill Miller? Is somebody following him? Is he on somebody's hit list? Not exactly, but there Brascan is, highly liquid, its stock selling way below book value and a beautiful target for would-be acquisitors.

Somebody could come along and offer a 50% premium over the present market price and for about $650 million get $380 million in cash and about $800 million in assets. The stock currently sells for 16 on the Amex, has a book value of around 32, over 40% of it in cash, and has an estimated $2 to $3 a share of earning power on continuing operations. It also has—with its low 1-to-8 debt-to-equity ratio—huge untapped borrowing power.

What is Brascan? How did it get so rich—and so vulnerable? Here's the story: On Jan. 12 Brascan Chairman John H. (Jake) Moore sold $2.5 billion (assets) subsidiary Light-Serviços de Eletricidade S.A., the electric utility servicing Rio de Janeiro and São Paulo, to Electrobras, the Brazilian-government-controlled national power company for $380 million ($210 million cash on the barrelhead, another $170 million by mid-April).

Moore says he's now looking for "a major acquisition" and calls it "a fantastic opportunity."

Perhaps. But for whom? Merger mania is at least as feverish up north as it is in the States. There are no large Brascan blocks outstanding (the largest known public shareholding is 2% of the stock). And Canadian government agencies have proven singularly ineffectual in blocking mergers.

Now some might argue that Jake Moore didn't get anywhere near enough cash for Light in the first place. He liquidated nearly 75% of Brascan at less than half book value; Brascan's equity in Light amounted to $840 million, and Moore accepted just $380 million for it even though Light earned an estimated 10% on its rate base last year. Under Canadian law there's not even the consolation of a fat tax-loss carryforward.

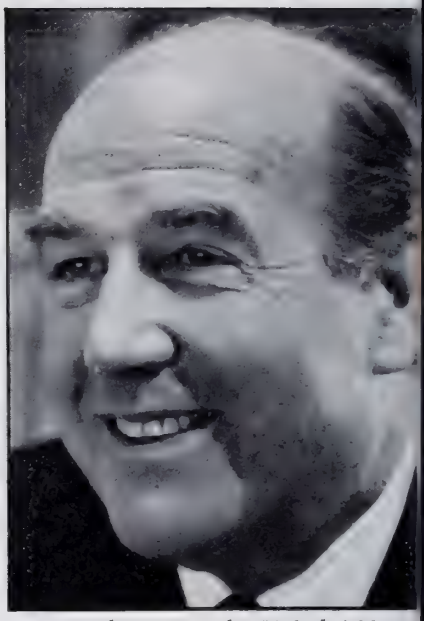
Expropriation? "There was no discriminatory treatment," replies Brascan's Miller. "We were subject to the same regulations as government-owned Brazilian utilities." The fact is, the company was all but forced out of Brazil. It simply couldn't afford to stay the course in the midst of a heavy capital spending program with rate increases kept artificially low by the government.

"We would have had to borrow in excess of $350 million this year, all of it abroad, at an effective cost of over 14% versus the 10% we earned on our rate base last year," he says. "The company has spent in the neighborhood of $1.3 billion over the past five years, and in the process has moved from an underleveraged position by U.S. utility standards to a place where it was close to being fully loaned out and in need of equity funds that we would not be able to raise for a Brazil-based privately owned utility. So the source of that equity really had to be the government." So ended an 80-year-old venture in which Canadian investors originally financed much of Brazil's early utility development through Brazilian Traction, Light & Power Co., Ltd.

The fact is, Brascan has been prepared to sell Light for at least a couple of years now. The company apparently caved in to the knock-down price for fear the new regime which takes over in Brasilia in March might introduce further delays. So Brascan walks away with no more net equity than it had back in 1954—not much to show for the past 25 years' work at that big utility. Better than nothing, though, and management has a chance to try investing, redeploying Brascan's shrunken assets more profitably.

Trouble is, Brascan's diversification record to date isn't very encouraging. The company has about $800 million assets outside of Light, slightly over h of that in Brazil (in part because of c ital repatriation laws), but last y Moore was only able to show a lo 3.8% return on equity on these inv ments, which include mining o ations, real estate ventures, meat pa ing, financial services and brewerie 24% share in Canadian beermaker J Labatt Ltd.). Two recent sizable acqu tion attempts in oil and gas, one inv ing Ashland Canada, fell through.

"We've made some mistakes in te of diversification," Miller conce blaming an excessive number of sm minority investments for the s showing, "but I think we've learned fr those mistakes. Now we're concent ing our efforts in a smaller numbe areas where there's very good mana



Brascan Chairman John H. (Jake) Moore ***"A fantastic opportunity!" For who***

ment in place, where we can have influence on management, and where can be more than just a passive sh holder." Among the admitted mistak a Canadian coal venture on which B can took a $10 million writeoff. Oil gas and consumer goods are more pr ising areas for the future, Miller adds.

There is, of course, Canada's Fore Investment Review Act, which wo probably bar any U.S. acquisition tempt. And there would be nothing prevent Brascan from turning around trying to buy the would-be raider in way that nearly $1 billion (sales) Dom Ltd. recently did with $1.7 billion M Millan Bloedel Ltd.

Nevertheless, Brascan managem continues to peer anxiously over shoulder—like a man with a bulging v let and a gold wristwatch walking do a deserted city street after midni "There's no question," Miller says, "t we are vulnerable for someone who the resources to engineer it." ■

The same InCorp Banker can lease you equipment to dig and lend you money to build.

One InCorp Banker can deliver on all your company's financial needs. He is skilled in the application of leasing, construction financing, appraisals, international banking, factoring and more. All in addition to traditional lending.

As a result, you receive coordinated, efficient solutions to your company's financial needs through a single InCorp Banker, representing a $2 billion multinational financial services corporation. And because the same InCorp Banker can handle your total relationship, you'll save time and money.

Whether you're about to break ground or appraise your plant and equipment, call Paul M. Diesel, Vice President, at (401) 278-5818 or write InCorp at 55 Kennedy Plaza, Providence, RI 02903 for an annual report.

As I See It

Can the dollar hold its present level? Can th U.S. right its massive trade deficit? No, say one expert with a unique perspective.

Bearish on the dollar

By Norman Pearlstine

BECAUSE JAPAN ships so much more to the U.S. than it buys, Japan last year accounted for about 40% of the U.S.' $29 billion trade deficit. But last month, amidst talk that the U.S. trade deficit would be down this year, the dollar improved nearly 10% against the yen; the recent rate was 200. Is the dollar crisis finally easing? No, says Yoshihiro Tsurumi, 43, an international trade specialist who serves as director of the Pacific Basin Economic Study Center at UCLA's Graduate School of Management. Tsurumi derives this pessimistic view from a unique perspective. A graduate of both Tokyo's prestigious Keio University and the Harvard Business School, he is that rare being: a truly bicultural man, equally at home in Japan or in the U.S., equally able to understand both viewpoints.

Interviewed by FORBES recently, Tsurumi predicted that the current recovery of the dollar will be short-lived and it will be back trading at 180 yen by year-end.

FORBES: *Why are you so bearish?*

"There are three reasons, and they're all related to my view of the U.S. economy. First, I doubt that the U.S. balance-of-trade deficit will be reduced substantially during the year. While a minor recession might reduce imports, I am not optimistic about an increase in exports. Second, the U.S. inflation rate will run 5 to 6 percentage points above inflation rates in Japan and West Germany. Higher U.S. interest rates are now barely offsetting the relative loss of the dollar's purchasing power against the yen and the mark. But as U.S. interest rates peak out, foreign creditors will again try to move out of dollars and into yen and key European currencies. Third, and most importantly, the recent upswing in the dollar was primarily caused by political necessities rather than changes in economic climate. The key industrialized nations wanted to penalize and scare away currency speculators and they were anxious to give the impression of a stable and resilient dollar prior to the December OPEC meeting in Abu Dhabi. Recent capital flight from Iran as well as increased foreign investments in the U.S. have helped the dollar. But without fundamental improvements in the domestic economy and in international trade, the upswing can't be sustained."

And you haven't seen this fundamental improvement in the U.S. economy and in U.S. exports?

"No. Take steel, for example. The U.S. and Japan established the 'reference price' formula last year, effectively increasing the price of imported Japanese steel by 15%. The U.S. government hoped this 'breathing space' would enable American firms to expand market share. Instead, they increased their own prices. That fueled inflation and it led to little reduction in America's overall trade deficit. The market share that American firms could have taken from the Japanese was in fact filled by new steel imports from countries like Brazil and Korea."

Yoshihiro Tsurumi
The upswing can't be sustained.

Why hasn't the more expensive yen led to a greater reduction in imports from Japan?

"Although the yen appreciated more than 30% in 1978, the volume Japanese exports for steel, automobi and household electronics—which gether comprise over 60% of total Ja nese exports to the U.S.—didn't decl appreciably. Japanese exporters were a to cut production costs enough to abs much of the yen's appreciation and some cases they settled for lower pro to sustain volume. In addition, th shifted marketing strategy. Instead selling price, they stressed better quali prompt delivery and product innovati When Japanese firms did lose sales in U.S. it was often to competitors in K rea, Taiwan and Latin America—wh currencies are tied to the dollar—and to U.S. manufacturers."

Jimmy Carter and many economists now predicting that U.S. exports will crease sharply in 1979, greatly reducing overall trade deficit. Is that likely?

"Carter and the economists are lo ing at the overall potential of the U economy. But the answer to that qu tion depends very much on the behav of individual firms in the U.S., not overall potential. And here I am not v optimistic. Foreign countries are alre purchasing all the American agricultu products and industrial raw materi they can absorb, so any increase in ports will have to come from the Am can manufacturing sector. But American firms are structured to expl their potential, especially in the fa growing Pacific Basin area. In the sence of an effective American dri European, Japanese and other nati will snatch away a growing share of t market. Even that section of the Ja nese market that is opening up to fore firms is being exploited more aggressi ly by Europeans than Americans. Am can firms must redirect their efforts ward exports. Otherwise the vicious cle of trade deficits, a declining dollar U.S. inflation will continue."

What a prospect. Ugh!■

"All airlines fly at the same speed
but bad service can make a flight seem longer."
FRANK BORMAN, PRESIDENT, EASTERN AIRLINES

Airspeed isn't a good reason to choose one airline over another. The quality of personal service is.

Eastern Airlines employees are committed to giving you good, hassle-free service.

Your flight seems quicker when things go right. Like being greeted as you board the plane. Or being handed a magazine, instead of having to hunt for one. Or getting a good, hot meal and a second cup of coffee automatically. Or just having a friendly, helpful flight attendant for your section of the plane.

It's all the little things we do for you that affect your loyalty. And not just the things we do in the air, but on the phone and in the airport as well.

When we're helpful on the phone, when we're careful with your luggage, when we try to honor your request for a specific seat, it all pays off for us.

Our philosophy is that our people can't just do a job. They have to really put themselves out for you. And it's helping us win over new passengers and win back old ones.

For the second year in a row, we've flown almost two million more passengers than we did the year before.

We realize there are other airlines out there you could fly besides Eastern.

So if we want you to fly Eastern all the time, and we do, we have to earn our wings every day.

EASTERN

WE HAVE TO EARN OUR WINGS EVERY DAY

It looks dazzling on the field; how does it look in instant replay?

The big play

By Robert J. Flaherty

ROBERT P. JENSEN, chairman of $835 million (sales) General Cable Corp., labored as a tight end with the Baltimore Colts in 1950. His business style reflects it.

He sets off complicated chains of decisions like the kind of football play that is months in the devising and unreels in a few dazzling seconds on the field.

When he quit football at 25, Jensen vowed "to be the chief executive officer of a major corporation by the time I was 40." A mechanical engineer with a degree from Iowa State, he started in sales and quickly moved through Olin, Kaiser Aluminum and Howmet. At 42, he was made president of Howmet, the U.S.' fourth largest aluminum producer. But when France's Pechiney decided to take over 100% of Howmet, Jensen decided he didn't want to be just a divisional boss—and he recognized that the Frenchmen wanted a countryman in his spot. General Cable's directors were looking for a new chief executive and Jensen got the job.

Jensen, a big, burly, fit-looking man of 53, has pulled off the Big Play twice since he took over Greenwich, Conn.-based General Cable in January 1973. The first time was in 1974, and it was a defensive play. He cut back the company's swollen copper inventories, sacrosanct to previous management because of the tax liabilities that would accrue from last-in first-out accounting, and in so doing freed $20 million in cash. Then he sold off General's unprofitable magnet wire business, closed down its beloved but inefficient Perth Amboy, N.J. plant, and sold a losing joint venture in aluminum to the government of Bahrain, thereby canceling a $15 million loan guara offset by no earning assets.

That amounted to getting back to line of scrimmage after the quarterb had been sacked.

His first offensive play in mo from older into newer businesses volved a bold acquisition. Massac setts-based Sprague Electric, a big ma facturer of capacitors for storing releasing energy, was on the block. S gue's erratic history had frightened er suitors, but Jensen knew its ch ered past concealed bright promise 1976 he paid $69 million in cash took on $65 million in Sprague's for 97% of the company. By selling 14% of Sprague's holdings in boom Mostek Corp. for over $10 million reduced the cash cost to $59 mill Not a bad price for a big, promi electronics business. And he still h 20% of Mostek.

After four years of careful plannin quarterback, Jensen uncorked a long ward pass. In 1978 he sold $150 mil worth of assets and securities—a m part of the company—and bought $ million by the end of December. He positioned the company from bein wire and cable manufacturer with s electronic diversification to a high-te nology and engineering services c pany heavily in defense work—and 35% in wire and cable.

His strategy: Squeeze capital f older, low-profit businesses, reinves in newer, faster growing ones.

First, sell off General's unprofita $80 million (sales) power cable busin Proceeds: $58 million, exactly book ue. Then use $106 million in cash acquire Automation Industries, a big ducer of engineering and technical vices (mainly for the Navy). Automat earned $12 million in 1978.

Jensen then had to deal with a dan ous situation where a fumble could h cost him control of his company. Ge al's largest stockholder, British Insula Callender's Cables Ltd., notified Jen it wanted to sell all of its 2.8 mil shares. That was 20% of the compa which, if it fell into acquisitive ha could mean the end of his independe Jensen bought the stock for Gene treasury, financing the deal by sel $53 million worth of convertible pre ence. Since the conversion price is above General's cost, the net result be-to reduce General's common capi ization while seeing to it that the convertible preference shares are wid dispersed. He then sold General's cr holdings in the British company; he to take a book loss of 80 cents per sh but he further enhanced liquidity.

Not all of Jensen's plays worked out December 1975 he made an unfrien move to acquire Microdot, which into the friendly arms of Northwest

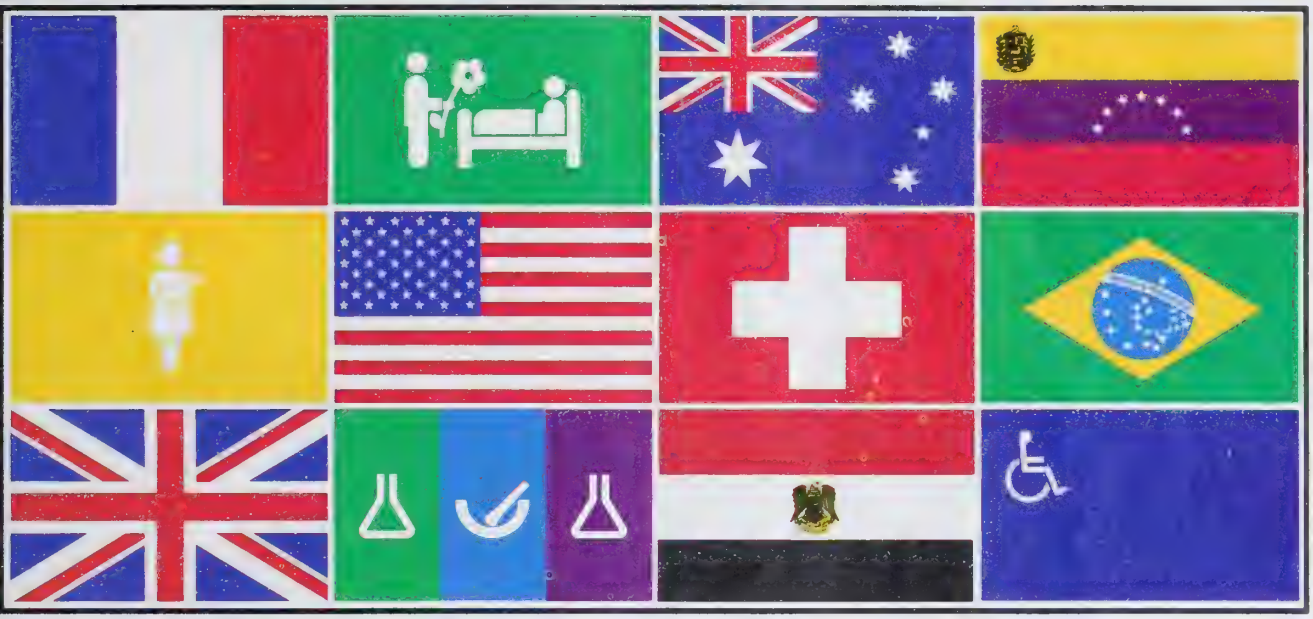
WORLDWIDE HEALTH CARE

COMMUNITY BY COMMUNITY



All over the world, the demand for high quality health care is increasing. AMI, the leader in international health care services, is growing to meet these needs.

In addition to the 60 hospitals we own and manage internationally, we're acquiring or developing facilities in England, Spain, Egypt, Australia and here in the U.S. We're also providing the widest range of health care planning, technical and managerial systems and services to communities around the world.

Increasingly, we're working on projects affecting nations of people. For example, we're training thousands of paraprofessional medical support personnel in Venezuela. This program will help develop an infrastructure of health care delivery in that country.

Community by community, here and around the world, AMI's 14,000 health care professionals are answering the need for quality health care systems and services. It's a commitment we're growing on.

AMI®
The International Health Care Services Company

American Medical International, 414 North Camden Drive, Beverly Hills, California 90210

Around the world, Ingersoll-Rand machines capture and conserve energy.

In oil fields, power plants, coal mines, processing plants, gas exploration and transmission ... Ingersoll-Rand machines are busy helping people involved with energy. For example:

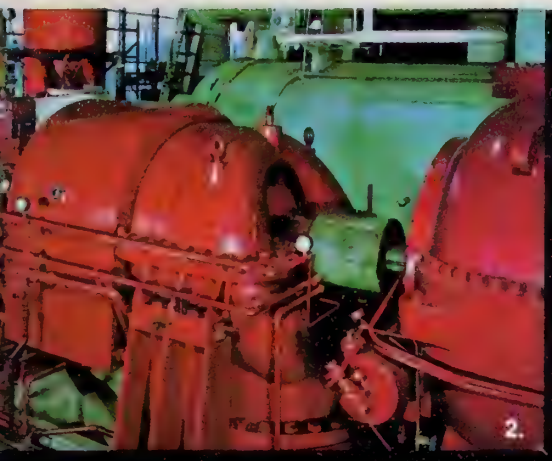
1. Mining coal from deep inside Kentucky. Lee-Norse continuous miners, working in seams as low as 30 inches, can rip loose and load 1000 tons of coal in 8 hours. Productivity like this helps make coal an attractive alternative to oil.

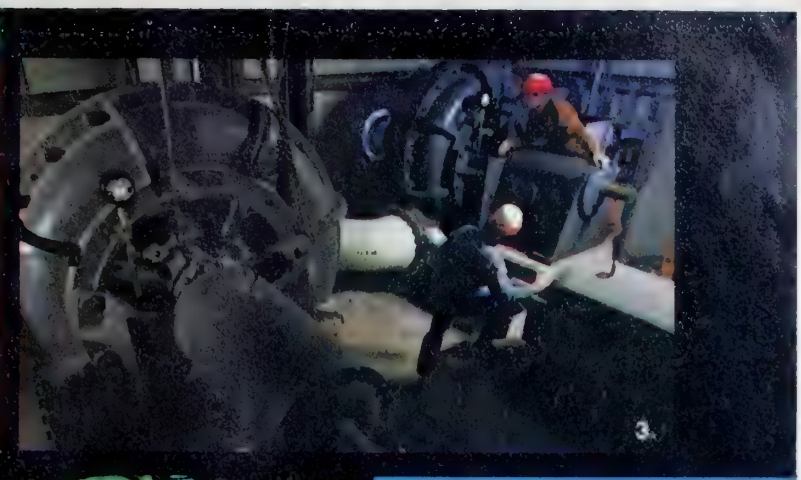
2. Heating and cooling in Connecticut. Twelve Terry steam turbines help supply 29 offices and buildings with steam in winter and chilled water for air conditioning during summer. Compared to having many small systems, this efficient method saves fuel, capital and labor costs.

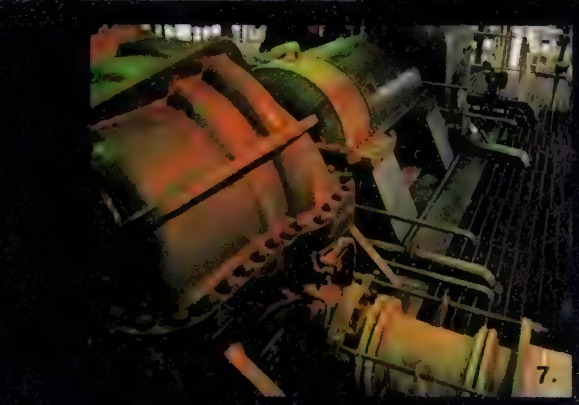
3. Capturing pollutants in Kansas. An electric utility uses these rubber-lined slurry pumps in a system that keeps sulfur dioxide and ash from entering the air. Tough I-R slurry pumps can propel concentrations of up to 75% solids.

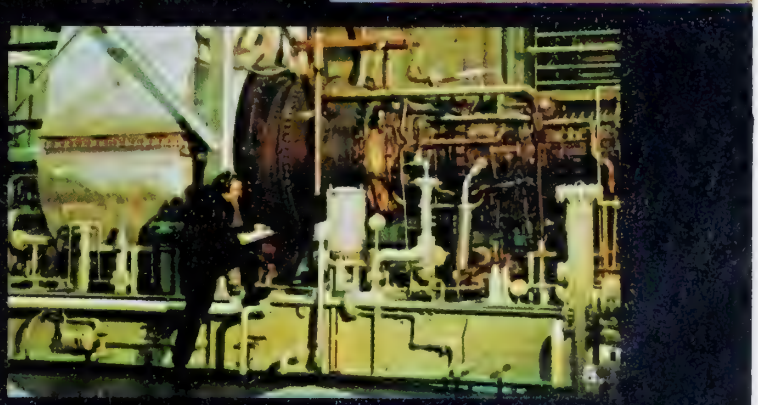
4. Forcing oil up from the North Se I-R turbine-compressor modules pre surize the gas that emerges, and our reciprocating compressors force it b into the ocean floor. This gas then he force out more oil. And it remains in t ground for future use

5. Repressurizing an oil field in the Middle East. Ten 15,000-horsepowe pumps are moving sea water—4.2 mil barrels a day—through a 60-inch pip line to an oil field. There, the water is forced into the ground to help push o additional oil.









Drilling for gas in New York. This pile rock drill sets up and starts drilling ess than an hour. That reduces ex- ation costs, allowing a wider search new sources of supply.

Harnessing waste heat in Tennessee. gases created during fertilizer manu- ure drive a turbine, which in turn vides combustion air for making nitric d. Ingersoll-Rand designed and built entire fuel-saving compressor train

Pumping gas from the U.S.S.R. Six compressor units will help pump viet gas in Austria and Germany to France. Our highly efficient gas turbines have logged a 99.5% availability record, partly because of very fast changeout when repairs are needed.

These are just some of the ways Ingersoll-Rand machines help innovative people capture and conserve energy resources.

In fact, that's what I-R does best: supply technological muscle to make ideas work. And we do it in a big way. Our 1978 sales exceeded 2.3 billion dollars.

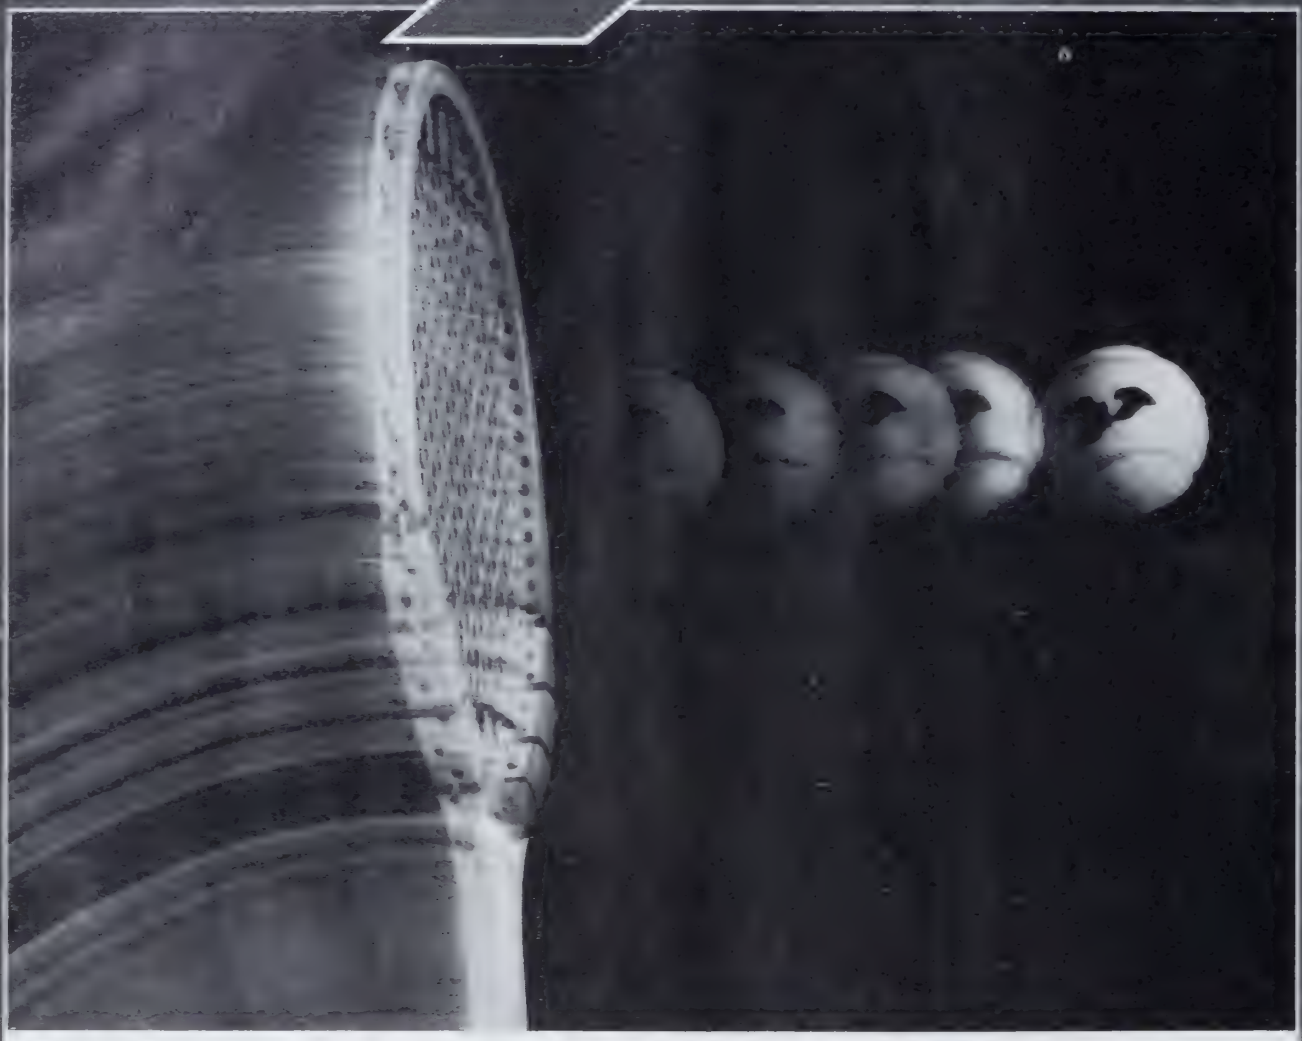
National Bank of North America

THE BANK THAT GOES OUT OF ITS WAY FOR YOU



SERVE US YOUR TOUGHEST BANKING PROBLEM!

At North America, solving your toughest banking problem is the name of the game. Our team of banking professionals works closely with you to find solutions to your company's needs.

But in banking, talent has to be backed by muscle, just as in sports. Our team is backed by a Money Center Bank headquartered at 44 Wall Street. As of June 30, 1978, North America became the 35th largest bank in the U.S., with assets of over $3.9 billion. Add that to our financing and service capabilities nationwide and around the world, and you have a bank that can give your company the full credit it deserves.

So when you have a tough banking problem let North America show you how we can provide the winning solution.

How do you recover $20 billion in fuel with 20-million-year-old fossils?

ons of dollars' worth of precious oil lies deep
ıin existing American oil fields. But by using
fossilized aquatic plants, processed into a
r aid called Celite,® Johns-Manville is helping
oil to flow forth.

The easy-to-get-to oil was pumped out first.
difficult-to-extract remainder is trapped in
l and shale. Water flooding and steam injec-
can push it out—but, preliminary filtration of
water is essential. As the water passes through
microscopic pores of the Celite, foreign parti-
are trapped. So they don't clog up the oil-
lucing strata and close off the flow of oil.

In essence, the simple filtration of water is
ing solve the complex energy crisis.

Oil recovery is only one of the amazing uses
iatoms. Celite also facilitates the recycling of
e water and is used to clarify beer, wine,
icines, swimming pool water, restaurant cook-
ils and dry-cleaning solvents. These are just
a few examples of the innovative thinking that has brought Johns-Manville to the forefront of the filtration industry.

In addition, J-M is a worldwide manufacturer of fiber glass products, non-fiber glass insulations, pipe products and systems, roofing materials and industrial products. We also mine and process asbestos fiber and other non-metallic minerals. And each business segment is backed by a company with 120 years of experience.

To discover more about a $1.5 billion company that can put its problem-solving capabilities to work for you, write Johns-Manville Corporation, P.O. Box 5705-J, Denver, Colorado 80217.

Ideas to build on.

Faces Behind The Figures

Gnome of New York

"I don't think you can talk in terms of a *winning* strategy," says Kurt F. Viermetz, vice president of Morgan Guaranty Trust Co., talking about the foreign exchange market. "The strategy is to cope with exchange market developments on a minute-to-minute or day-to-day basis."

Viermetz is the man to ask: Morgan is a whiz at foreign exchange trading. Last year, it reported foreign exchange trading profits of more than $56 million, up 30% from 1977, accounting for nearly 7% of the total operating income of parent J.P. Morgan & Co.

It's not just the gnomes of Zurich traders must contend with. "Banks like ourselves," says Viermetz, "may short the dollar one minute and be long the next. This is absolutely necessary to support the market in order to have, at all times, the possibility of executing our clients' business."

With Morgan Guaranty and other banks doing so well in exchange trading, you'd think there would be some big losers. There aren't, says the 39-year-old native of Augsburg, Germany.

"The popular idea is that it is a zero sum game," he says, "but the other side of the coin is, first and foremost, opportunity losses by, for example, an exporter who sells his Japanese yen right away deciding he doesn't want to take any exchange exposure. Also, there may be losses central banks take very consciously to provide support for a public policy defined by the country." So, the taxpayers pay—but don't they always?

Viermetz says he judges a trader not on how much money he or she makes, but on how they cut their losses; in currency, as in the stock market, you just can't buck a trend.

Kurt F. Viermetz of Morgan Guaranty Trust Co.
The market is minute to minute and the strategy is to cope.

R.I.P., Bill Zeckendorf

The first big postwar bust—the failure of William Zeckendorf's awesome assemblage of real estate holdings and development dreams, Webb & Knapp Inc.—is about to pass into history after nearly 14 years in bankruptcy court. When the late promoter's real estate venture went to the wall back in 1965, the monumental job of figuring out what was left and who would get it fell to Mortimer M. Caplin, a Washington, D.C. attorney who had served as Commissioner of Internal Revenue in both the Kennedy and Johnson Administrations.

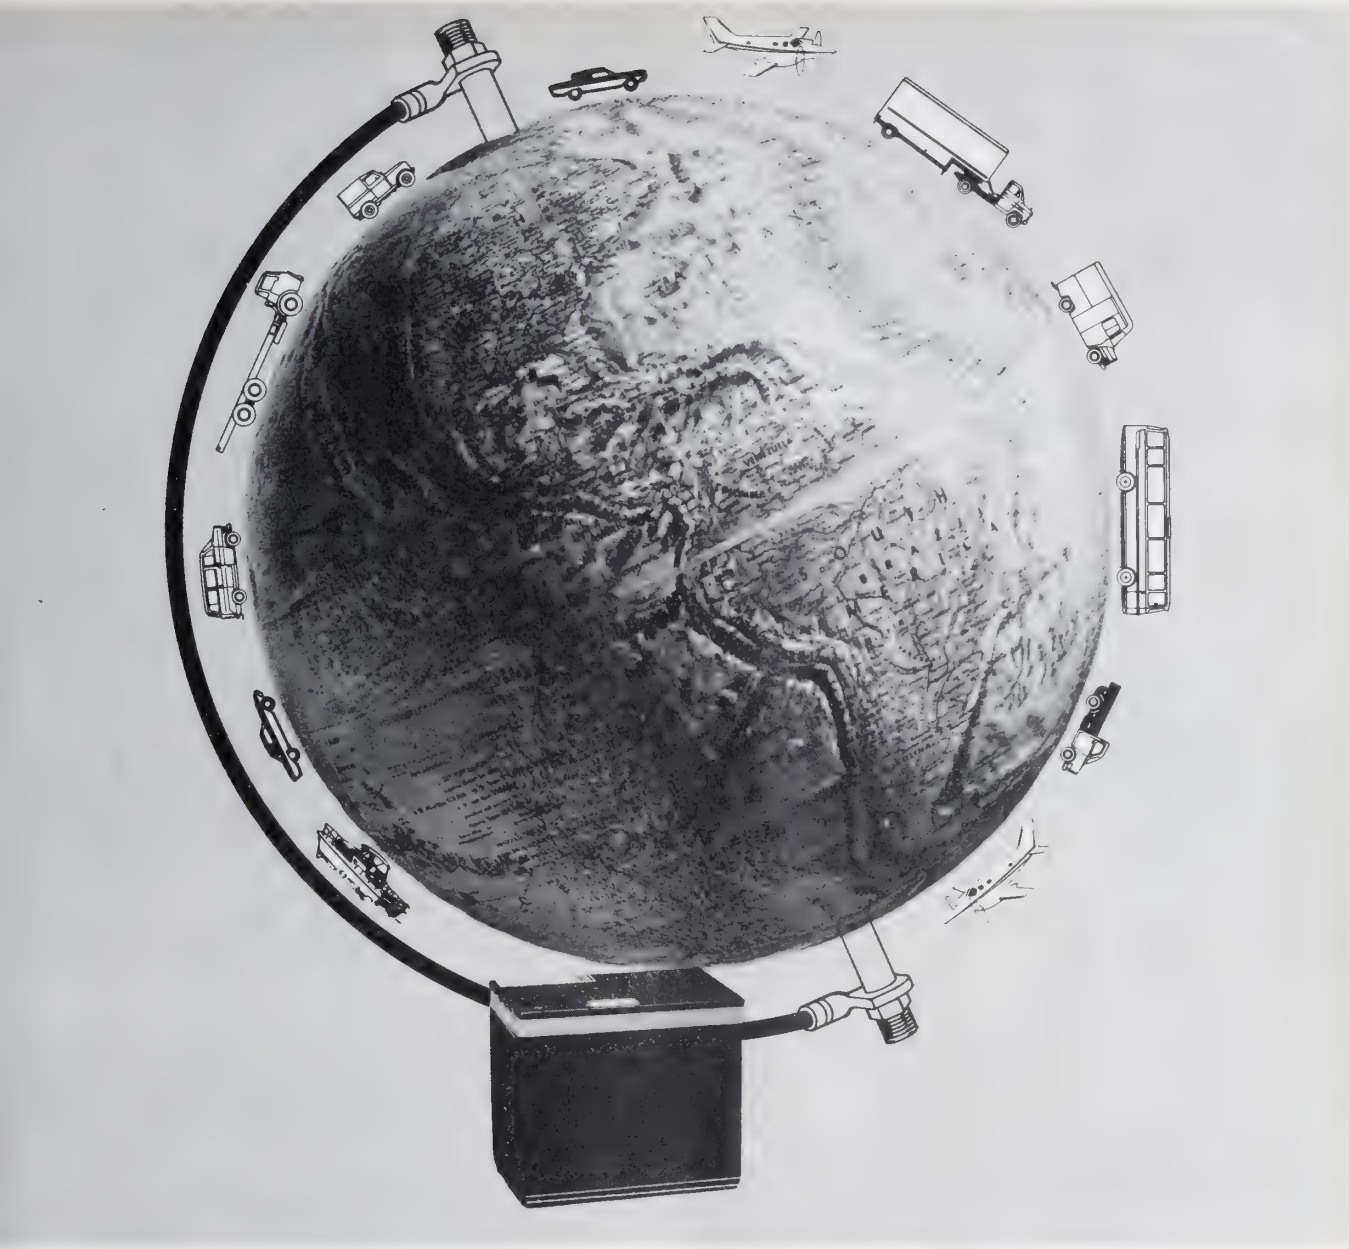
With the final papers that will end the bankruptcy about to be filed, Caplin, now 62, recalls his first visit to the legendary developer. By the time Caplin made his way up the cylindrical elevator to Zeckendorf's circular Madison Avenue penthouse office, everybody else had gone home.

"We were all alone and it was very poignant," says Caplin. "He was a proud man, but I needed his cooperation to unscramble the messy books." Here,

Webb & Knapp trustee Mortimer M. Cap
After 14 years, 8.5 cents.

humbled, was the man who had court at splendid meals from his pany's private kitchen and wine c had spawned such development Washington's l'Enfant Plaza, Den Mile High Center and Montreal's Ville Marie and had owned the Chry Graybar and Paramount building New York among countless tracts properties. At first Zeckendorf coop ed, but later his arrogance and cun reasserted themselves. In the end C had to bring suit against Zecke himself, and he finally settled for a $1 million.

When Caplin took over, Web Knapp had $21.5 million in assets only $3,405.35 in cash in the bank. bilities, including a federal tax clai about $30 million, totaled nearly million. One of his first tasks as tr was to use his knowledge of Washin ways to settle the IRS claim. The ag ultimately accepted $2.75 millio about 8 cents on the dollar. All unsec creditors wound up with 8.5 cents o dollar and the common stockholder nothing at all. Along the way Caplin to contend with tons of rubbish in houses, including file boxes of Zec dorf's uninteresting doodles. They burned. Meanwhile, the firm of C and Drysdale has been making the by using the Freedom of Information to procure thousands of IRS docum on behalf of clients accused of civil criminal tax fraud, in order to, if not



Every day the whole world *Starts with LEAD*

Most of the internal combustion engines on earth and flying above it get their start from lead-acid storage batteries.

Cars, trucks, buses, ambulances, fire engines, aircraft, ships, boats, farm machinery, construction and materials handling equipment—a large part of all transportation depends on this basic power package—the lead-acid battery.

Today, an increasing variety of equipment such as power tools, golf carts, lawn mowers, portable pumps are being driven with electric motors powered by lead-acid batteries. And there is a growing trend toward battery-powered on-the-road vehicles.

Emergency lighting systems rely on lead-acid batteries and large battery banks are currently being studied in our nation's energy program as a means of load-leveling to maximize efficiency for electrical utilities.

Modern battery design gives today's lead-acid batteries more power, less weight and better life—at lower cost than ever before. Today's new batteries deliver up to 70% more ampere hours of work than the same size units of 1958 while average cost is up less than 10%.

Furthermore, the Maintenance-Free battery technology which St. Joe helped develop has made the lead-acid battery an even better, more versatile power source.

Lead is a vital material for today and for the future.

Stress ribs disfigure a printed coffee can so it looks like this. Not very pretty.

Beautifully printed IP paper label covers this can so it can have more stress ribs and less steel.

How International Paper gives the wrinkled can a face lift—and helps food processors save a pretty penny

Those wrinkles you see around cans are stress ribs.

Canmakers press them into cans to make them stronger.

There's a limit to the number of ribs a food manufacturer can tolerate on his can, because he wants it to be readable and look enticing on supermarket shelves.

More ribs, less metal

But if more ribs could be engineered *into* the can, less metal would be needed *for* the can. And that could save food processors money.

Keeping a warehouse full of cans for different brands, promotions and sizes ties up a lot of money, too.

The Coca-Cola Company Foods Division faced those problems with its coffees and posed them to International Paper.

IP's packaging experts came back with a money-saving idea that was remarkably simple: *cover that can with a beautifully printed paper label.*

IP's idea offered Coca-Cola Foods many attractive advantages:

1. Savings on metal. They could replace their can of heavy-gauge ribbed steel by using a less expensive can of lighter-gauge steel with *more ribs.*

2. Less inventory. Instead of having to carry high inventories of printed cans of many different

IP paper labeling lets processors keep an inventory of many different labels instead of many different cans. A big savings in storage space!

kinds and sizes, they could just store the necessary sizes of unprinted cans—and keep on hand their inventory of printed paper labels in a smaller space.

3. More readable label. Stress ribs distort graphics on printed cans and make them less attractive on supermarket shelves. With stress ribs covered, the label is easier to read and can have more sales appeal.

4. More marketing flexibility. Printed cans call for more advanced planning and a big investment in special cans. With paper labels, product managers could react to changing market conditions more quickly and get price-off or other promotions on shelves faster.

IP's experts showed Coca-Cola Foods how our high-speed presses can print labels with all the mouth-watering realism of the finest photograph.

We showed them our versatility. IP can print labels for almost any package anyone puts out. For food products like coffee, frozen juice, salad dressing, soup, peanut butter; or other products like bar soap, dishwashing detergent, motor oil, household cleanser and fabric softener. Even wine.

21 different combinations

Coca-Cola Foods put IP's idea to work. Now they save with IP labels on 21 combinations of grinds and sizes for their Butter-Nut and Maryland Club brands.

A beautiful paper label to cut costs on metal cans is only one example of International Paper's creative solutions to our customers' problems in every industry—from food processing to meat-packing to building to publishing to energy to hospital supplies and many more.

May we help you?

else, slow their progress to the pokey.

What sank Zeckendorf? A couple of things, says Caplin. For one thing, his banks carried him too long because, like all the believers, "they were looking for another home run." For another, Zeckendorf, whose talent was promoting big dreams, got bogged down in operations. "He should have let others make that last dollar."

No bowl of chili

When it comes to chili, Bernard Z. Lee (everybody calls him B.Z.) takes the view you might expect of a native New Yorker transplanted to Texas: He likes it strong. The managing partner of Seidman & Seidman, one of the top accounting firms in the second-seven category right behind the Big Eight, says, "I like 'mad dog' style, the strongest of all. It takes a highly developed palate to handle it."

His views on the equally hot issue of self-regulation of the accounting profession are also strong: Lee is a backer of peer review of accounting firms. That's the system by which various aspects of a firm's procedures are examined critically by a team made up of accountants from other large and small firms.

Of his own firm's experience with a peer review, the 53-year-old Lee says: "We were good to start with, but we're better now." Other accountants' objections to the process range from fears about revealing trade secrets to competitors to the feeling that things are fine the way they are. But tough-minded practitioners like Lee recognize that if the profession, through the American Institute of CPAs and the Financial Accounting Standards Board, doesn't come up with an acceptable system of self-regulation, the feds—in the form of the SEC or some congressional committee—will saddle the profession with bureaucratic policing.

Lee also favors the controversial restructuring of the AICPA, under which a firm that audits SEC-regulated clients can be subjected to discipline by the institute, even leading to loss of qualification. Until now, the institute did not go after firms, only individual accountants.

The new structure, Lee says, "sets up a sanction. Directors will want to know if a firm is a member in good standing of the SEC division of the institute before they hire or renew an auditor."

Will the profession swallow such spicy stuff? "I think the profession will do what it must that's reasonable and possible if given the time to do it," he says.

Seidman & Seidman's Bernard Z. Lee
In matters of self-regulation and chili, it's a matter of taste.

A good learner

"We have to be sure that we can build better quality cars than the American ones," says Toyota's Seisi Kato, explaining, not too delicately, why his company has shelved, at least temporarily, its plans to open a U.S. plant. Kato is president of Toyota Motor Sales Co., worldwide sales arm of Toyota Motor Co. of Japan. His lack of confidence in American workers is evident in his comment.

But Toyota has a problem. Like Germany's Volkswagen, Toyota has found it necessary to hike prices (four times last year) because of currency fluctuations. "Export is and always will be the essential part of our business," says the 71-year-old Kato. "The U.S. is the number one customer, but it will continue to be difficult as long as the yen continues its upward trend."

Seisi Kato of Toyota Motor Sales Co.
The strong yen makes export tou

The Japanese are fast learners. himself learned from General M Through a tennis-playing buddy, met a General Motors manager in in 1930 and soon found himself a jo stock clerk with GM. Five years when then weaving-machinery pro Toyota decided to make cars, it r GM's Japan operations, getting, a others, Kato and Shotaro Kamiya, chairman of Toyota Motor Sales.

Toyota first exported to the U 1958. Kato recalls driving one of cars on a Los Angeles freeway and b being able to stay out of the way c bigger, faster Detroit iron. "Ours just toys then compared to the Ame cars," he says. Before price incr lowered demand, Toyota could not ply the U.S. with cars fast enough.

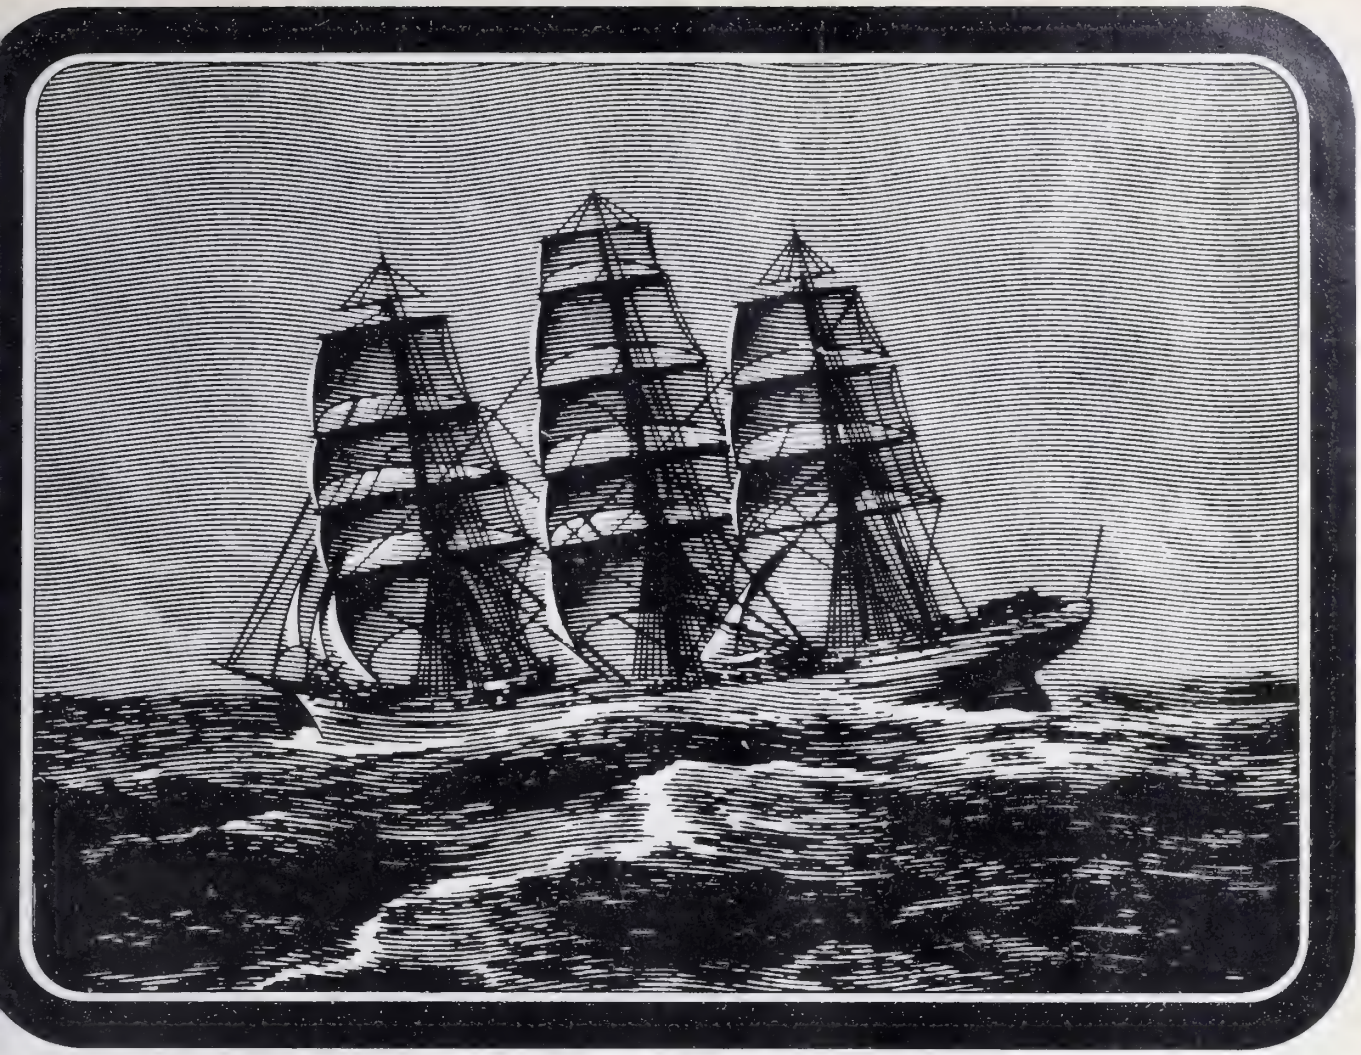
Well, there's always Japan's neighbor, China. Last year, Toyota more than 1,200 vehicles there, m trucks. Unfortunately, he says, the ket is not likely to grow at a quick "The Chinese open their hoods check everything each time they s he says. "The way they maintain vehicles, they could last for decades

So planned obsolescence won't there, but the Japanese will find a w

A timely trip

One of the big winners in the arbi derby last year was Guy P. Wyser-P head of Bache Halsey Stuart Shield bitrage unit. His salary, based or firm's arbitrage profits, was $864,8 over five times what Bache boss H A. Jacobs Jr. made. His secret: kno when to take a trip.

Wyser-Pratte's kind of arbitrag course, is playing the spreads on t



Does anybody out there remember good old American know-how?

Farrell Lines never forgot.

At Farrell Lines, we've got more than 37 sleek, modern ships going for you—we've got a 52 year tradition of Yankee ingenuity. That's helped some of the biggest shippers in the business.

Like the huge petroleum company whose flammable liquids we figured out a safe way to load and ship.

Or the giant manufacturer of a chemical so smelly no other line would touch it—till we helped devise a virtually leakproof packaging system.

Or the car company whose overheight tractors kept getting bashed in on top—till we stepped in with a labelling and checking system that meant no more accidents.

With our right good crew of specialist experts—in commodities, containers and cargo safety—we like to think we have a talent for taming tricky cargoes. And taking the best possible care of conventional ones.

And now that we've added the American Export Lines service to Farrell Lines, there's almost no place in the whole wide world we can't go out of our way for you.

In the Tradition of Great American Seamanship.

FARRELL LINES

offers and mergers. The arbitrageur makes his profit on the difference between the purchase price of the stock and the price an acquirer is willing to pay. If the deal falls through, you can lose the profits of ten previous deals, but if a fight breaks out, like the one between United Technologies and J. Ray McDermott for Babcock & Wilcox, you can make a killing.

During the first three quarters of 1978, so many tender deals closed that even the amateurs were ahead. But by October, investor confidence had slipped and prices slid even on the deals that looked certain to go through.

It was so bad, says the 38-year-old, "I took time out and escaped to Paris." Had he stayed around he might have been frightened into closing out his positions instead: "On the day after I left, the President announced his moves to strengthen the dollar, and the arbitrage stocks bounced back. I had the best December ever and a great year."

French-born Wyser-Pratte learned the business from his father, who ran the New York-based family firm until 1967, when he sold it to Bache. His son has run Bache's arbitrage business since 1971.

Even with 1979 starting off with the promising but risky (for arbitrageurs) bid American Express made for McGraw-Hill, Wyser-Pratte still has time to toss a few barbs at the "socialists in Washington" whom—rather than his own kind—he blames for the takeover wave. "Washington has created an environment where investors have little confidence while companies find it cheaper to buy stocks than build new plants," he complains. Instead of improving the business climate, he says, the bureaucrats want to block all large mergers and takeovers. "[They want] to ban last year's greatest source of investor liquidity and profit," he adds. So he's crying all the way to the bank.

Bache arbitrageur Guy P. Wyser-Pratte
His pay is five times his boss'.

Bill Sheriff of Truckstops of America
The greasy spoon gives way to big business.

Bogart wouldn't believe it

On a stormy night on Interstate 70 in Effingham, Ill. as many as 150 diesel trailer trucks may be idling in the parking lot at Truckstops of America, one of 26 truckstops owned and operated by $1.1 billion (sales) Ryder System, Inc. Inside a roomy main building on the 15-acre property, truckers are playing pinball or pool, swapping tales of the road and sorting through the general store's wares—items like pointy-toed cowboy boots, lumber jackets, workshirts, belt buckles, CB accessories and the latest country-and-western tapes, not to mention tools, truck parts and tires. And since truckers are always supposed to know the best places to eat, the restaurant, open 24 hours daily, draws a crowd where "fourwheelers" (that's trucker talk for the ordinary motoring public) are kept separated from the kings of the road. Nearby, truckers can also spend the night at Truckstops' full-service mo

If all this sounds more like big bus than the grimy diners of 1940s I phrey Bogart movies, that's because In 1978 Ryder's truckstops ave about $7 million apiece in sales, wit entire chain accounting for some 1 Ryder's revenue, but only 4% of p earnings. Trouble is, Truckstop America gets most of its revenue pumping diesel fuel, a low-profit ness. (Last year they sold in excess million gallons.)

Bill Sheriff, 36, president of the ville-based subsidiary, came aboa 1973 when Ryder bought two New co truckstops Sheriff and his Uncl owned. The laconic New Mexican like to get away from that overwhel dependence on fuel volume. Sheri plains, "Our opportunity for imp ment of profits has to come from oping other profit centers that are a tive to the clientele that is already us." That accounts for the prolife of cowboy boots and CB stuff.

Sheriff is also pruning location instance last year he sold off low-vo truckstops in Clearfield, Pa., Roch N.Y. and Santee, S.C. (The South C na property was purchased by a lic who still uses the Truckstops of Am title.) The new Effingham acqui has the advantage of being at the roads of Interstates 70 and 57.

Ryder people believe there will s another rainbow in their oil spil growing number of diesel-powere on the road—Mercedes, VW Ra Oldsmobiles and Cadillac Sevilles. drivers presumably will buy co boots, too. ■

CNA believes working with agents is one of the most effective ways we help keep insurance affordable.

"I don't deal with CNA's computers. I deal with CNA's people."

A big insurance company like CNA needs its computers. But this is a people business. And, to help me and my clients here in Lawrence, I need CNA's people. People who listen when I tell them about my clients' special problems. People I can count on to come back with an answer. After all, it's my job to understand my clients' needs. I deal with CNA because they have people who are willing to do the same."

Wilderness and Multi-use lands. Can they live side by side in the public forest?

At Potlatch, we recognize the need for Wilderness areas. Areas where "man is a visitor who does not remain." It is part of our heritage that deserves to be protected.

But we must also look at Wilderness areas for what they are—places where roads and motor vehicles are barred, where nearly all types of structures and facilities such as campsites are forbidden, and where timber harvesting and other commodity activities are prohibited.

For all the romantic allure, the Wilderness attracts very few people, since they can only venture there on foot, horseback or by canoe.

Multi-use public forestlands, on the other hand, serve a much broader segment of the population. Here, campers, snowmobiles and outboard motors are allowed, improved campsites and timber harvesting under government regulation are permitted.

The continuing expansion of the Wilderness through legislation, at the expense of Multi-use lands, threatens eventually to remove from America's timber resource any hope of meeting America's growing need for either forest products or modern group recreational activities.

Wilderness. Multi-use. Potlatch believes, with balance, we can have all we need of both.

not always comparable with the costs.

Let's say the cost *does* justify the tighter standards, then what happens? The CEA warns it is likely that first will come expensive and extensive litigation, hardly the behavior to achieve more productivity. Lawyers' briefs don't make more shoes. Some of the new laws, the CEA adds, are even written so that specific technology is required; thus efforts to find other, perhaps more efficient, means of production are precluded.

Such law, in effect, inhibits progress.

Now we see the problem. How does it work in real life? Giant General Motors, which has been keeping tabs since 1974, is now spending $1.1 billion a year on meeting government regulations—not including sums for improving fuel economy or fitting antipollution devices on every auto. That's the equivalent of 23,750 full-time employees out of GM's total employment of 800,000 doing nothing but working to satisfy the demands of public interest groups.

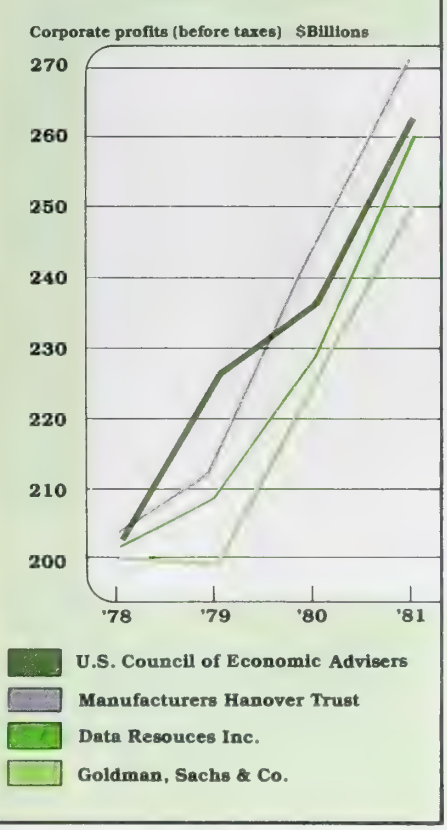
The Environmental Protection Agency boasts that it created an estimated 150,000 *additional* jobs at 25,000 companies in 1976 to operate and maintain water pollution control equipment. The number of jobs added by clean water mandates rose to 500,000 at the end of 1977 and may well top 1 million by this year out of this country's total employment of 94.8 million.

That, for only one type of environmental activity. None of these persons contribute to expansion of capacity. Recycling of bottles in Oregon added 365 jobs—not to produce more bottles, but to handle, collect, clean and return used containers.

Is this bad? That we are providing more good-paying jobs, keeping the air cleaner, righting social wrongs and being more thoughtful of the handicapped? Not at all. It means we are concentrating less on quantity of goods and more on quality of life. But we must realize we are paying a price for it. And if we are going to insist on righting in a few years the wrongs of decades, if we are going to seek justice solely through regulation by Big Brother, then we are going to continue to risk losing ground economically to more pragmatic people like the Japanese. ■

Profits and prophecies

The chart below tracks forecasts of corporate profits over the next few years made by some authoritative private sources and by the President's Council of Economic Advisers. The Council is virtually alone in its optimism about 1979. Longer term, the others catch up.



The reverse mortgage is a novel idea. It has merit. Only you can decide if it is worth the additional debt risk.

LIVING ON YOUR HOME EQUITY

By Ben Weberman

How Many Times have you heard someone say, "The best investment I ever made was in my house; it's the only asset that has increased in value through the years"? Until now, not too much could be done to make this "investment" pay off. Sell the house? Where would you live, in some high-priced apartment? Take a new, big mortgage against the house? Interest would eat up much of the cash.

Okay. You have a house purchased in 1948 for $15,000. Next year the mortgage is paid off. The house could easily bring $60,000. What do you do?

Look into the new concept of "reverse annuity mortgages" authorized last December by the Federal Home Loan Bank Board for federal savings and loan companies. They come in two varieties. One is truly an annuity. The home owner borrows a large sum against his equity and uses that cash to buy an insured annuity. The second is a plain "reverse" mortgage arranged with a lending institution. The thrift association agrees to advance a specified sum monthly to the home owner, thus *building* mortgage debt.

I don't like the insured annuity type very much because it involves assumption of a large mortgage in order to get money that will buy an annuity from an insurance company. Unless you are over 70 years old, the insurance company will pay you hardly enough each month to cover the interest on the mortgage.

A reverse mortgage sounds better to me. This, too, has pitfalls. These mortgages accumulate so much debt as time goes on that they eat up equity. Eventually, the house would have a big mortgage drawing a sizable amount of interest each month.

Broadview Savings & Loan of Independence, Ohio, near Cleveland, has been offering reverse mortgages for over a year. (It is state chartered and did not have to wait for federal approval.) To make its plan work, Broadview insists that the original home mortgage be paid off or very nearly so. The maximum reverse loan credit can be up to 80% of appraised value. Payout to the home owner can be for five, seven or ten years. Broadview currently charges 10¼% interest on unpaid principal. The home can be sold at any time for estate purposes or if the owner feels unable to continue living on the property, since no prepayment penalty is required.

Take the case of a $60,000 house on which a $48,000 maximum mortgage can be arranged. If the home owner decides to take money out over five years, monthly payments would start at $600 for the first year and gradually rise to $900 in the fifth year. The mortgagor would start to pay interest on the loan right away. Monthly interest, taxes and insurance would come to $147.18. Principal repayment of a state-required minimum $1 a month would bring net payment to the owner of about $452 in the 12th month. Because interest charges grow as the debt expands, payment to the home owner is also scaled to rise. In the final month, the 60th month, the transaction would consist of a $900 loan increment less charges of $471. The net payment would be $429.

What has happened is that for five years—the period of this mortgage—you will have come out net with $425 to $450 a month in cash. But you have also been incurring mortgage debt. At the end of the period, you have a big, tough $48,000 mortgage on a house that had formerly been owned free and clear of debt.

If home prices continue to advance rapidly, you can renegotiate an additional mortgage and continue to get cash. But you would be starting with one big chunk of debt that carries a big monthly interest charge. The numbers would not look nearly as good as during the intial five-year period. The system works only if housing prices continue to advance 10% to 15% a year, a hardly likely occurrence. The idea is novel. It has merit. Only you can decide if it is worth the additional debt risk.

At the end of five years, the agreement calls for repayment of the principal—which is basically the $48,000 originally contracted for—or to roll over the credit and start again. Legal counsel has provided an opinion that the money borrowed by the home owner is not subject to income taxes because it represents a loan. Interest and real estate taxes are deductible all along from income as in the past.

Broadview Savings & Loan allows several options at the conclusion of the five-year, seven-year or ten-year payout period when full proceeds of the mortgage loan have been disbursed. The home can be reappraised to determine if further payments may be made by reason of increased equity. A regular amortization schedule may be started for the remaining period of the mortgage, or the loan may be paid off.

New York City notes

The strong reception accorded New York City notes makes it seem that the city is back on the track toward marketing its own debt whenever some more money is needed. The city sold, under its name, $125 million of five-month notes carrying an interest rate of 8%, tax free. That is better for most wage earners than the taxable 10.33% that six-month insured savings certificates pay.

Did the high interest rate account for the success? Hardly so. The notes—while general obligations of the city, issued in anticipation of certain revenues—are more like state debt than city debt. That's because the revenues backing the notes are collected by the state, payable by the state and held by the state comptroller in a separate account.

The noteholders get first crack at the revenues. Revenues come to about $900 million, and notes to be issued will not exceed $600 million in principal amount. It's a sound proposition provided the mayor and his buddies can't get to the money first. ■

Bond yields didn't get much above the 3% mark until the early 1950s. Even then yields were still abysmally low.

ARE BONDS A BUY NOW?

By Heinz H. Biel

FOR MANY YEARS I have had a passionate aversion to long-term bonds. I still have it. I just don't like no-win propositions. Even with interest rates as high as they are at present, the net return to the investor is sharply negative after allowing for taxes and the inroads of inflation.

Let's start with World War II. Do you remember that young lieutenant whose principal function it was to make sure that every member of every company was buying War Bonds? The penalty for refusal was being assigned to the dirtiest details or to endless KP. This "investment for the future" was a cruel hoax, but there was no SEC to investigate the misrepresentation or the sales methods used.

Bond yields didn't get much above the 3% mark until the early 1950s when the Federal Reserve finally discontinued providing unlimited price support for U.S. Treasury securities. Even then yields were still abysmally low by the standard of recent years. In 1956, for instance, American Telephone & Telegraph sold a 34-year bond with a 3⅞% coupon. Today this bond sells in the low 60s, for a loss of over 35% in market value on top of a 60% loss in buying power. And this is known as a triple-A investment.

Most individual investors finally got the message. They learned it the hard way. They no longer buy long-term bonds unless there are specific reasons, such as restrictive provisions in a trust or the urgent need to maximize current income. Yet year after year untold billions of dollars of bonds are being issued in this country, some with maturities as far ahead as 40 years. Such lengthy bonds are almost unheard of, and would be unsalable elsewhere in the world, where investors seem to be more attuned to the effects of inflation. So who is buying all these bonds?

Primarily, the buyers are life insurance companies and pension funds. They have hundreds of millions of dollars pouring in week after week and these bonds fit their needs perfectly, as long as they meet the actuarial requirements, which nowadays they do with ease. As their future obligations are payable in (depreciating) dollars, why should it bother them that inflation has such a deleterious effect on bonds? The venture by life insurance companies and pension funds into common stocks was, in numerous instances, spectacularly unsuccessful. Buying high-grade bonds, on the other hand, requires no great investment skills.

So much about bonds as an *investment*. But what about bonds as a *speculation?* There are fluctuations of such magnitude in the bond market that the speculative potential is impressive indeed. Just look at the gyrations of the 7% bond of AT&T, due 2001, which was offered around par in 1971:

1974	Low	74	Yield	9.6%
1976	High	104	Yield	6.6%
1978	Low	78½	Yield	9.3%

The 40% rise between 1974 and 1976 was sweetened further by the high yield. Of course, we never buy at the low or sell at the high, but the potential gain is nevertheless intriguing. (During the same 1974-76 period, Telephone stock gained over 63%, but stayed near that high.)

There are some economists and money market and bond market experts who expect interest rates to peak in the not very distant future, say sometime between March and June. If that should prove to be the case, the risk/reward ratio for long-term bonds is favorable indeed, and their purchase could be quite rewarding on a strictly temporary and speculative basis. Short-term bonds, which cling closer to par because of their approaching maturity, are not involved, of course.

Whether the price recovery in bonds, if and when it comes, will match the wide gains witnessed in the 1974-76 period is, however, questionable. The precarious health of the dollar may make sharply lower money rates and long-term interest rates "impractical," to say the least.

Just a brief comment on tax-exempt bonds. Fundamentally, there is no difference. However, an investor in a high tax bracket—*i.e.*, over 50%—may think that the factor of tax exemption overcomes the inherent shortcomings of a bond. It becomes a matter of choosing the minor evil.

In summary, let me reemphasize that long-term bonds are unattractive under present conditions and should be avoided as investments. Currently they have moderate speculative attraction because of the downturn in interest rates expected in the not too distant future. It should be noted, however, that yield-sensitive stocks specifically utilities, should respond similarly without sharing a bond's principal fault, the fixed coupon.

McDonald's Corp.

While the stock market was moving up to the best levels since last October, one of the most hallowed growth stocks and institutional favorites, *McDonald's Corp.* (45), declined to its lowest price since mid-1977. What's wrong? First there were strange rumors of impurities in the food, earthworms of all things. Then it was said that high meat prices were squeezing profit margins and that compensating price increases had an adverse effect on sales. Some analysts lowered their 1978 earnings estimate to $4 a share. But this still makes it a respectable gain of nearly 20% over the preceding year's $3.37.

I have always been somewhat lukewarm toward McDonald's. Its earnings multiples were just too high for my taste. This is no longer the case particularly if 1979 should live up to early income projections of another 20% increase in per-share earnings. A P/E of less than 10 lends definite attraction to McDonald's, whose growth record can only be described as phenomenal. As dividends are likely to remain insignificant, the stock is obviously unsuited for investors requiring current income. ■

Modern Portfolio Theory is about as up to date as Charlie Chaplin's Modern Times.

A CLOUDED CRYSTAL BALL

By John Train

PEOPLE who come to our office, which is a sunny fishbowl on a high floor of a skyscraper, often stop and look at the rugs. "Gosh," they say, "those are nice. You don't often see oriental rugs in a modern office."

"I'm fond of them," I reply. They make sense, too. A well-made rug is a joy to look at, and can take 50 years of use, a lot more than most wall-to-wall carpeting is likely to stand. And you can take it along if you have to move. (The symbols in oriental rugs have quite specific messages, by the way, like those in stained-glass windows. I have written a monograph on the subject.)

Our rugs are worth more now than when we bought them: There's keen interest in rugs today, although less than in the Twenties, when good ones sold for a fortune. In between, including when I picked up ours, they went for very little.

If you had contemplated starting a rug collection after World War II, well-meaning friends might have discouraged you by pointing out that rugs had declined sharply in value for a number of years, and, while they had once sold for much more, the price structure was unstable. To use the jargon of Modern Portfolio Theory, at that time oriental carpets had a high beta. That term would have frightened off some prospective buyers, which would have been a shame because that was just the time to be buying oriental carpets.

There's a simplistic notion in Modern Portfolio Theory that high beta—volatility—is the same as high risk, something a potential buyer should steer clear of. It isn't the same at all. Quite the contrary: Volatility *creates the informed buyer's low-risk opportunity.* If he has done his homework well, then the volatility declines as others learn what he discovered. Just as in fine rugs: Once people caught on to how beautiful and valuable they were, prices ceased being volatile.

Modern Portfolio Theory has another blind spot. It uses circular reasoning. MPT requires that you *tell* the computer that you think the market will go up,* whereupon the Program tells you which stocks would do well if your postulate (and the computer's data) are correct.

Experience refutes this approach. The way you find a cheap stock is by knowing the company and determining that you would be willing to pay more for the return it will give you than what the market values it at. If the companies in a group are cheap, the group's probably cheap; if most groups are cheap, then probably the whole market's cheap. What you can really hope to know is the specific thing—that certain stocks are attractive compared with cash, bonds or other stocks. The rest is extrapolated. So if MPT takes your specific knowledge, constructs a generality, and then derives a different specific, it has actually degraded your wisdom, not strengthened it.

Here's an unkind illustration. Suppose Tom, the baker's son, finds himself in love with the girl next door Kate. He goes to an MPT matchmaker, who consults his black box and pronounces: "Bakers' sons called Tom usually marry brunette schoolteachers called Jennifer. I have one for you in Seattle. It's a pity you have to move but that's life."

John Train is president of Train, Smith, Investment Counsel, New York, and the author of Dance of the Money Bees.

**One doesn't say it that way, of course. One says that the nonsystemic risk has a positive expected alpha.*

In addition, knowing about a specific company you have an investment in—not just handling it as a symbol—gives you the confidence to see it through bad times as well as good, which reduces portfolio turnover. Any policy leading to turnover is like one leading to war or litigation: It's self-destructive, enriches the wrong people and cancels out in the end. It doesn't solve a problem, it *becomes* the problem, like a short-cut across quicksand. Once you're in the quicksands of turnover it doesn't make very much difference where you thought you were going.

To be blunt: Modern Portfolio Theory, which was formulated way back in the 1950s along with that other simplistic fallacy, the efficient market theory, is about as up to date as Charlie Chaplin's *Modern Times*.

To enable my readers to be *really* up to date, I have promulgated NEWEST Portfolio Theory (based on some tried and true methods of the past, to be sure), together with its own acronym-filled lingo.

A glossary of NEWEST

Old (MPT) term	NEWEST term
To regress	To COMPAR
Covariance	GROUPMOVE
Alpha	RELPERF
Positive expected alpha	WINR
Negative expected alpha	LOSR
Beta	VOLAT
High beta	JUMPIN
Low beta	DUL
Optimization	RIT-THING
MARCH / MARISM	CRYSTBAL

NEWEST has many concepts that scarcely exist in Modern Portfolio Theory. For instance, the investor actually goes to the place of business of a company he invests in, examines the factory and product line, and interviews several levels of management, besides talking to the customers and the competition. This process, which saves on computer time but is expensive in shoe leather, is called INSPEC in NEWEST jargon.

Then there's the EXPER concept. Many will find this concept hard to accept. It holds that money should be managed by seasoned men, skilled judges of character familiar with business and the stock market, and not by librarians whose background is in statistics, economics and computer theory.■

"It's my job to keep up with the forces that affect interest rates. That's why I keep up with Barron's."

Bill Boraczek, Vice President
Manufacturers Hanover Trust Company
New York City

"Trading government securities is my job. For the bank's account. For our investment portfolio. For our correspondents. I have to know which way the interest rates are going. And Barron's is a valuable professional tool—it really helps me keep up with the forces and trends that influence interest rates.

"Unlike a lot of daily papers, Barron's doesn't just report what's going on now. Barron's takes a position. Says what they think is going to happen—and why.

"I use Barron's regular columns to pick out a lot of information. I always go through Up & Down Wall Street, The World At Work, The Week In Bonds, and The Commodities Corner. Barron's is candid and doesn't waste words. It's valuable for anyone interested in the fixed income or equity markets. For the professional and individual investor."

No other source of financial information tells you more—more incisively than Barron's. If you want to understand what's happening now or gain insight into what's going to happen—read Barron's. Over one million readers do.* Every single week.

*Source: TGI, Spring, 1978.

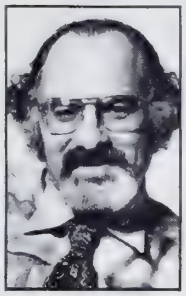
There is a catalyst working on the saving and loan industry: There are serious entrepreneurs eager to buy them.

SHARK BAIT

By Martin T. Sosnoff



If the stock market is a bargain, the savings and loan stocks are a giveaway. When you go for *control* of an S&L, the negotiations start and end somewhere around two times book, but any investor can buy the same stocks for 60% or 70% of book—about one-third of what they are worth in a takeover. To be sure, there are other issues—entire industries—that sell far below net worth, but there is a catalyst working on the S&Ls that is bound to narrow the disparity between today's prices and tomorrow's values. The catalyst is that there are serious entrepreneurs eager to buy them. Their dorsal fins are brushing up against these properties and, of late, many have bitten off sizable stock holdings.

The situation is reminiscent of other industries where the megabuck corporations are acquisition minded. As soon as the leader does a deal, a standard of value is established for subsequent acquisitions. This is what happened when the oil companies decided to diversify their energy base and buy coal and uranium properties or even natural gas reserves. Sizable chunks of whole industries have disappeared into the corporate jaws, the equivalent of the corporate New York Yankees bidding up of Reggie Jackson and the subsequent Pete Rose auction.

The savings industry is simplicity itself. You take in money mainly on passbook rates of 5¼% to 6% and lend it out at 9% or better in long-term mortgages for single-family dwellings. What could be simpler? Occasionally, a home is overappraised or a trac developer's ambitious building pla land the lending institution in troub It happened in the late Sixties and 1973, but the inflation in housing ov the past five years makes everyo look as astute as J.P. Morgan. T nation's housing stock has practical doubled in value and loan-to-value r tios are low. Hard to lose money.

Compound interest works for e eryone. The consumer, like cloc work, saves anywhere from 5% to 7 of his income. Everyone who is not food stamps has at least a couple thousand in his passbook account— never leaves the repository that ha pened to have a branch within neig borhood proximity. Savings and lo associations, many of them charter in the early Forties, started out storefronts and today sport marble p lars on the East Coast and glass a marble on the West Coast. The foun ing owners started out counting pe nies in the back room and now ha nine zeros of assets on their glos balance sheet statements. Many a worth hundreds of millions—the A mansons and Tapers in Southern Ca fornia are household words. Gold West Financial is a husband-and-wi team of securities analysts.

Several financial conglomerates already own S&Ls, and many more about to own them. Sears, MCA, Ci Investing, Pennsylvania Life are the Reliance Group and Kemper own portable positions in ICA and Gibr tar Financial. Lazard Frères is po tioned in a piece of Financial Fed ation. Just recently, management Gibraltar petitioned the S&L comm sioner of California to force an outsi group to disgorge its ownership of to 25% of the company. Manageme was turned down. The men with hi dorsal fins who know the value of t buck will not be stopped.

S&Ls normally make 20% per a num on their net worth. Tax rates low, maybe 25% of earnings, and di

Martin T. Sosnoff is chairman of Atalanta Capital Corp., New York, and the author of Humble on Wall Street.

ends have been compounding from a ow base. Typical yield is 5%; the ayout ratio maybe 22% of latest 12- nonth earnings. Even if you pay wice book for these properties, with- n four years you have made back your remium. This is better than you can o anywhere else. Well-managed com- nercial banks scrape to earn 12% on quity; make a few bad guesses, like nancing the real estate trusts, and ou can set yourself back five years' rowth. Franklin Bank rapidly went ut of business by writing certificates f deposit and placing the money long erm. This was a billion-dollar institu- ion whose offices my firm occupies ow at a very low rental.

Last month I wrote that the reces- ion starts late in the year. I am grate- ul to David Levine, the brilliant oung economist of S.C. Bernstein & o., for documentation of this pro- ocative thesis. It goes like this: The &Ls run out of money and new ome starts collapse. Meanwhile, the xpensive six-month certificates the &Ls are writing squeeze profit mar- ins. Rates are tied to six-month reasury bills and there is some cross- ver from passbook accounts, maybe % a month from low-interest to igher-interest liabilities. If this hap- ens, the average publicly owned S&L ill show an earnings decline of 10% o 20% this year, but by 1980 earnings hould be compounding at 20% again. t four times earnings and 70% of ook, how can you lose money? The orst that can happen is you get left t the post for awhile. The market llies through much of the year and is industry does nothing. But you an make 50% or more over the next 8 months. Not bad.

My candidates are the most obvious roperties that the sharks are already ircling. If one of the granddaddies, ke First Charter or Financial Feder- tion, sells out as a friendly deal, it ill establish a yardstick of value easurement and all other properties ill move up proportionately. If they scape Jaws, earnings boom in 1980 nd you make money on the funda- entals. The stocks during 1978 out- erformed the market despite steadily sing short-term interest rates.

This is my bonus for our gentle eaders, even the one who said that he ought a shave and a haircut would rve me better than a $600 sports cket. I remind him that George ashington wore his hair long and be Lincoln was bearded. Both served eir constituencies well. ■

How to increase your total return without increasing your risk.

When you calculate the total return of your portfolio, you probably think only in terms of capital gains and dividends. But when you do, you overlook a third factor that can also significantly affect your total return: your brokerage commissions.

EXAMPLE:	
Buy 300 shares at $28, sell 300 shares at $32.	
Gross Return:	$1,200.00
Round Trip Commissions:	
At last NYSE fixed rates	300.57
At Source median rates	150.00
Net Return:	
At last NYSE fixed rates	899.43
At Source median rates	1,050.00
Increase in return at Source:	**16.7%**

To get an idea of how our reduced commissions can increase your total return see the example above.

And even though your return increases, you won't add any risk to your portfolio or change any investment decisions. The only difference is that you'll pay less in commissions. What's more, with Source, you'll experience some of the finest execution and custody services in the industry.

To find out how you can start increasing your total return at Source, call or send the coupon below for our free Commissions and Services brochure. Call us toll free at **800-221-5338** or in N.Y. State call collect at **212-269-9127.**

Source Securities Corp., 70 Pine St., New York, N.Y. 10005

If the pension managers, who are susceptible to groupthink, all decide to move at once, the buying could be explosive.

A BUYING PANIC?

By Myron Simons

THE QUESTION isn't which way but when. Just as there are huge pools of foreign money waiting for a stronger dollar before going bargain hunting in the U.S. stock market, so there are huge pools of pension fund money that would normally go into the market but that are parked instead in money market instruments.

From the pension fund point of view, the money market has been a sensible place to be: With yields as high as 10% and more, the pension funds are doing better in risk-free investments than they could in blue chip stocks. But interest rates won't stay this high forever, and the dollar is clearly undervalued.

The situation has all the makings of a buying panic. When? Your guess may be as good as mine, but if the pension managers, who are susceptible to groupthink, all decide to move at once, the buying could be explosive.

The conventional wisdom is to wait until a business slowdown has begun and the shape and severity of it becomes clearer before putting on one's stock buying shoes. However, there's never been a time when there was so much money available and a slowdown has been so widely anticipated. The pools of money that would like to wait until later this year are likely to be jostled into action sooner than they would like by the huge resources that are available for common stock investment. With a scenario like this, there should be a lot of ways to make money on the market.

The most important thing is to develop a strategy and some stock selections that are going to make you comfortable until a number of uncertainties that are likely to develop early in the year get out of the way. One technique is to buy stocks in companies that will be relatively immune to recession, such as a number of those in aerospace and in fields related to it.

Still a second strategy is to select companies with solid asset values. They should be strong enough to come out of a mild business slowdown smelling like a rose. *Northwest Airlines* (30) is a good example. It has relatively low long-term debt and it owns a lot of aircraft. A true figure of its asset value would be something like $65 to $70 a share. Its earnings, which were badly affected by a long strike last year, should make a comeback this year.

A third strategy is to buy stock in a company that will take a turn for the better even in a business slowdown. *Eastern Gas & Fuel* (17) should benefit from the fact that coal is likely to get a higher priority as a result of the Iranian situation. The company should be able to go through 1979 with few interruptions in production, so its earnings should return to the $2.50 level marked up before last year's devastating coal strike.

A fourth approach is to choose growth companies that should emerge from a business slowdown relatively undamaged, and with earnings potentials better than ever. *Data General* (65) specializes in minicomputers that aren't likely to suffer much in a mild recession. Its incoming orders recently were so strong that sales and earnings should continue to grow for at least the first couple of quarters of 1979. Earnings for the fiscal year ending September 1979 should be about $5.50 a share. Its price/earnings ratio is admittedly higher than that of the overall market, but it seems quite reasonable for a stock with Data General's future possibilities.

Growth potential at a somewhat lower P/E is available in *Eltra* (29). It business comes mainly from the Pres tolite and C & D Battery division and the Mergenthaler Linotype group With higher oil and natural gas prices the demand for batteries should b relatively immune to the effects of recession. The trend toward mechani zation in the printing field ought t keep Mergenthaler on the upbea Backlogs are at a record level, an incoming orders are strong. Even there is a business slowdown, I expec the company to earn about $4.50 i the fiscal year ending Septembe 1979, up from last year's $4.20. I seems easily possible to get both high er earnings and a higher P/E as Eltra potential is more fully realized.

Western Pacific (37) is still anothe case in point. It has branched ou from its original railroad operatio into manufacturing, principall through its Veeder Industries division Now it is in the midst of an attemp to sell its railroad division to its em ployees, as Northwest Industries di some years ago. Western Pacifi won't get much cash for the sale, bu it *will* get a tax loss of something lik $70 million. Its earnings before taxe could be as high as $10 a share. Wit that kind of cash flow, the compan will probably work aggressively on fu ture acquisitions.

Undoubtedly, economists will cor tinue to worry about whether we ar going to have a recession and when will come. But, for the stock marke we've been hearing about it for so lon now that the price/earnings multiple have already been lowered enough t reflect anything less than a seve downturn. A recession—and the some—is already discounted. Stoc buyers are much more likely to ke into the success or failure of Presider Carter's voluntary guidelines tha into the recession. If the guideline can end the take-it-while-you-ca get-it feeling that pervades both bus ness and labor, money should begin t pour into the stock market. At lon last, the market may become an are that participates in inflation rath than suffers from it.

Kennecott Copper (23) has ended i proxy fight, but the new board of dire tors has formed a committee to stu possible divestitures. Meanwhile, th outlook for the company has improve because of the advance in copp prices. That should remove some the risk in holding the stock whi you're waiting for a possible corpora reorganization or partial sale. ■

How The World's Leading Hospital Company Contains Health Care Costs...

Hospital Corporation of America is working every day to contain health care costs in more than 100 communities across America and throughout the world. We believe the efficiency of private enterprise is having a positive impact on the situation and we are proving that we can operate hospitals more efficiently. Through large scale purchasing, prototype construction, efficient personnel scheduling, developing and implementing new management systems, sharing of human resources and the simple factor of the profit motive, we are successfully containing health care costs.

HCA pioneered corporate management of hospital networks and continues as the leader after its first 10 years. Our Company is built on a commitment to deliver high quality patient care at reasonable prices. We attribute our success and steady growth to that commitment. Call or write for more information.

Of all the water used in homes, 55% is used to flush toilets. By cutting water use by 90%, you cut water consumption by 50%.

THE TWO-QUART FLUSH

By Thomas P. Murphy

IF YOU THINK that giant corporations are grabbing all the worthwhile opportunities, please read this story. It will disabuse you. Maybe even inspire you. It is about a couple of private businessmen who may have shown us a way to save half the water now used in the homes of the world.

It all started with two clogged heads (marine toilets) on James H. Albertassi's boat. Albertassi and his wife had cruised their 47-foot Chris-Craft to Florida in the winter of 1972, and during that cruise the heads clogged—both of them. Albertassi was so annoyed he decided that he could make a better one than anything then on the market.

Albertassi was no inventor, but he did own a successful precision machine shop in Braintree, Mass., and he had a lot of engineering experience. He figured the better marine head was not going to be an overwhelming technical challenge.

But it very nearly was. Before he was through, Albertassi had sold the machine shop to get more time and money to devote to his experiments.

One problem with the marine head, Albertassi discovered, was the macerator (grinder). Like garbage disposers, the toilets he experimented with had macerators that tended to clog on paper. No macerator Albertassi could devise did much better.

Finally persistence (some would call it "luck") gave the answer. While experimenting with yet another macerator, Albertassi made a mistake in wiring the electric motor, turned it on and to his amazement, it worked.

Thomas P. Murphy heads a venture capital firm, Partnership Dankist, Stamford, Conn.

While Albertassi had been working on his invention, the Environmental Protection Agency was holding hearings on marine sanitation. From the tenor of those hearings it was clear that boat owners would eventually have to stop flushing untreated sewage into the water. Albertassi, it turned out, had the only self-contained, direct discharge marine head that met the Coast Guard's proposed standards.

Albertassi lacked the capital to launch his invention, and a lifetime spent running a machine shop had not given him much marketing experience either. Enter Walter O. Heinze. Heinze was a marketing consultant with as much business as he wanted and no interest whatever in marine toilets. Reluctantly, he let a mutual friend prevail upon him to meet with Albertassi.

When Heinze saw what Albertassi had, Heinze was exultant. This was more than a boating enthusiast's toy. To understand how this vision happened you have to know something about Walter O. Heinze.

Heinze is a man who already had had two very successful careers. He had been president of International Latex and subsequently chairman of the board of STP Corp. When STP was sold, Heinze started a marketing consultancy firm. Heinze is a man of intensity, in work and in hobbies. He had been a big game hunter, then built Japanese gardens and in recent years has been engrossed in archaeology. Heinze had actually trained himself to do fine, archaeological photography and so the professional archaeologist would invite him along on their digs. Many of those digs were in parched areas of the Near East. It was a peculiarity of Albertassi's toilet that it used little water—only six quarts in the marine version and today, in household model, only two.

What Heinze saw in Albertassi's invention was a possible solution t

ne world's water problem.

Heinze has become something of n authority on water usage and ewage disposal. "Fifty-five percent of ll the water used in homes," he will ell you, "is used to flush toilets. By utting water use by 90%, from 20 uarts to 2, you cut water consumption 50%. Can you imagine," he asks netorically, "what that would mean o a city like Cairo? Its sewers were uilt for a city of 2 million, and Cairo as a population of 8 million."

Heinze agreed to finance the company, and promptly changed the name o International Water Saving Systems, Inc. He also set out to capture ne marine head market and with one dvertisement in *Yachting*, he had the hone ringing off the wall in Avon, Mass. Marine dealers were ordering a roduct they had never seen from a ompany they had never heard of, and 00 at a time! Heinze geared the company to produce 2,000 units a month. ixty people were already at work in ne little Avon plant.

Then disaster. While some boat wners welcomed the Coast Guard's egulations, others swore they would ee the Coast Guard put diapers on hales before they would buy one of nose expensive new heads at well ver $600 a copy. Bowing to the potical furor, the Coast Guard announced it was delaying enforcement ntil 1980. Orders dropped to a trickle. Over those frantic months before, Heinze had had many offers to buy ne company. Now he took one of nem, and sold the marine business to anforth, a major marine manufacurer. But he kept all other rights.

Employment is down to 12 people in von today. The plants are still making me heads for Danforth, whose busiess is good, but the thrust is Heinze's ater-saving idea, and he is already egotiating with an Egyptian company o make the toilets for the Middle East narket, while Albertassi continues ork to perfect the idea. There is also ne recreational vehicle market. Some f the big ones carry half a ton of water nd sewage aboard.

That is the story, but it is not the eason why Walter O. Heinze was illing to have it told. He talked to ne, after avoiding the press through is long career, because, he says, "I ould like to give encouragement to der people. You do not have to give p at 60 or even 70. A man who conues learning always grows more luable to a business."

Walter O. Heinze is 75 years old. ■

Thoughts on the Business of Life

I know of nothing sublime which is not some modification of power.
EDMUND BURKE

Power is the first good.
RALPH WALDO EMERSON

If a man has come to that point where he is so content that he says: "I do not want to know any more, or do any more or be any more," he is in a state in which he ought to be changed into a mummy.
HENRY WARD BEECHER

No man will work for your interests unless they are his.
DAVID SEABURY

Never try to work a man who will work you to death trying to work him.
ROBERT LEWIS WILSON

Great businesses turn on a little pin.
GEORGE HERBERT

No business can offer proper service unless it makes a profit, and service is what a business has to sell.
WILLIAM FEATHER

A salesman minus enthusiasm is just a clerk.
HARRY F. BANKS

Business may not be the noblest pursuit, but it is true that men are bringing to it some of the qualities that actuate the explorer, scientist, artist: the zest, the open-mindedness, even the disinterestedness, with which the scientific investigator explores some field of pure research.
EARNEST ALMO CALKINS

American business needs a lifting purpose greater than the struggle of materialism.
HERBERT HOOVER

Popularity means profits. An enterprise headed by a well-liked executive has far greater chances of succeeding in winning public good will than a discontented organization. Goods produced by loyal workers carry with them an aura—or something—that somehow conveys a favorable impression, which sometimes induces consumers to choose them in preference to products manufactured by coldly disinterested workers.
B.C. FORBES

The character of the ruler is like the wind, the people like the grass. In whatever direction the wind blows, the grass bends.
CONFUCIUS

Success in any enterprise requires the right product, methods and men and each must complement the others.
JOSEPH BURGER

We require from men two kinds of goodness; first, the doing of their practical duty well; then that they be graceful and pleasing in doing it; which last is itself another form of duty.
JOHN RUSKIN

I cannot give you a formula for success, but I can give you the formula for failure—which is: Try to please everybody.
HERBERT BAYARD SWOPE

More than 3,000 "Thoughts," indexed by author and subject, are available in a 574-page book at $11.95. Send check and order to: Forbes Inc., 60 Fifth Avenue, New York, N.Y. 10011. Add appropriate sales tax on New York State orders.

The depositary of power is always unpopular.
DISRAELI

Too often a sense of loyalty depends on admiration, and if we can't admire, it is difficult to be loyal.
AIMEE BUCHANAN

A few honest men are better than numbers.
OLIVER CROMWELL

The only things that evolve by themselves in an organization are disorder, friction and malperformance.
PETER DRUCKER

Ability wins us the esteem of the true men; luck, that of the people.
LA ROCHEFOUCAULD

A Text . . .

Wherefore comfort yourselves together, and edify one another, even as also ye do.
I THESSALONIANS 5:11

Sent in by M.A. Adams, Kingsport, Tenn. What's your favorite text? The Forbes Scrapbook of Thoughts on the Business of Life is presented to senders of texts used.

Sometimes only a change of viewpoint is needed to convert a tiresome duty into an interesting opportunity.
ALBERTA FLANDERS

There are two kinds of discontent in this world: the discontent that works and the discontent that wrings its hands. The first gets what it wants and the second loses what it had. There is no cure for the first but success, and no cure at all for the second.
GORDON GRAHAM

Only 8 NYSE* industrials have paid dividends for 98 years or more.

Government ~~of the people, by the people, for the people,~~ shall not perish...

When Lincoln mourned at Gettysburg, he pleaded for the preservation of a fragile thread of government struggling to connect the diverse interests of the nation.

Today, our government is hardly a fragile thread. With more than 400 federal agencies writing 25,000 new regulations each year, it's more like a ball of twine that totally surrounds, binds and touches upon every aspect of our lives.

Lincoln would be pleased to see that the men at Gettysburg did not die in vain; that in fact the union has survived.

But we think that he would speak out to warn the people for whom this government was founded and preserved that they are about to lose control of it. To the un-elected and unchecked bureaucracy it has spawned.

Let us dedicate ourselves to insuring that Lincoln's union survives in the manner he intended. That his words are not deleted by some federal agency to conform to the latest government regulation.

THE TRUCK STOPS HERE

....and it's been doing just that —economically—for 43 years.

However, some people claim that trucking rates are inflationary, and that consumers pay billions in excess transportation charges. These claims are outrageous.

For instance, from a base of 100 in 1967, revenue per ton mile of regulated general freight carriers rose to 166.2 in 1977. During the same period, the Consumer Price Index rose from 100 to 181.5, or 15 points higher than the price of regulated motor carrier service.

Consumer food prices alone in the eleven years rose to an index level of 192.2. Other consumer price changes were also higher than the increase in truck charges. Compared with the 166.2, housing in 1977 was 189.6; medical care was 202.4 and fuel oil and coal were 283.4.

The men and women of today's trucking industry are concerned about inflation. They are working hard to control costs and economize while continuing to provide dependable motor carrier service.

And 43 years of economical, efficient, safe and reliable service to all Americans who depend on motor carriers for the delivery of essential goods has proven one thing—the nation's trucking system works.

Changes in Truck Rates* as Compared to Changes in Various Consumer Items
1977 versus 1967

ENERGY CONTROL.

How Honeywell helps San Joaquin County save energy. Enough to run one-fourth of this building free.

For San Joaquin County, California, a wise investment in energy management is paying big dividends.

At Stockton, the county seat, one Honeywell Delta computer system now controls energy usage in the Public Assistance Building pictured here and the County Courthouse as well. In one year, Delta saved the county $82,207 in energy costs—enough to run one-fourth of each building free.

The system paid for itself in five and one-half months. Without sacrificing the comfort of building occupants.

Two ways your building can save.

Whether you invest in your own Delta system, as San Joaquin County did—or time-share an energy management system through Honeywell's BOSS service—depends on your building's requirements. In either case, a Honeywell computer controls all your energy-using systems. It automatically checks occupancy schedules, reads temperatures and operates all heating, cooling and lighting equipment for maximum energy savings.

In hundreds of buildings, large and small, energy savings of 20 to 30% are common. There are manpower savings, too. Your maintenance staff need not spend their time checking dials or snapping switches.

A unique combination of hardware plus experience.

Delta is the product of Honeywell's advanced computer technology and our long-established leadership in temperature controls. Only Honeywell designs, builds and services all major components of its own system from thermostats to computers. We can help you every step of the way from planning and detailed applications through installation—and far beyond.

Support service: a strong Honeywell advantage.

Once your system's on line, we can help you make the most of it. Our team of service experts offers you a comprehensive package of energy management and operating support. That package includes: Periodic audits of energy use and costs. On-site operations analyses and quarterly review meetings. Scheduled preventive maintenance and emergency repair service. Plus continuing training programs for your personnel.

You can rely on Honeywell to supply all the energy savings help your building needs—hardware, proven programs and the highly skilled people to make them work.

Take the first step to savings.

We showed San Joaquin County how to save thousands yearly. Let us show you. Write now to: Mr. J. H. Jester, Vice President, Sales and Marketing, Honeywell Building Services Division, Dept. 00000, Honeywell Plaza, Minneapolis, MN 55408.

From the most complex computer systems to the simplest controls, providing better ways to help you control your business has always been our business at Honeywell.

Gone with the whistle

Many FORBES readers over 40 will remember sitting with their parents in the family car, waiting for the railroad crossing gate to go up again and reading with fascination the names on the passing boxcars, some of which appear at right. The names were redolent of history and of faraway places, names like: Père Marquette; Wabash; Delaware, Lackawanna & Western; Great Northern; Nickel Plate; Gulf, Mobile & Ohio; Monongahela. Where are they now, these names from a Norman Rockwell past? Merged out of existence in an age of shrinking railroading, a shrinkage that has seen employment in the industry drop from 1.4 million at the end of World War II to about 490,000 today.

The blowing of the lonesome train whistle became embedded in the American consciousness. It runs like a lament through the novels of Thomas Wolfe and the poems of Carl Sandburg. Thomas Edison's *Great Train Robbery*, the first narrative motion picture, threw up one of the movies' great icons. Those rhythmically rattling trains spun off endless songs and stories from John Henry, that steel drivin' man who ramrodded the C&O tunnel, to Casey Jones who engineered one of the Illinois Central's most spectacular train wrecks. It was said that in railroad towns, a large portion of the babies were conceived in the wee hours when the train, whistle open, thundered through. Generations of young Americans heard that same whistle and yearned to see the world.

The romance is gone. Now the jet airplane, the computer, the transistor, the oil refinery are what Americans think of when they think of industry. The railroads are shrinking; several are bankrupt. But railroading still plays a vital role in American industry. On page 52, Associate Editor Paul Gibson tells how the demand for railroad freight cars is booming. How can the railroads be preserved? By permitting the merger trend to go unchecked? Or through attempting more fundamental reform? Without nostalgia but with relentless realism, Executive Editor James Cook examines these questions in the cover story of this issue. It begins on page 43.

The high cost of bargains

Note to Senator Kennedy and others who want to make laws against corporate takeovers: Please read the article on page 66 of this issue. In theory, a going business is worth more than the sum of its assets—the organization, reputation, etc. have value, too. But with the stock market averages having lost half their purchasing power in the past decade, this is no longer true. Today, almost any major corporation has assets that are worth much more than the price the stock market puts on its entire business. As our story tells, a bidding battle is going on for National Airlines, which was never any great shakes as a going company. The would-be acquirers want its aircraft and its routes—its assets. They are prepared to pay $425 million to get them. For the money they are getting a company that netted about $14 million last year and whose common equity is around $20 million. Contrast this with the price the stock market puts on another airline, UAL—about $670 million—only 60% more than what the bidders are offering for National. UAL netted $302 million last year, owns 50 hotels and hundreds of valuable aircraft. Its equity capital, based on the conservative book value of its aircraft and hotels, is over $1 billion. So National dead is worth almost as much as UAL is worth alive—even though UAL is 6 times as big and over 20 times more profitable. Quite a nice premium for going out of business. There's more wrong here, Senator Kennedy, than just the takeover ambitions of a bunch of greedy corporations. ■

Independence? Well . . .

If it succeeds in its billion-dollar attempt to take over McGraw-Hill, American Express vows to take special steps to maintain the editorial integrity and independence of the big publisher. (Chairman Harold W. McGraw Jr. had cited a possible loss of independence as a major obstacle to any deal.) How would AmEx preserve that independence? FORBES recently was turned down flat when it sought an interview with American Express. Why? Editor-in-chief Malcolm S. Forbes had criticized the takeover in his Fact & Comment column *(Feb. 5)*, an AmEx spokesman said, and the company was refusing the interview because it assumed any FORBES story based on it would also be critical. (Forbes had commented: "I hope [McGraw-Hill] stockholders opt for the independence of this great firm instead of a quick buck.") In this instance at least, American Express seems to have been less than enamored of editorial independence.

A banker's lament

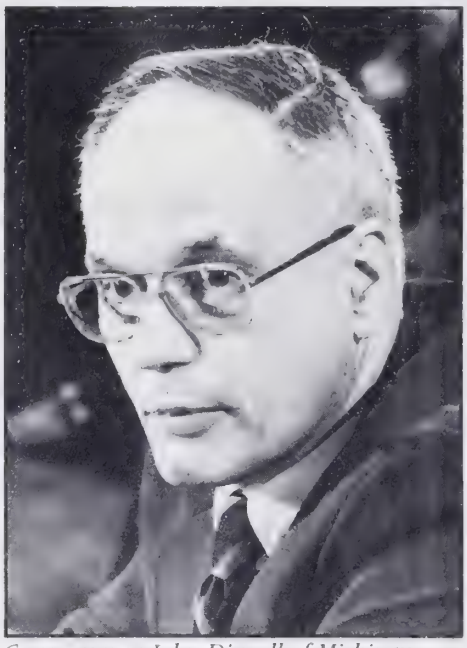
Federal Reserve Board Chairman G. William Miller may suffer an occasional twinge of frustration in his work but it doesn't affect his sense of humor. His job is considered a mystery, he says, because few seem to realize that the Federal Reserve is the country's central bank. "Millions of Americans think it's a wildlife preserve," he says wryly. "Most of the others think it's a rare old whiskey of some kind."

Who pays Johnny's bills?

Public schools, for the first time in U.S. history, are getting more of their money from state treasuries than from local school districts. During the current school year, states will provide 47.4% of the funds, local districts 43.7% and the federal government 8.8%. Two years ago, local districts supplied 52.7% of public school financing, the states less than 40%. California provided the most dramatic turnaround when the now-famous Proposition 13 chopped local property taxes by 57% and forced the state to begin picking up 65% of its school bills, compared with 38% last year. Other states, however, are paying an even greater share. Hawaii leads, supplying 80.5% of local school funds; Kentucky pays 71.6%; New Mexico and North Carolina, 67%; Alabama and Delaware, 66.2%; Alaska, 66%. Proposition 13, in fact, only highlighted a trend. The big shift, according to the National Education Association, has been caused mainly by local resistance to school bond issues and taxes, combined with court decisions ordering more equitable funding among school districts.

Logic and the law

Congressman John Dingell is taking a special interest in insurance, and one of the first bills into this session's hopper outlines his ideas of what to change. First, he calls for an end to any discrimination based upon "race, color, religion, sex or national origin." This Michigan Democrat says insurance companies should use criteria like smoking habits, physical condition, family health history and occupation. (Insurance men will probably wonder just what Dingell thinks they have been using.) They may be equally puzzled by some of the logic the congressman uses to justify his bill. Dingell argues, for instance, that rates based on tables that show women living longer than men are discriminatory. Why? Because, he says, only about 14% of women live longer than men and many women actually die sooner than the average man. See?



Congressman John Dingell of Michigan
Why Capitol Hill can be baffling.

Saving the savers

Congressmen are lining up to promote personal savings. Senator Lloyd Bentsen (D–Tex.), who sits on the Senate Finance Committee, wants to exempt the first $500 in interest on savings accounts from income taxes for individuals (and the first $1,000 for joint accounts). Representative John Rousselot (R–Calif.), a member of the tax-writing House Ways & Means Committee, is pushing two bills, on exclude $1,000 in interest from taxat the other to exclude $2,000. Twenty c gressmen are backing a bill provid partial exclusion for various groups savers, and Silvio Conte (R–Mass.) wa persons over 65 to have a $5,000 exer tion from taxes on interest. Taking s another tack, several congressmen h proffered bills to make tax-free mo placed in special housing accounts signed for later home-buying.

Bubble, bubble, toil and trouble

The big methane gas bubble that waf through Wall Street last year is prov difficult to keep afloat. Energy watch had seen dreams of plenty in estimate geo-pressured methane—natural gas solved in hot brine—ranging from trillion to 5,000 trillion cubic f enough to supply the U.S. for centuri Armed with a Department of Ene contract, General Crude Oil Co. of Dal sank a $4.1 million well on the Te Gulf Coast last winter. It caved in, tr ping 5,000 feet of drill pipe, and had to capped. General Crude is trying anot site, 500 feet away, this time taking s cial precautions against collapse of shale which occurs in combination w the area's gas-bearing sandstone. If t second try works, the well is expected produce 2 million cubic feet of gas day—dissolved in 40,000 barrels of bri So now there is problem number tv the cost of getting rid of that Niagara salt water. The bubble is going to tak lot of blowing.

Humphrey's dream

Gently but firmly, Washington is writi off even the watered-down goals set the Humphrey-Hawkins Act as it w passed by the last Congress, largely sentimental tribute to the late Hub Humphrey, the Democratic senator a vice president from Minnesota. Alice Rivlin, director of the Congression Budget Office, concedes that few econ mists believe in Humphrey's dream th inflation can be cut to 3% and unemplo ment to 4% by 1983, at least by emplo ing traditional fiscal and monetary po cies. Charles Schultze, the chief Whi House economic adviser, also says it wi be "very difficult" to rein in unemplo ment and inflation at the same tim Those two goals, in fact, tend to contr dict one another, one reason Preside Carter backed off from his 1976 can paign commitment to Humphrey-Ha kins and went along with the emascula ed version finally passed last year. Th

l stated that anti-inflation policy ould not be allowed to interfere with ll-employment goals, a pious hope but a ew that no one in Washington takes ry seriously.

The population map

ie boom states of the next two de- des, at least in people, will be Florida, izona, Nevada, Colorado and Alaska, cording to new census projections. By e year 2000, Florida is expected to gain % in population, Arizona 73%, Neva- 54%, Colorado 53% and Alaska 49%. ie smallest increases are expected in ew York, Pennsylvania, Ohio and Illi- is. The projections assume that the gration patterns set between 1970 and 75 will hold true. If they do, the South d West will grow twice as fast as the st of the country.

Color chart

nerican car buyers have made another itch in choosing colors for their new tomobiles. According to Arthur H. oth, automotive color manager for Du nt (largest supplier of Detroit's paints), ver-gray has moved into the top spot the first choice for full-size and inter- ediate models, with a 1% margin over e previous favorite, medium blue. hite ranks number three. Solid black enry Ford's original one-and-only op- n for the Model T) is gaining slightly, oth says, in part because buyers like e graphics that builders are adding to ghten their all-ebon models. Among yers of compacts, medium blue has splaced red as the most popular hue d, for vans and trucks, white has ssed dark brown as the first choice.

Scrap over scrap

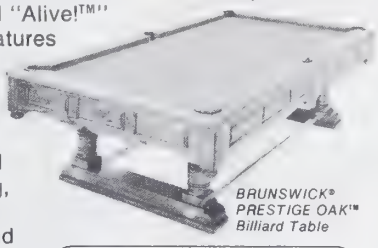
eelmakers, who are still complaining at imports are hurting them, are now in arms about exports. This time, the eelmen want the government to clamp ntrols on outgoing shipments of scrap etal. Scrap prices, they charge, have mped to $102 a ton since last summer, 1% increase. They blame exports, say- g that scrap is flowing out at a higher e than even in 1973, the last time port controls were imposed. Scrap alers are fighting the idea, maintaining at exports are not to blame. The U.S. s enough scrap on hand to supply its eds for 14 years, the dealers argue, iming that the real problems are bad ather in the big industrial states here scrap metal is generated) and a ortage of railway gondola cars to ship e stuff to customers. ■

Brunswick, the people who brought you Air-Hockey,™ bring you

ARCADE-QUALITY HOME PINBALL.

Now, all the size, fun, and action of arcade-quality pinball comes home with home pinball from Brunswick. New "Aspen™" and "Alive!™" are packed with features like fast-action independent flippers, six digit electronic memory for up to 4 players, double and triple bonus scoring, electric sounds, musical fanfares and more. With solid-state dependability.

Take a cue from us when it comes to billiards. Our elegant Prestige Oak™ billiard table is just one of the renowned creations from our complete line of billard tables.



BRUNSWICK® PRESTIGE OAK™ Billiard Table

Brunswick home recreation. From Air Hockey™ to pinball and beyond.

Saga of the Stuyvesant

When Seatrain Lines' young president, Stephen Russell, maneuvered his company's $120 million, 225,000-ton tanker Stuyvesant into the Alaskan oil routes, FORBES *(Oct. 15, 1977)* regarded it with astonishment and admiration for its daring combination of business savvy—and sheer nerve.

The play opened when the Stuyvesant slipped down the ways into a world market slowed by a glut of oil carriers and then becalmed by the OPEC embargo. The only blue skies were over the routes that would handle the new flow of Alaskan oil. Russell steered for them and promptly ran aground. The 1920 Jones Act closes domestic shipping routes—and the Alaska run is one—to foreign carriers and to American ships built with taxpayer subsidies. Seatrain had used $27.2 million in subsidies for the Stuyvesant (plus $28.8 million more for her sister ship, the Bay Ridge, still abuilding and also aimed at the Alaska business). Unfazed, Russell first asked Washington to let him carry North Slope oil anyway. The resultant uproar from competitors with unsubsidized tankers killed that, so Russell dealt a new hand, offering to repay the Stuyvesant's subsidy if the Jones Act restrictions were waived. The Commerce Department agreed and gave Russell 20 years to repay at 7.9% interest, a boon indeed, considering that Seatrain had negative working capital the previous year.

Calling for a new deal and a new look, three competitors, Shell Oil, Alaska Bulk Carriers and Trinidad Corp., sped to court. But while the lawyers argued, the Stuyvesant was sold on a leveraged lease back to General Electric Credit Corp. and began hauling Alaskan oil under charter to Sohio. A few months later, a U.S. district court upheld Russell's move and the outraged competition went to the U.S. Court of Appeals.

This month, the appeals court in Washington, D.C. ruled the other way. shipbuilding subsidy, a majority foun meant that under the Jones Act "the sh is dedicated to the U.S.-foreign trad Whether repaid or not, "the subsi stamps indelibly the character of t ship then and thereafter."

The judges' decision puts the Stuyv sant back into troubled waters. It al spells potential trouble for the Bay Ridg even before the latter leaves the Broo lyn Navy Yard. Seatrain wants to put t second ship into the Alaska business b so far has been unable to get the approv of the Commerce Department, whi proved so accommodating in the case the Stuyvesant.

Russell, who has raised Seatrain's o erating revenues from $345 million 1974, the year he came aboard, to $5 million last year, is holding a stea course. Seatrain will seek further a peals-court reviews and, if need be, vow to go to the Supreme Court. (Under a counting rule FASB 13, although t Stuyvesant was sold to GE Credit, Se train must treat the transaction as a loa and keep the ship on its books, both as liability and as an asset.)

Growing pains

"That rare bird, a new investment idea, was FORBES' first reaction to MassMu tual Corporate Investors, a $94 millio closed-end fund launched in 1971 b Massachusetts Mutual Life. Reportin on the venture's first year *(Sept. 1, 1972* FORBES added that "when the inves ment history of the early Seventies written, the prize for useful originality could well go to the "normally stodgy Springfield, Mass. insurance firm.

MasCp (which is how the New Yor Stock Exchange lists the stock) differe from regular mutual funds because it ha no commitment to redeem shares, an from standard closed-ends because ther was no market valuation for most of it investments. What it proposed was t

The Seatrain tanker Stuyvesant shows her lines in New York harbor
It takes more than seamanship to make a profit at sea.

Follow-Through

t its money into private placements, a actice that the parent insurance com- ny had raised to a fine art. In effect, ch placements let the lender earn not ly interest but equity extras like war- nts or convertibles, with little down- e risk. "It becomes a game of heads win, tails we don't lose," was the mment of Richard Dooley, who then both MassMutual's private place- nts and the new fund. (He is now ecutive vice president and chief in- stment officer.)

To make sure the new fund's investors ed the same odds, the Securities & change Commission laid down a re- irement that the parent company had invest jointly and equally in any ven- e and had to get out in unison as well.

The rosy future expected both by Doo- and FORBES, however, didn't quite rk out.

First, MasCp got off to a slow start. derwriters demanded and got a hefty million of the original $100 million tation, shrinking assets-per-share im- diately from $25 to $23.50. Dooley mes the initial hitches on the fact t the SEC wanted the fund fully and iftly invested because it took a dim w of anyone collecting a 1% manage- nt fee on unused funds. "To place $94 llion in 18 months was too fast," Doo- says. "Investing had to be done in a rry and thus was overly sensitive to economy and the stock market."

Then, the game of "heads we win, ls we don't lose" proved to be any- ng but a sure thing. MasCp had win- rs—Dooley cites a $2 million gain on ker Drilling, another of $800,000 on oan to American Broadcasting. But ere were lemons, too. He winces en he recalls Richard Abel, a com- ny merchandising books to college okstores. Abel ran into inventory blems in 1976 and handed Dooley d MasCp a $1 million loss.

Today, MasCp sells on the Big Board at ound 16 and Dooley thinks the fund d its shareholders (today 11,000 in mber) are in good shape. The fund now up to $100 million and is fully invest- its management has enough time to n. "We can afford to be pretty selec- e," he says, about the $10 million or MasCp will invest this year. The d's policy is to retain capital gains for nvestment and to pay out earnings as idends. These reached 40 cents a arter in the mid-1970s, were cut to 38 nts in 1977 and moved up, in three ges, to 42 cents last year. So while it s turned out to be no bonanza, MasCp yielding close to 7% on the original ce—and who knows? It may yet hit me more big winners.■

New from OLYMPUS Optical Co., Ltd.

THIS NEW MICROCASSETTE™ PEARLCORDER™ REMEMBERS NOT ONLY WHAT BUT WHEN!

Pearlcorder™ D130 Microcassette™ Tape Recorder with the exclusive Quartz liquid crystal display clock, timer, stopwatch and digital tape counter.

Plus plug-in modules: AM and FM tuners, interview microphone, voice-actuator, and more.

If you appreciate the finest things in life, you'll understand why this is the costliest Microcassette™ recorder made. And you'll want this miraculous memory machine with up to 2-hours of recording on a tiny tape. Under $350, at your Olympus dealer. Or write for brochure, to Olympus Corporation of America, 4 Nevada Drive, New Hyde Park, N.Y. 10042.

MICROCASSETTE™ AN OLYMPUS DEVELOPMENT

Pearlcorder™ D130. The audio-video memory.

Ireland...friendly, unspoiled, inviting, exciting. From sightseeing to shopping, from castles to cottages, to the Abbey Theatre. And it's described to perfection in this beautiful 32-page full color book. Take the first step toward a perfect vacation by writing, then see your travel agent.

MY TRAVEL AGENCY IS

A REASSURING MESSAGE TO ALL TURKEY FARMERS, EAR PIERCERS AND NOTARY PUBLICS.

Most insurance companies won't go near turkey farms.

And they were never too interested in covering hair removers, escrow agents or skydivers.

But at AIG, insuring the unusual has always been business as usual.

And now, writing these special policies is even easier. Because New York State changed its policy.

On September 1, 1978, the Free Trade Zone was created.

As a result, lengthy and often costly delays were eliminated. Because insurance companies licensed in the Zone are no longer required to file policy form and rates in accepting unusual risks.

AIG companies were the first to write unusual coverages in the Free Trade Zone

And we have more companies licensed to do so than anyone else. Six in all.

Through your broker, we can insure against drought or leaky waterbeds.

We can cover tree surgeons or paramedics. Auto racing or space travel.

We can make safety consultants feel safer and private security forces more secure.

In fact, there are hundreds of unusual risks we can cover.

And that list may be added to in order to meet your needs.

If you'd like to know more about the Free Trade Zone, please send us the coupon below.

We think everyone from actuaries to zookeepers have the right to rest assured.

AIG'S "FREE TRADE ZONE" POLICIES

Please send me more information, including a list of the unusual risks covered in the Free Trade Zone.

American International Group

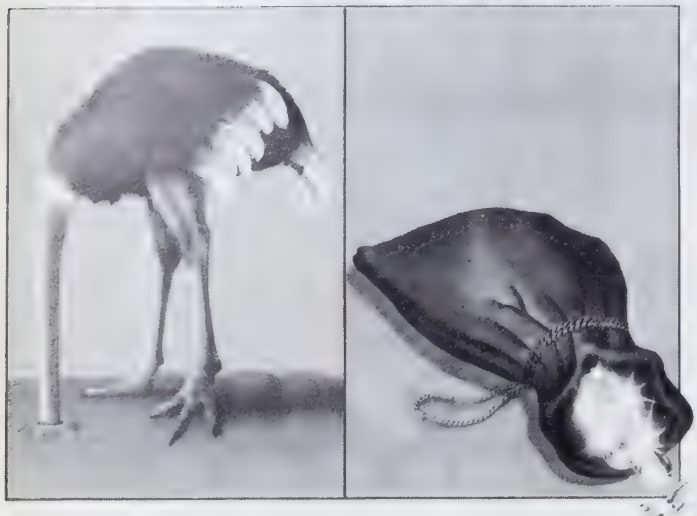
AIG companies licensed in the Zone: American Home Assurance Company, Birmingham Fire Insurance Company, Commerce and Industry Insurance Company, National Union Fire Insurance Company of Pittsburgh, Pennsylvania, Landmark Insurance Company, The Insurance Company of the State of Pennsylvania

TWO WAYS OF DEALING WITH CONTINUING INFLATION.



Face it. Constant inflation has gone beyond theory.

It's now a part of realistic economic planning. And you should count on it undermining the future value of your earnings, retirement plans and investments in general.

Diamonds, on the other hand, have consistently hedged the effects of inflation.

The reason? Diamond supply is limited by an international cartel which keeps diamond prices responsive to the international economic picture.

All of which ought to suggest that now is prime time to contact an International Diamond Corporation Certified Diamond Counselor.

He's a financial specialist who's been thoroughly schooled in every aspect of the investment diamond industry. Each month he holds a free class to show you how to invest in diamonds for maximum liquidity, security and profit.

Phone us for the name and number of your local Certified Diamond Counselor. International Diamond Corporation, 30 North San Pedro Road, San Rafael, CA 94903, (800) 227-1490, in California (800) 772-3338.

Borman versus Amtrak

Mr. Borman, boss of Eastern Air-s, states the government could buy airline ticket for every Amtrak pas-ger traveling between Chicago and mi for less than subsidizing the same trak service *(Other Comments, Feb. 5)* id Mr. Borman's cost of an airline et include government money spent uild and maintain the Chicago and mi airports?

e Lehman
lake, Ohio

Who is paying for the airports, FAA, r, etc.? Also, who is paying for the l the airlines haul? Come down from clouds, Mr. Borman, and recognize fact that we are all subsidized.

H. Budwill
homa City, Okla

You and others discussing Amtrak to comprehend the isolation of com-nities and small towns when railroad senger service is cut off. Most com-nts against the operation of Amtrak ne from people in large metropolitan ters usually adequately served by air-s, trains, bus routes, interstate free-s, etc.

harles P. Vickers
le, Wash.

They will spend it

While it would be highly advanta-us for us to decontrol oil and gas es in this country *(Fact and Comment, 22)*, to advocate that "a pretty good k of that cost ought to be straight ral tax" because the added revenue ld "largely reduce the anticipated billion deficit" is naïve. Do you real-believe that increased tax revenues lt in a decreased deficit? The bureau-s and politicians always spend it fast-han it can be collected.

onald M. Doyle
neapolis, Minn.

Save the Children

Your article on charities *(Feb. 5)* re-ed that Save the Children "live[s] off rnment grants." In fact, in 1977 only % of total income was received from government. That article also stated he chart on page 50 that but 55% of ome was expended on our programs. t figure is a distortion in that Save Children received on the last day of iscal year a bequest from Eli Lilly of $3.3 million, reported as income in the annual report, but obviously not spent in a 24-hour period. Excluding this onetime bequest produces a figure of 76.8%, a commendable income spent on programs. This extraordinary item should have been included in your "Unexpended income" column.

"Orwellian" crimes

SIR: When a corporate president, Mr. Park, is convicted by OSHA and the Supreme Court of the "crime" of allowing rats in his warehouse *("The boss in the slammer," Feb. 5)*, one wonders just how oppressive our sick government has become. Mr. Park is now a "criminal" because he could not accomplish what man

MORE BRITISH THAN A STIFF UPPER LIP.

Nestling near Belgrave Square, London, is the Ladbroke Belgravia Hotel. Central, but blessed with a distinct air of tranquillity.

It's small, friendly and exceedingly civilised. It has 110 rooms, each equipped with colour television, direct dial telephone, and individual air conditioning.

It's the kind of hotel where your drink is served, not in an ordinary glass, but in one of cut crystal.

Where, between sips, you can nibble on a canape or two, chosen from those presented on silver trays by the waiter. Asparagus and smoked salmon, perhaps, or a piece of robust English cheddar.

Should disaster have struck earlier in the day, or at best just minor inconvenience, you'll discover a needle and thread in your room to help rectify the situation.

The bathrooms are complete with a telephone extension, so you can retain your dignity, instead of having to scutter, dripping, to the bedside table.

And if we can't provide you with a certain something, it's really nothing to worry about.

Harrods is just round the corner.

Ladbroke Belgravia

LADBROKE BELGRAVIA HOTEL · CHESHAM PLACE · LONDON SW.X 8HQ

For reservations call 800 621 8336 (in Illinois call 800 972 8089) or see your Travel Agent.

AND A THRIFTY SPECIAL ACCOUNT CAN SAVE YOU UP TO 48.7%. In order to "out-Thrifty" Thrifty, our major competition would have to give you a discount of up to 48.7%. Maybe more. Our Special Account program offers two ways to save. For short distances, rent a Chevrolet Monte Carlo or similar car for only $16.95* per day plus 10 cents a mile. Or choose the Freeway Special at $21.95* with the first 150 miles included. In each case you pay for the gas. And you choose the plan that saves you the most after you turn the car back in.

We'll include $1 million combined single-limit BI/PD insurance in the bargain, plus collision protection with $100 deductible—as opposed to competition's $250 deductible.

We'll give you lots of extra Thrifty service, too. Like confirmed reservations on any size car, courtesy airport pickup and delivery and more.

And we'll provide it at nearly 400 destinations in all 50 States, Canada, Central America and Great Britain.

For details, send the coupon. We'll give it very special attention.

How Irving's Corporate Financial Counseling works for companies.

Practiced and practical. Each year, Irving's Corporate Financial Counseling professionals hold seminars on subjects of interest to corporate managers. And when Victor Suhar, International Group Manager, conducts sessions, the subjects are international in scope.

"We're working practitioners," he explains, "so we speak from experience.

"Recently, for example, we were retained as counsel on foreign exchange risk management by a U.S. manufacturer of industrial equipment having heavy equity participations abroad. Our assignments: first, design a program to reduce foreign exchange risk. Then, evaluate the company's equity investments overseas.

"Later, a European affiliate engaged us for a recapitalization and a five-year financing plan.

"Experience like this enables us to make successful recommendations for our clients worldwide."

Independent, informed counsel. "Last year alone, some 500 companies called on our services to meet a wide variety of needs." Speaking: Harry Lund, Domestic Group Manager, Corporate Financial Counseling.

"Broadly, we're corporate consultants on all matters of long-term finance and financial management. We assist our customers in areas ranging from mergers and private placements to dividend policy and profit goals. We're a source of up-to-date information and insight on financial issues. And we've a supplemental staff to help with bi or urgent projects.

"But most of all, we offer something that managers just can' find in their own companies—an independent, informed opinion on problems of corporate financing and policy."

The Olympic bank. Irving is well-prepared to serve as the Official Bank of the 1980 Olympic Winter Games. After all, we have more than 100 years of experience in international banking.

Fact and Comment

By Malcolm S. Forbes, Editor-in-Chief

LET'S TAKE THE FIRST STEP PROMPTLY

ne volunteer Army is faltering more every day.

ne Joint Chiefs, political Nervous Nellies, at the moment only ready to ask for a standby draft system that would ire registration and classification and—maybe—testing of t-age youth.

ur Ready Reserve has already shrunk from 1.6 million to 000. As for the volunteer Army, almost 40% of the male uits last fall were black, an inequitable situation in a democracy and one created largely by an unemployment rate among draft-age blacks of 39%, which is more than double the nation's average for youths.

The problem of having our military forces adequate to preserving the Free World won't go away by ignoring it.

If we haven't yet the guts and sense to reinstitute universal service, let's at least take step one, by restoring registration and classification.

THOSE FIGHTING 55 MPH CAN FORGET IT

that the same sort of gasoline crisis that brought on that in the first place looms again.

simply is an uncontested fact that at lower speeds engines burn less fuel than they do at high speeds.

Driving 55 is somewhat less of a problem than not having enough fuel to drive at all.

THREE CHEERS FOR SEARS!

They've struck a Telling (CEO Edward R.) blow against capricious, arbitrary and conflicting federal agency regulations and policies on equal employment.

WHEN HAIG RESIGNED AS NATO COMMANDER

pened to be in Europe and was astonished that so much of press there took seriously the possibility that he could me the Republican presidential nominee—simply be- e, apparently, Alexander Haig himself does.

aving enjoyed a sizable chunk of presidential power when Nixon was in mental and political limbo prior to his physical departure from the Watergated White House, General Haig, I guess, decided he liked the job enough to want it.

His chances, though, are probably only slightly ahead of those of thee and me.

INSTEAD OF FUMING ABOUT IRAN, MEXICO, SAUDI ARABIA

an—with a little vision—turn these not-unrelated prob- into opportunities. We're virtually forced to get going on ible solutions, since there's no way we can have our way, ne way, with any of them.

n's down the pipe for the indefinite future as former ntities of oil in the export pipeline go. Most present, and ainly all future, commitments for vast military purchases gone with the Shah.

ow, too, we have to start understanding the Saudis' posi- —Senator Church's fulminations notwithstanding. The long-powerful (200 years) Saud family is—wisely—worried should Khomeini turn Qaddafiesque, venting his anti-Royalist ire on the pro-American Saudi regime. The Saudis will not, cannot, march in lockstep to changing American tunes. Preserving Saudi's independence and its present regime is as much in our interest as theirs. They know what's required to do that better than we do. What's convenient for us isn't necessarily what's healthy for them.

As for Mexico—short-thinking Schlesinger has to be short-circuited, if not politically electrocuted, for his asinine aloof-

ness toward our southern neighbor. President Carter had better press for solutions to our gas-and-oil-pricing differences with this next-door neighbor who's burning off the gas we so need more and more every day. Mexico is contracting to ship oil from its Saudi-like reserves thousands of miles to Japan, to Europe and behind the Iron Curtain.

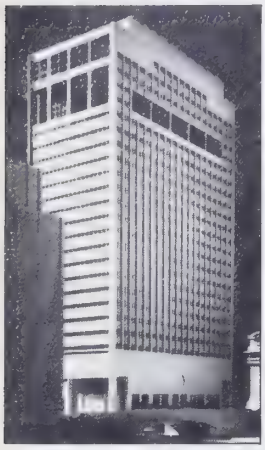
Here we sit, Schlesingering, while the vital stuff next door goes expensively past our front door. At the same time OPEC, by price, and Iran, by revolution, push their doors in Uncle Sam's face.

By facing up to what is the Iranian reality now, w eventually restore to some degree our trading relationship this "Islamic republic."

We can strengthen the Saudis by ceasing to Church th

We can lessen our oil/gas crunch by ceasing the old ha looking down our nose at our southern neighbor. We're de now with a Mexico who's blamed important to us. It power card on a par with any high card in our hand. W earnestly begin being a good neighbor, and be done wit empty Good Neighbor rhetoric so long used as a substitu

CORPORATE ARCHITECTURE: ONE AWEFUL, TWO AWFUL



Philip Morris

There's no call for Philip Morris to plunk this big square box on Park Avenue *(left)*. Wouldn't you think a company that has grown so swiftly by imaginative marketing, that has been a longtime patron of the arts, would extend its vision to architecture?

As for this proposed AT&T building *(far right)* in New York—surely it's a joke? Can you imagine Ma Bell actually building a monumental Chippendale highboy such as this? John deButts, who retired early this year as CEO of this extraordinarily successful corporate giant of giants, could have even further humanized the AT&T image by sending the architects to the showers and new ones back to the drawing boards.

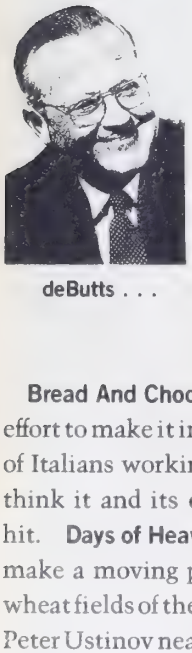
Avon

On the other hand, take a look at this breathtaking Avon tower *(center)*. To look up at this building is to lift up one's spirits. Even if you're just shuffling'-hustlin' along 57th Street in typical never-look-up New Yorker fashion, that nifty number "9" does a number on y

AT&T

Architecturally, anyway, Tiffany and Avo in a high-karat compatibility.

SPEAKING OF JOHN deBUTTS . . .



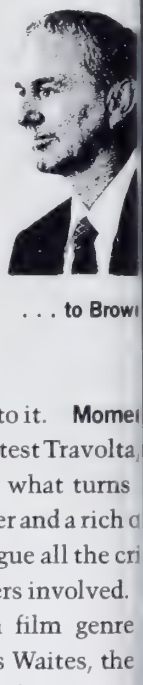
deButts . . .

This inordinately able guy is going to be missed, not only by everyone who has any connection (that's a pun) with AT&T, but by the Business Council and those in government who've been sensible enough to seek his counsel.

In our last conversation before his departure, deButts mentioned something which puts in context the size of both the company and its problems:

"If we handle 99.9% perfectly our 767 million telephone calls a day, that still would leave 760,000 customers who had a bad experience."

Thank goodness successor Charles Brown has what it takes to take over one of the biggest, toughest, most important CEOships in the world.



. . . to Brow

MOVIE REVIEWS

Bread And Chocolate—Depicts the frustrating, heartbreaking effort to make it in Switzerland by one of the multiple thousands of Italians working there. Though the film's won prizes here, I think it and its over-Chaplinizing hero miss more than they hit. **Days of Heaven**—Every frame of this stunning film would make a moving picture. A Dreiser-worthy tragedy among the wheat fields of the Texas panhandle in 1916. **Death on the Nile**—Peter Ustinov nearly murders Agatha Christie's bloody good fun whodunit. And Bette Davis shouldn't be dragged out of retirement any more. Still, the film's fun, the settings great. **Just Crazy About Horses**—If you've ever liked horses, or wondered why so many are passionate about one aspect or another of 'em, this superbly photographed, superbly paced documentary answers All, in the voices and actions of those really into it. **Momen Moment**—All the critics have dumped on this latest Travolta, I thought it was great. Imagine, a film about what turns genuine love between a Hollywood Strip hustler and a rich o woman that has a happy ending yet! The dialogue all the cri called trite, but I'd call it true to both characters involved. **the Yard**—By far the best yardage of prison film genre produced. First-rate actors, especially Thomas Waites, the lain Who's A Good Guy At Heart. Even the high suspense drama don't interfere with the message: that prisons a frustrating box for prisoners, and for guards and parole board well. **Superman** is good clean fun for kids of all ages. Fo others, this comic stripper just doesn't fly.

THE MOST SENSE ABOUT JAPAN AND U.S. TRADE

ade by Mike Mansfield, our ambassa-
in Tokyo, in his comments beginning
page 73 of the Japanese advertising
ion in this issue.

ormer U.S. Senator Mansfield merits
appellation of "elder statesman." Not
use of age and that he formerly held
ic office, but because as longtime
rman of the Senate Foreign Relations Committee he
a statesman and, in his present tough position, *is* a
esman.

ur present trade imbalance with Japan of $12 billion is a
factor in a trade deficit we can no longer afford if the buck
regain its health. Many, rightly, are pretty hot under the
ar when agreements with Japan which seem to reduce their
f barriers on American goods are balked by a distribution
em that proves a mighty second hurdle.

it Ambassador Mansfield makes a valid point: We want

Ambassador Mansfield and FORBES' Jim Dunn

immediate results and resent the patience required for the long-term approach. As any American doing business in Russia can testify, it takes years rather than months to learn *how* to do and then actually to do business in the U.S.S.R.

Our ire blinds us sometimes to the fact that Japan now is our largest overseas market. In 1978 our exports to Japan were over $13 billion—though that's only a bit better than half of what we buy from them. Japan has the world's third-largest economy. Its potential for increased U.S. sales is still great.

There's an enormous gap to be bridged in philosophical understanding; in our making the effort to gain as much practical knowhow as the Japanese have here; and between dollars and yen.

Those gaps are lessening though, thanks in major measure to Mike Mansfield.

THE UNDRIVEN
don't get there.

SHOW ME A GOOD LOSER
and I'll show you a steady one.

A WARNING TO INVESTORS

By M.S. Forbes Jr.

When we hear reports of record corporate profits, when we read about the number of multimillion-dollar cash acquisitions, when we are told that the major banks are still not quite "loaned up," when we are reassured that companies are keeping a tight rein on inventories, it is quite a shock to learn that the balance sheets of American corporations are in the worst shape they've been in since the dark days of 1974.

But as one politician used to say, "Let's look at the record."

Each quarter the FTC publishes SEC-gathered balance sheet data for all manufacturing companies, and the numbers make for grim reading. While many corporations may be awash in cash, many are not—or if they are, their pile of greenies is more than matched by increased short-term liabilities.

The SEC data show that the ratio of liquid assets (cash and short-term investments) to current liabilities (such as payables and short-term debt) is at the lowest level since the fourth quarter of 1974 when we were in the severest economic contraction since the 1930s. The critical ratio of debt-to-equity is at the highest level it has been during the post-World War II period. Most of this new debt is short term.

A.G. Becker vice president and economist Roy E. Moor brought attention to these numbers last summer in a report called, "The Most Bearish Story." The reaction among Becker's clients was disbelief ("It went against everything most of them had been led to believe"), but those numbers were unassailable.

What is so disturbing, says Moor, who recently updated these figures, is that we are not yet in a recession, when such low ratios would normally be reached. Despite big profits, companies have been laying out cash faster than they have been earning it.

Moor concludes glumly, "The most insidious characteristic of the situation is how the plague continues to spread, without as yet causing major fatalities." The longer this deterioration continues, "the more widespread will be the ultimate financial crisis." If a contraction does come, many companies will have precious little cushion.

"The signs of this deterioration are already appearing," warned Moor in a conversation with this writer. "Look at the bankruptcies of Food Fair and Allied Supermarkets. Look at the financial condition Firestone was in when it was hit with its radial problems. Look at the down gradings in bond ratings."

Another alarming aspect of this situation has been the growth of debt between companies in such areas as receivables and trade credits. In the past two years, this type of borrowing has jumped from $69 billion to $92 billion, or 33%. A major insolvency could have a greater impact on the health of other companies than in the past.

Moor dispels the misconception about capital spending. It started slowly after the last recession, but since late 1976 has been growing faster in real terms than the economy.

Because the last recession was preceded by a large inventory buildup, it is inventory that observers have been concentrating on. Like generals fighting the last war, we are overlooking what could precipitate trouble *today*. In short, many analysts have been lulled by reports of record profits and dividends, of cash hoarding, of sluggish capital spending.

All this isn't meant to suggest that we are on the verge of a great collapse. We are far from that. Moreover, the stock market has pretty much discounted a severe recession and corporate liquidity crisis. But the message to investors concerning individual companies is clear: When you get your 1978 annual reports, you'd better take a hard look at the balance sheet. Not just the asset side, but the liability side as well.

Other Comments

Often comments by others stimulate, irritate, abuse or amuse this editor's mind.—MSF

Iron Will and Hatred

During revolutionary years, success came only to men of iron will and red-hot hatred. Time and time again, men of moderate views failed because of a lack of will or an inability to take decisive action.

—J.H. Plumb, British historian

Respect for Customs

"Believe me, I feel shame as an Arab when I see the way some of us behave in London [said a Saudi multimillionaire businessman]. But I have no respect whatsoever for some Westerners when they come here and don't bother to learn the ways of the country. For instance, in the Arab world you never cross your legs and put the sole of your shoe in a man's face—it's an insult. If anyone comes into the room you get up. You'd be astonished how these small things have a bearing. Westerners come here with no respect for our customs, so they have no right to point fingers at Arabs who go to their countries."

—Linda Blandford, *Super-Wealth*

Corporations and Architecture

Private enterprise has come to rival government as a powerful patron of architecture; the chief patron of the past, the church, has largely been displaced. However, private enterprise has done little for the advancement of American architecture . . . having produced too few splendid structures such as New York City's Seagram building. . . .

New York City's Rockefeller Center has been the subject of countless laudatory articles in architectural publications, while the glass towers across Sixth Avenue have been virtually ignored.

—James Carberry, *Wall Street Journal*

"Natural" Is Dangerous

There are hundreds of highly dangerous "natural" chemicals, just as there are thousands of perfectly harmless "synthetics." Yet environmentalism has managed to establish the doctrine that everything in nature is "good," while things that are made in the laboratory hold the potential for destruction. . . .

Plants themselves are intensely involved in this struggle for existence and their form of "warfare" is largely chemical warfare. Certain cacti give off herbicidal chemicals that make it impossible for other plants to germinate in their immediate vicinity.

Almost everything we eat is a human invention that does not exist in nature. They are completely "unnatural" organisms that we have invented for our own purposes through a process of chemical and genetic manipulation. . . . Cancer-inducing chemicals occur naturally in many foods. Dr. Russell S. Adams Jr., of Penn State University, found that such common foods as rutabagas, tea, cabbage, turnips, peas, strawberries and milk all contain traces of chemicals that either cause cancer or are closely related to chemicals known to cause cancer. . . . The entire centuries-old effort of improving breeds for greater yields and better disease resistance could easily drown in the same sea of red tape that has already suffocated the pesticide industry.

—William Tucker, *Harper's*

Oil Swap

The shutdown of the Iranian oil industry has stretched world fuel supplies tight, increased American dependence on Arab sources and raised the prospect of shortage. Yet the oil fields of Alaska's North Slope are operating well below capacity. . . . When oil companies asked for the right to build the Alaska pipeline, they assured Congress that all the oil would be sold to West Coast refineries. To hold them to their word, Congress banned exports of Alaskan crude. . . . California burns only the lowest sulphur-content fuel oil and huge quantities of high-octane gasoline. Alaskan crude is too sulphurous. Alaskan crude might be sent East. But the only route is through the Panama C

"At last I've hit upon a cheap source of energy, Janet."

There is a neat solution: Let th companies swap their Alaskan oi Mexican oil that would otherwise er in Japan. The Alaskan oil would be fectly acceptable to Japan. The Mex oil would be a boon to the U.S.; it easily be processed in Gulf Coast ref ies. The result: everybody would transport costs. The swap would inc total world oil supplies. . . and re our dependence on foreign oil.

—*New York Times* edit

The trouble with governm regulation of the market that it prohibits capitali acts between consent adults.

—Professor Robert No

Swamis versus Shock

I have traced Hindu mysticism its origins to the present. What sh we say of it? I can speak only for mys have practiced meditation, with no except that of a close reading of the nishads. I found it difficult, but be cial. I know one thing: If I found m in a mood of profound depressio would go to an ashram rather than psychiatric clinic. The swamis m not be able to cure me, but at least would not fasten steel clips to my b and torture it with electric shocks.

—Aubrey Menen, *Hor*

The Essential Element

I think what is happening in educa is most disturbing. Students really not required to learn, they are not quired to study. There is no discipl Many are living without rules, with authority, without respect for autho How are these people ever going to quire the habits and the knowledge t can run the country, or run the busin es, or produce the works of art? All t means discipline. I don't write with working eight hours a day, sitting there and working hard. Among man these students there's no sense of w no respect for work, no sense of satisfaction you get out of it.

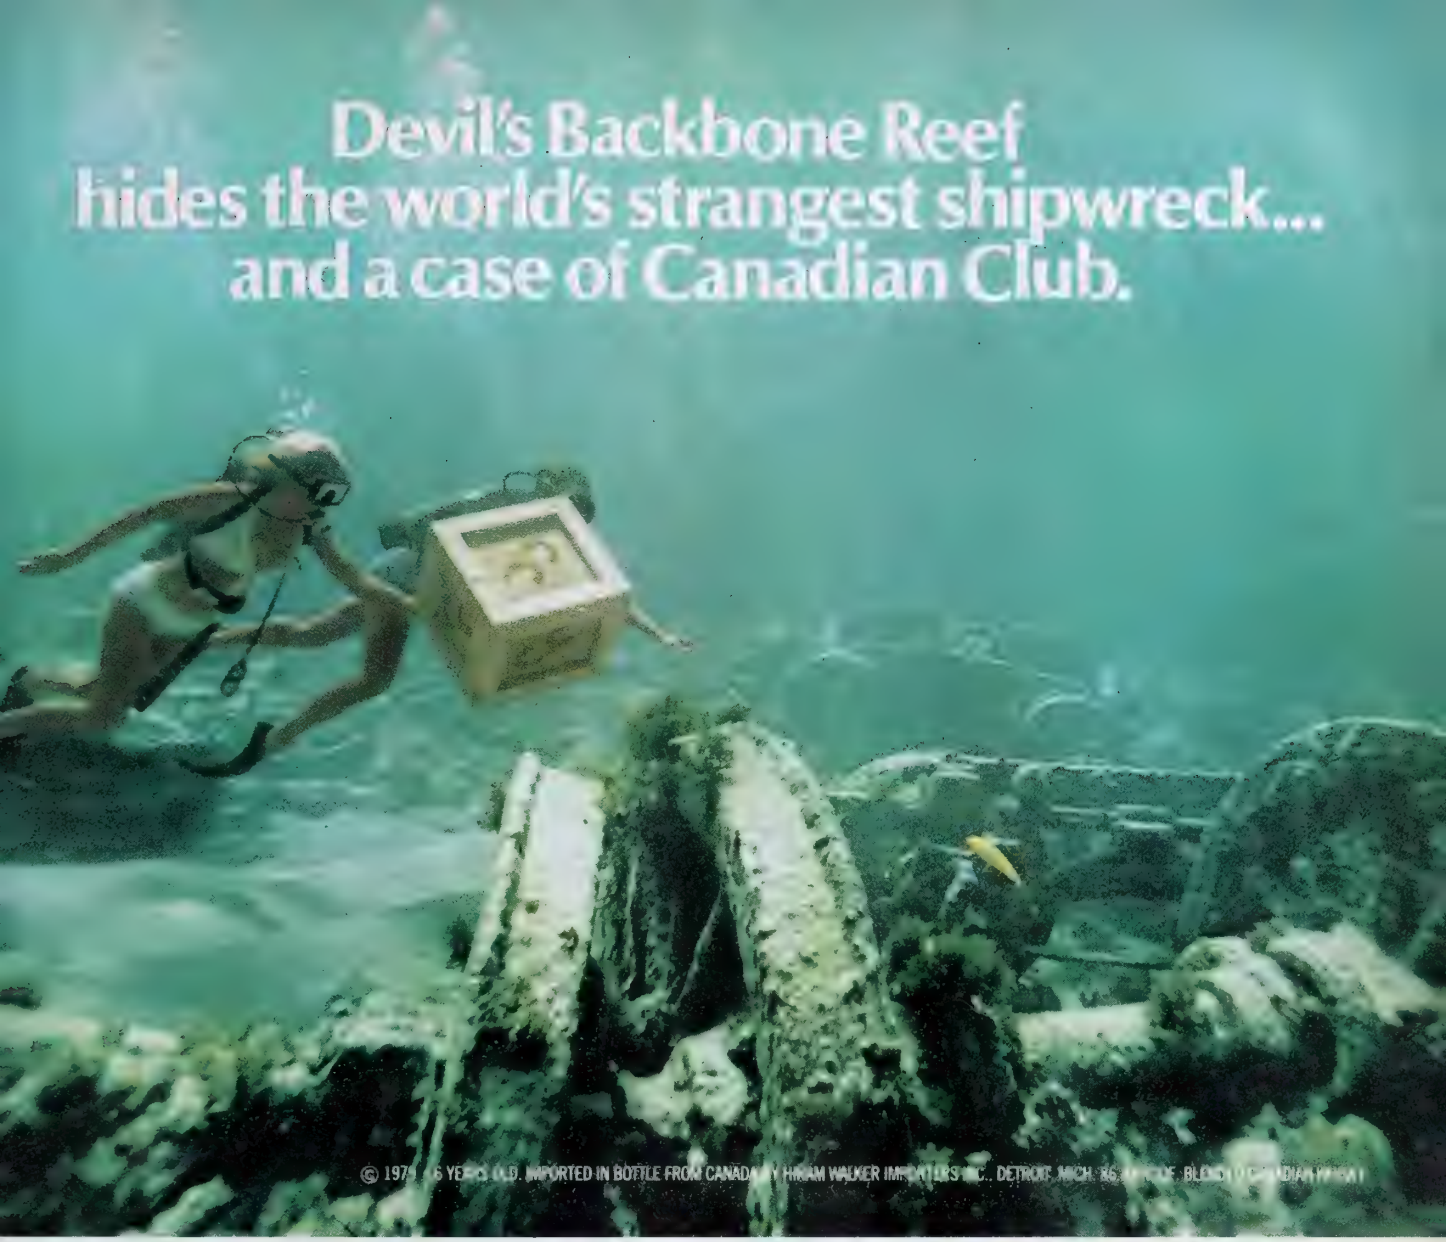
How To Fill Mental Cavit

Devil's Backbone Reef hides the world's strangest shipwreck... and a case of Canadian Club.



Since Columbus first came ashore here, sailing men have been littering the brilliantly blue Bahamian waters with shipwrecks. Some carried treasure, some drowned heads. But the strangest of all carried a train.

Hell for ships, heaven for divers.

The train lies off Eleuthera's northern tip, scattered on Devil's Backbone Reef. At least six wrecks are strewn here: a diver's paradise, we thought, and a perfect place to hide a case of C.C.

We headed for Romora Bay Club on Harbour Island. The club could provide us a launch and guides to explore the reef. Nearby Dunmore Town could offer Bahamian entertainment, complete with Canadian Club. But no one could provide us with a reliable story of how or when the train had sunk on the reef.

This is exactly where the case lies.

Seek groupers, and bring muscles.

We combed Devil's Backbone till we found a devilish place to hide our Canadian Club.

To raise the C.C., you'll need scuba gear, guts and muscle: it weighs 200 pounds. Start where a "dinner boat" went down on Devil's Backbone. Follow a channel across the reef to an old Ward Line steamer wreck (try this only in bright sunlight or you'll lose your boat). Take a bearing from its bow. Not more than 200 yards along, where the reef slopes into deep water and a big Nassau grouper lives, we sunk the watertight case of Canadian Club.

May your seas for the search be as smooth as our whisky. Note: nonswimmers may discover their own Canadian Club adventure at bars or local package stores by just saying "C.C., please."

Canadian Club

"The Best In The House"®
is even better in the Bahamas.

We fly the world the way the world wants to fly.

Every day we fly the world.

We take Americans to Tokyo and the Far East. We take tourists from Australia to the American West. Business travelers from London to Frankfurt. We take Texas oil people to the oil capitals of the world. All on the world's largest fleet of 747s and 747SPs.

And because we have a whole world to fly, we have a good idea what the world wants from an airline.

They want attention. And they want to be left alone. They want to put their trust in long experience. And they want a lot of new ideas.

They want an airline committed to making air travel available to everyone.

And they want an airline that stays great by knowing how to get better.

See your Travel Agent, and suggest Pan Am, the airline that flies to seventy-one cities in forty-seven countries around the world. Every day.

here else could so few make so expensive a fuss over so little of bstance as some U.S. farmers have been doing lately?

Tractorcade follies of 1979

ie and Ronnie Nation on tractorcade duty
decides how much risk-protection is enough?

ON SUNDAY MORNING, Jan. 21, Ronnie Nation, 35, and wife, Bonnie, 33, of Qulin (rhymes with duelin'), Mo., kissed their two children goodbye and mounted their $9,000 Massey-Ferguson tractor. With a fuel trailer in tow, the fuel itself paid for by well-wishing local merchants, the Nations joined 8 other tractors and 21 other vehicles assembled on an icy road near town for an 800-mile haul east to Washington, D.C. at 14 mph. More vehicles joined them as they chugged east in a curious journey that could only happen in America. The governor of Missouri flatly banned their tractors from his interstate highways, but once out of the state, police patrols courteously assisted them in getting on the road by 7 a.m. and off before dark. Empty lots or large roadside rests were at their disposal as overnight camping grounds.

Ronnie and Bonnie Nation reached Washington nine days later, where they joined some 5,000 other farmers, kin and supporters in the kind of exhibition that has come to be known as "the tractorcade." Normally, a tractorcade would be a predictable sort of spectacle, a power play blending realistic amounts of political hope and emotional hype. Alas, as choreographed by the American Agricultural Movement, a splinter group of uncertain but clearly modest size which seems to have invented it, last month's tractorcade broke through normal conventions into something approaching farce. In seeking to present the American farmers there as decent folk, spontane-

Tractorcade traffic jam
What, besides hype, was learned?

ously assembling to seek redress of serious economic grievances, the AAM more likely succeeded only in portraying them as manipulative zealots with a questionable grip on reality. The spontaneous elements in last month's production—the tractor driven into the reflecting pool, the grinding up of sod on the Mall and the smashing or burning of trees, information kiosks and traffic signs—nicely coincided with the presence of television cameras and reporters.

Last year, when the AAM tried out its tractorcade act, it played well enough. If the White House and the Congress did not provide farmers with 90% parity as a complete hedge against disappointing crop prices, they nevertheless gave a farm bill that provided a generous package of loan and subsidy programs. Thanks to the programs and to strong export demand, net farm income last year rose 40%, to some $28 billion, second highest in history. This year, with Washingtonians now paying $1.59 a pound for hamburger and 59 cents for a bunch of broccoli, it was hardly a surprise that the reception was chillier. So profoundly had audience sentiments shifted that Secretary of Agriculture Bob Bergland could afford to call the demonstrating farmers "greedy" and, in response to predictable cries of pain, offer only a reluctant and partial apology. The AAM was still plumping hard for 90% parity. But it seemed certain to be denied, with chances not much better that any significant consolation prizes would be forthcoming.

The tractorcade backlash resulted despite considerable efforts from many quarters, not by farmers alone, that went into mounting this year's show.

Some gave money. Among Ronnie and Bonnie Nation's well-wishers, for example, were their local John Deere and Allis-Chalmers dealers, each of whom contributed $500 to the AAM fundraising effort. A White dealership chipped in $200 in Qulin, Mo. Three local banks in Poplar Bluff gave $500 each. All of these banks, of course, have considerable amounts of money on loan to farmers in the area.

Some gave goods. In a neighboring county, Ronnie Nation says, an International Harvester tractor dealership leased two $26,000 tractors for $1 each for use in the Washington demonstration. (The $1 charge was a bit of legal tokenism to deal with insurance requirements.) Local oil companies contributed 1,500 gallons of diesel fuel and 500 gallons of gas—more than the tractorcade participants from the area could haul. Other local businesses gave lumber, paint, hardware and food. Even the "strike" headquarters in Qulin where the farmers organized was donated by a local farm store.

Some gave services. The White dealership plans to send special rigs to Washington big enough to haul some of the tractors and the men home. The farmers will pay only for gas the rigs use.

Farmers throwing in with the AAM Washington were clearly learning how manipulate the media with all aplomb of, say, Abbie Hoffman. One last month some of them loaded so tractors on a trailer on one side of Mall, drove the trailer to the other s where television cameras were set blithely gave out the word that m demonstrators had just come to to then unloaded the tractors to prove Whether they are learning more t that is impossible to say.

In any case, the reception Ronnie Bonnie Nation got was hardly likely t much consolation. They have borrow heavily in recent years to add to th acreage ($71,000 invested since 19 and buy farm equipment ($135,000 si 1970). Others may feel that the Nati decisions to buy or sell land are their o business, done at their own risk, but t their judgments of what return is reas able and how much insulation from r they are entitled to are not necessa final. Ronnie Nation apparently thi otherwise. He says that his 800-a farm, most of it in corn, gros $150,000 last year, that it netted, after costs, only $3,400 . . . and that it was nearly enough. ■

What's going on with prices at the unleade gasoline pump? While consumers try to puz zle it out, the government is caught in quandary of its own making.

Where do all the pennies go?

A MOBIL STATION on Manhattan's East Side was selling unleaded gasoline last week for 86.9 cents a gallon, 3 cents over the price of its regular leaded gasoline. A Gulf station in the trendy Montrose area of Houston was getting 64.9 cents for no-lead and 59.9 cents for regular if you pumped the gas yourself, 69.9 cents for no-lead and 65.9 cents for regular if the station attendant did the work. That was a 5-cent differential in self-service, a 4-cent spread in full serve, if you're counting.

Anyone driving one of the nation's 117 million automobiles has noticed varying, seemingly arbitrary differentials in own area. Nationwide, according to Department of Energy, the spread tween unleaded and leaded gasol ranges between 3 and 14 cents per gall It's something of a national mystery gasoline is price-controlled by the D partment of Energy, how can the diff entials vary so widely? Even a penny gallon on the price of unleaded, after is no mean thing. Based on present mand, that 1 cent would add up to so $500 million in the U.S. this year alon

Unleaded fuel is premium fuel w something missing—air-polluting ad

umps on the east side of Manhattan

nny here, a penny there can add up, nationwide, to nearly half a billion.

s that raise gasoline's burnability (its ne rating) and allow it to burn othly rather than explode ineffi- tly in a modern internal combustion ne. To get those higher octane rat- without resorting to lead additives, ers have had to run larger crude ks under higher temperatures and sures and add chemicals besides. extra ingredients and fuel (it takes to make fuel) plus wear and tear on pment add about 3 cents per gallon eir costs. But if it costs 3 cents per n more to produce and most Ameri- are paying at least 4 cents per n more at the pump, who gets the penny?

e dealers? How well the dealers are g with the premium prices they are ng for unleaded gasoline is problem- By DOE decree, dealer markups in at their May 1973 levels—na- ally 11 cents to 13 cents above what pay their distributors for gas—plus e allowances for cost and rent in- ses. But competition is such that ers are marking up less than the wed maximum. Several dealers told ES they might make a nickel a n profit after deducting their costs, not on all grades of gas. Again, petition is such among gasoline re- rs, most of whom carry unleaded leaded regular fuels and high-test as , that in most places a dealer is always sweating out fractions of a cent on one type or another. With demand for unleaded firm and getting firmer, the added margin they hold onto there may well be given back by shaving their price on "price leader" leaded.

The DOE is worried. It is now in the throes of deciding whether to deregulate gasoline prices altogether, or to at least provide a "tilt" in the regulations that would serve as an incentive to refiners to invest in production of more unleaded fuel. The DOE is worried that, either way, the result could be differentials in gas prices rising to 9 cents, perhaps 10 cents. Why? Because the demand for unleaded gasoline is not elastic; it is mandated by environmental laws. By 1983 unleaded fuel will amount to 70% of the gasoline market. Its price will not be elastic because most drivers will have to use it. Hence refiners and marketers will be able to raise its price versus the leaded price. Such a spread could drive consumers to find an illegal way of feeding regular gas into their "unleaded only" tanks, thereby burning out their catalytic converters (just two tankfuls can do it) and running their cars at a slight reduction in performance but a more-than-slight reduction in fuel costs.

One DOE alternative is to do nothing, but this raises the possibility of shortages of the unleaded. Refiners are not anxious to add expensive equipment to enable them to produce additional unleaded gas. The reason is that present regulations, while enabling them to recover their added production costs, give them almost no return on the extra capital investment. Without higher prices, therefore, the U.S. may face a shortage of unleaded, which was only 25% of the market in 1977 but rose to 33% last year and will be 42% this year. Such a shortage of unleaded gas would itself be an incentive for consumers to use regular gas, illegally. The Environmental Protection Agency claims 10% of drivers are now doing so. The DOE is unsure, but estimates from a General Motors study that the figure is under 2%.

Inevitably, the EPA had thought of another alternative—a further regulation specifically limiting the differential in price between regular and unleaded. But the Justice Department said this could be counterproductive because it would lead to higher than competitive profits on leaded gas and perhaps divert investment to more production of leaded regular, at the expense of unleaded. The EPA dropped the idea. So DOE is currently pondering deregulation, which is thought to carry great political risks, or "tilt," which means adding to the existing mass of regulations that may eventually push the U.S. driving public into becoming a nation of lawbreakers. Bureaucracy, thy name is muddle. ■

Thinking about buying gold? Opening a numbered Swiss bank account? The Swiss stock market might make more sense.

The new chic—Swiss stocks

SWISS BANK ACCOUNTS have always been jet-age status symbols, but lately they have also been good investments. During 1978 the Swiss franc rose 23% against the dollar, which means that *idle* balances in Zurich or Geneva earned over four times as much as ordinary 5.25% savings accounts make in New York. There's a catch, of course: The Swiss don't want to supplant the U.S. as the world's central banker, so since 1973 they have imposed a prohibitory "negative interest" tax that reaches 40% a year on new foreign accounts above $60,000.

Since late January, however, investors have had a new way to get around that barrier: the Swiss stock market. In the first week after the 11-month ban on foreign buying of Swiss shares was lifted Jan. 24, the Zurich averages zoomed 10%.

That despite the fact that blue-chip multinationals based in Switzerland often pay a dividend return of under 3% or even under 2% *(see table)*, and the companies themselves treat their shareholders as something barely to be tolerated. Hoffmann-La Roche, for example, refuses to split its shares even though the price per share is approaching $50,000. Similarly, Swiss companies tell their owners as little as possible. "We have no uniformity in financial reporting," says Charly Denervaud of the Swiss Financial Analysts' Association. "Only a few legal requirements, like having to publish an annual report and a balance sheet. But it can be just three lines."

What makes Swiss stocks nonetheless interesting is that these miserly payouts and corporate reticence cover up some of the world's most conservative accounting. Ciba-Geigy, for example, writes down all its office buildings to the value of 1 franc. Most companies have little or no debt and keep investment portfolios to soak up their spare cash. If one year yields unusually good earnings, depreciation will suddenly skyrocket—creating hidden reserves. The main job of Swiss analysts is to ferret out true earnings from the underreported official figures, which are often as little as a third of actual profits.

One result, of course, is price/earnings multiples that seem outlandishly high. Thus Nestlé commands a price of 25 times earnings *vs.* only 8 for General Foods, though the two companies have an equivalent product mix. Swiss executives, unlike their U.S. counterparts, do not highly prize those ever-rising profit curves; stability, not supergrowth, is the name of their game. "They try to give the impression that results are the same from year to year," says one banker. "The main objective is to keep dividends predictable." To Nestlé, this has meant a series of small dividend increases that has more than doubled the company's payout since 1964.

For investors, the advantage of Swiss shares is that they are denominated in a stable currency. Thus Swiss shares can be an intelligent income-producing alternative to owning gold, which costs money to keep secure, or opening a bank account subject to tax. But remember that big Swiss companies do most of their business outside the country, and so face much the same conditions as other multinationals. Says Olaf Rogge of Geneva's Lombard, Odier & Cie., "Owning equities here doesn't mean you're buying the fantastically strong Swiss economy."

Buying Swiss stock isn't hard. Swiss companies are not listed on any foreign exchanges, since that would make them subject to foreign disclosure rules. Indeed any good U.S. broker can arrange execution of a Swiss order, though commissions will be perhaps 50% more than for an equivalent U.S. domestic transaction. Of course, if you already have a Swiss bank account, you can invest directly since bankers in Switzerland are allowed to buy and sell stocks.

Prices of major Swiss issues are reported daily in the *Wall Street Journal*. The Swiss government withholds 35% of dividends, but that amount is a credit against your U.S. tax bill—not just against taxable income. That makes the transaction equivalent to domestic dividend income for investors in the 35% tax bracket.

Finally, one of the most curious and interesting aspects of Swiss stocks is that they now constitute a kind of hedge against a future *rise* in the value of the dollar. The currency gains that make Switzerland so attractive to foreigners over the past several years have hurt Swiss exports. But if the dollar (and other foreign currencies) should rise vis-à-vis the Swiss franc, the profits of Swiss multinational companies would also rise both because the goods they sold abroad would drop in price and therefore become more competitive, and because the profits they made would translate into more Swiss francs. ■

Switzerland's top multinationals

Company	1978 Sales est (billions)	1978 Earnings est (millions)	1978 Earnings per share est	Recent price	1978 PE estimate	Yield
Nestlé (food products)	$11.45	$493	$175	$2,133	12.2	2.4%

All estimates by J. Vontobel & Co., Zurich. Estimates used because of Swiss delays in reporting corporate results.

u've heard it before—Du Pont turned ound? Okay, but it has really happened this ne. Just look at those earnings!

Du Pont shines again

By Geoffrey Smith

WE WOULDN'T HAVE split our stock 3-for-1 if we didn't think we could keep up our earnings in- ses," says Irving S. Shapiro, chair- of E.I. Du Pont. Sitting in his com- tively modest office in Wilmington, Shapiro is responding to BES' question: Was your earnings gain last year a flash in the pan?

n a 12% sales gain, Du last year showed a dra- c 44% rise in net in- e to $787 million, 46% a e—compared with a 1% ings gain for Union Car- 5% for Dow Chemical 11% for Monsanto. That just like the good old for Du Pont—a splendid on stockholders' equity a 7.5% margin on sales. 've regained the momen- ." says Shapiro. "Now can restore ourselves as premier company in this stry."

ne achievement, Shapiro ted out, was made in of the fact that Du 's big business in fibers on, Dacron, Lycra, Orlon) still far from healthy. ts there had come way from 1975's dismal $6 ion, but at $220 million represented only 4.4% rn on investment—and 2% in apparel and home c fibers, which currently unt for about half of that ness.

ne point, then, is that e is still plenty of room improvement in Du 's important fibers busi- If this can be achieved, Pont could get even bet- ter overall earnings than it got last year. What are the prospects for such improvement? For the immediate future, a bit fuzzy. A great deal of fiber goes into carpets and, with housing starts likely to be sluggish this year, the fibers business should be under pressure again. There is still dumping from foreign producers like Italy's partly nationalized Montedison, which is run as a kind of job-creating public works program rather than as a business. Longer term, however, is a different matter. Like any low-return industry, fibers has ceased to attract new capital. Demand, thus, is slowly catching up to capacity.

"The odds are very high that no one will see fit to put capital in new fibers plants until sometime well into the Eighties," Shapiro says. But didn't Du Pont just bring a brand-new 100-million-pound-a-year Dacron polyester filament plant on stream at Cooper River, S.C., increasing industrywide capacity by 7%? Yes, but Shapiro says Cooper River, which had been sitting idle for three years, will give him better costs because of greater efficiency. He's got another big fibers plant sitting half-finished in the snow up in Côteau-du-Lac, Quebec, about which he may soon be saying the same thing. In a recovering economy—whether there is a mild downturn, a steep downturn or no downturn at all—enough excess capacity has already been eaten up that even with additions like Cooper River, fibers prices are likely to improve relatively quickly and sharply.

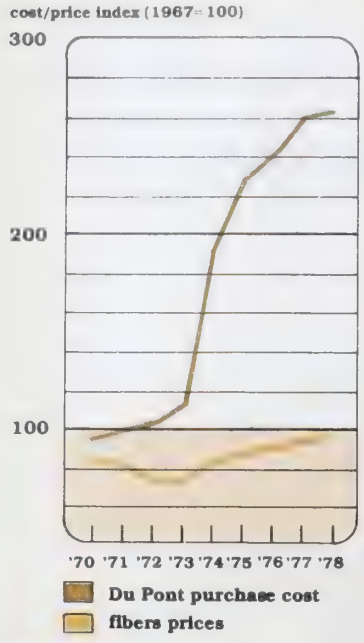
The big improvement in fibers was by no means Irving Shapiro's doing: The whole market turned—witness the big improvement in Celanese earnings last year. Fibers were simply so far down they had nowhere to go but up. But Shapiro has made his mark in vigorously continuing the basic restructuring of the company begun by his predecessor, Charles B. McCoy. Even Shapiro concedes that the changes were long overdue and merely have served to bring Du Pont closer to the level of its competitors in corporate controls and corporate discipline.

The changes nevertheless have been substantial. About 35% of Du Pont's earnings last year, for example, came from specialty products like agricultural chemicals, electronic connectors, blood analyzers and photo systems—all high-technology products where Du Pont has an important proprietary technology developed largely in the last several years. These businesses are not as capital-intensive as Du Pont's older product lines and for the most part not as dependent on petroleum as a raw material. Their returns, therefore, are far higher than the com-

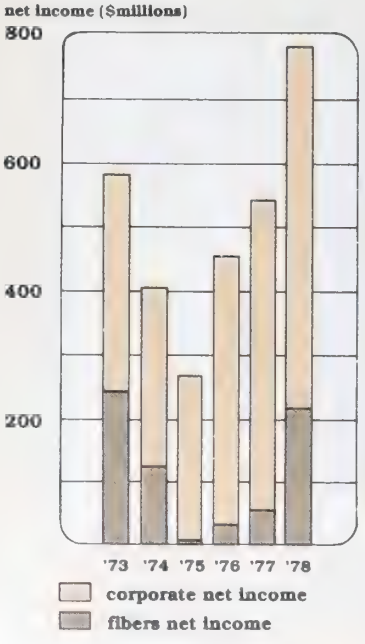
Chairman Irving S. Shapiro of E.I. Du Pont
"It's been a brutal period but we've regained the momentum."

Plenty of leverage left

After a brutal cost squeeze following the Arab oil boycott, Du Pont's big fiber operations finally got some slight price improvement as improving demand ate up excess capacity.



Modest as that price improvement was, it made a dramatic difference on the bottom line, causing fiber earnings to quadruple. Yet that business still earns only 4.4% on invested capital. Further improvement in demand could cause prices to soar and earnings to quadruple yet again before return on capital in that business is high enough to justify major plant expansion.



pany average. So is their rate of earnings growth. Last year earnings from specialty products increased 38%, from $202 million to $278 million.

Among the bright spots in the specialty products business is the $650 million photo systems business, which has over 25% of the world market for X-ray products, makes most of Polaroid's film, and has a booming labor-saving color proofing product for the printing industry. Then there's a $180 million instruments business that consists mainly of equipment that analyzes blood over 35 different ways automatically; a $500 million biochemicals (herbicides and fungicides) business so profitable that it contributes at least 10% of Du Pont's earnings all by itself; and a booming $280 million electronics business, part of which makes connectors in competition with AMP. Shapiro expects the last-named business to grow 20% a year for the foreseeable future, thanks mainly to planned expansion in telecommunications and data processing.

There are soft spots to be sure, like the older $700 million fabrics and finishes business, which is faced with a stagnant consumer paint business and the need for costly capital spending to support federal requirements for more concentrated, less volatile automotive paints. But on balance Du Pont's $3 billion specialty products business, painstakingly built up over the past 15 years, can probably grow at 12% for at least the next 5 years. No other major chemical company can match Du Pont's strength in lucrative specialty products.

Supporting all this is a research and development budget that at $400 million is still twice the R&D budget of Dow, Du Pont's nearest competitor in research.

This, of course, means that Du Pont is no longer the premier research company it once was, and this, in a way, is a pity. Ten years ago, however, Du Pont was spending 6.8% of sales on research whereas today it's just 3.6% (*vs.* 3.4% for Dow). But there are questions as to the extent basic research pays off for private enterprise these days, and no doubt Du Pont is getting good value for the research it still does.

The fabled Experimental Station near Brandywine Creek, home of nylon, has been brought far more closely to heel by Shapiro. It's now presided over by a senior vice president who is also a member of the all-powerful six-man executive committee. "It's a major change," says Shapiro. "We wanted to give more momentum to the research organization. We wanted to be sure it had a commercial flavor to it. In the old days researchers went about their own scientific interests and often they hit things you didn't know what to do with. The old line was, 'We've got an answer, you go find a question.' What we're trying to do now is point them in the right commercia rection—give that effort a little body glish." A familiar story in the chem industry, perhaps, but new at Du Po

Elsewhere, too, Shapiro marshals tistics to show that he's really cut out deadwood: "In 1974 we had sales of billion and 136,866 employees," he s "Last year, sales came in at $10.6 bil and the number of employees 131,317." There is, however, still m room for improvement: Dow Chemi with roughly two-thirds the sales volu of Du Pont, employs just 53,500 peo Dow thus gets $128,785 in sales per ployee, whereas Du Pont gets $80,720. Admittedly, Du Pont's nur ous and lucrative specialty businesse quire heavier staffing—but *that* m heavier?

Shapiro is moving manfully to cent ize authority over Du Pont's proud partmental fiefdoms. "The traditio Du Pont was that the head of each partment was his own major gener says Shapiro. "The theory was that executive committee, even if it thou that the head of the department wrong, would not interfere with wha was doing—except, in an extreme si tion, to replace him. Well, we've dra away from that kind of thinking. We also set up a corporate plans departm that reports to the executive commit and that enables me and the commit to have the kind of information we n to make decisions, and not be depend on facts we get from our operating partments. By definition operating partment heads are advocates for w they want. Now we have longer-te analyses of each product line. We're plying more muscle to understanding own business."

You may say Du Pont should h done that long ago, and Irving Shap would be the first to agree with y "Only in Du Pont could this have b such a major development," he says w a wry smile. "But I think we're in a mu better posture now to make the to calls and to make them on an intellig basis." There is to be sure the possibil of a modest downturn in Du Pont's ea ings this year in commodity chemic and fibers. This would only be pa offset by gains in specialty products a perhaps plastics if the automotive m ket holds up. In 1980 and beyond, upward leverage in earnings, given a s tained uptick in the economy, rema enormous. This is not to say that Irv Shapiro is a superman. Many of the ga came from forces in the marketpl over which he had no control. Many the changes he wrought were obvi ones, long overdue. And one can qu tion the long-term effects of his cutba in research. But none of this changes t fact that Du Pont looks like a very attr tive investment right now. ■

e world turns. In socialist Sweden, Volvo ockholders have vetoed a merger backed by vernments, trade unions and management.

Arise, ye prisoners of confiscation!

By Paul W. Sturm

HOWARD JARVIS led a revolt of California taxpayers that transformed hundreds of U.S. politi- s into born-again budget cutters. Ha- Gergils hasn't heard of Howard is, but Gergils is spearheading a simi- grassroots movement among Swe- s small investors that has rocked the ness and political establishment in country.

Workers have their unions," says gils. "Well, we capitalists can form n too." Last month his 25,000-mem- Swedish Shareholders Association] won a smashing victory over the alist establishment that runs Swe- It blocked the sale of 40% of Volvo, ig Swedish auto and truck manufac- rs to the Norwegian government. e people who contribute risk capital e grouped together to defend them- es," Gergils says.

early, the proposal would have hurt o stockholders. Under it, the com- agreed to sell a controlling block of tock in a transaction that cut the value of existing shares by 30%. re were political and economic divi- ls for the Swedish government and e unions, but they were being paid by Volvo's 128,000 stockholders. n the deal was announced last May, o stock dropped by 25%.

r $220 million, Norway was to get of the largest private firm in Scandi- a, with revenues of nearly $5 billion year. As part of the deal Volvo agreed end perhaps $150 million to set up wegian plants. In return, it received xploration rights in a promising area he North Sea—a potential bonanza a short-term drain on scarce capital. , there were two government side- s: Norway promised to sell Sweden 5 ion tons of crude oil annually, and den would sell Norway 2 million cu- neters of timber.

opping the Volvo sale was a clear victory for private enterprise. Norwegian investors, too, saw the transaction as a potential Trojan horse for ownership of industry. "Our politicians are a bunch of socialists just waiting to use this acquisition as a wedge to restructure our whole economy," says Erik Schultz, a partner in Oslo's Fondfinans. "Volvo is bigger than the top 16 companies on the Norwegian stock exchange. With our government running it, the private sector here would be squeezed out."

Stockholder leader Hakan Gergils
Sweden's version of Howard Jarvis?

So, with moral support from the financial community in Norway, Gergils and the SSA mounted a campaign against the scheme. It was David *vs.* Goliath. The prime ministers of both Norway and Sweden were squarely behind the venture, and their 13-page side agreement was in many ways the most significant part of the transaction. Union leaders plumped actively for the proposal, since they viewed Volvo's partial nationalization as a ticket to guaranteed job security. Sweden's Fourth Pension Fund, a public body, is Volvo's largest shareholder, with a 5% holding. Its professional managers recommended a vote against the sale, but they were overruled by an outside board comprised of union and political appointees.

Why would Volvo's management negotiate such a curious transaction, which merged public issues with its own corporate policy? One reason, according to many Swedes, is that Pehr Gyllenhammar, the company's controversial president, is ambitious for a political career. At 43, he is handsome, articulate and almost a regular on Swedish television. He recently boasted to a reporter that he does not socialize with other businessmen, and Gyllenhammar's reputation stems more from initiating generous labor settlements than from working wonders with Volvo profits. Though his vaunted experiments in "taking the boredom out of assembly-line work" have boosted his image with the public, Volvo's labor costs have risen so high that its cheapest car is now priced within a hair of $7,000 in the U.S.

"With this deal, everyone was out to crush the shareholders," explains Rolf Deiner, who heads an investment company with a 3% chunk of Volvo stock. "Fortunately, our laws won't allow it."

That meant a down-to-the-wire proxy fight, with the outcome largely determined by Volvo's small investors. The nationwide debate that emerged—pitting Gergils against Gyllenhammar—stirred more excitement in Sweden than anything since the 1976 elections, which ended the 44-year reign of its Social Democratic party. SSA wound up with nearly 17,000 proxies and enough votes to force Volvo into an embarrassing last-minute scrapping of the entire plan.

Even though he revels in this hard-won victory, Hakan Gergils—again like Howard Jarvis—is a most unusual man to lead Sweden's revival of grassroots capitalism. A partner in his family's small retail clothing business, 38-year-old Gergils hails from an obscure town in western Sweden, and his only political experience was a term as president of his college student union. When he joined SSA eight years ago Gergils was a disillusioned investor, and the SSA was not much more than a loose association of investment clubs.

Today, the revived organization has 60 local chapters and a budget of nearly $1 million. "In percentage terms, our membership is nearly as big here as the autoworkers union in the U.S.," Gergils says. A solid minority, 12%, of Swedish households are shareholders, and some politicians are already running scared. In a recent slip-of-the-tongue on a radio interview, former prime minister Olof Palme called Gergils a "fascist"—an attack that may have enhanced the SSA's popularity.

Now, many Swedish businessmen think SSA may flex its muscle once more and try to oust management at Volvo's regular annual meeting in May. Shareholders show little enthusiasm for the way Gyllenhammar has run the firm since he took over from his father-in-law in 1971. Unless Volvo can wangle appealing merger terms with some other auto company it must soon resort to local capital markets to raise the $500 million that it needs to finance the development of new models. This is no trifling sum. That Volvo can get it with Pehr Gyllenhammar at the helm is most unlikely.

Under his tenure, the corporation, which accounts for 10% of Sweden's exports, has made a series of strategic blunders. One early move was to begin selling small boats and sporting goods, an endeavor that has produced a steady stream of losses. Similarly, Volvo spent nearly $50 million preparing to build cars in the U.S. Its plant in southeastern Virginia never opened because sales here slumped, and today the facility is little more than a warehouse.

Even worse was Gyllenhammar's 1973 investment in the Dutch carmaker, DAF. This moved Volvo out of its traditional niche in the middle of the market and put the Swedish firm in head-on competition with small-car giants like Fiat, Renault and Volkswagen. So far, DAF has cost Volvo over $125 million—despite annual subsidies of about $50 million from the Dutch government, which is now a 45% partner in the venture. On top of this, the basic Volvo is a 15-year-old design that must be changed completely to stay competitive, but the company's car for the Eighties is still the drawing boards.

Last year, Volvo earned only abo $150 million pretax—nearly all of it fr the highly profitable heavy-duty tru division. The company's operating m gins have slipped from over 10% to j 3% since Gyllenhammar took over t reins; and Volvo's debt to equity ra has tripled to .95, far worse than troubl U.S. automakers like American Mot and Chrysler.

Gyllenhammar's defense is: Thi could have been much worse. "Ev time there is a high labor settlement an expensive change in working con tions, we get blamed," he says. "But t bottom line here is just as important in other Swedish companies."

Maybe so, but the figures don't b him out. Gyllenhammar's grandsta play may or may not launch his politi career, but it could cost him his job. assuming that his stockholders wo stand idly by rather than protect th interests, Volvo's president couldn't ha been more wrong. ■

Marcus Wallenberg and the unspeakable crime

Not much happens in Sweden's business community without a bit of benevolent guidance from Marcus Wallenberg. Through a web of personal holdings, foundations, investment companies and his position as head of Skandinaviska Enskilda Banken, the country's largest bank, at 79 he sits atop an empire of nearly 40 firms. With combined revenues of close to $20 billion, the Wallenberg "group" includes famous names like Electrolux, L.M. Ericsson and SKF.

Like most of the world's really rich, Wallenberg wields his power subtly. His family crest bears the Latin *"Esse non videri,"* which means "Be, but don't be seen"—an apt description of the clan's style. The fact that Volvo is notably absent from any Wallenberg influence adds a fascinating subplot to the current tussle between the automaker's management and the Swedish Shareholder Association.

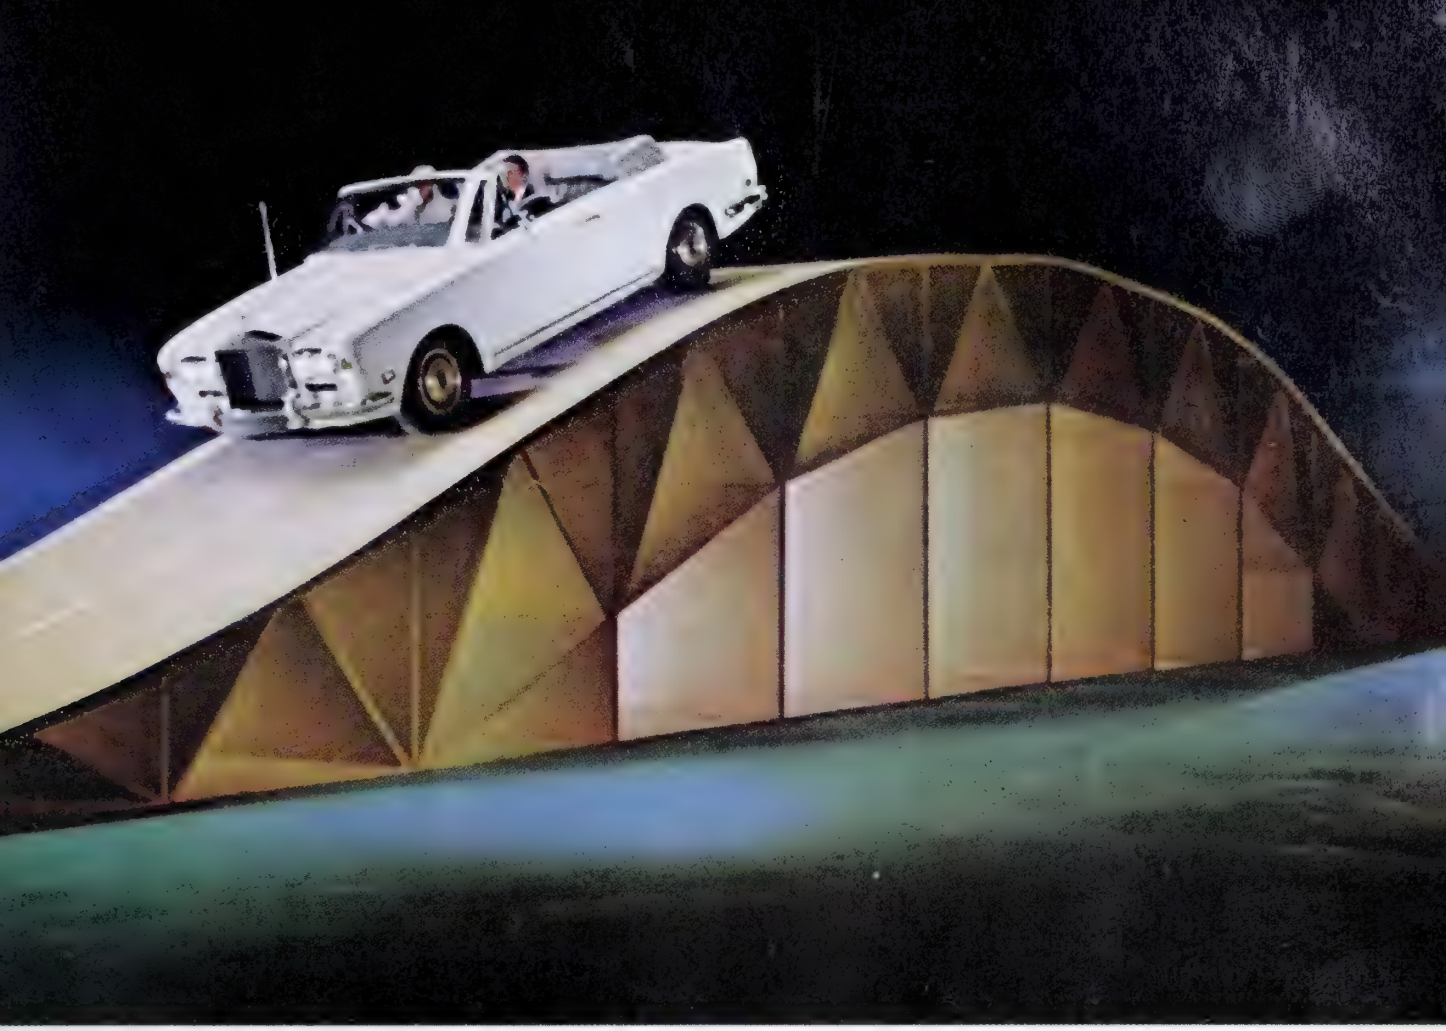
In 1977, Wallenberg orchestrated a merger between Volvo and Sweden's other car company, Saab-Scania, which he controls. Dissent within Saab soured that deal, and Wallenberg sacked its chief executive last summer. Oddly, that happened on the same day Volvo's Pehr Gyllenhammar announced his plan to get funds from Norway.

Then Hakan Gergils and his band of small investors attacked Gyllenhammar's proposal, and Wallenberg followed up by criticizing the deal with Norway in a newspaper interview. For him, such calculated exposure is as rare as Greta Garbo asking for time on *The Today Show*. Not surprisingly, the Stockholm press treated Gergils' victory over Volvo as a triumph for Wallenberg as well: The company badly needs an infusion of new capital. Where else to go for it now but to Wallenberg?

Sweden's power-behind-the-scenes Marcus Wallenberg
Since most things need his okay, did he kill the Volvo deal?

Many left-wing Swedes believe that Gergils' grassroots movement is secretly funded by Wallenberg. "Our people can now identify the enemy," says Kjell Olof Feldt, a Social Democratic member of parliament and a top party policymaker. "Capitalists aren't just nice old guys like Marcus Wallenberg, who is perceived as having created lots of jobs. Now they're passive investors, like Hakan Gergils, who are only interested in making money."

That "passive investors" with their savings finance the creation of jobs doesn't interest Sweden's socialist leaders. Instead, the politicians charge them with the unspeakable crime of wanting to make their money make more money. **—P.W.S.**



Ve drove this 2½ ton Rolls Royce over a bridge nade entirely of St. Regis paper to prove a point.

The point is that paper can be stronger than you think. pecially if it's in the form of corrugated box material.

The roadbed of this bridge was made out of six layers St. Regis triple-wall corrugated–a material we supply a of to the U.S. The verticals were made of five layers, d the triangles of four.

Triplewall is made up of three layers of the corrugated nedium'' and four layers of linerboard. And it can thstand 1,100 lbs. per square inch of puncture pressure its side. And on its edge, a 12 x 12 in. piece can take 0 lbs. A mere seven layers of paper!

The strength of corrugated isn't only in the paper elf. It's the structure. The shape of the medium is one of e strongest structures known. In Colonial Virginia lls were built in the corrugated, or serpentine form. And ey're still standing today, although they're only one ck thick.

Corrugated box material is a sandwich. A wavy rrugated medium is squeezed between two rollers with eshing teeth. That's the meat of the sandwich. The bread two layers of heavy paper called linerboard.

Since it was patented in 1871, corrugated has been one the mainstays of the American distribution system. fact, the corrugated box is one reason we have the most icient distribution system in the world.

And St. Regis has had its share of innovations in the field. Partly because we're one of the largest makers of linerboard in the world. And partly because of our technology and marketing thrust.

All this reflects the marketing stance of St. Regis toward all our packaging, paper, lumber and construction products. To use the full weight of our technology in serving our markets and in renewing the forest resource our products come from.

St. Regis—serving Man and Nature.

encouraging railroad mergers without tackling the underlying oblems of the industry, the federal government may be paving the y for more Penn Centrals.

Putting the caboose before the engine?

By James Cook

s OFFICE high up in Cleveland's Ter- l Tower, Hays T. Watkins, chair- and chief executive of the 11,200- Chessie System, has a huge four-by- ot map of the U.S. in one corner, e's had some plastic overlays made tailing the major rail systems in the Using the overlays, he can put rail- together and take them apart . Watkins is not just playing games. spect every other president or chair- has one," he says. "And whenever body announces a merger or a er study, all the other companies looking around. Sometimes we find that we think we should move, times we don't."

ese days, for the first time since the Central collapsed back in 1970, the ads are on the move again, Chessie g them. Four merger proposals have dy come before the Interstate Com- e Commission, two or three others well be in the making, and approval y one of them could bring forth a rash of counterproposals. prospects are fairly propitious. Both the Interstate Com- e Commission and the Department of Transportation gone on record as favoring mergers as one way of gthening the industry.

hough it may yet, the railroad industry still has not gone vay of the horse and buggy. For hauling certain kinds of t—heavy, bulky stuff—it is far cheaper than any other of land transportation. It is energy-efficient and relatively olluting. Last year it grossed roughly $22 billion, em- d 490,000 people and carried 70% of the U.S.' coal-ton , 60% of its grain, 77% of its auto products and over 60% chemicals and primary metals. But in spite of the success eral highly profitable companies, the industry as a whole y sick. Its share of the intercity freight business fell from 65% at the end of World War II to around 40% in the late es, but instead of stabilizing at that level continued to ne, netting less than 36% last year. Had the railroads held 40% market share, they would have grossed close to $3 n more in revenues last year, most of which would have down to the bottom line. As it was, the industry prob- earned less than $265 million last year. Things are so bad he industry depends on private individuals *(see box, p. 56)* lp keep it supplied with freight cars. Ten railroads have

Chessie Systems' Hays Watkins
Mapping a competitive imbalance?

gone bankrupt since 1967, three remain bankrupt and another is likely to go bankrupt at any time now. In some respects the industry as a whole is in worse shape than it was during the worst of the Great Depression.

But are mergers the answer? The Pennsylvania-New York Central merger was, of course, a total disaster. And Penn Central was only 1 of 17 mergers made during the Sixties before the Penn Central bankruptcy brought the merger movement to a screeching halt. The dismal fact is that of those 17 mergers only 3 seem to rank as unqualified successes: Southern's acquisition of the Central of Georgia; the Missouri Pacific-Louisville & Nashville acquisition of the Chicago & Eastern Illinois; Norfolk & Western's acquisition of the Virginian. A handful of others—the Norfolk & Western-Nickel Plate-Wabash and Chesapeake & Ohio-Baltimore & Ohio, among others—rank as *qualified* successes. But most of the rest—including the Illinois Central Gulf, Burlington Northern and Seaboard Coast Line—fell far short of realizing the gains they had promised.

The failure is difficult to quantify, the variables are so great. Two recent Federal Railroad Administration studies concluded that mergers did not significantly improve the profitability or market penetration of either the SCL or the N&W. A 1972 study by the Senate Commerce Committee took an even grimmer stand: "Justification of proposed mergers has rested almost exclusively on cost savings. . . . The alleged savings have generally failed to materialize or have been much smaller than were anticipated." The report concluded: "By and large, they are more likely to be harmful than beneficial."

There were plenty of reasons for failure. The merger process was too lengthy—8 years for Penn Central, 5 for Seaboard, 14 for Burlington Northern. Most of the track and service consolidations couldn't actually be made. The labor conditions wiped out most of the prospective labor savings. The conditions imposed to protect competing railroads were far too onerous. There were reasons and plenty of them. "But that's the whole point," says Southern's able President L. Stanley Crane. "Merger is not a panacea or a substitute for good railroad management. It's no substitute for an adequate railroad market and an efficient operation that drags the money straight down to the bottom line."

"Railroading is complex; managers can't manage a big company."

More than a few railroaders agree with the Senate study's conclusions. Kent Healy's little book on *The Effects of Scale in the Railroad Industry* long ago suggested that mergers could produce diseconomies. Other economists have claimed more recently that there are no scale economies in railroading, and that the average cost per track mile is constant no matter what size the system. Isabel Benham, dean of the nation's rail analysts and president of Printon, Kane Research, has had second thoughts herself. "Railroading is so complex," she says, "that rail managements just don't have the capability of managing a really big company."

The new wave of mergers, however, is different from the old one. This time they're not directed primarily at promoting economies, scale or otherwise, and they're supposed to avoid the problems that faced the earlier spate of mergers. The mergers of the Sixties were by and large parallel mergers. They involved merging properties said to duplicate each other, and they promised to improve efficiency and cut costs by permitting the duplicate equipment, facilities and services to be eliminated. In this, they generally failed. The new mergers are end-to-end mergers, and as such they require less capital to bring off, involve far fewer labor problems and lessen the likelihood of managerial friction. Instead they're supposed to enhance the ultimate profitability of the merged company by permitting it to offer more competitive service.

The latest round in the merger movement was set off two and a half years ago by the Southern Railway. Southern proposed to break out of the South and merge with the Missouri Pacific. That posed a threat to a number of neighboring roads, so the Seaboard Coast Line, Southern's arch competitor in the South, began talking with Southern Pacific, while Burlington Northern began considering linking up with the St. Louis-San Francisco. The Southern-Seaboard proposal fell through, but the BN-Frisco proposal has now come before the commission. Once the Seaboard-Southern Pacific negotiations broke off last summer, Hays Watkins began playing with his plastic overlays again and finally decided the time had come for Chessie to go after Seaboard.

The Chessie-Seaboard proposal has put Southern on the defensive, and Southern's Crane considered but rejected the possibility of taking on the Illinois Central Gulf, IC Industries' troubled railroad affiliate. Meanwhile, the Southern Pacific has been pushing ahead with a merger of its own—the acquisition of a 966-mile line from Tucumcari, N.M. to Kansas City and St. Louis, the Rock Island's share of the Golden State Route that the two railroads have operated for 75 years.

Nobody disputes the competitive clout such mergers would wield. They offer the merging companies the opportunity for extended single-line service; and because it eliminates interchanges and bypasses terminals, single-line service generally offers a shipper greater speed, less delay and less likelihood of misrouting and loss and damage. At the moment, for example, both BN and the North Western offer multiple-line service with the Frisco between the Twin Cities and the Gulf. But if the Frisco and BN are permitted to merge, North Western will find itself at a considerable disadvantage competing with BN's new single-line service.

Such service is a potent competitive weapon. Burlington Northern hopes to pick up $71 million in new revenues through its Frisco merger, Chessie more than $96 million from the Seaboard merger, Southern Pacific nearly $110 million from the Rock Island's Tucumcari line, and most of these estimates are probably conservative. But whether they achieve their profit objectives remains to be seen.

In backing such mergers, Secretary of Transportation Brockman Adams says: "Our overall goal is to produce efficient through-service transportation companies that can effectively

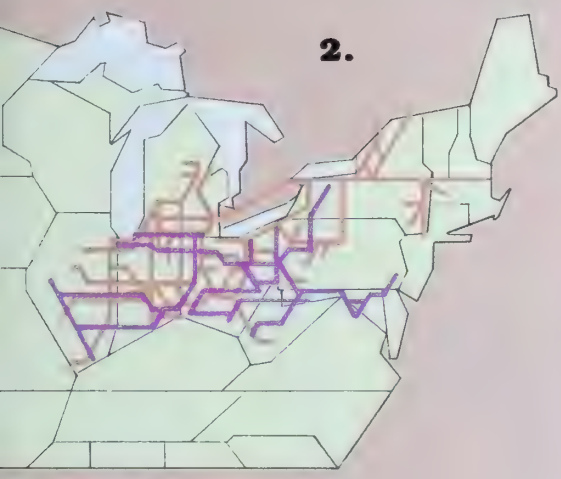
The trouble with competition is that somebody doesn't always win. Sometimes everybody loses. And that's the sort of competition that ultimately led to the wreck of the Penn Central in the biggest bankruptcy in the history of the world. The two railroads involved, the Pennsylvania and the New York Central, had been rivals for nearly 100 years. The Pennsylvania was the standard railroad of the world, the Central the obstreperous outsider, but for generations the Central successfully kept the Pennsylvania at bay. Then in the late Fifties, the Pennsylvania launched a series of moves that so threatened the Central it felt it had no choice but to merge with its ancient rival. In hindsight, the disaster that followed was inevitable.

The final conflict began in 1959 when the ICC approved a merger of the Virginian and the Norfolk & Western, a Pennsylvania affiliate. The merger cut off the New York Central from its traditional access to the rich Pocahontas coalfields.

1.

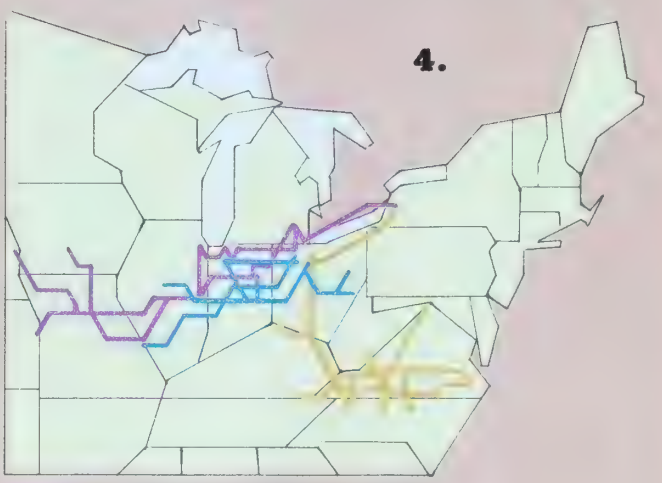
Could the wreck of the Penn Central have been avoided?

an effort to protect its position in coal, the ntral responded by proposing a merger with other and even bigger coal carrier, the Balti- re & Ohio.



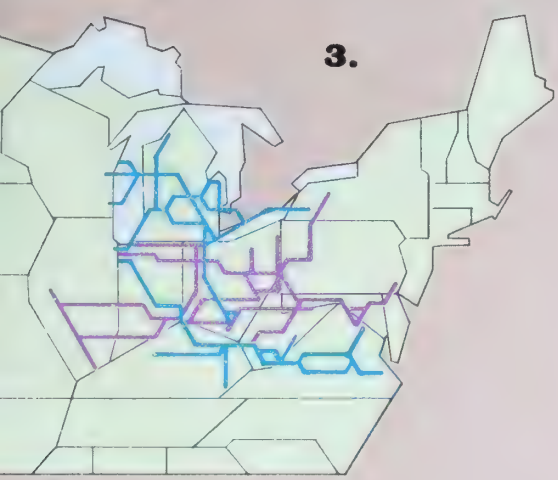
New York Central
Baltimore & Ohio

The C&O-B&O merger put the N&W at a disadvantage, so the N&W worked out a merger with the Nickel Plate and the Wabash, another Pennsylvania affiliate, gaining access not only to St. Louis, but to Chicago, Kansas City and Omaha as well.



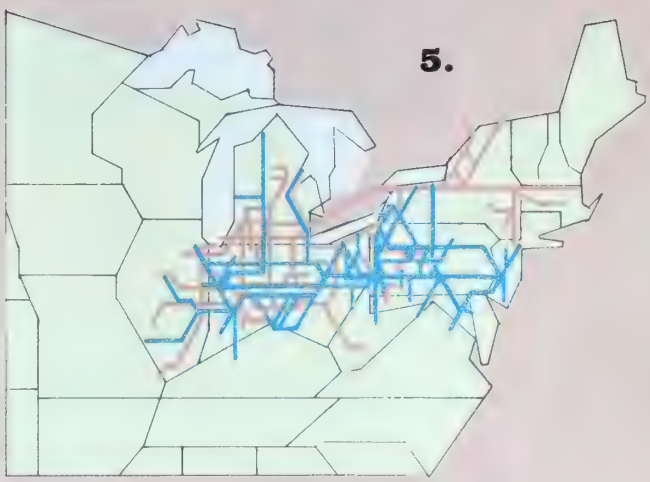
Norfolk & Western
Nickel Plate
Wabash

ıe B&O merged instead with another Pocahon- s coal carrier, the Chesapeake & Ohio, gaining cess to St. Louis and the transcontinental traf- beyond and leaving the Central more vulner- le than before.



Chesapeake & Ohio
Baltimore & Ohio

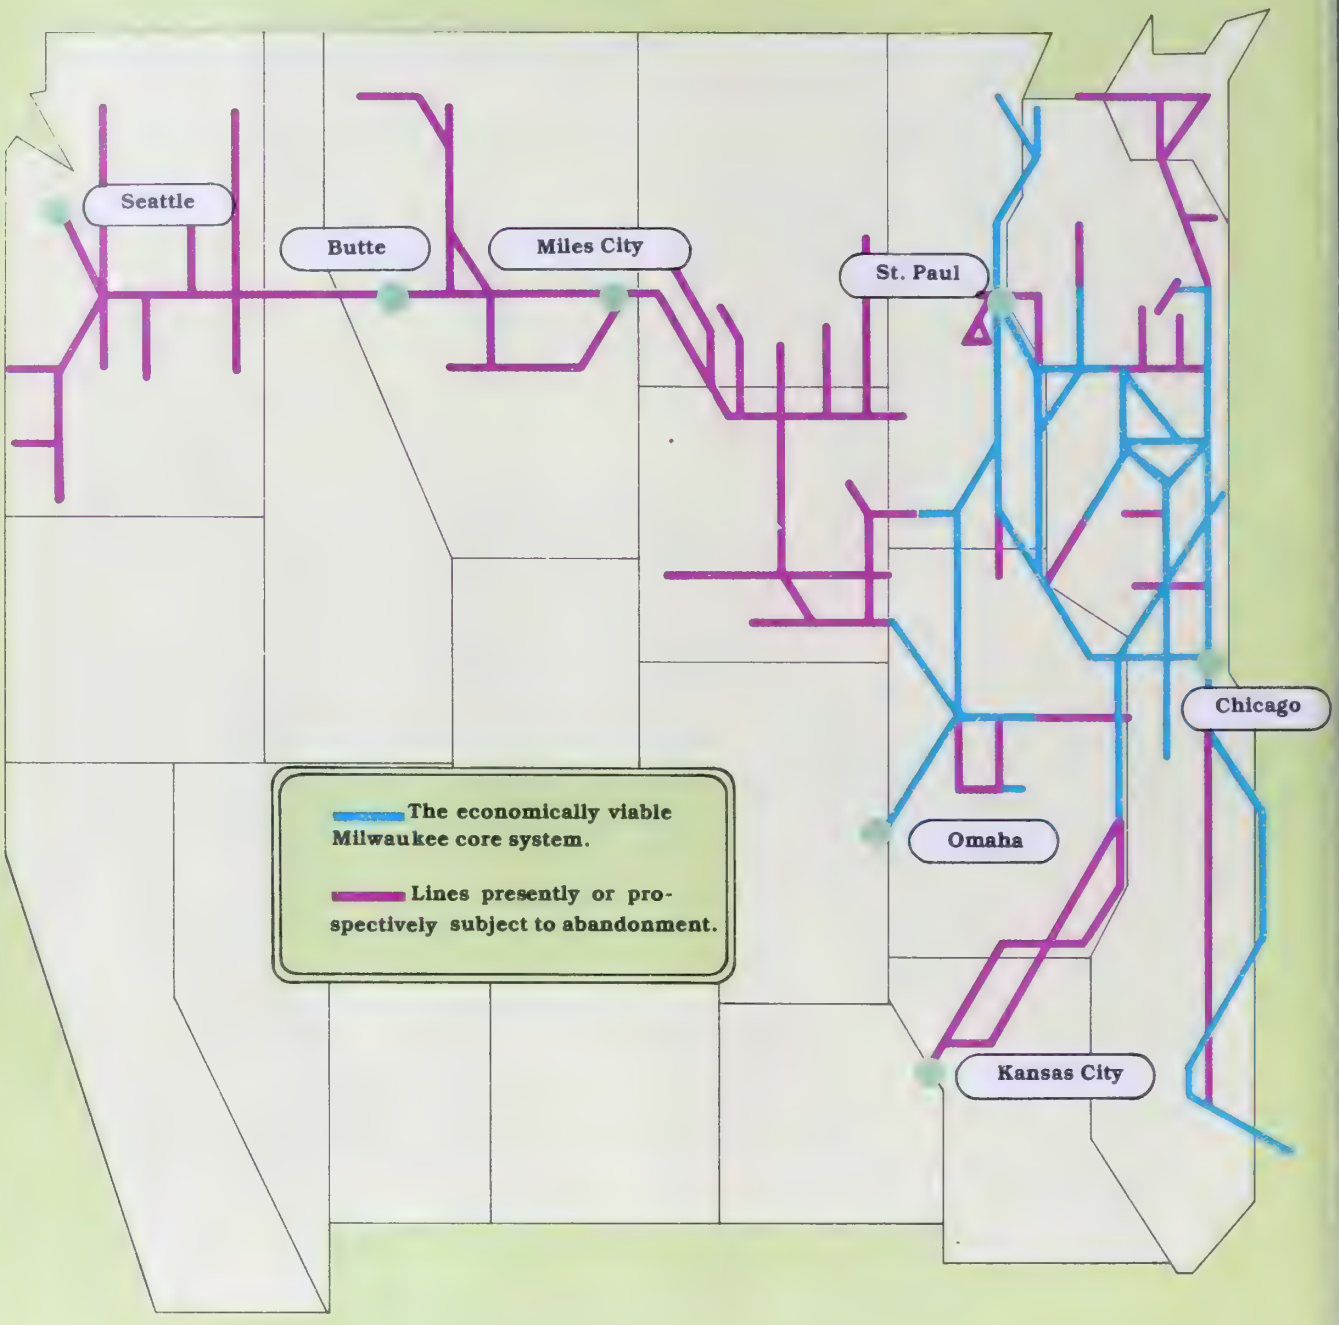
Surrounded on all sides, the New York Central felt it had no choice but to merge with the Pennsylvania. As a condition of the merger imposed by the I.C.C., the Pennsy agreed to dispose of its richest holding, the Norfolk & Western. The two roads merged as the Penn Central and soon went bankrupt.



New York Central
Pennsylvania R.R.

Alternative to merger

The Milwaukee's basic problem is too much track to maintain, too little revenue to support it. A merger might disguise the problem but it wouldn't solve it. Like other roads, however, the Milwaukee can go a long way toward solving the problem itself. The once-prosperous, thrice-bankrupt road has been only marginally profitable ever since it built its main line to the Pacific Coast in 1909. Now it's planning to cut back its system to more manageable levels, abandoning that traffic-thin line and perhaps as much as one-half of its total track.



End-to-end mergers will do nothing to solve the industry's problems.

ete with the through service we have with trucks and s now. We're not trying to take from one and give to the , we're trying to make the whole railroad system com- ve with the barges, the trucks, so they can survive."

body can quarrel with that. Although the railroads do ete with trucks, barges and pipelines, it has been pretty ual competition, except in a few limited areas like new mobiles, grain, coal and so on. The truth is that most ads compete effectively only with each other, and that is the new round of mergers has the same destructive tial that the first round of mergers had: because, if rail etition operates pretty much within a closed system, any etitive gains that carrier A makes from a merger will to be made at the expense of carrier B.

h end-to-end mergers may step up the competitive pace n the industry considerably, but they will do nothing to what Adams and most other observers consider to be the problems of the industry. In moving commodities like grain and so on, railroad service is so much cheaper than service that the trucks cannot really compete. The rail- could charge considerably more for such freight than currently do and still retain their competitive advantage, hey are prevented from doing so by the Interstate Com- e Commission which is responding to pressures from cians, shippers and consumers. Were the railroads able to more money on their core traffic they would be far more able and thus much more able to compete effectively trucks on other freight traffic. Mergers would not solve roblem. Only a change in federal policy can.

or would mergers do anything to reduce the branch line problem, which stems directly from the red tape involved in abandonments. The carriers most likely to e are by and large not overburdened with capacity, not the estern roads—BN, SF, SP, UP and MoPac—and not the ard or the Southern either. Those roads that have the s capacity—Conrail in the East and the Milwaukee, Rock l, Katy, and North Western in the Middle West—aren't to attract any suitors. "These mergers," admits Seaboard dent Prime F. Osborn, "are not a solution to the railroad em." Since he is himself talking merger, he adds, "But frequently put a railroad in a position to deal with these ems better."

better at whose expense? The SP's gains from the mcari line will come out of the hides of a host of sur- ling railroads—rich roads like the Santa Fe and Union c, poor roads like the Katy and North Western. The most ging proposal, the Burlington-Frisco merger, will make of its gains from some of the most marginal carriers—$3 on from the Milwaukee, $1.9 million from the North ern, $4.5 million from the Rock Island, $6.6 million from linois Central Gulf, $2.5 million from the Kansas City ern, $6.5 million from the Missouri-Kansas-Texas. rly," says the North Western's President James R. Wolfe, architects of that merger did not intend to use it to assist ving the Midwest railroad crisis."

at $6.5 million from the Katy is roughly 7% of its rev- , and MKT's Chairman Reginald N. Whitman estimates it will run nearly twice that—no small amount for a ad that only made $2.4 million last year. "If they are to take a large share of our business away," Whitman "they ought to provide us with some compensation so overnment doesn't have to bail out the business the er took away."

Chessie's is perhaps the most threatening proposal of all. Chessie hopes to attract $40 million in traffic away trucks and barges including $11 million in lost coal . It expects to pick up $56 million from other railroads, ding $10 million from Southern, $18 million from Norfolk stern and $17 million from Conrail. Those estimates are nly conservative. William J. McDonald, Union Pacific's r vice president-law, thinks the Chessie merger has the potential for serious traffic diversions from ailing Conrail. "In the railroad industry," he says, "one never shorthauls oneself. Therefore they would make a vigorous effort to move as much traffic over that combined system as possible—instead of interchanging northbound traffic with Conrail in Washington, for example, they might move it over their own lines as far as Cincinnati or Detroit. In respect to solving the problems of the industry, mergers are not at the top of the hit parade."

"In regard to Conrail," says Norfolk & Western President John P. Fishwick, "the ultimate question is, why should you let two solvent railroads get together if the result is appreciable damage to an enterprise that is taking half a billion a year out of the taxpayers' pockets? What is the public interest?" The head of a big midwestern-based carrier has the same misgiving: "If you end up turning Conrail into a pure nationalized road," he says, "you may have won the battle and lost the war. I don't really know whether or not it's a good solution to risk busting these companies with mergers in which they may not be involved."

Such traffic diversions are by no means theoretical. The Burlington Northern merger, for example, played a role in bankrupting both the Milwaukee Road and the Rock Island, and though the ICC required the BN to open new gateways to the Milwaukee, the BN coerced shippers using private sidings on its lines into signing agreements to use BN service exclusively—a practice that ended only when the Justice Department intervened. The ICC's Rail Services Planning Office worries that the cumulative effect of these traffic diversions, none that damaging in itself, could eventually have very serious effects on the entire railroad system. "Eventually," RSPO observes, "every railroad may be affected."

The North Western's Jim Wolfe estimates that the Burlington merger still costs the North Western $15 million a year in lost traffic, *vs.* the $7 million the BN projected, and he figures the BN-Frisco merger will cost him another $2.5 million—*vs.* BN's $1.9 million projection. He also figures that the $2.5 million diversion will be spread so evenly across his traffic flow that the entire $2.5 million will come off the bottom line. But even that is nothing beside the $8.6 million the Rock Island expects to lose (BN projection: $4 million) or the $14 million the Frisco merger will cost the Milwaukee (*vs.* $3 million). "The synergistic effect of a BN-Frisco merger," says Milwaukee President Worthington L. Smith, "will yield such a competitive advantage to BN that, even reorganized, Milwaukee will find its competitive abilities even more marginal and deteriorated." To judge by past experience, the merger may end up doing more to weaken its competitors than to strengthen the Burlington itself.

Thus, it may seem idiocy of a high order for the regulatory agencies to foster a merger policy that on the basis of past experience offers little promise of strengthening the roads that participate in mergers and that offers a very real promise of damaging those that do not.

But that may be precisely what the DOT and the ICC have in mind. In the Thirties when railroads went bankrupt, they repudiated their debts, reorganized their financial structures and went on about their business. In those days they had the overwhelming bulk of both the freight and passenger business, and even in the depths of the Depression they had sufficient cash flow to meet payrolls and repair track and equipment. They went bankrupt only because they could no longer support their frequently top-heavy capital structures. But these days the bankrupt railroads are not viable under any circumstances. They can no longer generate the funds to finance their operating costs, much less their interest charges, and so their only alternatives are to ask for government aid, ruthlessly slough off those services that can't be profitable, or liquidate their plant

in the interests of their creditors and let the solvent segment of the industry pick up the pieces that are worth preserving.

The DOT rejects either subsidies or nationalization. It's convinced the railroads are going to have to rationalize their excess plant one way or another, and it favors what it calls free-market solutions in doing so, with government providing only such support as is necessary to maintain essential services. Former Deputy Transportation Secretary John W. Barnum lamented not long ago that DOT had been forced to provide funds for midwestern roads like the Rock Island and the Katy, whose survival the DOT does not consider essential, in order to generate political support for funding Conrail, whose services it does consider essential.

In encouraging mergers, the DOT may have the quite cynical aim of deliberately forcing the bankruptcy and liquidation of marginal roads that it may otherwise be forced to keep in business because of political, trade union and shipper pressure. Brock Adams shies away from the suggestion, but does not disown it. "We are interested in maintaining service," he says. "We are not directing our efforts to maintaining particular corporate entities. If they are prepared to slim down and come out of a reorganization with something that can be profitable, we will help them."

The DOT really laid it on the line in last fall's *Prospectus for Change in the Freight Railroad Industry*: "The DOT has concluded that mergers are a less promising technique to improve the railroad industry than other approaches to restructuring. . . . The elements of rationalization contained in the concept of line transfers, joint-use agreements and abandonments are what actually save costs—not corporate integration per se. . . . All these elements can occur short of merger."

That's pretty much the solution Jim Wolfe, head of the employee-owned Chicago & North Western, has adopted in rebuilding his long-ailing railroad. "The best thing for the North Western to do," he says, "is to continue to improve its physical properties, improve its capacity and market share—which we've been doing in part by taking business from our midwestern competitors who are in extremis—and by scaling the plant down. Once we're fit and trim, we'll make a better merger partner."

With 40% of its track miles generating at one time only 4% of its revenues, North Western has been ruthlessly abandoning line. It has scrapped 2,600 miles out of 11,700 over the past ten years, and thanks to expedited ICC abandonment procedures, hopes to get rid of another 1,600 over the next three years. At the same time, Wolfe persuaded the federal government to put up $150 million to rehabilitate North Western's high-grade Chicago-Omaha main line. He has even worked out some pioneering market swaps with the Milwaukee—Milwaukee will abandon its freight service to Rapid City, S.D., in favor of the North Western, and the North Western will abandon its service on certain lines in Iowa and Minnesota in favor of the Milwaukee.

"We would be best served," Wolfe goes on, "by seeing the excess track capacity in the Midwest eliminated by liquidating all or part of those bankrupt railroads. We would like to acquire whatever of their revenues we can. When you have a group of bankrupts that can't make it without government aid competing with a group of solvent railroads, as we have here in the Midwest, liquidation is best."

This would mean *finis* for the Rock Island. Rock Island's trustee, William M. Gibbons, argues that liquidation of his company is not necessary. Despite losses of over $100 million since 1972, he's convinced he can put the bankrupt Rock Island back on its feet without having to liquidate the company. By selling the Tucumcari line to the SP, Rock Island will generate $57 million in cash that Gibbons will put to work upgrading the rest of the Rock's property. With the Tucumcari line gone, Gibbons would then be able to concentrate Rock Island's car fleet and motive power on the trackage that remains, becoming basically a north-south railroad providing

Any competitive free-for-all coul drag the whole industry along.

single-line service between the Twin Cities and the Gulf. T strategy could conceivably work, but it puts Rock Island competition with some of the savviest railroads in the bu ness—Santa Fe, Burlington Northern, MoPac and ICG, most whom are determined that SP will not get the Tucumcari li Gibbons' colleagues suggest, however, that he's having much fun running the railroad he'd just as soon the Rock Isla were never reorganized—a circumstance that would probal cost him his job.

The bankrupt Milwaukee is considering even more dras surgery as a way to survive. The company had always pr pered until 1909 when it built its Pacific Coast Extension order to compete with the transcontinental railroads in territory. But it paid the price ever after in traffic too thin support the cost of maintaining the line. Bankrupt for the th time in a half century and with over $300 million in defer maintenance, the Milwaukee is in sad shape. Trustee Stan E.G. Hillman wants to stay in business—but to cut the M waukee back by almost half, from 10,000 miles to as little 5,700—and concentrate its operations east of Butte and pos bly east of Miles City, Mont. *(see map, p. 46)*. Hillman hopes recoup part of the loss by selling segments of the line beyo Butte to the Union Pacific. "I made my own determinatio he says, "that the Pacific Coast Extension was such a dra that if it were to remain part of the railroad I would not be al to reorganize the company."

The fatal flaw in the DOT's strategy for restructuring a rehabilitating the railroads may well prove to be the diverge interests of government and industry. If the DOT is concern with preserving service rather than companies, the compan themselves are concerned with preserving themselves rath than the industry, and DOT's emphasis on competition m serve only to dissolve what community of interest they mig otherwise have. "The mergers that are going on," Southern Stanley Crane says, "are not intended to solve railroad pr lems. They're aggressive moves on the part of management improve their basic position in regard to the rest of t industry. You don't go into a merger trying to save sor broken-down railroad. You go into it in the hope of makin profit, which is in the interest of your stockholders, becau that's what you're trying to run the company for."

The N&W wanted its Wabash-Nickel Plate merger l cause it wanted some merchandise traffic to balance coal. The Southern wanted the Missouri Pacific for fast-growing Gulf Coast petrochemical traffic. "We are not c brothers' keeper," says Illinois Central's William B. Johnso "When you propose a merger economically beneficial to yo company, knowing it will be detrimental to other railroa you get involved in a balancing process."

The railroads cannot pursue these aggressive strategic goa without sometimes putting their competitors violently on t defensive, as the UP did when it went after the Rock Island the Sixties and as the SP may do in attempting to acquire t Tucumcari line. "It's the first move," says Jim Wolfe disa provingly, "by a major profitable carrier to extend its territo into that of other profitable railroads by acquiring the line o bankrupt." It is difficult to see how such a move will help t problems of the industry—however much it might benefit t Southern Pacific. "If the Southern Pacific gets the Tucumc line," Missouri Pacific's President Downing Jenks told Ne York security analysts last month, "other midwestern ra roads have their own merger maps to pull out of the drawer.

The well-run and highly profitable Union Pacific was bad burned when it tried to buy the Rock Island in the early Sixtie and since then has lost its enthusiasm for mergers. Uni Pacific's William McDonald thinks the industry's traffic flo patterns make interregional mergers largely unnecessary. A

rding to a UP study all but 20% of the railroads' traffic flows *bin* the three regions into which U.S. railroads are divided. en so, the geopolitics of rail competition are such that any ious threat to the competitive balance within the industry uld send the U.S.' major carriers scrambling for merger tners to protect their position. The SP's Tucumcari acquisi- n has that potential, and so also has the Chessie-Seaboard rger.

"If something like the Seaboard-Chessie merger goes ough," Crane concedes, "someone will look to Southern to uire or Southern will look to someone to acquire. They will in a protective mood." For the Southern, the logical move is the north, to the Norfolk & Western, but Southern might ose to turn to the west—to the MoPac or Southern Pacif- -with incalculable results.

Should the Chessie merger be consummated, there will be only three railroads outside Conrail serving the East. There are, however, at least four major transcontinental es that exchange traffic with the eastern railroads at the ssissippi and Missouri River gateways—five if you lump in MoPac-Rio Grande-Western Pacific route—and at the mo- nt they all compete for transcontinental traffic on more or s equal terms. Since nobody in his right mind would want to uire Conrail, that means there are only three potential uisitions in the East as against five potential suitors. Obvi- ly, somebody will be left out in the cold if these transconti- ntal mergers begin to fall into place. And some of these sently profitable railroads could easily lose their profitability. More than a few railroad executives have heavy reservations ut mergers. Santa Fe's Chairman John S. Reed clearly has m. And so has Stanley Crane. But except for Santa Fe, ion Pacific and Norfolk & Western, few railroads are strong ugh to stand alone. Thus, any competitive free-for-all could g the whole industry along. "Bigness is strength," says ta Fe President Lawrence Cena. "So maybe you push for the best merger you can get that improves your stockholders' position. But the track record hasn't been that good."

In restructuring the railroad industry, the DOT may opt for free-market solutions, but the free market alone may offer no more hope of solving the railroad problem in the Eighties than it did during the Sixties. The Pennsylvania, for instance, was prepared to go to almost any length to achieve its ill-conceived and ill-executed merger with the New York Central: guaranteed lifetime employment for its labor force, spin-off of its priceless Norfolk & Western holdings, assumption of the New Haven's massive losses. And such suicidal impulses could take over the industry once again.

It's like the old joke about George Bernard Shaw and Ellen Terry having a child—will the kid have her looks and his brains, or his looks and her brains? Transportation is too vital to leave to chance.

Which brings us back to the question: If not mergers, then what? The answer is that, before merger can become a workable solution, the industry's basic problems must be tackled. These are: 1) the low rate level on that freight traffic that moves most naturally by rail; 2) the difficulties and delays involved in abandoning lines and laying off unneeded workers; and 3) the unequal and in effect subsidized competition from trucks and barges that continues to divert traffic from the privately supported rail lines and onto the publicly supported highways and waterways.

These are politically tricky problems. It is easier to put overlays on maps and dream dreams like those Robert R. Young and Edward H. Harriman once dreamed. But such dreams may turn into nightmares.

"Mergers could force the crisis," Jack Fishwick says wearily. "The stronger get stronger at the expense of the weak. And then everybody rushes to merge and says we don't want to be last. Somebody's going to have to be last. There may be so many crushed that they'll bring the whole system down." ■

"That's a Butler building?"

Yes, that is a Butler building.
In fact, you probably see beautiful Butler buildings all the time and don't know it.
Because Butler buildings offer total design flexibility and can be as tasteful and dramatic as any building.

Yet, they also give you all the important time and money savings of systems construction.
To learn more about energy-saving Butler buildings, call the local independent contractor who can build one for you. See "Butler Mfg. Co. Builder" in the White Pages. Or write Butler Mfg. Co., Dept. B-397, BMA Tower, Kansas City, Mo. 64141.

BUTLER

There is now a Mercedes-Benz station wagon

The new 300 TD. Before it could be a Mercedes-Benz station wagon, it had to behave like a Mercedes-Benz car.

Mercedes-Benz has engineered a station wagon that handles like – and is as solidly built as – a Mercedes-Benz car.

It does not wallow about on the road like a hippopotamus.

And it has been designed to spare its owner the aggravation of a chorus of rattles and creaks.

"First and foremost," reports *Car and Driver* magazine, "is that when you drive it empty, you very quickly forget you're driving a wagon. It handles very much like a sedan, with none of the ponderous, tail-happy lethargy we've come to expect..."

But what happens to the handling when the 300 TD is heavily loaded?

There is a sensor buried deep within every Mercedes-Benz station wagon. Should a passenger step aboard, or luggage be added, this sensor orders a special pump to send an extra supply of hydraulic fluid to the rear shock absorbers.

This raises the rear of the vehicle to its normal, most effective level.

And this, in turn, maintains the correct front-wheel geometry so that the station wagon can be steered precisely even under heavy load, instead of wallowing clumsily from side to side.

It sounds like a Mercedes-Benz car

Creaks, rattles, thrumming noises – are they the inescapable bugaboos of a station wagon?

Not so, said the Mercedes-Benz engineers.

Car and Driver agrees: "The back end doesn't sound like a crate of empty muffin tins whenever you hit a bump, which is something you can't say for your average wagon. Mercedes-Benz designers have found ways of securely buttoning down all the movable panels that usually cause station-wagon rattles..."

Good brakes are not enough

The handling ability of a car is considered of paramount importance at Mercedes-Benz. The reason is simple: if at all possible, it is always preferable to *avoid* an accident.

The new Mercedes-Benz 300 TD
Only 2,500 will be available in the U.S. this year.

Good 4-wheel disc brakes alone are often not enough. The car must also be capable of violent evasive action without loss of control.

And so the new Mercedes-Benz 300 TD station wagon has been fitted with the sophisticated steering and suspension systems of a Mercedes-Benz car.

Steering that "talks" to you

There is zero-offset steering built into the front suspension of the 300 TD to provide more precise steering control in emergency situations.

The power steering itself has "feel." It tells your hands exactly what the front wheels are doing at every moment.

And the suspension is independent on all four wheels. Should one wheel hit a bump in the middle of a corner, that wheel alone is affected, leaving the other wheels independent to maintain their grip on the road. There is none of that alarming, sideways hop-skip-and-lurch that one expects from a less-expensive solid rear axle; the Mercedes-Benz will simply shift a few inches to one side, then smoothly resume its course.

It uses Diesel fuel. Sparingly.

The Mercedes-Benz station wagon is no gas-guzzling leviathan. For one thing, it measures a trim and nimble 15 feet 11 inches from stem to stern; it is the length of a Mercedes-Benz car. For another, it doesn't use gas at all.

The powerplant is the remarkable 5-cylinder Mercedes-Benz *Diesel*. This 3-liter engine is coupled to a 4-speed automatic transmission to achieve a balance of performance *and* economy. It delivers an estimated 23 mpg.

This estimate is from the U.S. Environmental Protection Agency. *Remember:* Compare this estimate to the "estimated mpg" of other station wagons. You may get different mileage, depending on how fast you drive, weather conditions, and trip length.

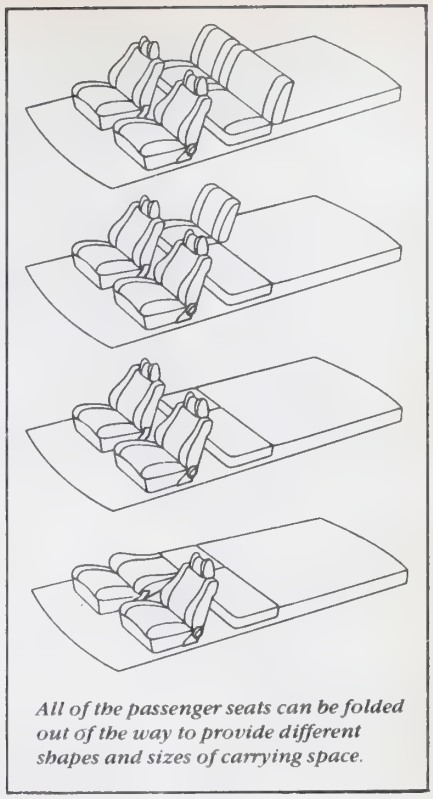
A lesson in the use of space

The interior design of the 300 TD station wagon is an object lesson in the ingenious use of space.

Raise the tailgate and look for its hinges and damper units. You'll find them tucked discreetly into the roof. It costs more to do it this way, but the Mercedes-Benz engineers wanted an absolutely smooth inner-roof surface so that bulky packages wouldn't snag on outjutting hinges.

There are seats for five adults. All of the passenger seats can be folded out of the way (*see illustration, right*) in a multitude of sizes and shapes of carrying space.

"If the object is *really* long," noted *Car and Driver*, "say a carton of record-length spaghetti or a python with rigor mortis, that's no problem either. Just unlatch and remove the right-side cushion of the second seat. Fold that side of the seatback forward. Then fully recline the passenger-side front bucket. That leaves an uninterrupted stretch from the tailgate in back to the glove-box door in front. What more could you ask?"



All of the passenger seats can be folded out of the way to provide different shapes and sizes of carrying space.

More standard equipment

In typical Mercedes-Benz fashion, the list of standard equipment is quite staggering in its length.

To name a few items: Climate control air-conditioning. Cruise control. A 4-speed automatic transmission.

Power-assisted steering and brakes. Electric window lifts.

Also, an AM/FM stereo receiver with electric antenna. A quartz-crystal chronometer. Wiper, washer, and defroster for the tailgate window. Halogen fog lamps. A pair of outside mirrors, both adjustable from inside the car.

There is even central locking: a turn of the key in the driver's door locks all four doors, the tailgate, and the fuel filler port. Simultaneously.

Engineered like no other car in the world

The Mercedes-Benz aim is doggedly single-minded. It is to build safe, comfortable, practical cars with as few imperfections as possible.

This philosophy puts engineering ahead of petty economies and precludes the mass production of inexpensive cars.

A Mercedes-Benz is engineered like no other car in the world.

Load this space, or add passengers, and a sensor orders the suspension to raise the rear of the station wagon to its normal, most effective level.

The alloy wheels shown are at extra cost

Who would have thought it? Railroad freight car building, one o America's oldest industries, is now one of its most robust.

Look who's booming!

By Paul Gibson

IF WE TAKE AN ORDER today we cannot promise delivery before the first quarter of 1981."

Jet aircraft? Computers? Communications gear? Semiconductors? No, railroad freight cars. The man who made the statement is an executive of FMC Corp.'s Marine and Rail Equipment division in Portland, Ore. FMC is not alone. New orders for railroad freight cars started climbing in 1976. That year they totaled 38,000, reached 69,000 in 1977 and then soared again in 1978 to 116,000—the highest level since the mid-1950s. The carmakers can only deliver around 65,000 cars a year; there isn't any more foundry space available for steel casting of sideframes. Even so, this year they have written orders for another 100,000 vehicles. Pullman Inc. alone has a backlog of over $1 billion, more than double the figure three years ago.

"We've never had to book so far ahead," sighs CEO John Lloyd of Missouri Pacific Railroad, which is waiting for over 3,400 cars and 100 locomotives to be delivered this year and for almost as many in 1980.

Demand for locomotives is nearly as strong as for cars. With orders doubling since 1976 to almost 1,200 engines and no sign of any slackening ahead, General Motors' Electro-Motive division, by far the nation's largest builder of locomotives, recently added weekend and night shifts at its La Grange, Ill. plant, hoping to boost production to about 20%.

What is happening here? Frankly puzzled by the situation but nonetheless happy, ACF Industries President Henry A. Correa says, "The only explanation I can offer is that it's all because of the innovations in how our industry is financed."

Quickly, Correa explains that only a third of all the freight cars delivered by ACF in 1978 went to the major railroad companies. Similarly, of the 7,000 or so cars shipped by Pullman in 1978's first nine months, barely 30% went directly to the Class I railroads. The rest were purchased by leasing companies (40%) and shippers (15%). The balance went to American Rail Box Co. and its parent, Trailer Train Corp., two financing cooperatives owned jointly by 29 Class I railroads, but which purchase and manage their own independent fleet of cars.

This switch in ownership—a complete reversal of the buying pattern prevalent up until only two years ago—is regarded as significant and possibly permanent by both Pullman and ACF, the nation's two largest carmakers. "A whole avalanche of people are stirring up interest in owning freight cars," says Pullman Chairman Sam Casey, whose own firm has made a tidy profit since the late 1960s by owning and leasing freight cars in addition to making them.

Who are the new owners? They run the gamut: San Francisco's Itel Corp., which this year will buy every third boxcar made in the U.S.; medium-size bank-related companies like Philadelphia's Girard Leasing Corp., a car buyer in 1978; and a slew of private investors. Utilities also have become very big in freight cars, as the change from oil- and gas-fired power plants to coal has created a huge demand for coal hoppers; Iowa Power & Light, for example, recently took delivery of 115 coal cars. In chemicals, Dow Chemical is fast becoming an important purchaser of tank cars and may also buy coal cars if it develops its lignite deposits in Texas. Then there are private and corporate investors who are using rail cars both as a tax shelter and for capital appreciation *(see box p. 56).*

"Rail cars are a hot market for us," says Itel President Peter Redfield, "because the demand is there, yet the railroads we deal with have had and will continue to have trouble financing capital equipment." That's almost an understatement. The U.S. Department of Transport

T. Irvin, executive vice president, tells how A&A works from a client's point of view:

"We think growing companies deserve as much cash flow and asset protection as giant multinationals."

"Many small and medium-sized businesses don't realize it, but their basic insurance and financial concerns are the same as those of the multinationals. Big or small, a company has to be protected from the impact of sudden losses. And that's where we come in. Whatever size your company is, we'll use the same sophisticated risk management and analysis techniques we've developed over the years for our giant clients. As a matter of fact, our position as a worldwide leader in our industry is due largely to the growth we've enjoyed with our small and medium-sized clients. And we see much of our future growth coming from theirs. You can bet we'll be right there working with them. And with companies like them."

Working from a client's point of view is our way. From our top management to the men and women in over 110 cities here and overseas. That means working as allies, solving business problems together.

We think our dedication to acting as an ally of the clients we represent is a big reason why A&A has become a worldwide leader in the insurance and financial services business. We have the facilities, expertise and strength to act as effective allies. We work from a client's point of view, whether the corporation is large or small.

Alexander & Alexander
The Allies

tion, in a study issued last October, said the railroads faced a potential capital shortage of between $13 billion and $16 billion during the period 1976 to 1985—without counting Conrail, the federally supported basket case.

Formerly, third-party ownership was largely restricted to tank cars for oil and petrochemical firms. Most of these are owned and leased by GATX Corp. and Trans Union Corp., which got their starts when the trustbusters broke up John D. Rockefeller's empire. Nowadays, however, the ownership trend has spread to box- and flatcars, plus open hoppers for coal and covered hoppers to transport grain and other agricultural products. Within ten years, says Redfield, half the hoppers will be owned by agricultural companies and others not in the railroad business. Today fewer than a third are owned by outsiders.

Starting in the late 1960s, Pullman began sinking what Casey says has become "hundreds of millions of dollars" into building up its own fleet of 17,600 freight cars. These it leases to the grain and agricultural companies, like Cargill Inc. and Archer-Daniels-Midland Co., which, come harvest time, find themselves desperately short of cars. Mostly, Pullman leases its cars on medium-term, five-to-ten-year leases at a shade under $300 a month per car.

This isn't like leasing computers, where after six or seven years your machine is obsolete and ready for the scrap heap. Quite the reverse. Rail car technology rarely changes much. But thanks to inflation—up 25% in two years in this business because of escalating steel and labor costs—a freight car becomes more, not less, valuable as time passes. The freight car that cost $30,000 new in 1977 has a $40,000 replacement value today. Factor in accelerated depreciation and a 10% investment tax credit and you begin to see why Casey says of leasing rail equipment, "It's a cash cow. It's greatly impacting our earnings and will continue to do so all during the 1980s."

A ride on the rails

The 14 firms listed below make, lease or supply components for rail cars, or else they run short-line railroads. Demand for rolling stock has sent earnings soaring for almost all of them.

Company	1978 Revenues (millions)	1978 Earnings per share	EPS increase from 1977	Stock price range in 52 weeks	Price/earnings ratio
ACF Industries	$828.3	$4.72	14.5%	39½–28⅞	7
Amsted Industries	699.7	4.63	39.8	45 –29¼	7
Brenco	62.2	2.29	31.6	30¾–20¼	12
Emons Industries	7.2	.84	16.6	27¼–15⅞	23
FMC	2,912.8	4.22	17.2	28⅝–20½	6
GATX	742.2	4.84	dp*	32 –22¼	5
Itel	687.4	3.86	27.8	37½–16¼	6
Midland–Ross	578.7	2.71	28.4	20⅜–14	6
Naruc	31.0	1.30	nm†	12½–11⅜	9
Portec	204.9	1.95	57.2	22½–13	9
Pullman	2,594.0	5.83	92.4	48 –24	6
Rex-Noreco	3.5	.57	dp*	13¼– 4⅛	25
Tiger International	703.8	3.68	62.8	34⅝–15⅝	6
Trans Union	772.7	4.25	–4.7	38¾–28¼	6

*Deficit to profit. †Not meaningful.

"Quite simply," says President Kenneth G. Bosomworth of International Resource Development, Inc., the New Canaan, Conn. consultants, "the railroads of tomorrow will function as the movers of other people's rolling stock." As this happens, adds Bosomworth, there will be a great shift toward leasing, with the value of rail equipment including locomotives on lease doubling to almost $2 billion by 1985. Already a passel of both small and large firms, including the likes of U.S. Rail Service and COMDISCO, are acting as go-betweens on car-buying deals with banks and financial institutions putting up the cash and owning the equipment. Ford Motor Credit Corp., Greyhound Leasing & Financial Co. and General Electric Credit Corp. are actively involved in car-buying deals.

But the two biggest buyers and owners by far are Itel and Pullman. Itel, which started in computer leasing, plans to invest $1 billion in rail cars by 1983.

Pullman is also big in leasing truck trailers, but last year, thanks mainly to its rail cars, leasing's contribution to Pullman's earnings almost doubled, helping to push total earnings up from $3.03 to $5.83 a share. This year, expect $8. Itel's earnings from its rail freight have grown from $1.4 million to $16 million in just three years. How longtime lessors GATX and Trans Union must wish they had stuck with rail cars instead of branching out into shipping and real estate which badly penalized their recent earnings growth.

Itel has added an extra wrinkle. It has been buying short-line railroads and now has four. Owning short-line railroads is becoming one of the profitable ploys railroading and their operations m traditional railroaders seethe with an To understand why, you must first derstand a little about how the U.S. system works and in particular how da car rentals are levied.

Under the system's complex accou ing rules, whenever a shipment take car off the owning railroad's tracks onto someone else's, the second railr must pay rent for the car to the f railroad. The rental is called a per di charge. For years the more prosper western railroads have complained th cars are in effect being pirated by ca shy eastern lines that found it cheape rent than to buy. Not uncommon in industry are stories like the Boston Maine once telling its carmaker to s 750 new freight cars, only to have fe than 300 arrive. The others had b "hijacked" en route by competing r roads even before they reached B& New England marshaling yards.

What makes the car shortage e worse is that increasingly shippers h taken to keeping freight cars on th sidings, sometimes using them as l cost portable warehouses. To reduce pirating and to speed up unloading ti while also encouraging greater car bu ing, the Interstate Commerce Comm sion since the late 1960s has vastly creased user charges. Daily rentals boxcars now can run as high as $24 the peak shipping season, while just month the ICC approved a doublin the penalty charges for shipments are not loaded or unloaded within days of arrival.

Enter the short-line railroads an bunch of savvy financiers including I Redfield. They saw the ICC's move ease the car shortage as an opportu to turn a fast buck by introducing t own freight cars into the system an collect the now sizable rentals.

There are about 300 short-line roads in the U.S., each typically stre ing 30 miles, which came into existe to link a plant or mill with the m lines. Many are defunct. By purchasi short line the financiers can introduc many new freight cars into the syster they like. The cars bear the short li recognition marks, but once they le the builder's plant they become par the general traffic pool to be used other railroads. Often they don't m onto their "home" lines for month even years at a time. So far about a do short lines have been bought expre for this purpose.

Now $24 doesn't sound like much rental charge, not when even the ch est boxcar fetches $30,000 new. But ure it this way. If your car stays on o people's tracks for 80% of the year— at all impossible when there's a shortage—you will recoup all of you

The name that's a leader in calculators and electronic cash registers

KIDDE

Victor Business Products is Kidde's outstanding performer in office products. The reasons? More than 6,000 facilities, for sales and service in every U.S. county and 80 nations. State of the art products like the new 600 series calculator that sets new standards for reliability and performance. And premium features across the line, without premium price tags.

Victor electronic cash registers are also scoring big in the fast-moving world of retailing. With ECR products that range from stand-alone units to expandable systems with data communications capabilities.

These quality products, and hundreds of others from Kidde, have helped produce record sales, net income and earnings per share year after year. And now annual sales are at a rate in excess of $2 billion. To learn more about Kidde, write for our Annual Report. Walter Kidde & Company, Inc., 9 Brighton Road, Clifton, New Jersey 07015. And to find out more about the Victor Business Products, call Victor's toll-free number (800) 447-4700; in Illinois (800) 322-4400.

K&S *lawn equipment*

vestment in seven or eight years at the most. Again, that's not accounting for any depreciation, tax credits or residual value in a piece of equipment that likely will still be plying the tracks well into the 21st century.

At these rentals, per diem is much more profitable than ordinary leasing. Where a boxcar on lease might collect $5,400 a year, the same car on daily rental in today's car-short market could conceivably produce $7,000.

Wall Street, ever alert for new merchandise to peddle, last December sold to the public shares in National Railway Utilization Corp., a holding company for four short lines in the East. In five years, from a standing start, Naruc has hoisted its revenues to around $31 million, on which it probably earned $4.5 million in 1978. When it came to market late last year, Naruc had no difficulty in raising $9 million for new boxcars from investors willing to pay around 9 times earnings for its stock, about even with what the stocks of profitable railroads sell at.

What's good for the lessors is, of course, bad for the railroads: They would rather pull a leased car than have to pay rent on one. "I think the incentive per diem over time will be bad for the railroads," complains Vice President Peter Schneider of San Francisco's Thayer, Ringoen & Macdonald, which arranges lease financing for the big railroads. Snorts MoPac's Lloyd, "Itel gets the money and we do the work."

But while the railroads and the car lessors squabble over the spoils, bus nessmen who use the railroads are d lighted to get the extra cars. While t age and capacity of the railroad fleet h improved, the number of cars, 1.6 m lion, is down from 1.8 million ten yea ago. Many railroads are using nearly e ery dime they can get to keep the tracks in halfway decent shape and service their debt; they have little spare for the 20% down payment r quired for new equipment.

When FORBES asked General Mills if has trouble getting enough suitab freight cars, the company's transport tion man, Elmer Atchley, replied, "O my God, yes," and then launched into long lament about the difficulty Gene Mills' is having in keeping rodents out

You don't have to feed them

Soon Merrill Lynch hopes to sell freight cars through public offerings. "These will be suitable for an investor whose net worth is above $120,000 and [who has] earnings over $65,000," says Merrill Lynch's Michael Scillia, who expects personal investments in railroad equipment this year to top $300 million, triple 1978's level, as other Wall Street and regional dealers promote such investments. Already in the business are a number of promoters including Wayne Harbin, the former chairman of Marathon Manufacturing, now heading up Houston's Richmond Tank Car Co. which makes, leases and, on occasion, handles private placements of tank cars.

Besides the obvious attraction of income protection, rail cars are being presented as low-risk investments with high residual values and even as a way to secure a better standard of living in retirement. The mathematics of ownership can be beguiling for people in high tax brackets. After paying interest on the borrowed money and management fees, the investor is usually left with a rather small cash balance. However, thanks to accelerated depreciation and investment tax credit, he can claim a very large income tax offset the first year and declining amounts in subsequent years. By using the tax savings and the cash flow to reduce the debt, he will eventually end up owning the car free and clear, or nearly so. By buying a deal in his high-earnings, high-tax period and foregoing a cash return on his investment, an investor can hope to own a good income-producing property in his retirement years. In addition to giving up the return on his equity investment, however, the investor may also have to make further, relatively modest cash inputs as the tax savings diminish.

And—as with all tax shelters—there are plenty of pitfalls. Some are more real than apparent. "The high-flying promoters aren't deeply involved in this game yet," says William G. Brennan, author of a widely respected newsletter on tax shelters, "but you still need to read the fine print carefully." Among the points to watch:

- Hidden costs. When management firms supply rail cars they often mark up their purchase price 12% or more. That can run over $4,000 a car, so ask to see the manufacturer's invoice. Also, charges for maintenance, insurance and even state property taxes are easy to inflate, often clipping gross revenues by a third or more.
- Leverage. In practice, the wealthy borrow less than some promoters claim. In private placements involving business executives, Merrill Lynch says, only half borrowed any funds and then only up to 60% or so. Don't get locked in at today's sky-high interest rates.

Chairman Wayne Harbin of Richmond Tank Car Co.
A "richer retirement," investing in railroad tank cars.

- Delivery. Cars are in short supply. Your tax shelter could vanish if a promoter cannot get cars to sell you. One such promoter even walked off with the down payments.
- Residual values. High now for cars, but in a slump could tumble.
- Leases. Range from one month to seven years. While shorter leases yield higher returns, they carry greater risk; to cover costs a car needs to be in use 70% of its life. Beware of renting to short-line railroads that could go broke—as did the Virginia Central—or are strike prone.
- How sheltered? Buying cars after June 30 cuts first-year depreciation in half. Opinions differ, but some critics contend that as rental incomes outlast depreciation schedules you could end up paying not lower but higher taxes.
- And, finally, don't forget this: As in most tax shelters, the investor is sacrificing liquidity, tying up his money for a long period of time. An investor who must pull out before seven years have passed risks losing part of his tax credits as well as the markup he paid to the promoter.

Still, it is a beguiling business. As Chairman Sam Casey of Pullman Inc., the car builder, likes to say, "Rail cars are different from cattle or citrus groves. You don't have to feed or fertilize them." **—P.G.**

eal packages shipped by rail. Lately the Class I rail's profit performance has been atrocious. Traffic in 78 set a record of $21 billion, up 9%, net return on investment averaged s than 2%—even lower than in the ths of the Great Depression. The sition is uneven: A number of railroads, ticularly in the West and South are ng very well, but the desperate situan in the East and parts of the Midwest gs down the overall performance. is means that many major railroads nply cannot generate enough capital to deeply involved in purchasing all the ipment needed. The car lessors, refore, are filling the vacuum with tside capital.

Wherever the money is coming from, equipment manufacturers should e no trouble in raising their sales aner 20% or so to around $6 billion and bably will earn upwards of $325 miln in profits, double 1976's net.

The last great surge in rail-car orders in early 1970s was touched off by overprosperity and a grain-car shortage

ny railroads are using arly every dime they can llect to keep their tracks halfway decent shape and service their debt; they ve little to spare for the % down payment required hen it comes to buying new uipment.

sed by the Russian wheat deal. That om quickly led to a bust. Orders nged 66% in two years. Are we headfor another downturn? If so, in addin to the equipment makers, what will pen to all those smart financiers with ir private car fleets? Not a few of the ditional rail operators would almost lcome a recession if only, as one put "to see those blasted short lines gged with their own empty and unuse cars." That's a specter that could e day come to haunt the short lines. rmakers say they are getting fewer uiries about new cars than a year ago. so some well-seasoned lessors are rting to cut back on their funding nmitments. "You are seeing a general nd toward lower lease rates," says nneth Rusterholtz, vice president of nsportation financing at General Elec- Credit. GECC hasn't committed it- to any really big rail-car financing for o years now because, as Rusterholtz s it, "there's excessive bidding by too ny firms eager to supply equity."

No question: Some people may get rned in rail-car tax shelters and in the ort-line railroad business. But for ipment manufacturers, it's "Happy s are here again." ■

Of the 5 Great Liqueurs in the world only one is made in America.

Wild Turkey Liqueur.

Scotland has Drambuie. Ireland has Irish Mist. France has Cointreau and B&B.

Now America can boast its own great native liqueur: Wild Turkey Liqueur created in Kentucky by the originators of America's finest native whiskey, Wild Turkey.

Wild Turkey Liqueur is the "sippin' sweet cream" of liqueurs. It's made to be savored slowly after dinner. Or as a mellow accompaniment to an evening's conversation. You've tasted the great liqueurs of Europe. Now taste America's great one—Wild Turkey Liqueur.

Today's
Chase.

"We produce results for multinational clients because we're multinational bankers."

"At Chase, we combine the account relationship manager's knowledge of a corporation's goals with the ability of our bankers in overseas markets to act and react with expertise on the firing line. That's how we serve international clients best."
REID

"Cooperation is the key. The relationship manager orchestrates the overall count and keeps everybody informed as to objectives. Those of us overseas know what the strategy is and work to produce results based on our knowledge of local business practices, currencies, and market conditions."
BANKS

"The teamwork that characterizes the Chase system really pays off for our customers. A typical example is the way we worked out a back-to-back for a large U.S. company wanting to borrow Swedish Kroner. At the time, it appeared there were none available anywhere. David coordinated some super detective work in London until he finally turned up a corporation that had Kroner and needed Sterling."
REID

"We have a mature presence in every major money center in the world. Understanding those markets and having such a proven system enables us to deliver services in ways the competition simply can't match."
BANKS

The Chase Bank. A worldwide network of branches and affiliates providing vast sums of money and essential banking services for clients in over 100 countries. What we offer is yours through your Chase Relationship Manager. Call on today's Chase Bankers today.

What is NCR up to now?

We're up to number two in hospital computer systems.

Your hometown hospital, if it's automated, may very well be one of our customers. That's because NCR's share of the hospital market has grown to 22% in the United States.

NCR specialists dispense TLC—This dramatic rise is the result of NCR's market specialization philosophy. When selecting a computer system, hospital administrators want a supplier who builds more than hardware. They want EDP specialists who understand their problems. They need support people they can depend on to be there, night or day, until the system is up and running—then later, if problems should arise.

Administrators depend on NCR systems—Why are we up to number two in hospital computer systems? Administrators of medical institutions such as Deaconess Hospital in St. Louis, Shawnee Mission Medical Center in Kansas, Kettering Medical Center in Ohio, and St. Anthony Hospital in Denver helped put us there. They rely on NCR's MEDICS system that instantly updates patient information from admission to discharge.

Providing business equipment for 95 years—But helping hospitals fight rising costs is nothing new for NCR. We've been in the business equipment field for 95 years. Healthcare administrators look for this kind of experience when they choose an EDP system.

16,000 people in support—And they look for support. NCR supplies it, with 16,000 highly trained field engineers around the world.

Healthcare is just one of the fields where NCR is the leader. We're also up to management's most demanding requirements in retailing, financial, commercial, industrial, education and government markets.

Now you know why NCR is a world leader in general-purpose computer systems.

NCR
Complete Computer Systems

Why is Champion International expanding faster than most of its forest products rivals? Because Andy Sigler thinks it should.

Full speed ahead, damn the recession!

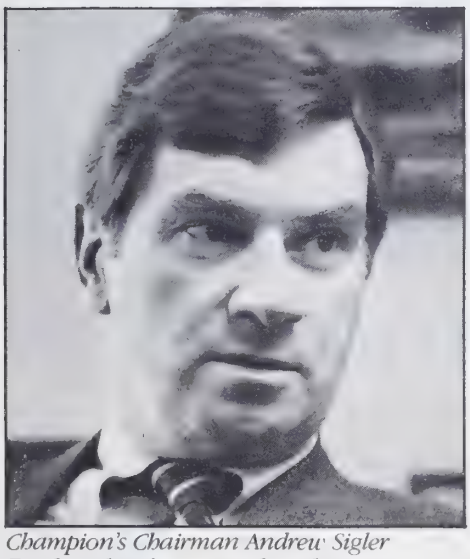
By Jean A. Briggs

NOT LONG AFTER Andrew C. Sigler, 47, was named president and chief executive officer of Champi- International Corp. he ran into Robert Pamplin, the legendary, now-retired s of Georgia-Pacific who built that npany into the biggest and most suc- sful in the forest products industry. nplin ran the hottest company in the siness. Sigler had just taken over one he least successful. "Son," said Pam- n, throwing an arm over Sigler's shoul- , "if you ever want to sell your Drexel niture subsidiary just let me know." igler laughs about the incident now, at the time he was a bit unnerved. d some information leaked out? Or s old Pamplin simply expecting Sigler do the obvious?

Pamplin had no inside information. ewd businessman that he is, he was bably prodding Sigler. For it was clear t Sigler had to get busy undiversifying hodgepodge company that his prede- sors had created and get back to ba- s—trees and paper.

igler, who started as a sales trainee at ampion Papers, had been with the npany over 17 years when he was ked to succeed Thomas Willers as ampion International's boss in 1974. llers, a former Occidental Petroleum cutive who now works for eccentric ionaire Daniel K. Ludwig, was fired Champion's board because of his nmitment to a failing strategy. Will- caught up in the jargon and faddism he Sixties, had wanted to turn Cham- n into a company that would "serve total home environment."

igler is careful not to ridicule his pre- essors. "Times were different," he s. "Pressures were different. The ite paper business wasn't a particular- good business in the Sixties and every- 's advice was to diversify." It is obvi- , though, from the way Sigler talks t he never believed in all that stuff



Champion's Chairman Andrew Sigler
Back to basics—wood and paper.

about "home environment." Sigler's commitment, then and now, is to trees.

In 1975 his predecessors' policies brought Champion to a point of crisis. Its earnings per share plunged 44% and the company earned only 9% on its highly leveraged equity. That same year its highly profitable rival, Georgia-Pacific, suffered an earnings-per-share decline of only 13% and earned nearly 16% on equity. Since the two companies were quite similar in size and were in many of the same businesses, the comparison was entirely unflattering to Champion.

Today the comparisons are much more flattering. Last year, Champion reported earnings of $3.32 a share, but this was after a special charge of 73 cents for settling antitrust suits. Without this charge, Champion would have earned $4.05 a share and would have shown a return of 18.3% on stockholders' equity; Georgia-Pacific, 19.7%. Sigler, in short, has almost closed the gap up with his most successful rival. Among other big companies in the industry, Weyerhaeuser earned 19.3%, Boise Cascade 14.2% and International Paper 12.9%, all before charges for antitrust settlements.

With housing starts likely to be down this year, Champion may suffer some slippage in profit margins. But absence of the special charge gives it a cushion. At any rate, this time its setback will be nothing like the one in 1975.

In the nearly five years since he took over as chief executive Sigler has not only done what Pamplin was nudging him about but a good deal else besides.

Sigler's first order of business was to get out of home furnishings and carpets. "We were able to do that much faster than I had thought we would," he says. "We accomplished most of it in two years; I would have thought it might take twice that." Why so quick? "There's always someone around who will buy something," he says. Then carefully choosing his words: "We didn't put false values on the businesses."

Sigler has sold 18 separate companies which had total sales of $640 million, but whose pretax earnings totaled a mere $2.2 million. "The aggregate profitability of those companies was about nothing," is the way he puts it. In the process he freed up over $400 million of capital.

Sigler's second major move was the purchase of Hoerner Waldorf, a highly profitable $500 million (sales) paper packaging company located in St. Paul, Minn. He bought it in early 1977. Shortly thereafter the company and the entire paper packaging industry failed to make badly needed price increases stick. But Sigler dismisses that as unimportant: "Business has been terrible for 18 months but that's a short-term thing. We're not talking about buying something for a year. This was a big thing for us, it tied in."

The fact is Hoerner Waldorf and Champion fit beautifully. F. Daniel Wilder, the former general manager of Champion Papers whom Sigler sent to Minnesota to run Hoerner, says Champion had wanted to get into the packaging business for years.

Hoerner Waldorf lacked trees and the financial strength to expand. Champion had both money and trees. "They spent $20 million in 1976," says Wilder. "We spent $46 million in 1977, $75 million in 1978 and expect to spend $129 million in 1979. They couldn't have afforded that on their own." The major project is the expansion of a pulp and paper mill in Montana that will increase linerboard capacity 56%.

Now, with all his pins in a row, Sigler is hell-bent on expansion while most of the industry is being cautious. He has announced a $2.1 billion capital spending program for the next five years. Boise Cascade is one of few other companies in the industry that will be spending at that rate. Sigler's plan includes $420 million for packaging, $845 million for Champion papers and $410 million for Champion

Creating new

Lockheed knows how.

World's fastest aircraft.

Flashing through the skies at speeds that made its black titanium skin glow cherry red, the Lockheed SR-71 has proved itself the world's fastest plane by setting two speed records that still stand. One record of 2092 mph over a 1000 kilometer course broke a mark of 1815 mph set by a Russian MIG-25 Foxbat in 1967. The other record—2194 mph over a 15/25 kilometer course—broke a mark set by the Lockheed YF-12A in 1965.

SR-71

Important as superior speed is, however, it is just one advance Lockheed has brought to the world of flight.

World's quietest big jetliner.

A new era, a new technical advance in aircraft. The L-1011 TriStar was certificated by the U.S. Federal Aviation Administration as the world's quietest big jetliner. It continues to be the quietest of the big jetliners, a welcome neighbor at airports and airport communities worldwide.

L-1011 TriStar

World's most advanced maritime patrol plane.

Most of the Earth is ocean. And most of the ocean under the keen scrutiny of the P-3C Orion.

Orion is uniquely qualified for maritime patrol. It fly low and slow for long periods of time. It can dash high speed to distant destinations. Its acoustic, electr and infrared "eyes and ears" can pierce fog and wat

Orion has been chosen by Australia, Iran, Japan, New Zealand, Norway, Spain and the U.S. Navy. And Canada recently selected an advanced version called

P-3C Orion

dvances in flight.

Lockheed's first airplane, the Model G in 1913. This original hydro-aeroplane carried three passengers at 60 miles an hour.

ra. No other maritime patrol plane is close to Orion tions served, miles flown or overall capability.

rld's fastest loading airlifter.

e C-5 Galaxy began a new epoch in airlift. It is the st military airlifter ever built. It can carry heavy oment impossible for other aircraft to handle. the world of airlift, where speed in loading and ading is critical, the C-5 stands alone. It is the only er that kneels on its landing gear to bring its cargo close to the ground— within shoulder height—to l handling of huge pieces of equipment. It is the airlifter that loads and unloads at both ends. In actual ation, 200,000 pounds of cargo have been unloaded a C-5 in under 30 minutes.

rld's most versatile airlifter.

e C-130 Hercules began its career purely as an airlifter. g the way, this sturdy, simple airplane has added roles. Now it is a tanker, a search and rescue plane, oto-mapping aircraft and a commercial cargo plane. en serves as a passenger liner.

In the Arctic, Hercules lands on skiis. Around the world, it lands on runways of gravel, dirt or sand that turn away other aircraft.

And it's a fuel saver. Its quiet, thrifty turboprop engines use far less fuel than turbofan engines. No wonder 43 nations have chosen this timeless plane of many missions.

Creating new advances in flight has been the life work of thousands of Lockheed workers. The Super Constellation helped establish world airline routes. The F-80 was America's first operational jet fighter. JetStar—and now the JetStar II—has led the way in creating the field of business jets.

The long-range C-141 StarLifter was America's first fanjet airlifter. The S-3A Viking is a major advance in carrier-based patrol aircraft. In advancing the world of flight, Lockheed knows how. In virtually all types of aircraft.

Lockheed

Pfister Tradition

Tradition is a treasured custom handed down through time. At the Pfister Hotel and Tower, "Salve" is our philosophy. Simply stated, "Salve" hails a warm welcome to those who enter. It assures you that the Old World charm and grace that greeted guests and dignitaries in the 19th Century is unchanged. We continue to display the same consideration and courtesy that was thought to be lost; nothing is more important to us than knowing you are well taken care of.

Tradition is a time honored practice, borne out of dedication and, above all, service.

Corrugated medium for containers being produced in St. Paul

Acquisition of Hoerner Waldorf put Champion into packaging at last.

building products, the old U.S. Plywood Co. which merged with Champion Papers in 1967. The remaining $425 million is mainly for timberlands.

Where's the money coming from? Sigler hopes to generate 80% of the capital internally. Cash flow is presently running at about $319 million a year. Sigler has cut Champion's debt ratio from 46% to 36.8%—partly through a timely sale of common shares in 1976 when the stock was higher than it is now. So, there is plenty of borrowing power, if needed, to finance the rest.

The expansion is carefully aimed at specific markets in which Champion already is well established: printing and writing papers, for example, where Champion has had customers on allocation for over a year. "We are one of very few companies building new plants for printing and writing papers," says Robert F. Longbine, head of Champion Papers. "Even if the economy grows fairly slowly, and such developments as electronic fund transfers mean demand for printing and writing paper doesn't quite keep up with that growth, there'll still be market enough for our new production."

In the past five years Champion has increased plywood production nearly 30%. According to John Ball, head of that division, it plans to increase it another 35% in the next five years.

Champion has also increased its lumber production nearly 50% in the past five years to 1.45 billion board feet and plans to add another 200 million board feet shortly. And it is about to bring a new particle-board plant on stream.

Basic to all this is Sigler's recognition of the importance of the company's number one asset: trees. Champion is the fifth most richly endowed company in terms of cubic feet of timber—after Weyerhaeuser, International Paper, Georgia-Pacific and Crown Zellerbach owns 3 million acres across the coun It controls, through long-term cutti rights, 400,000 more.

When Sigler became chief execut officer, timberlands became a separ profit center rather than merely a supp er of raw material to paper and plywo plants. Explains L.C. (Whitey) Heist, t division's chief: "Take a plywood pla Unless you attempt to put a market pr on the timber you put through it, y could deceive yourself into thinking y were making money when you were Or that you should keep it running wh you shouldn't."

Timber is now transferred at mark prices to the sawmills and pulp mills a Heist books the profits. They are la allocated back to the operating divisio

Another reason for breaking timb lands out was to make sure the fore were managed properly—that a piece wood going to a pulp mill should inde be headed there and not to a sawmill and to oversee the vitally important forestation and acquisition activities.

You don't turn a giant company or dime, but in less than five years An Sigler has completely reoriented th $3.5 billion (revenues) outfit. It kno what it is now: a tree company, not conglomerate. And it is in one of the be of all businesses. "North America is t place to be in the forest products indu try," Sigler says. "We're the low-co producers. We're one industry that c support Mr. Strauss' negotiations. W can be in favor of free trade."

A blunt, no-nonsense man, Sigler su denly looks pleased. "We're getting plu from analysts," he says. "And that's a l different than it used to be." Maybe n enough plugs: Champion still sells only five times earnings and at a fair substantial discount from book valu But this, too, may change. ■

An Arthur Young View:

Congress Didn't Invent Internal Controls with the Foreign Corrupt Practices Act

When it enacted the Foreign Corrupt Practices Act, the Congress believed that good systems of internal control would help to curb illegal payments. Therefore it included in the Act not only specific prohibitions against bribery and other foreign corrupt practices, but also requirements for accurate record keeping and adequate internal controls.

Some companies—and, sometimes, their advisors—have assumed that the Act requires a project of massive proportions to evaluate and revise the company's control systems. While that's undoubtedly needed for some companies, we believe it's unnecessary for most.

We make that statement because many companies have long recognized the importance of strong internal controls. Over the years they have developed good systems and ongoing programs for monitoring those systems. These companies should not panic; rather, they should continue their present quality performance and simply take steps to assure ongoing compliance with the Act.

Establishing a program

We believe reaction to the Act should include a program for the following:

1–Assignment of qualified people to oversee the development, staffing, and execution of the compliance program.

2–Assessment of the quality of the company's internal control environment—that is, the importance attached to internal accounting controls throughout the company—its "control consciousness."

3–Assessment of existing control systems through a review of comments reported previously by independent and internal auditors, and by other means including selected special reviews.

4–Correction of significant control weaknesses that are identified.

5–Continuous monitoring of the operation and suitability of the systems.

There are limitations

A good internal control system *permits* the preparation of reliable financial statements, but it *doesn't produce* them. Sound judgments, estimates, and evaluation by management are necessary ingredients critical to all financial reporting.

Similarly, good internal controls are no guarantee against bribery and corrupt practices, although they make such practices more difficult.

We do believe many people, including some in government, do not understand these limitations of internal controls. Nor do they understand the cost-benefit considerations required of management in establishing new controls. In fairness to its investors, a company must weigh the cost of an added control against the value of the asset to be protected, the extra precision in financial reporting which might be achieved, and the risk of loss or misstatement in the absence of the control. These are matters for critical and balanced judgment by those responsible for the conduct of the business.

In our view, while the Foreign Corrupt Practices Act does create the need for review and evaluation of internal accounting controls, what most companies need is a calm and studied approach. It is not an occasion for pushing the panic button.

In the four-handed game for control of National Airlines there are three sure winners, but who will be the loser?

High-stake poker

By Phyllis Berman and Richard Greene

EVEN BY THE UNGENTLE standards of takeover battles, this one is getting vicious. Francisco A. (Frank) Lorenzo, president of Texas International Airlines Inc.: "Pan Am has bought politicians and lobbyists from coast to coast, from Maine to Florida. . . ."

Pan American World Airways Inc.'s recent press release: "[Eastern Airlines Chairman Frank] Borman is again acting as a spoiler because of his fear of competition. . . ."

Charles J. Simons, vice chairman of Eastern Airlines Inc.: "I don't think they [Pan Am] know their butts from a hole in the wall. Is that clear?"

No. Nothing is clear. Except that Pan Am, Eastern and Texas International all want Lewis B. (Bud) Maytag's $589 million National Airlines Inc. Pan Am (revenues, $2.2 billion) now owns 24.1% of National's 8.56 million shares outstanding and has a contract to buy the rest at $41 a share. Eastern (revenues, $2.4 billion) with virtually no stock has offered $50 a share. Little Texas ($180 million) has 23.2% of National and is attempting a hostile takeover at market price.

The story really began last fall, when the Airline Deregulation Act of 1978 was passed. Prior to the act, the only merger between major carriers the Civil Aeronautics Board would surely approve involved a failing airline, like Capital and United in 1961. But that's been changed.

And National is a most tempting partner. Its route structure sweeps through the growing Sunbelt and then north to New York. The CAB recently gave it several profitable North Atlantic routes. Most important, its fleet—15 DC-10s and 40 727s—has a probable market value of $700 million, nearly twice as much as the $425 million Eastern would pay for the airline at $50 a share.

Knowing this, Bud Maytag, National's chairman, who controls over 4% of its shares, has played a shrewd poker ga
On May 25, 1977 Maytag first ente

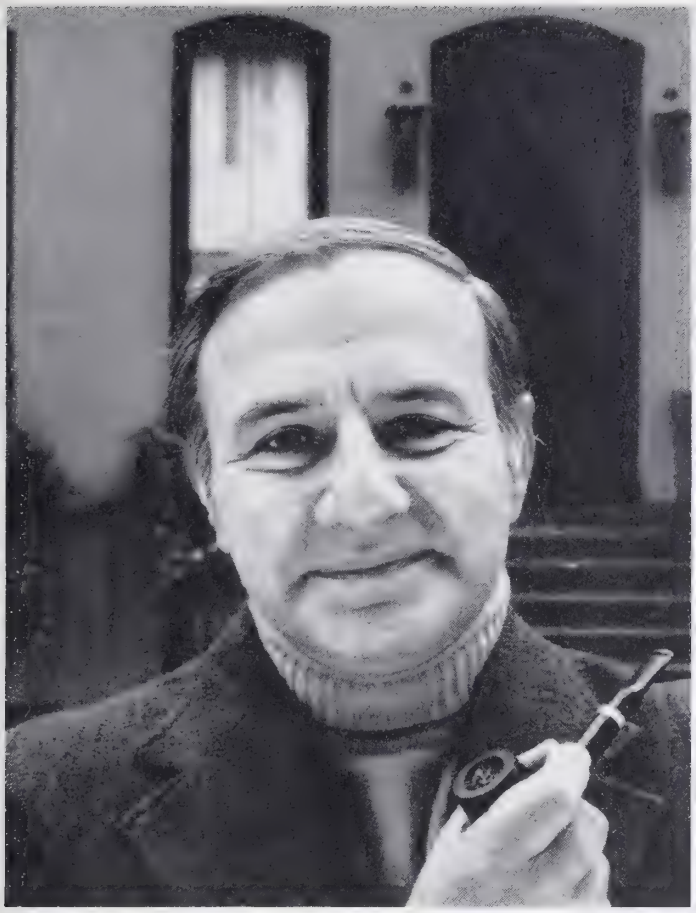
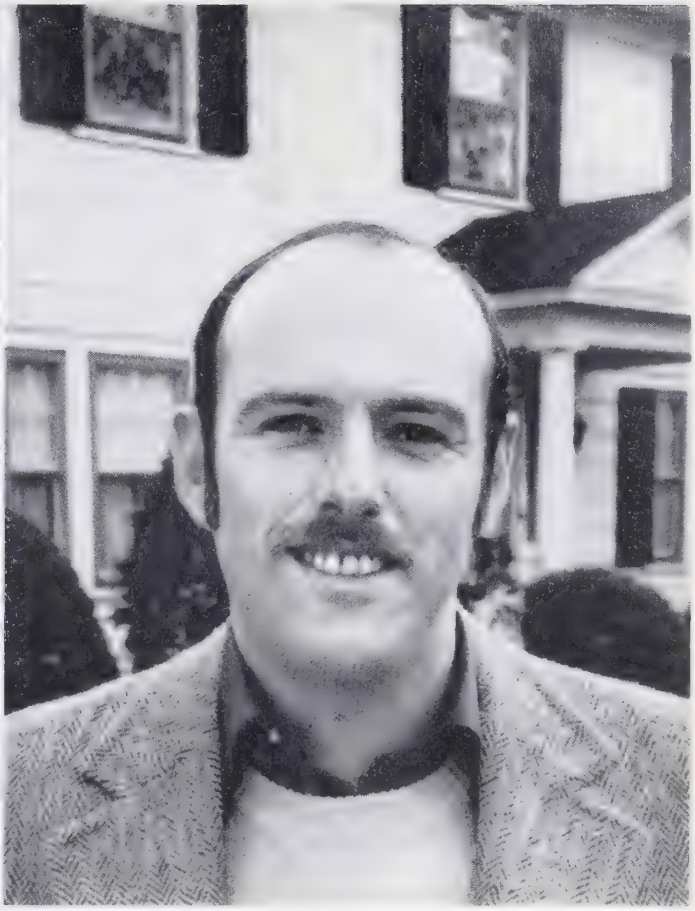
Hot words and escalating offers in a historic contest for a shrewd—and tempting—partner.





One of these homeowners is thrifty, safety conscious, and a sitting duck for financial disaster.

He doesn't even know it. He thinks he's done his best to protect his home and his possessions. He hasn't.

Many people, like the man on the left, believe they have adequate homeowners insurance. But inflation has been pushing up the value of their homes. They don't update their coverage every year. So when disaster strikes, they are unable to fully recover their losses.

Rising replacement costs are one reason. In the last 10 years the cost of re-siding a home jumped 132%, re-shingling a roof 155%; and repainting a living room 142%.[1] In the last five years alone, the cost of building a new home has increased 63%.[2]

As a group of property and casualty insurance companies, we don't want you to be a sitting duck by not having your insurance provide full protection for your home. Check with your agent to be sure your homeowners policy reflects the amount of additional coverage inflation has made necessary.

Here's what we're doing to help protect you:

- Offering policies with a built-in inflation clause.
- Supporting strict building codes to reduce fire risk.
- Designing new coverages to meet the special insurance needs of older homes.
- Helping to develop safety standards which protect life and property.
- Operating special claims assistance and damage repair programs in times of catastrophe.
- Conducting fire prevention and arson control programs.

Here's what you can do to protect yourself:

- Re-evaluate your home insurance needs annually with your agent.
- Take a higher deductible if you can. It lowers your premiums.
- Install a smoke detector or burglar alarm. Many companies offer premium discounts for such devices.
- Get a receipt or appraisal for all major household items (furniture, antiques, jewelry, art). Duplicate it and keep it and all such records in a safety deposit box away from your home.
- Inventory all your possessions and take photos of each room to document what you have.

National Chairman Lewis Maytag
He's not being coy—just smart.

fered him $375,000 a year for five years as a senior executive officer. "A payoff," sniffs Lorenzo.

At the moment the sure winners are Frank Lorenzo and Bud Maytag. Maytag, in addition to his contract, will get a minimum of $15 million for his own National stock. Lorenzo's Texas International owns about 2 million National shares that cost it $54 million and should bring over $95 million if the Eastern or Pan Am deal goes through. Also, Texas stands *some* chance of getting National—it may be the only one approved by the CAB, for instance. Meanwhile, the arithmetic is getting a little weird. At $50 a share, the bidders are putting a price of $425 million on National Airlines. At the same time, the *stock market* is putting a value of only $315 million on American Airlines, which is four times as big as National, and only $670 million on UAL, which is *six* times as big and includes a flourishing hotel chain. You figure it out. ■

May you live every day of your life.

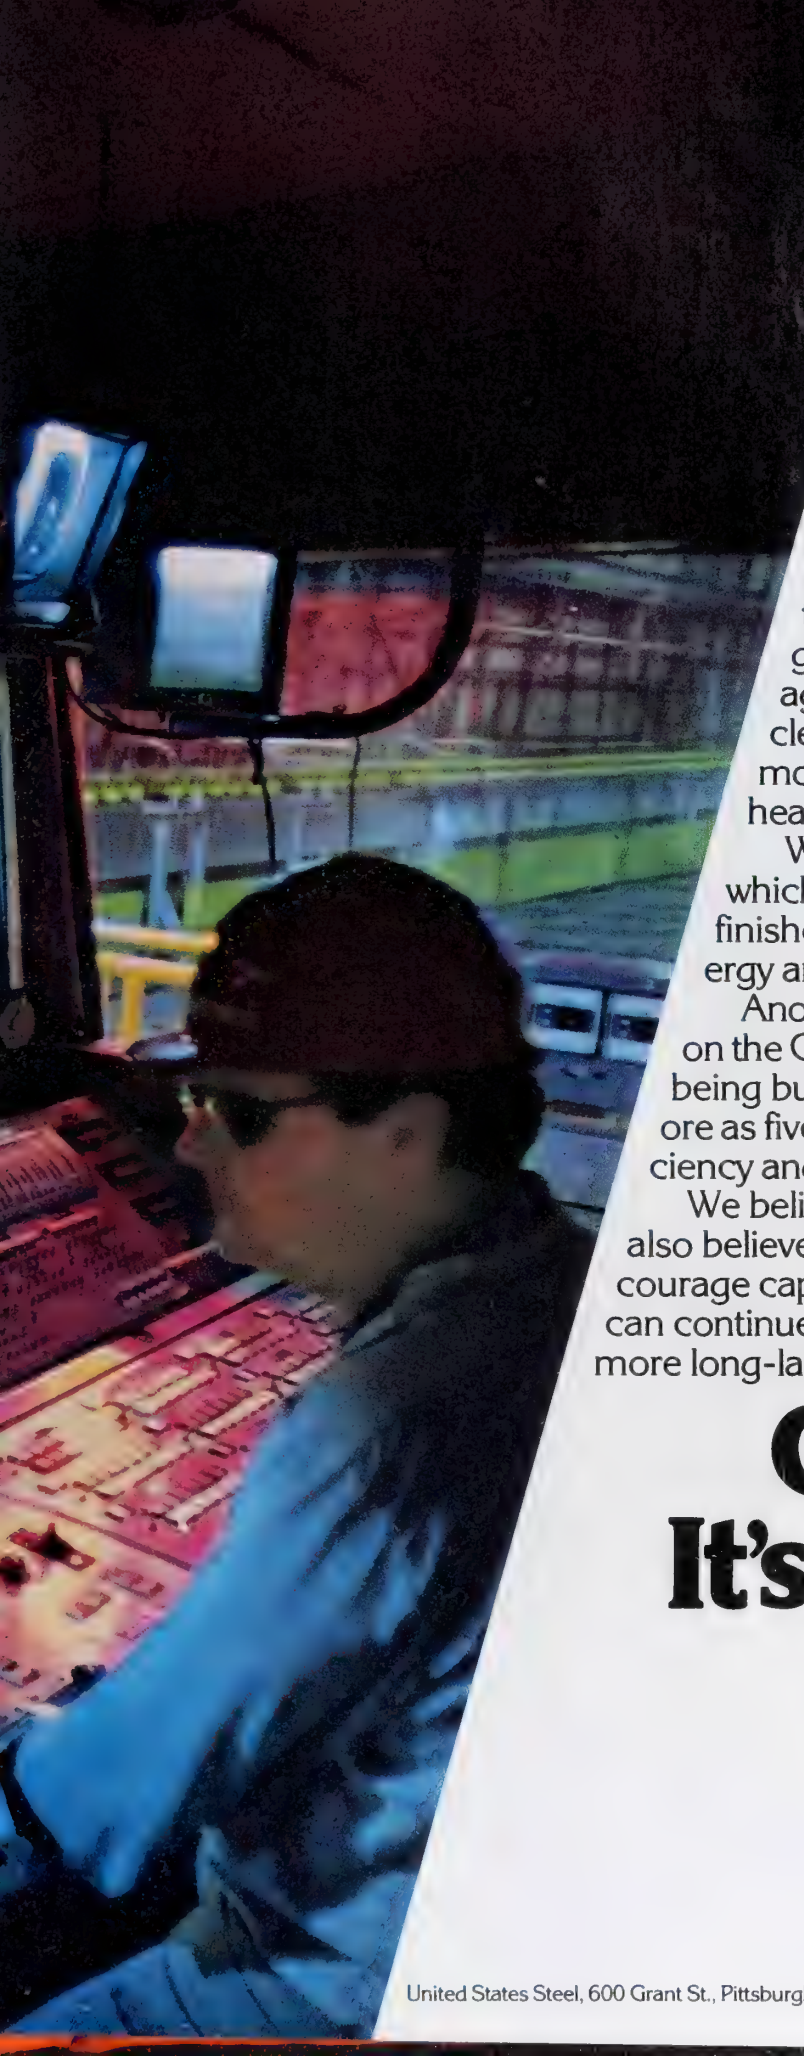
AMERICAN EXPRESS

To invest $6 billion in your company, you have to believe in its future.

We do.



Within the last ten years, U.S. Steel's capital expenditures for the development of new products, new businesses, raw materials resources and improved and expanded facilities, have totaled more than $6,000,000,000. Here are a few examples.

About 70 percent of our raw steel today is produced in electric, basic oxygen, or Q-BOP furnaces. Just a decade ago the total was only 20 percent. These cleaner, very efficient furnaces replaced more than 100 less productive open hearth furnaces.

We now have seven continuous casters which process about one-fifth of our semi-finished steel. This equipment conserves energy and improves product yield.

Another example is our shipping operation on the Great Lakes, where two super-ships are being built. Each will hold about as much iron ore as five older vessels, thereby increasing efficiency and productivity.

We believe that this is money well spent. We also believe that our government must act to encourage capital formation, so that private industry can continue to make improvements and create more long-lasting jobs.

Confidence. It's one of our strengths.

TRADEMARK

United States Steel, 600 Grant St., Pittsburgh, Pa. 15230

If Textron had not strayed from its founder's precepts it might never have become so heavily involved in Iran.

Adjusting the balance

SINCE THE EARLY Fifties when Royal Little decided to turn his cyclical textile company into the world's first conglomerate, broad diversification has been Textron, Inc.'s guiding principle. Today its 25 divisions gross more than $3 billion from making products as diverse as watchbands, chain saws, helicopters, zippers, greeting cards, hearing aids, roller bearings, machine tools and gas meters. Far from being an unmanageable hodgepodge, Textron has been exceptionally profitable with its diversity, regularly earning 15% or better on stockholders' equity. Textron worked so well it became the answer to anyone who questioned the conglomerate concept.

But in recent years Textron has strayed a bit from Little's path. Its Bell Helicopter division has grown to where it accounts for nearly 25% of overall corporate earnings. Don't knock it: The growth has been profitable though it did somewhat unbalance the company. Rendering Textron even more vulnerable was the fact that more than one-third of Bell's business has been in Iran. The collapse of the pro-Western government there will probably cost Textron $1 billion in sales over the next six years.

How much will Iran cost Textron on the bottom line? About 70 cents a share this year after taxes. Wall Street, which was predicting an earnings gain of about 30 cents a share, is now predicting a *decline* of 40 cents—a difference of about $21 million. This is hardly a body blow to a company with $1 billion in equity capital and profits last year of $168 million, but it means a down year for Textron and further damage to its image as a growth stock. Textron sells currently at only six times 1978 per-share earnings of $4.47. Continuing Securities & Exchange Commission investigations into alleged bribery have wasted endless amounts of executive time and diverted top management from its basic business of running the company. "We can no longer count on Iran," says CEO Joseph Collinson. He says it almost with relief.

Textron had two major contracts with Iran. The first, a so-called foreign military sales agreement, negotiated by the U.S. government, called for the delivery of more than $800 million in helicopters, spare parts, logistics and training. Textron has already received $500 million. But the remaining $300 million, due in the next year or so, appears in jeopardy, especially after Textron announced last month that it has removed from Iran over half its 3,000-man work force.

A second contract of $575 million over the next six years was negotiated directly with the Iranian government, and called for Textron to build a helicopter plant in a joint venture with Iran and supply parts as well. This would have picked up the slack as the first deal wound down. It was canceled when Iran defaulted on an $80 million advance payment for the project.

Collinson, 64, tall and precise-speaking, likes to point out that Bell is by no means totally dependent on Iran. It has a strong stake in the commercial helicopter market whose uses include executive transportation and servicing offshore oil and gas drilling. Bell's big push into the commercial market, Collinson believes, eventually will offset the drop in Iranian business and begin to be reflected in earnings in 1980. Though Collinson refuses to be specific, the aftertax margins on commercial helicopters are, he says, "substantially higher" than the 6% margins on foreign military sales. "Bell will have a drop in sales this year because of the Iranian situation," he says. "But the profit loss will not be so great because we will have increases in other phases of our business."

Already Bell has a backlog of more than 100 orders for its new Model 222 medium-size commercial helicopter, expected to begin rolling off the assembly line in October. Bell's goal is to sell 600 222s at $1 million apiece over the next five years. Bell will also introduce two other models: the 412 and 214ST commercial helicopters.

Even so, the commercial helicop market is only a fledgling $500 million size, and at its projected 15% ann growth rate, it could be years before co mercial sales fully absorb the lost Irani business. Commercial aircraft sales which now account for about one-qu ter of the Aerospace group's $1 billion revenues and $43 million in net come—would have to more than doul to offset the Iranian sales loss. Iran deal Textron a serious blow, and put heavy burden on its other groups: C sumer, Industrial and Metals.

The setback comes at an inconvenie time for Collinson, who became CE last year when G. William Miller left become chairman of the Federal Reser Board. An accountant by training, and former Arthur Young & Co. partner, C linson joined Textron as its treasurer 1959 and was made president in 197 His tenure as CEO will be short-lived. H plans to retire at year's end—and hop to leave on a happier note.

However, his successor, with the Ir setback largely behind him, has an exc lent chance to get earnings rising agai The most likely candidate is Robe Straetz, 57, Textron's president, wh started as a salesman with the com pany's Homelite division in 1946 an worked his way up the ranks, becomi that division's president in 1969.

Collinson and Straetz are a study contrasts, both in personality and bac ground, but complement each other we Says Straetz: "Miller was a brilliant co ceptualizer. Joe and I are closer to ope ations than to the broad picture; o style allows for an upward flow of info mation from the group officers."

Whatever the differences in style the top, Textron seems still committe to the "balanced growth" concept: a quiring smallish companies compatib with existing divisions while growi internally by introducing new product Textron is also looking for domina companies in small, fast-growing ma kets, but not big dramatic moves. A ca in point is Jacobsen Lawnmower (sale $100 million), which Textron bought la year. Other recent acquisitions include $40 million resin-producing division Ashland Oil and an Australian greeti card manufacturer to complement th company's Valentine Sands division.

Of Textron's acquisition strategy Co linson says: "We would rather build solid, steady growth record than an erra ic one by taking unnecessary chances."

Textron's essential balance, Collinso believes, will assert itself and fill the ga left in Bell by the Shah's fall. If that ca be achieved, the soundness of Royal Li tle's basic concept will again have prove itself—even though Textron straye from it a bit in the case of Iran. ■

MATSUSHITA IN VIDEO TECHNOLOGY:

The people who developed the 4-hour video home system now present the 5-foot Color Video Projection System.

After you develop and introduce Omnivision IV™ VHS,™ the 4-hour video home player and recorder, what do you do for an encore? Introducing the 5-foot (diag meas) Color Video Projection System from Panasonic that's so sharp and crisp it literally turns your home into a theater.

Someday we may look back and say this was the time television emerged from the bi-plane age into the jet age. Not since the introduction of color have there been such dramatic changes. First Matsushita Electric introduced the four-hour Video Home System (VHS™) that has put TV programming control into the viewers' hands rather than the networks'. And now Matsushita (pronounced Mot-soosh-ta) has another way to watch TV that is both literally and figuratively a gigantic step forward: A compact one-piece Color Video Projection System with a giant-sized 5-foot (diag meas) screen.

LIFESIZE TV.

The 5-foot (diag meas) TV screen isn't just big. It's spectacular. You'll feel as if you're in the middle of a sporting event or sitting in the best orchestra seat for a show or movie.

However, Matsushita engineers were after more than just a big image. After all, there are other video projection systems, but the Matsushita Color Video Projection System is a one-piece system. Unlike two-piece systems that require you to align them, our one-piece system is aligned automatically. No alignment is required, ever. Plus our system has a wide viewing angle. Add to that, a Schmidt optic system in a three-tube in-line arrangement for brightness. The result: a sharp, clear, lifelike picture even in normal room light.

VIR, COLORPILOT™ AND BIG SOUND.

As you'd expect the Panasonic Video Projection System also incorporates the latest electronic color controls: VIR and ColorPilot. With VIR, special circuitry automatically reads color signals sent out by TV stations. ColorPilot automatically takes over for those stations without VIR or those transmitting a weak VIR signal. Each system works to bring you accurate color that remains constant from station to station, program to program — all automatically. In addition, a Video Sensor automatically adjusts the TV picture to surrounding room light. And we didn't forget the little touches like a washable screen and handsome simulated wood cabinetry.

Matsushita engineers didn't forget sound, either. There's a 2-way 3-speaker system for excellent tonal quality. And the System also has a six-function infrared remote control and electronic tuning.

The Matsushita Video Projection System is also designed to be the center of a complete televiewing system. In conjunction with Panasonic Omnivision IV™ you can program an entire evening of personalized TV. You can see programs that you recorded while you were away or when other programs were being broadcast. Or play your own video tapes made with an optional TV camera. Or watch video tapes of sports and theatrical presentations that may be purchased or rented. All are enhanced by the huge picture.

TINY TV TO GO.

At the other end of the TV spectrum, Matsushita built the world's smallest color TV as well as the world's first 1½″ (diag meas) black and white set. Today, many people are finding that small portables that play on both house current and batteries make perfect second sets.

In addition to Omnivision IV™, Matsushita has demonstrated a unique disc player system that reproduces color images and stereo sound from a disc that looks like an ordinary LP phonograph record and can play up to two hours.

All these developments and the more than 50 million TV sets Matsushita has made to date stem from a controversial business philosophy. A philosophy which states that while profit is vital to business, a company's contribution to society by continuously improving product and technology is even more important. Only when Matsushita contributes to society can it expect to profit. It is a philosophy that works. In 1977, the Company owned over 49,000 patents and sales were $7.8 billion worldwide for our *Panasonic, Quasar* and *Technics* brands in the U.S. and Canada and *National* virtually everywhere else. Matsushita stock is traded worldwide, in the U.S. on the New York and Pacific Exchanges (symbol MC).

For more information about Omnivision IV™ VHS,™ the Color Video Projection System and the company behind them, write: c/o Matsushita Electric Corporation of America, Communications Division, One Panasonic Way, Secaucus, N.J. 07094.

CAUTION: Unauthorized recording of copyrighted television programs, films, video tapes and other materials may infringe the rights of copyright owners and be contrary to copyright laws.

anasonic Color Video Projection System lets you watch anything
on a 5-foot (diag meas) screen. Omnivision IV™ VHS™ lets you record
ing on TV for up to four hours and then play it back

MATSUSHITA ELECTRIC
PANASONIC TECHNICS QUASAR NATIONAL

THE AGE OF MICRONICS IS HERE.

Introducing the NP-80. The newest and most advanced member of Canon's full line of plain paper copiers. So sophisticated, Canon had to develop a new science—we call it micronics—to make the NP-80 what it is.

What is micronics? It's a combination of space-age technology and our own engineering/optics/electronics expertise.

The fastest desktop copier in its class—32 copies per minute. That's just one advantage of micronics: speed. Add to this instant-on, automatic shut-off after 36 seconds plus an interrupt function, and you have both a fast and an efficient copier.

Then there's the NP-80's Micro-Computer. It self-analyzes the entire copying process and notifies you if there's ever a problem. It makes this copier so intelligent, it thinks for itself. So the machine can take over tasks previously performed by humans. The end result is simplified operation and greater reliability.

All this, plus Canon's improved their remarkable NP process with two unique innovations. First a seamless CdS drum delivers more speed and long life. And second a new roller developing system uses less toner and produces completely dry copies. You get copy quality close to printing quality.

Check out what the NP-80 can do for you. After all, wouldn't you like to be the first person in your business to enter the Age of Micronics?

U.S.–JAPAN RELATIONS

In An Increasingly Interdependent World

George Santayana, the Spanish philosopher, once wrote that "A wall is a door." This seemingly contradictory declaration deftly describes the current U.S.-Japan economic situation. What Santayana was getting at, I believe, is that any obstacle, once overcome, becomes a gateway to further progress. In the past year we have made significant progress in persuading Japan of the importance of increased imports and a more balanced economic relationship with its trading partners. The world is witnessing the second opening of Japan with new and attractive opportunities for exports now available. Never before has Japan been so open to American exports. American businessmen are finding that markets in Japan can be won; to make the most of this situation we must learn more about Japan—its distribution system, its market practices and its consumer preferences. In short, we have to take the same kind of long-term approach and do the same kind of market research that the Japanese did in the 1950s and 1960s in order to enter the American market.

It is said that America and Japan look at each other through the same telescope; Japan looks through the eyepiece and sees a huge but minutely detailed and therefore comprehensible United States. Americans, on the other hand, look at Japan through the other end of the telescope. From that viewpoint Japan does not loom large at all, and we tend to undervalue the importance of the country, its people, and their way of doing business. I urge American businessmen to learn more about the world's third largest economy and to look at it as a potential market. There have been success stories already—McDonald's, Schick, Texas Instruments, etc.—and we are confident there will be many more. Because of President Carter's national export policy and Secretary Kreps' Trade Mission last year, together with the successes enjoyed by the Trade Facilitation Committee in identifying and eliminating impediments to increasing U.S. exports to Japan, the trend is up and there is every reason to believe that this will continue.

I have always believed that the fate of the United States is inextricably linked to the future of East Asia. Americans often seem to have a fixation on Europe, which to an extent is understandable since so much of our culture and so many of our ancestors came from there. But we are gradually coming to realize that our future lies in the Pacific and East Asia.

Let me review for you briefly some of the remarkable events that have occurred over the past year that have greatly strengthened stability and economic progress in Asia and the Pacific.

First of all, the United States and China have normalized relations, ending a 30-year period of mistrust and misunderstanding. China's desire to have full diplomatic ties with us is a manifestation of its new, outward-looking policy, both in terms of economic development and foreign policy. China is turning to Japan and the West for economic and technical assistance, and we are witnessing such unprecedented, forward-looking steps as China's sending large numbers of students, scholars and technicians abroad to study. China is thus becoming a more constructive member of the international community and a positive force toward a reduction of tension in the East Asia-Pacific region.

For this reason we welcomed the

signing last year of a peace and friendship treaty between Japan and China. We believe that the treaty will contribute to peace, stability and prosperity in Asia by nurturing a reciprocal set of interests including trade, economic development and cultural exchange. It also marks the end of a difficult period of uncertainty and start of a healthier and more fruitful relationship between China and Japan.

Second, the heady breezes of economic growth are blowing strongly in Southeast Asia and the ASEAN nations are seeking ways not only to consolidate their economic gains but to provide for their common security. We are pleased to see that Japan has become not only the region's largest trading nation but its largest source of economic aid as well. While there are still significant tensions in Indochina, it is important to note that in contrast to the serious differences among the communist states of the region, the ASEAN nations are growing stronger as time passes.

Third, South Korea has made remarkable strides in its economic and social development. It is in recognition of these gains and its new strength that the United States believes it is possible gradually to reduce the level of our ground forces in the ROK. We are confident that the program will not create a soft spot in our cooperative defense effort in this part of the world.

Lastly, Japan has fully emerged as an economic leader in the world and is gradually assuming the responsibilities that go with leadership. Whether at an economic summit addressing global issues, or at any number of regional forums, we are pleased to see the creative energies of Japan brought to bear on the multitude of problems confronting the world.

Our economic interests in Asia are also expanding. Last year the return on U.S. investments in East Asia was the highest in the world and the trend is up. Last year our trade with East Asia surpassed in amount our trade with Western Europe and the trend is up. Our exports to Japan alone were well over $13 billion in 1978 making Japan our largest overseas market. A serious problem exists, however, in that Japan's sales to the U.S. are about $25 billion, leaving a burdensome deficit between us. This year we expect that, with shifts in trade patterns resulting from yen appreciation and other factors, we will make great strides in resolving our bilateral trade problems. We are cooperating to strengthen the world economic order in ways which will benefit both countries. With the measures being taken on both sides, we hope to see more stable markets for foreign exchange, and much larger Japanese imports, especially of manufactured products. As we continue working together I am confident that there will be a substantial reduction of our trade imbalance.

There is a broad range of areas in which Japan and the United States are already jointly at work toward goals we share and which neither of us can reach alone. There is a long history of cooperation between our countries in the United Nations and affiliated organizations. We work closely with Japan and other developed countries in the United Nations Conference on Trade and Development. Regional institutions are another field for our interdependence. Japan's association with the developing countries of Asia is underscored by the new initiatives toward ASEAN announced during former Prime Minister Fukuda's successful visit there. Japan plays a major role in the Asian Development Bank, the Inter-American Bank and the African Development Bank.

Bilateral relations between Japan and developing nations, as well as between the United States and developing nations, continue to play a major role in the process of increasing mutual understanding and cooperation between North and South. In this connection the United States welcomes Japan's pledge to double by 1980 her 1977 aid disbursements to developing countries. The interest of Japan in broadening her aid effort beyond her traditional programs in Asia as befits an economic superpower is attested to by her several assistance programs in Africa. We also applaud Japan's new policy of generally untying new aid loans so that developing countries may obtain the best available equipment with these loans at the lowest costs.

The United States and Japan have also continued their close cooperation in the Organization for Economic Cooperation and Development (OECD). Since Japan was welcomed into its ranks in 1963, we have exchanged views on current trends in our economies, consulted each other on domestic and international economic issues, and subjected our economies to intense scrutiny. Here, too, Japan is being accorded an increasingly large role reflecting growing prosperity. A particularly good example of this can be seen in the recently formed OECD Steel Committee. Intended to study trends in supply and demand for steel as well as make specific recommendations on production and trade policies, the Committee will meet a critical need for multilateral consultations on a vital industrial product.

There remain, of course, other problems yet to be overcome, but as long as we recognize the growing complexity of the world economy and the increased interdependence between the United States and Asia, we can look forward to mutually beneficial economic and security relations.

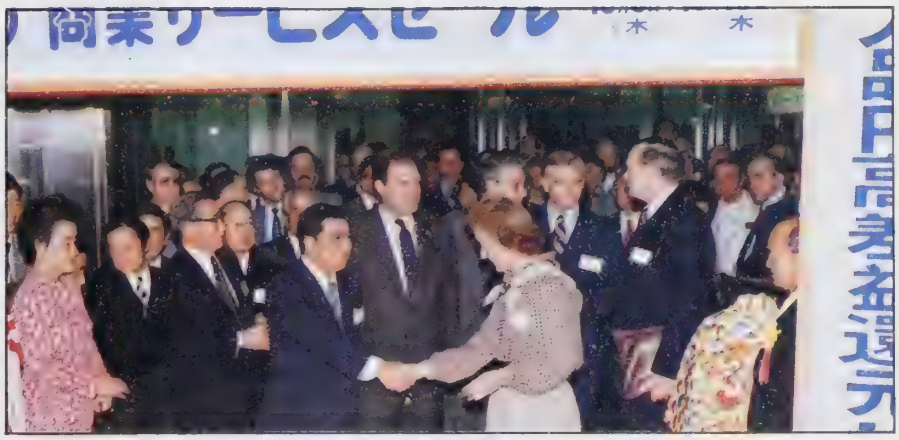
Every cloud has a silver lining.
The Japan-U.S. trade gap is quite a cloud.
The silver lining?
The best chance ever for U.S. exporters in the Japanese market.

THE WORST IS OVER

Japan-U.S. trade relations have, as most everyone knows, been going through some bad times. Japan's surpluses, growing steadily since the recession of 1974-75, peaked at the end of 1978; in that year, Japan exported an estimated $25 billion worth of goods to the United States and imported only about half that much. It was the biggest bilateral trade deficit in history. Said the Tokyo-based president of the Boston Consulting Group, James C. Abegglen (a highly respected American Japan-watcher): "A distinct note of irritation is in the air."



New Beginning: U.S. Commerce Secretary Juanita M. Kreps cuts tape to open officially American Fair at Tokyo's new World Import Mart in October of 1978. Secretary Kreps headed 100-member U.S. delegation.

Is the irritation justified? At first glance, Japan seems to be enjoying an overwhelming advantage from that cumulative $36-billion trade gap. But look a little closer. The economical automobiles which Japan sells to the U.S., for instance, are made of Japanese steel, much of which is in turn made from Australian coal and iron ore. Australia, an English-speaking country with close links with the U.S., runs surpluses in its trade with Japan, surpluses amounting to billions of dollars. And Australia is in heavy deficit in its trade with the U.S. Orders from Japan for raw materials, in other words, enable Australians to buy U.S. products. Purely bilateral trade figures are misleading, and the demand for balanced bilateral trade everywhere is a short-sighted one which would quickly bring world trade to a halt.

HOW TO CLOSE THE GAP

Even so, however, the 1978 trade surplus with the U.S. was something that no one in Japan, or the U.S., wants to see repeated. Japan has a vital interest in U.S. goodwill just as the U.S. has a powerful interest in Japanese prosperity, directly and indirectly.

But how? To oversimplify, either Japan exports less to the U.S. (and therefore imports less from everyone) or the U.S. exports more to Japan, stimulating the American economy and. boosting world trade in the process. So where do we begin?

We begin by considering the two countries as they actually are. The U.S. is a comparatively new nation, with abundant raw materials which until recently met most American needs. The U.S. therefore has practically the whole range of human needs available for export.

Japan is an overcrowded chain of islands long on scenery and short on everything else. In no single raw material can Japan supply even half of its needs; in most, Japan is dependent on imports for anything from 95% to 100%. Even where Japan appears to be largely meeting the needs of her 115 million people from her own resources—in rice, poultry and pork, for instance—she is heavily dependent on fertilizer made from imported oil, and foreign-grown food grains (more than a billion dollars' worth were imported from the U.S. in 1977).

A MATTER OF NECESSITY

Not surprisingly, Japanese and American attitudes towards international trade are very different. Japan supports her population by importing raw materials, processing them and selling the resulting products on the world market. Machinery makes up half the Japanese export total; add metals, chemicals and textiles and you've accounted for just about everything "made in Japan." Food exports from Japan are mostly fish products and less than 1% of the total. The Japanese have traditionally been wary of importing anything but the basic necessities of food and raw materials. In 1868, at the time of Japan's opening to the outside world, her industries were much behind those of the developed West; no Japanese manufac-

If expertise in securities is money, Yamaichi is worth fortunes.

With 80 years experience, Yamaichi is one of Japan's foremost securities firms, providing the complete expertise you require to maximize opportunities in the securities field.

With the yen becoming an increasingly stable international currency, our brokerage business on behalf of foreign clients in Japan has enjoyed unprecedented success. Success that can be attributed directly to our position of leadership among Japanese securities companies. Success that makes us your ideal partner in all aspects of the securities business: underwriting, brokerage, distribution, dealing, research, and investment banking.

Yamaichi's offices on four continents are linked by a 24-hour-a-day "hotline" which gives our international clients immediate access to data pertinent to their needs—up-to-the-minute stock quotations, economic and industrial studies, corporate evaluations, and investment and bond market analyses.

If you're looking for expertise in securities, consult Yamaichi. In Japan and throughout the world, we have the know-how necessary to offer you immediate and comprehensive assistance with your investment requirements.

Uncommon vision in international finance.

turing could have survived, let alone grown, without rigid protection. For most of the century since, Japan's problem has been not trading surpluses, but nagging, incurable deficits caused by the need to import not only food and raw materials, but advanced foreign machinery and know-how as well.

A USEFUL SIDELINE

By contrast, American industry has never considered manufactured exports as anything more than a profitable, useful sideline to the main business of supplying the huge and sophisticated U.S. market. Economies of scale and superior technology meant that American exporters, if they were successful at home, did not have to make any extra efforts to sell abroad.

In terms of gross national products neither Japan nor the U.S. is all that dependent on foreign trade: Japan's exports are only a little over 10% of its GNP, its imports less than that. U.S. exports and imports are both under 10% of the U.S. GNP—less than half the proportion of the manufacturing countries of Western Europe. The difference is that Japan's exports are vital because they finance necessary imports . So, as an exporter, Japan has had to try harder.

But that is changing. The U.S. now has to get into exporting seriously, for much the same reasons that have impelled Japan for a century: to meet a big and growing bill for imports, especially oil. The Japanese market for U.S. goods is already big (second only to Canada's) and the Japanese economy continues to grow at a brisk clip. Nothing would please both the Japanese government and business community more than to see U.S. exports to Japan grow.

PERSISTENT MYTHS

Why then was last year's trade so wildly unbalanced? It was not so much the result of Japanese import restrictions or a Japanese government-sponsored export drive. Both are now largely myths, or, more accurately, memories of how things were a long time ago.

True, the Japanese market was pretty much closed to foreign manufacturers up until the early 1960s. The bombed-out Japan of 1945 reproduced in many ways the conditions of 1868. The Japanese governments of the early post-war years severely restricted foreign manufactured goods and coddled the struggling industry to get it back on its feet.

As Japanese industry became competitive internationally, and therefore competitive in its home market as well, import restrictions diminished. But Japan continued to be a heavy importer of foreign capital goods and technology. The yen stayed cheap and Japanese products continued to export well. So, in the early 1970s, with the re-equipping of Japanese industry almost complete, trade surpluses with the U.S. started to pile up—$3.2 billion in 1971, $4.1 billion in 1972. The result: the yen began to climb in value and Japanese exports became more difficult to sell.

OIL UP, YEN DOWN

Then the 1973 oil increases tripled Japan's oil bill and brought the yen tumbling down again. The trade surpluses with the U.S. started to soar once more, this time into the stratosphere—$1.7 billion in 1975, $5.4 billion in 1976, $8.1 billion in 1977, and last year's whopper, estimated at more than $11 billion.

This looked like an ugly trend which might continue forever. But it is not. In little more than a year, the yen appreciated almost 40%, partly as a result of those huge surpluses. In the early months of 1978, the situation appeared to worsen as U.S. imports from Japan (expressed in terms of cheaper dollars) seemed to soar—though in yen terms (which is what counts to the Japanese) the change was far smaller. In fact, by the third quarter of 1978, exports to the U.S. expressed in yen were down 11% and imports

KIKKOMAN Soy Sauce
NOW MADE IN AMERICA

Teriyaki Sauce
Naturally Brewed Soy Sauce

Ideally situated in America's wheat and soybean heartland, Kikkoman's 200 acre Wisconsin plant—a major facility opened in 1973—utilizes modern technology to uphold its well-known tradition of product excellence.
Now nationally advertised and distributed, Kikkoman has attained an ever growing acceptance in homes and restaurants the world over.

World renowned quality Since 1630.

from the U.S. expressed in dollars were up 28%. The tide had turned, and the last quarter of 1978 showed it running even more strongly in favor of the U.S.

The same period shows a permanent change under way in the pattern of Japanese imports: the proportion of manufactured goods to total imports rose from 21.8% in October-December 1977, to 29% in November 1978. This partly reflects a slow and steady change in the Japanese lifestyle, as new families with more Western tastes become more numerous, as the consumption of American-style food increases, and as Japanese living standards rise.

Significantly, the most striking changes were in leisure products (up 80%), Western-style furniture (up 67%), and sporting goods (up 55%)—areas where U.S. manufacturers have long excelled.

The whole Japanese trend towards a Western pattern of consumption should favor American manufacturers above all other competitors, in fact, because Americans are the Westerners Japanese know best.

FAR FROM CLOSED

How open is the Japanese market? The image of a country semi-closed to manufactured imports—a sort of economic Tibet—is at least 15 years out of date, although such old ideas die hard, and the vagaries of yen and dollar have helped to perpetuate the illusion. In fact Japan now has no import quotas, except on certain voter-intensive, politically explosive farm products like beef and oranges, and even there the barriers are slowly coming down.

Outside of these highly specialized areas only five manufactured items were still restricted in February 1978, compared with six in the U.S., 11 in West Germany and 27 in France; and Japanese tariffs on manufactured and non-oil mining products in 1975 averaged 3.6%, vs. the U.S. average of 5.7%, and 6.7% in the European Common Market. The Japanese market, as far as government goes, is as open as any in the industrialized world.

What about non-tariff barriers? Every country has them, and Japan has its share. Japanese regulations on things like product safety and pollution are severe, and Japanese bureaucrats enforce them strictly, on Japanese and foreign manufacturers alike. In addition, the Japanese language, especially in its written form, is difficult. The need, however, for conquering each other's language is just as great on both sides of the Pacific.

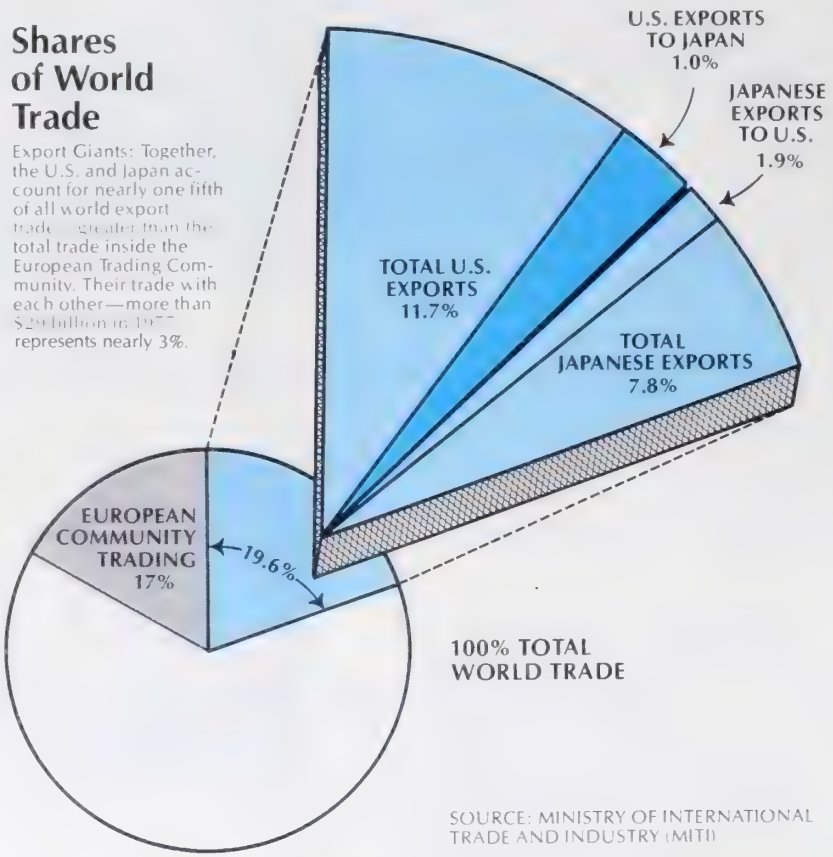
Too, the Japanese distribution system has comparatively little experience in handling foreign manufactured goods. In short, in no way is the Japanese market easy. The competition—other foreigners and the Japanese themselves—is steep, as it usually is when the prospective rewards are so great.

COOPERATIVE EFFORTS

However, help is increasingly available to U.S. exporters. The great Japanese trading companies (sogo shosha) have experience unique in the world in bringing together manufacturers, retailers and consumers. The U.S. and Japanese governments have established a U.S.-Japan Trade Facilitation Committee to work towards overcoming some of the problems outlined above. Since October 1978 the new World Import Mart gives foreign manufacturers the opportunity to show their products to Japanese distributors and consumers at Ikebukero, close to the heart of the Tokyo business world. The Japan External Trade Organization has been organizing Export-to-Japan seminars in major U.S. cities. A 92-member Japan Import Promotion Mission went to the U.S. in March of 1978.

The greatest help of all, however, is likely to be the expensive yen and comparatively cheaper dollar.

But even with all this help the Japanese market is not, and is never likely to be, an easy one. Exporting to Japan takes in-depth market study, efficient manufacturing, imagination and new ideas. In fact, manufacturers who can succeed in Japan can probably succeed anywhere. Look at the Japanese, who first made the grade at home.



Shares of World Trade
Export Giants: Together, the U.S. and Japan account for nearly one fifth of all world export trade—greater than the total trade inside the European Trading Community. Their trade with each other—more than $29 billion in 19[illegible] represents nearly 3%.

SOURCE: MINISTRY OF INTERNATIONAL TRADE AND INDUSTRY (MITI)

INTERVIEW: Masaru Uchida, chairman of the Sogo Shosha Committee of the Japan Foreign Trade Council

"Japan has always been a good market for imported products."

Trade relations between the United States and Japan continue to be the cause of misunderstanding by both parties. Here Chairman Uchida gives concrete advice to the American businessman contemplating entry to the Japanese market.

Q. Why is Japan such a difficult market for foreign goods?

A. First of all, Japan is, and always has been, a good market for foreign goods. Even in feudal days when Japan was closed to the outside, foreign goods brought in through Nagasaki by the Dutch were much sought after.

Japan is, however, the most homogeneous market in the world. Its idiosyncrasies, for the most part, can only be understood by those born and raised in its social environment. Distribution, for instance, has been the nemesis of many a foreign marketeer.

What works in New York will not necessarily work as well in Tokyo – particularly if the concept is forced upon the Japanese marketing staff.

I would say that the first step toward success in the lucrative Japanese market for foreign goods is to get a Japanese partner with a reputation for winning. Sogo shosha, the Japanese general trading companies, are good examples of what to look for in a Japanese partner.

Q. But sogo shosha are often called "non-tariff trade barriers." Are they not so?

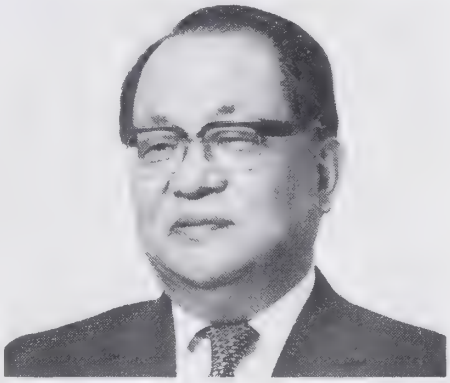
A. Nothing could be further from the truth. *Sogo shosha exist for free world trade.* Including importing to Japan. In fact, the 15 top sogo shosha that form the Sogo Shosha Committee of the Japan Foreign Trade Council imported more from the United States than they exported to the U.S. from Japan. Approximately $10.4 billion worth of goods were contracted for import and $9.2 billion for export in the sogo shosha's US/Japan trade during calendar 1978.

Q. What markets in Japan show the most promise for new products and services from the United States?

A. We find that franchise restaurant systems are just beginning to show their true potential in Japan. McDonald's, Kentucky Fried Chicken and Shakey's Pizza have led the way, but recent additions such as Denny's and Baskin-Robbins are also proving very successful.

Again, it is best to find a partner that is already successful in the field. We know of foreign companies that have failed dismally because they chose the wrong partner.

Who knows what the future holds, but we see promise for American products and services in such fields as computers, large and small; medical electronics and other equipment; telecommunications equipment and electronic components; food processing and packaging equipment; advanced scientific and technical equipment; home appliances; packaged food, especially marine products; chemicals; sporting goods; and fashions. Of course there is always a demand for raw materials and fuels such as coal, coke, and liquefied gases.



Masaru Uchida: "Sogo shosha exist for free world trade"

Q. Does the Japanese consumer discriminate against foreign brands?

A. The modern Japanese consumer probably has less prejudice against products from other countries than consumers in any other country in the world. There was a time when imported or foreign brands connoted extremely high prices and superlative quality to the Japanese consumer. With significant increases in discretionary income, especially among younger consumers, however, the idea that imported and foreign brands are out of reach of the ordinary consumer is no longer a problem.

Japanese consumers may well be more familiar with American brands than American consumers are with Japanese brands. Olin skis and Hanson boots are familiar to Japanese skiers, Pflueger to fishermen, and Ericson and S&S to yachtsmen. Housewives in Japan know and use such brands as Del Monte, Duskin, Johnson & Johnson, Cheer, Heinz, Tabasco, Sunkist, and many others. Children are as apt to brush their teeth with Colgate as with a Japanese brand.

Success of American brands in the Japanese market depends much on marketing strategy, adaptability of the product to Japanese tastes, and skill of the Japanese partner involved.

Q. What things should be kept in mind by anyone interested in entering the Japanese market?

A. There are several.

1) Research your intended market thoroughly. And do not leave that research strictly up to a Japanese research firm. Get highly involved in the project with a team of your people who can ask searching questions about what you want to do and about the results of any research project.

2) Make haste slowly. Map every move. Then be prepared to work 24 hours a day, seven days a week until your product or project is off the ground and rolling.

3) Select your Japanese partner with care, then take his advice seriously. Trust him until he shows reason for you not to. If you find you cannot trust your partner, you should terminate the relationship.

4) Remember that Japan is a vertical society with a definite pecking order. Find where your company fits in the commercial order of the field you have chosen.

5) Stick to it. Many foreigners come to Japan in hopes of quick sales and profit. We have a saying, "Three years on the rock." We like profit as well as the next person, but sometimes it takes longer in Japan. Do not get overly impatient. If you feel things are not going fast enough, have a long, quiet talk about it with your partner.

Q. What products and/or services are sogo shosha looking for?

A. We mentioned several fields that look promising. We are interested in products and services in any one of them. The very size of a sogo shosha precludes our handling low turnover, low profit items. However, if we see promise, we will suggest an alternative course of action to whomever approaches us with that proposal. We have set up some highly successful licensing operations in fashions, restaurant chains, and other fields, and we have been known to set up special subsidiaries to market especially promising products in Japan.

For further information on just what sogo shosha are and what they can do for you, send $2.00, check or money order, to the Sogo Shosha Committee at the address below. We will forward you our 16-page detailed pamphlet entitled "The Sogo Shosha: What They Are and How They Can Work for You."

It takes some doing, but there are those who are making it in Japan's trillion dollar economy.

INTERDEPENDENCE —on the move in Japan

"Look at it this way," an American businessman recently remarked over drinks in a Japanese hotel, "you've got a vast, homogeneous market here of 115 million people with the highest literacy rate of any nation and a per capita income almost comparable to that of the U.S. Outside our own, it's the largest free market in the world."

The Japanese economy is indeed worth pursuing. And while many U.S. businessmen view this marketplace as impenetrable, there are those who are discovering that the rewards do justify the investment.

AMONG THOSE MAKING IT

Take Max Factor, for example, the largest foreign subsidiary of any American cosmetics firm. In recent years, with total sales of about $200 million, Max Factor has enjoyed a growth rate 15% higher than that of the Japanese cosmetics industry in general, in part because of its adaptation of the marketing strategies of the leading Japanese cosmetics firms, with franchise corners in major retail outlets and a completely Japanese distribution system. In such respects, the company is indistinguishable from a wholly Japanese enterprise.

Another U.S. manufacturer, the Borden Company, through its joint venture with Meiji Milk Products, began marketing the first sliced cheese ever sold in Japan. By 1977 it had captured 15% of the market. Another product, Lady Borden ice cream, was introduced in 1971. Currently, Meiji Borden is the second largest ice cream manufacturer in the country.

FAST RISE OF FAST FOODS

Since 1970, fast-food chains from the U.S. have greatly altered the dining habits of the Japanese. Government figures describe the combined potential of McDonald's, Kentucky Fried Chicken, Mister Donut, Dunkin' Donut, Shakey's and Denny's as a $34 billion market. Foremost has been McDonald's with an incredible 50% annual growth since its beginning in 1971. Unlike its franchise organization in the U.S., a directly owned outlet system was instituted to ensure quality service.

In the field of high technology, the success of IBM in Japan is legendary. It controls about a quarter of the Japanese computer market. Another success story is Texas Instruments. With superior technology, TI went into Japan to produce semiconductors in order to forestall Japanese manufacturers from dominating the market. And the strategy has paid off.

Avon is a good example of a company utilizing a marketing system in Japan unique to the U.S. A staff of over 50,000 "Avon ladies" are generating an estimated $50 million in sales. Schick combined forces with the Hattori Watch Company, manufacturers of the Seiko brand, and gained an overwhelming market share of 68% of the single-edge razor blade market and 74% of twin-blades. Sears has tied up with Seibu, Japan's second largest retailer, to expand the mail order business in Japan. Mindful of the differences in lifestyles, Sears has tailored its refrigerators to Japanese kitchens by developing a compact design without affecting the storage capacity.

AN INTEGRAL PART OF LIVING

Statistics reveal that, of the 200 largest U.S. companies in sales, 117 have subsidiaries or joint ventures in Japan in which their equity shares are 25% or more. It's not surprising that in recent years U.S. products have become an integral part of the daily lives of the Japanese. Western-style supermarkets and department stores celebrate week-long "American Fairs" with merchandise ranging from Texas beef to Black & Decker tool kits. The housewife shops for Kellogg cereals and U.S. strawberries, the conservative businessman looks for a Brooks Brothers' label and teenagers pick up copies of the "Saturday Night Fever" album at $19 a throw.

Recently, the Japanese government has made conscious efforts to increase imports from the United States, implementing tariff reductions, expanding import-financing arrangements, easing exchange controls and simplifying import regulations. The government is also trying to maintain maximum growth in GNP to stimulate demand and boost imports.

In the private sector, a group of private companies established the "World Import Mart" last October.

NEW STRATEGIES, RENEWED INVOLVEMENT

This flurry of recent activities in both the government and private sectors is resulting in stepped-up

Tokyo's "Fifth Avenue." Strollers enjoying a "no-car" Sunday along the Ginza, main shopping thoroughfare in Tokyo. Affluent families show new consumer orientation.

involvement by U.S. companies in the Japanese economy. Many of these firms are employing new strategies. For instance, to encourage sales of American-made subcompact cars in Japan, the big three American car companies are shifting distribution channels from dealerships to directly owned routes through their respective Japanese partners.

In other developments, Procter & Gamble recently attained 100% control of its subsidiary, Procter & Gamble Sunhome Company. PepsiCo is reviewing its total Japan strategy for marketing Pepsi Cola. It also tied up with Fujiya Confectionery in snack foods. Exxon will increase its involvement with General Sekiyu, a leading oil products distributor, and become the fourth largest force in Japan's oil industry. Other top-ranked U.S. corporations who increased their commitments in Japan include Dresser Industries, American Can, Celanese and General Electric. Arthur D. Little, Inc. of Cambridge, Mass. became the first American "think tank" in Japan last spring.

MOVING UP WITH THE YEN

Also in 1978, Eastman Kodak set up its own Japanese subsidiary. The company capitalized on the rise of the yen to reduce the prices of its film and thereby gain a larger share of the Japanese market. In industrial measuring instruments, Yamatake-Honeywell Company and Yokogawa-Hewlett-Packard both took advantage of the yen's climb to improve profitability. Among consumer-product manufacturers, firms like Estee Lauder and Yamazaki-Nabisco registered outstanding performances by using traditional Japanese distribution channels and adapting their products to Japanese tastes.

Last year, too, witnessed increased competition between U.S. and Japanese firms in the field of data processing. Honeywell, in setting up Honeywell Information Systems (Japan) with Mitsubishi Office Machinery, joined the five other major American manufacturers marketing computers in Japan. The others: Burroughs, Control Data, IBM, NCR and Univac. In consumer finance, an increasing number of American firms are forming subsidiaries in Japan. Leading U.S. companies include Avco, Beneficial and Household Finance.

MARKETS MUST BE WON

The long-standing belief that Japan is a market almost impossible to crack seems no longer entirely true. America's exporters are making substantial gains. What remains to be tested is the resolution of U.S. businessmen to capitalize on the situation—to be aggressive in winning markets in Japan.

That many American businessmen in the past found it difficult to gain a substantial foothold in Japan can be attributed to several factors. The most basic was a lack of experience and long-term commitment to develop export markets. The U.S. Department of Commerce estimates that of about 25,000 American companies that could export to Japan, only 2,500 do so. Moreover, just 200 companies account for 70% of all U.S. merchandise exported to Japan.

The successful U.S. firms marketing in Japan have investigated that country and its people with the same thoroughness that the Japanese have studied the U.S. marketplace.

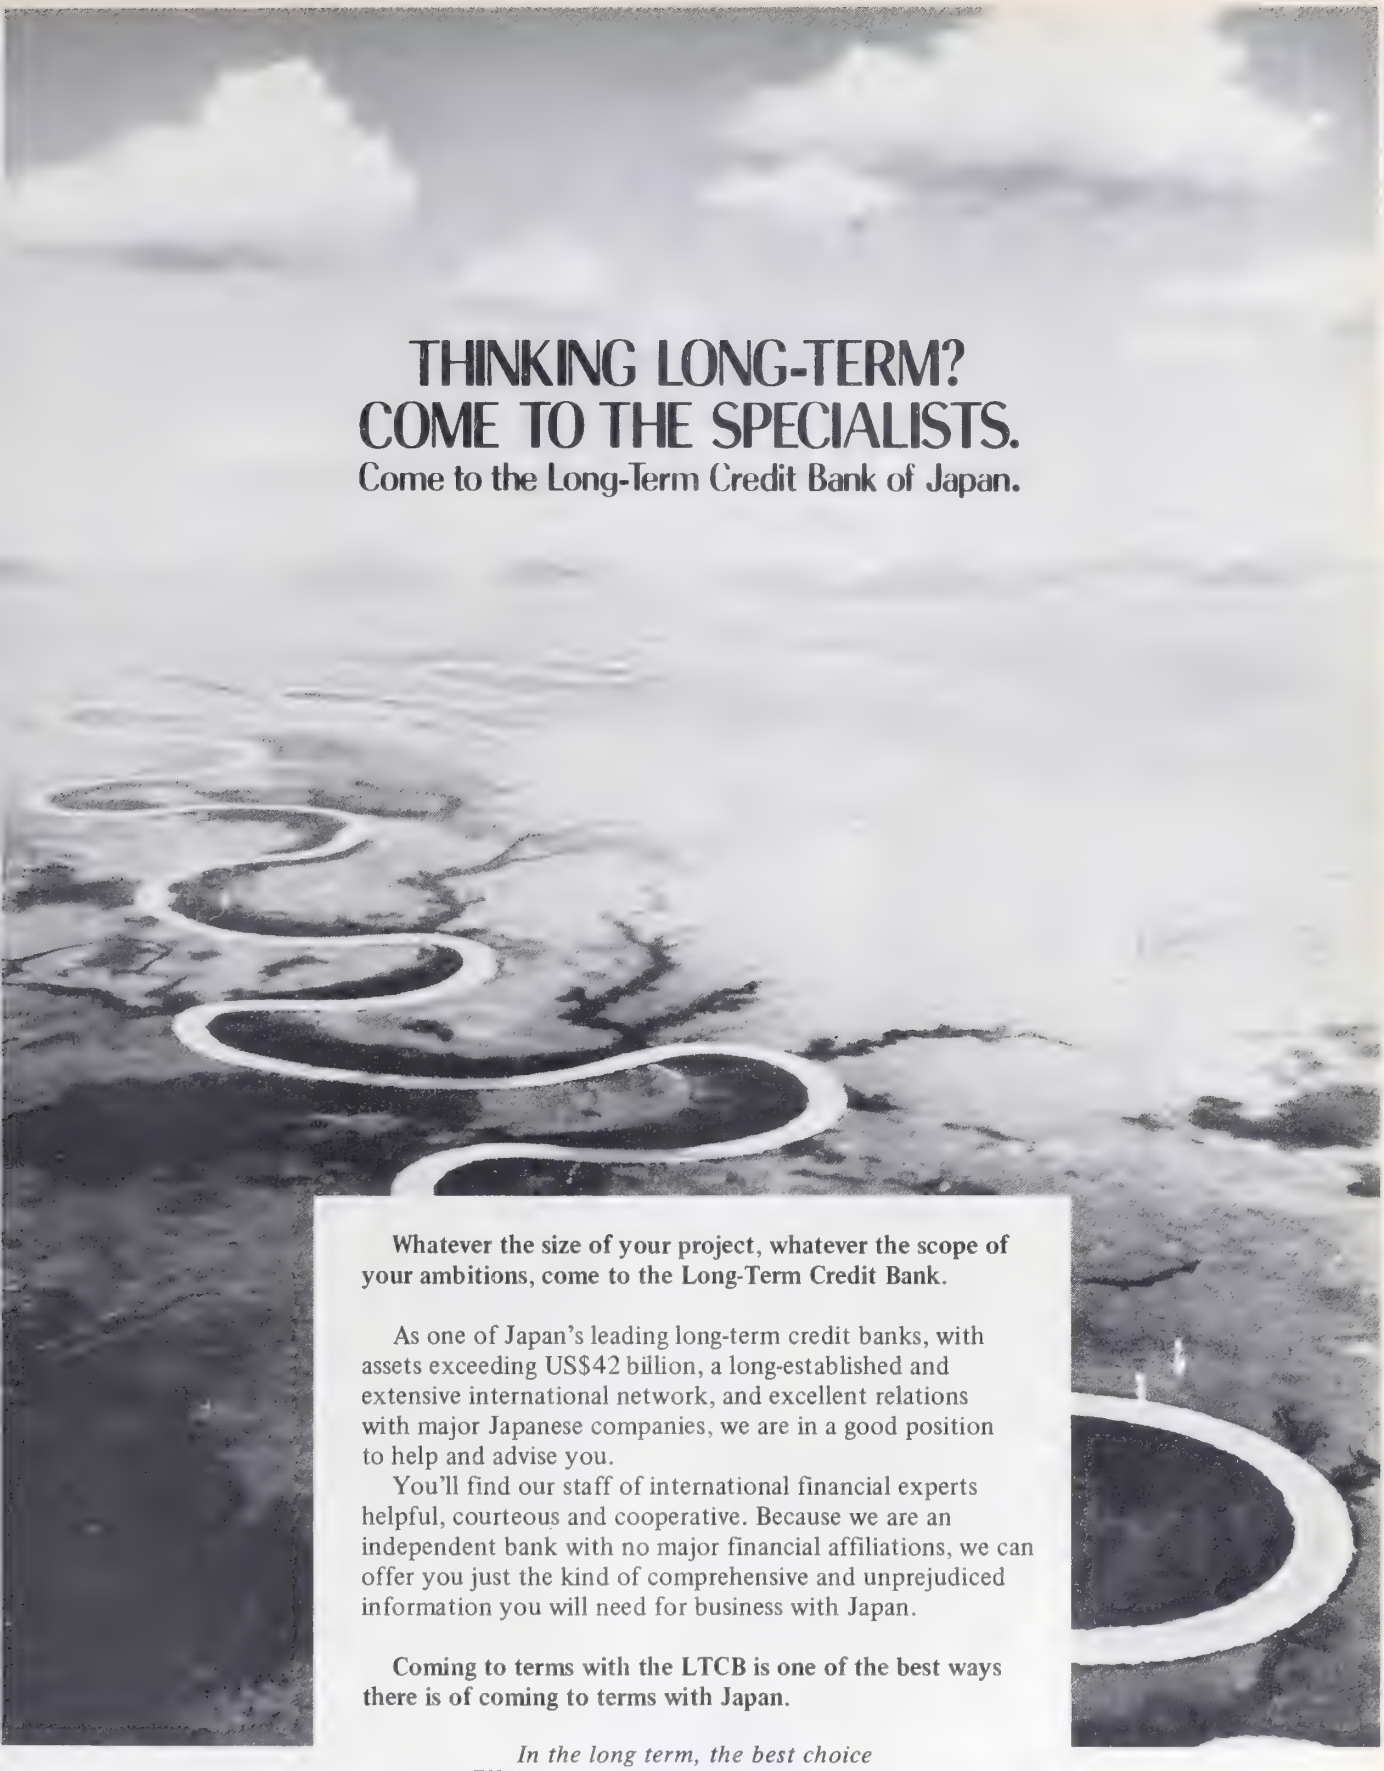
WHAT'S AHEAD IN THE 1980's?

These enterprising U.S. firms are now looking further to expand in Japan. Certain fields of export will be target areas. For example, American industry is the acknowledged world leader in high technology-intensive products. Hence, the market in Japan for U.S.-made aircraft, large computers, medical equipment, pharmaceuticals, and office machinery will continue to develop.

Similarly, American consumer products—fashion and leisure-oriented goods, packaged foods, toys and household items among others—have proven acceptance by Japanese consumers.

As discretionary incomes continue to rise in Japan, there will be a growing demand for new and better products and services. Frequently it is the foreign entrepreneur who best identifies voids and supplies the innovative. The phenomenal development of the fast-food industry in Japan is a good case in point.

The U.S.-Japan interdependence in trade is entering a whole new phase. What remains to be done is a carefully thought-out commitment towards a market strategy adapted to the Japanese environment. A number of U.S. companies are succeeding. Opportunities exist for many more.



THINKING LONG-TERM? COME TO THE SPECIALISTS.

Come to the Long-Term Credit Bank of Japan.

Whatever the size of your project, whatever the scope of your ambitions, come to the Long-Term Credit Bank.

As one of Japan's leading long-term credit banks, with assets exceeding US$42 billion, a long-established and extensive international network, and excellent relations with major Japanese companies, we are in a good position to help and advise you.

You'll find our staff of international financial experts helpful, courteous and cooperative. Because we are an independent bank with no major financial affiliations, we can offer you just the kind of comprehensive and unprejudiced information you will need for business with Japan.

Coming to terms with the LTCB is one of the best ways there is of coming to terms with Japan.

In the long term, the best choice

Proof of Progress 1978

Once again, Nikko's financial statement provides proof of progress and successful management policy. Income before extraordinary items was US$353 million (¥66,800 million) (up 36%), the highest since Nikko's founding. And despite the fluctuating yen-dollar rates, net income was up a full 35%, reaching US$172 million (¥32,600 million); and net income per share increased to ¥40.42.

Success for our sixtieth year and for the future is reflected in the increase of stockholder's equity, now US$876 million (¥165,900 million). The demonstrable progress made in 1978 resulted in increased cash dividends (to ¥7. per share, including 60th anniversary ¥1. dividend).

For Nikko and its clients, 1978 was indeed a very good year.

Japanese companies' $995 million worth of manufacturing plants in the United States are paying benefits to both countries.

INTERDEPENDENCE Comes Home

Ten years ago the idea of a sizable Japanese manufacturing presence in the United States would have been dismissed as too bizarre even to think about. Even five years ago it would have sounded strange.

Today it is fast approaching reality. At last count some 300 Japanese firms had put $995 million of direct investment money into 532 U.S. manufacturing projects. (The figure is considerably higher when reinvested funds are included.) If present trends continue the United States could rival Southeast Asia as an outlet for Japanese manufacturing investment.

Equally significant is the fact that, after a late start, Japan probably will soon overtake West Germany and the United Kingdom to become the world's second largest overseas direct investor, after the United States itself.

Why should the traditionally cautious and stay-at-home Japanese want to venture directly into the citadel of Western manufacturing power and progress? Partly it is the same concern that drives most direct investors: if you don't get in quickly your competitors will. While cautious, the Japanese have always been extremely sensitive to what others are doing. The sight of large European combines moving steadily to establish U.S. manufacturing bases is clearly having its effect. And in many fields, if only one Japanese firm moves almost all the others will move, too.

THE REMORSELESS YEN

On top of this is the economic attraction in U.S.-located production as the yen moves remorselessly up against the dollar. When the dollar was worth 220 to 230 yen, many manufacturers had already calculated that production costs in the U.S. were no higher than in Japan, even allowing for the expense of transferring abroad. With the dollar below the 200-yen level, some inevitably want to turn these calculations into reality.

The major psychological boost for investing abroad, however, has been Japan's trade surplus and the realization that any long-term solution to it will require some shift in production out of Japan. For commodities at the mature stage of the product cycle—like television sets and automobiles—such thinking makes a lot of sense. The production technology is already established and known, so there is little technological risk in moving abroad. On the other hand failure to move could easily lead to loss of an important overseas market.

Not surprisingly, therefore, it is in these areas that most of the Japan-U.S. investment action is now occurring. Most of Japan's large television makers have either tied up with U.S. makers in joint production facilities or moved to establish their own. Other appliance makers are also beginning to establish themselves. One large automobile maker has begun preparations for two-wheel vehicle manufacture and is expected to expand this later to four-wheel vehicles. Other car makers are known to be studying the U.S. market closely.

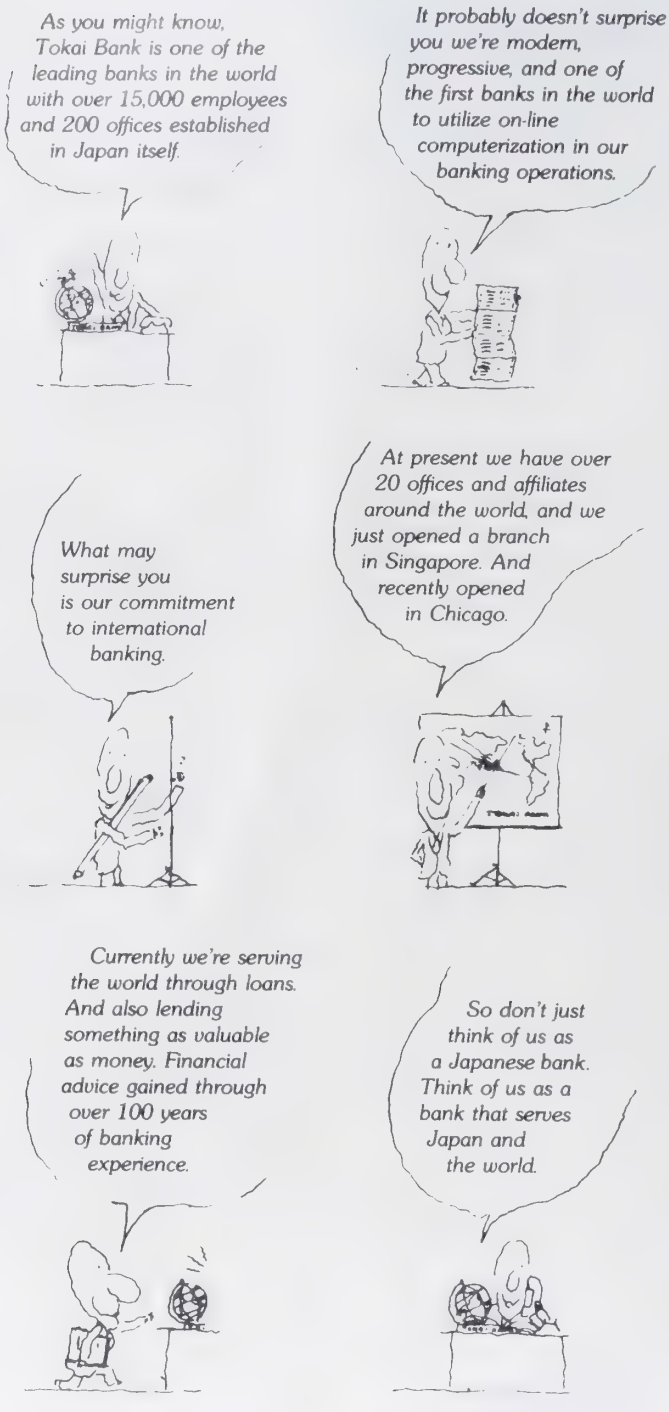
As a result the manufacturing share in Japan's total direct investment in the U.S. had jumped by 1977 to almost 21% (trading investments have traditionally made up the bulk of total investment).

SOY SAUCE TO SAWMILLS

Meanwhile, of course, other investors continue to launch projects which cover everything from making soy sauce and Japanese noodles to large scale processing of U.S. timber and agricultural exports. Indeed, some $500 million of Japanese direct investment money has already found its way into the development of minerals, timber and food for export to Japan. A major role has been played here by Japan's *sogo shosha*—general trading companies—with their consistent philosophy of securing and consolidating reliable supply sources.

Underlying this investment surge is the fact that many Japanese manufacturers are now surprisingly familiar with, and quite unintimidated by, the differing operating conditions in the United States. A recent survey comparing investment attitudes towards the U.S., Western Europe and the developing countries showed that while Japanese investors realized the intense competitiveness of the U.S. market they were impressed by its size, tolerance to foreign capital, the availability of ancillary goods, services and finances; and the quality of labor. Most commented that while labor unions were strong in the U.S., they were also moderate. Many noted the simplicity and "rationality" of the U.S. distribution system, with the producer and consumer brought into direct contact. Obviously, many were comparing it with the far more complex system they had to live with in Japan.

A few words about Tokai Bank's expanding international operations.



As you might know, Tokai Bank is one of the leading banks in the world with over 15,000 employees and 200 offices established in Japan itself.
It probably doesn't surprise you we're modern, progressive, and one of the first banks in the world to utilize on-line computerization in our banking operations.
What may surprise you is our commitment to international banking.
At present we have over 20 offices and affiliates around the world, and we just opened a branch in Singapore. And recently opened in Chicago.
Currently we're serving the world through loans. And also lending something as valuable as money. Financial advice gained through over 100 years of banking experience.
So don't just think of us as a Japanese bank. Think of us as a bank that serves Japan and the world.

TOKAI BANK

ATTRACTIVE INDUCEMENTS

Another attraction is the inducement many U.S. states are prepared to offer the foreign investor. Large Japanese investors find themselves approached with offers for feasibility studies, technical aid, and so on Only the most negative of investors could fail to be impressed by such attention, particularly when the problems and difficulties of finding new factory sites in Japan are considered.

Obviously it will be some time before the success of this investment can be judged. Indeed, given the overall Japanese investment philosophy—building for the general future prosperity of the corporate family rather than constant attention to the bottom line—it is hard to define just what is success. Japanese manufacturing investment abroad has sometimes been defined as "defensive"—it's usually motivated more by market considerations than a more aggressive desire to exploit a technology abroad. It sees its rewards more in terms of holding or expanding a market position than in high dividends. In fact, the dividend return on Japanese manufacturing investments abroad averages only half that of U.S. investments overseas.

This relative lack of concern for high return also helps to explain the high proportion of Japanese overseas investment in the form of joint ventures. The more aggressive Western investor is usually more reluctant to share the profits of his technology with locals.

TWOFOLD GAIN

For the U.S., of course, the gain from Japanese manufacturing investment is twofold—more jobs and less imports. True, to the extent Japanese investment is defensive it tends to concentrate initially on assembly operations. And many have pointed to the high proportion of Japanese staff in overseas operations. But both could be fairly temporary factors. They represent a rather natural response to the pressure of having to operate in a foreign environment

All those looking for a better First Class service can now rest assured.

JAL's first class is first class service the way you have dreamed it should be.

Consider our new and exclusive Sky Sleeper Service. Sky Sleeper is a big, comfortable bed in the sky. The service is available for an additional charge* on our specially fitted 747 Garden Jets that fly across the Pacific.

There's more. There are French, German and American wines and continental cuisine and Japanese delicacies that look as good as they taste. And a hostess in kimono whose courtesy and hospitality make you feel as if you're in Japan already. Welcome to JAL's first class—first in its class.

BIG NEWS FROM THE LATEST WORD IN COPIERS.

Invent a better copier, and the world will beat a path to your doorstep. Even if your name isn't exactly a household word.

That's what the industry told us. And that's what we did. Tapped the full resources of our research and development center to create the biggest news in copiers today. The Mita MC-20.

It's no accident that Mita solved copier problems other companies couldn't. From the beginning, way back in 1934, we've devoted all our efforts to basic research on copying technology. Copiers, you see, are our only business. A business we understand so well, Mita copiers are used in more than 100 countries.

Why, then, haven't you heard of us?

Maybe it's because you're just beginning to look around for a better copier. A logical alternative to the big names you have heard of.

And maybe it's because we've been spending our money on technology, not advertising. So when we introduce a new copier like the MC-20, it's a copier that really makes news.

Read All About It!

Here's the scoop on the MC-20.

First, it works. And keeps on working. It's a plain paper copier designed to give you the low maintenance of electrostatic copiers. One that will keep your service calls to a minimum.

Next, it gets rid of dual element toners. No mixing. No draining. No changing. The MC-20 uses a single element dry toner that's clean, simple, and efficient. When it's all used up, you just add more.

The MC-20 gives you consistent copy quality. Copies with dramatic, solid blacks. Clean, crisp whites. Excellent fine line and halftone reproduction.

And we even developed a special cold pressure fusing system that needs no warm-up time, so the MC-20 makes copies at the flip of a switch. You save electricity, too.

To keep your copier lines whittled down to size, the MC-20 delivers 20 copies per minute.

And to keep your copies coming, the MC-20 paper travel path is virtually a straight line. That means less chance of jamming.

Now For the Good News.

You can see why the Mita MC-20 is big news.

Here's why it's good news. It costs a lot less than you'd think. And it keeps costs down, because it cuts down on downtime.

Best of all, it's news from a reliable source. Mita. We're big enough to sell copiers all over the world, but we're small enough to care about every copier we sell. And back our customers with service, 100%.

Why not get the whole story. Write Mita Copystar America, Inc., 158 River Road, Clifton, New Jersey 07014.

And you'll see why the latest word in copiers is a word you'll be hearing. More and more.

MITA COPYSTAR

and to that extent tend naturally to solve themselves with time. The Japanese businessman is no less susceptible than any other to the argument that the locally hired employee or locally acquired component or employee is likely in the long run to be a lot cheaper than the one brought in from abroad.

In one sense the high initial dependence on the parent company for staff and components is often inevitable. Japanese investors abroad do not bring a scientific skill so much as a know-how in a particular production process. Transmitting that know-how means initially relying on the components on which it is based. And particularly with the Japanese, it requires the men who have actually handled the process in the parent company to be on the spot abroad to communicate it directly and in person to those below them. The Japanese have never really acquired the American genius for committing production know-how to paper in the form of easily read guidance manuals. They see it as something you "attach to your body" *(mi ni tsukeru)* and which, presumably, you also communicate with your body.

SOCIAL DIVIDENDS

But while monetary dividends may be low at this stage the social dividends of Japanese manufacturing investment in the U.S. are already apparent and they could be of very considerable value to both parties. Even more than kabuki groups, college football teams, visiting scholars, direct investment abroad means men and women operating directly at the cultural interface. Faults and virtues are fully exposed, and in the case of Japanese investment it would be less than true to deny that at first many expected more of the former than the latter. "Take the Japanese manager away from his cooperative, compliant Japanese worker, and you have a different ball game"—that summed up the general feeling at the time.

It has not worked out that way, and looking for the reasons has thrown a

WHEN THE TWAIN MEET...

What impact do Japanese business organizations have on a metropolitan area like New York?

Some answers are found in a 1978 study conducted for the Japan Society by Conservation of Human Resources, Columbia University.

Japanese corporations in metropolitan New York, the study says, generate revenues of over $811 million a year. Most of these funds—over $758 million—are expended directly by the Japanese corporations. Another $51 million comes from visitors from Japan, and an additional $2 million to the Port Authority for handling goods from Japan.

That $810 million is seven times greater than the revenues of the New York theater industry; and the total employment generated is nearly three times that provided by the entire international diplomatic community in New York.

In 1976 there were 436 Japanese corporations with 11,383 employees in the New York area, earning an average salary of $24,000. Of the 11,383 employees, only 3,657 were from Japan; the other 7,726 were local. In other words, for every Japanese worker employed by a Japanese firm in New York, 2.1 local residents are provided jobs. Furthermore, says the study, research suggests that the multiplier for employment in metropolitan areas ranges between four and five. Thus the jobs directly traced to Japanese companies probably support more than 50,000 local workers overall.

In addition, the study says:

—Salaries and wages expended by Japanese firms in New York total over $274 million.

—The 3,657 Japanese employees support 7,262 dependents in the New York area. Altogether, these families probably spend well over $88 million annually.

—Japanese firms occupy nearly 4.8 million square feet of commercial space in the New York area at a total cost of nearly $33.9 million.

—Japanese companies spend more than $328 million a year on advertising, legal, accounting, financial and other services in New York.

—Japanese corporations pay an estimated $95 million annually in taxes, including $77 million to the federal government, $10 million to New York City and $5.8 million to New York State.

—The presence of Japanese firms inspires tourism; an estimated 162,000 Japanese visit New York annually, spending an estimated $51 million in lodging, meals, gifts, entertainment, transportation, etc.

Summary of Direct Economic Impact of the Japanese Business Community in New York

		Amount (in millions of dollars)
Expenditures by Japanese Corporations		
Payrolls	$274.0	
Fringe Benefits	27.0	
Taxes	94.6	
Space Costs	33.9	
Business Services	99.2	
Bank Fees and Interests	229.5	$758.2
Expenditures by Japanese Visitors		
Hotels	24.9	
All Others	26.3	51.2
Expenditures to Port Authority		2.1
Grand Total		**$811.5**

great deal of new and unexpected light on both the U.S. and the Japanese psychology. The first surprise has been the ease, almost wilingness, with which the U.S. worker has responded to Japan's family-style managment techniques. We are discovering that it is not just the Japanese worker who likes the company to provide welfare and recreation facilities; factory managers who bring flowers to hospitalized workers are also welcome in the United States.

TWOFOLD LEARNING

True, firms which have succeeded best with the cradle-to-grave approach have usually been involved in smaller projects, often concentrated in the southern U.S. Both factors work to allow the more personal Japanese style of management to operate more effectively. But this should not detract from the merits of such management. Significantly two of America's largest and most successful companies, IBM and Texas Instruments, make no secret of their efforts to instill and preserve Japanese-style company loyalty in their employees. And while their techniques differ somewhat, it is not unlikely that they may have been affected by the Japanese example in their midst.

But the biggest surprise is that the learning process is also working in reverse. Japanese investors with large, and in some cases strongly unionized, labor forces on their payroll have clearly decided they should adapt to the "dryer"—more contractual and less personal—U.S. management style rather than to try to introduce Japanese techniques. Some have actually been impressed enough by the merits of the U.S. system to try to introduce some of its aspects into their Japanese factories. So far, such examples have been confined to the more international-minded of the Japanese investors. But they are significant in any event.

VIRTUES OF CONSISTENCY

Indeed, a good argument could be made that it is not so much the nature of the Japanese management philosophy that explains the success of Japanese investment in advanced economies such as the U.S. as the fact that a philosophy exists. Each member of a Japanese company is educated in uniform and consistent standards of management; Japanese managers in overseas projects may change but the techniques do not.

In the more individualistic West the techniques often depend as much on the individual as the company, and his future depends on their success. It can produce both highs and lows of management excellence but it almost always produces trauma whenever any major management changeover occurs. Perhaps it is in making us remember the advantages of consistency and determination that the Japanese investment push in the U.S. should be most appreciated.

The many worlds of RCA

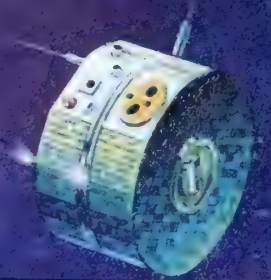
With the first airborne color weather radar, even rain clouds have a silver lining for RCA.

Until last year, monochromatic radar was the best way pilots could keep tabs on long distance weather. But then, RCA brought out Primus ColoRadar, the world's first airborne color weather radar systems.

The Primus systems incorporate technology RCA pioneered in color TV. The full-color display shows each moisture level in a different color. The maximum resolution currently available on digital radar and a 300-mile range enable pilots to make faster, more accurate weather evaluations.

The rapid sales growth of the Primus ColoRadar systems has contributed to a new earnings record for the RCA Commercial Communications Systems Division. And the Primus systems command a strong market as the first available systems of their kind.

From aviation electronics to Random House Books, from solid state components to weather satellites, RCA is dedicated to innovation, ality and steady growth. ©1978 RCA Corporation



Honda cooperation spans a broad spectrum of activities. As a responsible member of world society, working with the peoples of many lands to achieve mutual prosperity finds Honda involved in far more than merely manufacturing quality products. Honda imports into Japan an ever-widening range of commodities from many nations to promote balanced two-way trade. Thirty-five Honda production plants in 30 countries, another result of mutual cooperation, stimulate local economies by creating new jobs and business for local industries. Honda, as one of its many public service activities, contributes extensively to the improvement of traffic safety worldwide through driver education programs. Honda research and development strive to answer the aspirations and needs of society by providing the original technology and innovative products necessary to make life easier and happier.

Today's Honda—totally committed to mutual progress.

The Global Family

HONDA

Honda believes cooperation is a key that opens the door to mutual prosperit

tting along with the owner was Holliday's ost visible skill when the company went blic in 1972. But once on his own he owed what he was worth.

A pair of survivors

When Teng Hsiao-ping stopped off in Houston on his way home, he met another durable ivor, Raymond Holliday, 64, CEO of hes Tool Co. Teng survived purges; iday survived Howard Hughes. The were not complete strangers. hes Tool got one of the first con- s with the Chinese in 1973, after the n-Mao meetings. It has already sold Chinese about $50 million worth of rilling equipment and expects to do a deal more.

olliday is set to retire this year in a e of glory, after six years as head of company. Last year earnings were up to $69.6 million on $659 million , and return on stockholders' equity over 21%. In those six years, sales increased nearly sevenfold, while year's net equaled 1972's gross.

quiet man, Holliday began in 1938 as ccountant for Hughes Tool, worked up to the inner circle of Hughes associates and then spent 13 years as Howard Hughes' chief lieutenant.

When Hughes sold the company in a public offering for $150 million, Holliday cut his ties with Hughes himself and stayed with the company. He still keeps a picture of Hughes in his office, but he's not all that nostalgic for the old days. "Working for Mr. Hughes," says Holliday, "well, everything was a secret unless you were expressly told otherwise. . . . I think I shifted gears rapidly—and happily."

Holliday did not have an easy time after Hughes Tool went public. First he had to modernize the plant, which according to one observer, "looked like a 19th century blacksmith's shop." Howard Hughes preferred to pocket his cash (some $500 million over the years) for his other ventures.

The company nearly drowned in modernization in 1976, when a new electron beam welding device caused a production jam that cut earnings by almost 10%. Worse yet, Holliday blew it with Wall Street when, just one week before the company announced that 1976 third quarter earnings were 52 cents, Holliday told a group of analysts that they would top the previous year's 80 cents.

To make matters worse, Hughes was hit with a five-week strike in 1977. A group of young workers with the United Steel Workers held out for a better contract. Earnings that year were up less than 9% to $3.25 per share, less than they had been in 1975.

But Holliday handled a hard job well. In 1972, Hughes was still pretty much a one-product company—oil drilling bits. Other drill bit manufacturers like Smith and Reed Tool (now a part of Baker International) were cutting into its melon. In 1974, Holliday bought Byron Jackson, an oil well servicing company, from Borg-Warner for $46 million in stock. BJ services old wells as well as new—so it is less dependent on new drilling. Since it was bought, BJ has contributed a total of $647 million in sales and $65 million in net income.

Last September, Hughes paid $40 million for Brown Oil Tools, a $50 million (revenues) company which will add other kinds of drilling and servicing tools. Holliday has invested over $365 million in equipment, working capital and plant modernization and more than $100 million in stock for the acquisitions. Although Hughes didn't reinvest money in his company, he didn't borrow any either. In 1972, the company had no debt, so Holliday had no problem borrowing to rebuild. Even now, the company's debt-to-equity ratio is only 20%.

The industry is coming off one of the best years ever for U.S. drilling, with the number of working rigs up 12.7% over 1977. And Hughes' economist, Isaac Kerridge, says that drilling in 1979 should be up 5% over last year.

Wall Street is still lukewarm toward Hughes. The stock now sells for around 43, up 25% over last year. John Walker, a financial analyst for Paine Webber Mitchell Hutchins, estimates earnings for 1979 at $6 per share—up from $4.88 in 1978. If he is right Hughes' P/E is 7—at the low end for an oil drilling outfit.

James Lesch, Hughes' 54-year-old president and probable successor to Holliday, is aiming for a wider geographical spread for Hughes' earnings. Hughes still has a market share of 45% to 50% in the U.S. drilling bit industry, but Lesch looks to output from its Singapore and Mexican plants to provide an even bigger edge in the Far East and Latin America.

So, like Teng, Holliday came through hard times and landed on his feet. The communist and the capitalist have a certain amount in common. ■

from BJ-Hughes pumping sand into old wells
purchase of BJ gave Hughes new customers in older oilfields.

Perhaps a U.S. accounting rule should rank with Arab oil and Japanese TV sets as reasons for the crippled dollar.

Are there gnomes in Connecticut?

ARE THE GNOMES of Zurich really just a bunch of American accountants? Is the weakness of the U.S. dollar at least partly attributable to an asinine accounting rule? George S. Weissman thinks it could be so—and he's very disturbed about it. Weissman, 59, is the savvy accountant and former public relations man who recently moved into the top job at New York's fabulously successful Philip Morris, Inc. This company, whose sales have grown from just over $1 billion to more than $6 billion in a single decade, operates all over the world. It is, therefore, no stranger to currency fluctuations. Listen to George Weissman on the problem of the plunging dollar:

"The key is that since FASB 8 (*i.e.*, Financial Accounting Standards Board Rule 8), there has been an awful lot of unnecessary trading in foreign currencies." Unnecessary? "Well, necessary to hedge your company's foreign position so your shareholders don't get slaughtered on foreign exchange translations—but *unnecessary* in terms of the nation's interests."

Weissman turns the floor over to Hans G. Storr, 47, PM's refreshingly candid and articulate chief financial officer. According to Storr, FASB 8 has encouraged U.S. multinationals like PM to borrow dollars to buy strong currencies and repay the strong currency loans. "In doing this," says Storr, "FASB 8 has definitely put pressure on the dollar in the international money markets. . . . In hindsight it is clear that this has been detrimental to the dollar."

How can an innocent-looking accounting rule help cripple the once-almighty dollar? Please bear with us through some simple arithmetic:

Suppose a U.S. company's Frankfurt subsidiary has borrowed $100 million in deutsche marks, which the company borrowed to finance $100 million in Frankfurt-warehoused inventories. If the deutsche mark climbs 10% against the dollar, it will take $110 million to repay that loan. Accountants agree the company should convert (or "translate") its liabilities at *current* foreign exchange rates to reflect such increases in liabilities. In this example, the deutsche mark debt is written up by $10 million, to $110 million. Fair enough—so far. The company used the deutsche marks, remember, to increase inventories. These, too, presumably are worth more in dollars. So you lose on what you owe but you gain on what you own. A wash. So in our example, a $10 million writeup of debt would be exactly offset by a $10 million writeup in inventories. (In the case of weak currencies, the results are opposite: Liabilities and assets *fall* together.)

"FASB 8 has definitely put pressure on the dollar in the international money markets. . . . In hindsight it is clear that this has been detrimental to the dollar."

Enter, in October 1975, the villain: FASB 8. It ordered companies to translate foreign liabilities at current exchange rates, but made them convert a huge hunk of their assets, their foreign inventories, at *historic* rates, the rates in effect when the inventories were acquired. The FASB probably thought it was being conservative. In fact it was being ridiculous. As a result of FASB 8, you still have to increase your liabilities by $10 million in the example above, but you don't get to write up your inventories by a like amount. FASB 8 broke new theoretical ground by requiring companies to deduct such foreign currency translation "losses" from (or add such "gains" to) operating income—*despite* the fact that these gains and losses were not and probably never would be realized. You don't have to be an accountant to realize that this is funny money. It is kind of like saying a man is going bro because he has incurred a big debt wit out also telling that he bought a valuab new house with the proceeds of the loa

What does all this abstract theory ha to do with the real-world flight from t dollar?

"What was greatly overlooked by t FASB and Securities & Exchange Co mission when FASB 8 was being consi ered," resumes PM's Storr, "was th corporations wouldn't just sit on t sidelines and watch their earnings det riorate because of a change in accounti rules. Instead they went out and began *rebalance* their foreign assets and liabi ties. They began to rematch their cu rently translatable assets with their cu rently translatable liabilities."

How do you do that?

"What we did first was reduce stron currency liabilities by repaying stron currency denominated debts, going i stead into dollar-denominated debt," r plies Storr. PM alone has repaid ov $125 million in strong-currency de since FASB 8 hit the books—over $ million in deutsche mark loans alone.

And you don't have to be a forei exchange expert to see what this does: increases the *supply* of dollars and i creases the *demand* for deutsche mar because you have to use dollars to bu deutsche marks to pay off the DM del You help the DM rise and the dollar fa Not because you are trying to get rich c currency speculation but because you a trying to protect your stockholders fro the shock of a reported earnings decli when none exists.

Alas, Hans Storr isn't finished:

Borrowing dollars to repay stron currency liabilities is only one way reduce the foreign exchange exposu created by FASB 8. Another way is match your foreign currency liabiliti with foreign assets that are current translatable." Remember, says Storr: I ventories are *not* convertible at curre exchange rates. But such assets as ca and marketable securities are.

Back to our hypothetical Frankfu subsidiary: Under FASB 8 the $10 mi lion deutsche mark debt writeup wou be offset if the subsidiary held $100 mi lion in deutsche mark-denominat bonds, cash or equities. So U.S. multin tional companies like PM are "laggin or slowing down their dividend remi tance from strong-currency countrie This has the same deleterious effect c the dollar that borrowing dollars to rep deutsche mark loans has: It helps ke deutsche marks in Germany, and out international circulation.

Of course, a company can alwa hedge its foreign exposure by buying fo ward market contracts. Unfortunatel this entails *real cash* costs in the form commissions and in the form of pote tially *realized* losses if the contract go

"We picked Dallas/Fort Worth because they've got the right attitude."

Reece A. Overcash, Jr.
President & Director
Associates Corporation
of North America

"There were many things to consider before we moved our administrative offices. Location, communications, resources–they were all important factors. But what really made us decide on the Southwest Metroplex was their attitude.

"It's an attitude reflected in how they manage their cities.

"You see it in their views on corporate taxes–there are none.

"You see it in their allocation of corporate space–it's plentiful and very reasonable.

"You see it in how hard the people work and in what they think they can do–you'll almost never hear anyone in Dallas/Fort Worth tell you it can't be done.

"They have a real positive attitude. And it's catching. That's probably why 1017 million dollar companies make their homes here in the Metroplex. And why we decided to become number 1018."

If your company is considering relocation or expansion for any of its operations, contact us now. We'll provide all the information you need on the Southwest Metroplex. Write Worth M. Blake, President, North Texas Commission, P.O. Box 61246, Dept. W, Dallas/Fort Worth Airport, Texas 75261. Or call 214-574-4430.

The right attitude.

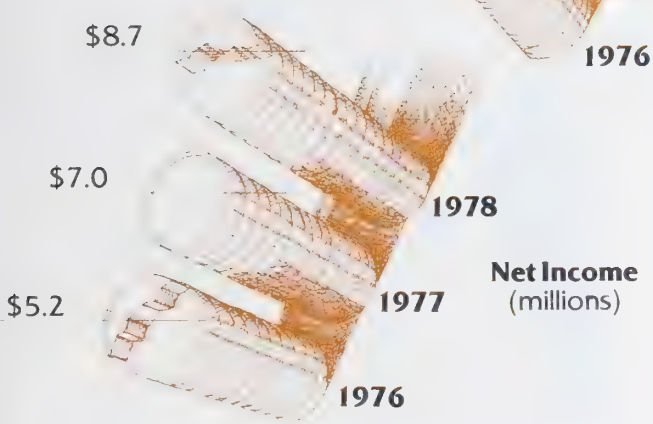
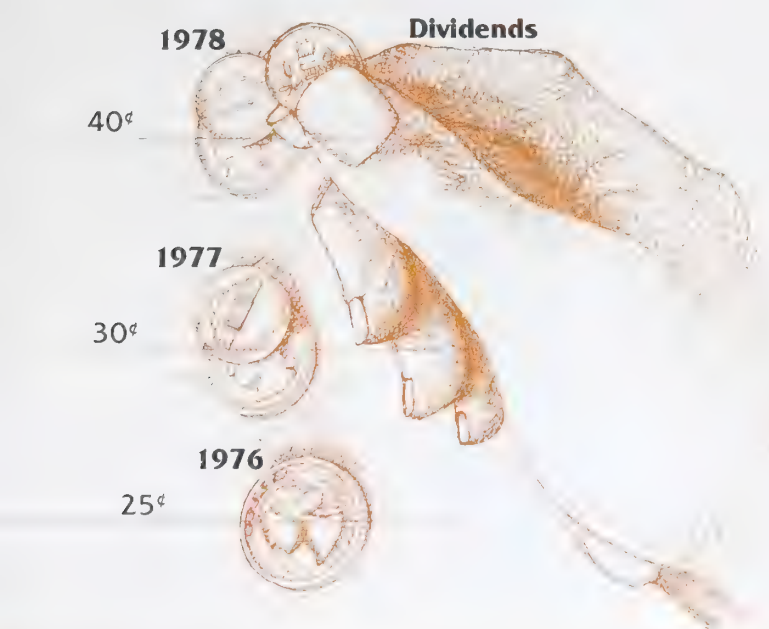
1978. Keene's greatest year yet for putting good things together.





Our $2.64 EPS for 1978 set another record – a solid 30% higher than last year's record earnings. Longer term, thirteen successive record EPS quarters have raised our 5-year compounded growth rate to 30%. Since 1967, our start-up year, sales have gone from $9.2 million to $163.9 million, and a zero dividend has turned into a significant 40¢ return – up 33% last year alone.

Ahead? We're a healthy, rapidly growing teenager that will continue to specialize in Bearings, Filtration, Lighting and Laminates. We've built new facilities to help meet our 44% increase in year-end backlog – a new record resulting from a 27% gain in 1978 bookings. That should mean still better numbers next year. For more on the record numbers to date, write for the new annual report.

Twelve years after FORBES editors set up a portfolio of common stocks by chance, the "Dart Board Fund" continues to do well.

Dart it all!

Statistical Spotlight

WELL, WE DID IT AGAIN. FORBES' "Dart Board Fund" has once more beaten the averages and most of the professional money managers.

We last reported on the fund a bit over a year ago. Once again it has come through with flying colors. Since the end of 1977 it has produced a 13% gain; Standard & Poor's 500 is up only 3%; the Dow Jones industrial average, down 1%.

The FORBES Dart Board Fund is a product of some neat wrist-work by FORBES' editor-in-chief, publisher and editor. Almost 12 years ago (FORBES, *Nov 1, 1967*) these three gentlemen each tossed ten darts at a board on which was mounted the stock market page of the *New York Times*. They came up with a list of 28 stocks in each of which, in theory, they invested $1,000; where a merger eliminated a stock, they reinvested the proceeds in the acquiring company. No new stocks were bought. None were sold. Over these 12 years our fund has grown from $28,000 in value to $43,278.91. Our Dart Board Fund gain so far is 55%, which compares favorably with the S&P 500's 8.2% gain and the DJI's 4% loss. Pretty neat, what?

What does all this prove? That the wrist is mightier than the brain? No, but we think it raises some interesting questions for the random walk theorists. These are the people who argue that stock prices behave in a random fashion and that trying to beat the market by intelligent portfolio management is a pretty hopeless endeavor. We don't necessarily subscribe to this theory but a good many people do. The random walkers argue in favor of indexing—that is, buying a cross section of the market and simply riding with the long-term tendency of stocks to rise. We think they are missing a guess: If the market were random, why not buy a random selection of stocks and ride with it? We did. T struck us to be at least as intelligent indexing. And look at the results.

Mark this: Our dartists were not ov whelmingly successful in picking w ners. Thirteen stocks declined over 12-year period *(see table)*. But the gain more than offset the losers—hence nice margin of profit.

Significantly, many of the *downs* performers were stocks the professio money managers were high on back 1967: Singer, which produced a tu around that didn't last; Firestone, wh went from star of the Sixties to stumb of the Seventies; Chase Manhatt which used to be larger than Citico Textron, the first conglomerate and of the best managed; Inco, the king nickel.

Of the 15 stocks which gained si 1967, their combined profit is $20,03 over 70% of the original portfolio su Profits were four times total losses.

There's an interesting principle volved here. While losses are limited t possible 100% of original cost, the stoc that declined lost only 17%; profits w 72% since six stocks gained 100% 200% and Texas Oil & Gas rose 848%. it this way: Had the 13 losers gone entir out of business, our portfolio would s have shown a profit. The dead loss $13,000 would have been more than off by the gains on the other $15,000.

The moral? Stick with your pic Your typical investor, professional amateur, would have been tempted take his profits early on the winners a so would have missed out on much their gains. It was a handful of winn out of 28 stocks that offset the tok gainers and the large number of los and gave us an overall profit. This really the key point.

The old rule is: Cut your losses and your profits run. Our experience wou lead us to rephrase that to: Let both yo profits and your losses run. There some reasons for this. One is that y can only lose 100% on a stock where your potential gains are limitless. T other reason is that a loser can co back; the stock that loses 50% one ye can, by simply coming back to its sta ing point, gain 100% the next year.

For this year's updating of the D Board Fund we decided to apply anoth test to our results: dividend growt There, too, the Dart Board is up—from yield of 3% to 4%—although the D (6%) and the S&P 500 (5.3%) do exce the Dart Board's yield.

We don't recommend dart boards general as a means of picking stocks, b we do think our experiment sugges that a sit-tight philosophy, while it c test your patience, has a lot to reco mend itself over constant buying a selling. It would seem that a combin tion of luck and sloth beats brains. ■

The Dart Board Fund

Below are the present holdings of the Dart Board Fund. The original portfolio has been affected by several mergers, a cash tender offer and a spin-off.

"QUICK! GET ME EVERY DECISION YOU CAN FIND ON 'BURIED TREASURE'!"

PROBLEM:

WESTLAW is West Publishing Company's answer to a lawyer's plea.

It offers direct access to a vast electronic library—the tens of thousands of state and federal cases that West, a leading publisher of law books, have in their St. Paul computer files.

Research that once took hours now takes seconds.

Ironically, WESTLAW's far-reaching success posed a problem: could data communications keep pace with its rapid growth coast to coast?

Before adding full text printouts to the service, for example, West wanted to be sure that lines and terminals could handle the longer messages efficiently.

Also, they did not want the expected surge in demand to slow down their almost instant response to inquiries.

The problem was data communications. The solution came from the Bell System.

SOLUTION:

The case for the Bell System solution was made on the basis of astute total systems planning and two Bell innovations.

One is Dataphone® Digital Service. This is the high-performance digital network that already links the nation's largest cities. It has helped virtually eliminate errors and interruptions in WESTLAW transmissions. It's also helping keep response times ultrafast.

Second is Bell's newest Dataspeed® terminal—keyboard, display unit, and high-speed printer—now used by WESTLAW subscribers.

Full text almost instantly, in print.

This combination plus Bell's continuing on-the-spot involvement have prompted West to look at still other ways to take full advantage of the Bell solution.

If you haven't talked with your Bell Account Executive lately about a System-backed system for your company, you're missing something.

The system is the solution.

Bell System

In a realty reorganization the lawyers sometimes do better than the creditors. But you can avoid this if you are not too greedy.

Fighting off the sharks while giving plasma

By Paul Blustein

THE KEYS, as the expression goes, will be on the table. Meaning, if you call our loans, brother, you own the property.

An uncomfortable decision is now before the creditors of Arlen Realty & Development Corp., the nation's largest publicly held real estate firm and owner of New York's Korvettes discount stores. The creditors can accept Arlen's plan to scale down its tangled mass of indebtedness, or they can throw the company into court for protection under the federal bankruptcy laws. If they opt for bankruptcy—if they take the keys off the table—they may squabble over them for months or years.

The Arlen plan was authored by Kenneth Leventhal & Co., a Los Angeles accounting firm. Leventhal has made a name for itself by helping over a score of troubled real estate companies keep out of the courts. Among Leventhal's more famous "workouts": Trammell Crow, the Dallas developer; Redman Industries; Cabot, Cabot & Forbes; and a number of real estate investment trusts.

Working out troubled real estate situations may sound like dry business, but it has helped make Ken Leventhal, a 57-year-old who founded his firm in 194 rich. The firm is medium-size, ranki in the top 25 U.S. accounting firms, b its real estate niche is so profitable that will easily buck the trend to merge int "Big Eight" firm—as J.K. Lasser and S. Leidesdorf, among others, did recently

Why are real estate workouts so nec sary a service? Because "throwing t keys on the table" is usually scary to creditor. "In most jurisdictions," L venthal explains, "the costs of a judic reorganization [under Chapters X, XI XII of the Federal Bankruptcy Act] pro ably approximate one-third of the ban rupt estate." Or as Leventhal's partn and comanager Stan Ross puts "Whenever you go into the court, one the first things that happens is that t judge stands up and says, 'I'm confuse That makes for long delays."

And huge costs. Once the lawy swarm over a reorganization there m not be much left for the creditors. It Leventhal's job to persuade, say, seni creditors that it is better to give up a l of their claim to junior creditors a even to equity owners in order to av monstrous legal bills. You might call i system for diverting money to juni creditors and equity holders that wou otherwise go to lawyers.

The trick in a real estate workout is devise a plan that—even if it pleases n body—still satisfies everybody. Ea claimant, from the most senior del holder to the lowliest stockholder, has be convinced that he's better off in t long run by giving up a portion of wh he's theoretically entitled to, instead going for all the marbles in a legal actio

"A lot of people have a Calvinist attitude," says Ken Leventhal, "and s that you shouldn't preserve any equi interest in a company if the creditc don't get paid in full. My view is to t contrary; as long as you get more for t creditors than they would get through judicial process, it's to their benefit preserve equity." Theoretically, the equ ty holder has been wiped out by his d fault, but he still has the power to del and harass. In order to buy his cooper tion, Leventhal advises, leave him wi some ownership.

In Trammell Crow's case, for instanc one creditor was an investment arm the Baptist Church. Its representative– preacher—had to face the fact that und Leventhal's workout plan, Crow mig yet wind up very rich. It seemed like reversal of the absolute priority rule which senior creditors are paid in fu then junior creditors, then equity holde only if there is anything left.

The Baptists had to settle for cancelin their debt and taking over some Crow's property, even though the valu of the property was depressed below t total amount of their claim. Eventuall however, their decision proved to ha

What Diamond
up to now. Beside

Diamond today is a multi-faceted, forest-based company whose sales have nearly doubled in the last six years to well over a billion dollars. This two-minute progress report will help explain why. It may give you a few surprises, too.

We're a lot more than matches. Over 90 years ago, as Diamond Match, we invented the safety match. And we're still one of the world's largest match-makers. But matches now account for less than 4% of our business. So that still leaves you about 96% in the dark. And for a billion dollar company that's a lot.

We're a tree company. We grow our own raw materials–1.4 million acres of trees. They're

a rich, renewable resource. Our scientific forest management also makes sure that we get maximum utilization from every tree we harvest. And that every tree harvested is replaced.

A nationwide packaging company. A lot of our pulp and paper goes into packagi products. Folding cartons. Egg cartons. Trays for meat, produce and for fast food chains. We're also a major can company. And the largest producer of non-aerosol mist sprayers: "Th only propellent they use is your finger."

A consumer products company. Yes, though we're known by other names. Like Bicycle,® Congress® and Tally-Ho® playing cards. Vanity Fair® paper towels and tissues. We also make cotton swabs, paper plates, school and office supplies and wooden-ware products from tongue depressors to toothpicks.

nternational is billion dollars.

memaker. A retailer. Building lumber g business at Diamond. We sell it for homes–or home renovation and nsion. We also operate over 100 build-

THE PLACE TO BE

Leventhal partner Stan Ross

An accountant has to be a psychologist sometimes.

been a wise one: The property's problems were worked out and the Baptists sold it for a handsome price.

Meanwhile, Crow was able to survive; his organization is prospering today. Had the Baptists tried to recover their "deficiency" by grabbing for more assets—assets which had been pledged for other loans—the result would have been horrendously complicated bankruptcy proceedings.

The problem is that modern real estate companies tend to build up a myriad of loans with different lenders, whose claims for security often conflict. "You get general liens, collateral calls, pools, cross-collateralization, and so on," says Ross. What about an example? asks FORBES. Leventhal pulls a thick bound book out of his desk and flips past several pages filled with columns of numbers to a fold-out chart. "This was used for Trammell Crow, and should give you some idea," he chuckles as the chart flashes by. The chart contains an impenetrable array of lines, arrows and boxes, rather like a diagram of spaghetti and meatballs, all designed to show the structure of the Crow organization.

"It's the nature of the [real estate] beast," shrugs Leventhal. "Trammell Crow was 800 business entities."

Leventhal's firm, then, first has to cut through what Leventhal calls "the accounting hogwash" in putting together a debt-restructuring plan. "What we do is analyze the underlying real estate in terms of a range of values, under different economic circumstances," explains Stan Ross. "And we look at the probable streams of cash flow."

The next step is to put together the complex charts showing which parties are which—and what the seniority of their claim is. "Sometimes people are not owed what they think they are," says Ross. "Often a bank will show up at a meeting, pound the table and say, 'We have a first lien on this property. And we're here to take it.' So someone will have to say, 'Please show us your documentation.' And to his absolute sho the guy will find that he doesn't have document. The lien isn't recorded."

The next step is to develop the de restructuring plan itself. That requ some tactical maneuvering. "You can go to a mass creditor meeting witho concrete plan," says Ross. "If you people together and ask what they wa it's a mob scene. They fuel each othe like what's happening in Iran."

A whole series of bankruptcy co words has developed. "A 'face-saver Ross explains, "is for the individual w screwed the whole thing up; you have issue him a new certificate as a fa saving device. A 'plasma loan' is mo that a company needs to get it over hill so it can survive. And there are g we've named 'sharks.' They go into market and buy the subordinated deb a troubled company at low prices—a then they come in and disrupt your re ganization"—that is, hold out for a bet settlement. "One of the reasons Citize Mortgage Investment went into a Ch ter X was because of heavy shark conc tration. We couldn't get the boat out infested waters."

Sharks aren't the only menace. M nows can be troublesome, too. Ross members one smallish creditor of a "n town" sponsored by the Department Housing & Urban Development. " was a great big guy," Ross recalls. " kept pounding at us, insisting he wo hold out for 100 cents on the dollar.

"So when we brought him into a ro with all the other little creditors in t town, we said to him, 'Why don't y become the chairman of this meetin We then announced to the people pr ent, This guy will be taking over t chair and he would like to explain t plan to you.' "

The ploy worked: The creditor eas his belligerent stance.

So, an accountant has to be a bit o psychologist sometimes, but that's s cheaper than letting the lawyers get h of the keys. ■

Think of us as an uncommon company. Basically.

Fiber optics, lasers, microprocessors and ultrasonics are not what one generally associates with shoes, glass bottles, gears or tires ☐ yet they're the technologies we're harnessing daily to help our customers produce such basic products ☐ It's bringing space-age science down to earth ☐ It's how we increase customer productivity ☐ promote energy conservation ☐ help cope with the global shortage of skilled people ☐ It's making practical use of science ☐ to keep the path to our door well beaten ☐ worldwide.

Ft. Worth skyline at dusk
A billion dollar mark on the world is supposed to survive.

Charles Tandy is dead. Does his spirit linger on? A great many people fondly hope so.

What to do after you bury the boss

By Harold Seneker

VALID OR NOT, the belief that there are such things as one-man companies that can't survive their creators dies hard. That scene was played out again recently in Ft. Worth, Tex. Charles D. Tandy, 60, lay down for a nap one Saturday afternoon in November and never got up. He couldn't have timed his passing much better if he had planned it. For one thing the directors were already arriving in town for the shareholders' and directors' meetings set for the next week. For another, it would be two days before the stock market opened.

Word spread fast. Charles, as he was known to everybody in the company, had become Ft. Worth's uncrowned prince. Tandy Corp. and its offshoots dominated its business life the way his two massive 19-story office buildings set on the eight-square-block Tandy Center dominate its landscape. (Coming in at night from the airport, you see the old cow town's new skyline lit up before you, and one whole side of it is the two Tandy buildings, the name in lights carrying for miles through the darkness.)

Now something had to be done quickly. The dozen or so key officers and nearly all the directors held an unscheduled meeting Sunday afternoon.

The first problem was the stock. They thought they remembered the shares had plunged in 1967, when Charles had a minor heart attack, and in 1972, when a company plane went down with five executives aboard. (In fact, the stock hardly budged.) This time he really was dead. The succession would have to be decided too, of course. But that could wait.

What mattered most, they decided, was that the company be seen to operate normally without him. Several major shifts in organization ordered by Charles were under way. They would go through as planned. "Normal" was to be the watchword.

Next was Charles' estate. He voted 2 million of the company's 25 mil shares. Were there any financial prises in the will? Tandy's lawyer present; he could not reveal the cont of the will before probate, but he them there was no worry, the estate in good order. "You'll hear dozen rumors over the next few days," Dire Phil R. North told the informal b meeting. "Rumors of takeover bids, erything. Well, don't you believe an it. Nothing is going to happen."

Now, what about succession? A t porary chairman? A permanent Leave it open? What about the presi cy and the CEO slot? They would hav settle that on Wednesday.

Whatever they did there would no another Charles Tandy. He had h more than any future chairman of board and CEO could hope to be. U that Saturday, he oversaw the affair five companies simultaneously. moved into the Tandy Center in Fe ary 1977, but his executives like t member him operating out of his pri office away from headquarters, be his desk, larger than life in recollect throwing off boundless energy, laug into his ever-busy phone, waving a cent cigar with his free hand at t different visitors while a handful of ecutives hold an impromptu meetin in a corner, awaiting their turn.

"He liked the constant activity," plains one top-level man admiringly. had no hobbies, no children. He drank and slept business, from dawn til as late as anyone was willing to about *his* business with him."

Tandy was mercilessly critical of subordinates, but they had learned meant it not as disparagement but goad. As one of them put it, "He'd you up and ask you if you knew current turnover rate for some big in tory item in the stores, or something course you didn't, but he'd looked it Then he'd go on to what he wante talk about. But first he always made that he kept his left in your face."

But Tandy never fired anyone, t say. If you didn't work out, he'd sh you to some harmless spot away f the action. Some of his devoted ex tives had stayed with him 30 years.

Charles not only headed up those companies, he invented them. First built the family's local leather busi into a nationwide chain of handic shops—Tandycrafts, Inc.—in the 19 Then he bought Radio Shack, a ne bankrupt chain of nine retail electro stores in the early 1960s, and built it i a giant—7,000 stores worldwide n and most of them outrageously pr able. In the late 1960s he added a printing operation (now the sepa Stafford-Lowdon, Inc.) and a promis newcomer, Color Tile, Inc., a chai retail wall-and-floor-covering stores

Every few minutes, hundreds of people fly into Kennedy with us.

On the average, some 400 planes land every day at New York's John F. Kennedy International Airport.

During the busiest hours, they come in every two minutes.

How do the JFK air traffic controllers keep the landings as regular as clockwork?

With ground-to-air radio equipment, developed and built by the people of ITT.

We're the world's largest supplier of these specialized communication systems—with 50,000 in use at U.S. airports.

These two-way systems are used by *every* major U.S. airport. Not only New York's Kennedy, but New York's LaGuardia.

And Chicago's O'Hare, Atlanta's International, Los Angeles' International, Dallas-Fort Worth's International, to name only the busiest.

Matter of fact, if you've flown anywhere in this country, your flight was helped home by ITT communication and navigation equipment.

And somewhere, somebody else is being brought home with it at this very moment.

The best ideas are the ideas that help people. ITT

The late Charles D. Tandy
No hobbies, no kids; business was fun.

the do-it-yourselfer. Tandy had set out to build himself a billion dollar company, and he had done it (for fiscal 1978, net sales were $1.06 billion; net income, $66.2 million; current assets, approximately $400 million).

The formula, a mix of retailing savvy and Texas-style wheeler-dealing, was actually quite straightforward: Lease, don't own, retail space (to keep asset turnover high); stock only items with extremely high gross margins (he demanded 55% to 60% margins at Radio Shack, when the typical electronics retailers' margins were more usually 32%); cut the inventory to a manageable stock of high-turnover items (Radio Shack went from over 40,000 stockkeeping units per store to 2,400); advertise *very* heavily ("If you want to catch a mouse, you have to make a noise like a cheese," Tandy would say, and budget 8% to 9% of sales for advertising); leverage the balance sheet fearlessly (3.39-to-1 debt-to-equity ratio at the end of fiscal 1978); plow all the earnings back into growth ("Who wants dividends when they can have capital gains?" he used to say) and give Wall Street what it wants. He conglomerated with gusto in the 1960s, for example, and then, in the 1970s, when tastes changed, spun off everything to stockholders but Radio Shack and the Tandy Center.

The funeral was on Monday, Nov. 6. The stock market closed that day with Tandy Corp. down 2½, to 22⅝, on volume of a quarter of a million shares.

Then it stabilized. Eight times earnings, Wall Street seemed to have decided, was low enough for a company with $1 billion in sales, a net profit margin of 6.2%, a return on shareholders' equity of 40.3%, and a compounded ten-year earnings growth rate of 28.3%. (Lately, at 24, the stock is still 8 times earnings.)

The price of the stock was more important than almost anything. Every

The view from third base

Maury Wills, the base-stealing artist of the Los Angeles Dodgers, once defined luck as the point where "preparation meets opportunity." John V. Roach II, a heavy-set Texan, has just stolen third base at Tandy Corp.

At 40 Roach is executive vice president of Radio Shack—Tandy Corp.'s primary operation—and current frontrunner to succeed Phil R. North, 60, as chairman (Radio Shack's President Lewis F. Kornfeld Jr. is 62).

Luck and preparation crossed perfectly for Roach. A Texas Christian University M.B.A., Roach bailed out of the data processing center of a failing finance company in 1967 and came to work at Tandy's computer processing center. He then acquired a private vision—to produce a workable "home computer," a blue-sky concept of the Sixties.

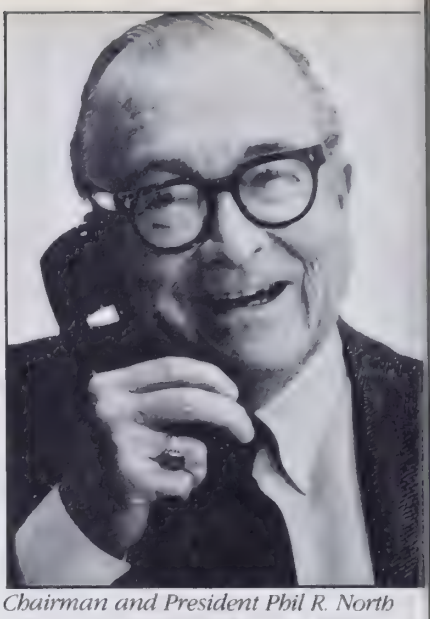
Over the years, as he rose through the ranks, Roach developed the home computer using Radio Shack tape equipment, a monitor screen and a keyboard. One day in early 1977 Charles Tandy came down to his office to see it and was hooked. He told Roach to take 3,000 to market.

At that point Roach was safe at second. He had his hand-built prototype, but no manufacturer. Most computer manufacturers didn't believe the era of the home computer had arrived. So Roach decided to have Tandy itself make the machine in Ft. Worth. Says he: "The industry took nearly 21 years to develop the technology. We had to develop the product in one."

In the fall of 1977, the Radio Shack TRS-80 took off with a speed that surprised even Roach. His expectation was that small businesses would be cautious at first, but that home hobbyists, the core of Radio Shack's customers, would get the market going. Instead, the small business market boomed. Tandy sold an estimated 100,000 TRS-80s last year ranging from $600 to $4,000 per system—40% of them to small companies. "All sorts of people bought them," says Roach. "A house of ill repute uses one to list its customers. There's a kid of 14 who uses one to write up computer programs for the trust division of a Ft. Worth bank."

So Roach is safe at third. But what happens when Texas Instruments, Inc. moves into the market? "One advantage is our retail outlet of 7,000 stores," Roach contends.

But equally important is the question: Will Tandy without Charles be as sharp as it was when he was around? **—Gerald Odening**



Chairman and President Phil R. North
After all, what are friends for?

manager and executive—includ Charles Tandy—got minimal salar and there was no pension plan. W they got were big bonus deals depend on results. You had to make your o financial arrangements for retireme he would explain. If you were sm you'd buy the company's stock.

In fiscal 1978 net income fell from $ million to $66.1 million, mostly beca of the CB radio bust. Tandy's respo was to borrow $100 million from banks and buy in 3.5 million shares. sult: Earnings per share jumped to $2 from $2.17 the year before. Rising come, he figured, would restore the pleted debt-to-equity ratio in time.

So, how to replace this phenomen He had been chairman, president a CEO of the parent and chairman of the spin-offs. The solution turned out to be difficult. Three of the top men h long since taken over spin-off operatio and wanted to stay with them, wh George R. Nugent, number two man Radio Shack, had been assigned to fix ailing Tandycrafts earlier in the year.

So each of them assumed the cha manship of his respective company.

Titles at the parent Tandy Corp. w another matter. Phil North (FORBES, *D 11, 1978*) was listed in the annual rep only as a director. But in fact he h served as an unofficial right-hand man Charles for a decade, working until ea 1978 on a fee basis.

But the close association of the t men was actually a lot older than th "We first went into business togeth when we were nine years old," Nor recalls, "selling leather strips. We cou get 'em from his father at a penny apie and sell 'em to the other kids at two fo nickel, once we showed 'em how make belts and quirts [riding whips]."

North knew Charles' thinking bet than anyone else alive. The periodic, fr

esars World, already a darling of the gam-rs in Wall Street and Las Vegas, craves pectability. For a good reason.

Caesars' visit to Wall Street

By John Merwin

ECENTLY Caesars World President William McElnea Jr., a tall, 56-year-old former investment bank-ew to New York for private meet-with financial analysts representing of America's most influential bro-e houses, Merrill Lynch and Paine er. One wouldn't think a gambling any with a successful Las Vegas tion and plans to open Atlantic s second casino this spring would to trudge up and down Wall Street ng its stock. Last year that stock ted more than 400% on the NYSE, ng all 2,194 Big Board issues. But te McElnea's courting, the two bro-e houses haven't shown much en-asm for Caesars World.

all investors and speculators, daz-by Caesars' 1978 stock performance, have short memories, but the bar-f Wall Street are neither forgetful rgiving. They well remember Cae-problems with the SEC, the Nevada ng Commission, the real estate and o writedowns and Caesars' former ty financial condition. It's no won-nat McElnea and Caesars' manage-have been hunkered down for the ew years. "We didn't have much of y to tell," McElnea says. Actually rs World did have a story to tell, ne which neither Caesars' embar-l management nor its suffering holders wished to hear.

ch of that has changed now, and quently McElnea and Caesars are ng out of the closet, anxious to talk what lies ahead for a company that l Resorts International and Bally facturing as the hottest speculative ling stocks of 1978. Caesars' ordi-earnings for fiscal 1978, ended July se to $1.61 per share, from 1977's . Although 1979's first quarter earn-were nearly flat (31 cents *vs.* 30), Caesars expects soon to report f its best first six months ever.

If Caesars receives a New Jersey license, the company will open its Boardwalk hotel-casino in late May, trying to dig into Resorts International's private gold mine. The mere prospect drove Caesars' stock up to 45 in September, from about 7 in January. (After a late-in-the-year tumble it sold recently for 33, adjusted for a 3-for-2 split.)

What has skeptics worried about Caesars' future is its past. McElnea and Caesars' chairman and vice chairman, brothers Clifford and Stuart Perlman, would like to forget the past, considering their key roles in several company misadventures. (McElnea was a director before becoming president in 1972.)

The Perlmans founded Lum's, the high-flying restaurant chain that ten years ago acquired Caesars Palace with cash and notes for 20 times earnings. A few months later it became common knowledge that the restaurant business was overextended. The stock plummeted. The company sold its restaurants and changed its name to Caesars World.

Caesars President William McElnea Jr.
Asking Wall Street to gamble?

During the last five years Caesars has been plagued by two major thrusts that bombed. In 1972 Caesars began acquiring land in North Miami Beach, Fla. for residential development. But in 1975, the bottom fell out of Florida's real estate market, forcing Caesars to take an $8 million writedown.

The other debacle involved the 1972 purchase of Las Vegas' Thunderbird Hotel. Caesars hoped to replace it with a major hotel-casino-entertainment complex, the Mark Anthony. Despite optimistic statements about impending financing, the Mark Anthony deal fell through in 1975. "We never even came close to getting our financing," McElnea explains today. Writeoff: $9.6 million.

As if that weren't enough trouble, the SEC and the Nevada Gaming Commission began looking into two Caesars real estate transactions involving men alleged to have organized-crime associations. After Caesars agreed to stay away from the controversial businessmen, the gaming commission dropped its complaint, but the SEC investigation continues. Will Atlantic City turn out to be another Las Vegas? Today Caesars has some firm believers who only a year ago couldn't be numbered among its supporters—suggesting that this really could be a new Caesars.

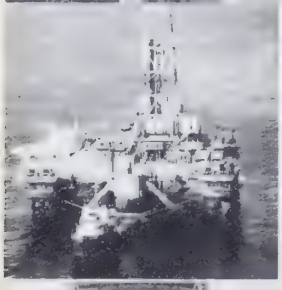
The most important convert is Aetna Life & Casualty, which lent Caesars $60 million last fall—the first time Aetna (and maybe any life insurance company) has made such a loan. Also, Caesars recently received a Standard & Poor's "B" rating on some of its subordinated debt. Only 18 months ago it struggled to get the same rating for its senior debt.

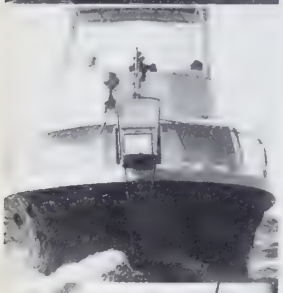
If Caesars' financial situation looks better, so does its board. Caesars appointed James Needham, a former SEC commissioner and NYSE chairman, to its holding company board, and Peter Echeverria, a Reno lawyer, to the board of its Caesars Palace subsidiary. Interestingly, it was Echeverria who chaired the Nevada Gaming Commission in 1975-76 when the commission told Caesars' officers to stay away from the men allegedly associated with organized-crime figures. "Once Caesars got away from those people, I had no further qualms about the company," Echeverria says.

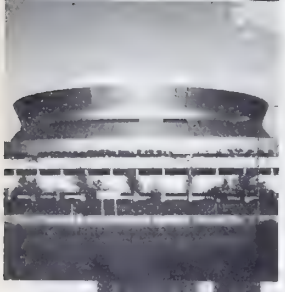
The jewel in Caesars' crown is its posh, 1,236-room hotel-casino, located at one of the busiest intersections on the Las Vegas Strip across from the MGM Grand, the Hilton Flamingo and the Dunes Hotel. Caesars Palace caters to every whim of Las Vegas' most affluent visitors. Surveys reveal that, while only

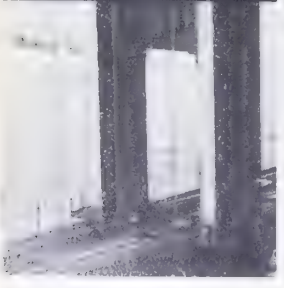
We're already a part of your life. Isn't it time you knew our name?

It's Grow Chemical.









We're a big company doing important things. It would be surprising if there were some area of your life, your business, or your recreation that wasn't affected and improved by the technology and products of Grow Chemical.

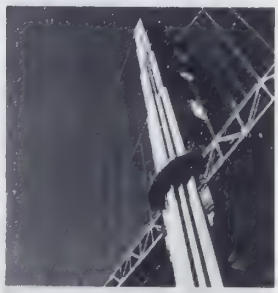
Chances are, the airliners you fly in are protected by Grow's Alumigrip.® It could be that we had a hand in the beautiful finish on the car you drive. The boat you fish from could be protected by Grow's Awlgrip.® Our Devoe paints might be, right now, covering the outside of your house or the room you're sitting in. And Grow's Prufcoat™ protects the refineries that produce the fuel we use.

Grow Chemical Corporation. We produce the finest of today's chemical coatings and we're constantly researching for tomorrow's. That's why the most important industries in America know Grow.

We've reported increases in sales, earnings, and earnings per share for each of the past 5 consecutive years. And, we're the company that, since 1964, has paid stock dividends totaling more than 78%. That, in addition to paying 58 consecutive quarterly cash dividends.

We want you to know Grow, too. Write Grow Chemical Corp., 200 Park Ave., New York 10017. We'll send you a corporate profile and our annual report.

GROW CHEMICAL



11% of the city's guests report fa incomes of more than $40,000, n 45% of Caesars' customers claim incomes. The hotel concentrates cially hard on recruiting the high ro Americans and also foreigners, par larly from such areas as Mexico, S America and the Far East.

The hotel-casino, with a 90% o pancy rate, operated at a 21.8% marg considerably improved during the two years after management tight its credit policies and cut down on plimentary junkets. Caesars Palace tributed nearly all of the company's f 1978 ordinary earnings. Late this Caesars will open 600 new rooms additional gaming facilities that sh make the casino even more profitabl fiscal 1977, for instance, Caesars' ca brought in $3,933 per square foot, more than rival MGM's $1,676. (M has more rooms and a larger casino.)

Caesars uses its relatively small, mate casino and big-name entert ment to attract the high rollers. Am singers, for instance, Frank Sin draws the most free-spending ca crowd. Among the many types of sp ing events Caesars sponsors in excha for extensive network television e sure, boxing brings in the most gamb money. One of Caesars' most impor corporate controls involves caref watching the high rollers and ra them on a 1-to-6-point scale, depen upon how long and how much they g ble. Big gamblers often get complim tary air fare, hotel rooms or both.

In its attempt to duplicate this succ Caesars New Jersey, Inc., 85% owne Caesars World, is developing a 528-r hotel on the Boardwalk, including a c no about 60% larger than the Las V casino. Caesars hopes later to buil more luxurious hotel on a second Bo walk site it has leased.

Considerably further down the roa the prospect that some other states legalize gambling. Presumably, Cae World will be ready and willing to s them. This is the message that McE is carrying to Wall Street. Why should care? After all, his stock already ha market value of $250 million and made a lot of paper millionaires. there's a reason. Caesars Palace has r tively little equity capital; it will nee to continue expanding. Which me that one day it will need Wall Street.

Has Wall Street been persuaded? N ther Merrill Lynch nor Paine Webber say, but one gets the feeling that t would like to see more of a track rec before they recommend the stock their legion of customers. Consider the record, considering the "industr considering Caesars World's huge capi requirements, considering that the st already sells at 20 times earnings, it's wonder they're skeptical. ■

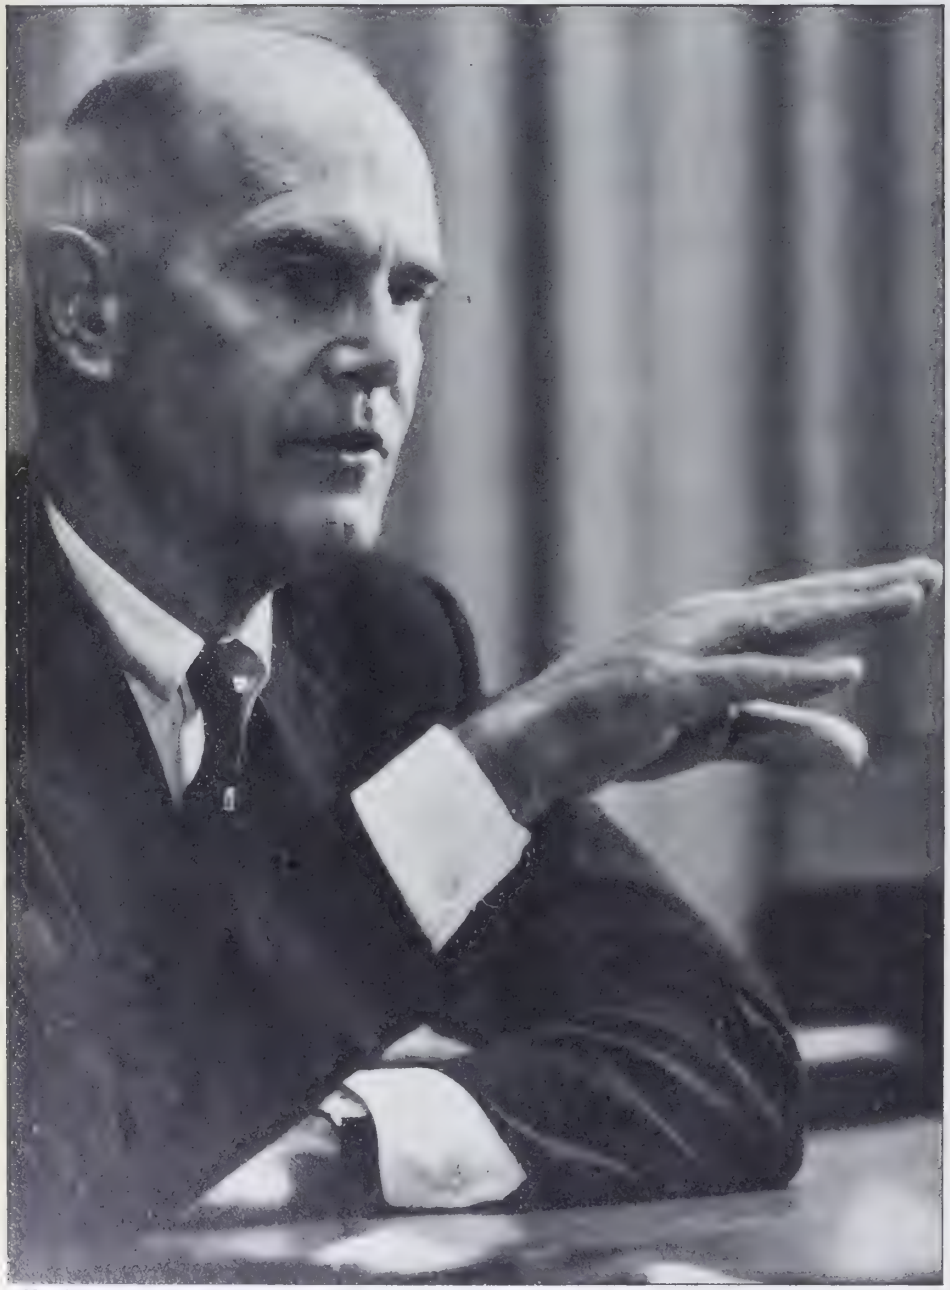
An aristocrat among banks, Bankers Trust tried to adopt the common touch. It didn't work, but now this $26 billion bank knows who it is again.

Bankers Trust finds itself



Alfred Brittain III of Bankers Trust
"The trouble with you," the letter said, "is you're in love with this bank."

PONDER THESE somber facts ab Bankers Trust New York Corp. sets, $26 billion), the holding c pany that owns New York's huge Ba ers Trust Co.: Among the 28 U.S. ba with assets of $5 billion and over, Ba ers stands near the bottom in profita ity. Its return on assets last year stoo 32 cents per $100, about half the gr average; return on equity was 10% c pared with 13% for the group. W most U.S. banks had record years 1978, Bankers was not able to match own earnings record, set in 1974. Du the banking crunch in the last recess Bankers' loan-loss record was among worst nationwide.

Nevertheless, things are looking up Bankers, which at $6.47 a share last y was up 28% from 1977, and this year be better. For this turnaround, credit quiet determination of Alfred Brittain 56, the bank's chairman and chief exe tive. Just as he refuses to blame bank's troubles on his predecessor wasn't as if I were just an errand boy,' says, shouldering some of the respo bility), he hasn't shrunk from mak some very tough decisions since he came CEO in 1974.

Bankers' decision to get out of re banking in metropolitan New York selling its 89 branches to the Bank Montreal is one such decision. This enable Bankers to eliminate costly o head and improve its balance sheet will reduce assets by about $1 billion yet increase stockholders' equity by estimated $20 million. (The price is t much in excess of book value.)

With the ever-mounting costs of o head and furious competition from ants like Citibank and Chemical, re branch banking became prohibitively pensive for Bankers Trust. Hencefo Bankers will concentrate on bein wholesale bank—that is, lending mo to big corporations. "We were lik shotgun in our lending business in past," says Brittain. "We now are dir ing our human resources away from approach that everything is out th and trying to zero in on a smaller num of the largest companies."

Bankers Trust's problems began in mid-Sixties and early Seventies whe pushed into the retail consumer mar and expanded aggressively into a hos other areas: international, real estate construction lending, as well as lend to smaller, so-called middle-market c porations (sales less than $100 milli Prior to that period, it was mainl carriage-trade wholesale bank caterin large, blue-chip corporations and weal individuals, many with 60-year ties to venerable trust department.

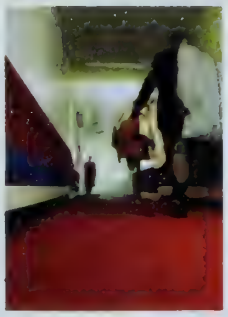
FAIRFAX COUNTY, VIRGINIA.

THIS MAY BE THE BEST PLACE IN AMERICA FOR BUSINESS TO WORK.

Inquire in confidence to: Mr. David Edwards, Executive Director, Fairfax County Economic Development Authority, 8330 Old Courthouse Road, Suite 800, Tysons Corner, Vienna, Virginia 22180 Phone (703) 790-0600

We control the basics.
As the world's largest producer of valves, fittings and pumps, you'll find us involved with the needs of basic industries. Just as we have been for over a century. And today we also manufacture water and waste treatment components that help industry meet new government standards.
Fluid and pollution control. A capability of Crane Co., where we've demonstrated that concentration on essential products for essential industries helps build a strong and growing business. In steel. In building products. In aerospace and aircraft. And of course, in fluid and pollution control.
Crane Co., 300 Park Avenue, New York, NY 10022
CRANE



If you're cramming a three day business trip into one, there's no place like an airport Hilton.

We know how it is. Into town for a quick meeting. Then fly out to another. So for just that kind of trip, we suggest any of our 26 airport Hiltons.

We'll arrange conference rooms, delightful meals, any business needs you might have. And at the end of the day, after your last meeting, stay with us and let Hilton Rainbow Service relax you. We've got spacious accommodations. Famous Hilton cuisine. And a gracious staff. So next time you're planning that whirlwind business trip, plan it around our airport Hiltons.

For information and reservations call your local Hilton Reservations Service or your travel agent.

There's no place like HILTON.

y, when you deposit a check in the bank around the corner, does it e three days before you can use the money? "Prudence," bankers ly. "Working off the float," say cynics.

The floating check game

By Cynthia Saltzman

YEAR AGO last July Lewis M. Taffer, assistant counsel for the Senate Banking Committee, t a $90,000 house in Washington, The real estate agent gave him ten o put 10% down on the deal. Taffer to the National Bank of Washing- picked up two bonds from his safe it box, and carried them down the to E.F. Hutton & Co. The broker hem at a premium and promised he total of approximately $12,000 e business days—the customary pe- ccording to a New York Stock Ex- e rule. Taffer returned to E.F. Hut- ne following Thursday, picked up neck and headed back to the Na- Bank to deposit it in his checking nt. While standing in line he no- the check had been drawn on the of America in Los Angeles. This t it would take over a week to clear e might have trouble putting the y down for the house.

er was about to be had—had by the float game." Because he was a r, and worked for a Senate commit- boot, he was having none of it. He sted immediate credit, and the let him have it. But for those not on aff of the Senate Banking Commit- 's not so easy. For many in Taffer's ion the broker or the Washington or both, could have wound up us- e $12,000 for five days or more at arge. At current interest rates, the could have earned $23 on that one- float—no huge sum in itself but ssive indeed when multiplied by ns of checks.

ry day about $54 billion in checks ting between one bank and another U.S. Whenever possible banks play oat. Corporations also are among nost astute technicians at playing me. Often, too, ordinary citizens check a few days before depositing nds to cover it.

Sorting checks at the New York Federal Reserve
Seven tons of paper a night.

Float has been around since the first check. But it's more fun and more lucrative these days because the banking system has one foot in the future and one in the past; computers and automatic fund transfers have speeded up parts of check clearing, but other parts depend, as they always have, on the physical transfer of pieces of paper. Learn to use the fast parts and the delay to your advantage and there is money to be made.

That's one reason American Express Co., the old master at the game, asks you to keep your last traveler's check. It's a nice deal for them. If you can be persuaded always to carry a $50 denomination, you will have contributed $50 to their capital on which they pay you neither interest nor dividends—without having to render you any service in return. American Express, in fact, virtually invented the game of working off the float. When you buy one of their traveler's checks, they have free use of your money until such time as you actually cash the check and it is handed to them for payment. They also cash in on the float when you use your American Express card. American Express used to be so slow in reimbursing for customers' charges that some angry merchants started switching to bank cards, like Visa, which paid more promptly. Recently American Express has agreed to hasten its own payments but only in return for a

higher cut from the merchants.

The problem is that nobody seems to know how much of today's float is deliberate and how much accidental. The Federal Reserve Board is trying to find out and has just issued a report calling on banks to eliminate "remote disbursement"—writing checks on a bank, usually a small one, 3,000 miles away. And the Securities & Exchange Commission is cracking down on brokers who do it.

Another Fed task force has been studying another aspect of check clearing in Taffer's story—"delayed availability"—where you deposit a check but the bank won't let you at the funds for as much as 30 days. Lorin S. Meeder, head of the task force, says consumers have complained about this for a year and a half, particularly new account customers.

The widespread intricate manipulations of float have made a mockery of the Fed's prediction that "technological progress"—*i.e.*, computers—would have eliminated both "checks and [Fed] float" by now. Quite the contrary. In a little over ten years, the number of checks processed in the U.S. has nearly doubled—from 18 billion in 1967 to 32 billion last year—and the Fed now predicts it will be 60 billion by 1985.

Certain parts of the check clearing process have gotten faster—much faster. Checks are now sorted in most big banks by computers which process 60,000 to 75,000 checks per hour. There is a frantic race to get the money officially on deposit. If the processing computer breaks down, the checks can still be sorted mechanically and bundles tied by hand to make sure the big ones—the $10 million variety—get to the Federal Reserve or another bank. Figure it out: At 10%, the difference between getting $10 million on deposit today instead of tomorrow is theoretically $2,740. It doesn't take many $10 million checks to build a nice piece of change.

But while this automation has speeded up things at the banks and at the Fed's processing centers, checks are still pieces of paper that must be transported. Moving more than 80 million of them around every day by truck, courier and airplane offers other float advantages.

Federal Reserve float, in fact, which was supposed to be largely eliminated by 1976, has nearly tripled since 1967 to an average of $5.5 billion daily last year. One reason is the speed with which the Fed gives banks credit for checks deposited—within two days at the most. Since it often takes the Fed longer than that to collect from the originating bank, this well-intentioned gesture means both banks use the money simultaneously.

Among the nation's 14,900 banks, the Fed found, there is no uniform policy about when depositors will be allowed access to their own money. Nor is it covered by law—banks can have any policy they choose. Some banks, like The First National Bank of Athens, Ga., allow customers of long standing to write a check on a new deposit immediately. But for "someone we don't know," says Harold J. Brewer, assistant vice president and cashier, "we might hold the money for 30 days, or 20 days, or 14 days." Favoritism? Not really. Just custom.

New York's Citibank uses a complicated availability schedule, based on Federal Reserve figures of how long it takes to transport a check back and forth to various points. Citibank will hold the money for 3 to 20 days—3 days for New York, 20 for Alaska, or 6 for Chicago, 8 for Sioux Falls.

Savings and loan associations can be worse. The Dime Savings Bank of New York in fact faces a class action suit, brought by Jacob Rapp, an irate customer, who charged it violated a statute requiring "reasonably prompt payment." The Dime holds local checks for 6 business days and others for 15.

In a little over ten years, the number of checks processed has nearly doubled: from 18 billion in 1967 to 32 billion last year. The Fed predicts it will be 60 billion by 1985.

Supposing you're a New Yorker who deposits, at 2:30 p.m. Monday, a check at your neighborhood Citibank branch, written to you by a friend whose money is around the corner at a branch of Chase Manhattan. The bank routinely says it will take three days to clear even though the two banks are 100 yards apart.

Citibank sorts that check fast and delivers it along with thousands of others to the New York Clearing House Association, where sometime during the night Chase, Citibank, and ten other big New York banks exchange checks. (Over half of Citibank's checks come from other local banks.) The clearing house keeps score—adding up what Chase owes Citibank and Citi owes Chase—makes up a settlement sheet and takes from one account and gives to the other. So Citibank, barring a disaster which prevents the messengers from making it to the clearing house, gets credit for your money by the next day—Tuesday.

Now here's the rub. Chase has until 11 p.m. Tuesday to see whether the check is good, whether the signature is forged, the account overdrawn or the "friend" has stopped payment on the account. If that happens Citibank would wake up to the problem Wednesday morning.

So while banks get credit for your money almost immediately, they claim delayed availability covers for the possibility that credit will be revoked—if the check bounces. (There is no notification if all goes well—as it does virtually 99% of the checks.) Ban prudence? Perhaps, but it is also h profitable at today's superhigh in rates.

When you talk to many bankers availability, they begin to spin off ta those worst-case possibilities. Few tion correspondent relationships, o flights to San Francisco, Atlanta New York are frequent, that major b in those cities all employ couriers meet flights and bring in checks at vals as brief as 60 minutes.

Phoenix Hecht Inc., a Chicago management consulting firm that check clearing studies by opening checking accounts in 120 cities a the country and sending checks bac forth, says even the collection pr takes no more than about a wee anywhere. If you're in Boise, Idaho, Richard J. Poje of Phoenix Hecht, a York check will be collected in four Every day the bank holds your ch after it's been credited for it—the makes a clear profit.

In defense of the banks, it shou remembered that retail banking i highly profitable; working off the helps recoup costs. Without profits the float, the banks might have t crease charges—or eliminate service

Says Oppenheimer & Co.'s bank lyst Mark Biderman: "Whenever have a system where there is an inc payment, you create all sorts of i ciencies. Banks have to get paid fo services they provide, and if they get paid directly, they're going to t get paid in other ways."

With money as dear as it is, s corporate treasurers do everything can to work with minimal cash bala This leads many of them to try to their own checks from collection f long as possible.

Among the classic cases are J.C. ney and Montgomery Ward, which disbursed some checks out of We Montana National Bank (assets, million) in Missoula, Mont. Borden pays some of its bills from the Bar Hawaii. The whole system thrives o fact that the Fed will credit the rece bank in two days at the most. checks are credited and debited the day. But it may take longer than two to collect from a place like Missoula

That's the sort of thing the Fed i up with. Missoula's Western Nat says Penney's and Ward's accounts be "discontinued" some time this Merrill Lynch, following a class a suit, has agreed to stop sending checks to New Yorkers from the Coast. But for dividend checks, M Lynch will continue to use distant b in order to slow down its outflo funds. As long as interest rates are l the great game of float will go on.

sion"? The deepest since the Great
Depression.)

We bounced back strongly in 1977 and it'll be even better in 1978 and we've improved track and added new equipment: 450 new and rebuilt locomotives and over 6000 new freight cars.

In all, we've spent $490,000,000 during the past six years to improve our roadbed, rolling stock and service to shippers.

EMPLOYEE NORTH WESTERN OWNED

At the same time, we developed the credit standing to finance $325,000,000 of this spending with long-term debt and leases.

Plus we've paid off $230,000,000 of long-term debt and met our lease obligations.

We've innovated with high-speed piggyback service, grain and coal trains.

Next? More improvements: In equipment, track and services. We're also working toward a new route to the vital western low-sulphur coal fields. Yes, Chicago and North Western is on the right track.
All aboard!

Here's a brand new Wall Street house that's flourishing while others are falling by the wayside. What's its secret?

Brean Murray's secret

By Robert J. Flaherty

WHILE OTHERS were wringing their hands over the disappearance of the small Wall Street research boutique and predicting that the investment business would soon be concentrated in a few hands, A. (Anthony) Brean Murray, in December 1973, quietly founded Brean Murray, Foster Securities with only $100,000 in capital.

Foolhardy? Can you call it foolhardy when this five-year-old firm survived two major market crashes, a continuing shakeout in The Street and last year netted over $500,000 on revenues of $3.2 million? Brean Murray is no threat to Merrill Lynch, whose revenues last year were well over $1.5 billion, but it does shame Merrill Lynch when it comes to profitability. Whereas Brean Murray's pretax profits were 18% of revenues, Merrill Lynch's were only 7.5%. Return on equity capital? About 50% for Brean Murray, 11% for Merrill Lynch.

Why did Brean Murray flourish where others failed? The fast answer is: good management. But that is too easy. So we'll describe who Brean Murray is and what he did.

Born in Dublin, Ireland, in 1937, he came to the U.S. as a teenager to join his widowed mother in New York City. After the close of the Korean War he joined the U.S. paratroopers. After graduating from Villanova University he worked for IBM as a salesman and was making $25,000 a year within two years—a huge sum for a young man in his 20s in the early Sixties. He also had an ulcer. "I liked IBM, but knew I couldn't get rich there," he recalls. He quit and went into the brokerage business, with what is now Dean Witter Reynolds. First year earnings selling securities to individuals: $8,000. That was no good either. So he moved to another firm, now Shearson Hayden Stone, which permitted him to switch to institutional sales. At age 28 he [illegible] full partner. His first venture capital deal bombed, but he finally got really rich by backing three ex-IBMers in a new venture, Shared Medical Systems. SMS is now a $63 million (sales) company and Murray's $85 investment is worth $1.3 million.

Eager for more deals, Murray joined Coenen & Co., but withdrew after a policy dispute with its owner. "I wasted three years of my life," he says bitterly.

In December 1973, with the market poised for a terrible crash, Murray opened the door of his own firm. It was profitable from the first, but it needed more than just a great salesman. It also needed great research. Because to open doors it needed something unique to sell.

"Institutional research firms still have the herd instinct," Murray said, and looked around for someone who could function as a lone wolf. Enter 48-year-old Norman Fields. Fields was a quiet, shy security analyst who made his name at Dreyfus Fund under Jack Dreyfus and later moved to Abraham & Co. in 1961. When the latter firm was absorbed Lehman Corp., Fields felt like a fish of water in the big firm. His friend . partner John Schulz, the former FOR columnist who ran portfolios at Ab ham & Co. on Fields' stock picks, r Murray and the two hit it off. So Sch joined the Murray firm in March 19 bringing with him Fields.

From then on Brean Murray was and running. It did $1 million in 19 $3.2 million last year and expects to $5 million this year. That's real gro at a time when stock trading has b rather flat and the market almost con tently disappointing.

Having met Brean Murray, let's m on to Norman Fields, who is strictly analyst. "I expect to own a stock f year or so and often end up holding i five years," he says. "My ideal is to an undervalued stock and time my chase before emerging dynamics m the value apparent to others. When stock is bid up and overpriced, I Ideally I have made *ten* times my mo In reality this goal has been achieve but not too often."

Nothing terribly original there. Fields' execution is something else a

Research director Ralph Kaplan, A. Brean Murray and analyst Norman Fields
An affection for stocks that are "second-tier, but not garbage."

In 1975 he had the guts to buy H Corp. at 8½, just after it reported a l quarter and The Street was certain cession was about to hurt it further. Fields is all set to receive his check Consolidated Foods Corp., which dered for Hanes earlier this year at share. That's a gain of over 600%.

Naturally most investors wou have bought Hanes back then, w shows why Fields does so well. " myself a speculator," says he. "It's

"It's worth taking chances when you're young so you can do what you want when you're older."

—Bill Sargent
Marine Biologist; Oceanographer; Underwater Photographer; Expert in Oceanic Law; Consultant to World Governments, Private Business and Environmental Groups, Archaeologist; Novelist

It could be argued that Bill Sargent, at age 32, is already doing what he wants to do. He's done, or is into, the following:

Participant in the international Law of the Seas Conference" in Caracas, Venezuela, 1974.

Working under a grant from MIT to develop a TV series on ocean life.

Producer and host of his own radio show.

Hosted TV talk show centered on ocean life and international law.

Lived aboard Atlantis II for six months on research project that took him from Woods Hole, Mass., to Africa, to South America, to the Baltic Sea and back.

Shot TV film aboard Soviet trawler operating off East Coast of U.S. (and learned salty Russian).

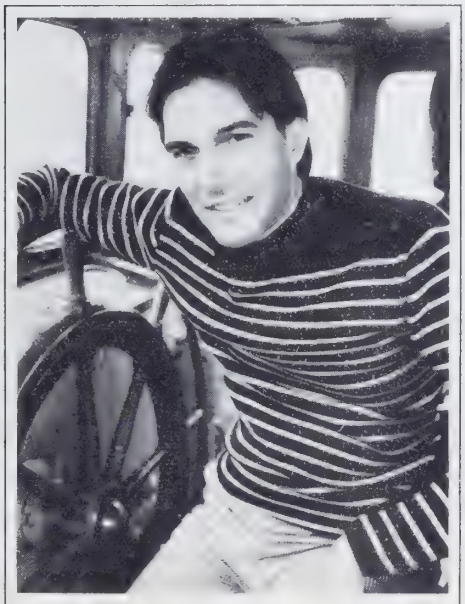
With a friend, discovered three unknown archaeological sites in the mountains of Colombia.

Currently writing novelization of Howard Hughes's frustrated attempts to raise a sunken Soviet submarine.

What's left Bill?

A lot, really. One of the most important things that has happened to the oceans in my lifetime is that we have started to see below their surfaces. This is changing our concept of the oceans, from a last frontier that must be conquered to a fragile environment that must be preserved. I want to be part of this process.

"And five years from now I would like to have my own TV show and have my book published—to communicate the feelings and appreciation I have about our natural environment to the widest possible audience."



The same kind of men who read Time and Newsweek read Playboy. Only a lot more of them read Playboy.

What do you do while you're catching your breath?

"Well, you've got to remember that much of what I get paid for, other people do for pleasure. But my wife and I do travel a lot. We can't get enough of that.

"I shoot a lot of underwater footage on my own time because I have such great visual interest in ocean life. I'm a movie buff. And we're busy putting together a new stereo system for the house and getting used to our zippy new energy-efficient car. We do as much skiing as we can. Changing diapers takes time, too.

"And reading. I have to do a lot of reading just to keep abreast of my own field. And I read to keep up with the world in general.

"Yes, of course I read PLAYBOY. I say 'of course' because I've been reading it for so long. It, more than any other magazine I know of, is involved in the mainstream of our culture and values. It's also a way of keeping up with the people who are shaping and changing things in this world. Besides, the PLAYBOY cartoons are great."

A typical Playboy reader?

Bill Sargent, son of a governor of Massachusetts, great-great-grandson of a great American painter, doesn't happen to be a typical anything.

But his lust for life is typical of the 14 million men who read PLAYBOY every month.

And you know what this kind of vitality leads to.

Sales. Lots of sales.

PLAYBOY men buy more skis than Sports Illustrated men. PLAYBOY men buy more new cars than Newsweek men. More PLAYBOY men own stock than Time men.

And it's that way in virtually every product category and compared to every newsweekly, sportsweekly or men's magazine.

And you can reach a lot more of these kinds of men—for a lot less money—in PLAYBOY than you can in Time or Newsweek.

The Playboy reader. His lust is for life.

Source: TGI, Spring 1978. PLAYBOY is a mark of Playboy. Reg. U.S. Pat. Off. © 1979, Playboy

common sense a speculator should make more than a conservative investor. The normal situation in the world is that low-grade stocks with high risk outperform high-grade ones with less risk. That's why I don't like stocks that are being followed by many other people."

Because Fields seeks stocks with hidden values, many of his past picks have become takeover candidates like Hanes. But he warns: "Never buy a company anticipating a takeover. They are too hard to time. Buy because of value and if a takeover comes—the value is realized that much quicker."

Hidden value can be realized in many ways other than by a takeover. For instance, Fields bought Oxford Industries, the textile company, for under $25 a share. In mid-1977 Oxford spun off its glamorous business machine division, giving 1½ shares in Lanier Business Products for each share of Oxford. Now Lanier alone sells for $28 a share, while what's left of Oxford sells for $10 per share. A 100% profit. Not bad.

To package Fields' ideas and combine them with those of Brean Murray's other half-dozen analysts, Murray hired Oppenheimer & Co.'s widely respected publishing and photography analyst Ralph Kaplan as director of research. In his own right Kaplan is an individual who has been willing to walk against the wind.

In 1970 he was the first analyst to predict the demise of both *Life* and *Look* magazines in his negative report on Time Inc. and Cowles Communications Inc. A Harvard English major, Kaplan is the perfect choice to compress the inarticulate, but brilliant ramblings of Fields into readable, bullet-like prose for quick reading by Murray clients.

About 100 stocks are followed by Brean Murray. All 100 have to pass the criteria of being "attractive, misunderstood or neglected." Of these, the following baker's dozen rank as buys right now.

Because he likes to go where he has little competition, Fields has begun following conglomerates; he happily notes that most other analysts avoid them because they are hard to analyze.

Borg-Warner (NYSE), he says, looked like a fabulous buy even before its proposed merger with Firestone Tire & Rubber. Now the possibility of turning Firestone around makes B-W look even better. B-W's estimated 1979 sales (without Firestone), $2.5 billion; earnings per share, $5.50; price, 27; P/E, 5.

Two conglomerates he regards as buys because they have so improved their debt-to-equity ratios that he thinks they are poised to try a deal for a very large company. One is Studebaker-Worthington (NYSE): estimated 1979 sales, over $1.5 billion; earnings per share, $6; price, 29¾; P/E, 5. The other is Martin Marietta (NYSE) which made a vain pass after Peabody Coal. Martin's estimated 1979 sales, over $1.9 billion; earnings per share, $6; price, 31; P/E, 5.

Fields likes IC Industries (NYSE) because of its divestment potential. It is diversifying by buying good companies at a big premium. If it can get rid of its ailing railroad—as Northwest Industries did in 1970—IC will get a tax-loss bonanza to shelter earnings. IC's estimated 1979 sales, over $3.5 billion; earnings per primary share, over $6; price, 27⅜; P/E, under 5. Speculation? Yes. Fields admits that he is—"a speculator but not a trader; I expect to wait a year or more."

He adds: "Speculative stocks as a group normally outperform the conservative stocks—they have to; there is more risk involved." (If you pick the *right* speculative stocks at the right time, that is. Most of us would be well advised not to take Norm Fields' advice too literally.)

Their stocks are "attractive, misunderstood or neglected." You get the picture why Brean Murray Foster Securities is becoming so successful in a Wall Street full of dead and wounded. It specializes. Isn't that how you become successful when you have to compete with far bigger people? By standing out from the crowd? By having a unique selling proposition?

Okay, conglomerate stocks. But would you guess what else Fields especially likes? Textile stocks. That's right. Few people follow these stocks because they don't think they can compete with foreign producers and because they expect a downturn in consumer spending this year. Fields—remember he bought Hanes when no one wanted it?—thinks that Washington will bail out the industry because of all the jobs it provides. He likes Dan River (NYSE), which he expects to earn $3 this year; it sells around 14. But his favorite textile stock is Cone Mills (NYSE) which he thinks will earn $7 a share and now sells for 26, less than four times earnings.

Research Director Kaplan also likes offbeat stocks but has his own choices:

"The most exciting stock": Computervision (OTC). Of its sales, 70% are in devices for computer-assisted designing. This market is growing 50% a year because the cost of computing is decreasing, while the cost of engineers and hand drafting rises. Kaplan estimates Computervision's 1979 sales at $104 million; earnings per share, $3; stock price, 27¼ bid; P/E, 9.

Why is a rapidly growing, high-technology stock selling for a P/E of only Blame the remaining 30% of sa which are in machinery to help ma wafers for semiconductors. That i risky business, with profit problems an industry facing a downturn. A blame past financial bumbling; the co pany lost $4 million in 1975 and so m managed inventories that they w higher than today even though the co pany has tripled in size since then.

Others, more cautious, will wait see how management controls inv tories during the next semiconduc downturn. Kaplan hopes he is buyin company that has turned around bef Wall Street knows about it.

Kaplan has bought a couple of sm companies in the material-testing bu ness. His reasoning is this: With c sumerism growing and with Washing pressing Detroit to build lighter c businessmen will have to experim with new materials and with more tensive testing of old ones for durabi and safety. Kaplan's picks:

Instron (Amex) will earn $2.35 year and sells for around 18. MTS S tems (OTC) will earn $2.35 and sells 19. These are smallish but not tiny co panies. Instron has 985,000 shares standing and sales volume will be million this year, MTS (2 million sha will do $54 million.

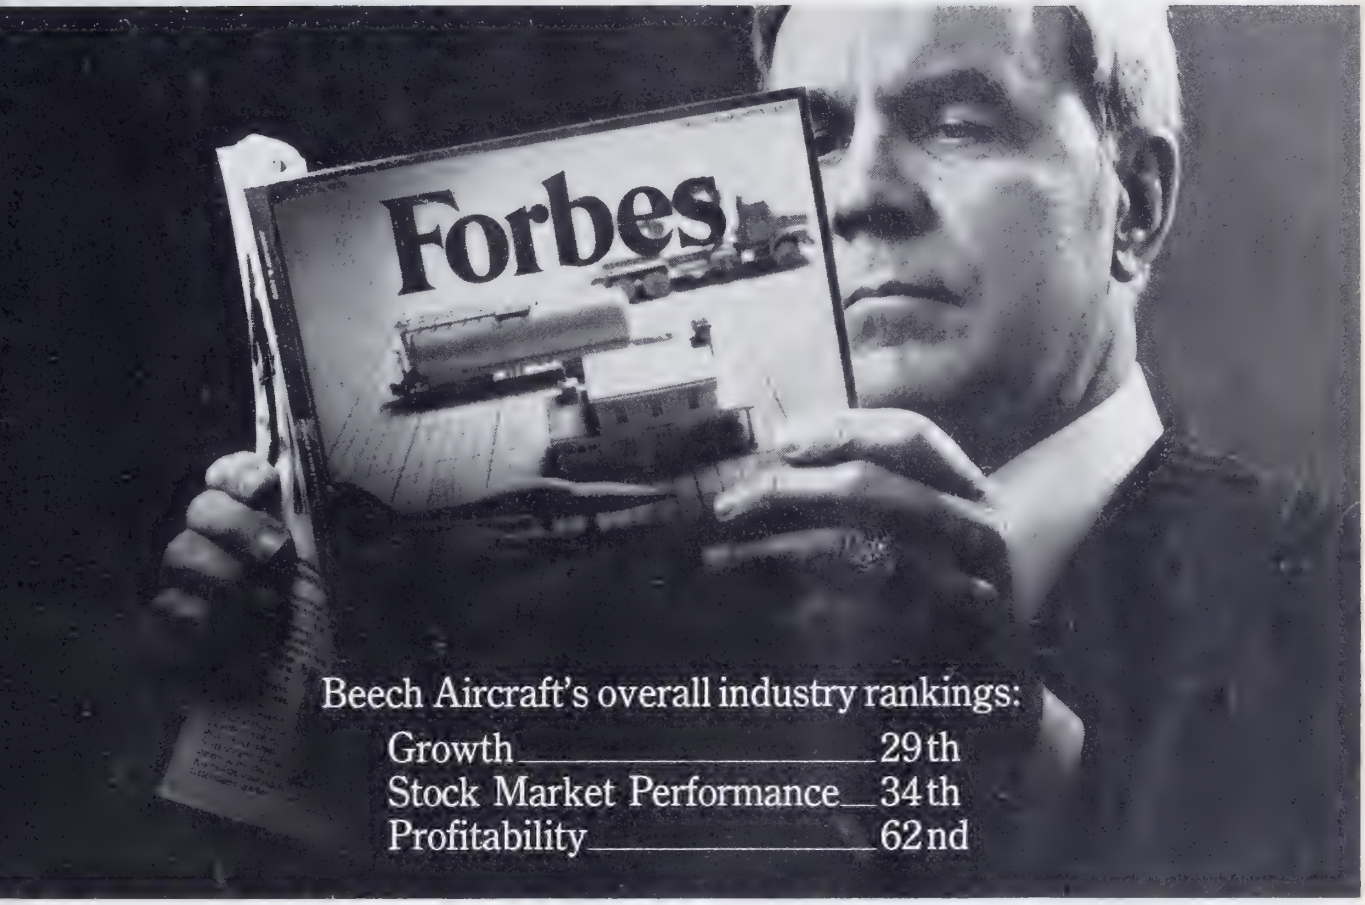
While American Express greedily c McGraw-Hill, Kaplan has his eyes couple of much smaller publishers. is IMS International (OTC), which computers to keep score for the phar ceutical industry. A tiny business? No all. IMS will do $135 million this y and earn $2.30 a share by Kaplan's mates. Price: around 17. The comp turned down a $20 offer from CBS.

Kaplan is also high on Scholastic M azines (OTC), which has a lock on school newspaper market. He expec to gross $127 million this year and $2.70. Recent price: about 17; P/E 6.

Still in publishing, Kaplan is bullish financial printers because of the incr ing demands for disclosure made by Securities & Exchange Commiss That means Bowne (Amex) and Pan Press (OTC). Both have great bala sheets and very low multiples (6 Bowne, 5 for Pandick, based on Kapl estimates for 1979).

Summing up Brean Murray's pic Fields associate John Schulz calls th "second-tier but not garbage"—you the picture of why Brean Murray, Fo Securities is becoming so successful Wall Street full of dead and wounde specializes—in second-tier, nongarb to be sure—but isn't that how you alw become successful when you hav compete with far bigger people? standing out from the crowd? By ha a unique selling proposition? Now know Brean Murray's secret. ■

Our annual report from Forbes.



Every year *Forbes* magazine makes an exhaustive study of corporate America. This year's study covers 1,006 of the nation's largest companies. Including Beech Aircraft.

As one of these 1,006 we ranked 29th in growth, 34th in stock market performance, and 62nd in profitability.

Forbes also reports that we ranked 2nd in both profitability and earnings per share growth within the Aerospace/Defense industry. An industry which, by the way, many analysts have projected as a growth industry through the 1990s.

Perhaps Beech Aircraft is one of the reasons for their optimism. We've just finished our sixth consecutive year of record-breaking growth in both sales *and* earnings.

And looking at the last 15 years, the value of a single share of Beech Aircraft stock has increased more than 529%, through growth, cash dividends, and stock splits, an average of over 35% per year from 1964 through 1978.

	1973	1974	1975	1976	1977	1978
Net sales	$204.6	$241.6	$267.1	$346.9	$417.4	$527.5
Net income	$10.0	$12.4	$15.6	$20.6	$25.4	$35.5
Dividends	$3.1	$3.6	$4.4	$5.3	$7.0	$8.3

All figures in millions

This kind of performance doesn't just happen by chance. It happens by design. Both product and corporate design.

Our product quality is recognized around the world. And at Beech Aircraft, we believe in putting just as much careful attention to detail, stability, integrity and performance into our company as we build into our products.

For a copy of our own annual report, write to: Beech Aircraft Corporation, Dept. K, Wichita, Kansas 67201.

Beech builds quality airplanes. And vice versa.

Faces Behind The Figures

We never worry over money

You've got to hand it to Roger Tamraz, the self-styled "financial commando" who seems to have made a good thing out of turning Middle East gold into Western dross. The latest effort of his thinly capitalized ($28 million) First Arabian Corp. is a plan to buy two bankrupt oil refineries, one at Come By Chance, Newfoundland and Commonwealth Oil Refining's facility in Puerto Rico.

But refineries in eastern Canada are running at 60% of capacity, and many Caribbean operations are also in trouble. Compare that with U.S. refineries running at about 90%, and it is hard to imagine how Tamraz' shadowy backers will do much business.

Tamraz says the game he is playing has nothing to do with near-term profits but rather with asset values and oil politics. The 38-year-old Harvard Business School graduate calls the marginal refineries "a classic case of countercyclical investment." The Newfoundland refinery is priced at $219 million—half the plant's replacement value. Then, he adds, "In the refinery business today, supply is more important than price. With our Arab connections, we can insure a source of crude."

Who are his Arab connections? Lebanese-born Tamraz won't say. His backers in the Puerto Rico bid, a group called Arabian Seaoil Corp., are supposed to be Saudi royalty. The major shareholder in First Arabian is Tamraz' father.

How have Tamraz' regal and not-so-regal backers fared? Not very royally. Tamraz first came into view when Kidder, Peabody assigned him to help rescue the bankrupt Intra Bank in Beirut back in 1970. In 1973, he left Kidder to set up First Arabian. But look what happened: The $2.4 million investment that First Arabian put into Edward Bates & Sons, a London merchant bank, went down the drain. In 1975, Tamraz put his Harvard classmate, Saudi Arabian investor Ghaith Pharaon, into Detroit's Bank of the Commonwealth after it had been all but wrecked by Donald Parsons. Pharaon tried to turn it around, but in 1977 unloaded it on First Arabian for $10 million. Pharaon, who had also owned a piece of First Arabian, got out of that holding, split with Tamraz, and went back to doing his own deals. The bank is breaking even now.

A marginal bank and now two marginal refineries? Are such items really bargains just because they are cheap? Yes, says Tamraz, because the price of U.S. oil must ultimately rise to the OPEC level. His backers seem willing to wait. Says Matthew Steckel, Tamraz' partner and chairman of the Bank of the Commonwealth, "The level we play on—we never worry over money."

Roger Tamraz of First Arabian Corp.
How long must his shadowy backers wait to get their money out?

Faces
Behind The Figures

"Each bag of [Pop Rocks] candy has less than 3% of the carbon dioxide in a single 12-ounce can of soda," Mitchell says. "The worst thing that could happen to you, even if you were very bloated, would be that you would burp."

Capitalist roader

Despite all the talk about Peking allowing foreigners to make direct equity investments in China, opportunities for such joint ventures are likely to be few. Instead, a number of Hong Kong-based businessmen are willing to forsake equity and engage in what the Chinese call "compensatory trade"—swap might be a better word. They agree to pay the workers' wages and to provide China with all the necessary manufacturing equipment and technology. In return they get the plant's output for a set number of years. Once they get enough to cover costs and, presumably, a healthy profit, they turn control of the plant over to the Chinese. Such deals enable the Chinese to set up manufacturing operations with little capital investment.

One of the first Hong Kong businessmen to pursue such "compensatory trade" is Charles C.S. Lam, a 48-year-old native of Swatow, China, who came to Hong Kong when he was 8. Lam, who runs a large plant-and-shrubbery nursery in Hong Kong, is also engaged in shipping ventures. He first approached Peking three years ago about the possibility of setting up factories on the mainland. But it wasn't until last year that they let him set up a shirt and pajama factory employing about 1,000 workers some 40 miles from Canton.

Last month Lam put the finishing touches on an even bigger deal under which he and the Chinese will produce 55,000 shipping containers in Canton over the next five years. The containers will start rolling off the production line this September for delivery to Container Transport International. At $2,200 apiece, that works out to a $121 million deal. Lam says he will invest $12 million in machinery and material needed to start production and that CTI will send over specialists to help. Lam won't say how much the workers will be paid, but some people in Hong Kong suggest it could be as low as $50 a month.

Lam warns that "compensatory trade" can be very risky unless you are certain there is a buyer willing to take everything the factory produces. In the case of Container Transport International, Lam seems to have just that. The company says its operations have been hampered by a shortage of containers and that until now it has only been able to buy 200 a month in Hong Kong.

Another try for Olivetti

The ostensible reason for Carlo De Benetti's trip here last month was to introduce two new electronic typewriters into the U.S. market. But, much more important, the vice chairman and chief operating officer of Italy's $1.9 billion (revenue) Olivetti is shopping for a U.S. company. He wants one that will help him turn around his company's sick U.S. operation and give it a more competitive product line in the world office equipment market.

Hong Kong businessman Charles C.S. Lam
He's not waiting for equity deals.

Carlo De Benetti of Olivetti
Too many eggs, too many baskets

Last year, Olivetti's U.S. operati more than $30 million on sales of million—a grim performance for a subsidiary of a company that was the stars of post-World War II Euro

De Benetti figures he needs even to add a U.S. company in telecom cations so that Olivetti can stay petitive in the office-of-the-future ket. "We need to understand wh market wants," he says. "In most the U.S. anticipates the market ir many, France and Italy by about five years."

Meanwhile he expects Olivetti to start making money by next "We sell too many different produ too many different market segm he concedes. And he is focusing th pany where he thinks it has th shot—in printing calculators, bu computers, terminals designed t savings and loan market, and of c the new electronic typewriters. T quisition or joint venture he ho make will augment the business co er line and word processors.

Not just a hired hand, the 44-ye engineer is Olivetti's largest stockh Fresh out of Turin's polytec school, he went to work for a famil parts company that grossed $400,000 in 1958, the year he a During the next 18 years, De B turned the company into a $50 n business without any debt.

Then he got what looked like a c at the big time. The Agnelli fam cruited him to run Fiat in 1976; after four months and last spri bought his piece of Olivetti. So de is the Italian stock market, he had only $17 million to buy 13% multi-billion dollar company. ■

Full employment. That's our goal for the working tree.

America's need for wood is growing.

By the year 2020, government and industry sources expect demand for wood fiber to nearly double.

That's one reason why, at Potlatch, we feel a responsibility to utilize each harvested tree to the fullest.

For example, improved sawmill technology enables us to get more end product from every log we process.

We use that part of the tree crop not suitable for conversion into lumber—the tops of pine and hardwood trees, slabs, edgings and sawdust. We process them into pulp for paper and paperboard products.

We also use the bark and scrap residuals as fuel to supply part of our power needs.

Full employment of our working trees.

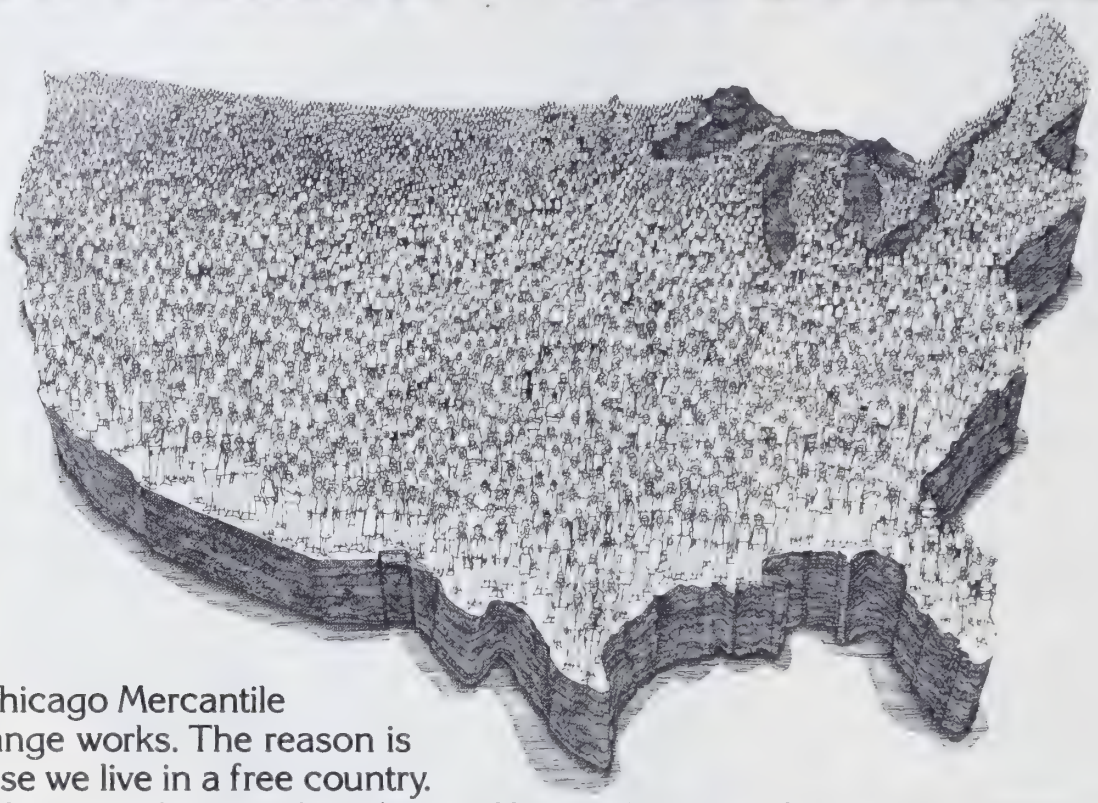
It's no small task. But it's the one that pays off in jobs and paychecks today, and homes and forest products tomorrow.

Potlatch Corporation, Public Information Office, P.O. Box 3591, San Francisco, CA 94119.

Potlatch

We grow the working trees.

The Chicago Mercantile Exchange. Assets: over 200 million free Americans.



The Chicago Mercantile Exchange works. The reason is because we live in a free country.

Sure, that sounds corny, but it's true. Here in America, the environment is right, the overwhelming majority of Americans sincerely believe in the free enterprise system, and those who have the need, desire and means to trade on the CME do so in great numbers. In fact the market is so attractive that a significant percentage of orders come in from every part of the globe. (It's no coincidence that the volume of futures trading done in the U.S. is greater than in the rest of the world combined.)

What's the attraction? With more than 20 futures contracts listed, ranging from Swis francs and U.S. T-bills to stud lumber and frozen pork bellies, businesses wishing to reduce the risk of future price and interest rate changes have an open auction marke on which to do so. Speculators hoping to capitalize on the very same uncertainties may apply their skills in the market with just as good a chance as anyone else of being successful.

The "chemistry" of all these divergent interests coming together on one trading floo is what has made the Chicago Mercantile Exchange one of the world's leading financial institutions. There's only one possible explanation for that. It works.

MONEY & INVESTMENTS

The Economy

Debt traps

HIS POINT, *psychology*, not money or consumer debt, is the key to onomy. Until the consumer gets a scare thrown into him, the con- boom will go on and will continue g upward pressure on prices and st rates. A "good scare" means he will fear for a job or a business.

Right now the consumer is euphoric about his cash flow, if pessimistic about inflation. The result is he is spending like there is no tomorrow. Consumer debt has increased almost $150 billion a year in each of 1977 and 1978. Most of us have become blasé about big numbers. But ponder that one for a moment: It means that total consumer debt, standing at about $1.1 trillion, now amounts to about one-half of the Gross National Product.

Isn't a boom financed by borrowing like this likely to stop of its own weight? Isn't the consumer close to the end of his ability to borrow and to repay? The answer is no—and this is important. Psychology, not some magic number, will decide the limits of borrowing power at least for a long time to come.

Here's why: Consumer cash flow and consumer assets have risen as fast as debt. Bankers and moneylenders in general are not fools and they have been accepting easier terms. They realize the consumer remains a good risk.

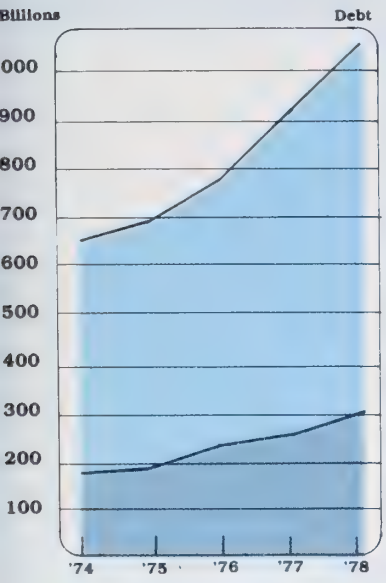
Unfortunately, consumer psychology is a bit unhealthy now—unhealthily good. Are home prices too high? They'll be higher a year from now. Should we borrow to take that trip? Why not? You only live once. That's the way people now think. Afford a new car? General Motors Acceptance Corp. now offers 48 months to pay for one. A credit union will provide 60-month terms. That means that in spite of inflation the monthly payments don't go up much.

Where does it all end? It ends when consumers and lenders both become frightened. What will trigger this? We don't know. Maybe it will happen when a certain number of people offer their supposedly valuable houses for sale and find there aren't any buyers who can afford a huge price plus a 10.5% mortgage rate. Maybe the farmers will do it for us—using their political clout to push their share of the national income so high that the rest of us can no longer afford new cars and new vacation trips.

The boom has rested almost entirely on consumer spending; capital spending has been flat and so has overall government spending. The long-awaited recession will come when the consumer cuts back. When will that be? When your living-like-there-is-no-tomorrow neighbor tells you that he is postponing that trip to Europe because he is worried about the future and doesn't want to go any deeper into debt—or that he is out of a job. ■

Bearing the burden

Since the end of the last recession consumer borrowing has increased dramatically . . .



. . . but additions to savings in various forms should make that added debt bearable.

Those who have predicted higher interest rates have been right for a year now, but they will not be right much longer.

WE'RE NEAR THE TOP

By Ben Weberman

A LITTLE MORE than a year ago I wrote that a forthcoming bond market rally "will make many money managers look extremely dumb for their current timidity." It's flattering but sometimes inconvenient that some readers at least remember what I write. Asked one of them recently: "Who's dumb now?" My reply is that FORBES has always gone on the principle that it is better to be wrong than to hide behind either/or reporting. You know—the kind that tells the reader the market will go up if it doesn't go down. Yes, I was wrong about interest rates during much of last year, but as my regular readers know, I try to think by myself and not run with the herd. My contacts include bond traders, bankers, economists and government officials, and I listen to them all and come to my own conclusions. I'm a reporter, not a theoretician. And there are many times when this eclectic approach yields better answers than rigid doctrine can.

A very smart Wall Streeter recently attributed his success to the mistakes he made; that is, he learned from them. What have I learned from being wrong in expecting that interest rates would go down? To find out I went back and reexamined my assumptions. I was correct in believing that we were not in a runaway boom and that there were no shortages of key goods. In other words, 1978 did not look like 1974. Where I went wrong was in failing to realize how Congress and the Administration would bow to special interests and set off an inflationary spiral that would be counteracted by the Fed through high interest rates. This is largely a man-made inflation, not a natural one.

Water over the dam. What next? Here goes my neck again:

I sat at a table with money managers of some of the largest fixed-income portfolios in the country recently at an Economics Club of New York dinner. In that small group alone we counted over $20 billion of long-term money waiting to be invested. At the same time, life insurance companies, which invest more than $35 billion a year, had only 50% of their estimated 1979 cash flow committed, *vs.* the 70% level that would be normal for this time of the year.

A survey by Merrill Lynch of 152 institutional investors who buy stocks as well as bonds found similar evidence of a reluctance to take positions. More than 43% of the respondents said they have more than 15% of portfolio funds in cash, an alltime record since the survey began in May 1976. This was up sharply from the 35% that were that heavily in cash in September 1978. The sidelines are getting crowded. Very crowded.

One day soon, some of these sideliners will step up their investing pace, and when they do, the market rush will be so rapid that those who are still waiting to buy long-term bonds may find that the 8.25% yields of a year ago have been passed on the way down.

We had a foretaste of this kind of buying panic in the week of Jan. 19. A nice little rally got under way, only to be nipped by news of the Iranian disaster. There was no news to account for the rally, but a slight flurry of buying caused prices to run up smartly. In just five business days, the Treasury 8¾s of 2008 moved up in price from $97.75 to $99.25. Yields dropped from 8.95% to 8.8%. As anyone familiar with the bond market knows, this is a big price increase and sharp decline in rates for a short period.

Let me add that I am not as optimistic as I was a year ago about the prospects for controlling inflation. The swing I see in bond prices will come more from supply and demand than from brilliant long-term economic planning. The current underlying rate of inflation is assumed to be 9%. Many of the governmental supports that caused our 1978 problems will still be around in 1979—with two major exceptions. The weak dollar added 1%, possibly 2%, to 1978 inflation. Another one-half of 1% was added by rising interest rates passed along by borrowers as just another cost.

That suggests a possible decline in the inflation rate to the 7%-to-8% area. The Iranian situation, of course, muddles the entire outlook, politically and economically. But assuming no international explosion, this modest decline in the inflation rate will be the signal for money managers to get off the sidelines. It will be the start of a better trend—and trend is what investors bet on.

Since the fall I have been suggesting that investors, instead of buying long-term bonds, would do just as well—perhaps better—if they bought four-year Treasury notes. These carried a high rate of return relative to long issues and held the potential for substantial appreciation as the yield curve returns to a normal shape where interest rates climb steadily from the short end to the long end.

The curve is still distorted. It moves up rapidly to a hump in the one- to two-year range and then eases back down as maturity gets longer. I still feel it is wise to be cautious and buy those four-year notes. They yield about 9.1%. But for those willing to take a chance, I would say that a 9% interest rate on long-term Treasuries will look very good for most of the next 29 years.

The investor who is sticking with the 10% to 12% short-term money market instruments in hopes of doing better by investing later this year in the long market may be sorely disappointed. So, my advice is: For those who must borrow, borrow short if you can, and go out longer later. For those who invest in fixed-income securities, move out of short-term securities and into medium-term, with possible longer-term bonds. Those who have predicted higher interest rates have been right for a year now, but they will not be right in their predictions much longer. ■

Ben Weberman is economics editor of FORBES

What makes Jacobsen Textron's kind of company?

• A strong engineering reputation. Created by 57 years of building fine outdoor power equipment for professionals as well as homeowners.

• A record of innovation. The latest example is the new Power-Burst® control, on both lawn mowers and snowthrowers, to deal with tall, thick grass or deep snow. And a Jacobsen garden tractor has been adapted to hydrogen power for experiments with this fuel of the future.

• Manufacturing, engineering and marketing expertise that Jacobsen can share with other Textron Divisions, like Homelite, Fafnir and Polaris E-Z-Go.

These strengths make Jacobsen Textron's kind of company. Together with the basic advantages that Textron Divisions enjoy: manageable size...recognized market positions...sound technology ...experienced management...solid growth records.

We'd want to invest in these companies, if we didn't already own them. And we back our Divisions with a continuing commitment to new product development. For the last six years, Textron-financed R & D has totaled more than 20% of pre-tax income. It now exceeds $60 million a year.

For more information, write Textron Inc., Providence, R. I. 02903.

Ideas well managed. **TEXTRON**

This man has to find and sell the key corporate decision-makers in the E.E.C.
This man needs a pin-point breakout of car prospects in Singapore, Hong Kong and Manila—by make and model year.
This man has to know to reach the most first air travellers at the least possible cost.
This man must sell where high-end scotch consumption is at its densest.

They'll have their answers. In very short order. And absolutely free.

Introducing the Newsweek International Data Center.

n Asia and the Middle East, the kind of esearch international advertisers needed vas rare, to say the least.

n Europe it was more extensive—but nore expensive, as well. And little of it rossed national boundaries.

low, Newsweek International has athered all of it together.

Resource for Marketers.

he Newsweek International Data enter is a computerized repository for ne diverse media/market data so aluable to multi-national business: atistical tracks on major product use, narket composition and media habits f key consumers.

Vith retrieval access to this data in New ork and London, we can immediately urn your media/marketing queries into ard, useful facts.

xclusive and Extensive Data.

Much of this data is exclusive to Newsveek International, like the Asian rofiles study of 1976. For the first time, nose of you who market in the eight najor cities of Asia have access to definitive study of the lifestyles and nedia habits of Asian executives.

here's more. We've included data from ther, equally reliable sources:

he recently completed Pan European urvey is perhaps the first—and certainly ne most comprehensive—study of uropean executives which sets aside ne limitations of national boundaries.

The Australia-wide survey of readership of magazines, by the Roy Morgan Research Centre.

The McCann-Middle East media study—the only definitive media research yet done in the Middle East.

All of this data is now immediately available to you, without charge.

Grace Reiner, your Newsweek International representative in New York. Call 212/350-2556.

Telephone Link to Data Center.

You simply call your Newsweek International representative and pose your problem.

He then becomes the liaison between you and the Data Center. With startling immediacy, you'll have the information you requested on your desk, ready to feed into your decision-making process.

An Extraordinary Magazine Service.

Only Newsweek International offers this unique service to the international marketing community.

As far as we know, there's nothing quite like it in all the world: a comprehensive media/marketing data bank open to international marketers without charge.

But then again, there's nothing quite like Newsweek International itself...a magazine of global scope and universal authority...received, read and responded to by nearly two million key international consumers each and every week.

And ready...with data and with prospects...to help you sell in any of these major world markets.

Newsweek INTERNATIONAL

When it comes to investments, playing it safe is no longer safe.

THE CASE FOR RISK

By Heinz H. Biel

SOME TECHNICAL analysts contend that if the market does well in the early part of the year, with the averages holding above their lows of the preceding November/December—as they have done so far—it will be an up year. Although I have about as much faith in most such prognoses as I do in the weather forecasts of the groundhog, I am inclined to go along with this one. In all probability most stocks will wind up the year with plus signs.

We certainly have not been blessed with much good news this year, and it is not easy to justify the more cheerful investor sentiment since the turn of the year. Could it be that IBM's pre-Christmas announcement of a 4-for-1 split and a dividend increase of nearly 20%, followed a few weeks later by Du Pont's 3-for-1 split and a similar dividend hike, reminded investors that pleasant surprises do happen in the stock market and that the widespread negativism toward equities may have gone too far?

Another reason why the stock market seems to be regaining favor among investors, despite temptingly high yields on long-term bonds and short-term notes, may be the frustration over the future value of the dollar. When Federal Reserve Board Chairman Miller says that the President is too optimistic in his expectation that this year's inflation rate can be reduced to 7½%, and perhaps 7%, by the end of 1979, one can only conclude, as I did long ago, that the "battle against inflation" is hopeless and a sham.

With such pessimistic thoughts in mind, common stocks, with all their faults and uncertainties, begin to look increasingly attractive. When it comes to investments, playing it safe is no longer safe. I'd rather accept a risk and take a chance than seek the false security of a triple-A bond where, because of inflation, a loss is a certainty.

Nobody claims that stock investments are the perfect solution. You only have to look at the Dow-Jones industrial stock average, which hasn't made any headway in a period in which the dollar has lost half its value. But that is only a blunt generalization. Take a specific case: General Motors. Despite record profits, the stock of the world's largest manufacturing company sells below its lowest price of a decade ago, and even some 10% below its book value. On the other hand, such makers and distributors of automotive replacement parts as *Echlin Manufacturing* (17) and *Genuine Parts Co.* (36) have proved to be magnificent investments. With new-car prices as high as they are, automobiles will just have to last longer and this should be beneficial to these companies.

The recession (or "contraction"), which many economists had told us to expect any time after mid-1978, is still in the offing rather than an immediate threat. The leading indicators look a bit ominous, but that was also true last spring. The statistical evidence is inconclusive right now, and there are so many extraneous trouble spots that it might be best to discard the timetable for the domestic economy for a while.

The nonarrival of the long-heralded recession may have been at least a temporary plus factor for the stock market. Not only were fourth-quarter profits higher than had been expected—in some cases, in fact, they were simply spectacular—but analysts are also beginning to raise their 1979 projections. It no longer seems likely that overall corporate profits will decline materially below last year's level. It still is improbable, however, that many companies will succeed in lifting sales and earnings sufficiently to match an 8% to 10% inflation rate.

One industry that should do rather well this year is the natural gas pipeline group. These companies transport a product that is now in ample supply, contrary to predictions made by our Washington regulators a few years ago. Stocks like *Southern Natural Resources* (36) and *Tenneco* (30) are selling at only modest multiples and offer an attractive appreciation potential.

At this stage, it is much too soon to judge how the upheaval in Iran will affect the world's oil industry. Who knows whether or when that country will again become a major exporter of crude? Will there be an acute shortage of oil this spring or summer? What will be the effect on prices? These are unanswerable questions, but I feel confident that the major oil companies will manage to come out on top—as usual. I see no reason for investors to shy away from this industry. My favored stocks remain *Mobil* (72) and *Phillips* (31).

I have always been somewhat leery of companies that are heavily dependent on government/defense business. The risks involved are not of an ordinary, commercial nature, which are more or less "normal" and predictable. Just look at the huge writeoffs that Litton and General Dynamics had to take last year on settlements of contracts with the U.S. Navy: $333 million and $359 million, respectively, before taxes. Who needs that sort of problem? My affection for Boeing, for instance, did not develop until mid-1974, by which time about two-thirds of the company's backlog was commercial.

For some time I have been thinking (and writing) kindly about *Raytheon* (46), despite the company's sizable involvement with defense. However, Raytheon not only has greatly diversified its activities, but is also a very sound and financially strong company, as reflected in the AA rating of its debentures. Raytheon set new records all around in 1978 with profits up 32%, to $4.83 a share. Early projections for the current year are in the $5.50-to-$5.75 range. The recently increased but still modest dividend rate of $1.60 undoubtedly will be lifted again before the year is out. Raytheon should do well, almost regardless of general economic conditions, and I continue my favorable opinion of the stock. ■

Forbes: Capitalist Tool

The EFHutton Master List. The most important investment tool we have developed in our 75 years.

A Challenge to Independent Investors

If you are the sort of individual who insists upon making his own reasoned investment decisions...

...the sort who refuses to delegate the responsibility for managing his money to anyone other than himself...

...but, at the same time, the sort who sets the highest performance standards for himself and his investments...

...then you should know that E.F. Hutton strives to provide its customers with an "edge."

As a major broker-dealer, E.F. Hutton, through its highly trained staff of account executives, continually strives to offer our brokerage customers superior services and products, including investment research and ideas. Our account executives never have and never will ask our customers to settle passively for investment mediocrity, whether in the area of executions, research, or any other aspect of our business.

The Hutton Master List

As just one example of our efforts to give our brokerage customers an edge, consider the Hutton Master List, an important tool utilized extensively by our account executives in servicing their accounts.

The Master List, a compendium of common stocks compiled by our 50-person Investment Research Department, includes statistical data relating to market valuations, capitalizations, volatility (beta coefficients), earnings, growth rates, dividends, yields, price-earning multiples, quality grades, returns on invested capital, etc.

In addition, the vast majority of these stocks are rated by our senior analysts in terms of their perceived fundamental attractiveness and by our technical staff in terms of their intermediate price trend expectations.

Finally, for most of these stocks, our analysts also project fundamental potential values and potential changes from current prices, based upon the factors, both quantitative and qualitative, which they consider significant in evaluating equities.

In effect, this represents the distillate of the best thinking of the entire Investment Research Department on hundreds of stocks, including all of those in the Dow Jones Industrial Average, more than 90% of those in the Standard & Poor's 500 Index, and a multitude of other issues of broad investor interest.

A Master List Every Month

The first Hutton Master List was compiled in July 1976 and included information on 714 different stocks. In August 1976 we prepared our second List, in September 1976 our third, and we have compiled one such List every month since. And over the past, more than two years, the number of issues in the Master List has been expanded regularly, so that by January 1979 we were evaluating not 714 but 860 different companies.

Since its inception, the Master List has been distributed monthly to each and every one of E.F. Hutton's more than 3,000 account executives so that they have had at their fingertips at all times the latest facts and figures—and the Investment Research Department's most up-to-date evaluations and opinions—hundreds of different companies. Our account executives, in frequently communicate that information to our customers.

This brings us to the key question: can such an effort b value to our brokerage customers? Or over the past two yea we simply staggered about with the random walkers, disc belatedly that all stocks really always are efficiently priced omniscient market?

The Record

To answer these questions we have reviewed the 12-montl performance record of the 30 stocks from each of our mon Master Lists for which we then had projected the greatest appreciation potential. We were pleased to learn that in eve 12-month period beginning with the one commencing in 1976 and running through the one starting in January 197 19 separate periods in all, including 570 stocks (30x19=5 there was a reassuring degree of accuracy in our Master Lis assessment of appreciation potential. The data show that

- Of the 570 stocks, 396 or 69.5% appreciated over th 12 months. Moreover, of the 570, 121 or 21.2% appreciate or more, with 55 different companies being represented ar the 121 stocks (several appeared more than once).

- By contrast, during those 19 periods only nine stocks declined 50% or more, and only four different companies represented among the nine (one company showed up six and the other three, once each).

- Of the 570 stocks, 67 or 11.8% appreciated 75% or during the next 12 months, including 37 or 6.5% which or more. Twenty different companies were represented ar the doublers and 34 different companies among the issues 75% or more. And there were no declines of comparable magnitudes.

It should be borne in mind that this data relates only 30 stocks on each monthly Master List for which the gre appreciation potential had been estimated, whereas in all some other stocks on the List also were rated "Fundament Undervalued" and were calculated to have some—albeit l appreciation potential than these 30 stocks. Our evaluatio the numerous other stocks in the Master List (both positi negative) may not have been as accurate. Moreover, even the 30 stocks for any given month which performed well ensuing 12-month period may not have continued that pe ance indefinitely thereafter. Finally, it is important to bear that although these 30 stocks generally may have perform as anticipated by our Research Department, in each 12-m period there were some stocks among the 30 that did no perform well.

Nonetheless, on balance, we believe that the subsequ 12-month record of these 30 stocks in each of the 19 one periods is a reasonable indication of the competency of ou evaluation process and significant enough to warrant care

luation. Simply stated, as we look back to the start of the ster List, for these 30 stocks from each List we have been right nticipating increased valuation more often than we have n wrong.

he Master List vs. Standard Benchmarks

valuating the significance of these results, of course, we also e careful to consider the possibility that they may reflect a ncidence with a period of generally rising prices. We asked selves whether our appreciation potential estimates simply e the market waves. To find the answer, we did a number of iled studies comparing the next 12 months' average perform- e of the 30 stocks from each List with the generally accepted chmarks of market performance—the Dow Jones Index, the ndard & Poor's 500 Index and the more broadly-based Value e Composite Index. In each case we compared performance of Index with the average performance of the 30 stocks — nputed both as an unweighted arithmetic average (i.e., assuming qual dollar amount invested in each issue) and in a manner parable to that used in computing each of these market indices.

The results confirm our belief that the appreciation potential yses of our monthly Master Lists can be an important data for the independent investor to consider in making his stment judgments:

The average of the 30 stocks outperformed the Dow Jones ustrial Average (also consisting of 30 stocks) in all 19 periods, ether calculated as an unweighted arithmetic average or aged by assuming purchase of an equal number of shares of n issue, the method employed by the DJIA.

By the same token, the average of the 30 stocks outper- ned the average of the 500 stocks in the S&P 500 Index in 9 periods, whether calculated as an unweighted average, or ghted by total capitalization, the method as used in averaging S&P 500.

Finally, the average of the 30 stocks outperformed the average ne even more broadly-based Value Line Composite Index sisting of 1700 different companies) in all 19 periods if ulated as an unweighted arithmetic average, or in 18 of the 19 ods if calculated, like the Value Line Composite, as a geometric age. (Copies of our full calculations and comparisons are, of rse, available upon request.)

We can't be sure that our Master List evaluations will tinue as the past might suggest. No one can guarantee that. we can assure you that we always try, that we continue to as much effort into our research as we have in the past, and we never accept the premise—nor ask our customers to pt the premise—that doing as well as the market is doing enough.

But What About the "Real World"?

re pretty proud of this record—and rightfully so, we'd say. we can anticipate the objections already:

"These thirty stocks would not necessarily make an ade- tely diversified portfolio. In fact, the average beta of all these stocks was above 1.20—pretty risky." "All those issues really uldn't be suitable for everyone," they will say, "and even if they were, you probably couldn't have bought all the stocks in size because of some relatively thin capitalizations." "And isn't it true," they will say, "that 30% of these 570 stocks actually declined in price in the ensuing twelve months?" "Couldn't an investor actually have lost money if he bought only some of these thirty stocks in a given period, or held them for periods other than exactly twelve months?"

Of course all these objections are valid, but we believe that they miss the point. The Hutton Master List is not a model portfolio, or a set of "buy" and "sell" recommendations, and simply mechanically buying certain stocks on the List is not our suggested approach to investment decision-making.

Buying stocks solely on the basis of Master List evaluations clearly will not assure investment success. The Master List simply provides a body of objective data and subjective evaluations which, when intelligently employed by our brokerage customers who wish to make their own investment judgments, should assist them in making their decisions. We believe, based on the past record, that the possibility of investment success is increased for the independent investor who uses the sort of information which we make available to our account executives—and through them to our brokerage customers—via the Hutton Master List.

In Our Mind, This is the Hutton Edge.

Skeptics also may say, "It's one thing to compile extensive data about a bunch of stocks, but it's quite another thing to make that data meaningful to the average customer." But that is exactly what we train our account executives to do—to translate the research, opinions, and evaluations of our Investment Research Department, as reflected in the Master List, into actionable recommendations for individual accounts. And this is the kind of service customers of E.F. Hutton get—at no additional charge—when they do business at our firm. In our mind, this is the Hutton edge.

So, if in making your own buy and sell decisions, you would like to draw on the knowledge and opinions of experienced performance-minded analysts—then wouldn't you want to know which of the hundreds of stocks in the Hutton Master List we believe to have the greatest upside potential today—and why?

As we already have noted, each of our account executives receives a copy of the Hutton Master List monthly—including our Investment Research Department's appreciation potential projections on those issues—and will be happy to share that information with you. Just give your Hutton Account Executive a call. If you don't have an account with us, call the nearest E.F. Hutton office and ask to speak to one of our account executives. Or send in this coupon.

Ordinary businesses producing ordinary products can be unusually rewarding.

TORTOISE AND HARE—AGAIN

By Peter G. Banzhaf

ADVANCED technology soundly managed has always been welcome on Wall Street, sometimes with spectacular and enduring results. But even the best of the exotic product makers haven't always been as successful as they have seemed.

Ordinary companies producing ordinary products, on the other hand, are usually treated to a yawn. Sometimes, however, their performance exceeds our wildest imaginings. And we are reminded that the historic relationship between the tortoise and the hare still exists.

An example:

Late in the summer of 1961, when technology was truly king of the stock market and I was a brand new broker, a young woman arrived at my desk with $400. Her brother-in-law, it turned out, worked for an office-equipment company that made a terrific dry copier, and she thought it had a bright future. The name of the company was Xerox (changed from Haloid-Xerox only three months before), and she wanted to buy as many shares as she could with her savings.

Even in that far and distant past, however, Xerox was not unknown to the investment community. It was so known, in fact, that the shares were selling at about 130 with a price/earnings ratio almost as high—92.

I was concerned, of course, about the suitability of such a speculative investment for a small investor. It was too dangerous. I suggested that she put her money in shares of the Parker Pen Co. of Janesville, Wis. Parker was a relatively ordinary company, making a relatively ordinar product but doing a pretty good job o it, and selling at only about 16 time earnings. She promised to call m when she made her decision and the disappeared into the summer, neve to be heard from again.

As the years went by, Xerox, o course, achieved virtual worldwide of fice-copier hegemony and develope into one of America's great growt companies. (Xerox Corp. seems to b losing ground in its fight to protec the copyright on its name. *Webster New Collegiate Dictionary* now carrie "xerox" as a transitive verb. Defini tion: "to copy on a Xerox machine.") hoped that my visitor had gone else where and bought her three shares. shouldn't have tried to stop her, I tol myself. Sometimes a client survive more elegantly without the benefit o a broker's wisdom.

Even so, Parker, the little pen maker, was, I had to admit, doing nice job in its own quiet way. Nothin to be embarrassed about there. Bu when the great growth stocks failed t recover completely from their histori 1973-74 tumble, I began to wonder maybe the tortoise hadn't done al most as well as the innovative har after all. So I took a look.

And, of course, you know the an swer. The hare, with a 5-for-1 split i 1963 and a 200% stock dividend i 1969, with an outstanding record o earnings gains and dividend increase had risen about 350% from the end o August 1961 to middle January 197 A splendid record, certainly.

The tortoise, on the other hand, ha a series of small stock dividends and 4-for-3 split in the 1960s. But in th 1970s—that most difficult of inves ment decades—it has had two 3-for- splits, a 5% stock dividend, a 2-for- in 1975, a 5-for-4 in 1977 and anothe 5% stock dividend in 1978. The to toise had produced a gain of bette than 1,050% since late 1961.

The holder who bought his Parke

Peter G. Banzhaf is a vice president of Robert W. Baird & Co., Milwaukee, Wis.

18 years ago and simply went to
p with it, was just plain lucky, of
rse. He had no right to expect such
ormance from a company in such
prosaic industry. Why, Parker
n't even considered the best pro-
er of writing instruments—at least
by the investment community.
Cross, until very recently, car-
a significantly higher multiple.
e wags said it was because invest-
nt analysts used Cross pens.)
ranted this was not a carefully
trolled experiment. It's just one
mple, a recollection. The whole
cept of entry point, among a host
ther things, has to be considered.
ox had already flowered. The end-
might have been entirely different
we started the contest five years
ier. Even so, there's a point to be
le. Ordinary businesses producing
nary products often involve less
and, despite that, can be unusual-
ewarding. Probably not as reward-
as Parker has been, but good
ugh to bring tears of joy to the
of most investors.

addition to my recollections, I
e two stocks to recommend. Each
ts own way is ordinary. But in
r ways, it is extraordinary. Each
ndeniably good at what it does and
sports an unusually high return
equity—a key, but often over-
ed, measurement. Neither stock
ew, however.

N Corp. (31), an insurance holding
pany, now looks as if it will earn
ut $6.15 in the year recently con-
ed, up from $4.33. Despite the
cipated downturn in the property/
alty cycle, NN should show strong
s again next year. Return on equi-
25%, and the dividend policy has
ys been generous.

y second selection is (surprise!)
er Pen (28). At Parker, the future
s as good as the past. For the fiscal
ending this month, earnings will
bout $3.35, a considerable im-
ement over the $2.60 produced a
ago. Initial estimates for the year
d are in the $3.75 range.

rker combined its dominance in
writing instrument field with as-
dancy in the temporary help busi-
when it acquired Manpower sev-
years ago. Together, they are
ing out a 28% return on equity for
firm, which is most impressive.

n ordinary company, yes, but
ker's pen has been mightier than
t investment alternatives for the
20 years and I'm inclined to be-
e the trend is intact. ■

Financial Strategy

Crime is a business calculation, and the cost-benefit ratio seems to make terrorism unprofitable in the U.S.

IT SHOULDN'T HAPPEN HERE

By John Train

Some of my clients who are corporate executives, alarmed by huge scare ads taken out by recently formed security companies and newspaper accounts of bombings and kidnappings overseas, have started asking me gloomy questions about the desirability of specialized protective measures: sending their chauffeurs to take courses in evasive driving, varying their routes to work, buying kidnapping insurance and the like. And indeed the guard business is booming. (Supply creates demand: All those ex-CIA and FBI employees need work.)

In a number of countries in Europe and South America such measures make good sense. But the best opinion seems to hold that these conditions should not occur in the U.S. in the near future. "There's no reason to believe that political kidnapping is on the rise in this country," said an FBI official. The State Department and other authorities concur.

The logic comes from an analysis of who carries out these kidnappings and other attacks. There are really three different types of perpetrators: first, international terrorist groups, such as the PLO and the Red Army faction; second, indigenous dissidents, such as the Baader-Meinhof gang, the Red Brigades and the old Tupamaros; and third, domestic criminals and nuts (sometimes masquerading as one of the first two types). The motivations and methods of operation of the three categories are different.

First, let's consider the international terrorists, the ones who attacked th athletes in the Munich Olympics, fo instance. The PLO is the best exam ple. They are not a serious threat here They concentrate on Israel-related tar gets, not Americans as such, and i any event are far more likely to attac Americans abroad than in the U.S. I countries with massive socio-politica problems and inefficient police forces they can operate freely, with saf houses, escape mechanisms, etc., so i makes much more sense for a PL gang to attack Americans in Italy or i the Middle East than, for example, i Omaha. They would stick out like sor thumbs, and the local police forces ar not frightened by them or infiltrate by them. In New York, the Jewis Defense League would get them.

Furthermore, there is no pro-com munist or pro-Libyan faction here t take heart from some spectacular ac such as a major kidnapping or assass nation. Quite the contrary: Amer cans abhor kidnapping. The popula tion unites against the perpetrator In Mao's lingo, there is no sea for th urban guerrilla "fish" to swim in.

As to domestic dissidents, unplea ant memories of the Weathermen an Black Panthers are now more vivi among older persons than present re ality justifies. The Weathermen, no gray-haired, are turning into banker and lawyers. Several of the "Chicag Seven" hold government position Such lunatic groups as the so-calle Symbionese Liberation Army hav been broken up and discredited. (Th FBI's capability to intervene again them has also been weakened.)

In contrast, there are countries i Europe where the younger peopl have a legitimate complaint again the older ones, and where it seem that only violence produces attentio

The students in Italy are unde standably enraged by crowding in un versities and neglect on the part academic authorities. On graduatio they find few job opportunities.

John Train is president of Train Smith Investment Counsel, New York, and the author of Dance of the Money Bees.

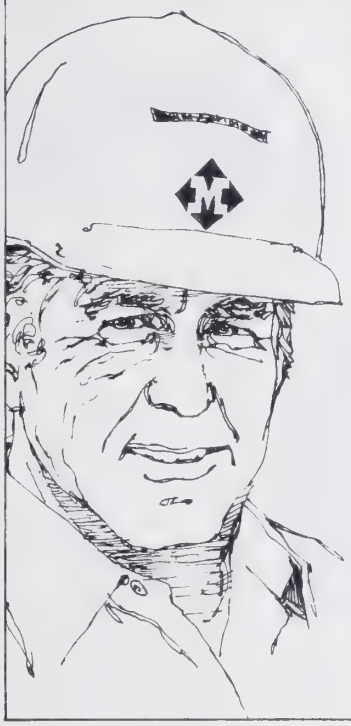
MAPCO IS PEOPLE, BUT...



Not just ordinary people. Hard workers, each of whom will produce about $180,000 in MAPCO sales and revenues this year. They work at extracting MAPCO's reserves of oil, coal and natural gas to help fuel our nation's energy requirements. They man the nation's longest LP-gas pipeline and the world's first common carrier anhydrous ammonia pipeline. They serve customers in retail Thermogas stores in 11 states with appliances, LPG and liquid fertilizer. They produce and market sonic instrumentation devices, filtration equipment and other water pollution control products. Unusual people?

For a closer look at what they've done for MAPCO's diversification and profitable growth, write for our current report.

Junior Growth Stocks

"MOST PEOPLE I KNOW FEEL THE COUNTRY IS GOING TO HELL IN A BROWN PAPER BAG. I DON'T AGREE," an investor friend said.

We agree with our friend. We think you, too, will agree when you study the 220 companies covered regularly in **JUNIOR GROWTH STOCKS.** With a few exceptions, these 220 vigorously growing companies have expanded their earnings in good times and bad. What's more, these 220 companies have compounded their earnings per share at a 42% annual growth rate for the latest four years reported.

JUNIOR GROWTH STOCKS is published twice monthly. Subscription is a modest $54 per year, or $25 for three months. If you are seriously interested in building your investment capital, our service may be a useful investment tool. Subscription is tax deductible.

On The Couch

When a sector collapses, the market may o may not fall apart. The key is the numbe of players and the money involved.

PSYCHING THE MARKET

By Srully Blotnick

PSYCHOLOGICALLY speaking, the market is a buy. That is the conclusion that emerges from my 15-year-plus study of investor expectations. Over those years, investors went through periods when they expected great things from stocks and through periods when they had given up hope. My studies show that when investor expectations are *high,* the market is near a top. When they are *low,* the market is ripe for a rally.

The index I use is the annual rate of return investors feel they will make on their investment. I have access to a group of 1,100 investors who regularly reply to my questions. If an investor expects to double his money, I assign him an index number of 100 (up 100%). If his or her expectations are only for a 10% annual gain, I assign a value of 10. Averaging all the scores produces an overall index.

Younger investors—those aged 21 to 35—typically give higher numbers ("I expect to double or even triple my money this year"). Adult investors—those between the ages of 36 and 55—usually seek more moderate rates of return ("I'd be very pleased with 15% to 20% a year"). Older investors—those over 56—give yet lower figures ("11% would be fine," and "I don't want to lose any money"). Therefore, I have the same number of investors in each of the three categories.

My index of investor expectations allows me to forecast the market's ups and downs with a reasonably high degree of accuracy.

For instance, at various turning points in the market, during 19 1970 and 1974, the index fell to ve low levels: 4.2 in the fall of 1966, 2 in the spring of 1970 and –3.7 in D cember 1974, the only negative re ing recorded since we began tracki a large group of investors in 1963.

As the market proceeded to recov after 1974 and after other bear m kets of the 15-year period, inves confidence gradually started to retu The index of investor expectatio began to increase, rising slowly a steadily at first, picking up quite a of speed once investors felt secure. fact, once the index passes the 25 zone, it appears capable of head into the clouds.

At some point, though, expec tions manage to exceed reality, t major extent, on the up side. A gree of optimism, a general level greed, is reached that simply can be sustained. The index subsequen declines with a speed that far ceeds anything it displayed dur its rise.

The index was dealt a surprisin severe blow by the September to N vember 1978 rapid market decline early September it stood at 14.1— sample on average expected to e 14% in the stock market. By late D cember, it had fallen to 8.9 and rec ered only part of the loss in Janua even though the market advanced balance.

Clearly a majority of my invest simply don't believe in the recent ly. Repeated public warnings of pending economic hardship seem have frightened them. They h been hurt before, they are quick state, and don't want to be cau unprepared in the next crash.

Maybe they are right. Perhaps world is well on its way to finan chaos. My studies, however, sug that the current pessimism is the sult of temporary factors. Although *average* investor may presently h modest expectations where the n

Dr. Srully Blotnick is a practicing psychologist and author of the new book, Winning: The Psychology of Successful Investing.

as a whole is concerned, there is a ticular group of investors, playing a ticular group of stocks, whose ex-ctations are anything but modest. e issues I'm referring to are the nbling stocks, and the players ac-ely involved with them have expec-ions (for this group) of 53.3. That is wn considerably from the 91.4 the up had attained in early September 78, but it is still very high.

You probably won't be surprised to cover that in the past when a sec- of the market attained values in 80-to-100 range, the sector soon reafter collapsed. And that, I be-ve, is what the September/No-nber decline represented: a sectoral lapse of gambling stocks that gged the whole market down.

When a sector collapses, the market a whole may or may not fall apart. e key variables are the number of yers and the amount of money in-ved. For instance, a similar situa-n prevailed in the early part of 73. The drug stocks were the gam-ng stocks that time, but the num- of individual investors excitedly ying the group was far larger, and titutional investors were also ch more involved than they are w with the gambling stocks. With index for the drug group in January 73 at an unsustainable level of 89.8, appointment was clearly close at nd. When the drug stock bubble fi-ly burst, right in the midst of a ession and the oil crisis, investors re deprived of their last ray of hope d their expectations vanished. The ole market collapsed, taking the way below 600 and setting the ge for a gorgeous rally.

have been studying the stock mar- for too many years to be rash in predictions. But this much I do ow: that in the past 15 years, enever investor expectations have n modest, the market did well in subsequent 8 to 18 months. Right w those expectations are modest eed. In spite of the very nice rally t started in November, investor ex-tations have been trending gently wnward again, and stood at 11.2 at beginning of February. (Investors, other words, don't think the mar- can give them much more in the y of a return than bonds can.) If I right, the stock market is going to ve them wrong. We could have a lden, sharp reaction first, perhaps part of a sectoral collapse, but it will brief. Psychologically speaking, cks are very cheap today. ■

American Brands, Inc.

294th COMMON DIVIDEND

A regular dividend of One Dollar ($1.00) per share has been declared upon the Common Stock of AMERICAN BRANDS, INC., payable in cash on March 1, 1979, to stockholders of record at the close of business February 8, 1979.
Checks will be mailed.

When inflation is uncontrolled, people want to turn their dollars into real assets. Any real asset will do, including cotton.

THOSE VOLATILE COTTON SPREADS

By Stanley W. Angrist

SPECULATORS and analysts alike were surprised a little when the U.S. Department of Agriculture announced in January that the 1978 cotton harvest produced 10.8 million bales, up 1% from the previous report but 25% below the crop produced a year ago. This production estimate, coupled with larger anticipated exports, points to an ending carryover of 4.1 million bales, which is 1.2 million bales below the stocks available at the beginning of the season.

This year's crop reached its highest price in late October when the March contract exceeded 73 cents per pound. (It seems to me that cotton was being driven, at least in part, by the mad flight from the dollar. When inflation appears to be uncontrolled, large numbers of people want to turn their dollars into real assets—not just gold or silver. Any real asset will do, including cotton.) Since that time, cotton has broken about 8 cents per pound.

Two factors appear to me to be acting now to keep a lid on cotton prices. The first is the size of the crop to be planted. The Planting Intentions Report released by the Department of Agriculture on Jan. 22 indicated that farmers will plant 13.9 million acres, which was about midway in the range of traders' expectations. It should be noted that several minor cotton-producing states were not included in the survey. Furthermore, farmers occasionally will understate their planting intentions in order to induce higher prices.

The second bearish factor is the effect that a recession might have on demand for cotton by mills. The most recent consumption report indicated December 1978 daily mill consumption at about 21,900 running bales *vs.* 22,500 during December 1977. Based on average consumption during the first five months of this cotton-marketing year, Bache Halsey Stuart projects a total consumption by season's end of about 6.3 million bales. An economic slowdown could, no doubt, reduce this number.

The demand for cotton cloth, like the threads of which it is woven, forms an integral part of the economy. As housing starts drop, demand for sheets, towels and other household fabrics can be expected to decline. Likewise, as unemployment rises, there is usually a cut in the demand for work clothes.

As the chart below indicates, the U.S., Western Europe and Japan have been busy exporting their demand for raw cotton to the developing and socialist countries. That is, we are farming out a portion of our textile industry to low wage-rate areas of the world. Asia is far and away our best market for cotton, with South Korea now our best customer. The People's Republic of China took about 426,000 bales of U.S. cotton last year. It is widely believed that Peking will buy more this year if it can get favored nation status and receive Commodit Credit Corp. credit.

However, sales to Asian market depend in part on how much fabri and apparel they will be able to sell t us. The domestic textile industry less than enthusiastic about lettin current amounts expand very muc All things considered, the USDA ha revised upward its projections f 1978-79 raw cotton exports from 5. million to 6 million bales. Traders fi ure this number could rise to 6.5 m lion bales. The booming export bus ness is attributed to American price which are 4 to 5 cents per pound b low foreign competitors' prices. U. exports during the first four months this marketing year total 1.55 millio bales *vs.* 863,000 in the same perio last year. If a small bull market deve ops, it will be fueled by exports.

Cotton has always been a popul commodity to spread—that is, go lon one contract month and short anoth contract month. But if you elect follow my recommendation, yo should be aware that cotton sprea are exceedingly volatile. The cotto spread that intrigues me is long Jul short December cotton, with July sel ing at no more than 500 points cents per pound) over December. Th rationale for this spread is simple: exports remain strong, the dema for cotton will remain high. Adequa plantings next season should stop a substantial advance of new seas crop months such as December.

If the spread narrowed 100 poin ($500) from entry I would bail o without hesitation. I believe that th spread could easily widen again to 7 points premium July as it did in ear January. Assuming an entry level 500 points premium July, that gives risk/reward ratio of 2.3 to 1. Marg on a cotton spread is about $500 whi the round-turn commission is $90.

Cotton consumption

As textile production has shifted to lower-cost producers one place and another, demand for raw cotton has shifted, too.

Forbes: Capitalist Tool

When the satisfaction or the security of another person becomes as significant to one as one's own satisfaction or security, then a state of love exists.
HARRY STACK SULLIVAN

Many will hate you if you love yourself.
LATIN PROVERB

Life is so complex that a good old-fashioned hate is becoming a luxury.
WILLIAM FEATHER

I am clever; and make no scruple of declaring it; why should I?
LA ROCHEFOUCAULD

A Text . . .

And they bend their tongues like their bows for lies; but they are not valiant for the truth upon the earth.
JEREMIAH 9:3

Sent in by Domenico Barone, North Providence, R.I. What's your favorite text? The Forbes Scrapbook of Thoughts on the Business of Life is presented to senders of texts used.

The more you speak of yourself, the more likely you are to lie.
JOHANN ZIMMERMAN

Be not extravagantly high in expression of thy commendations of men thou likest; it may make the hearer's stomach rise.
THOMAS FULLER

Conceit may puff a man up, but never prop him up.
JOHN RUSKIN

People are always ready to admit a man's ability after he gets there.
BOB EDWARDS

Thoughts on the Business of Life

When your cup runneth over, turn off the tap.

*Why is it that those who pat their own backs too hard give us and not themselves a pain in the neck?**
MALCOLM FORBES

Is not dread of thirst when your well is full, the thirst that is unquenchable?
KAHLIL GIBRAN

The miser is as much in want of what he has as of what he has not.
PUBLILIUS SYRUS

We're all born brave, trusting and greedy, and most of us remain greedy.
MIGNON MCLAUGHLIN

There is a destiny that makes us brothers; none goes his way alone. All that we send into the lives of others comes back into our own.
EDWIN MARKHAM

Enough is often too much in our material world, but seldom enough in our material world.
ROBERT L. UPSHUR

Greed is the womb of disaster.
ARNOLD GLASOW

*The Sayings of Chairman Malcolm, *a collection of over 500 thoughts embodying the wit and wisdom of Malcolm Forbes. Now available at $5.95. Send check and order to Forbes Inc., 60 Fifth Avenue, New York, N.Y. 10011. Add appropriate sales tax on New York State orders.*

Selfishness can be a virtue. Selfishness is essential to survival, and without survival we cannot protect those whom we love more than ourselves.
DUKE ELLINGTON

In his private heart no man much respects himself.
MARK TWAIN

Do you wish men to speak well of you? Then never speak well of yourself.
BLAISE PASCAL

I have not hated the man, but his faults.
MARTIAL

Why should I be angry with a man for loving himself better than me?
FRANCIS BACON

Praise becomes dangerous when it makes us satisfied.
FRANK TYGER

When ability exceeds ambition, or ambition exceeds ability, the likelihood of success is limited.
ROBERT HALF

We live in this world when we love it.
RABINDRANATH TAGORE

The more you love, the more you can love—and the more intensely you love. Nor is there any limit on how many you can love. If a person had time enough, he could love all of that majority who are decent and just.
ROBERT A. HEINLEIN

Never think badly of anyone, not even if the words or conduct of the person in question give good grounds for doing so.
JOSEMARIA ESCRIVA

PONTIAC GRAND PRIX

OU'LL FIND SOMETHING NEW TO LOVE EVERY TIME YOU DRIVE IT.

rst, it may be Grand Prix's beautiful, trim styling captivates you the most. With its rich, formal roof- And new cross-hatch grille.

ne next time, it may be Grand Prix's luxurious inte- that charms you. With its soft, available bucket seats. mpressive roominess. And impressive quiet, due in to special body mounts and door and body seals. s easy to fall in love with Grand Prix's road ability, too. There's a new freer breathing standard 3.8 litre (231-CID) V-6 that will amaze you with its response. Grand Prix is equipped with GM-built engines produced by various divisions. See your dealer for details.

It all makes Pontiac's new 1979 Grand Prix one very enchanting automobile to buy or lease.

And makes owning one a love affair . . . that never seems to end.

How this beautiful body gets its gleaming beauty from an industrial products company like Colt Industries.

To transport foods and chemicals, a tanker must provide the ultimate in cleanliness and corrosion-resistance. That's why major manufacturers like the Heil Company fabricate their tankers from stainless supplied by our Crucible Stainless Steel Division. Performance in hostile environments makes Crucible stainless steels equally essential in chemical processing, petroleum refining, electric power generation, pulp and paper production, pollution control. Together with the other well-known Colt Industries products, Crucible stainless helps make us a leading supplier to major markets in the industrial sector of the U.S. economy. For our latest financial reports, write Colt Industries Inc, Dept. D, 430 Park Avenue, New York, New York 10022.

Colt Industries

Fairbanks Morse diesel engines • Fairbanks scales • Pratt & Whitney and Elox production equipment • Quincy compressors • Central Moloney transformers • Trent welded stainless steel pipe and tubing • Crucible permanent magnets and coil springs • Colt firearms □ Crucible specialty steels □ Holley carburetors • Chandler Evans fuel controls • Fairbanks Morse pumps □ Garlock industrial seals and components □ Menasco shock mitigation systems.

Automatic Transmission

Who else wants to save time, trouble and aggravation? At $99, Rapidial™ is America's lowest priced, best selling automatic dialer.

Forty-nine out of 50 executives surveyed said they found it an absolute necessity – even though they bought it for convenience or on a lark. And most prefer it to having their secretaries or switchboard operators place their calls.

Rapidial will help make your day. Every day. Imagine dialing a number by touching a button. And, then, having the number you are calling ring in a second. (Tell somebody you will call right back, and his phone will ring the instant he hangs up!)

Works with any phone — One line or 10. Even turns a rotary into a Touch Tone®.

F.C.C. approved, manufactured in the U.S. and guaranteed for one full year, Rapidial comes with a plug-in wall jack adapter (4-prong or modular combination) for phones with one or two lines. For permanently installed office phones with up to six lines we have an inexpensive, two-screw "sandwich connector". And for phones with up to 10 lines the phone company will install an RJ35X connection (for a one time charge of about $30).

Rapidial works on any line of any multiple line phone. It also works with rotary phones. In fact, you can use the Rapidial keyboard to place all your calls with Touch Tone speed and ease.

It's Hands-Free

Rotary or Touch Tone, using the Rapidial keyboard regularly has added advantages. First, it's hands free telephoning. With a built-in type speaker system. You lift the receiver only when you hear someone answer. Second, if the line processed is busy, Rapidial shuts itself off automatically, remembering the number so you can redial at the touch of a button—as often as necessary.

There is no call you can't make. What's more, every call—local, long distance, inter-office, even over seas, is easier and faster. With Rapidial you can store as few or as many as 10 digits (area code and number) in memory. If you have to dial "9" or "1" or both, need the operator, want to access a WATTS line or a PABX system, just touch the extra buttons you need plus the button with the number you're calling.

Bonus Features

About the size of a hand-held calculator, Rapidial sits neatly on your desk next to your telephone. Always ready with no off/on switch to worry about. The numbers in memory are identified on the panel on top. The lower section is the Touch Tone keyboard pad. An LED DISPLAY lets you check any number in memory. The PAUSE CONTROL sets the machine to wait for a dial tone. There's an AUTOMATIC CANCEL button if you change your mind or hit the wrong number. And the BATTERY BACKUP protects the memory in a power failure.

® Touch Tone is a mark of A. T. & T. Co.

Five Different Uses

For peak operation and maximum efficiency at the lowest cost, Rapidial stores 20 numbers in memory—eliminating wrong numbers and having to stop to look them up. Numbers entered in seconds and changed—any time—by Rapidialing the new number.

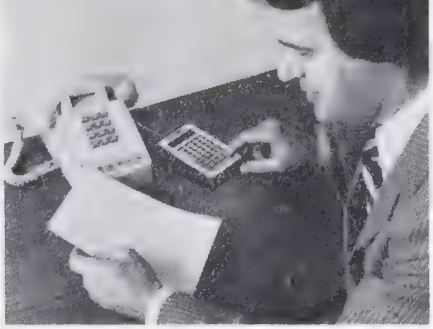
Basically it allows you to place frequently made calls yourself in an instant. In far less time, actually, than it would take you to tell your secretary to do it for you. With immediate access to emergency numbers.

Interestingly, our survey unearthed some rather surprising and highly enterprising additional uses.

For example, most executives store *both* their most frequently called numbers, family, friends, clients or customers, service organizations and suppliers...and those important but less frequently called numbers that almost always have to be looked up.

Others use Rapidial mostly for inter-office calls. Since remembering extensions is almost impossible. And it's kind of inconsiderate to have a man get on the phone with your secretary first all the time.

The Memo Caller—or daily telephone organizer—is one of the more intriguing uses we discovered. These men (or their secretaries) program each day's calls. Crossing off the ones that are completed (adding new ones as necessary). A glance assures you no one's been left out, no call back has been forgotten. And a touch of the button gets you the next man on your list.



Finally, many report leaving the bottom bank of storage cells blank. Reserving them for the flow of calls that always accompanies a special deal or negotiation.

$20 Less Than Retail...$50 Less Than The Closest Competitor's.

A repetory—or automatic dialer—from the phone company with 15 numbers costs $105 to install and $9 a month plus tax to lease—forever. For $130 you can get a 16 number dialer—with no keyboard of its own so it's only good for those numbers stored in memory. For $149.95 you can get a 20 number unit—but it's primarily for the home since a special telephone company installation for any multiple line phone is needed and it's not recommended at all for phones with more than three lines.

Rapidial will sell in stores for $119.95. But is being introduced by mail for $20 less. Why? To get as many as possible in use now by the kind of people Douglas Dunhill reaches by advertising in America's most influential publication.

So, you can have the easiest to use, most efficient and versatile unit on the market today for less than anybody else. And without risking one cent!

30 Day Trial

If your Rapidial isn't the executive necessity we described, the home convenience you hoped for, just return it in 30 days for a full refund. And we'll thank you for trying.

The price, including backup batteries and adapter for your wall jack, is just **$99.00** plus $2.50 shipping and handling. The Amphenol connection for multiple line office phones is only $19.95 extra. The adapter for the RJ35X is $19.95. (For the RJ35X connection itself, for phones with six or 10 lines, call your telephone business office.)

Deduct 10% from the price of the Rapidial on orders for ten or more. Call toll free to charge to your national credit card or send your check to Douglas Dunhill. (Illinois residents add sales tax.) You'll find it a far cry from standard transmission.

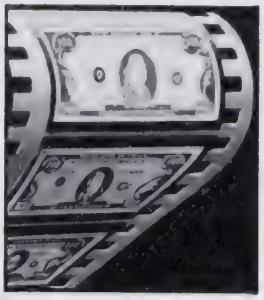
Forbes

March 19, 1979
Volume 123, Number 6

Automobiles: What do the Germans know that we don't? Two German auto companies are making it on volume that wouldn't keep Detroit alive a few weeks. **39**

Companies: Something terrible happened to Rohm & Haas on its way to $1 billion. **64**



Cover Story: Congress took away the tax-shelter bait for movies, but Hollywood is still attracting plenty of outside investment capital. **45**

Energy: Out of the energy crisis a whole new industry is being born. **86**

As I See It: A distinguished economist sees some hope—after a rough stretch—for the U.S. economy. **93**

Features

Trade: *The Awful Truth.* Is the U.S. really on the path toward closing its huge current trade deficit with Japan? Frankly, no. **33**

The Banks: *Another Blow To The Brokers?* Commercial banks would like to move in on some of Wall Street's juicy revenue bond business. Perhaps an environmental study is called for, to determine whether investment bankers are an endangered species worthy of protection. **35**

Cash Management: *No More Turtles And Hares.* Playing the float's a game. Cash management's a science. **36**

Companies: *The Happily Haphazard Conglomerate.* No Thorntonian synergy for Standex International Corp. No financial disasters, either. **38**

Health Foods: *Growing Up Among The Bean Sprouts.* And thriving. **52**

The Streetwalker: *There Ain't No Gratitude.* Everything's up to date at Ma Bell's, including the dividend. But not, alas, the stock price. **60**

Companies: *Don't Judge The Book By Its Cover.* Continental Oil's Howard Blauvelt is that rare executive willing to do things for which others will get the credit. **70**

Investment: *The Family Doctor.* It's bad manners to talk about money along Florida's Gold Coast. For the well-heeled who live there, the soft-spoken man from Bessemer Trust is a great comfort. **79**

Seminars: *Selling America Short.* Julian Snyder has nothing in common with William Jennings Bryan—except a rhetorical gift and a gloomy outlook. **99**

Companies: *Southland Buys As Others Sell.* Jon Brumley puts his money in the ground. So far, it's worked. **106**

Insurance: *Lloyd's Of New York?* For years Americans have been going overseas for reinsurance and extraordinary-risk insurance. Under New York's newly authorized insurance exchange and "free zone," U.S. investors may now get some of this big-ticket business. **110**

Retailing: *The Department Store Dentist.* Dr. M. David Isaak is a 39-year-old dentist with an entrepreneurial flair who believes his profession is an untapped multibillion-dollar market. He and some colleagues are doing somethin about tapping it. **11**

Statistical Spotlight: *Smaller Is Beautiful.* Considering how profitable spin-offs can be for stockholders, it's surpri ing more companies don't do them. Or is it? **11**

Faces Behind The Figures

Sidney Topol (Scientific-Atlanta, Inc.)
Patrick F. Noonan (The Nature Conservancy) **12**

Theodor Schmidt-Scheuber (ABD Securities Corp.)

TALK
TO TH

It's one of Dana's principles of productivity.

Bosses don't have all the answers. The worker who does the job always knows more about it than his boss. But all that he knows can't be used unless he's free to talk about it. Especially to his boss.

At Dana, bosses listen. It's part of what we call humanistic management, giving people the freedom to work well, to grow and to share the rewards.

You can see the results in our productivity. It's more than doubled in the last 7 years.

Productivity alone doesn't produce profits. But we're balancing our output of parts for the vehicular, service and industrial equipment markets we manufacture for. So, as well as increasing productivity, we've improved our earnings year after year.

And that's not bad for a bunch of people who talk back to their bosses.

Dana Corporation, Toledo.

Wrong diagnosis?

Never before has the economics profession enjoyed such oracular fame. The press and TV have discovered economics and are constantly calling upon its learned practitioners to explain inflation, to predict the business cycle and to analyze OPEC's impact. Reading it all we are reminded of the poet's "disputatious doctors." While we derive some comfort and understanding from their explanations, they seem unable and unwilling to throw much light on the big economic issues of our time. Can it be that economics has become so rarefied, mathematical and abstract that it is losing touch with the real world?

It is in the context of this question that FORBES is proud to present in this issue an interview with Sir W. Arthur Lewis, an economist little known to the public but highly respected both in the profession and within policymaking circles. This distinguished British-educa West Indian is now James Madison P fessor of Political Economy at Prince University. By his own admission, Le is is "an old-fashioned economis Meaning he draws his material not o from mathematical models or from cliches of latter-day Keynesianism also from history, society, culture. To the appropriate academic term, his multidisciplinary approach to what become an excessively narrow subject

Dr. Lewis' good news is that he does think the U.S. economy is in termi decline; we don't seem to have the Engl disease. His bad news is that we are i depression and taking the wrong steps get out of it; our doctors have mad wrong diagnosis and prescribed the wr medicine. For Dr. Lewis' diagnosis, the interview beginning on page 93.

The ripple effect

In tracing the ripple effects of Boeing's huge order backlog for commercial jets on suppliers in the aerospace business (FORBES, *Feb. 5*), John Merwin of our Los Angeles bureau ran into an enterprising fellow name of Dan Davis, who, along with two partners, has built a $5 million business creating custom aircraft interiors for sheikhs and other airborne aristocrats. Davis, in turn, was astonished by the ripple effects of a mention in FORBES. In addition to hearing from old friends he had lost touch with—so he reported to Merwin in a bemused phone call recently—Davis also was:

invited to do a one-hour radio talk show in Salt Lake City;

called by a vice president of a major car-rental company, wondering if he'd be interested in doing the seats for some airport buses;

sounded out by someone representing the Public Broadcasting Service, which apparently is doing a film on people who make custom products;

and, not least, was contacted by a representative of ever-enterprising Merrill Lynch who offered to guide his personal investment program and, while he was at it, wondered whether Davis would like his Custom Products of Sun Valley, Calif. to be placed on a list of companies that might like to be acquired. The ent prising man from Merrill Lynch was alone. Davis received calls from all s of people wanting either to buy his co pany or to sell him something.

Here in New York we were pleased the extent of the reaction Davis served, but not at all surprised. ■

At MAI our competitors are often our customers.

Originally, we set up **Sorbus Inc.** as a tionwide service organization to aintain and repair only the computer stems and peripherals marketed by AI.

But we didn't stay exclusive very long. Because many users of data-ocessing equipment, who formerly ied on the products of a single man-acturer, began to "mix and match" e products of several manufacturers. Desiring the convenience of one mpany to service all their equipment, many of these users turned to Sorbus as the logical choice.

At the same time, manufacturers of other data-processing equipment, not wishing to devote the necessary time or capital to the setting up of their own service networks, also, in many instances, called on Sorbus to become their maintenance arm.

Today, thanks to innovative and simplified techniques for the repair and maintenance of *all* types of data-processing equipment (even equipment made by companies that may compete with us), Sorbus has grown to become America's largest third party service organization.

MAI, a multinational company, also manufactures and markets Basic Four business computer systems and Word-stream™ word processing systems.

If you would like to learn more about the MAI companies, just send for our Annual Report and other literature.

It takes a smart company to make computer technology simple.

Promises, promises

President Carter's anti-inflation commander is doing a little inflating of his own. Chairman Alfred E. Kahn of the Council on Wage and Price Stability says he'll have to expand his staff from 110 to 233. He'll also need $5.2 million in extra money this year, another supplement of $8.5 million to run his shop in 1980 and still another of $8.5 million in 1981. When the wage-price guideline program was announced last October, the talk was all of austerity. "We're not interested in ma-and-pa grocery stores," one senior White House official commented. "We're going to have 135 people instead of 4,000 people in the monitoring end of this thing." So much for good intentions.

Eyes on the trigger

Is the "trigger price" machinery set up by the U.S. Treasury Department to curb the flow of imported steel working? The answer depends on whom you ask. An importers' trade group, the American Institute for Imported Steel, says it is, noting that the flow of foreign metal dropped by 32%, or 644,000 tons, from November to December of last year. The institute adds that it expects a "noticeable reduction" for February after a "slight surge" in January. Domestic steelmen, whose anguished screams prompted creation of the import-curbing system, see the other side of the ingot. (Imports set a record in 1978, 21 million tons, a 9.5% jump over 1977.) The American Iron & Steel Institute, while "somewhat encouraged" by the recent drop, is reserving judgment. "A single month does not make a trend," an AISI spokesman sniffs.

The gold bugs

Gyrating gold prices are dictating new management methods to industries that use the metal—and not just jewelry manufacturers and dentists. Eight years ago, when Richard Nixon freed gold from its 40-year-old, $35-an-ounce straitjacket, jewelers in the New York hub of the industry worked out charts to help their buyers and sellers, creating guidelines setting out price increases to match jumps in gold costs. (Users of pure 24 karat metal, for example, would raise their tags by so many percentage points whenever gold changed by, say, $5 an ounce.) Today, not only pure-gold men but even those working on "gold-filled" items (with perhaps a 2% gold content) have to watch the price-setters in London and Zurich. And others are getting into the act. Electronics manufacturers, who use gold in relays, solid-state gear and other devices, have their engineers working nights to cut the amount of gold needed or to find substitutes. (Replacements in use now, like silver and platinum, are precious metals, too, and are climbing right along with gold.)

The Fed's housekeepers

Don't tell the Federal Reserve Board a government agency can't cut costs and still increase productivity. Under a program instituted by former Fed Chairman Arthur Burns and carried on by his successor, G. William Miller, the central bank is doing both. During the past five years, the Fed has increased productivity by an average of 9.9% annually, compared with between 1% and 2% in the private sector. The Fed's 1978 operating budgets, Fed Governor Philip Coldwell told the Senate Banking Committee recently, were originally set at $722.2 million but preliminary results for the year, he was "pleased to report," were $718 million. "The Reserve banks," Coldwell added, "reduced employment by 650 people, compared with our budget estimate of a 486-person decline"—this despite a 7% increase in the system's work load. In all, Coldwell said, the Fed has reduced employment by 3,482 during the past five years and expects to cut another 489, or 2.1%, during the coming year. The story is the same throughout the system. In St. Louis, Fed President Lawrence K. Roos has cut his work force in three years by 24% (from 1,592 to 1,2 while the volume of work processed creased by 13.1%. In dollars and ce the St. Louis Fed's 1978 operating c were about $35.2 million, 1.7% ab the figure for 1977 but almost 1% be the 1976 outlay. The Reserve Bank Minneapolis scored similar results scrutinizing everything from refr ments served at bank meetings "cookie memo" became a byword) to cost of armored cars, a major item f district that sprawls from Upper Mi gan to Montana. Similarly, the New Y Fed, biggest in the system, cut its ch processing manpower from 775 in 1 to 642 last year, even though the tor of paper handled grew 3.2% to 1. billion pieces. Chairman Miller exasperate the White House every and then, just as his predecessor Bu did, but no one can quarrel with t housekeeping.

The campus crunch

Private colleges in the U.S. continu dwindle, with a net loss of 119 si 1970, according to the authorita *Chronicle of Higher Education*. During t stretch, 120 private schools closed, merged with other campuses, and went from private to public owners Offsetting that, 62 new private colle opened their gates, 19 of them in Cali nia. The majority of the schools folded were church-affiliated; onl handful of the new ones have a religi

Ex-Fed Chairman Arthur Burns, successor Miller and Mrs. Miller
An ongoing program of cost-cutting was part of the legacy.

Every day the whole world starts with *LEAD*

- and we're the largest U.S. supplier

Most of the internal combustion engines on earth and flying above it get their start from lead-acid storage batteries.

Cars, trucks, buses, ambulances, fire engines, aircraft, ships, boats, farm machinery, construction and materials handling equipment—a large part of all transportation depends on this basic power package—the lead-acid battery.

Today, an increasing variety of equipment, such as industrial lift trucks, power tools, golf carts, lawn mowers and portable pumps, is being driven with electric motors powered by lead-acid batteries. And there is a growing trend toward battery-powered on-the-road vehicles.

St. Joe is the largest and most advanced producer of lead in the U.S.

We pioneered in the development of the materials technology which made the maintenance-free battery possible. This has given us a new lead-calcium-tin alloy product line which we are supplying in increasing tonnages to the growing market.

But lead for packaged power is only one aspect of our growth with energy. We are a major producer of coal and have a sizeable and growing stake in oil and natural gas.

To learn more about us, write to Dept. 4 for our annual report.

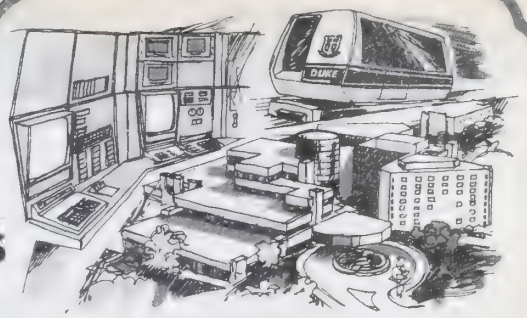
nection. And all colleges, new and , have an extra worry this year: They subject to President Carter's volun- wage and price curbs. Hikes in tu- n, fees, room and board will be com- ed to let Washington determine ether a school is holding its increases ow the prescribed 1976-77 level.

E pluribus unum

cOhio Corp. has delivered a 200- nd application to the Comptroller of Currency for permission to merge 40 ts 41 banks into one institution, a ve the holding company's chairman, ert G. Stevens, thinks is unique in his ustry. One immediate result of the solidation will be to raise BancOhio to ut 30th place among U.S. banks, with 5 billion in assets. Prestige aside, Ste- s says, it will also create "a new eco- nic entity" in Ohio. Most of his banks, explains, are small, with lending lim- under banking rules, of about 0,000 to $300,000—not much when n farmers are buying fleets of $50,000 ctors. Even the company's biggest k, Ohio National, has a limit of $12 lion to a single customer. With the rger, the new BancOhio will be able to d up to $30 million to a single borrow- nternally, the new setup will end what vens calls the "dis-economies" and "slows" of excessive paperwork and ay needed to handle big borrowings on ultibank basis. It will also help Banc- o cope more efficiently with out-of- e banks from New York, Chicago, the st Coast and other centers, competi- n that has made Ohio what Stevens s the "most thoroughly worked area in country." He will worry less, he says, ut "those young fellows running und the state with 3 or 4 million lars in their pockets to lend."

Rating the banks

eral regulators should make public financial condition of all banks, not those rated as "problems," according he General Accounting Office, Cap- Hill's official investigative agency. A GAO report to the Congress says giving all federally insured banks lic ratings would be a "more appro- te" way of showing the state of the ustry than the present method of sin- g out a few hundred banks each year ad risks. A year ago, the Federal De- t Insurance Corp. tagged 270 institu- s as "problem" banks and noted 779 rs that needed closer supervision. GAO is proposing no small task— FDIC insures deposits in more than 00 U.S. banks. ■



Robertshaw's automation system at Duke Hospital North will operate sophisticated systems for patient care.

Duke University Medical Center is building one of the world's most modern hospitals, using advanced concepts for both medical and mechanical operations. Automation control by Robertshaw will cut energy usage, speed maintenance and service, facilitate overall performance. Computer-directed systems will allow one man to supervise building comfort, life safety, security and many other functions.

Robertshaw also will control such specialized tasks as avoiding costly peak demand electricity usage and setting up smoke-free exit routes.

Tailored automation systems are among the 10,000 products made and marketed worldwide by Robertshaw.

For details, write to Robertshaw Controls Company, Dept. D90, P.O. Box 26544, Richmond, VA 23261. Or call 804/288-3081.

The Energy Control Company®

If you want sound advice about hotels in New York, ask an executive who travels.

Business people who travel acquire enormous sophistication about hotels. They love crystal chandeliers. But they're more favorably impressed by firm mattresses, hot breakfasts, attentive room service and easy checkouts.

They favor hotels that are centrally located, but out of the traffic. A prestigious reputation doesn't hurt. In fact, it reinforces an executive's stature when telling a client where to call. For nearly half a century, Essex House on Central Park has catered to the world's most sophisticated executives. We cater with such courtesy that our executive friends often bring their families. And they all tell their friends.

If you don't know someone who loves staying at Essex House, don't fret. Next time you're in New York, stay with us anyway.

We maintain volumes of fan letters. We'll show you a few. And do everything in our power to make you want to write us your own fan letter!

Follow-Through

The electric car (cont'd)

For three years, FORBES has been waiting at the curb for those waves of electric cars that would let the U.S. thumb its nose at OPEC. In 1976 a cover story *(Oct. 15)* proclaimed that the new federal plan to develop electric cars "just might turn on the electric-car switch at last." But Congress, alas, had given no funds. A year later FORBES *(Follow-Through, Oct. 15, 1977)* found that the Energy Research & Development Administration had signed contracts for two designs—one with General Electric Co., the other with Garrett Corp.—but the cars themselves were still far over the horizon.

Last June ERDA selected five private companies to operate the new electric vehicles ("EVs"). Congress had produced $30 million to spend on 165 EVs for private use and another 35 for U.S. agencies. To run the private ones, ERDA named AT&T (which will operate 20 in Culver City, Calif.), New York's Consolidated Edison (40) and Long Island Lighting Co. (60), Florida's Disney World (20) and Penn Jersey Subaru in Pennsauken, N.J., a dealer that will sell or lease 25 to individuals and small companies.

More important, today some EVs are actually on the road. LILCO got its first three last fall and has ordered its entire allotment. Con Ed got its first EVs last month and will give them to work crews in Manhattan, for inner-city driving, and in Queens, for a suburban workout. AT&T's manager of auto operatio Harold McGee, expects his first del eries—GMC vans—in April. Disr World and Penn Jersey Subaru have to decide which of the available mod they will use.

The numbers may be minuscul AT&T's 20 hand-crafted EVs will van into a fleet of 180,000 gasoline-powe vehicles—but the fact that the progr actually has wheels is important. P Brown, director of the EV project, poi out that he is getting money, the a test of support in Washington. For fis 1979, Congress raised the ante from initial $30 million to $37.5 milli which will suppport cost-sharing expe ments for 600 EVs for state and lo governments, federal agencies and p vate companies. Brown also notes w pride that even with the White Hou ukase to cut, cut, cut, his EV program $41 million for fiscal 1980.

So the EV is at least out of the gara but a long, long way from becomin chip in the game of dealing with OPE

After the fall

When the first new-issue boom of t Sixties ended with a thud, FORBES *(N 15, 1963)* surveyed the wreckage wit look at the 101 major new offerings (million or more) sold in 1961 and ea 1962. The overall picture was gri These offerings had raised $630 milli for the issuers and had given $70 milli

A Con Edison man gets ready to put one of its electric cars on the road
Don't get carried away, but the no-gasoline car is at least out of the garage.

"Our vote went for Kodak copiers. Great service had a lot to do with it."

Ruben Canny
The Marquardt Company
Van Nuys, CA

Dealing with NASA and the military makes fast, quality copying vital for this aerospace concern. As Ruben Canny, director of marketing and administration at Marquardt, sees it, getting quality work out fast is paramount.

What was your situation before going with Kodak?

We had a variety of copying equipment, which made service more of a problem. We figured we'd be better off concentrating on fewer makes of copiers.

And what made you decide to try out Kodak copiers?

Well, the name Kodak meant an awful lot to us. We needed a high-quality copier that would get the work out fast —and dependably. So we decided to give Kodak copiers a try.

And how have things gone so far?

We've had Kodak copiers for eighteen months now. We have not only been pleased with the quality of copies but also have experienced a minimum of downtime. We've had excellent response from your service people when we needed them. They're quick and they know what they're doing.

So you're satisfied with your Kodak copiers.

I don't believe we should ever start thinking we're satisfied. Just a couple of months ago, we ran a comparison test with various other available equipment to see if we could find a better copier for our purposes. No question about the results. The people involved voted for Kodak copiers as best able to meet our copier needs.

To The Marquardt Company, as with many other Kodak customers—the feeling of security that Kodak service provides is a real plus. Kodak service, plus Kodak quality, adds up to one thing: more predictable performance. And what makes it work—month after month, year after year—is the Kodak service representative. By training and design, he or she has just one responsibility: making sure that Kodak equipment works the way it's supposed to.

For more details, drop us a line. Contact: Dan Cannan, Eastman Kodak Company, Customer Equipment Services Division, Dept. K903, Rochester, New York 14650.

Follow-Through

more to brokers and underwriters, l the investors had not prospered. Two o of three stocks on the list were selling less than their original offering pr when FORBES looked at them in 1963.

How has the list fared since? Not t well. Half of FORBES' original 101 ha disappeared, some through merger, so through sale of assets, some through t bankruptcy courts. Some survivors, i true, did prove bonanzas. True believ who bought International Flavors & F grances have seen it grow more th 1,300% since 1961. Becton, Dickinso which started off selling at 6⅛, reach 62 and now stands at 34. Malone & Hy the grocery wholesaler, has increas more than 900%. Then there were t others. Unishops, launched at 3½, hi high of close to 50 in 1969 and now sells less than 2. Adjusted for splits, Howa Johnson's offering price was 4⅜; its hig in 1973, was near 35, but it now sells 10. Greenfield Real Estate Investme Trust (now GREIT) went off at 20 and now 7. FORBES' 1963 warning still stan "Don't reach too far . . . and take a go look at what you buy."

The camel in the tent

The first reaction of the chairman Sam P. Wallace Co., Inc. when a Sau Arabian entrepreneur bought into t Dallas mechanical construction firi was one of delight. "With Ghaith Pharaon as a partner, we have more wo than we can handle," Carl P. Wallace, son of the company's founder, to FORBES *(Oct. 1, 1977)*. Pharaon, who ow a $1 billion development firm in his ov country, had become Wallace's bigge stockholder after buying 1 milli shares—850,000 of them from Car brother Robert.

Fourteen months later FORBES *(Feb. 1979)* had a different story. Carl Walla was in federal court, fighting to keep h Arab partner from taking full control the 76-year-old family company. No Pharaon has written finis to the tale. T Wallace board has accepted the resign tion of Carl Wallace and named its pre dent, R.D. Buckner, to succeed him. S multaneously, the company dropped i suit against the Saudi businessman b cause, Buckner explained, "we had mi understood Dr. Pharaon's intentions seeking to acquire control." The ma who opened the door to Pharaon, Robe R. Wallace, stays as vice chairman and director, though he now owns only a fe hundred shares. Carl still has 25% of th company's stock and good reason to r call his 1977 statement that "Pharaon a good businessman; the Arabs ha been trading for 2,000 years." ■

Now—the no-rent, no up-keep branch office from the Bell System.

You can do business in a distant city for only $16* a month.

Thanks to the new miracle of Remote Call Forwarding—RCF—you can open a "branch office" in a distant city where there is potential business for your firm. Without investing in office space, equipment or additional help.

Your cost? Only $16* a month.

How RCF works.

The Bell System will assign your firm a local telephone number in the city where you want to develop new roots. And to establish your identity in this city, your company will be listed in both the white and yellow-page directories. *At no additional cost.*

Your customer in the remote city simply dials your local number, and the call is automatically forwarded *directly to you... with no waiting and without operator assistance.*

All you pay for your new "branch office" is the low monthly service charge of $16* plus the low direct dial rate for each incoming call. Since your RCF number is connected to your regular business phone, *no telephone is needed in the distant city.*

RCF—fast, convenient, inexpensive.

RCF establishes your identity in another city. Your customers and field representatives can call you locally and directly.

Though you're physically located in a distant city, to your customers you're only a local phone call away.

Now you can grow with your market.

RCF offers you the opportunity to explore new markets—practically without investment.

To begin, you may only want to start out with RCF service in a single market. Later, you may want to open additional markets. No problem. You simply add RCF as you need it.

As you'll find out from a Bell Account Executive, there are countless applications for RCF.

Find out from the Bell System how we can help your business grow.

Your business has special needs. This is why you should talk to a Bell Account Executive. We can tailor service to *your* specific needs.

*$16 is the typical monthly rate for your first RCF number, with slight rate variances in some locations. In addition, a nominal service connection charge usually applies. Each call forwarded is charged at low direct dial rates and is applied to your RCF bill. Your Bell Account Executive will advise you on the availability of RCF in the market area you choose.

There's no obligation of course. Call our toll-free number right now—while you're thinking about RCF.

xandria, Va.

R: Put a price tag on the hours and les of volunteers, especially mental alth volunteers, then see how the aritable organizations stack up.
lam S. Kurtz, M.D.
sing, N.C.

R: How can we, as businessmen, dend an end to government overregulan of our affairs when we can't even a charitable fund drive without turng it into a company store. The decision whether to make and to whom to ke a voluntary gift is supposed to be a edom protected by the First Amendnt, but you'd never know that at too ny major corporations during United y season. Won't we ever learn?
atrick Maguire
cutive Vice President,
ncerned Citizens For Charity
Francisco, Calif.

: You report fundraising expense of Red Cross in 1977 as 23%. I strongly agree with your approach to deterning our fundraising expense—excluding from public support monies those eived through local United Way campgns and ascribing all Red Cross membership and fundraising expense to the remaining components of public support. You made an error in computation that drove the figure still higher than it would otherwise have been, even if your approach were valid, which it is not. I stand by our 1977 annual report, and the audit conducted by the U.S. Army Audit Agency. This audit indicates a fundraising expense figure of 3.66%.
—George M. Elsey
President,
The American National Red Cross
Washington, D.C.

FORBES *made an error in calculation, but defends its method for calculating fundraising ratios, which is the same method that the National Information Bureau uses for agencies like United Cerebral Palsy. On that basis, Red Cross' corrected fundraising ratio is 16.7%*—ED.

SIR: We look on your charity piece as a careful, objective review of a complex and sometimes emotional area, dealing with the many views and prejudices surrounding our world of "not-for-profit."

MORE BRITISH THAN A STIFF UPPER LIP.

Nestling near Belgrave Square, London, is the Ladbroke Belgravia Hotel. Central, but blessed with a distinct air of tranquillity.

It's small, friendly and exceedingly civilised. It has 110 rooms, each equipped with colour television, direct dial telephone, and individual air conditioning.

It's the kind of hotel where your drink is served, not in an ordinary glass, but in one of cut crystal.

Where, between sips, you can nibble on a canape or two, chosen from those presented on silver trays by the waiter. Asparagus and smoked salmon, perhaps, or a piece of robust English cheddar.

Should disaster have struck earlier in the day, or at best just minor inconvenience, you'll discover a needle and thread in your room to help rectify the situation.

The bathrooms are complete with a telephone extension, so you can retain your dignity, instead of having to scutter, dripping, to the bedside table.

And if we can't provide you with a certain something, it's really nothing to worry about.

Harrods is just round the corner.

Ladbroke Belgravia

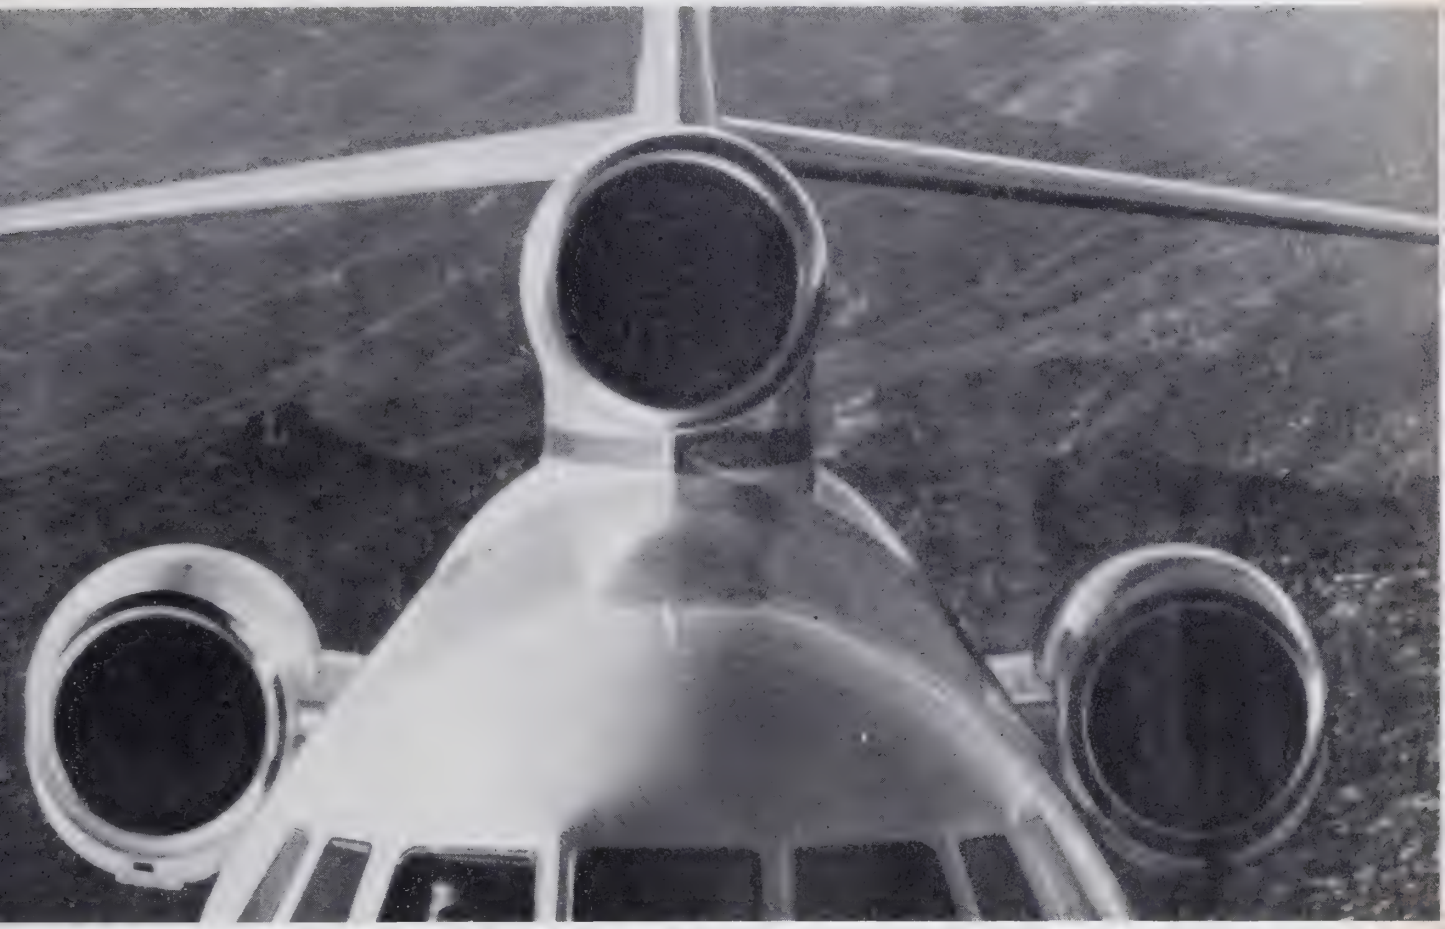
THE NEW FALCON 50



THAT THIRD ENGINE. A VERY WELCOME SOUND.

Right now, there's no law against venturing out over vast oceans or trackless jungles in a private plane with only two engines. Right now, that is. And some firms take that risk. But did you know this: The FAA does not allow commercial airliners with two engines to stray beyond one hour's flight from a suitable airport. Sane rule. Safe rule.

However, three engines make life a lot easier. And long-range flight a lot simpler. For with three engines, you can forget about this FAA rule. You needn't fly the longer, slower routes. You fly direct. Much faster. And that third engine makes it possible.

Say hello to another Falcon first: The newest long-range jet. The only long-range jet with three engines. Mighty nice to hear that third one purring softly, reassuringly overhead. It's there to help the Falcon make time. Move fast. Save fuel.

You'll want to find out more about the Falcon 50:

It's the strongest jet. Tackles turbulence without throttling down.

It seats 10-12. A practical, economical size.

It's the fastest long-range jet. From Teterboro, N.J. to Paris, France in 6½ hours. A new world's record.

It's the *longest* long-range jet. More than 3,500 miles. The most versatile, too. Masters runways as short as 3,000 feet.

And, yes, the Falcon 50 is a Falcon through and through with all the famous Falcon features. Such as full redundancy for *all* critical systems.

You'll want to weigh all of this. Carefully. And you can. For all the facts and figures on the newest long-range jet—the Falcon 50—just write on your letterhead. Address Tom Turner, Vice President-Marketing, Falcon Jet Corporation, Suite 320, Teterboro Airport, Teterboro, N.J. 07608.

The Falcon 50: Brand New. Tried and True.

THIS MAN IS A GLUTTON FOR HAPPINESS.

At a time when many people are fed up with the quality of new cars, 9 out of 10 people who buy new Volvos are happy.

Having bought five Volvos, the man you see here is ecstatic.

He's Henry Clemons, an interior designer from Massapequa, New York, and he's been buying Volvos since 1969. He's managed to keep all his old Volvos in the family, giving one to his wife, and passing three others down to his sons.

Mr. Clemons estimates he's put a quarter of a million miles on the Volvos he's bought. He's constantly recommending them to friends and business associates. "I've probably sold thirty Volvos that way. My local Volvo dealer loves me."

If you've never felt this kind of love for a car you've owned, consider a Volvo.

Better to know one-fifth the happiness Mr. Clemons has known than never to know happiness at all.

VOLVO
A car you can believe in.

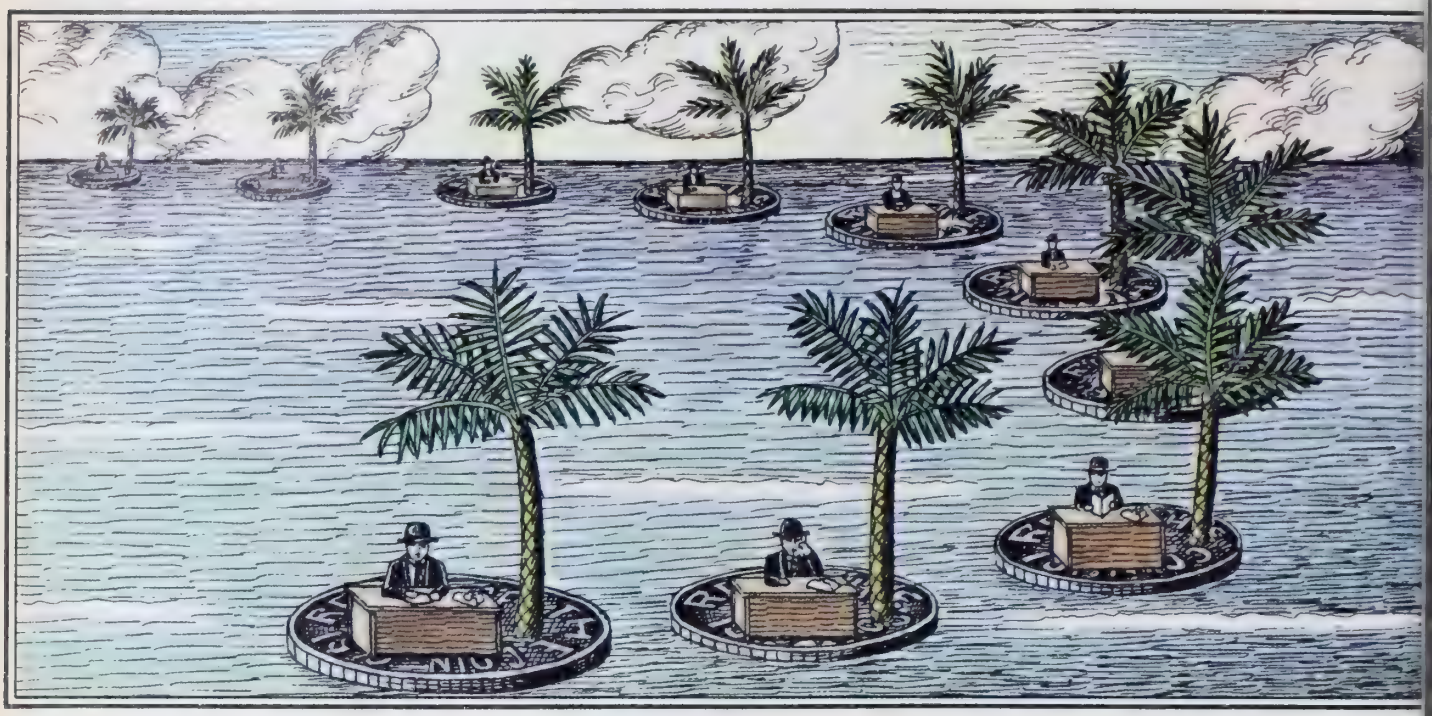
The Widening World



Simplified placement of insurance, cost benefits, and the availability of professional management services are all factors behind the continuing growth of captive insurance companies.

A brief review by INA of an insurance topic of interest to business executives.

For a growing number of American companies, the insurance subsidiary or "captive" is an idea whose time has arrived.

There are now at least 1,000 captives, both individually and group owned, operating worldwide. Over a hundred have been formed in the last two years alone. Moreover, with costs continuing to escalate for full risk protection through conventional policy coverage, captives are expanding both the volume and scope of their underwriting activities.

Most captives were originally formed to write insurance for the parent company or group only, but as they grew in experience (and in capital surplus) some began to accept risks from unrelated outside companies. This makes the captive more of a full-fledged insurance company, with possibly important tax consequences.

At one time, a captive was considered feasible only for the very large company or trade association, and the capital outlay required may still rule out a wholly-owned captive for many companies. But many captives are now being formed by groups and medium-sized firms.

The Bermuda angle

Many captives today – about 700 of them – are based in Bermuda, where capitalization requirements are less stringent and investment and financial reporting rules more relaxed. American multinational companies that do not restrict their captives to doing business with the parent company find Bermuda particularly advantageous, since income derived from overseas insurance operations is not taxable until the funds are repatriated.

With the advent of the captives, Bermuda has become a world insurance center, handling as much as two billion dollars in premiums each year. Of this, as much as $500 million is outside business not related to the captives' sponsors.

What has led companies to establish captives? Essentially, a captive represented an extension of the self-insurance trend – a

# of Captive Insurers

ction to situations in which mmercial coverages for certain ks had become either un- ilable or prohibitively costly.

Lower expense ratios

Today, however, with com- rcial insurance less restricted, motives are largely financial.

When insurance is placed di- tly with the captive, a com- ny may be able to realize a vings of the commercial urer's overall administrative ts. On the other side of the ger is the cost of executive ne, as well as any fees for the tive's management.

In addition, retention of pre- um reserves by the captive in- ad of an insurance company have important cash flow ad- ntages for the parent company. ch funds may be legally availa- for company investments t otherwise might have to be anced through bank loans. d the fact that a captive can nsure a large part of its risks mitigate against the disas- us loss – at reinsurance rates t can be lower than those for mary insurance.

Backing and fronting

Reinsurance, in fact, can play a key role for a captive, since many parent company risks are too large for a captive to handle without the backing of another insurer.

In one arrangement, the parent company pays premiums directly to the captive for primary insurance, but a large amount – say 80% – of the risk is immediately transferred to a reinsurance company. Or, in another arrangement called "fronting," the parent pays all premiums to a primary insurer, which then cedes perhaps 50% of the risk to the captive as the reinsurer. In some cases the captive handles part of both the primary and reinsurance coverages.

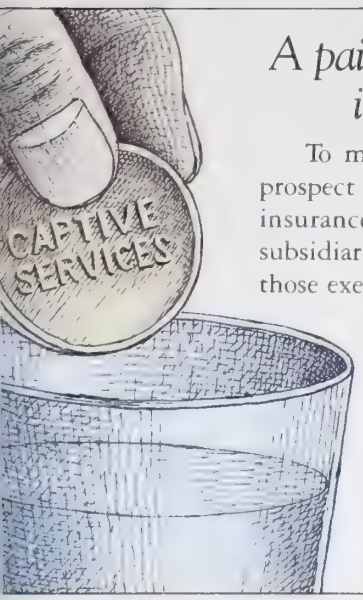
All of these arrangements involve some major tax considerations. In general, the IRS today disallows the tax deduction of premiums paid to wholly-owned captives, except to the degree that the risks are shared by other insurers, on the ground that such captives are merely a form of self-insurance. Challenges to this IRS ruling are now in the courts. If, however, the premiums go to a captive organized by a group and not dominated by any one company, they are likely to be deductible.

A decision about setting up a captive can be difficult. The first step should be a comprehensive survey of the company's risk exposures and insurance coverages, together with all other relevant factors such as cash flow and financing considerations. If the study suggests that a captive is advisable, insurance brokers and some insurance companies – including INA – can be instrumental in its creation and management.

* * *

The Insurance Company of North America was founded in 1792 in Independence Hall, Philadelphia. Today it is the largest component of INA Corporation's international network of insurance and financial service companies. In property and casualty insurance and risk management services, life and group insurance, health care management, and investment banking, INA and its affiliated companies offer a unique combination of products and services to business and industry around the world.

INA insurance products and services are available through selected independent agents and brokers. For an informative booklet on current trends in captive insurance, write INA, 1600 Arch St., Philadelphia, Pa. 19101.



A painless way to acquire insurance experience

To most company executives, the prospect of sudden immersion in the insurance business via an insurance subsidiary is not an enticing one. For those executives, some insurance companies and brokers have a solution: working with the risk manager, they can provide all the management services needed by a captive – including underwriting, financial management, loss control and claims handling.

Fact and Comment

By Malcolm S. Forbes, Editor-in-Chief

CARTER MAY BE IN A LOT OF HOT WATER

h a lot of assorted groups—often because he is saying no en he should.

ome happenings hurtful to his image were beyond his ver to alter, *i.e.*, Iran *(see editorial below)*, China and tnam, the Afghanistan assassination, Meany's continued assination of Administration policies, and so forth.

ut there is one battle that, if he stands firm, can eventually t this President of dwindling popularity into a sort of ratio-at-the-bridge role: a determined carrying out of his nt against inflation. Hanging tough for a budget aimed at ntual balancing; lessening our world trade imbalance; en-raging the Federal Reserve to slow the expansion of money; measurably curbing enormously costly federal regulation.

That he intends to stand firm he reiterated before a group of mayors and governors who were demanding more rather than less in the way of handouts. Said he: "There are going to be a lot of pressures on you to relent on the anti-inflation program, some of them benevolent and some selfish pressures. There will be great temptations for you to listen to those who say: 'Take the anti-inflation measures out on others, not us.' But I can promise you that I am not going to back down. I am not going to yield to pressures of any kind."

If that proves to be the case, Carter's reelection won't be the hopeless case so many of his aspiring successors like to think.

"SEND IN THE MARINES" IS SO EASILY

d and, with few exceptions, nearly impossible. Such action easily be catastrophically counterproductive.

ake the case of Iran, when some unthinking hotheads ed their voices demanding that our military "go in" and get erican citizens safely out. If the Iranian armed forces and elite Imperial Guard couldn't protect the legal government from revolutionary street mobs, imagine what would have happened to some airborne U.S. troops—if they could have found a field to land in.

Our Ambassador and the U.S. played it cool under extreme circumstances. That saved American lives, where bluster could easily have blown them away.

OUR FAILURE IN IRAN

sn't our low-keyed action in extracting Americans from sical danger. Our dangerous failure was in not having a clue what thin ice the Shahinshah was skating.

Ve're more to blame than the CIA.

ecause of the abuses that came to light after Watergate, ve near castrated that unit. It's held accountable to one ree or another nowadays to eight Capitol Hill committees; irectly, to even more. We have plucked out our Intelligence s and ears everywhere.

We had better put them back. Swiftly.

This nation and the Free World aren't going to survive blind, nor are we going to impose our version of the Marquis of Queensberry rules all around the globe.

Elementary intelligence tells us that it's vital for our country and its survival, for freedom's survival, that we have superior Intelligence. As well as spies and Eyes in the skies, we need human eyes around the earth and ears to the ground if we're going to hold our ground.

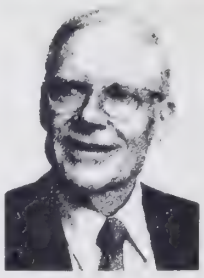
SADAT'S GOT EVEN MORE CHUTZPAH

n the Arab world, the Israelis or the rest of the world may e him credit for.

magine, with the Shah's Iranian future indisputably nil, and h the Egyptian-recognized (de facto) Khomeini government ing Morocco to return the Shah for trial (which those hright and gutsy people certainly won't do), Sadat renews his invitation to the Shah and his family to return for a further Egyptian visit. Instead of quaking, an unafraid Sadat continues to befriend a man who had supported Egypt in its extreme financial need when he was under no necessity to do so.

I think that Sadat's continued display of moral fiber gives hope for eventual, meaningful Israeli-Egyptian peace.

ONE OF THE MOST BRILLIANT TOP EXECUTIVES



to shed his light on some of us here at FORBES recently is Bill Baker, president of AT&T's Bell Laboratories. With twinkling, unmatched clarity he explained how the unfettered laboratories of an AT&T or an IBM can bring forth from their brains and bounty incredible new techniques, open up undreamed-of new horizons. Writes Baker in the *Journal of the American Academy of Arts and Sciences:*

"Because of the relief of drudgery by use of computers in the routines of mental information processing, we shall see greater and greater adventures into now distant scientific realms, such as the behavior of elaborate natural systems of the weather, of geophysics, of the oceans, of biology, of ecology, and, of course, of the sociology of man himself."

In some compelling remarks on the subject "Is Knowledge Useful?" Dr. Baker observes:

"There must be about ten times as many people of high talent working to transform new basic knowledge into use as there are seeking the new basic knowledge."

Let's explore the too-frequent adversary relati ship between government and business with co eration and intelligent coordination on the search level, this Bell Lab CEO says, "because applications of science for the benefit of m through industry and government increasingly pend on the conception and design of large int acting systems. I see boundless opportunit through the use of logic machine systems to resolve the p zles of cosmology, of life, and of the society of man. And, abo all, I see that automation, once viewed as an ominous, Fr kensteinlike threat to personalism and humaneness, turns to augment especially the bold individualism of new though

In a letter following our luncheon, Bill Baker writes: "S ence and technology, like so much of free enterprise, is a ris and sporting business."

Risky and sporting enough for corporate R&D without added burden of harassment and haranguing from politicos a bureaucrats.

THE WASHINGTON STAR

The other day we heard someone term this Time Inc. acquisition "as the equivalent for Time that land warfare in Asia was for the U.S.A."

"UNEASY LIES THE HEAD . . ."

Kings, dictators, rulers by whatever name come and go just like the rest of us—except that an infinitely higher percentage of these Heads roll precipitously and sooner than those of their subjects.

This thought came to mind recently when reading one of those fascinating *International Herald Tribune* features under the heading "Seventy-Five Years Ago." This item was dated June 12, 1903:

"The king and queen of Serbia were assassinated yesterday in their Belgrade palace when a group of political conspirators, composed mainly of army officers, marched to the palace and demanded the abdication of King Alexander. When the king replied to the summons with a pistol shot, a massacre took place, with the conspirators murdering the king, queen and members of the royal entourage. The town was occupied by the conspirators and Prince Peter Karageorgevitch proclaimed the new king of Serbia."

You may recall that it was in Serbia's Saraje 11 years later, that World War I was triggered wh the Archduke Ferdinand of the Austro-Hungari Empire and his wife were done in by conspira Princip's bullets.

Many are betting that the Serbian pot will b again when Yugoslavia's Tito *(left),* of Croati extraction, dies. And that day can't be all that away. Tito's domination has been so total that no deputy w real support from all the perpetually feuding races that make Yugoslavia is visible in the wings.

Moscow's grimly determined to haul these independe minded Slavs back behind the Iron Curtain. The Russians w be ready to put fires out there if they start, and to start some they don't.

This towering Russian threat may be just the thing, thou to keep the Serbs, the Croatians and the Slovenes determin ly united when Tito passes.

HAVING TRAVELED MUCH FOR MANY YEARS

to many foreign lands, I never cease to be grateful that English has become almost everybody's second language. Of necessity, most other educated people have to learn at least one other language in addition to their own. It used to be French, the language of diplomacy until World War I.

It is another real weakness of our educational system that so few young Americans are required nowadays to learn a second language. You'd think Spanish would be high on the list, because it is the language of our neighbors in South and Cent America, except Brazil and a few others. In the Caribbean, many parts of the Pacific, in North Africa as well as the Iberi Peninsula itself, Spanish is the language. For the career-mi ed, of course, Russian has specific potential uses, and now, t Chinese.

If you're raising young, it would be wise to encourage th to master another tongue in addition to the lingo of their pee

EARLY INTO PORNOGRAPHY

t the age of 13, I was invited not to return to boarding ool. I had been mimeographing a school paper in competi- with the established one. Among other things it featured a column, and one clipped from somewhere told of "the ntminded professor who kissed the streetcar goodbye, ped on his wife and went to town."

nonestly thought it was an absentminded professor joke. he headmaster honestly thought I was lying through teeth.

He then announced that the paper would be censored beforehand. Incensed, I ground out a manifesto of discontinuance to protest this threat to "a free press." He would have kicked me out but since it was during the Depression and rebating the tuition balance was unaffordable, this pornographer was allowed to finish. Dad defended me and the freedom of the press, and the following fall off I went to another school.

Imagine today being bounced from school for such a mild—and unintentional yet—transgression!

I'M SURE BETTY CROCKER HAS A BETTER

e of humor than her Daddy Warbucks, General Mills. obody can prescribe recipes for all American housewives not have to chuckle at some of the results and responses. it when a New York publishing company brought out a ne bartender's guide and called it *The Betty Cooker Crock Book for Drunks,* General Mills finally won an injunction to halt its sale on the basis that their trademarked Betty would suffer in public esteem.

It wasn't Ms. Crocker who suffered, it was General Mills—from a lack of judgment to go with its lack of a sense of humor.

THINKERS PERISH

is harder than having one.

THE REMARKABLE DIPLOMACY OF PETER GRACE

By M.S. Forbes Jr.

The record of businessmen taking a hand in diplomacy has not been salutary. Back in 1915 Henry Ford earned widespread ridicule when he chartered a ship, filled it with pacifists and sailed off to Europe to try to end World War I. Several years ago then-billionaire H. Ross Perot naïvely jetted around the world trying to persuade governments to persuade North Vietnam to release American prisoners, or at least to let Perot give them his planeful of Christmas goodies.

W.R. Grace & Co. boss Peter Grace, however, is not your run-of-the-mill businessman and, as recent events have shown, he is not your usual businessman-turned-world-savior. It was he who recently made it possible for Chile to avoid a crushing economic boycott by acting as a catalyst, a mediator between the unions and the Chilean government.

He had no axes to grind, no vested interests to protect. W.R. Grace had not been involved in Chile for more than a decade and has no plans to go back. But the Grace name was well respected in that country. Grace was also a close, longtime friend of George Meany. They served together (Grace as chairman, Meany as president) with the American Institute for Free Labor Development, which trained Latin American labor leaders.

It was a gutsy decision. If his involvement in a tricky situation backfired, Peter Grace would receive more scorn than appreciation.

Last November Grace read in the newspapers that George Meany and his fellow AFL-CIO chieftains had decided to go along with European unions and support a boycott against handling Chilean goods, a harsh blow to a trade-dependent nation. Reason: Chile's suppression of trade unions.

Chile's President Pinochet and W.R. Grace's Peter Grace

Grace was aware that in recent months the Chilean regime's human rights record had very much improved. He also knew a labor boycott would devastate Chile's impressive economic recovery. Given the changed political climate in Chile, Grace thought it unwise for American unions to undermine this anticommunist regime. Moreover, the boycott wouldn't help our balance of trade; we had a more than $200 million trade surplus with Chile.

Jetting promptly to Chile, Grace had a meeting with strongman Augusto Pinochet, when he learned how difficult his task would be: Pinochet told him that Chile was in no mood to make concessions "under duress."

Meany's reply to Grace's original overture was also discouraging, but Grace persisted. Finally Meany agreed that he and his colleagues would meet with Chile's powerful, articulate finance minister, Sergio de Castro.

In Chile, Pinochet fired his hard-nosed labor minister and replaced him with a moderate who felt, like Grace, that significant concessions would have to be made to Chile's unions.

More than once the situation threatened to unravel. The payoff came on Jan. 15 at the meeting of The Inter-American Regional Organization of Workers, the official organization that was to give the formal go-ahead for the boycott. The labor leaders, however, agreed to suspend the boycott, and Chile agreed to meet four critical union demands (such as the right to strike and the right to assemble) by June 30.

After countless hours and three trips to Chile, Grace's Kissingerlike activity succeeded. Not without reason, the Chileans have termed him "The Golden Bridge."

Dig that Dazzle

We dropped in the other day for a conversation with H.R.H. Tutankhamun, last pharaoh of the 18th dynasty, just as his much-mitted extravaganza "Treasures" was about to open. We asked the slight, dark monarch if his spectacle had a theme.

"Yes. It's about gold, man. Heavy metal. I mean, I'm quite comfortable with gold. I was into gold very early. I was into gold when there was none of this $230-an-ounce nonsense. Gold doesn't *unnerve* me. But I'm not most people. Most people, they see a little gold—I mean, a little gold that's not in a *wristwatch* or something—they begin *shedding* skin, man."

Freedom from Advice

"Besides the hopes of being safe from Persecution in this Retreat," William Byrd wrote in 1728, "the New Proprietors [of New Jersey] inveigled many over by this tempting account of the Country: that it was a Place free from those three great Scourges of Mankind, Priests, Lawyers and Physicians. Nor did they tell a word of a Lye, for the People were as yet too poor to maintain these Learned Gentlemen."

American Heritage

Boarding School Grace

For the Preppie, gracefulness is less a gift than a standard, something to measure up to, a performance. The delight of the thing comes from the knowledge that it's all contrived, that the effect of effortlessness requires a good deal of strain, that negligence requires attention, that indifference requires concentration, that simplicity and naturalness require affectation. The most delicious "in" joke of Preppiedom is the anxiety everyone feels about being carefree.

Harper's

National Service at 17

Civilian public service could be offered as a useful alternative to military service—for both sexes. A bill to offer just such an alternative has been drafted for introduction in Congress. Its author, Representative Paul N. McCloskey Jr. (R–Calif.), contends that the all-volunteer system of military service is not working. He proposes that at age 17 "everyone, man and woman," be required to register. Then each individual would have the option of volunteering for military service or giving one year's "civilian service in a community or environmental capacity." Those who did neither would be put in a lottery pool for military draft. Benefits for military duty would be higher than for civilian service. Such a plan, McCloskey suggests, "might remove the need" for a renewal of military conscription.

Itel's 64,000-ton YSI Trader in the Panama Canal, en route to Japan.

Capital equipment. It keeps us and our customers growing strong.

In most any business, capital equipment is essential to growth. And because we specialize in innovative ways to use capital equipment dollars more effectively, our expertise has contributed to Itel's development as much as it's helped our customers.

Since we concentrate on two of the largest categories of capital equipment—transportation and computer equipment—we've built an extensive asset base in order to meet our customers' ever-expanding and changing needs. The result has been outstanding financial performance.

For the past seven consecutive years, we've reported record-breaking earnings and revenues. In 1978 alone, Itel's net income reached a new high of more than $47 million. And our revenues increased 71% to a record $688 million.

We've designed and built our past success in capital equipment leasing with innovative marketing ideas. In the future, the same type of creative thinking will continue to serve our customers as well as it's served us.

Itel. We're a company that will grow on you.

For further information, write or call for our annual report. Itel Corporation, One Embarcadero Center, San Francisco, California 94111, (415) 955-0000.

THE TASTE BEYOND PREMIUM SCOTCH

the U.S. really on the path toward closing its ge trade deficit with Japan? Frankly, no.

U.S.-Japanese trade: the awful truth

By Norman Pearlstine

IRST, THE GOOD NEWS. After months of big trade surpluses and U.S. complaints about them, Ja- s trade advantage is narrowing ply. During the first ten months of 3 Japan's surplus with the U.S. was aging $1 billion a month. But in No- ber it fell to $656 million and, ac- ing to Japanese trade sources in To- it dropped to nearly half that level in January. Present trends are likely to continue at least through the spring, allowing Japanese Prime Minister Masayoshi Ohira to be the one who smiles when he receives President Carter next June at the Tokyo summit conference.

The bad news is that it won't last. Although the U.S. trade deficit with Japan this year could be only half 1978's, there are good reasons for thinking the deficit will be back above $10 billion again by the early 1980s.

a and Carter in 1975

n the prime minister of Japan greets the President of the U.S. in Tokyo next e, they will not be meeting for the first time. They met once before, in May 5. Ohira, then, was Japan's finance minister. Carter was the darkest of c horse candidates for the Democratic nomination.

It isn't a matter, as many Americans suspect, of Japan's deliberately closing its markets to U.S goods and securities or running huge surpluses at American expense. Instead, the surpluses are a reflection of basic differences in the two economies—differences that make it inevitable that Japan sell a large share of its manufactured goods to the U.S. That doesn't mean there aren't ways to narrow the trade gap somewhat. There are. But there is serious doubt whether either nation is willing to pay the heavy political price involved in doing much more than nibbling at the problem.

Japan's trade performance last year alone goes a long way to explain why the favorable trend of recent months will be short-lived. Although its surplus was huge—a record $11.6 billion, 43% above the 1977 level—Japan actually did a lot to keep it from being even higher. It agreed to restrict exports of color televisions and steel. It spent about $3 billion worldwide, most of it with the U.S., on "emergency" imports it normally wouldn't have bought, including airplanes for use at home and for lease abroad, medical equipment and other items. It reduced tariffs, expanded import quotas and increased import financing while expanding domestic demand through increased public works spending.

Most important, the government encouraged the push toward a stronger yen. Between April and September the yen rose in value by 17%. As of Jan. 1, it was trading at 194 to the dollar, making it 33% stronger than it had been two years earlier. As a result, exports to the U.S., which had been growing in dollar terms by 39% during the first quarter of 1978, grew only 22% in the third quarter and by only 16% in November. Meanwhile, imports, which grew by less than 1% in the first quarter, were booming along at 22% above year-earlier levels in the third quarter and were up 42% in November.

So far, so good. But, unfortunately, none of these factors, not even the stronger yen, has led to permanent, significant, structural changes in U.S.-Japan trade. "Emergency" imports will be reduced by a third, to $2 billion this year. Nor will the Japanese economy expand enough to suck in a big volume of additional imports. Japan's cautious Ministry of Finance has proposed a 12.6% expan-

sion of the general account budget for the fiscal year beginning Apr. 1—in fact, the smallest annual expansion in 14 years. A separate budget for loans and investments is being held to a moderate 13.1% increase.

As for the yen, much of the benefit to trade is being lost by different inflation rates in the U.S. and Japan. While consumer prices rose by 9% in the U.S. last year, they grew only 3.5% in Japan. Japanese wholesale prices *fell* 2.5%. While American workers are resisting Carter's efforts to keep wage increases at 7%, Japanese workers are likely to settle for hikes of about 5% this spring.

In addition, by their willingness to redesign products and accept thinner profit margins, many Japanese exporters seem likely to keep on selling abroad even if the yen returns to 180 or 190 from its Mar. 1 level of about 200. Japanese automakers had to raise their U.S. prices several times last year. Nonetheless, by stressing performance, quality and special features, they were able to make 1978 the second best year for American sales. As color television sets began to fall, Japanese electronics manufacturers stepped up sales of videotape recorders—which are manufactured only in Japan—and of redesigned, higher cost stereo sets. And so on down the line. "A lot of Japanese manufacturers can make money with the yen at 185," says Eric W. Hayden, vice president and senior economist for Bank of America's Asia division in Tokyo. "They are comfortable with the yen at 200, and at 205 they can go great guns." Despite present sluggish growth, Nomura Securities Co., Japan's largest brokerage house, predicts that Japan's worldwide trade surplus will equal $25.3 billion for the year ending Mar. 31, 1980—slightly *above* Japan's total trade surplus of $24.7 billion for calendar 1978. Some slowdown.

Japan had been getting about 17% of its oil from Iran. Should shipments be curtailed until they inhibit domestic growth, the result could be even higher exports. Whereas U.S. companies tend to reduce production during times of sluggish domestic growth, Japanese firms, with their high fixed labor and interest costs, can't. Instead, they push exports.

That, however, is only one structural difference between the two countries which makes a long-term reduction in the Japanese trade surplus unlikely. Another: Japan, unlike the U.S., must import most of its raw material, fuel and food. At the same time, Japan tends to run deficits in its invisibles account (which covers services such as tourism, transportation, banking). "To pay for these goods and services, Japan must run a surplus in its manufactured goods trade account," says James C. Abegglen, president of The Boston Consulting Group's Tokyo unit. "These goods will go in large part to the U.S., which remains overwhelmingly the largest single market for manufactured goods exports."

What about U.S. exports to Japan? Although they are increasing, they aren't rising as much as some U.S. officials had hoped. Raw material imports, such as coal and oil, tend to be relatively inelastic—that is, lower price doesn't automatically lead to higher volume. As for U.S. manufactured goods, Japan has been taking more lately, but they still represent only about 26% of total imports. It will not be easy to do much more than that. In recent years U.S. manufacturers have been losing market share to European and developing nations throughout the Pacific, which are keen to boost exports to Japan.

Are the Japanese deliberately dragging their heels on taking more U.S. goods? Some Americans allege a bewildering array of nontariff barriers and discriminatory practices restricting U.S. exports. Although some of the complaints are valid, in some instances Americans are complaining about minor matters. Endless hours were spent last year, for example, negotiating an increase in Japanese imports of beef and citrus fruits. But the U.S. is itself a net *importer* of beef with little to spare for Japan. Citrus exports are being increased, with clear potential for still more sales, but not enough to make a meaningful difference in the trade gap.

Until a few years ago, Japan could be criticized for its protectionist ways. But most of its controls were swept away in the mid-1970s. Today Japan has less protectionist legislation on its books than do most other industrialized nations.

In other instances, Americans are still complaining about restrictive practices that have already been limited or sharply curbed. Until a few years ago, Japan could be rightly criticized for its protectionist ways. But most of its controls were swept away during the mid-1970s. Today Japan has less protectionist legislation on its books than do most other industrialized nations.

Nevertheless, as 1979 began, a subcommittee on trade of the House Ways and Means Committee issued a lengthy report on U.S.-Japan trade which painted Japan as a bastion of protectionism. The study group, headed by Rep. James R. Jones, an Oklahoma Democrat, was critical of Japanese procurement policies, especially those of Japan's 115 quasi-public corporations, such as Nippon Telegraph and Telephone Public Corp. and the Japan Tobacco and Salt Public Corp. The subcommittee also alleged the existence of formal and informal import tels, discrimination against for banks, a variety of regulations aga foreign autos, medical testing equipn and other manufactured goods, as we restrictions on agricultural imports cluding leather goods.

The report has infuriated many J nese officials, who think it unfair. M of the alleged abuses are well docum ed, but they argue that the report fai recognize that the U.S.—indeed, virt ly every industrialized nation—coul similarly condemned for protectic trade practices. More compellingly, haps, they argue that even if Japan bo to all of the subcommittee's demanc wouldn't make more than a $2 bil dent in the U.S.-Japan trade gap.

The political nature of the repo indicated by the fact that while it cusses citrus fruit and beef, it ba mentions the big role that additi wheat sales could play in reducing trade gap. The Japanese governn presently buys all wheat from abroad then sells it domestically at twice imported price, presumably to pro Japan's politically powerful rice farm But unfettered wheat sales could hundreds of millions of dollars to An ca's exports. (Why didn't the report n tion this? Consider the impact on mestic wheat prices that a drive to port more to Japan would have.)

Nor does the report deal in suffic detail with other, politically vol ways to cut the trade gap significantl doesn't mention, for example, that could shave the trade deficit by al $3.8 billion a year by selling oil f Alaska's north slope to Japan. The Congress, of course, has prohibited s sales. Undiscussed, too, is the possib of squeezing much more money f Japan for the troops and nuclear umbr the U.S. provides. Such a move m help reduce Japan's foreign reser which at the end of 1978 totaled $ billion and which are proving to b much a recycling problem as are OPI petrodollars. Such recycling might result were the yen to become more c international currency. The overwhe ing majority of Japan's trade is now nominated in dollars, and neither Jap Ministry of Finance nor the Bank o pan is likely to wish it otherwise with considerable outside pressure.

If, as seems likely, the Japan-U.S. t gap again rises to last year's levels, w might the U.S. do? The choices are It could, as one immediate response, a surcharge on Japanese imports. such a surcharge would be inflatio and would do much to destroy relati with Japan, our most important all Asia. Another choice, though, coul to do nothing. Given the complexit the trade issue, that might not be su bad idea. ■

e commercial banks want to move in on all Street's juicy revenue bond business. ow much more can Wall Street lose?

Another blow to the brokers?

By Lawrence Minard

SHRINKING Wall Street is trying to hold on to over $500 million in underwriting and trading revs it derives from tax-exempt rev- bonds, some $30 billion of which floated last year. The giant com- cial banks, banned from the revenue underwriting business since the days of the New Deal, are trying to some of this business away from Street.

s a battle over dollars, pure and sim- but both sides are wrapping them- es in the American flag as their re- tive flacks, lawyers and professors ey for position.

evenue bonds are issued by agencies tate and local governments and are red by the agencies' revenues rather by general tax revenues—a public er plant, for example, or an airport or ital. Revenue bonds were small ge until the Fifties' urban sprawl, Sixties' Great Society and the Seven- Proposition 13. Revenue bond financing mushroomed: to $2.2 billion in 1960, to $6 billion in 1970, to $28.3 billion last year, when revenue bonds accounted for nearly two-thirds of all municipal debt issues. No one expects this growth to slow.

Suddenly the banks were missing out—*big*. If only they could change a few words in the venerable 1933 Glass-Steagall Act, which forbade them to deal in state and local government bonds other than general obligations backed by full faith and credit of the government.

The banks won a partial victory in 1968, when Congress permitted them to underwrite revenue bonds for housing, universities and dormitories. But that came to barely 20% of last year's $28.3 billion. The bankers wanted the whole thing. In 1967 they had come close to getting it: The Senate passed a William Proxmire-sponsored bill that knocked down the Glass-Steagall proscription. That left the House of Representatives trouble: For at least two years now, Representative Fernand St. Germain's (D–R.I.) House Subcommittee on Financial Institutions Supervision, Regulation & Insurance has steadfastly refused to hold hearings on a bill, known this year as H.R.1539, that would finally open the revenue bond turf to the commercial bankers.

The bankers, of course, heatedly assert that St. Germain unfairly favors Wall Street. "He's just stalling us," says one.

Counters Richard Still, staff director of the Financial Institutions subcommittee and St. Germain's chief aide: "The bankers are pressuring us to hold hearings only on their narrow interests. We are saying: Let's take the bankers' claim for 'public benefits' and examine that claim a little more closely."

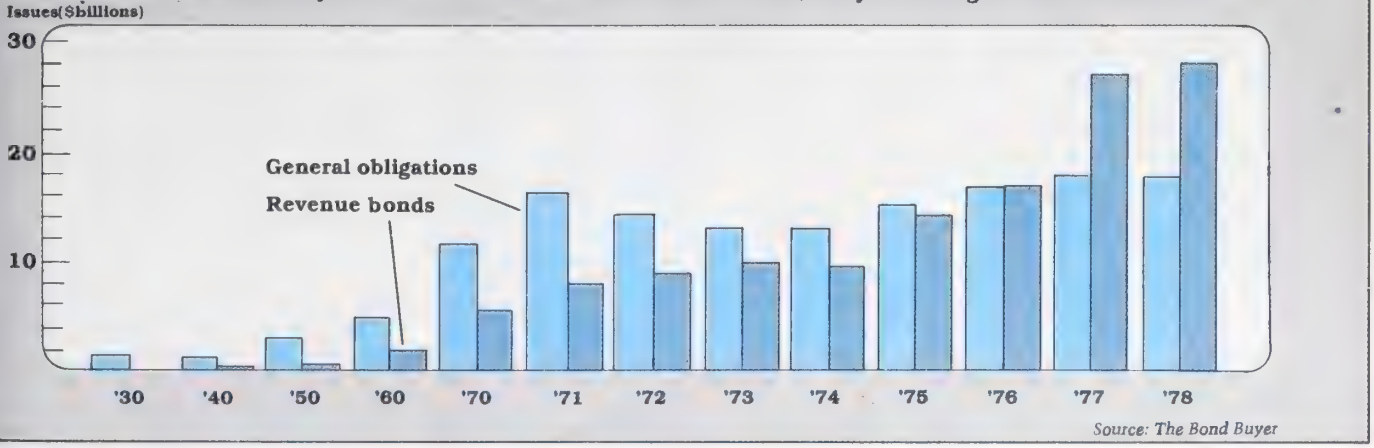
The bankers are claiming that if H.R. 1539 passes, increased competition for revenue bond underwriting will result in lower prices to the bonds' issuers.

Who says so? Experts, of course. No special pleading is respectable these days unless it has a professional expert supporting it. The universities are full of "experts" eager for fees to stretch their rather meager salaries.

In 1978 a commercial bankers' lobby group, the Dealer Bank Association (1978 budget, well under $500,000), paid Columbia University's eminent economist, Professor Phillip Cagan, about $30,000 for a 20-page regression analysis study. Building largely upon an eight-year-old paper by the University of Chicago's late economist, Rueben Kessel, Cagan reached this startling conclusion: If commercial banks had been allowed to underwrite ineligible (*i.e.*, closed to the banks) revenue bonds, the bonds' issuers would have saved, in 1977 alone, $412 million over the life of the bonds issued that year. Virtually all the savings, said Cagan, $405 million of the $412 million, would result from commercial bankers' ability to sell the bonds at interest rates an average 19 basis points (or 0.19%) lower than the investment bankers had

Now, a nice piece of change

Why are the commercial bankers shoving so hard to get into municipal revenue bond underwriting? Because issues of these bonds have grown phenomenally both in absolute terms—last year over $28 billion were issued, *vs.* $600 million in 1950—and in terms of their importance relative to general obligation notes. Revenue bonds comprised just 16% of the municipal market in 1950; last year the figure was over 60%.



Source: The Bond Buyer

been able to sell them for.

Federal Reserve staffers picked up Cagan's $412 million number; Fed Chairman G. William Miller wrote a letter of warm support to Representative Henry S. Reuss (D–Wis.), chairman of the Banking, Finance & Urban Affairs Committee. Comptroller of the Currency John G. Heimann and half a dozen leading revenue bond issuers wrote similar letters to St. Germain. There's suspicion in the air: Why was St. Germain stalling the hearings? Didn't he want to save taxpayers $412 million—and increase American competition to boot?

But wait! Wall Street has a lobby group, too: the Securities Industry Association (1978 budget, $2.5 million). Last year, at a cost of $25,000, the SIA financed an 83-page "critique" of Cagan's study by University of Chicago economics Associate Professor Michael Mussa; it is just now being distributed. Mussa's conclusion: ". . . the analysis of Kessel and especially Cagan is seriously flawed . . . and . . . *there is no evidence that an extension of bank eligibility* [in revenue bond underwriting] *would result in any significant reduction in borrowing costs* [Mussa's emphasis]. . . . The bulk of [Cagan's] estimated interest savings of bond issuers must come at the expense of investors, through a reduction in the yields they earn. . . . Ordinarily one would think that increased competition would benefit investors, not harm them. Yet Cagan's savings estimate requires that we believe just the reverse, that increased competition in selling bonds would result in investors paying higher prices and accepting lower yields."

Behind most rhetoric there is usually some economic reality. In this case, it is that the commercial bankers are afraid of the future. Listen to Citibank's Senior Vice President James W. Stevens, head of its money market division:

"This world is changing in one big hurry. The foreign banks have gone from a very low share of the New York market to having about 30% of the commercial and industrial loan demand. Sears, Roebuck [which is planning to merchandise Sears' paper to the public] appears to be getting competitive with banks' savings instruments. We're in a very competitive environment, and there are serious people at major banks who believe that the banks had better work damn hard to maintain a franchise so that they don't become like the railroads—obsolete."

While losing elsewhere, banks would like to move in on revenue bonds. Forgetting the rhetoric and the obfuscating experts, why not allow the added competition? Trouble is, most of the gains would come out of the hide of an industry that is already in trouble. Can Wall Street survive if it loses most of the revenue bond business? Probably, but on a reduced scale—large parts of the industry have already either been killed or rendered marginal by the unfixing of commissions. Chairman Harold M. Williams, whose Securities & Exchange Commission unfixed those commissions, isn't convinced. Talking like a fiscal ecologist, he says:

"I do not know what the answer is, but I do know that if I had to vote today I'd say, 'No, the banks should *not* be allowed to get in.' We must have a better understanding of what the impact of letting the banks in would be on the securities industry—and not only the aggregate industry but the individual components of it, too." Williams says he is particularly concerned for the future of the smaller regional firms.

Agrees Samuel L. Hayes III, professor of investment banking at the Harvard Business School: "I'd be *very* cautious about passing something like [H.R.1539] at the present time."

If hearings on H.R.1539 do begin, perhaps the Congress, the SEC, the Fed Reserve, the comptroller of the curre and the U.S. Treasury can bring to b the line of inquiry used in environmer issues. In these, it is usually up to wh er wants to alter the environment prove that no long-range harm will re from his actions. A fiscal ecologist wo say: Commercial bankers want in revenue bonds? Fine—as long as t don't further weaken Wall Street.

This is not to say that the bankers wrong and the brokers are right. E has a case. But in economics as in environment, you can't change one p of the chain without an impact on other parts. Do our public policy mak adequately understand this? ■

With double-digit interest rates, nobody ca afford idle cash balances. With modern com puter techniques, nobody need have them.

Managing cash: no more turtles and rabbits

By Cynthia Saltzman

At 5 A.M., while Raymond C. McCron is sleeping as peacefully as is possible for the senior vice president and treasurer of a $25 billion (assets) insurance company, a messenger picks up a bag of checks at Manhattan's Church Street post office and delivers it to an uptown office of McCron's Equitable Life Assurance Society.

By 6 a.m., seven Equitable clerks are rapidly sorting some 2,000 checks, averaging $6,000 apiece. At Equitable's Chicago office, simultaneously, a similar process is just getting under way.

By 7:30, while McCron has his first cup of coffee, the New York checks are on their way to Equitable's New York banks to be turned into cash that morning. By 8, as he stuffs his paper in his briefcase to catch the train, the last Chicago checks are being sorted and the process begins in San Francisco.

By 9:30 a.m., when McCron walks into his offices at Equitable's Sixth Avenue Manhattan skyscraper, millions dollars have been pushed into the co pany's coffers—up to a day and a h earlier, McCron figures, than they wo have had he waited for the banks to the sorting and encoding of checks.

Under the usual system, banks h so-called lock boxes for corporations cated at post offices where compar receive payments. But why count on banks? McCron claims that push money forward with his own lock bo has meant some $5 million annually earned interest.

At 10:30 a.m., McCron sets up a c ference call with regional treasurers– New York, Atlanta, Chicago and Francisco—to decide where to place surplus. On a typical "big" day last cember that surplus was $68 milli which at current near-10% short-te interest rates means Equitable m $25,500 over that extra day and a half

This is contemporary cash mana ment, and McCron is one of its m skillful practitioners. Going beyond

ıond C. McCron, treasurer of Equitable Life
quering cliches with computers and empty checking accounts.

e of float (FORBES, *Mar. 5*), cash man-ıent is a science. Made possible by puters and modern communica-, it is bringing companies like Equi-e ever closer to conquering that old ıé that an idle dollar is a wasted —especially so with interest rates ıe double digits.

ı that typical day in December, ron decided to invest $43 million of $68 million surplus in bank "repur-e agreements," and the rest in com-cial paper, all at close to 10%. At oximately 1:15 p.m. the same day, New York office received a check for million. Since the New York money ket basically closes down after noon, unds were wired out to Wells Fargo and invested in commercial paper ın Francisco—again at almost 10%. McCron: "Our short-term investing ws the sun."

ıe quiet, 58-year-old McCron is a gee from railroading. He started with Denver and Rio Grande Western oad in Denver and followed Alfred erlman to the New York Central in . After the Penn Central merger, ron spent two years consulting and me Equitable's treasurer in 1972.

cCron manages over 100 people in urers' offices around the country. lso oversees Equitable's sizable trad-perations—dealing in some $3,000 h of securities a second. Like most gs that run well, McCron's complex ems run on a simple principle: Al-s have enough money in the bank to your obligations—but never a pen-ıore. With so-called zero balance ac-ts, holding a minimum of demand sits is possible.

ıe key is electronics—instant trans-f funds, instant information. When, has promised, the Fed charges for its k-clearing services, electronics will become even more important.

The big push has come only recently. Three years ago only a few big New York banks—Chase, Morgan and Chemical—had terminals connecting corporations to a central network. Chemical's "ChemLink" now is linked to 400 U.S. banks and offers a printout of balances on as many of these as a corporation needs. Allen M. Cohen, who heads ChemLink, estimates that now over 40 other banks offer the same thing.

Before McCron, Equitable, like most big corporations, had accounts in banks all over the nation—some 350. No longer. McCron has cut the number of banks to just over 100. Merely by closing accounts, McCron figures, he has saved about $4 million annually.

RCA's Parkinson
The wired dollar abroad.

Gone are the leisurely days when you sent a check after you put the money in the bank. Equitable, like thousands of other corporations, now has a central account with a balance negotiated on some average of the checks that come in. A constellation of "zero balance" accounts surrounds the "concentration" account. Thus the balances are at a minimum, and money can be whipped in to cover checks in the nick of time.

Multinationals are working on extending cash management overseas. "It's more difficult when you're dealing with currencies and banking systems all over Europe," says RCA's Kenneth Parkinson, who heads its international cash management, but he is developing computerized systems for each division.

What McCron and Parkinson are doing is a little like what individuals can do with automatic teller machines and interest-bearing checking accounts. Modern banking allows the private depositor to move funds from one account to another as fast as Equitable can.

But McCron is working the other side of the consumer street; now, 300,000 (or 25%) of Equitable's life insurance policyholders have their monthly premium payments—averaging $40—automatically zipped out of their bank accounts and into Equitable's. "Preauthorized payments" had been around for several years, as a way to make life insurance more "convenient" for customers, and more profitable for Equitable. First McCron tried preprinted checks authorizing Equitable to withdraw the premiums from the customers' accounts. That required printing and mailing 300,000 checks—too cumbersome and costly. Putting the whole thing on computer tape and moving the funds electronically was the solution.

McCron is now working on another project which promises to reach far beyond life insurance. Some 300 Equitable policyholders with accounts at Hollywood, Fla. Federal Savings & Loan Association and the Greater New York Bank for Savings can now pay their premiums and other bills by telephone. The requests are turned into computer information and sent to the Fed's Automated Clearing House network. The funds move from the individual's account into Equitable's at Chase Manhattan overnight and without paper. McCron sees this system of standardizing and computerizing bill paying as inevitable.

Have they worked on speeding up the payments as they have the receipts? McCron claims to be studying paying annuities electronically. Of course, all this will put an end to the "in like a rabbit and out like a turtle" game—a victim of the computer age. ■

Little Standex must be doing something right. It sells at better than book value. Of how many conglomerates can that be said?

Haphazard conglomerate

By James Cook

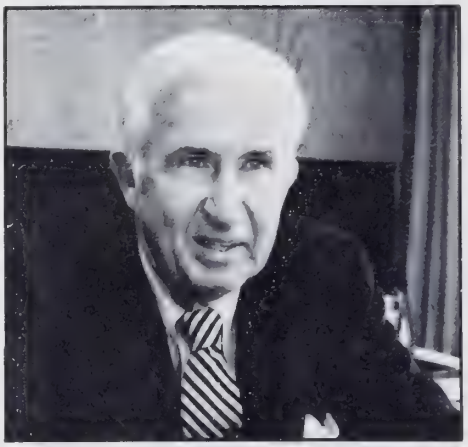
IN PUTTING TOGETHER Salem, N.H.'s Standex International Corp. (estimated fiscal 1979 revenues, $300 million), Chairman Daniel E. Hogan, 61, fell for none of the fashionable conceptualization to which conglomerators all too often are prone: no Thorntonian synergy for him, no Lingian redeployment, no Dukian corporate concepts and not even any Riklisian Chinese money. But no financial disasters either and, since fiscal 1971, Standex' earnings have nearly tripled; this year they're certain to gain 50%. If earnings were erratic in the early Seventies they are solid today.

"We had no particular grand plan to form a conglomerate," Hogan says. "We just thought we were making some good business investments. We stayed pretty much with companies that manufactured useful articles and sold them. The businesses we have have one thing in common: They make a lot of money."

Standex started out as a family company—Bolta Plastics, founded by Standex' 85-year-old honorary chairman, John Bolten Sr.—and Dan Hogan started out from Yale with a degree in business administration and wound up marrying the boss' daughter. But in 1954 General Tire made Bolten an offer he couldn't refuse—$4.4 million for his $28-million-a-year vinyl sheeting company—and Bolten and Hogan were out of business. But not for long. Inside a year, that $4 million had gone into acquiring Standard Publishing, a Cincinnati publisher of religious materials, and Roehlen Engraving, a Rochester, N.Y. engraver of embossing plates and rolls for texturization.

The two outfits were melded as Standard International—renamed Standex International six years ago—and the new company promptly proceeded to acquire all over the lot. In the beginning it picked up companies like Everedy cookware, Coca-Cola bottling franchises (in South America), Lestoil and Bon Ami cleaning products (all subsequently sold); more recently it's taken on outfits like Yield House mail-order colonial furniture, CEBCO education publications, and Woodside fireplaces. Hogan was careful to keep a capital balance in his acquisitions, acquiring cash generators like Crest Fruit (mail-order grapefruit) to finance capital-intensive outfits like Master-Bilt refrigerators.

Although Dan Hogan is essentially a pragmatist, he did gradually formulate



Standex Chairman Dan Hogan
Conglomeration had five laws.

his gut feelings and his—sometimes painful—experience into what it amuses him to call "Hogan's five laws":

1) Beware of the time of the hump—when a company inflates its earnings in anticipation of a sale.

2) The price of an acquisition varies inversely with the square of the distance from New York.

3) Companies that have made money for ten years in a row will probably make it again in the eleventh.

4) Companies with loss carryforwards have a demonstrable capacity for losing money.

5) Concentrate on small private businesses that have some sort of proprietary position in their market and which are for sale because of estate problems or lack of professional management.

"We made over 100 acquisitions in 22 years of the company's history," H gan says, "dumped maybe 25, and r have 13 operational units. Ten or two years ago we picked the product gro that we thought we could do well w and where we had a certain amount expertise, and in the last five or six ye we've gotten the company into the p tion we want."

If there is a sixth Hogan's law, it Everything is for sale if the price is rig

In 1969 for instance, Hogan spun 20% of Standex' Edward Weck hosp and surgical equipment subsidiary—give it more visibility." It became visi the price soared, and he sold the rest Squibb at 30 times earnings—201,(Squibb shares, which Hogan liquida between 96 and 99 (Squibb is now 33 The proceeds, $11.3 million after ta paid debts and financed acquisitions.

Or consider Standex' bid to take o the A.T. Cross Co., the writing inst ment company. Hogan paid $4.2 mill in 1967 for 930,000 shares—46% of company—and when Cross resisted Standex takeover, sold them off for $ million in three public offerings betw 1971 and 1973, an average of $43 per sha or $30 million aftertax profit. The p ceeds went into buying up 30% of Stand own stock in 1972—1.3 million share 10½. Cross stock subsequently plunge 22, while Standex now sells for 16.

Capital gains from these disposals k Standex' earnings soaring during the l Sixties and early Seventies when some its early acquisitions ran into trouble a its operating profits leveled off. But h ing jettisoned the losses and buttres the winners that remain, Hogan can n happily report a 55% gain in fiscal 197 first half earnings and a comparable g in prospect for all of the year. Hogan t to maintain a debt-to-capital ratio of tween 30% and 40%—"If it gets in t low 30s," he says, "we're not using most valuable asset, our credit; if it g in the low 40s, our debt is too high."

With things going well, Hogan h been acquiring again, having picked eight outfits over the last 18 mont most of them for cash. Says he, "It's a l country, and there are a lot of good bu nesses floating around, a lot of peo getting older, tired of fighting ERISA red tape or product liability proble They're prime prospects for us."

Hogan and his ex-wife, John Bolt and his son and Director Samuel S. De nis 3d still own 40% of Standex' 6 m lion shares—which may be a key to t company's success. If Hogan runs t company more like a family investme portfolio than like the typical conglom ate, who's to complain? The stock n sells at a premium over book value. how many conglomerates—or ev stocks—can you say that today? ■

hat do the Germans know that we don't? Two their companies are making it in the auto usiness on a volume that wouldn't keep a etroit giant alive for more than a few weeks.

German autos: Small is beautiful

By Paul W. Sturm

Bayerische Motoren Werke

S THAN TWENTY YEARS AGO Bayer- e Motoren Werke was a near-bank- builder of luxury sedans and tiny bble" cars, cheaper even than war Volkswagens. Today the Mu- -based company is the world's fast- growing automaker outside Japan and xtbook example of shrewd product tioning.

s concept: Put a big engine in a small create a sporty image and charge tever the traffic will bear.

the U.S., where BMW sells 10% of production, the firm's compact four- nder sedan lists for over $10,000 hout tax or extras. A most prestigious pe can easily go for over $30,000. 're completely different from Mer- es," says Eberhard von Kuenheim, W's Prussian-born chairman. "They e a car for the establishment, for uffeurs. Our customers do their own ing, and they like it. That way we have a wide line of models, but we ays aim to be at the top of each ge."

aimler-Benz might bridle at the char- rization but one thing is clear: Its cedes and BMW have distinctly dif- nt images and both are obviously at- tive to Americans. Despite the high es, last year, when auto imports bare- eld steady here, BMW unit sales ped 15%, even though the declining ar caused three price increases. ldwide results were even better, and W's consolidated revenues topped billion—up 40% from 1977 in dollar ns. "We may not be a giant on the motive scene," says von Kuenheim. t we are 1 of the top 20 German panies."

ith such high-priced products, BMW uld boast spectacular profitability. It ably does, but conservative account- makes comparisons with U.S. firms difficult. Reported earnings for 1978 should be close to $75 million, and even cautious German security analysts up that figure by about half. The result is pretax margins of nearly 10%—on a par with Daimler-Benz and nearly as good as General Motors.

This resurgence largely benefits one man. German industrialist Herbert Quandt bailed out BMW and set its present direction in 1961, just in time to thwart a takeover of the failing Bavarian firm by its better-known competitor, Daimler-Benz. That move stoked up another old German rivalry: The Quandt commercial interests have long been second only to those of Daimler's controlling Flick family. Today, Quandt, reclusive and in failing health at 68, owns some 60% of BMW's stock—worth more than $1 billion.

That friendly block of shares gives management considerable security during a period of auto industry consolidation. Von Kuenheim, a 50-year-old engineer who worked for the Quandt holding company before taking over BMW in 1970, plans to invest $1.6 billion over the next four years to keep his marketing edge. BMW doesn't aim to increase production beyond 400,000 units a year—a target it will reach in 1980. Instead, the company will grow by upgrading its product mix. Avoiding even a hint of mass marketing makes perfect sense, since German labor costs are currently 40% higher than U.S. labor costs.

Last year, for example, BMW introduced a small six-cylinder engine. Cus-

Von Kuenheim of BMW
As with U.S. automen, his biggest problems come from politicians.

tomers loved this costly option, and the less profitable four-cylinder models dropped from two-thirds to one-third of total production. At the same time, the firm inaugurated its 700 series. These $25,000 sedans are aimed squarely at the Mercedes market, and the timing is nothing if not shrewd: Daimler's luxury line has gone seven years without a model change. The big BMWs are already outselling Mercedes in some European countries, and they are chipping away at its 50% share of the U.S. market for expensive imports.

But while BMW seems to be winning its marketing battles, its chairman worries about setbacks on the political front. Automobiles, like oil, are fast becoming a political product. Complains von Kuenheim: "Every bureaucrat from Bonn to Washington thinks he can design cars just because he drives one. That costs us money." BMW production lines are clogged with an expensive range of pollution control systems, bumpers, lights and safety devices that have been added to meet varying worldwide government standards.

Another von Kuenheim problem is also political: the tendency—not unknown to the U.S.—for labor-intensive auto companies to be first in line for government assistance when the going gets tough. "Already, half of Europe's car industry is nationalized," he explains. "The system is supposed to let people with better products or better management make more money. Instead, companies with problems get bonuses from the taxpayers."

One worry, however, that von Kuenheim doesn't have is the threat of a takeover bid. His office atop BMW's 20-story cylindrical headquarters seems impregnable to attack. And even if the protective Quandt shareholdings are soon splintered among succeeding generations, BMW's chairman dismisses any possibility of losing his independence. "Sure, GM or Daimler would love to merge," he concludes, "but the German antitrust laws would never let them. No one else could afford us."

He means the company, of course, not the cars.

Porsche

ONCE THERE WERE nearly a score of small European firms that built sports cars—largely as a labor of love. Today, high wage costs and government-imposed design requirements have overwhelmed these legendary creators of auto exotica. They are either out of business (like Facel Vega and Jensen), able to produce only a handful of units annually (like Aston Martin and Maserati), or tiny divisions of huge corporations (like Ferrari, now owned by Fiat).

Then there is Porsche. Tiny by auto industry standards, it flourishes on a unit volume—35,000 cars last year—that wouldn't keep most auto companies alive for a single month. In its fiscal year ending last July, this family-owned German business had annual revenues of over $500 million. The Stuttgart-based firm's bread and butter is its racy, rear-engined 911—on the market since 1964 and still moving briskly. The price: a minimum of $25,000, but over $50,000 for a turbocharged version that can zoom from a dead stop to 60 mph in less than six seconds.

Still, Porsche isn't resting on the 911's market victories. Its third-generation owners stepped aside five years ago in favor of professional outside management, and two new models introduced since then have broadened the company's base considerably. The 928 is a luxury sedan, available with automatic transmission, that competes against Mercedes and BMW; the 924 is a $15,000 sports car intended to challenge cheaper Italian and Japanese models.

"With high-price cars like ours, we must sell all over the world to maintain production volume," says Heinz Branitzki, who runs Porsche's financial operations and came to the company from the Carl Zeiss optical firm. At the moment, however, Porsche's problem is too much foreign business. Over 5 of its production goes to the U.S.—l of that to California, where sl Porsches look just right in Beverly H driveways. The dollar's decline squee those margins, and Branitzki aims limit his exposure by boosting sale home and in Japan, which is alread major Porsche market.

Despite its unique success, tradi prevails at Porsche. Top-of-the- models are largely hand-built by wo ers in blue overalls emblazoned w the company name. And Porsche gets a 50-cent royalty for every Vo wagen "beetle" that is built; four Ferdinand Porsche designed it for in 1936. Several years ago, in fact, V Audi division and Porsche seer about to merge. But Porsche bac away, though the two still share dea in the U.S.

At the moment, thanks to the mise of many competitors, Pors easily sells all the cars its cramped tory can build. Branitzki, however, i about to cut customer waiting ti and push production beyond 40, units a year. "That would cost us million for expansion," he says, " I'd rather have a bit of money in bank. Look at our revenues—four ti what they were four years ago. Give a while to consolidate."■

Branitzki of Porsche
His company's revenues are accelerating even faster than its cars.

Doughboy emerges with Citicorp's CitiLeverage.

CitiLeverage. Five asset-based financial services hat respond directly to a company's "success signals."

Corporations everywhere are discovering their own hidden strengths. And turning them into fresh capital with CitiLeverage—the new range of asset-based financial services from Citicorp Industrial Credit, Inc.

California-based Doughboy Recreational, Inc., for example.

Doughboy®, a rapidly-growing above-ground pool manufacturer, has a strongly seasonal business—generating cash only in the summer.

With CitiLeverage, they're able to use their "success signal" of big off-season inventories, and convert it into real capital for growth.

In commercial finance, industrial sales finance, equipment finance, leasing and factoring, intelligent managements everywhere are using CitiLeverage to take advantage of their success signals.

To get an idea of how CitiLeverage can work for you, call our Chairman, Bob Martinsen, at (212) 559-6631, collect. Or write him at Citicorp Industrial Credit, Inc., 399 Park Avenue, New York, NY 10043.

He'll put you in contact with the right CIC officer, in one of our 29 offices across the country.

Citicorp's CitiLeverage:

Because nothing succeeds like success.

Citicorp Industrial Credit, Inc.

What L-P did last year, br

Mrs. Del MacLeod is not a shy woman.

As president of the Nickel and Dime Investment Club of Greater Detroit, she lets it be known what she likes and doesn't like. This year, she was pleased with the way their portfolio performed, and especially pleased with one stock in particular — Louisiana-Pacific.

As she pointed out at the January meeting, L-P's sales, earnings and funds generated from operations hit record highs in 1978. Assets and sales both topped the $1 billion mark for the first time.

All the Nickel and Dimers agreed — emphatically — with their president. And that was important to us. Because like thousands of other small investment clubs throughout the country, they set some tough standards.

Following the principles laid out by the National Association of Investment Clubs, these ladies devour the business press. Analyze companies' past performances. Plot trend lines. If a stock cannot show at least 10 percent earnings gain over five years, they won't touch it. And if earnings stay depressed, they don't hesitate to sel

This is the free enterprise system at its best. Because under their watchful eye, American business must stay concerned about things like productivity, profits, dividend growth. And the monthly investment, though it totals only $15 each, helps provid the capital necessary to fuel the U.S. economy.

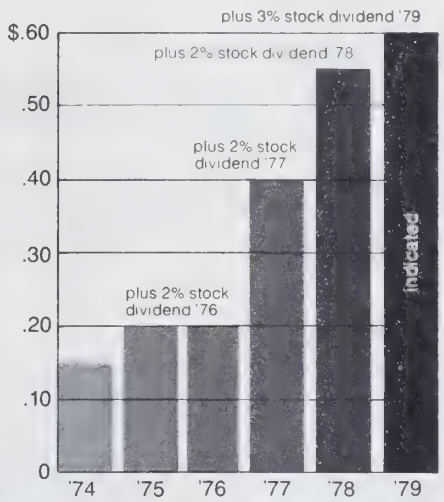
ght investors to their feet.

t Louisiana-Pacific, it's our job elp the forest work for people. l we are honored that the kel and Dime Investment Club only holds our stock, but has bled its investment over the six years.

n case you haven't been owing our progress with the he scrutiny, here's how we d in 1978:

arnings hit a record high of ,670,000, up 36 percent over 7. Sales jumped 31 percent to

Annual Dividend Growth



$1,042,100,000. Return on sales improved from 7.6 percent to 7.8 percent. Earnings per share rose from $2.15 to $2.91.

Given the excellent results of 1978, plus confidence that 1979 will be reasonably strong, the company declared a 3 percent stock dividend and a regular quarterly cash dividend of 15¢ per share. The 3 percent rate represents a 50 percent increase over the 2 percent stock dividend rate declared in each of the last three years.

For complete details on what we did in 1978, write for a free copy of our annual financial report to G. R. Griffin, Louisiana-Pacific, Dept. FB, 1300 Southwest Fifth, Portland, OR 97201. And for more information on the National Association of Investment Clubs, write Kenneth Janke, 1515 East Eleven Mile Road, Royal Oak, MI 48067.

Pan Am introduces 3 new ways to fly the world.

Some of the people we fly each day can afford the best service in the world.

And some simply want good service for the best prices in the world.

So, for our First Class passengers, flying on our long-range 747SPs, we're offering a brand-new idea in deluxe service. Unique reclining Sleeperette® seats and private table-for-two dining with excellent international cuisine.

For the business traveler, and others paying full fare, most of our 747s offer Clipper® Class, a separate section with free drinks, headsets and an empty seat beside you whenever possible. Plus a lot more attention on the ground and in the air.

For people taking advantage of our special fares, we have Full Service Economy Class. This offers the same high standard of service Pan Am Economy passengers have always enjoyed.

To bring you these three kinds of service, we have the largest fleet of 747s and 747SPs—the most advanced planes in the skies. With the kind of specialized service that can make all the difference on a long-distance flight.

See your Travel Agent or transportation department. And choose the way you want to fly the world. On Pan Am.

PAN AM®

We fly the world the way the world wants to fly.

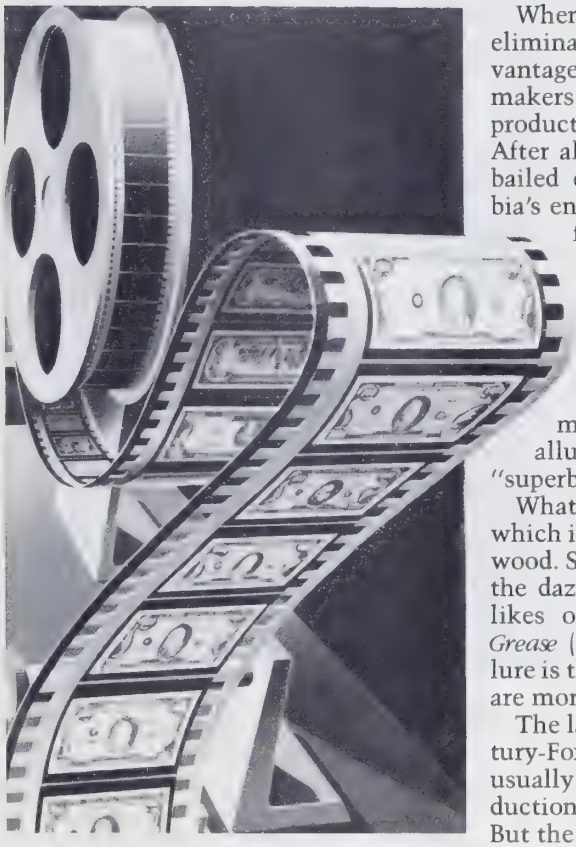
oat with $4 movie admissions, up-front TV money and superblock-sters, Hollywood is attracting plenty of outside investment money en though Congress took away some of its tax-shelter bait.

Soon to be a major motion picture

VERYBODY's in two businesses, a Hollywood sage once reflected; his own and the picture business. sider Melvin Simon from Indianap- They say he's the third-largest shop- center developer in the country. ly he's been spending a lot of his and money on his other business, vin Simon Productions in Beverly . And how's he been doing in the re business? That's hard to say. r only a couple of years commuting e Coast in his private jet, Simon is inly among the most visible of the money in town. But none of his res—*Matilda, Somebody Killed Her and,* and *When You Comin' Back, Red* —is what you would call a hit.

ny would an otherwise prudent man, made a fortune in real estate (in the of investments movie people try to e with their earnings), drop money st by the planeload all over Holly- d? Perhaps for the same reasons they been bringing out money from the ofts of Manhattan, the oilfields of s and anywhere else you can name e the dawn of Southern California ry: the glitter of the silver screen, -eyed starlets, Groucho Marx eco- ics, the pool at the Beverly Hills l, and, maybe, just maybe, the big e. Who would rather be the third- st shopping center developer in the World when he could be the sev- - or eighth-biggest "indie prod" in a? You shouldn't have to ask.

here's a lot of outside money trying me into the industry," agrees Ned n, president of MCA's Universal res, the major of major studios. "In- rs see the enormous grosses of a re that hits. If you have a hit there's nd to up. They're like kids in front of ndy store." Then there's the tax an- If you're in the topmost brackets, you lose, what do you lose? A mere ents on the pretax dollar. Up and n Sunset Boulevard and in the law es tucked away in Beverly Hills you



hear the same refrain. Hollywood is awash with money; Mormon money, real estate money, Iranian money, Arab money, Canadian and West German tax-shelter money, Texas oil and gas money, Kansas cattle money, doctor and dentist money. Rumors fly. Sam Lefrak, the New York construction king, is in town "looking into movies."

Two years ago, Randy Eaton, 38, who made his money in newspaper publishing and commercial photography, came to Los Angeles with his ex-actress wife and set up Brilliant Films. Though he has yet to release a picture, Eaton claims he's managed to raise $26.2 million to make two films, one a sci-fi blockbuster. "I've never seen so much money in my life," he says.

When the tax laws changed in 1976, eliminating the most extravagant tax advantages from movie investing, moviemakers issued dire predictions that film production would drop as much as 15%. After all, it was tax shelter money that bailed out Columbia Pictures (Columbia's entire 1975 picture production was financed by shelters). By some estimates at least 20% of all the films produced by the major studios in 1975 (and over 50% of the films made by U.S. independents) used some shelter money. What the doomsayers missed was Hollywood's enduring allure and the rise of the $100 million "superblockbuster."

What it is mostly about is Cinderella, which is after all the archetype for Hollywood. Sure, a lot of people are blinded by the dazzle of money taken in from the likes of *Star Wars* ($165 million) and *Grease* ($83 million so far). But the real lure is the feeling that, somehow, movies are more fun than, say, real estate.

The large studios, like Twentieth Century-Fox, Universal, or Warner Bros., usually bankroll most of their own productions from their cash and bank credit. But the old movie studios are today publicly held "entertainment conglomerates," with a wide range of investments in records, books, ski resorts and television production. Thus movie spending by the majors has remained fairly constant (about $600 million a year), and with the average price of a picture running around $6 million (up from around $2 million just seven years ago), the number of pictures made by the majors is small compared with the demands for product by the big theater chains, which have been expanding rapidly. This sellers' market—which has driven many small mom-and-pop theaters out of business—has opened up the door to a plethora of independent producers and production companies that finance and produce pictures outside the studio system.

Universal's President Ned Tanen
"If we believe in a movie, we finance it ourselves."

There are plenty of wondrous tales to lure these people on.

They see Billy Hayes' experiences in a Turkish prison become *Midnight Express*, a picture that was made for $2.6 million *(see p. 49)* and has brought in more than $16 million in rentals so far. They know that Sylvester Stallone managed to turn his private fantasy into the blockbuster *Rocky* and then ride on its coattails for a couple more films. And, of course, they keep on hearing the shrieks and moans of the theater owners over lack of product to cover their screens.

But the ultimate reality in Hollywood, assuming the picture actually is released, is that there is always going to be a gross. There is only sometimes a net. Even more sobering, the cash investor is often the last one in line when the gross gets hacked up. Even a film that brings in fairly respectable numbers—say $10 million in rentals from theater owners—may leave outside investors nothing.

That happens for a couple of reasons. A relatively cheap picture like *Midnight Express* can cost another $5.5 million for promotion and advertising. (Warner Bros. put out less than $3 million to film *Oh, God!*, but it spent more than twice as much on prints and ads.) Say you only want to open your dream movie modestly, maybe only in New York and Los Angeles, to feel the water. That alone consumes $300,000 or more in promotion money. And making the prints to put into a 500-theater national opening can cost $150,000. By next year a total media campaign could *average* $4.9 million, almost double the cost in 1972.

All that money comes out before outside investors see a dime. But there's more: The big cut, off the top, is the 30% or so the distributor (almost always a major studio organization) takes of every dollar that comes from the theaters.

The days of tax shelters built on ov valued nonrecourse loans are a thing the past. But the outsider can still ben from some depreciation or amortizat charges, from investment tax cre and, of course, from the fact that a 70 bracket investor risks only 30 cents every dollar he puts up, for which he b high hopes and an invitation to world premiere, if the picture is releas

Getting a film released is not all t simple, because of the high costs of p motion that the distributor has to vance. The shelves of film storage va are packed with pictures that were co pleted but not considered worth risk good money to release. And there ar

When the tax laws changed 1976, eliminating the most travagant tax advantag from movie investing, mov makers predicted that film p duction would drop as much 15%. What the doomsaye missed was Hollywood's allu and the rise of the $100 milli "superblockbuster."

fair number of shoestring productions the vaults of film labs waiting for son body to pay for the processing.

All of that aside, however, the ri film in the right hands can be a dar investment. "The negative of a mot picture today may be as valuable a piece of land," asserts Max E. You stein, the veteran studio and indep dent producer who is now a film cons tant. "The investor is protected on downside by ancillary rights and has hell of a shot on the upside." You stein's clients include investors w want to make movies, so he may inordinately sanguine about prospe But some pictures have certainly m plenty from nontheatrical sources.

Television is the most obvious an lary source of money. A network n now pay $1 million to $2 million for t showings of a so-so movie, while a like *Hooper*, starring Burt Reynolds, j went for around $12 million. Even a b office bomb, *Moment By Moment*, rep edly brought $8.5 million before opened because it starred John Travo Rates for pay cable television and syn cation to non-network stations and f eign TV can bring in another $1 mill to $1.5 million. A paperback novel ba on the movie creates a billboard effec the book racks and brings in some bu too. The *Star Wars* "novel," for examp has over 5 million copies in print. M ies are being made with albums in mi following the runaway successes of *Sat day Night Fever* and *Grease*, now the t best-selling albums ever. And a ph novel of *Grease* for lip movers points

nd $600,000 for Weill's movie and
e broke even on it.

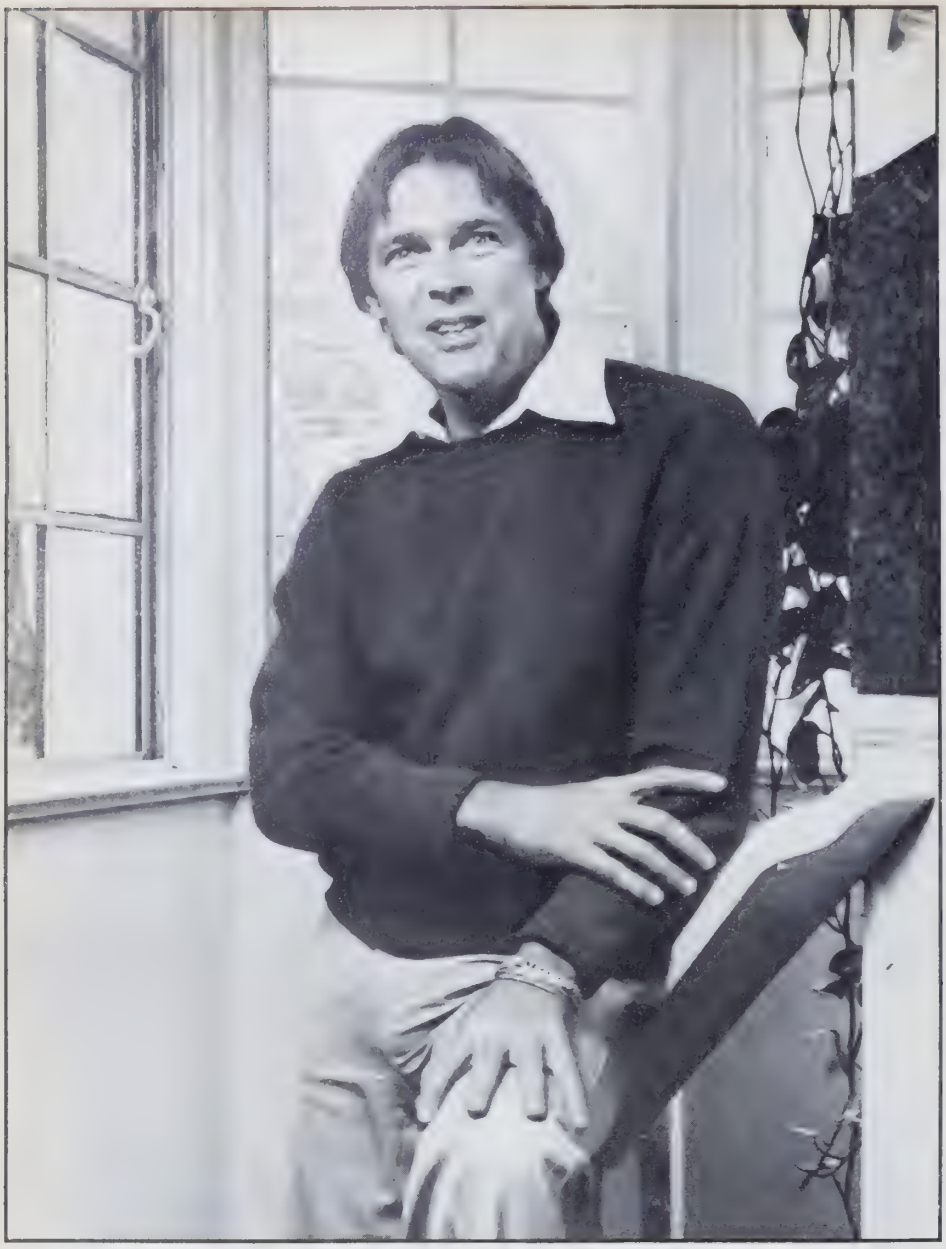
Independent consultant Max Youngstein
"For the independent producer, the television sale is like studio financing."

For the most part, the movie business, like everything else, belongs to the professionals. Take the producers who work for the studios directly or, increasingly, as independents with contracts that provide for production fees when they're working, as well as financing, distribution and profits. Probably the best known are the team of David Brown and Richard Zanuck, who made such films as *The Sting* and *Jaws* for Universal, and Frank Yablans, who made *Silver Streak* for Twentieth Century-Fox.

These producers are almost invariably veteran studio executives—producers, directors, editors, story buyers—or agents who have been selling packages in Hollywood for years. "An investor is really investing in the man who makes the decisions," says Edmond Saran, a former foreign sales chief for the Italian distributor Titanus and now president of an independent production company. "Otherwise the figures are scary."

The bulk of independent production financed outside the studios comes from the handful of large companies who make five to ten pictures a year, have bank credit, but distribute through the majors: Lorimar Productions, Lord Lew Grade's ITC, Dino De Laurentiis Productions, Roger Corman's New World Films. While it has yet to release a movie, Orion Pictures, started last year by five former top executives from United Artists, will be in this league. "Unless you're an ongoing business, it's hard to get the synergism from preselling, for example," explains Peter Guber, chairman of Casablanca Records and Filmworks. "An individual doesn't get the play."

A major new source of money coming into the business is from foreign distributors who want pictures to show in their countries. Today a lot of these foreign operators not only will buy completed



Brilliant Films' Randy Eaton
"Where are the craziest areas? In financing and distribution."

films, but they will agree to bankroll part of a film in exchange for the right to distribute it. Such agreements can be used to borrow money to finance production. Producers like Dino De Laurentiis and Joseph E. Levine have used this kind of financing for some time, but more and more producers are looking to the world market for sources of financing. *Meteor*, a $17 million film about disaster on a global scale, was financed primarily by selling rights to distributors in Southeast Asia, Scandinavia and Iran. Warner Bros. then bought the remainder of the worldwide rights and American International Pictures bought U.S. and Canadian rights. After the script for *Meteor* had been rewritten, reportedly all that remained of the original was the destruction of certain major cities, because the investor-distributors wanted people to see their own cities wiped out.

So important have foreign audiences become (foreign rentals in 1977 were $600 million, 41% of total worldwide rentals) that pictures are being put together to give them global appeal. Recent movies like *Brass Target*, *Force 10 from Navarone*, and *The Wild Geese* (action films with big-name stars of several nationalities) are made to clean up overseas even if they are only minimally successful here. *The Cassandra Crossing*, for example, was a dismal flop in the U.S., but, according to its producer, England's Lord Lew Grade, it took more than $4 million from Japan alone. *The Eagle Has Landed*, another Lew Grade production, had rentals of $7 million in the U.S. but $3 million in England alone.

Making movies for American television and selling them overseas to be shown in theaters has been bringing in money to studios like Universal for years. But it has become more important lately. Lord Lew Grade's $6 million *All Quiet on the Western Front* and Z Braun's $8 million *Freedom Road* will released this way.

In spite of all these complexities, you still want to be in pictures? For little as $10,000 almost anyone can b movie mogul through limited partn ships offered by investment counsel who raise private money for produce They fly into Minneapolis or Wich and use their business contacts to fi money. "Anyone who has a busin manager is probably in a high enou income bracket," says consultant You stein. "Hollywood has a high profile. s director, Parker got ore than $150,000 plus ½% of the net profits.

ased on the true story f Billy Hayes
lly Hayes got 125,000 plus 5% of the et profit.

A Casablanca Filmworks production
Casablanca brought the project to Columbia in return for 25% of the net.

Executive Producer Peter Guber
Guber is chairman of the board and a co-owner of Casablanca Records & Filmworks. He was formerly executive vice president of worldwide productions for Columbia Pictures. He conceived the project and put it together for Casablanca.

Produced by Alan Marshall and David Puttnam
Marshall and Puttnam were the line producers; they made the picture on straight salary.

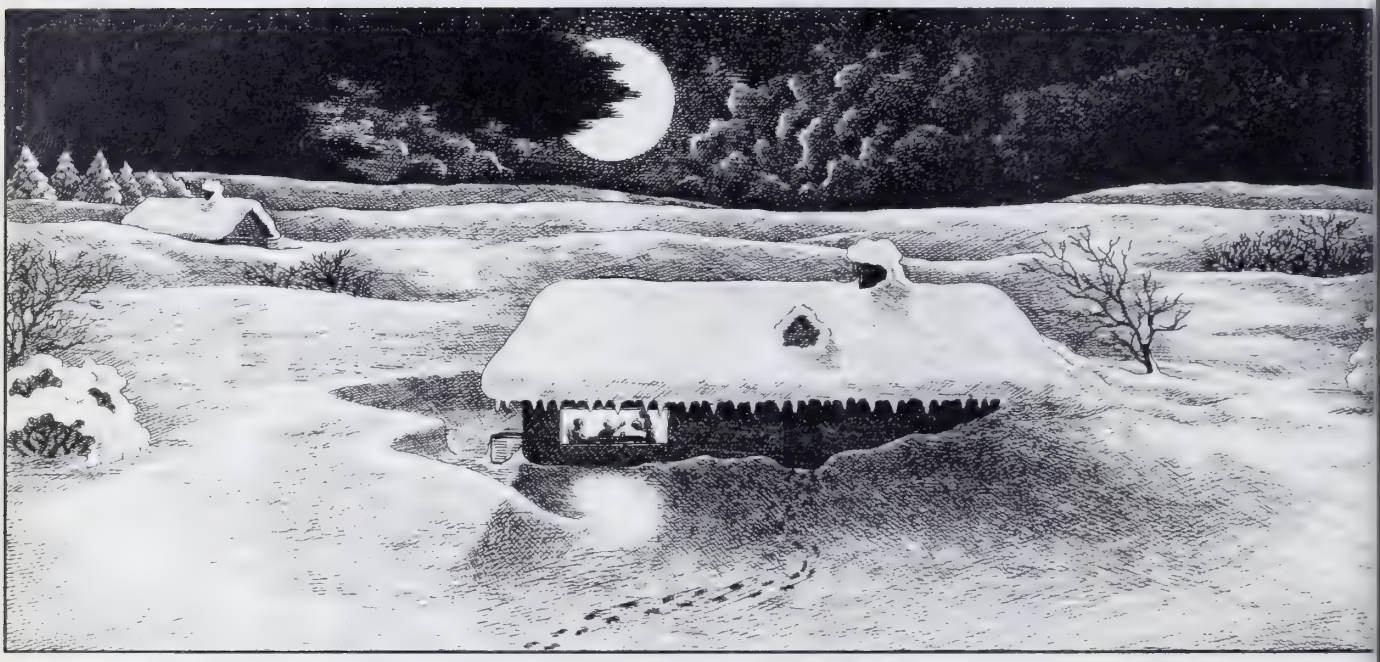
Read the Fawcett paperback
Fawcett paid the authors $90,000 for the paperback rights plus another $25,000 when the movie began production.

Music created by Giorgio Moroder
Moroder is an independent composer from Germany who has done projects for Casablanca. He got a fee for his score.

Screenplay by Oliver Stone
Stone received a fee of $75,000 for the screenplay. No profit participation.

Original soundtrack album available from Casablanca Records & Filmworks
Casablanca has the rights to the soundtrack and is the distributor through its record division. A percentage of the royalties are paid back to the movie grosses.

Hidden in the cold air
your house. Here



City Investing's Rheem Air Conditioning Division has an innovative way for homeowners to cope with high energy costs. The heat pump.

Even when the temperature outside is well below freezing, the air contains heat.

Heat that can be extracted from its icy surroundings and brought into your house.

All it takes is a heat pump.

More specifically, a *New Day* Heat Pump, manufactured by our Rheem Air Conditioning Division.

Our *New Day* Heat Pump. It warms your house in winter.

Here's the principle that makes our *New Day* Heat Pump work. It's essentially the same one that makes your refrigerator work.

All heat pumps require certain basic components. A coil and blower inside your house. And another coil, plus a compressor and fan, outside your house.

What circulates within the coils is called a "refrigerant," although it also acts as a heat-transfer medium.

This refrigerant, circulating continually within the system, permits the heat pump to warm your house, or cool it, automatically.

How?

In winter, outside air is drawn over the outside coil. Heat that's always present, even on coldest days, is absorbed and transferred through the refrigerant to the inside coil.

Now the heat pump draws air over the warm inside coil, where it is heated to a comfortable temperature and then circulated

ough warm air to heat
ow to find it.

efficiently throughout the entire house.

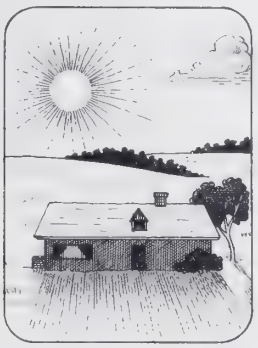
It also cools your house in summer.

You've probably noticed that your refrigerator gives off a little heat on the outside even though it's keeping things cold on the inside.

Why?

Because the circulating refrigerant is absorbing heat from inside the refrigerator and transferring it out into your kitchen.

Now think of one of our heat pumps doing the same thing, but on a larger scale.



Being reversible, the *New Day* Heat Pump works during warm weather to remove hot, humid air trapped inside your house. While circulating cool air.

Thus our heat pump helps keep you warm in the winter. And cool in the summer. Automatically. It's not only a simple idea. It's also a practical idea.

Coping with high energy costs.

Because it starts with a natural source of warmth – heat that's always present in the air – a heat pump is highly energy-efficient.

This means it delivers more heat from a given amount of electricity than a conventional electric furnace. Even in parts of the country where an auxiliary heating system is needed.

Which makes the *New Day* Heat Pump definitely an idea worth looking into.

Meeting basic needs with good ideas has helped our Rheem Division through a long and innovative history of products like the *New Day* Heat Pump.

This same kind of innovative thinking continues to guide the profitable growth of other City Investing operations.

Our companies profit from good ideas.

In housing, we plan and develop entire communities. We're a major builder of single-family houses and mobile homes.

In manufacturing, the talents that have made us world leaders in the production of steel shipping containers and water heaters also enabled us to introduce the *Sun Set* and *SunDirector* solar water heating systems.

In insurance, we're a major property and casualty underwriter, specializing in policies tailored to business needs.

Health-food "nuts" are too big a business to be a joke anymore.

Growing up among the bean sprouts

By Harold Seneker

EVERYTHING NATURAL, which opened last month on a corner in New York City's Greenwich Village, looks like the archetype of all health-food stores. It is small. It is decorated with an old harrow and other rustic touches. It has a health bar that really does sell freshly pressed carrot juice. It is run by a onetime salesman of industrial chemicals who chucked his first wife and his father-in-law's promise of the business a few years ago and learned health food from his new brother-in-law, who runs an even smaller shop nearby. But Clifford J. Bareish, proprietor, 34, lives on the fashionable Upper East Side of Manhattan rather than in the Village. Standing amid granola bars, cans of ersatz meats for vegetarians and carob bean confections, he surveys his new domain. "You used to get a lot of people in health foods who didn't know how to run a business," he remarks. "They really didn't care about making a profit. But, face it, I'm here to make money. This is a business enterprise." He pauses. "This can be an incredibly lucrative business," he breathes.

So it would seem. There are now, by industry estimates, approximately 6,000 health-food outlets around the country, and their number is growing. They have a trade association, the National Nutritional Foods Association, that lobbies Washington. They have an annual convention and trade show, which will be held in Las Vegas this year. There are no good overall figures as yet, but what figures there are indicate they will do this year, in aggregate, more than $1 billion worth of business, maybe quite a bit more. And they are riding a boom of remarkably long standing: Dollar volume has probably doubled since 1975, and by one estimate increased an astonishing 650% over the past ten years.

Some 18 million people buy in health-food stores now, and over 2 million subscribe to the current health-food bible, *Prevention* magazine. Store patrons tend to be mostly women (2-to-1), better educated than average, white-collar or professional, and somewhat more single than the general population.

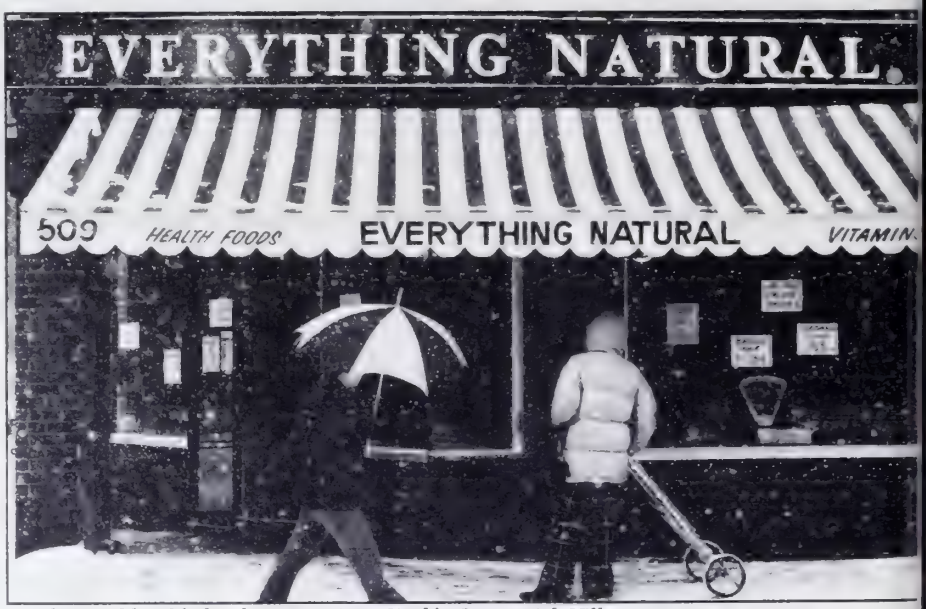
The key to selling to them is knowing the stock, the better to aid a credulous and eager public amid the mysteries of nutrition. Colds? Vitamin C, of course. Overweight? The latest fad diet, just gearing up, is a high-fructose regimen. Fatigue? B vitamins and brewer's yeast. Allergies? Vitamin C and vitamin B_6. Blues in your sex life? Ah, the pharmacopoeia! B vitamins and brewer's yeast again, vitamin E, perhaps vitamin A, ginseng, and selenium pills for the gentleman's prostate. . . .

One of this fledgling industry's principal trade magazines, *Health Foods Business*, extracts a composite of the typical health-food outlet from an annual survey it conducts, and its numbers do a lot to explain why the business now attracts people with Cliff Bareish's attitude:

The average storeowner has abo 1,600 square feet, counting 400 squa feet of storage space, and does a volu of $172,000 a year, with a heartwarmi average markup of 35% for most ite except vitamins (FORBES, *Feb. 5*), whi average a very heartwarming 51%. T average storeowner's rent is $570 month, or 4% of sales. He takes $17,5 down to net, for an average margin 10.2%. But this is only the avera which includes hundreds, maybe tho sands of relatively nonprofit ex-flow children and other true believers, wh establishments come and go like ma flies. The Bareishes in this game c expect to do a lot better.

Since inventory typically turns ov eight times a year, the average sto owner has no more than $14,000 tied in the business that way. He has abo 300 cubic feet of refrigerator and freez space, but the rest of his capital inve ment is apt to be shelving, a cash regis and a sign over the door. The hours a long, 60 to 70 hours a week, but he ha couple of full-time clerks helping (at $1 or so a week) and a couple of part-time

The business is seemingly founded solid bedrock: a large public's consu mate faith that physical salvation som how resides in certain foods, or that t reverse lurks, hidden behind innocent beguiling appearance, in others. The pu lic does not always agree on which foo are which but, correct or not, the ba notion is certainly venerable. What J Kellogg wound up calling corn flak were such a health food in their day, p of the cure at his sanitarium in Bat Creek beginning in 1898. Campb Soup's familiar V-8 cocktail vegeta juice debuted in the 1930s as a heal food; yogurt is perhaps the most rece "nut food" to become commonplace.



Traditional health-food store in New York's Greenwich Village
Rain or shine or snow, business keeps getting brisker.

Wolfschmidt Vodka.
The spirit of the Czar lives on.

It was the time of "War and Peace." "The Nutcracker Suite." Of Tolstoy and Dostoevsky.

Yet in this age when legends lived, the Czar stood like a giant among men.

He could bend an iron bar on his bare knee. Crush a silver ruble with his fist. He had a thirst for life like no other man alive.

And his drink was the toast of St. Petersburg. Genuine Vodka.

Life has changed since the days of the Czar. Yet, Wolfschmidt Genuine Vodka is still made here to the same supreme standards which elevated it to special appointment to his Majesty the Czar and the Imperial Romanov Court.

Wolfschmidt Genuine Vodka. The spirit of the Czar lives on.

AMERICAN EXPRESS

There are evangelistic nutrition gurus, the Linus Paulings and the Adelle Davises, denouncing chemicals and artificial foods and preaching the supernutrition gospel of vitamins, or brewer's yeast and blackstrap molasses, or organic vegetables. Moreover, it seems every other month a new FDA or AMA pronouncement comes out, sure to scare still more legions into converting.

Aside from the legitimized items like yogurt, and from taking preservatives out and putting the label "natural" on a few supermarket items, the giant food companies seem to have done relatively little in natural foods. Most of the producers are still small, some literally kitchen-table operations. So, too, are the distributors, though a few regional wholesalers are approaching respectable size. Some successful retailers, however, taking advantage of the fast cash and low investment nature of the business, are branching out into chains.

Interior of General Nutrition Center store
Even sesame seeds and dried kelp can be mass-marketed.

By far the biggest is David B. Shakarian, 65, of Pittsburgh. His General Nutrition Centers are a far cry from Everything Natural and its ilk: big, bright, fluorescent-light-and-plastic affairs labeled GNC outside and full of the house brand and point-of-sale displays screaming the week's bargains, just like any well-run chain discount store. GNC exploded into prominence in the last ten years. Shakarian has over 700 stores now, stretching from the brand-new one on New York's Herald Square to the flock of almost new ones in Los Angeles, and he is opening others around the country, mostly in big shopping malls, at the rate of two a week. He has one manufacturing plant in Fargo, N. Dak. and another in Greenville, S.C. and says he is expanding both. "Our secret is we self-manufacture almost 90% of what our stores sell," he crows. Actually, he means "self-package," after buying in bulk. Being private, he declines to discuss any numbers whatever, aside from the store census, but FORBES calculates that, between the stores and a sizable mail-order operation, his annual sales must well exceed $200 million.

Quite a change from the simple store Shakarian opened in 1935. "We design foods meant to replace the junk foods—comparable foods, but without sugar or bleached white flour or preservatives or artificial colors or flavoring," he says eagerly. "People say we gouge the public on prices, but when you compare the actual nutritional content, our prices are better. You pay $1.40 a pound for potato chips, you know, but plain potatoes give more nourishment at 14¢ a pound."

When he considers all the misspent billions going up the supermarkets' food chain from the sadly misled, tragically malnourished, potato-chip-chomping majority, the possibilities excite Shakarian still more. "The potential number of stores is unlimited," he exclaims. "Right now, the market could support 5,000 or 6,000 GNC stores. In Pittsburgh, we have 25—all profitable. The same saturation nationwide would give us 4,000 right there."

Unfortunately, not everyone shares his vision. He has only term debt from banks and insurance companies, no long-term debt, and must use only internal cash flow to finance new store openings. Current interest rates, needless to say, worry him a lot; and the two-a-week pace is already a marked slowdown from 1978, when he averaged three a week on a smaller base. Recurrent rumors circulate in the business that he is overextending himself, and that he has trouble keeping all his suppliers paid on time. "Our fast growth has periodically caused temporary [cash flow] problems," Shakarian concedes. "But," he insists, "we are not in trouble now. Our fiscal management is in good order."

Meanwhile, back in Greenwich Village, Bareish contemplates the bright, flashy GNC outlet a few blocks from his new store. Its presence does not trouble him. "When they opened, we were worried about our other store," he says, meaning his brother-in-law's place, only one block from the GNC. "But their clerks can't give advice because they don't know the stock. Our sales leveled off for a few weeks and then they began going up again. We'll do fine, offering the specialty items they don't have."

One can argue the merits of the products, or the wisdom of going the flashy discount-store route versus looking initiated and organic, but one thing is certain: If they can stay solvent—and if they can hold on to the big growth market they now have to themselves—both breeds could find themselves going a very long way with it. ■

CNA believes working with agents is one of the most effective ways we help keep insurance affordable.

"I don't deal with CNA's computers. I deal with CNA's people.

A big insurance company like CNA needs its computers. But this is a people business. And, to help me and my clients here in Lawrence, I need CNA's people. People who listen when I tell them about my clients' special problems. People I can count on to come back with an answer. After all, it's my job to understand my clients' needs. I deal with CNA because they have people who are willing to do the same."

VISA

Now: Two ways to bail out the kids.

Beginning this month, VISA joins Western Union's emergency Money Order service.

Which means you now have two easy ways to send money when it's needed fast.

All you need is VISA or Master Charge and a telephone.

With Western Union's Charge Card Money Order service, you can send a Money Order anytime. Up to $300. And charge it to your VISA or Master Charge.

Simply call Western Union's toll-free number, 800-325-6000, day or night (In Missouri, 800-342-6700.) The Money Order is flashed to one of our 8,100 offices or agencies, located throughout the country except Alaska and Hawaii. It usually can be picked up within two hours, when the selected location is open for business. (Some are open around the clock.)

The Money Order amount and our charge will appear on your VISA or Master Charge statement. Simple as that.

You can send regular Money Orders, too.

If you don't have a VISA or Master Charge card, we still can help. Just take cash—any amount—to a Western Union office or agency. And we'll send a regular Money Order.

That's not all. Our Commercial Money Order service offers an instant credit line to businesses once they qualify. Up to $5,000. No charge to open or maintain the account.

Your Money Order can be picked up at one of our 8,100 offices or agencies, located throughout the country except Alaska and Hawaii.

And if you're a Telex or TWX® subscriber, you can send Money Orders directly from your terminal.

Send for your free emergency money wallet card.

For more information about our Charge Card Money Order service, and for a free wallet card that explains how to use it, complete the coupon.

Why is everything up at Ma Bell except the stock price? Don't yesterday's dividends mean anything?

Ma Bell: There ain't no gratitude

The Streetwalker

American Telephone & Telegraph—the stock—has treated its stockholders well. In a market where many blue chip stocks sell for a fraction of what they brought in the early Seventies, Ma Bell has held up rather well. Even in the dark days of late 1974, when the market lay in ruins, AT&T common never dropped more than 30% from its previous year's high.

The reason for this is that AT&T—the company—has treated its stockholders well. Over the past decade its dividends, rising in gradual stages, have about doubled. So have earnings. Ma Bell, in short, has kept up with inflation. Why, therefore, on the heels of the latest dividend boost—from an annual rate of $4.60 to $5—has the stock turned weak? Despite the good dividend news last month and a 17.7% increase in earnings to $5.27 billion for 1978, the stock failed to equal its 1977 high.

Why the disappointing reaction to the dividend boost? The Streetwalker put the question to some analysts who follow the stock closely. The negatives came on like a requiem. "I see a sharp slowdown in the growth rate in 1979," says Charles W. Schelke of Dean Witter Reynolds Inc. "I see a slowdown from the unsustainable growth of earlier years," adds Richard C. Toole of Bache Halsey Stuart Shields Inc. "I see flat earnings," says Steven G. Chrust of Sanford C. Bernstein & Co. "I see little downside risk, but almost no upside potential. The outlook is very dull."

Chrust actually thinks Telephone might be a sale at this point, at least for institutions holding a lot of the stock. Schelke and Toole opt for the middle path. They think Telephone is a hold, but are emphatic in their agreement that the stock is not a buy just now.

The earnings estimates for this year and next come from every point of the compass, but none of them is bullish. Dick Toole thinks AT&T will notch between $7.95 and $8.05 a share this year (compared with $7.74 last year) and $8.25 a share in 1980. Steve Chrust is projecting $7.85 and $7.95, respectively, while Charles Schelke looks for $8 a share this year and $8.40 next year.

Is this so bad? At $8 a share, say, AT&T sells at less than eight times the Schelke estimate for this year, at an earnings yield of nearly 13% and a stock yield of 8%. It's the old question of momentum. Wall Street loves momentum. It would prefer to see a low-yield-rising to a high-yield-holding-steady.

The Street's predictions of flat earnings are barbed with questions over whether AT&T will be making enough money to maintain quarterly dividend increases of 10 cents a share that have come their metronomic way in each of the last four Februarys. Steady enrichment is why most people buy AT&T.

The Street's predictions of flat earnings, though, are barbed with question marks over whether AT&T will be making enough money to maintain the quarterly dividend increases of 10 cents a share that have come their metronomic way in each of the last four Februarys. Steady enrichment of the dividend stream, of course, is the big reason most people buy AT&T.

Nobody is taking any bets on what next February will bring. Charles Schelke thinks there is only "a 50-50 chance" Telephone can stick to the February pattern. In fact, he says the increase might have to be deferred "until the third quarter." Steve Chrust makes much the same point. "With earnings flat," the Sanford C. Bernstein & Co. analyst says, "there is a chance that the next dividend crease will be five or six quarters out."

There are other elements in the s nario. Wall Street is convinced t AT&T, precisely because its profit tios have been so good, will have much tougher time getting rate creases by the regulators than it h over the past several years. Some a lysts also argue that the great produ tivity gains Telephone has punched over the last several years are beginni to taper off.

Beyond all of that, there is conce over the threat of competitive strik into traditional Bell territory by su savvy marketers as the Internatio Telephone & Telegraph Corp.; and a of uncertainty over the shape in whi Telephone will emerge from the wel of government and private antitrust su it is fighting.

Bell, as always, is rolling with t punches. The company concedes it "unrealistic" to think that the red-h growth pace of the last couple of ye could be sustained indefinitely. Nobo is blinking the fact that Bell has "be having greater difficulty with regulat in some states," or that the prospect o "modest slowdown" in the economy i very real one. The company argues, ho ever, that it still has plenty of product ity muscle up its technological sleeve. spokesman insists that any conclusio about next February's dividend policy a purely "speculative."

Wall Street has dialed wrong numb on Bell before. Most analysts, for exa ple, erred on the conservative side their estimates of how far AT&T's ea ings gain would carry last year and t year before.

Some of the shortfall then came out a seeming misreading of how well t economy in general would do. The B system does best when business booming and the long-distance toll lin are ringing with optimism. The Cassa dras just now are keening recession a the analysts have willy-nilly cranked least some of the croaking into th calculations of Telephone.

There is something of a "worst cas aura about the Street's bearish scenar Investors would do well to rememb that, in the severe 1975 recession, Bel earnings came down by a mere 3 There is, moreover, a broad consens that AT&T's earnings trajectory—a dividend payout—will begin to pick momentum again in the early Eighti Crawling out on the analytical lim Steve Chrust contends that "by 19 they'll be earning $10.50 a share a paying $6.50. I think it's going to b $90 or $95 stock," he adds, "but not rig away." To which Streetwalker ad "But then, Bell never was a stock for t highrollers with a short attenti span." ■

—Richard Phal

Not long ago, many people thought our population would soon outstrip our ability to feed it.

But what many regarded as a serious problem, Grace viewed as an unusual opportunity.

Recognizing the need to produce more food on less land, Grace turned its attention to chemical fertilizers. These soil-enriching chemicals can dramatically increase crop yields. And because these fertilizers replace the nutrients food crops take out of the soil, they decrease the need for crop rotation.

Looking ahead, Grace amassed 300 million tons of phosphate rock reserves, enough to supply its customers with phosphate fertilizers for the next fifty years. Of course, we can't always predict what the world will need next. But we do think our average is good.

Chemicals—for agriculture, industry, and packaging—are only one part of W.R. Grace & Co. In fact, Grace is a $4 billion company with interests in chemicals, natural resources and consumer businesses.

Since 1968, the company's net income has grown by an average of 15% annually, and shareholders have been receiving cash dividends for 45 consecutive years. And it's our goal to continue this performance.

Our annual report can tell you more. Send for it by writing to W.R. Grace & Co., Grace Plaza, 1114 Avenue of the Americas, New York, N.Y. 10036, Dept. FB-2.

One step ahead of a changing world.

GRACE

chemicals • natural resources • consumer products

Report from GTE.

How we can help improv

Over the past several years, GTE has developed a variety of effective intrusion alarm systems. Many of these are being used by a growing number of businesses.

The fence that talks.

Is someone trying to climb over the fence, or cut through it? We can make chain link fences tell when it's happening.

The key to this GTE system is a ⅛"-diameter sensing cable threaded along the fence. This converts vibrations into signals at a central monitoring station. A processor separates most fa alarms from the real thing.

The earth that hears.

How about people or vehicles entering stricted areas that aren't fenced in? Every st creates an infinitesimal earthquake. We develop a system of very sensitive buried microphones combination with a signal processor, which distinguishes actual intrusions from vibrations caused by natural phenomena.

ndustrial security.

ne air that feels.

Ve can even tell if an intruder is coming close orbidden metal objects like safes, file cabinets vehicles. We do it with a system that senses nges in electrical energy caused by a person roaching a protected object. The alarm is trig-ed if the intruder comes within a few inches, ne connecting cable is cut, or if the power fails.

We're a total communications company.

Whether the communications take the form of an intrusion alarm, a data communications system, or even a simple phone call, it's all a part of the activity of GTE. We're a lot more than a phone company.

GTE

One Stamford Forum, Stamford, Connecticut 06904

Something terrible happened to Rohm & Haas on its way to $1 billio in sales. Having trimmed its losses, the company is sadder. Th question now is: Is it also wiser?

A funny thing happened ...

By Geoffrey Smith

CHAIRMAN VINCENT L. GREGORY JR. of Philadelphia's Rohm & Haas Co. says he's a changed man. Repeatedly he attacks the folly of his former ways as a growthaholic: "I was out there leading the pack on this 'Let's keep this thing going' business. 'If you make a mistake, we'll grow right over it.' Much too gung ho. And a less than realistic strategic planning process."

No one could argue with that.

In 1973 he told shareholders: "I believe Rohm & Haas has the best dynamics for growth in the worldwide chemical industry." That year Rohm & Haas stock sold for 22 times earnings. Two years later earnings dropped 69%, from $74 million to $23 million, on over $1 billion in sales. In 1976, the company sank $12 million in the red, more badly hurt than most by the abrupt price hikes in oil and gas and the collapse of the fibers business. The stock was over 100 in 1973; last year it was as low as 28.

That would have been the end of Vincent Gregory in many companies. Not because of the OPEC embargo, which no one foresaw, but because he should have gotten out of the fibers market th years before OPEC—the minute he came chief executive in 1970. Gregory the first to admit that the warning sig were all there. Quite simply, Rohm Haas had been outflanked in fibers early as 1968. R&H's Anim-8 elas meric stretch fiber had been ov whelmed by a dramatic improvement Du Pont's competing Lycra fiber on t one hand, and the sudden flowering polyester double knits on the other.

"It was at that point that we shou have folded our tents and gotten out the fibers business," Gregory now co

Chairman Vincent Gregory of Rohm & Haas
"Fibers? We should never have been in there trying to compete with the Du Ponts and the Monsantos."

Now you can own art that is as original as you are.

Christie's Print Collection offers you a unique opportunity to express yourself - by owning original art. Not reproductions. Not posters. Limited edition lithographs and etchings. Created, signed and numbered by the artist. Selected by you.

To receive our free catalog - illustrating our current collection in full color and containing a wide selection of prints in the $80 to $150 range - just fill out the accompanying coupon, put 31¢ postage on envelope, and mail it to London.

If you decide to buy a print, it will be mailed to you within weeks - with Christie's Certificate of Authentication. That's important. We are Europe's leading publisher of original prints. We are a subsidiary of Christies International, who also own the world famous Christie's auction house founded in 1766. Our name is your assurance of value.

cedes. "Instead, I listened to the glowing talk from our fibers group that we could isolate ourselves from Du Pont and Celanese and the other big producers of polyester and nylon because we had specialized grades. Boy, it sounded great! This was 'market segmentation'—the Boston Consulting Group theory. Well, it went right down the goddam rat hole. By 1975 you couldn't give the stuff away!"

At the same time the cost of natural gas, upon which Rohm & Haas was unusually dependent for feedstock, shot up by a factor of 10. "Our gas bill went from an annual rate of $5 million in 1973 to $60 million in 1976," says Gregory.

The fibers debacle forced Gregory to take a close look at other losing areas of Rohm & Haas like pharmaceuticals and animal health products, another Sixties diversification. He didn't like what he saw. "I went out to research myself," he recalls, as if such a trip were rather unprecedented. "We had an ulcer drug—same goddam class as Tagamet except that we were ten years behind Smith-Kline! Throw that out! Our research budget was so small compared with the industry's that the probabilities of success were poor."

While Gregory agonized over whether or not to sell fibers and pharmaceuticals, in 1976 those areas of Rohm & Haas managed to turn in a staggering $93 million loss pretax on sales of $140 million. Together they had only made money for the company in 1 year out of 14. There was another year and a half of losses before the divestiture was complete—not the fastest example on record of cutting your losses.

Still the board of Rohm & Haas, 48% controlled by the Haas family of Philadelphia, decided to give Vincent Gregory that rare thing—a second chance. Why? "Because the top management of Rohm & Haas got an expensive education during all this," Gregory replies with a laugh. "I'm not sure the board thought they could afford to give another management such a lesson!" Another reason maybe was the fact that it was the two Haas brothers, Otto and John, who put Rohm & Haas into fibers and pharmaceuticals in the first place when they ran the company in the Sixties. Having bypassed all of R&H senior management to tap Gregory as their successor in 1970, these self-effacing brothers, now retired from active management although still on the board, apparently weren't about to blame Gregory for what was partly their own mistake.

Thus given a second chance, Gregory is falling back on mature, cash-generating businesses where Rohm & Haas has long been dominant, like paint ingredients, floor polish ingredients and Plexiglas. Furthermore, his capital spending is slacking off, thanks to the gross overbuilding that took place in many areas of the chemical industry during the early Seventies when the industry was growing at 14% to 15% in constant dollars.

Shorn of losing businesses, Gregory sees Rohm & Haas increasing its return on capital from 7% in 1978 to 10% by 1981. "That," he says, "would mean earnings per share of $9 *vs.* $4.49 we made in 1978." Yet last month its stock sold at 36—only four times what Gregory expects to be earning in just two years' time. As overcapacity eases in Rohm & Haas' long-standing core businesses, such a significant improvement in earnings is entirely possible—barring a steep and sustained economic downturn.

Still, there remains the question: Where does Rohm & Haas go from here? Gregory points to the high 4% of sales ($50 million) Rohm & Haas spends on research and cites "growth" areas in his core businesses.

"We're the number one supplier of the ingredients for house paints," says Gregory. "Over the past 10 or 15 years we've displaced about 70% of the oils and alkyds that are used in house paints and we're after the remaining 20% or 30% of oils and alkyds still being used. We expect to grow faster than the industry."

"I listened to the glowing talk from our fibers group that we could isolate ourselves from Du Pont and Celanese and other big producers of polyester and nylon because we had specialized grades. Sounded great! 'Market segmentation.' Well, it went right down the goddam rat hole."

Trouble is, the paint industry is only growing about 1% or 2% a year and is again wracked by price-cutting as Sears' DeSoto brand tries to buy market share. Even if Gregory doubled industry performance in paint, that segment would show perhaps 3% growth a year.

"Well, that's not bad when you have a good position like we do," he replies. No indeed, but don't call it a growth area.

"Another growth area is adhesives," he goes on. "There are many products in the adhesives market, solvents for example, that are being banned as pollutants by the Environmental Protection Agency. We can replace those products with water-based systems that we invented. So even though the adhesives business isn't growing much faster than GNP, the nonpolluting adhesives market is growing 15% to 20% a year in real terms."

But that's about 2% of R&H business at the moment. Most of Rohm & Haas "chemical specialty" sales come from floor polish ingredients, a market that isn't setting the world afire.

And Plexiglas sheet, a product which has been around for 30 years or so presently in overcapacity.

"That'll wear off in about two or th years," Gregory predicts, "and th we're not looking for growth, but improved return."

It's the same story in fluid proc chemicals, basically water purifiers electrical generators and nuclear re tors, a business that is more or less a standstill now because utilities aren't panding much these days.

No specialist in a high technology dustry like chemicals can go on milk cash cows for long, even with heavy fensive research spending, without go into long-term decline.

But Rohm & Haas does have at le one loaf in the oven that puts the spar back into Vincent Gregory's eyes. It family of broadleaf weed herbici called Blazer and Goal for the big c crop soybean market. "This is proba the greatest development our compa has ever made!" says Gregory.

Most herbicides now on the mar for soybeans, like Monsanto's highly s cessful Lasso, kill the grass. With grass to contend with, broadleaf we like morning glory flourish—which worse for soybeans.

"There's only one product out th that's effective in controlling broadl weeds in soybeans and that's BASF's sagran," says Gregory. "And any exp will tell you that our Blazer, which hope to introduce in the U.S. in 1980 was introduced in Argentina in 1977 a Brazil in 1978), is a league ahead." Sin there is no competing product now testing in the U.S., Blazer and Goal w only have Basagran to compete with u til 1985. After that, for 1985 and beyo are Rohm & Haas' new concepts in pl tics, a hybrid seed business and a n generation of insecticides.

So it would certainly be too early write off Rohm & Haas as a great co pany that has sunk into stagnation. B it is also too early to predict that t company is firmly on the comeback tra

Can Rohm & Haas, after suffering m jor setbacks in its attempts to build aging foundations in acrylics, get the m mentum up again? Gregory thinks mu of the answer lies in his new strateg planning system, which he has spent lot of his own time developing. But p haps more important is how Vince Gregory now thinks of his company:

"We're the smallest of the majors," says automatically. Then he checks hi self, perhaps remembering how the co pany had been unable to compete in t big leagues in fibers and pharmaceu cals. "No, we're really the biggest of t specialty manufacturers. That's exact what we are."

Maybe that's been the trouble along. An identity crisis, which the co pany has yet to prove it has solved. ■

'I didn't sacrifice great flavor to get low tar.'

"The first thing I expect from a cigarette is flavor. And satisfaction. Finding that in a low-tar smoke wasn't easy.

"But then I tried Vantage. Frankly, I didn't even know Vantage was low in tar. Not until I looked at the numbers.

"That's because the taste was so remarkable it stood up to anything I'd ever smoked.

"For me, switching to Vantage was an easy move to make. I didn't have to sacrifice a thing."

Peter Accetta

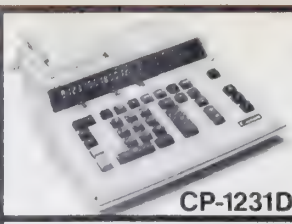
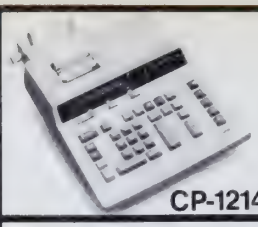
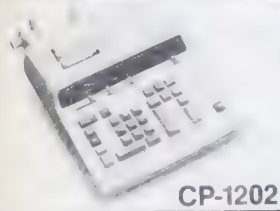
P-1420D The outstanding 14 digit, 2 memory **printer/display.** Item [illegible] mark up, mark down key, broad percentage function, reverse and non-add print key



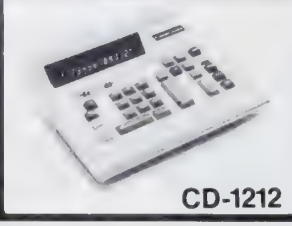
CP-1231D 12 digit, **printer/display** with 3 memory versatility. Performs four column totaling. Dual functioning item count, mark up key, delta per centage, shift key and sign change.



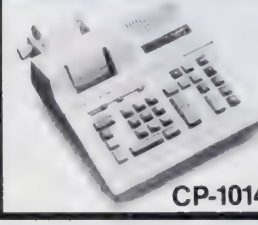
CP-1214D Advanced 12 digit **printer/display** with automatic or selective accumulation. Mark-up and delta percentage keys, two-key rollover, and buffered keyboard for quick operation



CP-1202 The perfect 12 digit **printer** with touch of adding machine to work with large numbers. Features include Grand Total key, buffered keyboard with two-key rollover



CD-1212 A versatile 12 digit, 1 memory **display** calculator. Features include mark-up key, delta-percentage key, percentage add-on and discount key



CP-1014 Reliable, economical, 10 digit, 1 memory **printer.** Features quieter, faster Canon Magnetic Printer, line of dashes selector key to separate your calculations, fixed or floating decimals

Calculators have come a long way in a short time.

They've gotten smaller. More sophisticated. More economical. And more reliable.

And since the beginning, Canon has been a leader in the calculator revolution.

In 1964, we introduced the world's first 10 key desktop calculator. Since then a continuous research and development program has enabled us to hold our position as a leader in the calculator industry. And with our improved calculators, in reliability as well.

Representing this development has been a line of advanced printing calculators that combine advanced electronic technology with simple adding machine-like keyboard.

Our display calculators have large, easy-to-read displays, fatigue-free keyboards, and are unique in their class for reliability. And our line of printer/display calculators is the perfect combination of digital display convenience and tape printout precision.

Through the years Canon has continually expanded its technological and manufacturing capability at its Costa Mesa, California plant to meet the growing needs of the American consumer. And is producing the most advanced calculators—display, printer and printer/display—at this modern production complex.

Research. Features. Reliability. Value. Now all from one reliable calculator source...Canon.

Call your local Canon dealer about the full line of more than 20 Canon commercial calculators.

Get it from a reliable source. Canon.

Continental Oil: a time for sowing, a time for reaping

By James Flanigan

CONTINENTAL OIL CO. Chairman Howard W. Blauvelt, 62, takes early retirement this year after only five years as chief executive, to be succeeded by President Ralph E. Bailey. There is about Blauvelt these days an air of the biblical steward rendering accounts to a stern master. "The company is in the strongest financial position it has ever been," he says proudly, the result of the strict financial discipline and lower debt ratios he brought Conoco.

All true, but it is also true that over the past few years Conoco has disappointed its followers, who expected continued great things from the company Leonard F. McCollum built from a $200-million-a-year regional outfit into a $2.4 billion sales-and-assets global company. By now Conoco's sales have grown to $9.9 billion, but its earnings since 1974 have barely kept pace with inflation. Last year's $4.20 a share was actually a few pennies less than Conoco earned two years ago, and would have been lower had it not sold some coal lands.

The glory days of the 104-year-old company were those of Leonard F. McCollum, a legendary oilman who ran Conoco from 1948 to 1968, and retired in 1972. To him are attributed the bold strokes that built the promise of Conoco: the moves overseas, the 1966 merger with Consolidation Coal. Promise feeds on promise, and there has existed ever since the belief that Conoco was capable of the startling move.

Blauvelt's critics, who include former Conoco employees—most of them quite senior executives—and security analysts, attribute the slowdown to what they call his excessive caution.

Is that a fair evaluation of Blauvelt's stewardship? On the surface, maybe, but a great deal of evidence suggests that Blauvelt's seeming caution is more style than content, and that the earnings slowdown was a result of circumstances beyond his control. A good case can made that Blauvelt, far from lacking d ing, has in fact beautifully positioned company for the future by pouring over $5 billion in capital investme and cash exploration expenses for Co co's oil, coal and chemical operatio That includes his 1979 budget—a c $1.3 billion to $1.5 billion. The gra total equals all the money laid out Conoco in the 14 years before Blauv became its chief executive.

Outgoing Conoco Chairman Blauvelt

Incoming CEO Ralph E. Bailey

Conoco grows and consolidates by turns. Blauvelt has invested in properties left by McCollum. Will Bailey, a coal man, expand on Blauvelt's base?

While doing that he managed to red the company's total debt to 32% of c italization from close to 40% five ye ago. He shook up Conoco personally bringing to heel its old Houston-ba North American petroleum operation group that had become near-autonom because it traditionally produced t thirds and more of the company's c solidated earnings. U.S. oil and gas s provide half of Conoco's earnings, Blauvelt reorganized the division.

He fired two vice chairmen in 19 another quit in 1977. An executive v president, a senior vice president two other vice presidents also left cause they preferred the company's decentralized way to Blauvelt's cent ized style of management.

The publicized departures of sen men have given Conoco a recent repu tion for management squabbling. that period is now ended. Out-of-co settlements have been reached with two ousted vice chairmen, and How Blauvelt himself is leaving, some th actually because he believes his own p sonality might get in the way of reorganized company fulfilling the pr ise that was always inherent in a siza oil company working in harness wit large coal company.

New York-born and Yale-educat Blauvelt is not a good old boy like m men in the Southwest's best-known dustry. Blauvelt started with Conoc an assistant controller in Ponca C Okla., and the oilmen's reference to h through the years is evident in the v he recoils from the word "accounta today. "I'm a manager, not an acco tant," says Blauvelt. "Look at any company. Their management will h been selected for qualities other t what got them their start."

He disdains the faint praise that e his critics grant him. "Howard Blau has brought financial discipline to C oco," they concede. That's rather saying of a plain girl: ". . . but she's g nice personality."

"Financial discipline and managem control are essential for a great c pany," answers Blauvelt, leaning the splendid Chinese-inlay coffee t in his Stamford, Conn. office for emp sis. "But you can't built a great comp with those alone. You also need gro You need to put some investment in.

WE KEEP THINGS MOVING IN ARGENTINA.

This country faced a tough economic problem—improving its critical trade balance. And we felt a particularly strong interest in helping; after all, Buenos Aires was our first overseas branch, dating back to 1917.

So in 1969 we founded an Export School which has already trained 5,000 Argentine executives. Now the nation's products are kept moving through the ports, contributing towards a positive trade balance. And those products are more and more often non-traditional—the result of modern technology. (Our educational program has brought us several awards from Argentina's Government for contributing to the economy.)

Bank of Boston has never felt that we're simply "open for business" in the 40 countries where we're located. We've always felt a strong obligation to work with them. And tough financial problems are right down our alley: we have more than 10,000 people around the world ready to tackle them and more than $2 billion currently committed to overseas lending. In the U.S. itself we have full-service facilities (Bank of Boston International) in New York, Los Angeles, and Miami—as well as our headquarters staff in Boston who specialize in financing, factoring, leasing, foreign exchange and all related services.

Where in the world can we tackle the next tough project for your company?

Crazy over Lindy. Mad about Amelia.

We were, too. While tickertape and cheering crowds followed the pioneers of American flight, Avco founded the corporation that became a cornerstone of the aviation industry. A leader in the design and manufacture of aerostructures and aircraft engines. And the research facility that helped bring Apollo Command Modules safely through the earth's burning atmosphere.

Rugged individuals capture the imagination of the world. At Avco, we harness that pioneering spirit and put it to work for us all. Assembling the world's largest data acquisition system. Developing high energy lasers that may create another industrial revolution. Building the world's third largest international consumer finance company. To help everyday people give wings to their dreams.

Leading the way for fifty years. From aerospace to financial services, from research to manufacturing. Where Avco leads, confidence follows.

Today, the new L-1011 TriStar commercial jet transport flies with wings from Avco Aerostructures.

/hy has all Blauvelt's investment
d so far to produce better results on
income statement? Essentially be-
se the political environment for the
nd coal industries has turned so hos-
nobody really foresaw this, that the
ıstry would become the scapegoat for
.C's extortion. Nor did many people
see that coal, the logical replacement
ıow costly oil, would be stalled by
tical and labor problems. Howard
velt's problems were external more
they were internal.
egin with coal, where Conoco is now
argest U.S. producer in revenues:
ontinental got its first major earn-
, $142 million, from the 1966 Con-
lation Coal merger in 1975, when
production payment that had fi-
ed the acquisition ended. Anticipa-
ran high at Conoco that coal would
ribute as much to earnings as U.S.
oleum operations. But coal did not
e through. After a very good year in
5—$174.6 million, or 38% of Cono-
earnings—the United Mine Workers
a job on Consol's profitability. In
3's strike-bound first quarter, when
sol lost $52 million. Moreover, the
allurgical coal markets have col-
ed with the worldwide slowdown in
production. Met coal in good years
ght in close to 25% of coal profits on
10% of coal production.
aught between the unions and the
rnment's confused policies, Conoco
begun to sell coal reserves in the
nd. The company gained $47.8 mil-
from such sales in 1978, or 50% of
oal earnings. With 200 years of re-
es, that's a policy of taking the cer-
dollar today. Consol has scrapped a
to double its 50-million-ton capac-
ut plans a 50% increase by 1985.
oil, Continental, true to its reputa-
for daring, jumped into the North
with both feet. It was a logical
e—but it underestimated the near-
dal drift to socialism of the British
rnment. Having lured the big inter-
onals into the North Sea because it
ed their knowhow, the British gov-
nent proceeded to deprive them of
t of the promised profit. Conoco,
ve in the North Sea from the area's
beginnings, was a member of the
overy group in three promising oil-
s in the 1970s—12% of Dunlin in
British sector, 33% of Murchison in
British sector and 10% in the Norwe-
sector, and 12.6% of the giant Stat-
field which lies mostly in Norwe-
waters. The investment initially an-
ated to develop these properties was
e $600 million. The anticipated re-
on investment, based on the experi-
of the area's first developers like
sh Petroleum, was on the order of
, maybe even 40%. But delays, ruin-
inflation and shifting but always
t-denying government attitudes
both in Norway and Britain have ballooned the size of the investment and reduced the possible returns. Conoco now faces total investment of perhaps $1.5 billion to develop its properties. The returns have been not so much reduced as shattered. The respected Edinburgh investment firm of Wood, Mackenzie now calculates that the real, discounted rate of return for the Conoco fields will be: Dunlin (smallest of the three) 19.5%; Murchison 12.5% in the British sector, 10.5% in the Norwegian; Statfjord 13.3% Norwegian sector, 14.1% British.

On a smaller scale, the Baltimore Canyon has been a big disappointment for everyone. Conoco laid out $59 million in 1976 for its leases in the area. It amortizes such outlays at 20% a year, but last December it took an additional $15.5 million writeoff of its investment in the

Former spirit of Conoco, Leonard McCollum
A nose for oil, and for growth.

Baltimore Canyon, reflecting almost the final abandonment of hope.

Given all these disappointments, it is a tribute to Blauvelt that Conoco has done as well as it has. What his critics overlook is that even if the political atmosphere does not improve, Conoco is virtually guaranteed better earnings growth in the years just ahead. Blauvelt talks of annual increases in the 10% to 17% range in the first few years of his successor's regime. If Blauvelt is correct, Conoco could easily be earning in the $8-to-$9-a-share range by 1985—assuming no great increase in the world inflation rate. It would have regained the stride it apparently lost in the mid-Seventies.

Where are these gains coming from? Disappointment or no, the North Sea should add about $1 a share to earnings by 1982 as well as supply Conoco with crude oil it will need to replace declines in U.S. production.

Coal is, of course, unpredictable, but all the logic points to major improvements—it is difficult to deal with, but probably less so than Khomeini. Talk of Iran-caused oil shortages could mean that coal will again sell against residual oil on a Btu basis, thinks Wall Street oil expert Joseph Tovey of Tovey & Co. Residual today sells at $2.55 per million Btus and coal at $1.40 and less for the equivalent energy. Thus coal prices could just about double and still be competitive. Consol is using bonuses and slurry pipeline knowhow to increase productivity at some of its mines. By one new underground method it can get productivity back up to 14 tons per man/day from 8 tons in recent years.

Conoco is going ahead full tilt on an $800 million joint venture with Monsanto in chemicals. The project will enlarge Conoco's production of ethylene, from which the company plans to expand greatly its position in plastics and other petrochemicals.

Conoco has a relatively small but highly profitable niche in the chemical industry. It is the nation's largest producer of the raw material alkylbenzene, which goes into detergents, and it holds a fourth place in the production of polyvinyl chloride, a leading plastic. It earned $61.3 million in chemicals last year, for a neat 19% return on its investment. That helped keep its overall return on equity at a respectable 15.8% in the coal-strike year. When the joint deal with Monsanto comes on stream, chemical earnings should show a good increase.

Once profits begin their upward march again, Conoco will be in a position not only to raise its rather conservative dividend—which is still only about one-third of earnings—but to make substantial new investments as well. In the past, there would have been no question about where the money would have gone—into oil. But the experience in the North Sea and elsewhere has not been encouraging. "If the political environment were conducive to developing energy," says Blauvelt, "we would have an excellent portfolio of things to invest in." The clear implication is that Conoco wants something big *outside* the energy field.

But Blauvelt also makes it clear that the time for acquisitions will be after his retirement. He has no intention of using Conoco stock for acquisitions when it sells for only seven times earnings and at only a modest premium over book value. Nor is he willing to make acquisitions with borrowed money if it means undoing the progress he has made in rendering Conoco virtually impregnable from a financial point of view. No, Conoco should wait, he feels, until it can base acquisitions on its growing cash flow.

Has Howard Blauvelt been a safety-first boss of a once-venturesome company? Hardly. It's simply that he's the kind of man who is willing to do things for which his successor will get the credit. In many ways he is the kind of chief executive that most stockholders should pray to get. ■

THE GOVERNMENT OF IRELAND
ANNOUNCES A NEW DEAL
FOR MANUFACTURING INDUSTRY

No tax until 1990 then a maximum of 10% for the rest of this century

There has never been a better time to come to Ireland.

The current Irish tax system, with its export sales relief scheme, enables manufacturers to qualify for full exemption from tax on all export sales until 1990.

The Government has now announced a new tax scheme that will come into force on 1 January 1981. This new scheme sets a maximum rate of 10% on corporation tax and will be in force right to the end of this century.

It means that if a company decides to locate in Ireland now, they will be in the advantageous position of not paying any tax until 1990 on export sales – and then, under the new scheme paying just 10% on all profits until 31 December 2000.

It's a unique opportunity...

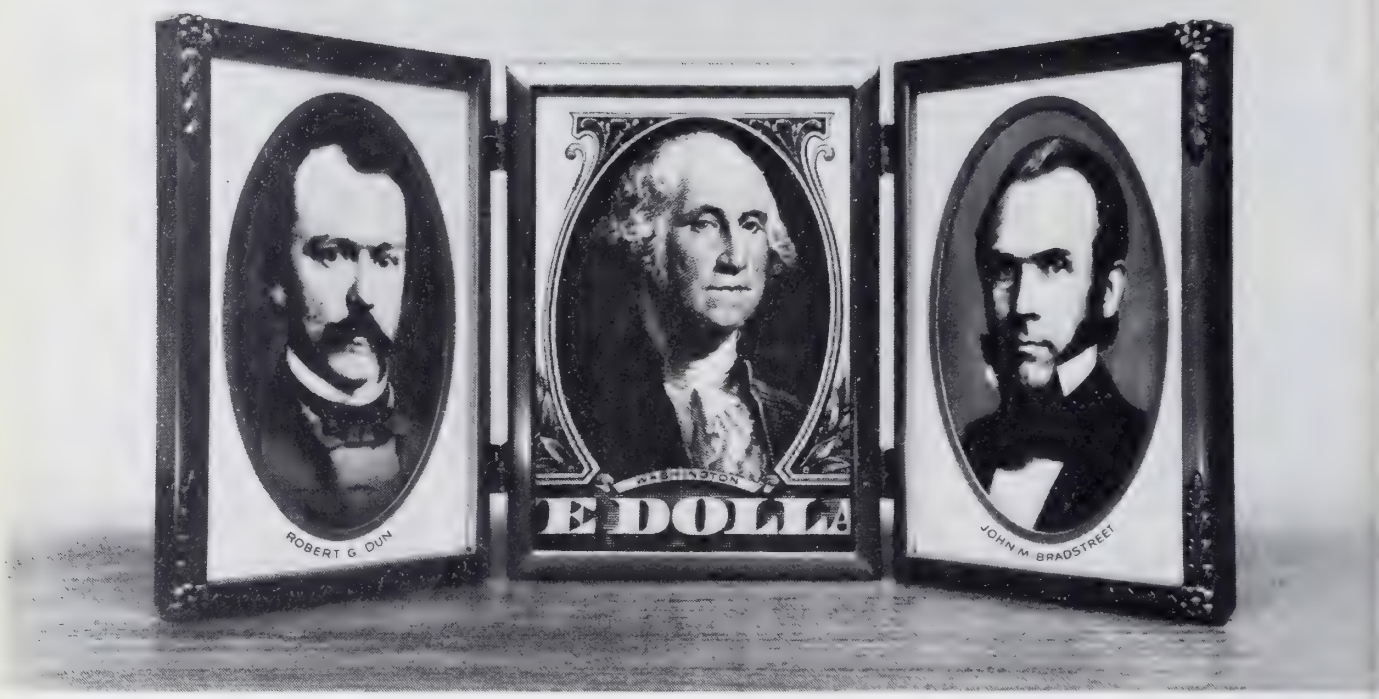
Every good credit executive deserves two things: a raise and Dun & Bradstreet.



Dun & Bradstreet?

Yes. Because, when a profession is responsible for 9 out of every 10 business transactions—and contributes directly to profits—its members deserve to be rewarded. And they deserve the right tools to get the job done.

Dun & Bradstreet. The business world's number one source of commercial credit information.

Only D&B arms credit managers with complete information on 5,000,000 companies worldwide. Up-to-date information, so credit can alert sales to changing situations among customers. Growth patterns that can steer a sales force to new profit opportunities.

Most importantly, complete credit reports from D&B can help credit managers increase net profits by reducing the average collection period of receivables.

For a concern earning 5% net on an annual volume of $25-million, it would require $685,000 in additional sales to equal what a credit manager can earn the company by collecting receivables 10 days sooner.

The professional credit manager and Dun & Bradstreet. Together, they're worth their weight in gold.

DUN & BRADSTREET INC.

"Family doctor" for the rich

emer Trust Co. of Florida's James E. Pangburn
rtiers in the drawing room, but tigers with an investment portfolio.

By James O'Hanlon

THE LADY is a real person, ebulliently blond and attractive, though close to 70. Dressed in a flowing blue Givenchy chiffon when this FORBES reporter called on her with the man from her trust company, she made us promise not to use her name, and we won't.

The lady greeted the man from the trust company with a kiss and led the way across sunbathed Italian marble floors into the art-cluttered living room of her $500,000 Palm Beach condominium. She lives alone with two servants, on a $400,000 yearly income from what remains of $10 million left by her second husband. Seated on a wide, silk toile-covered couch amid a dramatic collection of Rothkos, Calders and Louise Nevelsons, she fidgeted nervously with the eyeglasses she had carried away from work she had been doing in her study—charity work, invitations to a gallery opening—and launched into a practiced small-talker's reminiscence of a recent trip to China. When the topic turned to money, she reached along the toile for the reassuring hand of her Saville Row-tailored trust administrator and announced with classic Gotrocks insouciance, "I'm only good at spending it."

"You'll find that there isn't much talk about money among the people who live in Palm Beach," the man from the trust company interjected. He is a slim, 37-year-old Virginia lawyer named Dan Hall, who speaks so softly that the vibrations from his words barely ripple the luxuriating molecules in the room's sun-gilt air.

Helping this well-off widow preserve her principal these days is a more exacting task than ever. People like Dan Hall who practice it, especially along Florida's Gold Coast where it is bad manners to discuss such matters casually, are regarded as a solemn and priestly class. Hall is one of four officers of Bessemer Trust Co. of Florida, which, with two separate corporations, Bessemer, N.A. in New York and Bessemer Trust Co. of New Jersey, make up the current form of what someone once called "the Tiffany of trusts."

In Florida, Bessemer is one—according to some, the best—of an ever-broadening field of law firms, banks and trust companies vying for billions of dollars in estates and wills that have transferred to Florida to take advantage of its tax laws *(see box, p. 85).*

Bessemer was set up in 1907 by steel pioneer Henry Phipps for his family. Its first capital was $5 million from a more than $50 million share of Carnegie Steel's sale to the U.S. Steel Corp. in 1901. Today there are $1.6 billion in assets and 144 Phipps descendants who are Bessemer clients along with 250 outside clients, most taken on since 1974. Ac-

cording to Ogden Mills (Dinny) Phipps, the broad, dynastic-looking 38-year-old chairman of the three trust corporations since 1976, Bessemer decided to take non-Phipps clients to increase its fee base so it could attract the money-managing expertise needed to protect the Phipps family fortune from inflationary attrition. The Florida company now manages about $135 million—more than 95% of it from nonfamily clients taken on since 1974.

In 1977 the three Bessemer corporations had a combined net income of $462,673 on revenues totaling $10.2 million, as executor of wills, investment adviser, trustee and estate custodian—plus about $2 million in intercorporate service fees.

One Phipps descendant, septuagenarian Esmond Martin, has spent an estimated $3 million taking Bessemer into court on charges that the splitting of Bessemer, the outside clients and the service fees are combining to drain the family fortune. His cousin, Chairman Dinny Phipps, waves a cigar to rebut Esmond's allegations. "We have an estate department that is vital to the future of the family. But only one member of the Phipps family died in the last seven years. We can't afford to have top people sitting around in mothballs until the family needs them."

When it aggressively went public, Bessemer recruited John R. Whitmore, 45, as chief, luring him from his job as deputy chief of the trust department at American Security and Trust Co. It brought James E. Pangburn, 48, from the Mellon Bank to run the Florida company. Bessemer also brought in a new investment department headed by Charles W. Hastings, 42, and Michael Page, 51, a former partner of the now-defunct Faulkner, Dawkins & Sullivan, one of Wall Street's best small research firms until it was killed by negotiated commissions.

Perhaps "public" is not quite the right word to describe Bessemer's clientele. Not all of it is as rich as the lady in the blue Givenchy chiffon, but neither does it include many of what you would call small investors—unless, of course, you agree with the Boston money manager who says that "anyone with less than $1 million is a small investor these days."

Pangburn, Bessemer's Florida man, like Whitmore, is just the sort of tall, sonorous, impeccably tailored trust officer you'd want watching the judge's eyebrows at your own probate hearing. "We are looking for clients with more than $1 million," he says. "That way we can offer a lot more individual attention than a client gets at the big northern trusts where one trust officer may have 400 to 500 clients to look after."

At a cost of 1% yearly for the first $1 million in management, 0.6% for the second million and 0.45% thereafter, the

Bessemer Directors John R. Whitmore and Ogden Mills Phipps

After 72 years of minding Henry Phipps' fortune Bessemer wants to mind you

Givenchy-clad lady probably paid Bessemer about $40,750 last year. But then, people like her are accustomed to paying to get what they perceive is the best of everything. Bessemer's nonfamily clients get the same solicitous attention to their needs—from paying household bills to investment management—that Bessemer Trust Co. has lavished on the Phipps family since 1907.

"I can get in touch with Dan just about any time I want to," says the lady in her airy white-on-white living room. "In Chicago the trust company there just used to send me a letter or something."

Each morning the client's portfolio is punched up on the computer terminal from Bessemer's New York office. Usually any cash holdings over $500 are invested. Says the Palm Beach lady, "Last year I had one person doing taxes, other doing household management a another making investments—but body to coordinate it. Now Dan ta care of all of it, I get more money spend and I have more peace of mind.

When she had an automobile accid a few months ago, Hall helped her bu new car. He's found a Washington ins ance brokerage which specializes in Huntington T. Block Insurance Co., insure her $2 million collection of pai ings and sculpture.

How about investment strategy? W Hastings heading a ten-man investm department in New York, and P watching over the Florida portfolios, B semer now keeps about a 60% equiti 40% bonds mix spread throughout portfolios, according to individual nee

"Last Friday in our JetRanger III, we flew to four remote jobsites, wrote a contract at a client's pipe yard, inspected ranch property out at Mt. Palomar and got back to sign the mail by 5 p.m.."

ARTHUR VOSS
Voss International
Los Angeles, California

No matter what your short-range travel requirements are, Bell's 5-place JetRanger III shrinks hours to minutes. Cruising at up to 140 MPH with a range up to 375 miles, you go more places, do more work and spend less non-productive time getting there.

The JetRanger's cool-running 420 SHP C-20B Allison turbine gives you unparalleled dependability, on-line readiness and remarkly low down-time. It can speed you door-to-door faster than any other combination of air and ground transportation within a 350-mile radius. It combines versatility and cost-effectiveness with custom-designed interiors to match your tastes and needs.

"The JetRanger eliminates driving time to and from the airport and we can land virtually wherever our business is. It allows more involvement in out-of-the-office situations," Voss explained.

Bell JetRanger III . . . backed by the nation's most extensive parts and service network.

LongRanger II 222 Twin

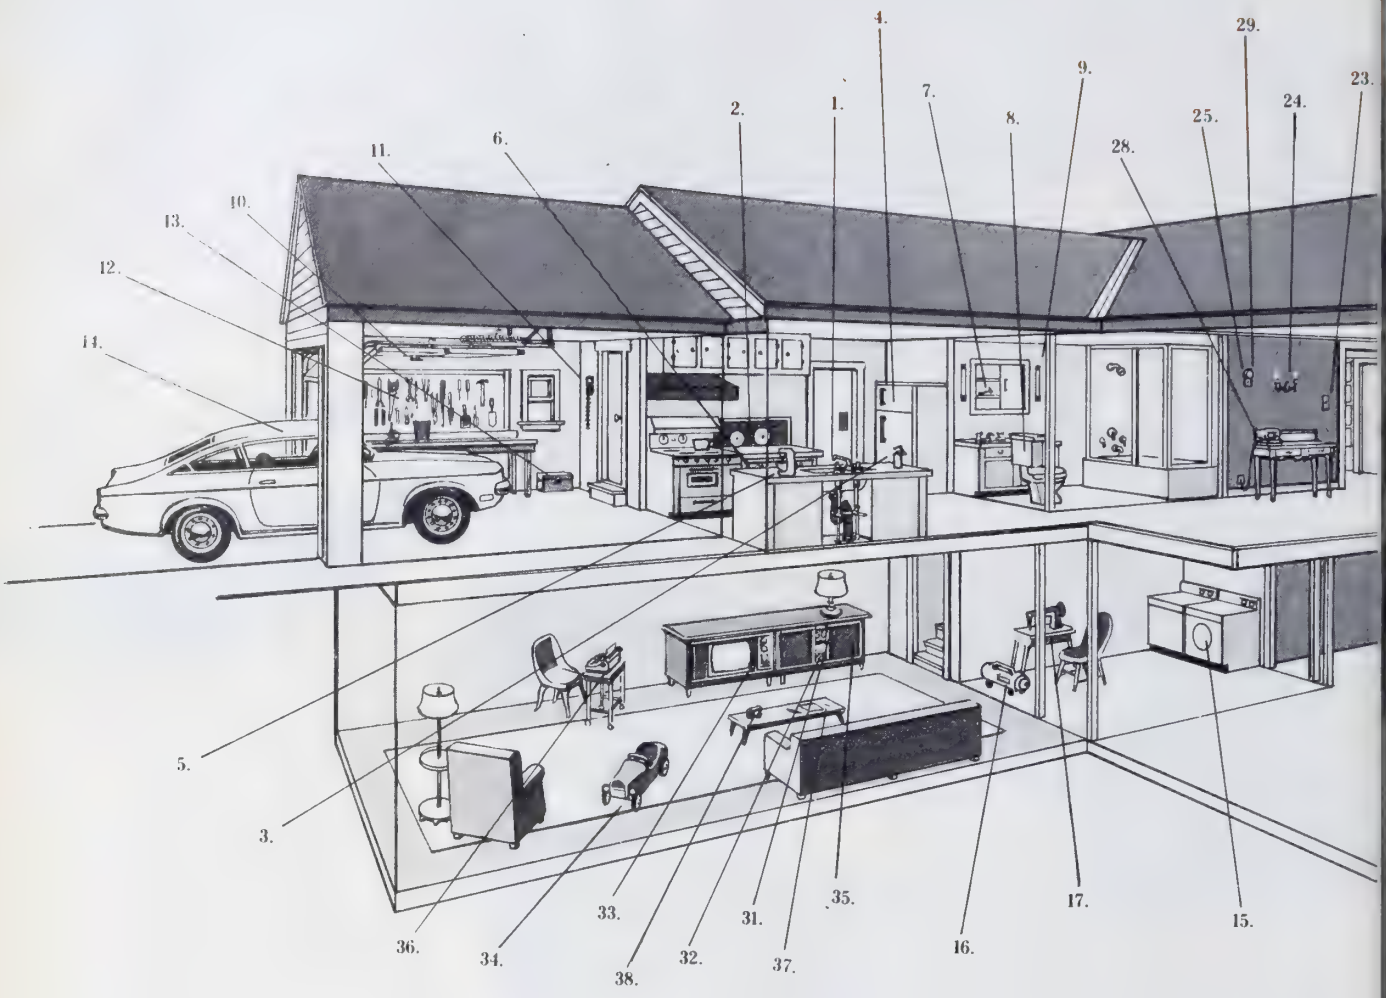
For detailed information on Bell's 5-place JetRanger III, 7-place LongRanger II, the new 10-place 222 Executive Twin and for a Bell Helicopter Travel Evaluation Guide called a Rangefinder, contact Dwayne Jose, Vice President, Commercial Marketing, Department 564, Bell Helicopter, P.O. Box 482, Ft. Worth, Texas 76101 or call (817) 280-2117.



A Bodine machine can assembl the house. And save you u

Our business at Bodine is making small-parts assembly machines. And many of the parts and products assembled on these machines can be found in your own home.

If you make small parts, we can tell you how to assemble those small parts faster, better—and for far less than it's costing you now.

Think about it for a moment and you'll quickly see why. Industry today is investing literally millions of dollars in trying to cut material and fabricating costs. Trouble is, there's not much room left to cut.

Where the savings are.

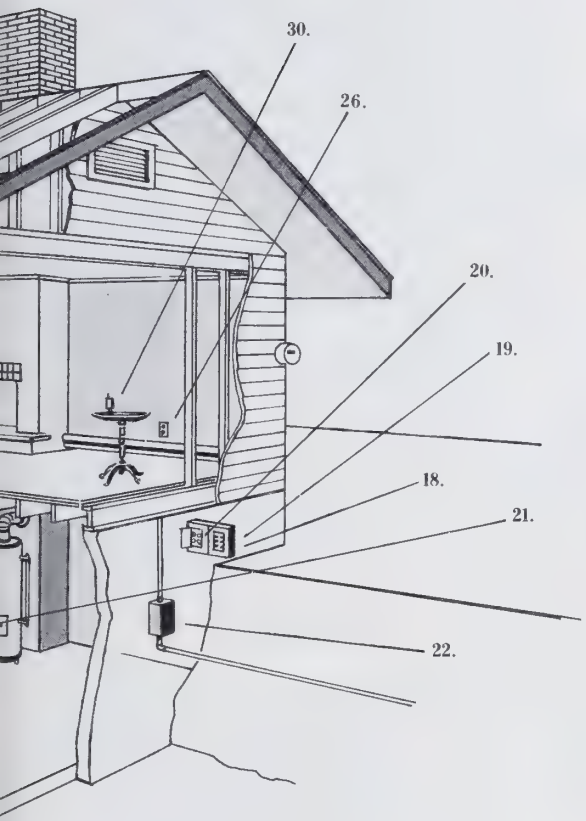
The one place left where you can make really significant cost reductions these days is in assembly. That's where your capital expenditures should be, because that's where you stand to save the most. And that's where we can show you how to save up to 95¢ on every assembly dollar.

We know because we've done it for many of America's most successful companies.

Does that mean we can do the same for you? Not necessarily. But 50 years experience in this business tells us that 6 of ever manufacturers can switch t kind of "selective automation" end up with substantial saving

What kind of savings?

We're not just talking a labor costs although, obvi that is a big consideration. Yo save because your product q will improve. Which means warranty costs will go dow nally, you will be able to inc production substantially witho hassle of costly hiring and tra procedures.



A partial list of components and small products assembled—in whole or in part—on Bodine machines:
1.*Faucets* **2.***Kitchen utensils* **3.***Detergent pumps* **4.***Refrigerator controls* **5.***Appliance motors* **6.***Flashlights* **7.** *Razors* **8.***Toilet valves* **9.***Flourescent sockets* **10.***Garage door locks* **11.***Hedge trimmers* **12.***Hand tools* **13.***Padlocks* **14.***Over 50 components for cars* **15.***Washing machine controls* **16.***Vacuum cleaner cord reel sets* **17.***Sewing machine components* **18.***Service boxes* **19.***Circuit breakers* **20.***Fuses* **21.***Furnace controls* **22.***Water meters* **23.***Light switches* **24.***Light sockets* **25.***Thermostats* **26.***Duplex receptacles* **27.***Door knobs* **28.***Telephone components* **29.***Air conditioning controls* **30.***Cigarette lighters* **31.***Radio components* **32.***Stereo cartridges* **33.***Television controls* **34.***Toys* **35.***Tape cassettes* **36.***Typewriter components* **37.***Pens* **38.***Cameras*

.st about anything around 95¢ on every assembly dollar.

probability, the machine will or itself within a year.
y important: Bodine makes nly assembly machines that e re-tooled for design changes en different products. You can ay units. Or take them away. ou can re-tool with "off-the- accessories. Bodine makes nly truly universal assembly ne. It will be working for you ong time.

eal with men at the top.
nething else you should know remember. In our shop, the head men take personal charge of your installation. They're the people who conceived the modern Bodine idea and built the Bodine reputation. In brief, you will be getting all the attention you need from the best there is.

How long will it take to start up? In far less time than you would think possible. We promise you will not lose a lot of productive hours on de-bugging—because your machine will already be de-bugged by the time it arrives. This is true no matter what business you're in —from the simplest controls to the most sophisticated electronic components.

What do you do now?
Write Frank Riley, Vice President, The Bodine Corp., 317 Mountain Grove Street, Bridgeport, Conn. 06605. Or phone (203) 334-3107 and ask for Mr. Riley. And make that call collect. We want to help you start saving money right away.

Bodine

There are no easy answers to the worldwide energy problem. But one fact is obvious: any long-term solution will require massive and imaginative investment.

Canadian Imperial Bank of Commerce – over $38 billion (Canadian) strong – has been involved in worldwide energy development for years. And we are stepping up our involvement.

We participated in the formation of the International Energy Bank, whose shareholders and associates have combined assets of over $200 billion. This bank's purpose is to finance energy development worldwide, beginning with the North Sea. It's a sound idea. But it's only one of many which we are considering.

We have evaluated energy proposals ranging from nuclear power plants to hydro-electric complexes, from Norway to the Near East. As 'The Ideas Bank,' good ideas are our stock in trade. So if you have an idea in the energy business, call your nearest Canadian Imperial Bank of Commerce office.

e of our $30 million common stock s recently came out in the top 10% n A.G. Becker survey," says Has- . "We're good pickers." Good, but observers would add not sensation- That's appropriate too—among the rich, preservation of capital is the ning, not profits.

ssemer looks for stocks of compa- that have a high return on equity a high current yield. Accordingly it tains a large commitment to IBM, Hastings says he has gotten a lot of age out of regional banks like United of Colorado and First Alabama Corp., as well as from insurance agencies such as Frank B. Hall, Inc. and Rollins Burdick Hunter Co. Says Page, "Recently we have been buying Mesabi Trust because the price of the iron ore pellets it produces is closely related to the wholesale price index."

"About 80% of our security portfolio is invested in 40 companies," says Hastings. "We make sure our analysts go out and see every one for themselves before we buy. Before our recent purchase of Pacific Petroleum shares you can bet that we had somebody trudging over the Canadian tundra looking over their drilling operations."

Bessemer also has an analyst to advise clients on real estate deals or private partnerships they may be intent upon. Says John Whitmore, "We don't originate any of these ideas. But if a client insists on getting involved in an oil exploration program, for example, we see to it that he gets the best geological advice available."

One tall, fashionable Palm Beach businessman says he maintains four accounts with Bessemer—two trusts for his children, one for him and his second wife and another "free" account into which he funnels any extra income. Says he, "It's like having a family doctor. They even make house calls."■

The sunny money game

rom Boca Raton to Del Ray Beach, hat stretch of Florida's Atlantic horeline known as the Gold Coast as been more popular than ever in he last five years—thanks to infla- ion and Florida's hospitable tax laws. The Sunshine State has no personal ncome tax save a $1 on $1,000 tax on nost intangible assets, and no estate ax except a "sponge" tax; it absorbs ny portion of an estate's federal eath tax that is deductible for state axes. Combined with the impact of nflation on substantial estates which nay represent a lifetime of work for etired executives and bought-out mall businessmen, the Florida tax reak has lately been attracting a stag- ering number of middle-aged Ameri- ans who might be characterized as millionaires."

Superrich Palm Beach County, for xample, which includes Palm Beach, oca Raton and Lake Worth, has al- nost doubled in population since 970 to an estimated 550,000. As one esident put it, "Children are remind- ng their parents that Florida laws can ave $5 million or $6 million in taxes n a $100 million estate."

In Palm Beach, unbecoming five- nd six-story apartment houses con- aining $150,000-to-$500,000 condo- niniums are straining the zoning aws between Lake Worth and South Ocean Boulevard. Says one local es- ate lawyer, "There are an incredible umber of retirement residents com- ng in here with $1 million or $2 mil- on. Then you have people with es- ates of eight or ten figures with vaca- on homes here who are switching heir domiciles here also."

It adds up to an atmosphere of in- ense competition among Florida law- ers, banks and trust companies for he management fees on a growing ot of fat portfolios and trusts. North- rn banks and law firms are challeng- ng Florida laws to retain portfolio management for clients moving south. Says one urbane Washington lawyer, who has been estate-minding in Palm Beach for the last two years, "An out-of-state law firm can set up a small office here staffed with a Florida-resident associate and make $200,000 a year for five years on a $100 million estate."

Until recently state banking laws kept northern banks and trust companies from doing trust business among Florida's wealthy "snowbirds." There were two exceptions: Northern Trust Co., by buying Miami-based Securities Trust Co. in 1971, and Bessemer Trust Co. *(see story)* because it incorporated in Florida in 1929 to tend to the needs of Phipps family members then "domiciling" there.

In 1974 the Florida legislature passed an amendment banning out-of-state banks from buying Florida subsidiaries or setting up investment advisory offices for their emigrating clients. But a recent federal district court ruling in favor of a Bankers Trust Co. challenge to the Florida laws appears to have opened the floodgates. Already Bankers Trust, Chemical Bank and U.S. Trust are running "advisory" offices in Palm Beach. And although the court's ruling may be appealed by the state banking commission, the competition should get even more intense. Says one local bank official, "There were 10 or 20 northern banks lined up waiting for that Bankers Trust decision."

Of course, the big northern banks may have a thing or two to learn about doing business in Florida. In places like Palm Beach, where trust officers may have the manners of 18th century courtiers, managing money isn't for every chart-reader with a tweedy suit and a stubby pencil behind his ear. **—J. O'H.**

Millionaire snowbirds switching their nests.

Out of the oil crisis a whole new industry is being born. Here are some of its pioneers.

Stretching electricity

By Jean A. Briggs

CAN WE FIND ways to smooth out the peaks and valleys in the demand for electricity, so that calls on generating capacity would be nearly the same all day and all night? It's a worthwhile goal. Doing so, the federal government figures, could cut our demand for oil by the equivalent of 200,000 barrels a day. It would, moreover, save the utility industry at least $10 billion in capital costs, costs which are ultimately passed on to the consumer.

When Richard V. deGrasse, 42, was on Vermont's utility commission during the Arab oil embargo, he became convinced that it is possible to iron out those peaks and valleys. At least he decided to find out. An engineer and former professor, he knew about grants so he applied for and got a $440,000 one from the National Science Foundation and began making studies.

Before long he and a fellow former commissioner, lawyer William A. Gilbert, launched Control Electric Corp. Control Electric imports and sells room-size units that store heat for later use; it also manufactures controls so the units can be used on U.S. electric systems. These units store electrically generated heat during slack hours of use and release it continuously throughout the day. The units are practical whenever a utility charges lower rates for electricity at one time of day than at another. Most U.S. utilities are now doing this on an experimental or voluntary basis.

According to deGrasse: "Our volume has tripled every year since Control Electric got started in late 1975 with $20,000 in venture capital. It is now almost $1 million." Last September AEG-Telefunken of West Germany, the manufacturer of the units, bought 51% of deGrasse's company for a package of trade credits, debentures and cash totaling about $750,000. "We have plenty of capital behind us now," says he.

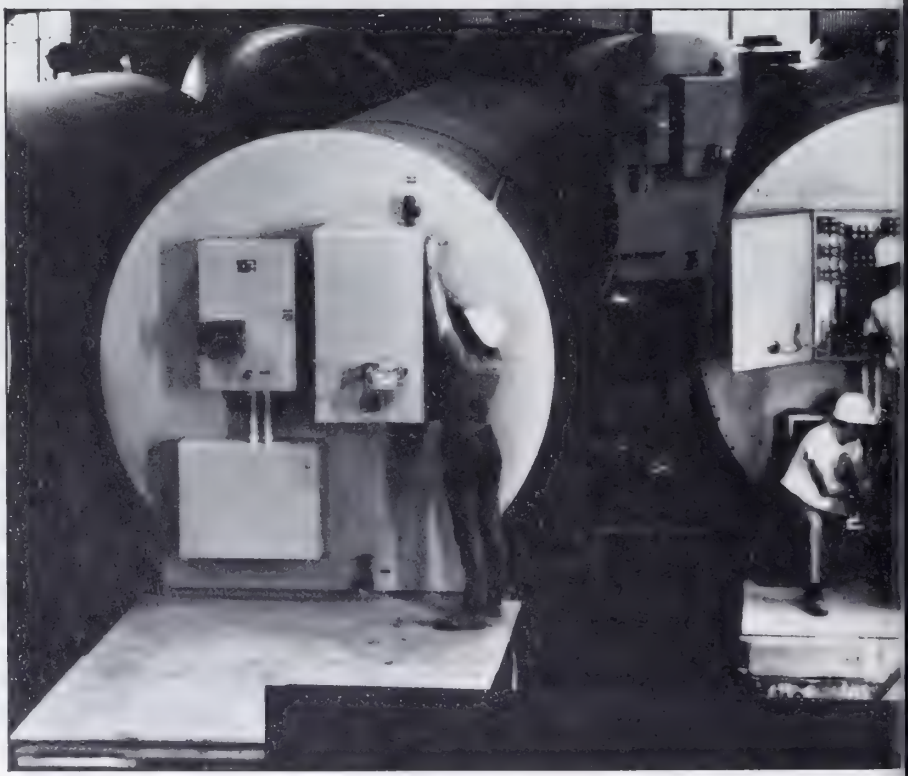
DeGrasse isn't the only one who sensed business opportunity in what the utility industry calls "load management." Load management essentially means trying to get customers to use electricity when it's best for the generating facilities to provide it. When energy was cheap the idea was to provide customers with electricity whenever they might want it. No more.

Charles R. (Pete) Harris of Charlotte, N.C. is another one who sensed opportunity. Harris is a longtime associate of the Bechtler family, which owns Zellweger Uster, Ltd. of Switzerland. He runs the company's U.S. operation, which until recently was primarily involved in supplying equipment to the textile industry. About 1974 Harris became convinced that it would be worthwhile for the pany to begin marketing its load agement equipment here. So Zellw Uster sent Peter Schnieper, a Swiss U.S. citizen, to Charlotte to develo business.

While deGrasse is selling heat st equipment to home owners and mercial establishments, Schniepe selling equipment for *rationing* elec ity to utilities and large apartment b ings. "The Zellweger Uster syste called 'ripple' control," exp Schnieper, "because it operates by ing an extra ripple of low-voltage cu over the power line." What that ripple does is to turn customers' ele cal equipment, typically their air c tioners and heating systems, off a according to whether their syste short of power or in surplus at any t

The two systems illustrate the basic approaches to load managemer storage by the customer when rate low for use when they're high ar control of customer use by the sup Both methods have been used for in Europe where electricity is r wasted the way it is here.

Adoption of these systems won't overnight, however. Dr. William Bl the Electric Power Research Insti the utility industry's research arm sists experiments with load mar ment techniques are just beginning: are some ways away from knowing the right answers are." One proble that time-of-day rates, though w spread, are still being used primaril an experimental or voluntary basis.



Megatherm's heat storage systems
Using electricity off-peak to provide heat for buildings.

SOMETIMES A PRODUCT JUST KEEPS GETTING BETTER AND BETTER.

The Kodak Carousel projector is a good example of such a product. Tried, proved, and improved over time.

It uses gravity to gently drop each slide in place. It's whisper-quiet, too.

It features a curved-field projection lens. For sharp edge-to-edge projection.

It uses the Transvue slide tray that lets you see the number of the slide shown, even in the dark.

It comes in many models. So you can choose just those features you want. Such as remote control. Automatic focus. Even automatic slide changing at timed intervals. And there is a wide variety of accessories made for it. Everything from special-purpose lenses, trays, stack loader to special "presentation aids."

See the Kodak Carousel projectors at your photo dealer's. And enjoy the projector that keeps getting better.

KODAK CAROUSEL PROJECTORS Kodak

make sense, it turns out, only if, at certain times of day, the utility has surplus generating capacity. Whether or not it does depends not only on variations in demand but also on what kind of capacity the utility has. If it uses mostly coal or nuclear power it is likely to have more power to sell off-peak than if it uses oil. That's because it's usually cheaper to keep a nuclear or coal plant going than it is to shut it down; the opposite is true for oil. Another problem is how costs are figured. Utility rates are usually based on average costs. The problem is to give the customer adequate incentive to use electricity off-peak but still to cover those costs.

A utility can offer different rates for different times of day, of course, only if it can detect *when* a given customer uses electricity as well as how much he uses. That means installing a new kind of meter that will record time of use as well as volume of use.

The meter manufacturers are ready. General Electric was apparently first on the market with an electronic meter that could perform the necessary tricks. But Sangamo, now owned by Schlumberger, wasn't far behind and neither was Westinghouse. The problem here is that time-of-day meters, like GE's best, cost as much as $240 per installation compared with about $23 for a conventional meter. The prices are expected to come down, but that won't prevent wrangling at utility commission hearings over who is going to pay for the new gadget, customer or company.

As far as central control of load is concerned, there's the question of whether a system such as ripple, which communicates one way—from the utility t customer—is adequate, or whether way communication is needed. way communication would also tel utility what's going on at the cust location. "The cost would be more double," says Blair. And, of co there's the question of how custo are going to react when their air c tioners or heating units or washing chines are turned off some afternoo

Despite the drawbacks, the pote market for load management equip is enormous—conservatively $2 bil assuming a large number of reside meters are replaced and a large numb utilities install control. If a large nu of customers buy storage units as w could be twice that. And if red doesn't get in the way, this is a beau way of saving energy. ■

The electricity savers

Listed below are companies already in the business of helping to stretch electricity. Some products give the utility the ability to ration electricity. Some measure when a customer uses it. Others give the customer the ability to store electrically produced heat.

"I'd like you to think of The Continental Corporation as a $7 billion supermarket of insurance."

John B. Ricker, Jr., Chairman and President

"When a company insures everything from 3-bedroom homes to giant tankers, 'supermarket' is the only descriptive word that really fits.

"And it fits The Continental Corporation better than just about anyone else in our industry.

"We're a company with $7 billion in assets. Among all U.S. property and casualty insurers, we stand seventh in premium volume. And we write just about every kind and form of insurance there is. We rank first in ocean marine, second in farmowners, third in allied lines and in inland marine, fifth in fire insurance, homeowners and fidelity, sixth in commercial multi-peril, ninth in automobile and eleventh in workers' compensation.

"Many of our subsidiaries are preeminent in their fields. For example, MOAC is one of the world's largest marine insurance companies. And Swett & Crawford is a leader in specialty coverages for industries as diverse as motion pictures and mining.

"On our shelves, customers can find every kind of policy. Some we invented —like the Comprehensive Business Policy. And Personal Comprehensive Protection, a unique home and auto policy.

"But we're not limited just to insuring insureds. We also insure insurers. Actually, we have the third largest reinsurance operation in the U.S. and the sixth largest in the world.

"Our customers do business with us in a variety of ways—through a network of agents in the U.S., Canada and overseas, through our joint ventures abroad with foreign companies and through part ownership of successful local insurers worldwide.

"So it's no exaggeration to say we're a supermarket. And a profitable one at that. In 1978 we reported record results with operating income rising to $303 million. That's a 21% increase over 1977. What's more, The Continental Corporation has been paying cash dividends without interruption since 1853. And since 1960, we've increased our dividend 14 times.

"So the next time you hear the name 'Continental,' think of The Continental Corporation. The one with the soldier in its logo, and a lot of shareholder benefits in its history."

For our latest financial reports, write The Continental Corporation, Dept. D, 80 Maiden Lane, New York, NY 10038.

THE CONTINENTAL CORPORATION

The Continental that means insurance.

C-E goes to the far corners of the earth to help find and produce oil and gas.

Here, on a sandy bluff overlooking the Gulf of Suez, C-E Natco desalters are processing oil from one of Egypt's offshore oil fields. In fact, C-E Natco equipment plays a part in processing about 25% of the oil and gas the world uses every day.

At other corners of the world, C-E energy specialists and equipment are also at work, helping to search out, develop and use energy resources.

On a remote coastline of Kalimantan, an Indonesian island, stand facilities that produce, process and transport oil from the Handil-Bekapai fields. Starting with feasibility studies and design, energy specialists from C-E Crest provided engineering, procurement, and project management for this challenging multimillion dollar project.

In the North Sea.

Gray Tool, a C-E operating unit, has furnished wellhead equipment for more than 50% of the platforms now installed or scheduled for installation in the harsh operating environment of the North Sea.

C-E Vetco has developed a diverless underwater drilling and production system. Used successfully in the North Sea, it cuts the time between discovery and initial production of offshore oil and gas reserves.

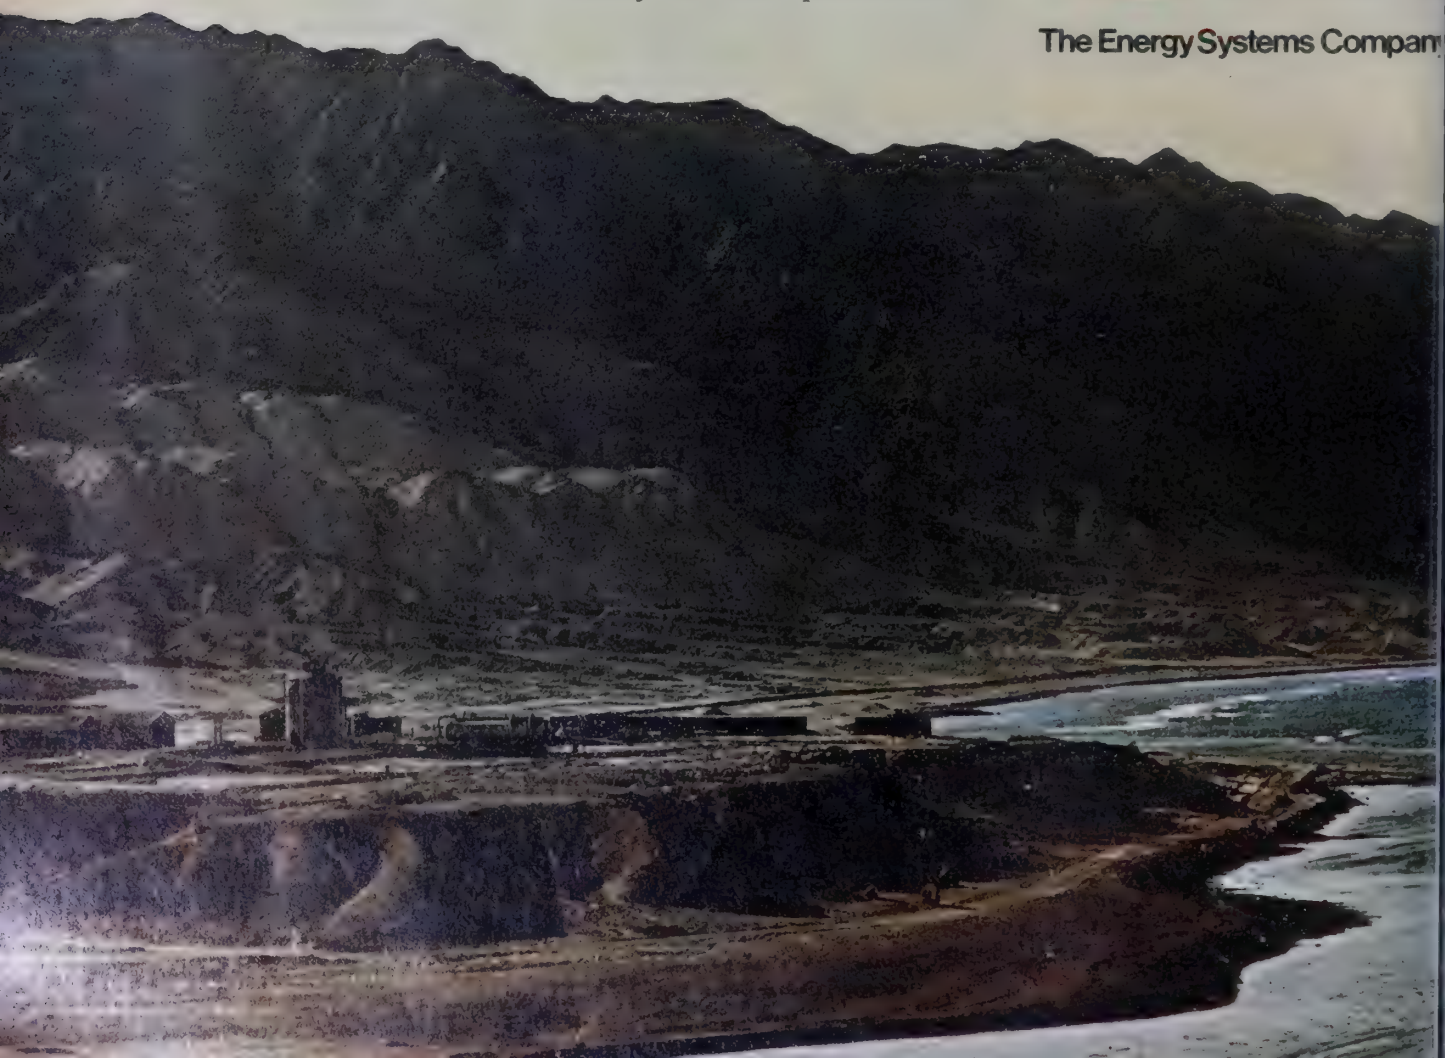
Energy is our business, all over the world.

For more than 65 years, C-E has been a leading supplier of systems, equipment, technology, and research to help develop the world's energy, conserve it, squeeze more uses from it, and clean up after it.

For more about C-E's worldwide activities, write Combustion Engineering, Inc. Dept. 7004-75, 900 Long Ridge Road, Stamford, Connecticut, U.S.A. 06902.

COMBUSTION ENGINEERING

The Energy Systems Company



istinguished economist sees hope for the U.S. economy where others nothing but gloom.

The economy's problem: It doesn't pay to invest

As I See It

THE U.S. have the English disease, n an earlier stage than the U.K. has e we investing too little, consum- much? And is our economy hope- set on a downward spiral? Pessi- abound. And our economists, pre- ied with mathematical models and —mostly vainly—to call the short- fluctuations in the economy, have od answer to this basic question. conomists tend, in fact, to cop out, se to answer profound questions the economic future demands go- yond the currently narrow bounds economics profession and delving istory, sociology, even culture.

W. Arthur Lewis is an economist pproaches his subject from just broad point of view. In his writing ws freely upon other disciplines nows how economic progress can- reduced to simple Keynesian or nanite formulas. Born on the small bean island of St. Lucia and educat- the London School of Economics, rinceton University professor un- nds the problems of the economi- nderdeveloped peoples, but he also that many of their problems are posed—products of their own his- heir own politics, their own cul- rather than entirely the result of itation" from above or from with- or does he share the academic prej- that business is a venal occupa- a prejudice he dismisses as "hu- tic snobbery."

is is now James Madison Professor tical Economy, and his very field, *l* economy, is a throwback to an day when economics was no nar- bject but engaged the philosophers elves. Lewis is little known to the l public but widely respected among scholars and policymakers. His new book, *Growth and Fluctuations, 1870-1913*,* is, despite its dry title, fascinating reading for anyone interested in business or economics.

Does the U.S. have the English disease? Lewis' replies, while hardly complacent, should comfort those who still have faith in U.S. society.

Much of what he says may surprise FORBES readers, who may think we are in the midst of an inflationary boom. Not so, says Lewis, from the long-term point of view we are in a cyclical depression of the kind the U.S. has suffered many times in the past. As evidence he cites: a low savings rate, inadequate corporate profits, a sick stock market and chronic unemployment among skilled workers. Stagflation? It's nothing new, he says.

"The U.S. is not caught in all these traps; it has devalued the dollar and imposed tariffs. It has a high level of capacity to produce new technology and trained people."

Thus, whereas Britain's decline seems to be semi-permanent, he suspects that the U.S. is merely in a cyclical lull. The U.S.' biggest problem, then, is not inflation but too-low economic growth.

Professor Lewis was interviewed for FORBES by Norman Gall, journalist and scholar, a visiting fellow with the Woodrow Wilson School of Public and International Affairs, Princeton University and recipient of a Guggenheim Fellowship. A graduate of New York University, Norman Gall has written articles appearing in *The Economist, Le Monde,* the *Washington Post* and the *Wall Street Journal*.

Gall: Your book explains how Britain exported a great deal of its capital a century ago—rather than investing at home—as the U.S. is doing today. Both have had low domestic investment in relation to GNP. Is history repeating?

Lewis: The U.S. is not, I think, in any long-term situation similar to Britain. The British economy was not able to *use* capital at home. The British capacity to switch from the older techniques of the Industrial Revolution—the cotton industry, the iron industry, etc.—to new products and methods was marred by a lack of technological infrastructure. Therefore, they could not invest profitably at home, so they invested abroad.

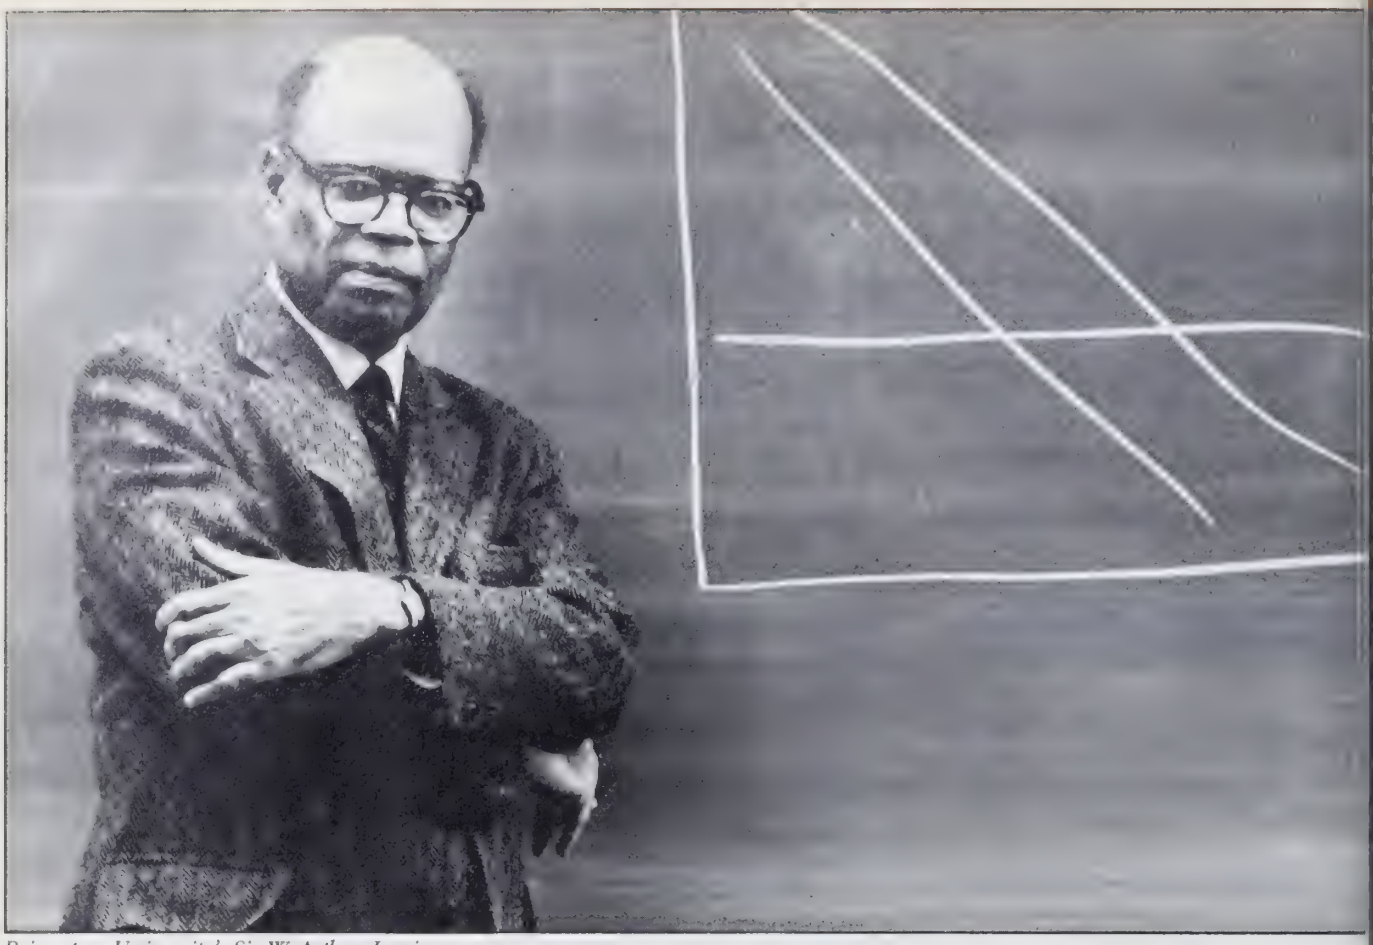
I don't think the U.S. has turned the [downward] corner and is any different from where it was 15 years ago. I'm afraid I'm an old-fashioned economist. I think in terms of business cycles. I see the U.S. at the trough of one of its relatively frequent depressions—depressions which have little to do with long-term growth prospects.

A century ago Britain was caught in a set of ideological traps. All the strategies available to her were blocked off in one way or another. She could not lower costs by cutting wages because of the unions, or switch to the American type of technology because of the slower pace of British workers. She could not reduce her propensity to import by imposing a tariff or by devaluing her currency, or increase her propensity to export by devaluation or by paying export subsidies. She could not pioneer in developing new commodities because this now required a scientific base which did not accord with her humanistic snobbery.

So instead she invested her savings abroad, the economy decelerated, the level of unemployment increased and her young people emigrated.

The U.S. is not caught in all these traps. The U.S. has devalued the dollar and imposed tariffs. It doesn't have the technological problems that the British had. It has a high level of capacity to produce new technology and to produce people trained in using it. At the end of the 19th century, the British were dependent on foreign trade. The economy was

and Boston: George Allen & Unwin, 1978, 336pp.



Princeton University's Sir W. Arthur Lewis
He sees some gloom, but doomsday will have to be postponed.

driven by foreign trade and got into a mess because it couldn't find its way in foreign trade. The U.S. economy is not dependent on foreign trade. It is potentially almost a self-contained economy. Its capacity to grow is not dependent on trade with the rest of the world. Its capacity to grow is dependent upon its own virility, its technological prowess, its savings capability and so on.

The U.S. savings propensity is low now, as you say, compared with times of prosperity. That's always the case. To be doubtful about the U.S., one would have to be doubtful about its capacity to make and exploit technology, doubtful about its entrepreneurship and things like that. I don't know what evidence there is for thinking there is any long-term downward shift in these things.

I don't know the outcome. But I note that a lot of people claim to know the answer. They claim that the answer is unfavorable. That doesn't mean they're right. The American position in the 1980s, like the British position 100 years earlier, depends upon continued innovation. Therefore, I think the crucial question that is being debated, for which we really don't have the data, is where the U.S. stands today in research and development, in patents, in innovation, in the forefront of new technology.

You've no doubt seen some of the statements on how patents have gone down, registration of foreign patents has gone up, share of expenditure on research and development has gone down, etc. The problem is that one has to distinguish between a cyclical recession and a permanent phenomenon. It's not possible in the middle of a long recession like this one, which now has lasted five years, to say whether the unfavorable things that one sees are temporary or long-term phenomena.

Starting with Marx in 1848, every time there has been a recession critics have predicted the imminent collapse of capitalism, just as the early Christians expected the imminent arrival of Judgment Day. Capitalism certainly will pass away; all social and economic systems do. But its capacity to survive great shocks has been thoroughly demonstrated and has to be taken seriously by friend and foe alike.

Gall: For a decade now, some leading commentators have been saying that the future of the industrialized countries will be in knowledge-based industries, while the older, metal-manufacturing industries will be moving to lower cost areas. Do you see this happening?

Lewis: I know where we've come from, but I don't know where we're going. We're coming from a world in which change takes place all the time, especially technological change in which t dustries that have been important to be important. Other industries their places. If you said that the or importance of industries in the U exactly the same as it was 25 year then I would be unhappy. I would there was something wrong. [Bu fact,] there *must* be change taking The question is in the virility system: Is the invention and innov process healthy? Do entrepreneurs worthwhile to invest?

Currently, in the middle of a d sion, we do not want to invest. T symbolized especially by the stoc change. If you build a plant for $1 m and then try to sell it on the stoc change, you get only $800,000 for it. is why nobody invests. If you hav money to invest, you buy into [an ing] business instead of putting m into a new one. That's a sign that in the middle of a depression. But i necessarily a permanent, terminal One distinguished colleague of mine it permanent. He thinks the stoc change has ceased to perform a function. But I think it can be reviv

Talking about invention, it isn't n sary that the U.S. pioneer in innova All that is necessary is that it inve innovation which can be pion somewhere else—Japan or Germa

where like that. It's quite conceiv-
that the seat of industrial innova-
may have moved from the U.S.,
n pioneered a whole set of industrial
ologies after 1880. I see some data
ating that the pace of invention is
more rapid now in Western Europe
in the U.S.
the end of the 19th century, there
whole set of new innovations: the
vriter, electricity, the telephone,
frigerator, the automobile, all these
s. Then Europe had a setback with
l War I and the U.S. went ahead to
op all of them. The U.S. not only
oped them technologically, but
ed that mass production and mar-
g was economically feasible. Every-
could have a telephone. Everybody
have two cars. Everybody could
a refrigerator. Before Europe could
bute all these things to its people,
ad World War II. By the time you
to 1950, Europe was way behind
J.S. in a wide range of things and
devote 20 years to wasting vast
of money in giving everybody a
none and two cars, etc. It may be
Western Europe and Japan are now
rs of innovation, but these innova-
may wind up in the U.S., provided
t is quick to pick up and adapt what
ented elsewhere.
: What about unemployment? Why
so high? Has it to do with all the
en coming into the labor force?
is: The entry of women into the
force puts a pressure on the indus-
system that it has failed to meet
the second half of the 1960s. These
en came into the unskilled labor
et. They came into the poor jobs
they compete with minorities:
s, Puerto Ricans and so forth. What
ve in the U.S. is a labor market that
erstocked with cheap labor, with
e who don't have entrée into the
kind of jobs. That market will
nue to be overstocked until we get
hing like the European situation of
ars ago. At that time industrial pro-
on was rising so fast that it created
ormous demand for skilled labor,
ng people out of unskilled jobs into
r-paying skilled jobs. The Europe-
iquidated their *lumpenproletariat.*
World War II, the working classes
rope joined the mainstream of socie-
r the first time. They were drawn
the jobs that nobody wanted to do
vere given well-paid jobs in indus-
hen, of course, other people were
ht in to replace them—from Yugo-
, Greece, India and the Caribbean.
U.S. needs this to happen, too. It
happening here because there
been this fast rate of increase in
emand for people in good jobs. This
at I mean when I say the U.S. is in a
ssion of the kind we have had fre-
ly in the past.

Annual growth of industrial production of 5% is absolutely vital to the social health of the U.S. [It has averaged only 3% over the past five years.] If the U.S. doesn't have a fast rate of growth of industrial production, and continues to have women pouring into the labor market and more illegal immigration from the Caribbean and Mexico, the levels of unemployment will become very high. The feminist movement will become explosive and the black movement will become explosive. The U.S can't afford to have the kind of economic malaise that people are taking for granted.

Gall: That is essentially the point. Many observers now say that the world's developed economies are condemned to a prolonged period of excess industrial capacity, especially in basic and capital goods industries. To make matters worse, many of America's factories have older machinery and therefore may be less competitive.

Lewis: Well, I come back to the fact that

"The U.S. is essentially a self-sufficient economy. It really doesn't matter to the American economy what is going on in Germany, Japan and all these other places. The American economy could build a wall around itself."

the U.S. is essentially a self-sufficient economy. It really doesn't matter to the American economy what is going on in Germany, Japan and all these other places. The American economy could build a wall around itself, a thick wall. American imports are only 5% of GNP. America is self-sufficient in food. It's self-sufficient in manufactured goods. The only thing it's not self-sufficient in is some kinds of minerals, of which oil is one. It's not the position in which Britain, Germany and Japan find themselves. Japan is entirely dependent on the world outside. The U.S. is not dependent on the world outside.

Gall: But what about oil? The U.S. now imports nearly half its oil. If Soviet influence should spread through Iran and dominate the Persian Gulf, as well as the oil tanker routes around the Horn of Africa, the Russians could cut off the flow of oil supplies to the West. Are you saying that the U.S. is sufficiently autarchic and independent in its economic operations to live through such a crisis?

Lewis: There's a difference. You are talking about military dependence. In military dependence, only one critical item—such as oil—could be missing. But I'm not talking about military dependence. I'm talking about economic dependence. Therefore, I'm only concerned about the importance of an item like oil in the national account as a whole. I'm saying that imports are small. The U.S. doesn't have to be all that competitive with everybody else in everything else, especially with the increasing need for American food. I could say the same thing about food that you said about oil on the Persian Gulf.

Suppose the U.S. economic system became totally closed. Suppose it became completely noncompetitive and could neither import nor export anything. Could the system still continue to grow at 7% per annum? My answer is yes. It depends on technology and investment.

Gall: Wouldn't it require a great deal of political will to make such an adjustment to a situation where imports were restricted? In the past you have attached a great deal of importance to noneconomic factors in determining economic reality. Do you think the U.S. society has enough internal cohesion to withstand such a shock?

Lewis: Let's talk about cohesion. One thing that dogs latter-day capitalism is the trade union movement. The U.S. has a mild trade union movement—when compared with the powerful British unions. The British are in a complete mess. They can't move in one direction or another without fighting the unions. Ask yourself about inflation. What role have American unions played in inflation? Inflation has come mostly from outside. U.S. unions have been remarkably restrained, which is a big difference between the U.S. and Britain. In Britain the Prime Minister says we ought to have a wages and incomes policy and is denounced by the leader of the trade union movement. In the U.S., the President says we won't have a wages and incomes policy and is denounced by the leaders of the trade union movement, who say we ought to have mandatory limits on wages and prices.

There's a vast difference. America doesn't begin to know what unions are like, compared with Great Britain. Its unions are much more like the Japanese unions, whose leaders are gentlemen and brothers of the capitalists.

Gall: Let me get back to the question I asked earlier. What policy should the U.S. be adopting to ensure that we don't follow the path of decline that Britain traveled a century ago?

Lewis: The main problem in the U.S. is to get out of this recession, to have a faster rate of growth. How can we get back to the long-run upward trend of about 5% annual growth in industrial production? To reach that growth trend, we may need a burst of speed in industrial production such as the 7% annual growth rate of the 1961-66 period. In 1978 we had 5.7% industrial growth. Everybody was surprised. The newspapers reported that all the economists were wrong in their predictions. All of them

predicted growth below 4% or 5%.

There's lots of pessimism around. We know there are various ways to stimulate the economy. But when you suggest them, people say that if you try to stimulate the economy at this time you will only get a rise in prices because there's a shortage in capacity, especially skilled labor capacity. However, if industrial production began to grow rapidly, labor would simply be drawn from the unskilled market into the skilled market and there wouldn't be any bottleneck.

The real problem in the economy is that it doesn't pay to invest. Investment is too low because the profit ratio is too low. What you have to do somehow is to stimulate the economy and raise the profit ratio. But it certainly cannot be done by raising interest rates to 13%, which is what the government is trying to do now.

Interest rates have to come down. Bringing down interest rates should also solve the stock exchange problem. When interest rates go down, stock prices will rise. It would no longer be true that, if you build a plant for $1 million, you could only sell it for $800,000 on the stock exchange.

Gall: Then is the economy simply faced with a problem of momentum?

Lewis: I think the U.S will have a harder time in the future than in the past. We see this in the difficulties with the dollar. The U.S., like any other country, must be allowed to export as much as necessary to pay for its imports. If you cannot have such equilibrium, then you cannot have peace in world trade. The set of rules that you have must be a set of rules that enables countries to pay their way.

Gall: You seem to be evoking an image of the U.S. as a kind of Gulliver fallen asleep among the Lilliputians.

Lewis: I'm saying all this because people are taking unrealistic attitudes toward the U.S. as it is running this great trade deficit. The domestic counterpart of this deficit is a high level of unemployment. As it imports shoes from Italy, American shoe factories close down. It is not reasonable to expect Americans to put up with the situation which forces them into a high level of unemployment. The argument for trade is, yes, the Italian shoes will cause you to close down your shoe factories, but you will be exporting something else that will be equal in amount.

Gall: You seem to be talking essentially of an invisible hand providing for compensating exports that will balance our accounts.

Lewis: It's not an invisible hand. It's a fixing of the right rate of exchange.

Gall: But will the U.S. be permitted to devalue in its dealings with certain countries? Will any devaluation be matched by a counter-devaluation?

Lewis: This was the situation until 1971. Mr. Nixon tried to get some peaceful readjustment of currencies. He did not get it and proceeded to take a set of drastic actions. Consequently, the dollar was devalued 25% or 30% vis-a-vis the German mark during the 1970s. Not long ago the yen was 300, and now it is under 200. The big difference between the British at the end of the 19th century and Americans today is that the Americans did devalue. I'm not saying with certainty that this is going to happen, but an adjustment of currencies to a new reality may be taking place.

Gall: Speaking of currencies, many people are worried about the foreign debts of developing countries. Brazil this year will borrow about $13 billion, or about 8% of its GNP, and Mexico may be borrowing the equivalent of nearly 20% of GNP. The Eurodollar market seems to be a medium of speculation on a depreciating asset: the dollar, that will be cheaper to pay back later on. What are the implications of this increase in borrowing?

Lewis: There's a big difference between investing the money productively in buildings, steel plants, oil, refineries, etc., and using the money to dig holes in the ground and fill them up again. If the money is being invested productively, for example, to expand Brazilian exports, the money will pay for itself. It doesn't really matter how much it is because it's self-financing. [But] if the government borrows money for foolishness and bankers insist on lending them money, you have a default. We do have defaults. The international investment business has always been full of defaults. In the 1820s, the Latin Americans defaulted. In the 1840s the North Americans defaulted. In the 1870s everybody defaulted. In the 1890s Argentina and Australia defaulted.

"Investment is too low because the profit ratio is too low. What you have to do is stimulate the economy and raise the profit ratio. But it cannot be done by raising the interest rates to 13%, which the government is trying."

I think we make too much of default from the point of view of the economic system as a whole. Charles Kindleberger of MIT has just published an entertaining book, Manias, Panics and Crashes [Basic Books, $12.95], in which he makes the point that when you have a crash, it is over within about six months. After that the system picks itself up again. What has the crash actually done? The main thing it has done is to damage confidence. As far as actual money flows are concerned it hasn't done very much.

People were extremely worried by the debt burden in 1970. Since 1970, prices have multiplied by two or three, so that the debt burden that existed in 197 more than halved automatically. I happens at regular intervals, the se thing to do is to borrow the maxi amount all the time. But you can't that to happen forever.

Gall: Why can't you? The major A can banks tell their stockholders: at the beautiful profits we're maki Brazil, just by doubling our rate of ing last year.

Lewis: What happens is that the take their petrodollars and put the the Bank of America. The Bank of A ica lends these dollars to Brazil Arabs have taken a long time to about inflation, but they are beginni learn. They will stop putting their m into the Bank of America unles bank indexes their deposits against tion. Otherwise, they will put their ey in real estate.

Gall: Then the banker will say: "I have all this principal anymore be the other guy is not depositing his ey with me. He is buying land." So would be the circuit breaker. And happens when the circuit breaks?

Lewis: Then you will have a syste which the interest rate is 50%. M will become become very expensive sucker, the Arab who put his mon the Bank of America, will have g wise. Look what happened to oil pr They indexed the price of oil and will index the money that they hav in the banks.

Gall: What happens then to the ba

Lewis: The banks will go to Mr. B enthal. Mr. Blumenthal will hold hands. The U.S. Treasury will bec the lender of last resort to ensure stability of the banking system. would have an international confer at which it would be agreed that t will be no repayment on principa loans for the next two or three y Those who could pay something on interest would pay some interest, ar forth. What difference would that m to the world economy?

There would be a lot of rescheduli debts. There will be a disturbanc trade for a while. For six months s exchange prices might fall. But for world economy to go down, m economies must go down. The Ger economy must go down or the Amer economy must go down. So long as major economies are moving at a st pace of 5%, or whatever you like, m ing that happens in Brazil or Zaïr going to make any difference to the of the world economy, or trade volu

So, when you ask me what would pen, I have to ask myself: Does cause industrial production to fall in U.S., Germany or Japan? The answ no. Why should it? There would be s turmoil, but the economic system w survive. ■

Today's management techniques are not new to him.

Kieran Fitzpatrick has learned to work th cost control, quality control, flexible pro- ction schedules, and increased employee sponsibility. Many international companies ve shown that innovative management can very successful in Northern Ireland. It rks for Du Pont, Goodyear, ITT, for undig, Michelin, Telefunken—for firms of sizes in a range of industries.

The Northern Ireland work force fits w methods into a manufacturing tradition old as the industrial revolution. We mbine innovation with positive attitudes ward company loyalty, productivity, d labor relations. We apply to the task lls from the basic to the sophisticated.

And to help put all this to work for you, we offer the best overall package of economic incentives in the EEC.

Selling America short

idential adviser Alan Greenspan
sing cold comfort at $10,000 an hour.

By Nick Galluccio

YOUNG, TALL, IMPECCABLY tailored, Julian M. Snyder brings the audience thundering to its feet, with his conscious parody of William Jennings Bryan's 19th-century oratory: "Let us not crucify America upon the cross of Keynes." Snyder's populism is a far cry from Bryan's. Where the latter wanted cheap money and a downgrading of gold for the benefit of the farmers, the former is speaking to a class of small property owners, mostly of advancing years, who, for various reasons, feel insecure about what they owe and what they own.

Editor and publisher of *International Moneyline*, a hard-money economic newsletter, Snyder is addressing some 500 small businessmen and professionals attending last month's three-day International Investment Seminar at Miami's posh Omni International Hotel.

Is this a sign of the times? The Miami event is among a growing number being spawned by shrewd promoters at a time when worries over inflation, recession, high interest rates, the falling dollar and ailing stock market have gripped Americans everywhere. Flocking to these seminars are thousands willing to plunk down as much as $3,000 to hear from people like Snyder, Alan Greenspan, Arthur Laffer and Ronald Reagan that the U.S. is going to hell. But—the message goes—you *can* take it with you in the form of anything from diamonds, gold, silver, chromium, platinum and precious stamps to soybeans, real estate and foreign currencies. These seminars emerged during the bear stock market of the 1974-75 recession. When the market rebounded, their popularity diminished. Now that it's back in the doldrums, they're burgeoning again.

The people listening to Julian Snyder last month descended on Miami from places like Ypsilanti, Mich., Grand Junction, Colo., Simi Valley, Calif., Baton Rouge, La., Belle Fourche, S. Dak. and

Visitors to our new Lackawanna bar mill might think we can build other new facilities at will.

We'd like to. It cost us a bundle to build this sophisticated steel bar mill at our Lackawanna, N.Y., plant. Those multi-millions were well spent. That we know...because more efficient facilities improve profitability. Understandably, we'd like to build more, but we can't always afford them.

In recent years, the steel industry has found it difficult to generate sufficient funds to invest in all the newer and more productive facilities desired. Steel imports dumped into our country, soaring costs, and heavy environmental demands have all taken their toll on profits.

Solutions to these and other problems will help us generate additional funds for capital investment...help us adopt new technology wherever practical to cut our costs and improve our profitability. Bethlehem will continue to seek those solutions.

BETHLEHEM STEEL

Bethlehem, PA 18016

It has been a remarkable half century, not the easiest of times, bu certainly an eventful one

Two Sunset covers, 50 years apart. On one, the serenity of a natural treasure, Lake Tahoe. The other, a lead-in to the practical application of a natural resource, solar energy. Two significant mileposts in the ever-changing story of 20th Century Western America.

The February, 1979, cover marks Sunset's golden anniversary as The Magazine of Western Living (although it acquired its birthright from a predecessor Sunset which had been foun by the West's Southern Pacific Company in 1898).

The 1929 issue, the first under Lane family ownersl emerged barely ahead of the stock market collapse and Great Depression. It would be 1938 before the new publica turned a profit—even a modest one—but the West and Su had begun the forging of a close and inseparable partnersl

The close alliance of the West and Sunset Magazine has been one of the phenomena of these action-packed years.

As the West has grown and changed since 1929, so has set. Its original service area of seven Western states is now een states, the result of a progressive outreach into, first, Territory of Hawaii, then Alaska, and more recently, the Rocky Mountain states.

In the evolutionary process, Sunset's circulation, a meager 00 in 1929, has grown to 1.4 million, with a total reading ence of nearly 3.5 million pace-setting men and women, the Rockies westward to Hawaii.

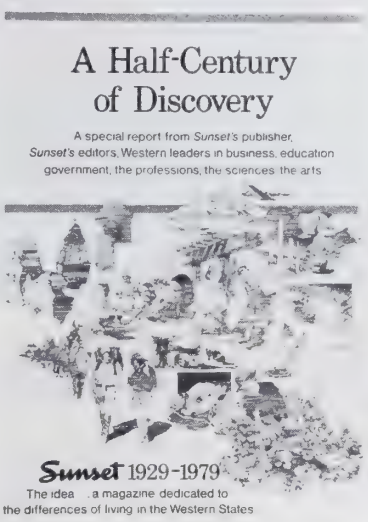
Sunset's basic purposes have been constant. Policies have changed, and been modified. nterests and involvements have expanded greatly.

Lane era began with a recognition that the West is a unique umstance, markedly different from the rest of the United es, not only in climate and geography, in historical molding, cultural evolution, g patterns, and social perspectives.

It became the magazine's purpose to Westerners make the most of their ue opportunities in terms of home life family interests: home-building and dec- ing, landscaping and gardening, foods entertaining, recreation and travel.

These are still the cornerstones, but set additionally has become a moving e for conservation and preservation of assets and attractions which make the t such an inviting place to live, or to visit n and again.

Thus, throughout these eventful 50 s, Sunset Magazine has written its pages Westerners and Westerners only. We do e many subscribers outside the West, olicited by Sunset, but they pay a mium for their subscriptions. Sunset is available on newsstands outside the t.



A Half-Century of Discovery
A special report from Sunset's publisher, Sunset's editors, Western leaders in business, education government, the professions, the sciences the arts
Sunset 1929-1979
The idea a magazine dedicated to the differences of living in the Western States

This special 16-page report, with a publisher's letter, history, and a "looking ahead" section by leaders from many disciplines, is bound into the February issue as a special bonus to Sunset's readers

Serving the Western family's interests is what Sunset is all about.

set readers know that when new conditions, new problems, udden emergencies arise, Sunset's editors will be on the m with alert and practical responses. Coping with energy tages and the drastic 1976-1977 drought are cases in point. occasion, we have pulled major articles and even magazine rs off the press, in order to treat an emergency which rred after our issue had been "put to bed."

Be assured, however, that Sunset does not have to have an rgency to be useful to its readers. Month in, month out, the azine provides an enormous variety of helpful ideas for Western families, whether it's getting value from inflationary dollars, adapting solar energy to practical use, conserving resources, having fun with a how-to-do-it home project or an affordable trip.

It has been a mutually rewarding partnership. That we have proved useful to our loyal readers, and to marketers and advertisers who are interested in selling the West, all of us at Sunset are both proud and grateful.

We have seen magazine circulation grow at about double the rate of Western population—without benefit of premium promotions, combination offers, and other subscription-boosting practices. Sunset's renewal rate is among the highest in the industry, and all renewals direct to publisher are cash-in-advance.

We have seen advertising revenues average better than $1 million per issue since 1971. 1978 was the biggest advertising revenue year in Sunset history. And the February anniversary issue has set a record that will be hard to beat.

Meanwhile, Sunset Books—more than 120 titles—are selling handsomely all over the world... A brand new, completely revised edition of the Sunset Western Garden Book (over 2,300,000 copies since first published) will go on sale in late February. Sunset's special interest annual magazines are growing year by year. Sunset Films is producing motion pictures for many American companies, large and small. Among our recent clients: Armour Foods, Hawaiian Airlines, Bechtel Corporation, and John Hancock Insurance.

"We are excited about the future." Okay. Nice birthday party. Where do we go from here? Chairman and Publisher Bill Lane said it for all of us, in a letter to Sunset readers, enclosed in the February, 1979 issue:

"We are excited about the future, and determined to stay down-to-earth and useful.

"Our task is to be sensitive enough to bridge the old and the new. In a world where it seems we're all being leveled by computers, Sunset's policy is to recognize all of you as distinctive individuals.

"We are in a very personal business. Serving your interests is what Sunset, The Magazine of Western Living, is all about."

Today, chemicals help keep world business in business.

And IU's Gotaas-Larsen fleet gets them where they're needed.

Businesses throughout the world need refined chemicals to make the products we use every day—synthetic fibers and materials, paints, glass, and more. In transporting these chemicals from where they're made to where they're used, nothing is more important than safety and purity.

Gotaas-Larsen Shipping Corporation, operating one of the world's major independent fleets, owns four modern chemical carriers equipped with advanced cargo handling and containment systems. All have been built since 1974 and are designed to comply with all current maritime codes for international chemical transportation.

With up to 39 segregated tanks, each vessel can carry cargoes as different as petrochemicals and palm oil, alcohols and acids. The tanks are made of stainless steel or specially lined to prevent contamination.

Founded more than 30 years ago, Gotaas-Larsen also transports liquefied natural gas, crude and refined petroleum. In addition, the company operates offshore drilling rigs and passenger cruise ships.

Yet Gotaas-Larsen is more than a maritime leader. It's an important part of IU International, a company with worldwide interests in land and sea transportation, industrial products and services, utilities, distribution and agribusiness that add up to $2.5 billion in annual revenues.

For more information about the Gotaas-Larsen fleet, write Kenneth A. B. Trippe, President, Gotaas-Larsen Shipping Corporation, 1114 Avenue of the Americas, New York, New York 10036. To learn more about IU International, write IU Corporate Affairs, 1500 Walnut Street, Philadelphia, Pennsylvania 19102.

IU International

e cause of our economic problems is the ief that all things are possible in an ever- anding financial universe. Let's drive the er money into the wastebaskets of history."

what better way to shop than over his and hors d'oeuvres in the thick- ed, sun-splashed suites of the rs and investment advisers spon- cocktail parties and ongoing in- ent workshops—by far the hottest last month at the 550-room Then, too, there was the lobby nholing, hawking and other "free" ment advice.

vhere was the action hotter than at entation given by Lawrence Mon- r., vice president and broker of son McKinnon Securities, Inc. It riday, Feb. 16, the second day of the ence, at about 12:15 p.m. when erg passed out to the more than eople in attendance a five-page re- report touting a Long Island, N.Y.- company called Standard Micro- ns Corp., an over-the-counter list- nufacturer of metal-oxide semicon- chips. At that very moment, the was selling at 8⅜. "I wouldn't sell ock if it reached $25 a share—even ached $40 a share," said Monberg. g his talk some 20 or so people d out of the conference hall to the one booths to call their brokers buy orders. Within an hour and a he stock's price had climbed to 10, and volume reached 81,400 compared with only 15,000 the us day.

ening to some of the speakers, er, you wonder that the attendees buy any stocks at all. Here's Julian r: "The specter of financial disas- ntinues to haunt the world in 1979. nderlying cause of all our economic problems is not Jimmy Carter, but rather the persistence of an erroneous idea . . . the belief that human material progress is perpetual, that all things are possible through an ever-expanding financial universe. We are all now beginning to be very much aware that something is rotten in the Keynesian economic universe. Yet the mystical proposition remains embedded in our minds that depression can be postponed indefinitely through policies of unlimited money printing and currency depreciation. We are entering an era of permanently rising inflation."

There was no surprise to Snyder's conclusion: Buy gold. "Let's drive the paper money into the wastebaskets of history," he orated. Snyder predicts gold will rise from its recent price of $250 an ounce to the $300 level in the next six to nine months, touching off a commodities boom.

James E. Sinclair, a partner of the New York-based firm bearing his name, followed Snyder to the makeshift rostrum to tout gold as the ultimate inflation hedge, only he recommends shifting into Swiss franc denominated bonds once gold reaches the $300 level. Sinclair's scenario calls for the franc to reach 1.06 per dollar *vs.* today's 1.66 per dollar, a 36% appreciation. Sinclair is devising a special so-called "strategic metals" fund consisting of titanium, chromium, platinum, lithium and uranium.

The stock market? Montague Guild Jr., president of Guild Investment Management, advised waiting for economic recession to set in—possibly late this year—before buying. His recommendations include telecommunications stocks such as M/A-Com and Rolm and computer stocks like IBM and NCR (in both industries the U.S. enjoys technological superiority over foreign competitors). He is also stressing the cement manufacturers located in the Sunbelt and California—the likes of Kaiser Cement & Gypsum and Texas Industries.

Fred Stanton Smith, president of the Keyes Company, a large Florida-based real estate outfit, came to the rostrum to suggest, of course, real estate. His advice to the novice apartment building buyer: Debt service of principal and interest should be less than 50% of the building's gross income. "Don't get into highly leveraged situations," he warns. Under no circumstances give the lender a piece of the property's income as a "kicker" in return for mortgage financing. He continues: "Always look at real estate in terms of the rent per square foot instead of whether it is one or two bedrooms."

What's more, he says, look at taxes as a percentage of the property's gross income. If that ratio is low, say in Miami relative to a nearby town, then it's bound to increase, so beware. Lastly, Smith pleads, "don't become enamored of a prospective property. Remember, the building should be seen as nothing more than a long-term inflation hedge."

To these rather conventional investment pitches, the sponsors of the convention added a sprinkling of media stars: Ronald Reagan and Alan Greenspan—each of whom were paid in excess of $10,000, a somewhat inflationary sum for a one-hour speech.

And there was Arthur Laffer of the University of Southern Calif. Riding the crest of California's Proposition 13, the handsome, boyish-looking Laffer is among the new breed of "free market" economists. His advocacy of mammoth tax cuts to stimulate corporate output and create new jobs is understandably appealing and fell on willing ears.

Greenspan fed the audience statistical analysis and interpretation. A bit dull but enlivened by the charisma that attaches to anyone who has had wide TV exposure. Bespectacled and professorial in appearance, the former chairman of President Ford's Council of Economic Advisers offered little solace to those many-furrowed faces listening intently to his hour-long presentation. His analysis: The explosion in mortgage credit at its present rate of $100 billion a year—ten times that of seven years ago—has strained credit availability to the point where mortgage money is fast drying up.

The speculative boom in real estate has touched off a selling spree among home owners eager to cash in on the soaring prices. Turnover of single-family houses, Greenspan points out, now exceeds 4 million units, compared with the average annual rate of 3 million. Increasingly tight credit is forcing housing prices and interest rates ever higher. But the bubble will burst, he predicts, next summer when home prices will plunge by as much as 15%, aggravating the recession. This, coupled with rising oil prices, will make for hard times through 1980.

When Ronald Reagan rose to the podium the auditorium resounded in an almost deafening thunder of cheers and applause. The handsome, articulate Reagan rewarded his admirers with a yawning and probably untrue platitude: "We are living in the longest sustained period of inflation in the history of government. You can go broke just hanging on to your money these days."

Was this worth $1,500 and a long trip? Says 71-year-old Weil: "If you associate with and listen to smart people you're bound to learn—it's got to rub off." ■

"I wonder often what the vintners buy one-half so precious as the stuff they sell." —Omar Khayyám
You can say the same thing about oil.
—Southland Royalty's Jon Brumley

Southland buys as others sell

AT 6:30 A.M. every weekday, four Ft. Worth men just heading into middle age gather at the old Hanging Tree, where their Texas forefathers used to string up cattle rustlers, to run three miles around the Shady Oaks Country Club.

This is not casual jogging, but serious business—running against time. If somebody trips, the others simply hurdle their fallen comrade and go on. That actually happened once to Jon Brumley, the 39-year-old president and chief executive officer of Ft. Worth's Southland Royalty Co.

Brumley didn't resent his friends' callousness: It was part of the drill. Brumley's $184 million (revenues) company, one of the fastest-growing little oil outfits in the country, is doing exactly the same thing.

The year Brumley became president, 1973, Southland had revenues of just $22 million, most of it royalties from producers like Gulf Oil, which was then operating Southland's Waddell Ranch properties in Texas. Last year its profits were twice what its gross had been in 1973 and its revenues were up 736% to $184 million. In the game of acquire-or-be-acquired that smallish oil companies are playing these days, Jon Brumley clearly wants his company to be among the survivors.

A dark-haired native Texan with horn-rimmed glasses and a relaxed manner, Brumley was working for an insurance consulting firm in Philadelphia in 1967. A fraternity brother, the son of Southland's long-time Chairman Galbraith McF. Weaver, wondered whether Brumley was tired of remaining up North; the son was a doctor, so Weaver had no successor. Brumley started as an "administrative assistant." Six years later, at the age of 34, he was president.

He arrived on the scene a few years before Southland won a big court case against Gulf, which had tried to extend its Waddell lease. Once it had the property back in 1975, Southland adopted a simple formula. In Brumley's words: "We used our credit to buy production and our cash flow to operate."

Southland's Brumley
Pouring his money into the ground.

Before becoming an operating company Southland's balance sheet was nearly debt-free. By early this year it owed almost $325 million and long-term debt was 72% of total capitalization.

In all this Southland was both adept and lucky. In 1976, for example, Brumley paid $186 million to buy Aztec Oil & Gas. At the time, the price seemed stiff. But considering what has happened since, it turned out to be cheap. Aztec's 850 million cubic feet of natural gas cost Southland 17 cents per mcf; it sold for an average price of nearly $1.32 per mcf last year and is heading higher.

Then, in the fall of 1978, Shenandoah Oil, a smallish west Texas-based producer, decided to sell its U.S. and Canadian oil and gas lands. Brumley outbid all comers for the Permian Basin properties, paying $126 million for proven reserves of 22 million barrels of oil and 63 b cubic feet of gas right next door to S land's Waddell acreage. Some Texa men said Brumley paid too much. he: "I feel as confident about Shen ah as I did about Aztec."

Brumley's consulting career was analyzing pension fund assets. It sl "Many public companies are ma for earnings per share," says a f associate. "Jon keeps an eye on tha what's on the balance sheet is w important to him." Brumley hi puts it this way: "The ultimate tes company is how much it is going worth at various periods of time."

Now, Brumley is keeping an ey Sweetwater County, Wyo., where S land has a 25% working interest Davis Oil in a potentially large ga covery, only 11 miles north of the Reservoir Unit, with estimated res of over 400 million cubic feet.

Still, Southland is bite-sized by c dustry standards. To make the com less vulnerable to takeover, the l recently voted to buy 1 million sha its own stock in the open market—a 8% of outstanding. The cost will be ty, about $52 million, but the shares be available to use for more acquisi and unavailable to would-be acquis Last month the board also split the 3-for-2 and suggested raising the dend from $1 to $1.20.

Brumley hasn't won them all. In the U.S. Supreme Court ruled 4 to 3 Southland must continue delivering ural gas to El Paso Natural Gas' inter pipelines at yet-to-be-determined p even though the old contract hac pired. Current energy policy, the C ruled, took precedence; a contract contract even after it's expired. So land gets $7 million a year less for gas—or about 50 cents a share—th would in the uncontrolled intra market. That hurt.

Brumley is well aware that South is entering a danger period. "Don' pect us to show the kind of earn growth in the next year or so tha experienced during the past few ye he says, well aware that with a p earnings ratio of over 14, the stoc vulnerable to any flattening out of e ings. "We've got sizable added int costs this year and we're spending n $90 million on capital projects." By 1980, he says, earnings should start ing again as new Shenandoah produc comes on stream.

With Southland's management, e ings are important but assets are p mount. However many smaller com ies sell out, figuring that at present pr cash in the bank beats oil in the gro Southland will go on pouring money the ground. "Everybody—*everybo* thought we paid too much for Aztec," Brumley. "Look what happened." ■

What J&H doesn't know about London, Willis Faber does.

One reason J&H serves more leading multinationals than any other insurance broker.

a time when other American kers are still seeking a stable tionship in the vital London rket, Johnson & Higgins and lis Faber & Dumas are brating 87 years of inter- ional cooperation.

This longstanding relationship ıst one of the reasons J&H the resources to uncomplicate most complex international management problems.

n addition to 34 of our own ces overseas, staffed with re than 900 J&H people, we call upon the global strength ur 71-office network of lusive correspondents in key iness centers.

Which is why 30 of the top 100 ıpanies have J&H as their ncipal international insurance ker. And another 15 have us heir team. And why we serve rly 30 percent of the rest of Fortune 500.

When it comes to international management, nobody has n at it longer or does it better n J&H.

Representatives of Willis, Faber & Dumas and Johnson & Higgins meet frequently. Here the senior officers of both firms discuss recent developments. Seated (l. to r.) A. Ronald Taylor, Chairman WF&D; David V. Palmer, Deputy Chairman WF&D; Robert V. Hatcher, President J&H; Richard I. Purnell, Chairman J&H.

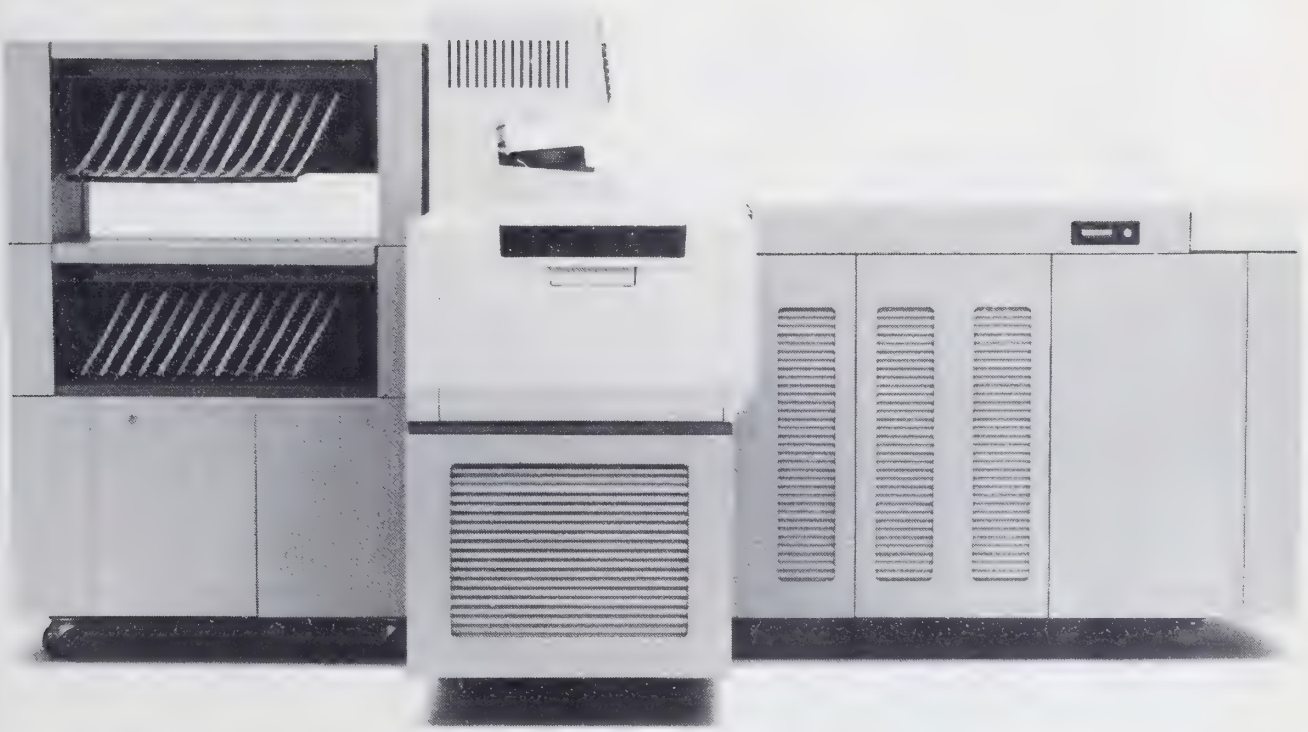
RISK AND INSURANCE MANAGEMENT SERVICES; EMPLOYEE BENEFIT AND ACTUARIAL CONSULTING THROUGHOUT THE WORLD

IF YOU CAN OPERATE THIS MACHINE,



YOU CAN OPERATE THIS MACHINE.

Push seven buttons on a telephone and you have successfully made a phone call.

Push two buttons on a Xerox 9400 duplicator and you have successfully made a copy.

In fact, anyone who can master the technology of making a phone call can operate a Xerox 9400 duplicator. Which, like a telephone, can be used for many different jobs.

Because with the push of other buttons, a Xerox 9400 can:

Automatically feed and cycle originals, automatically reduce, automatically collate and automatically copy on both sides of a piece of paper.

Xerox duplicators come in different models with many different features. And each of our models is the model of simplicity.

To prove to yourself how easy it is to use one of these Xerox duplicators, just call Xerox with the machine on the left. The number is 800-325-6400. Ask for operator 9400.*

If you can successfully operate that machine, you can successfully operate one of ours.

For years Americans have gone overseas for reinsurance and for insurance on extraordinary risks, usually to Lloyd's of London. We no longer have to lose that business.

Lloyd's of New York?

Uniformed doorkeeper at Lloyd's of London
New York wants a piece of the big insurance action.

LAST YEAR ABOUT $4 billion in ance premiums went to forei surers, often because no cor here could underwrite the risks. A drain on our balance of payment the projected Oct. 1 opening of the York Insurance Exchange may cha lot, if not all, of that.

Talk of an insurance exchang Lloyd's of London has been arou many years. Finally, last summe New York State legislature did thing more than talk—it passed creating a "free zone" in New Yor authorizing the exchange.

The free zone allows insurers buy the special license (a $1,000- item) to accept any hard-to-plac out of line with New York rate forms without approval from the as long as the premium is more $100,000. Also fair game for free insurers will be risks from a 360 list including such policies as wat leakage, stud fee coverage, golf damage, manicurists' liability and ministers' professional liability. exotic policies, like the $250,000 taken out on pin-up Betty Grable and the policy protecting an Aust from death due to the accidental f of a Soviet satellite (both risks co by Lloyd's), can be written in th zone or the exchange.

The free zone is a step in less regulation of the insurance busin New York for big insurers and ins The opening of the exchange is anc

Don't go to the exchange lookin policy on your house or car. This big shooters only, who don't neec sumer protection agencies. "There kinds of ways that big guys can do ness with big guys," notes Chu Son's Senior Vice President Ri Stewart. "They don't need to be pr ed from one another by state regula

On the exchange, syndicates of i tors will be represented by underw hired by the insurance brokers, wh go to the various underwriters to coverage for all or part of a risk. mum capitalization for a syndica $3,550,000, with each syndicate in contributing a minimum of $100,0

At first, the exchange will deal m in reinsurance. One kind of reinsu is that which companies buy to s big risks, such as a $50 million off oil platform policy. The other ki that which an insurance company to lay off part of its risk on, for exa all of its home-owner policies—s like your automobile collision insu with a deductible amount payable b before the insurance picks up the c damages.

"The exchange will also write po on risks entirely outside the U.S.," Continental Insurance Co. Ge Counsel William S. Gibson, who w

50% of the estate you eave may never get to your family.

Call Prudential about Estate Conservation.

Startling, isn't it. But it's true. From 10 to 50% of your estate, depending on its size, can be eaten away by taxes, administrative fees and other settlement costs. But a Prudential Estate Conservation Plan can help change all that.

Just call Prudential and a specially trained agent will analyze the value of your estate and draw up a life insurance plan that will provide the cash to cover the projected costs of settlement. Your Agent will also work with your attorney, accountant and trust officer to help minimize the taxes on your estate.

The bottom line: your family will end up with a lot more of the estate you want them to have. And that's a conservation plan everyone can agree on.

The Prudential Insurance Company of America

volved with the committee that drew up the constitution and bylaws of the exchange, "or a risk which was tried in the free zone but failed to get placed." In other words, existing companies get a crack at the business before the syndicates can bid on it.

Much of the free-zone business now goes overseas. About half the insurance premiums paid in the world, industry sources estimate, and as much as 50% of Lloyd's premium revenues of $3.5 billion, come from the U.S.

"We realized in December of 1977 that the intransigence of the state insurance department about setting up an American version of Lloyd's was costing New York and the U.S. a lot of business," says New York State Superintendent of Insurance Albert B. Lewis. "Then we asked, 'Why didn't this happen before?' " In a way, Lewis is conceding the state insurance bureaucracy's unwillingness to part with power created by this tremendous loss of business to foreigners.

As similar as the New York Exchange is to Lloyd's, there are some substantial differences. Lloyd's members (called "names") have unlimited liability—"right down to the last collar button" as Lloyd's brokers are fond of saying. New York Exchange members' liability is limited to their investment. Lloyd's also requires no cash other than membership and accounting fees of about $1,500 a year—but "names" must demonstrate liquid assets of $270,000 before being admitted as syndicate investors. To be a member at the New York Exchange, you must bring your $100,000 with you and put it on the line with an underwriter whom you trust.

Insurance, of course, is speculative by nature—why do you think they call them risks? For syndicate investors, if their underwriter is bad and their luck is worse, they could lose their whole bankroll fast. But with some good luck and a talented underwriter, their investment could simultaneously generate a tax loss and tax-free income. Here's how:

A $100,000 investment in a syndicate could produce about $300,000 a year in premium income, about $200,000 of it "earned" in the current tax year. The rest would be on risks extending beyond the end of the tax year and not yet earned. Using casualty insurance industry rules of thumb, expenses are likely to run about $75,000, leaving cash flow of $225,000 and taxable income of $125,000 for the year. Insurance companies use "statutory accounting" which allows loss reserves to be deducted from income before taxes. It is reasonable to set aside $140,000 (70% of earned premiums) for loss reserves in this example, so for the year, your investment shows a $15,000 underwriting *loss*. For a person in the 70% tax bracket this would generate $10,000 in tax savings. Meanwhile, the loss reserve can be invested for tax-free income in municipal bonds or the like. That's what the big insurance companies do. When you actually get that tax-free income depends on the syndicate manager's investment strategy.

But here's the catch: The Internal Revenue Service may not allow individual syndicate investors to deduct those loss reserves. Only insurance companies may take losses not yet clearly established. The IRS is waiting for a request for a ruling before deciding the matter.

An alternative is to operate the way Lloyd's syndicates do. In London, the books for the current tax year are kept open for two years after the end of the year. This allows the great majority of liabilities to be identified and quantified. Any potential liabilities left outsta are in effect reinsured by the sync The IRS has in the past found this od acceptable.

Yet another alternative is to s syndicates as corporations, autom ly allowing them to deduct loss re as insurance companies do. But th investors' income is actually a div from stock, and as such is taxable.

In the Lloyd's system, you dor that paper "loss" (in effect, the s eliminates the loss reserve), and corporation system, you lose the ta income from investing the revenu

In a lot of ways, it's just like p dice. You figure the odds, put dow money and roll those bones. It's a whose time has certainly come. ■

There's a great, yawning market out th and some entrepreneurial dentists are do their best to fill it.

The department store dentist

By Elizabeth Bailey

LAST MONTH, on a bitter cold day in New York City, a dentist, a businessman and a lawyer sat around a boardroom discussing the poor state of the nation's teeth and how best to get at them. Dr. M. David Isaak, a 39-year-old dentist from New Jersey, opened up: "Statistics show that almost 10% of the population have never been to a dentist; 50% didn't see a dentist last year; and maybe 5% see a dentist regularly. In terms of marketing and business potential, it represents an untapped multibillion-dollar market—we dentists are in a pre-industrial stage of dealing with a need that exists." In 1977 alone the nation's dental bill was $10 billion, up from $8.6 billion the year before.

But things are going to change if Isaak and other dental entrepreneurs have their way. Dentists are getting out of their low-volume, single-chair practices, and—in some cases—setting up shop in department stores. This is now possible partly through increased use of technicians, and partly because sweeping legal changes allow dentists to adv

Montgomery Ward has leased sp three of its stores on the West Co dental centers, and this year pla lease 10 to 15 more to Dr. Isaak's agement company, DentCare. If su ful, they plan many more. Sears buck has leased space in eight of it Coast stores to Pro-Dex, a dental agement company based in San Fr co. Dr. Allan Gutstein, a 35-year-ol tist from New York, has installed centers in three Times Square Sto Long Island. Contracts vary, but i Dex' case, they sell the practice dentist who, in turn, gives both the agement company and Sears a pe age of his revenues.

The department store dentists store hours. Dr. Gutstein's offic open 12 hours a day, Monday th Saturday, and 6 hours on Sunda Lewis Kaan, who works out of a store near Los Angeles, is open 10 a day, 5 days a week, plus 8 hou Saturday. "When you consider 100,000 people walk through this store a month, we have a huge ma

The word movers.

Burroughs

Sears' dental center (top) *and Dr. M. David Isaak of DentCare*
The big idea: moving dentistry beyond its pre-industrial stage.

he says. In contrast to the average dentist who handles 240 patients a month, Kaan and the two other part-time dentists in his office take care of over 750.

Fees charged by the department store dentists average 20% to 40% below those charged by traditional dentists. Dr. Gutstein will fill a cavity for between $7 and $21, compared with the $20 to $30 average price in his area. A root canal at the department store will cost $75 to $155 compared with $100 to $275. Prices are not only posted, but since the Supreme Court ruled in 1977 that professionals could advertise, Gutstein uses print, radio, buses and the store loudspeaker to hawk his services.

Chain dentists can charge less because higher volume and use of technicians substantially lower the cost of dental care. Dr. Peter Garvin, a 53-year-old dentist who practices in Ohio, where the laws regarding the use of dental technicians are liberal, started low-cost Cincinnati Dental Services ten years ago on that premise. Says Garvin, "Dental bills are mostly for labor. Well, if a dentist spends five minutes cutting a tooth and then lets a trained assistant spend the next 15 minutes filling it—at a much lower wage—you're going to have a saving. And, of course, with a large number of patients you can reduce the cost of dental supplies by buying in volume." Cincinnati Dental Services has grown to a 58-chair practice, with 12 dentists. Dental bills are on average 40% lower than those in the area.

"It's a matter of free enterprise," Garvin. "There's been no compet and as a result dental costs have g expensive. It isn't ignorance or fea stops people from going to the de they just don't have the scratch."

What's in it for dentists? Both stein and Isaak made over $10 when they were full-time "wi gers"—meaning practicing—den but their profits could be many that. The average dentist makes $41,000, but many dentists are poor nessmen. Dental graduates keep flo into the rich suburbs, while rural have no dentists. "One dentist I hir Sears was in private practice in Be Hills," says Dr. Kaan. "He could busy only two days a week. Beverly is a tough nut to crack."

It can cost up to $100,000 to set up-to-date dental office, and school graduates already saddled school loans in the thousands are vous about taking on the additional While Kaan owns his Sears prac and pays for his own liability ance—he pays a flat salary to the de who work for him. They don't ha worry about paying the bank, maki payments or hiring and firing empl "I have two or three dentists calli each week asking about jobs. Appa the security of the arrangement ov ances, in their minds, the inconven of having to work nights and weeke

There are those, of course, wh department store dentistry as deme to the profession. And, the depar stores are proceeding gingerly. Th tist carries the malpractice insu but a Sears or Ward is all too aware makes an attractive target.

But there's a booming marke there in low-cost, high-volume den and it's rumored that health-care r companies like G.D. Searle are lo for ways to get in on it. Right now, state laws prohibit nonprofessiona porations from having direct own of professional services, but the F Trade Commission is looking at r mendations that could open up der to corporate ownership. Michael schuk, crusading chairman of the recently blasted professional grou inflating fees. If Pertschuk is consi the FTC will encourage this spre corporate dentistry. Said he: ". . . orous competition, coupled with quate consumer information, assur proper range of quality at the lowes sible price." He was taking the wor of Dr. Isaak's well-cared-for mouth

It all comes down to a mat choice. "Before I went into Sears calls Dr. Kaan, "I got together with others in the community and disc it. Some were cautious; others 'More power to you. This is free prise—go ahead and good luck.' " ■

At 200 horsepower, it's not size but job efficiency that sets our new JD855 Loader apart from the rest. The advantage is gained with a hydrostatic transmission constantly balancing speed and force as required—from start-up until sundown. It's no surprise to us that the best salesmen we have for this one are the 110-hp versions we have had in production since 1976. Your inquiries about our company and equipment are welcome. nsidering how profitable spin-offs often are stockholders, it is surprising that more npanies don't do them. Or is it surprising?

Statistical Spotlight

Spin-offs: Smaller is beautiful

Time Inc. sold most of its televi- roadcasting operation to McGraw- ays Time Chairman Andrew Heis- e never considered spinning off the asting operation instead. Most prefer to sell for cash or notes and use the proceeds in their company.

In a way that is too bad: Spin-offs have often greatly benefited stockholders.

A spin-off occurs when a company sets up an operation as an independent company and gives its shares to its own shareowners. In 1968, Forbes studied the spin-offs that had occurred in the previous 15 years and found that the shares of the spun-off companies could rise faster than those of the parents.

The table below updates the stock market results of parents and their spin-offs over the last nine years. As a group the well-known parent shares rose 99%, the spin-offs 133%. Quite a difference.

Often the spin-off is in a more glamorous business—Lanier Business Products out of Oxford Industries, an apparel manufacturer. In addition, the smaller spin-off usually can grow faster percentagewise than the larger parent. Or an entrepreneur, who would have left the parent company anyway, takes over the spin-off and gives it his drive. The parent's shareholders get the benefits.

Many operations are spun off because they conflict with the parent's prime

The parts can be more valuable than the whole

In most cases, a spun-off company is a smaller entity than its surviving parent. But shares in the spin-offs in the list below have typically outperformed their parents.

TIME. The news magazine for the internationally minded.

Faces
Behind The Figures

Big piece, bigger pie

Whether the public is edified appropriately by the start of telecasts from Congress scheduled for this month remains to be seen. But one certain beneficiary of this noble experiment is Scientific-Atlanta, Inc., which makes the earth station that is sending the signals from the Capitol to the RCA Satcom I satellite and the receiving stations used by the majority of the cable systems that are carrying the congressional show to about 1 million subscribers.

Not unexpectedly, S-A's CEO, Boston-born Sidney Topol, 54, is talking about the nation getting "cabled up, and every cable system is going to have at least one satellite ground station." Only about 200 of the 4,100 cable systems in the U.S. are carrying this month's House session telecasts, and some of them have as few as 50 subscribers. But, presumably, if the rest of the public wants to see what its national legislators are up to, S-A will share in the bonanza. And as other cable programmers, such as Ted Turner's WTCG-TV, continue to expand their program offerings, the demand for S-A's receivers will boom.

Sidney Topol of Scientific-Atlanta
TV goes to space, profits go to Georgia.

But Topol is looking to a lot of other new business sources as well, as he continues the job of reshaping the company he took over more than seven years ago. In 1972, his first full year at S-A, the company grossed only $16 million and netted barely $250,000. In those days it was still pretty much a custom job shop, turning out high-priced but low-volume scientific instruments. Last year, for the fiscal year ending June 30, sales had climbed to $94 million, while earnings, at $5 million, were up some 18 times their 1972 level. And for the first half of fiscal 1979 sales hit $54.2 million and net went to $3.1 million, up 34%.

What Topol did was get the company out of its custom operations and into higher-volume products. "We realized that if we could standardize on a product," he recalls, "put it into production and sell what we'd made, we could make a lot of money. I took that concept and cut away other areas." Short-run products were dropped, and Topol focused on new ones that relate to communications, especially satellite transmitters and receivers, where S-A now has maybe 60% of the business.

Last year, Topol, a physicist by training, who spent 21 years at Raytheon Co., picked up Spectral Dynamics Corp., a producer of scientific measuring instruments. He got a $20 million, high-margin outfit plus a nice little marketing organization in Europe. Last year international sales volume at S-A reached 21%, up from 13% before the acquisition. Topol is also boosting S-A's share of high-output products another way. S-A has had a deal for the last seven years with Atlanta's Rollins Protective Services to make the burglar and fire alarms that Rollins installs and monitors.

Topol won't even bid on a government job unless he can see a standard product emerging. Even so, government business accounts for 20% of S-A's total, almost all of it in off-the-shelf products at catalog prices. And that's how Topol wants it all to go.

A perfect marriage

North Carolina's 13,850-acre Green Swamp was a dead asset to its owner, Federal Paper Board Co., Inc. The wetlands, valued on the open market at $4 million, would have been too expensive to drain and cut. Instead, the company donated the property to The Nature Conservancy as a wildlife sanctuary in 1977. Not a bad bargain. Federal Paper Board, with the tax credit, added some $2 million to its cash flow. The Nature Conservancy received a unique piece of real estate—a home for deer, alligator, black bear, bobcat and Venus's-flytrap—

Conservationist Patrick F. Noonan

Introducing the Newsweek International Data Center.

sia and the Middle East, the kind of arch international advertisers needed rare, to say the least.

urope it was more extensive—but e expensive, as well. And little of it sed national boundaries.

v, Newsweek International has ered all of it together.

esource for Marketers.

Newsweek International Data ter is a computerized repository for diverse media/market data so able to multi-national business: stical tracks on major product use, ket composition and media habits ey consumers.

h retrieval access to this data in New and London, we can immediately your media/marketing queries into , useful facts.

usive and Extensive Data.

ch of this data is exclusive to News- k International, like the Asian iles study of 1976. For the first time, se of you who market in the eight or cities of Asia have access to finitive study of the lifestyles and dia habits of Asian executives.

re's more. We've included data from r, equally reliable sources:

recently completed Pan European ey is perhaps the first—and certainly most comprehensive—study of pean executives which sets aside limitations of national boundaries.

The Australia-wide survey of readership of magazines, by the Roy Morgan Research Centre.

The McCann-Middle East media study—the only definitive media research yet done in the Middle East.

All of this data is now immediately available to you, without charge.

Harold L. Leddy, Jr. your Newsweek International representative in New York. Call 212-350-2556.

Telephone Link to Data Center.

You simply call your Newsweek International representative and pose your problem.

He then becomes the liaison between you and the Data Center. With startling immediacy, you'll have the information you requested on your desk, ready to feed into your decision-making process.

An Extraordinary Magazine Service.

Only Newsweek International offers this unique service to the international marketing community.

As far as we know, there's nothing quite like it in all the world: a comprehensive media/marketing data bank open to international marketers without charge.

But then again, there's nothing quite like Newsweek International itself...a magazine of global scope and universal authority...received, read and responded to by nearly two million key international consumers each and every week.

And ready...with data and with prospects...to help you sell in any of these major world markets.

Faces
Behind The Figures

Noonan, "We've become very concerned about haphazard conservation. In many cases, that can be worse than no conservation at all." Why? It sometimes forces industry into areas more fragile than those "saved."

You can't eat prestige

When the New York Stock Exchange admitted its first two foreign members last month (EuroPartners Securities and Transatlantic Securities), among those least impressed was a young veteran of the brokerage business named Theodor Schmidt-Scheuber. Three times in the past eight years, Schmidt-Scheuber, president of ABD Securities Corp., had tried to buy a seat on the NYSE. Three times he was flatly turned down.

"We don't have any intention of trying for membership again," he said last month. "The economic reasons for being a member of the NYSE have evaporated with the passage of the 1975 Securities Act amendments and the advent of fully negotiated rates. It's a prestige thing, but you can't eat prestige. We are better off today where we are."

Schmidt-Scheuber, now 44, went to Boston in 1968 when Dresdner Bank, Germany's second largest, decided it needed a broker in the U.S. and the Big Board still forbade foreign membership.

ABD Securities' Theodor Schmidt-Scheuber
Rebuffed in New York, loved in Boston.

A former Frankfurt Stock Exchange trader, he had started ABD that very year with $100,000 capital. Last year ABD, now owned equally by four European banks (Dresdner, Algemene Bank of the Netherlands, Banque Bruxelles Lambert and Germany's Hypo-Bank), cleared $4.4 million on about $6 million in capital.

ABD now accounts for 30% to 40% of the Boston exchange's total volume. In 1976 the exchange named Schmidt-Scheuber as its chairman—the first foreigner to hold that position on any American exchange.

Being on a regional exchange has its advantages for ABD. "Big volume orders can be spread out over a number of regional exchanges," Schmidt-Scheuber says. "That minimizes the impact of a single block, and it's less likely to be noticed than when it takes place on the broad tape." Moreover, he says, "Through commission trading arrangements, we have been able to do business with the NYSE at favorable rates. And when we execute orders out of New York, we don't have to pay that New York State transfer tax."

Apart from that, Schmidt-Scheuber has nothing against doing business in New York. He now has his headquarters there, just off Wall Street, and he also maintains an office in Boston. When a Wall Street firm went broke, he got the space for $9.50 a square foot in a market that gets nearly $20 these days.

At their own game

Unscrupulous bond dealers, the sort who used to assault unsuspecting retired farmers and doctors with dubious investments over WATS lines from Memphis and Ft. Lauderdale, are at it again. But now the victims are financial institutions that ought to know better, and the securities are Ginny Maes and others of impeccable quality. What's happening is that institutions such as credit unions, savings and loans and pension funds trading these securities are paying too much when they buy and getting too little when they sell. Moreover, some dealers and customers can't deliver because of inadequate capital or improper procedures, because of unmargined forward commitments. So the cry is out for federal regulation. Back in 1971, Lee A. Pickard was special counsel to Chairman William J. Casey at the Securities & Exchange Commission. These days, as a lawyer in private practice in Washington, he is working to head off such regulation from the commission.

As lawyer for the Public Securities Association, Pickard is trying to develop a system of self-regulation that will encourage institutions to deal only with members of the association. He hopes that PSA Government Inc., the vehicle he is setting up, will get some kind of

Learning for dollars

The recent scandalous revelations about colleges peddling spurious student visas to foreigners have caused some of the ivy to wither. But that does not seem to have affected other once marginal schools that are not merely coping with the age of dwindling enrollments but are actually thriving. Consider Dr. Frank W. Welch, president of Lincoln Memorial University in Harrogate, Tenn. and Donald E. Ross, president of the College of Boca Raton in Florida. Each one found himself running a near-defunct, small, private institution with no chance to survive doing what it had been doing. Each man threw out irrelevant curriculums designed to lure a kind of student who was no longer applying, and each turned to his local community for an effective new direction.

When Frank Welch came to Lincoln in mid-1973, the school was in the throes of identity and financial crises. After surviving much of the post-World War II era as a backup choice for liberal arts students mainly from the Northeast, Lincoln began losing students and money.

Welch, a sociology and theology teacher with a Ph.D. from Florida State, decided that Lincoln's future depended on what it could get from and do for its corner of Appalachia. The answer lay in changing just about everything. To halt the deficit, Welch put off maintenance and froze salaries. He antagonized the educators by replacing tenure with contracts.

Then he drew a circle with a 100-mile radius around the school and set out to "create a program and a market approach" for the people who lived inside the circle. Out went the liberal arts curriculum and in came community needs. Since strip-mining is one of the major regional industries, Lincoln now offers a program in mining and reclamation. Health needs of the poor are served by an extensive nursing program.

Welch's own aggressive student recruitment led to a program for training college recruiters. State schools need students to get state money, so Lincoln trains recruiters for its neighbors.

Its own admissions policy is simple: Any high school graduate who applies will probably get in. The average age of Lincoln's student body is 26, considerably above the average of 20, but that reflects the on-the-job, working-class nature of its students.

Lincoln, says its 39-year-old president, will "offer a course in a curriculum anytime, anywhere, for anybody if it pays." That includes a program at Brush Mountain Prison, the present address of James Earl Ray. And if you want to have a party or a wedding reception, Welch will rent you the hall and sell you the food and drinks.

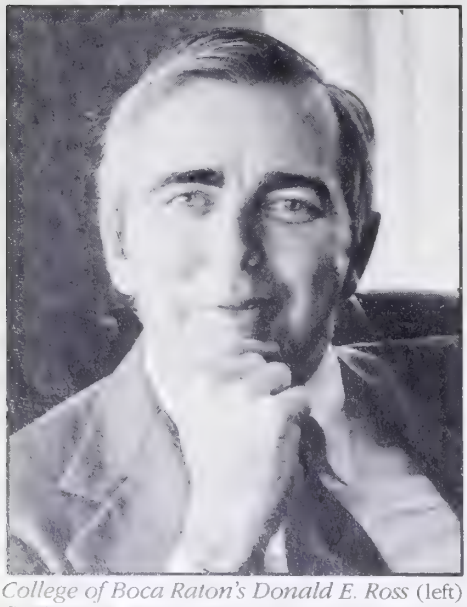
When Marymount College, founded in Boca Raton as a two-year school for Catholic girls in 1963, went bankrupt in 1971, Donald E. Ross, then president of Wilmington (Del.) College, came down to buy the school's library. Before he went home, Ross worked out an affiliation in which Wilmington took over the debt, and he began commuting between the two schools.

But the weekly 2300-mile haul got to be too much, and Ross opted for Florida. He changed the name of the school to the College of Boca Raton made it coed and began looking for ways to sell its output to local employers, chief of in those days was IBM. Since thei mens of Germany, Mitel of Cana ITT North Electric have located ele ics plants in the nearby Arvida ind park. And Ross' college will p them with graduates from its new tronics engineering technology pr In fact, the heads of these and employers sit on a board with meeting every three weeks to what's working and what isn't. process, Ross says, "they also fir how little teachers make, and that us get money." Employers also p lab equipment and seed money.

The 38-year-old president talks "hands on" training, which exte making beds and waiting on tabl students in hotel-motel manage another obvious local employer tie a school in a resort area. Recent was even musing about a progr marina management.

A year out of Hofstra University a degree in communications, Ross became dean of students at Long Is New York Institute of Technolo 26, he took over at Wilmington, has been in the business of higher tion at small colleges all his workin Unlike academics who move up ministration, he is not encumber tradition. So Boca Raton teaches arts because technicians become m ers and need some.

In the world of Lincoln and Bo ton, if it doesn't work, it doesn' Welch and Ross can probably b seen as members of a new class of tional entrepreneurs. The big priva state universities and a lot of s ones, they feel, will serve the tradi functions of scholarship and aca teaching. What they are doing is s an equally respectable product to demand, not a hope. ■



College of Boca Raton's Donald E. Ross (left) *and Lincoln Memorial University's Frank W. Welch*
College is more than bricks and mortarboards; for some, it's a business.

Peabody: The First Ten Years.

The Peabody Idea

body's consistent growth has fol-ed a plan conceived in 1969. That n was based on the idea that the ld can have more energy and less ution.

t is an idea that works. In 1969 es were $24 million; in 1978, over 5 million. The compound annual e of growth in earnings in the past years has been 33%.

The company achieved this growth ough a balanced participation in rgy and environment in five re-ed disciplines:

1. Oil Field - 17% of total

ce 1972, when Peabody entered market for reconditioning and sale il field pipe and surface equip-nt, earnings in this sector have wn sevenfold.

During 1978, the company was ticularly active in expanding oil activities in exploration, secon-y recovery and technologies for roving well yields—all high priori-in the drive for stepped-up domes-il production

2. Testing - 14% of total

body has the world's foremost mpetence in industrial testing. ndustry recognizes testing as an ctive means of ensuring quality reducing the need for expensive duct recalls.

Growth is anticipated in nondes-tive testing relating to large rgy projects, oil refineries, pipe-s and coal production

3. Air - 29% of total

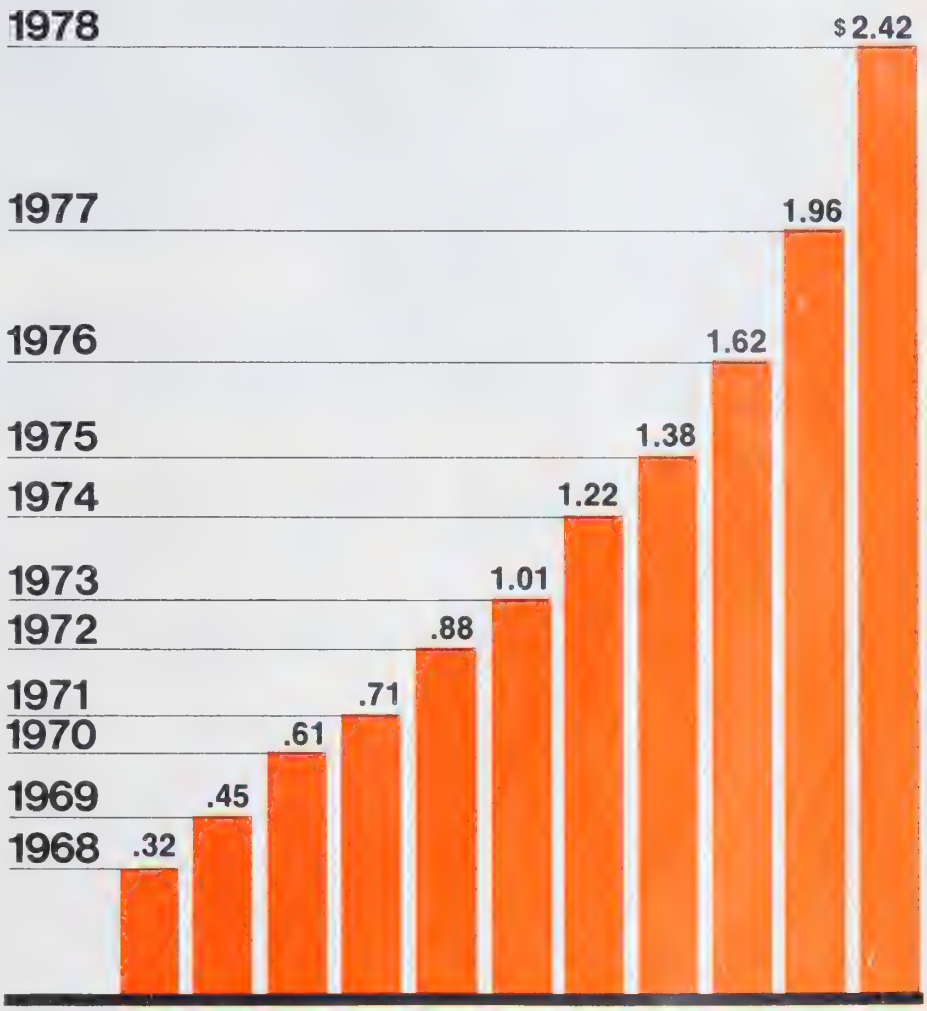
body handles both ends of the nbustion process, the leading se of air pollution.

For the front end, Peabody's APR ner is the most modern and clean-ning in use today.

For back end air cleaning, Pea-y's full range of technologies ove emissions at utility power nts and industrial facilities.

4. Water/Fluids - 19% of total

body's initial emphasis was in nicipal and waste water treatment. Now, the company's capabilities er the moving, handling and stor-ing of nearly all kinds of liquid or gas, including hostile and toxic fluids.



Net Income Per Share

Restated for 5% stock dividend paid Dec. 31, 1978

5. Solid Wastes - 21% of total

Peabody's profitable base as a manufacturer of equipment for the collection and handling of solid wastes has been strengthened with a new line of rear-loading refuse collection bodies and high-compaction front-loaders.

The Next Ten Years

The company's continued, steady growth in energy and environment is linked to three, interconnected trends: 1) the intensifying global search for energy to meet rising demands; 2) increased worldwide emphasis on safety and environmental control in every step of energy production; 3) the dramatic push for better fuel yields.

That's Peabody's combination for the next ten winning years.

One investment firm
you'll be glad to hear from.

MONEY & INVESTMENTS

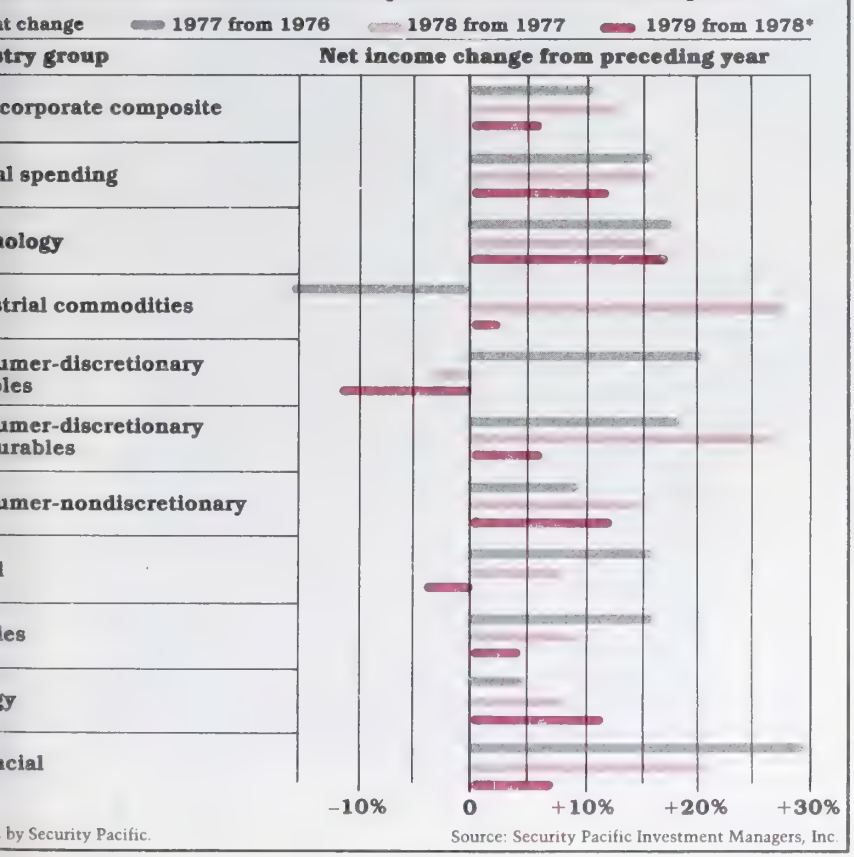
Riding winners

RECESSION of some kind *almost* with continued high inflation certain and with the world oil n frighteningly *un*certain there eem to be good reason to shun Yet the fact remains that a good companies are going to report arnings gains for this year—oil, recession and inflation notwithstanding.

Which will be the gainers? Security Pacific Investment Managers, Inc., a West Coast investment adviser, has come up with some good projections. Its analysts start with a conventional macroeconomic scenario: a tiny gain (1.6%) in real gross national product; an inflation

The winners and the losers

's ahead for corporate profits this year? Security Pacific Investment agers Inc. looks for an average gain in net income of 6.3% for the 500 panies included in Standard & Poor's average. But that's *average*. Within roup, there will be some big winners and some big losers. SPIM looks for ains among energy and technology companies, declines among producers dustrial commodities such as forest products and chemical companies.



by Security Pacific.

Source: Security Pacific Investment Managers, Inc.

The Economy

rate of 8.1%; an overall gain in corporate profits before taxes of only 2.4%—the latter much less than the inflation rate. Not a very pleasing prospect. Then SPIM divides the 500 stocks in S&P's index into ten economic sectors. Surprisingly, in spite of its not very cheerful overall predictions, SPIM sees excellent net income gains for some industries.

The adjoining chart shows that of the ten industry sectors, five will be better than average: capital spending, technology, consumer nondiscretionary spending, energy and finance. In this period of economic slowdown, for example, SPIM estimates have GE profits rising 7%, ITT's 10.5% and Emerson Electric's 11% in the capital outlay category.

Energy should do especially well in 1979, SPIM thinks. Profits of domestic oil producers should move from a below-average gain of 9.4% in 1978 to a 12.1% gain in 1979. International oils' will pick up 10% after last year's dismal 3% gain. Among the internationals, Exxon's profits will rise 10%, with Texaco up 8%. The domestic producers' profits will look even better, rising 13% for ARCO and 14% for Continental.

Automakers had a 6% drop last year and for this year the group should end up with a profit plunge of 23%, according to SPIM. General Motors earnings should be off 20% and Ford, down 20% to 25%.

Earnings in consumer durables—that includes housing, autos and apparel—are heading down. The discretionary nondurable group—cosmetics, leisure, photo equipment and soft drinks—would do well but for a 26% drop in airline profits. The third consumer sector—companies making staples like drugs, foods and soaps—look good.

The stock market, of course, does not always follow earnings, nor does it *only* follow earnings. It also reacts to news—little of which has been good lately—and sometimes discounts things in advance—such as turnarounds or turndowns. But in the long run earnings are what count. Therefore, you might well ask yourself: Is my portfolio aligned with the earnings probabilities for 1979? If it isn't, you might want to do some shifting and adjusting. ■

This is not the time to sell out your AT&T debentures to reinvest in six-month savings certificates.

GO LONG BUT BUY QUALITY

By Ben Weberman

YOU DO NOT have to be a hopeless optimist to see that interest rates are already high enough to bring the economy under control and to prevent inflation from escalating even further. To follow a radical prescription and push interest even higher would only bring about a deep recession. It is now only a matter of time before the already tightened brakes bring the economic vehicle if not to a screeching halt at least down to a controllable rate of speed.

Hence my belief that long-term bonds are a good buy. Look at those U.S. Treasury 8¾s of 2008. They are currently priced at 96¾ to yield 9.05%. Sure, you can do better temporarily in short-term money market instruments at 10% to 10.5%, but by going long term you lock in yields to maturity which—unless all the rules are off—are historically high.

Of course, one could do even better by sacrificing quality. But why should you sacrifice quality when you can get over 9% on the highest quality security that exists?

The differentials between top-quality and lowest-acceptable investment-grade taxable bonds are narrow by historic standards and do not compensate adequately for going into lower-quality investments.

So this is not the time, for example, to sell out your AT&T debentures to reinvest in six-month savings certificates. What would you do six months from now when short-term rates drop? Money market certificates will then be rolling over at a rate closer to 8%—maybe lower—while the bonds you buy today will continue to pay 9% or 9.6% (depending on issue) for as long as they are outstanding. The consequence is that today's 10.25% short-term rate may be tomorrow's 8% short-term rate. Today's 9% Treasury bond purchase will continue to pay 9% into 2008 and the Bell subsidiary debenture will pay 9.6% to 2014 (unless it is called for redemption at the company's option after 1984).

Within the Treasury sector, I now believe that the longest issues hold the most promise. The yield curve, from shortest maturities to the longest, is relatively flat. A few months ago rates of return on Treasuries rose from low levels for a three-month bill to a peak in the four-year range and then settled back to lower long-term yields. Today a three-month bill pays 9.75%, a one-year bill—the peak of the curve—pays 10.3%, and longer-term maturities slope downward very gradually to 9.05% at the long end. I would rather have a 9% long-term bond than a 9.3% four-year note or a 9.2% eight-year note.

My advice to the manager of the big portfolios—those of multimillion-dollar size—is somewhat different. Because I think that rates will remain high for the next month or two, I would not use all my reserves to buy the long bond but would place some funds out in long issues and some in the eight-year sector. The appreciation potential is substantial for both securities as rates decline.

Several months ago, when I was urging caution, I suggested purchase of the four-year note as the one holding most attraction for current yield and for price appreciation. These notes moved to a large gain during the January bond rally. The rally was premature but it did demonstrate how fast the market will move and how far when the turn really does arrive. The 9¼% notes due May 15, 1982 were trading at 99⅝ to yield 9.38% at the turn of the year. By the end of Ja they had gained in price to 101 8.9%)—a tidy profit, as bond p go. They are now back to 100 an buying range again—except tha eight-year 9s of Feb. 15, 1987 (yield 9.15%) look like a bette and the 29-year 8¾s of Nov. 15, at 97 (yield 9.05%) look best.

Corporate bonds of highest q don't carry enough of an increm yield to say that they are outsta investments relative to Treas Furthermore, the ability of most c rations to call their debt issu redemption after only five or ten means that you would lose the gen income if rates fell sharply. Is would exercise their options to p the bonds well before final matu

If you want to get into the corp bond sector in order to get yi think the Pacific Telephone & graph 9⅞s of 2016, priced to about 10.5%, are a better buy tha South Central Bells selling to 9.66%. There is considerably g risk in PacTels. The company v under a tough public utilities con sion in California, which has set dards that threaten PacTel's ac ated depreciation and investmer credit cash savings. The commi has set rules that could force the pany to refund over $1 billion t tomers on intrastate charges. Al in the face of a $2 billion capit pansion program this year. The r agencies consequently have cut quality ratings to A, in sharp co to the AAA carried by most othe subsidiaries.

The difference in yield betwee Tels and South Central amoun .9%. The extra return enhance attraction of the PacTels issue en to cover the risk.

I would avoid issues like Ge Power 10½% bonds of 2019. T debt securities have been ste downgraded until they now are Baa by Moody's and BBB by Sta & Poor's. Why? Because the s regulators seem little inclined to rate increases commensurate wit ergy cost increases without a battle. The 10.8% yield now avai to new purchasers of the bonds i worth the heartaches and head sure to come.

Stick with the best and the s and go out a little longer in mat in order to hold on to the gen interest payments for as long as p ble. The spread into lower quali not worth the risk. ■

Merely because the market has been calm, it would be false to assume that it has acquired immunity to unforeseeable *events.*

MARKET DEFIES MURPHY'S LAW?

By Heinz H. Biel

IT HASN'T BEEN much fun lately to read the newspaper. One gets the impression that everything that could go wrong did go wrong. Foreign affairs, the forte of the Nixon/Kissinger era, has been dominating the news in recent months. Except for the short-lived elation over the Camp David accord, it has all been negative. Mr. Teng's visit was hardly a diplomatic achievement, particularly in view of China's signs of belligerence.

I was not particularly fond of the Shah, but his oil was good, and the business relationship with Iran (and Taiwan, too) was a lot more desirable than exporting to a multitude of countries, many of which are quite Red and not very friendly. As we finance such exports with credits granted by ourselves, they don't help our balance of payments one darn bit. Looking around the globe, it is difficult to find a single country that we could regard as a genuine friend. We can't even manage to get along with our neighbors to the north and to the south.

Murphy's Law has also been working on the domestic front. Except for the private sector, things are going from bad to worse. The Administration can hardly take credit for the delay in the arrival of the heralded recession. What is happening is that Americans are beginning to behave the same way people have always done in inflation-ridden countries: spend the money before it loses more of its value and borrow as much as you can get away with. Such practical economics have kept the pot boiling. Of course, this is inherently unsound and likely to end in one big crash, but we'll worry about that tomorrow.

Although the exchange rate of the dollar has stayed fairly stable, thanks to intervention by the various cooperating central banks, the price of gold has shot up to another new high. The upheaval in Iran was the obvious reason, of course, but in the background loom the ugly consequences of a possible oil shortage and inevitably higher prices for petroleum products.

This list of present and prospective problems can be lengthened *ad infinitum*. Yet, *mirabile dictu*, the stock market has taken all the bad news in its stride. Although usually as sensitive as a mimosa, responding instantly to any item on the news ticker, The Street in recent weeks stayed remarkably unruffled in the face of world-shaking events. The simplest and perhaps best explanation is that the market, in its infinite wisdom, had discounted these events. In contrast to the Administration, it was not taken by surprise by all the happenings.

However, merely because the market has been taking things rather calmly, it would be false to assume that it has acquired immunity to *unforeseeable* events, good or bad. The main factors that may sustain it are: 1) the fact that current prices are statistically moderate by just about any standard of measurement based upon the teachings of Benjamin Graham and 2) the lack of suitable investment alternatives.

Colonial Penn Group (20), which I have mentioned occasionally in the past, recently announced that its close relationship with the American Association for Retired Persons and the National Retired Teachers Association will be terminated in 1981. Although this arrangement has been found to be perfectly legal, the numerous investigations, allegations and insinuations have been the cause of mutual embarrassment. Since the company's concentration on the insurance needs of the elderly seems to have been a major reason for its remarkable growth, the impending divorce has had a depressing effect on the price of the stock. Institutional investors hold 38% of the company's stock.

I think that the negativism toward CPG is exaggerated. First of all, the present relationship with AARP and NRTA will continue for another two years. Second, the company's expertise in doing business with the old folks should give it a competitive edge. Nevertheless, I feel that the stock no longer deserves a premium multiple among insurance stocks.

Laymen like myself have always been mystified as to why so many municipal and voluntary hospitals cannot make ends meet, even though they charge many times more for a miserable room and inedible food than the plushest deluxe hotels. The conclusion is inescapable. By and large, hotels have better management than hospitals. This would seem to be confirmed by the fine record of *Hospital Corp. of America* (29), which either owns or leases or just manages well over a hundred hospitals with close to 20,000 beds. It is quite an operation (no pun intended), with 1978 revenues of $797 million. Its operating profit of about 20% is impressive, and should be the envy of the multitude of money-losing institutions that are managed by doctors or politicians, whose competence may lie in a different field than the running of a hospital.

Of course, there is a rejoinder. Private hospitals, it is said, skim off the cream and don't take care of the poor; they don't teach and train; they don't encourage or sponsor research, etc., etc. This could be true, but it may also be used as an excuse for poor management. Anyhow, if you have qualms on that score, no one is forced to invest in the hospital business.

Hospital Corp. of America, now in its 20th year, has grown at an exceedingly rapid pace. Its record is long enough, and its profitability so consistent that it has earned the investor's confidence. With its classic growth-stock image, HSP has attracted institutional investors *en masse*, and they now hold 47% of the total shares outstanding. Nevertheless, HSP now sells at a fairly modest multiple of ten times this year's projected earnings of about $2.90 a share. Dividends, despite frequent increases, still provide only a nominal return, as is to be expected of companies with an insatiable appetite for capital. ■

Heinz H. Biel is a vice president of the NYSE firm of Janney Montgomery Scott.

The best way to understand our bottom line is to see our product line.

Beech Aircraft's overall industry ranking from *Forbes* study of America's 1,006 largest corporations.

Growth	29th
Stock Market Performance	34th
Profitability	62nd

Six consecutive years of record-aking growth in both sales *and* nings. That's the bottom line at ech Aircraft.

And a look up and down our duct line can tell you a lot about t how we achieved this remark-e bottom line.

Because in our products, you'll the kind of quality we're re-vned for. Meticulous. Superb. d refined.

But you'll also see more than ılity in our product line. You'll diversification. We build every-ıg from 2-place, 120 mph train-airplanes, to 300 mph corporate ısports, to supersonic missile gets capable of speeds up to ch 4.

Together, quality and diversi-tion of our products have given he kind of financial soundness few companies in any industry have been able to attain.

	1973	1974	1975	1976	1977	1978
Net sales	$204.6	$241.6	$267.1	$346.9	$417.4	$527.5
Net income	$10.0	$12.4	$15.6	$20.6	$25.4	$35.5
Dividends	$3.1	$3.6	$4.4	$5.3	$7.0	$8.3

All figures in millions

Of course, we know that a wide variety of well-built products alone can't insure success. So we put just as much careful attention to detail, stability, integrity and performance into our corporate design as we do our product design.

It's paying off, as the *Forbes* study cited above shows.

Quality products. Quality management. They both show up on our bottom line.

For our complete growth and earnings story, write for a copy of our annual report to: Beech Aircraft Corporation, Dept. K, Wichita, Kansas 67201.

Many cults are vast chain-letter businesse not so different from Dare To Be Great.

THE MOONIE GAME

By John Train

ONE OF MY client families had a dreadful experience some years ago: Their son was captured by a cult with a headquarters near his college. They haven't been able to reestablish contact with him since.

Most Americans now have some relative or friend who has undergone a conversion or sudden personality change—who has been "born again," whether into Krishna Consciousness, Scientology, TM, the Moonies, or something more sinister. Many of these cults are, among other things, vast quasi-chain-letter businesses, not so different from *Dare To Be Great*, whose executives make very good money indeed, and whose proprietors are real tycoons, with palaces, harems and company planes, a montage of Dale Carnegie, the Rolling Stones, Hugh Hefner and Bernie Cornfeld.

Indeed, it should be about time for a cult franchise industry to arise, with trade shows and magazines that offer to set you up in business:

> **OPPY FOR EXPD SWAMI**
> To license desirable territory, growing successful cult. Must have good track record. Sound equipment supplied. $10,000 investment required—easy terms.

Snapping, a new book by Flo Conway and Jim Siegelman (Lippincott, $10) describes the characteristics of this epidemic and the techniques of what I suppose can properly be called the cult game.

The first contact with a potential convert is often made through a casual notice on a college bulletin board, a pamphlet, or an advertisem Scouts approach apparently confu young people at bus or railroad tions or near military installati and invite them to a low-key disc sion group.

At the first meeting the visito often given a sense of the group's terest in him, and perhaps a sign personal concern or affection by local leader, who is likely to convey air of spiritual power. The visitor, trigued, returns.

In later visits the potential recru subjected to "love-bombing"—an undation of demonstrative affecti He is taken to a retreat, often a fa sometimes without being told tha is owned by the cult, and put un increasing pressure to submit. visitor may be deprived of sleep continuously surrounded by pers sive talkers. He experiences a serie epiphanies ("encounter highs") eventually becomes permanently *alté*. His ills and concerns fall away does his capacity for independ thought.

Quite often, at the moment of c version he feels energy tingl through him; he enters a trancel state and has the illusion that his b is being sprinkled with water.

As he falls further under the lead eloquence and discipline and group's enfolding doctrines and uals, he finds, through acceptance a deluded certainty, a new bliss.

Hours and hours of chanting or c centrating on mantras, day after d engender a disoriented and susce ible state in the victim.

The authors of *Snapping* sugg that they alter the brain's pattern perception and information stor and establish new ones. In ot words, there is an actual neurolog transformation in the brain. Perha In any event, the change inside head of the cultist convert is ea recognized by his family and for friends through his changed facial

HIGH INCOME TO HELP OVERCOME INFLATION'S NASTY STING.

Wise investors are making a beeline to Fidelity Aggressive Income Fund. In double digit times like these, it's a very sensible move.

The Fund seeks high income from corporate bonds rated (by pure coincidence) BBB or lower and from unrated issues. Our full-time management considers each an "underrated" opportunity with management strength, sound earnings potential or other positive attributes.

To further fight inflation, there is no sales charge for The Fund. There is an attractive free compounding option.

You'd be smart to learn more today. Return the coupon or give us a buzz.

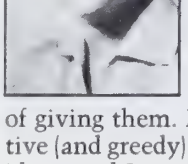
Results of an investigation—seven stocks that look like possible winners.

ALL AMERICAN BEAUTIES

By Ann C. Brown



ONE OF THE beyond-the-fringe benefits of being a FORBES columnist is hearing from readers all over the country. While most letter writers seek advice, every so often I find myself receiving stock suggestions instead of giving them. My naturally inquisitive (and greedy) mind delights in new ideas, and I try my best personally to check out all the companies. Over the past month I have been unusually busy scrutinizing and screening a bumper crop of intriguing situations. Here are the results of my investigations—seven stocks that look like possible winners. Take your pick.

Representing Oklahoma City is an outfit called *Woods Petroleum* (28), an oil and gas driller that has had two recent and sizable gas discoveries to add to the many producing wells drilled over the past few months. One of my best analyst sources looks for Woods Petroleum's earnings to grow 30% to 40% a year beginning about mid-1980. This year he estimates earnings in the area of $3 per share. There is some thought that the company might entertain a takeover offer, and if this proves to be the case, $40 to $45 per share does not seem to be an unreasonable price at this time. However, painful experience has taught me never to buy any company strictly as a takeover candidate. If a takeover should happen, it happens. If it doesn't, it's nice to have the comfort of growing earnings and the likelihood of dividend increases.

Great Lakes Dredge & Dock Co. (34) from Oakbrook, Ill. could be a dark horse. The company reported incredible earnings of $7.79 for 1978, up from $4.40 in 1977. What I know about dredging you could engrave on the head of a pin, but I do know that the company competes for contracts with the Army Corps of Engineers, and there is a move afoot to turn over more and more of this currently government-funded work to private industry. Should this actually come to pass, Great Lakes Dredge could earn over $10 a share in the not too distant future. With a current yield of 8.2%, the stock appears to have limited downside risk and attractive upside potential.

One of the prides of Wisconsin must be *G. Heileman Brewing* (30). Over the past few years, the company has swallowed up numerous bakery and beer concerns at a chug-a-lug clip. Earnings have kept pace, too—rising from $1.27 in 1974 to an estimated $5.50 for 1979. The dividend has more than doubled during the same period. What's important here is that Heileman Brewing seems to be able to tackle successfully the likes of Miller and Anheuser-Busch. Indicative of this is the fact that the company sells more beer in Chicago than the next *three* brewers combined. With the officers and directors owning less than 3% of the stock, Heileman's main worry would appear to be avoiding a company with a bigger thirst for acquisitions than its own.

Any company whose address is Beaverton, Ore. can't be all bad. In the case of *Pay Less Drug Stores Northwest* (18) it can be very good. In addition to Oregon, this high-volume/low-margin drugstore chain does business in California, Idaho and Washington. The latter state is noteworthy because Pay Less Drug NW is a big operator in Seattle, which makes it one of the logical beneficiaries of the Boeing boom. With the aircraft manufacturer slated to hire thousands more employees, Pay Less Drug NW should be able to sell a lot of pills and sundries expanded work force and its far The company's earnings hav creased steadily from 53 cents i to $1.92 for fiscal 1978. For th ended this past January, $2.25 possible. I'll hazard a guess of $2 so for fiscal 1980.

From California comes *Impel* (19), which is involved in the industry mainly through the se it provides to nuclear power p The company is on a September year and has announced earni 45 cents for the first quarter cents last year, or better than increase. For the fiscal year whole, $1.95 seems attainabl from $1.46 in 1978. The st closely held and traded ove counter. Use caution when b There just isn't that much for s

Texas is always twice as big erything, including stock sugges Dallas boasts *Overhead Door* while Houston is hot on *Geo Inc.* (28). Overhead Door is the manufacturer in the U.S. of sec garage doors and electric operat same. It also makes all manner er doors used in commercial an dential building, in addition to of doors for trucks and trailers. substantial increase in constr spending anticipated over the several years, Overhead Door see a continuance of its exc recent earnings growth. In 19 company earned 85 cents per and earnings estimates are $3 $3.35 per share for 1979.

The thing that caught m about Geosource Inc., besides i pressive earnings record, is th that the company has alrea ceived an order from China f million worth of geophysical ment. The basic idea of Geo Inc. is one-stop shopping. In words, the company offers an grated package of oil and gas se and hardware so that its cust don't have to buy a little bi and little bit there. This c should prove to be especially p with foreign purchasers, ma whom have neither the faciliti the expertise to choose and c nate different items from di suppliers. Earnings per share ha creased without interruption fr cents in 1973 (September fiscal to $3.15 in 1978. Looking Geosource could earn anywher $3.50 to $3.65 this year and $4 more for fiscal 1980.■

Ann C. Brown is executive vice president of the New York investment firm of Melhado, Flynn & Associates.

ow VALUE LINE can help you detect . . .

STOCKS WITH "SHAKY" DIVIDENDS

. . . as well as those with relatively "safe" dividends

If reliable dividends are important to you, we suggest that you carefully check every stock that concerns you right now against Value Line's specific measurements of relative *Financial Strength* and *Safety*. In view of the newly emerging uncertainties, it might be well to do this without delay.

Value Line systematically covers more than 1700 companies and their stocks (which account for about 96% of total dollar trading volume in U.S. equity markets). The coverage includes ratings of each company's *Financial Strength* relative to all the other companies, as follows: **A++ A+ A / B++ B+ B / C++ C+ C.**

The higher the rating, the better is the company's overall capability to finance growth, find external financing if needed, weather heavy financial storms without serious difficulty . . . *and pay dividends.*

If you're looking for relatively safe dividends, focus on the stocks of companies rated B++ OR HIGHER by Value Line for relative *Financial Strength.* Avoid companies rated C++ OR LOWER. Their dividends could be relatively shaky.

IECK SAFETY TOO

Value Line also ranks the 1700 stocks under regular coverage for relative investment *Safety,* from 1 (Highest) down to 5 (Lowest). Note that the *Safety* of a stock may be questionable—say, for instance, due to sharply diminished growth prospects—even though the *Financial Strength* of the company may be superb. The two factors are related but not identical.

The *Safety* rank also reflects a stock's price volatility. The more intense the fluctuations, the lower the *Safety* rank. Income-minded investors rarely feel at home with roller-coaster stocks, even if they sometimes provide interesting yields.

If you want secure dividends, concentrate on stocks ranked 1 (Highest) or 2 (Above Average) for investment *Safety* by Value Line. Avoid stocks ranked 4 (Below Average) or 5 (Lowest).

The combination of superior *Financial Strength* and superior *Safety* should provide you with far greater dividend security and reliability than would investments rated poorly by Value Line on these two criteria. But note that—while this approach will fortify your position—there can never be any ironclad guarantees.

ET THE BIG PICTURE

Whatever you want from stocks, The Value Line Investment Survey provides you with a very large universe of relative values to help you make the best choices. Certainly the 1700 stocks under regular review include virtually every issue that is likely to be of sustained interest to investors looking primarily for dividend income.

With Value Line's comprehensive rankings and ratings, you can also readily see how any stock currently measures up relative to *other* criteria that matter to you. Here's how:

UPDATED EVERY WEEK

Every week, Value Line's regular *Summary & Index* presents up-to-date ratings of EACH of 1700 stocks *relative* to all the others, as follows . . .

a) Rank for Probable Price Performance in the Next 12 Months—ranging from 1 (Highest) down to 5 (Lowest).

b) Rating for Investment Safety (from 1 down to 5).

c) Estimated Yield in the Next 12 Months.

d) Estimated Appreciation Potential in the Next 3 to 5 Years—showing the future "target" price range and percentage change from current price.

e) P/E ratio and current price, plus estimated annual earnings and dividends in current 12 months. Also latest quarterly results against a year ago.

HALF THESE STOCKS OFFER HIGHLY "SECURE" DIVIDENDS

according to Value Line standards outlined in this advertisement. Some of the others may be potentially shaky in this respect

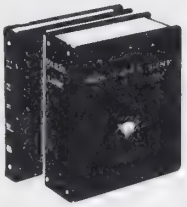
WESTERN UNION	WRIGLEY WM
U.S. INDUSTRIES	SINGER
GENERAL FOODS	U.S. STEEL
UNION CARBIDE	CHASE MANHATTAN
GULF OIL	SEARS, ROEBUCK
REYNOLDS METALS	INT'L TEL & TEL

PLUS FULL-PAGE REPORTS

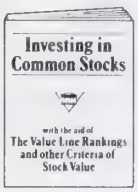
In addition, each of the 1700 stocks is the subject of a comprehensive new full-page *Rating & Report* at least once every three months—including 22 series of vital financial and operating statistics going back 15 years and estimated 3 to 5 years ahead. About 130 new full-page Reports like this are issued each week . . . 1700 every 13 weeks.

SPECIAL INVITATION

You can receive the complete Value Line Investment Survey (with 30-day money-back guarantee) for the next 9 weeks for only $29—about HALF the regular rate if no one in your household has subscribed in the past two years. And you get these 2 bonuses:



BONUS #1—Value Line's 2400-page *Investors Reference Service,* including our latest full-page Reports on each of 1700 stocks... fully indexed and looseleaf-bound for easy reference, and systematically updated by new full-page Reports in the weeks ahead. Filing takes but a minute a week.



BONUS #2—*Investing in Common Stocks* by Arnold Bernhard. Value Line's founder and research chief, revealing methods of stock evaluation that took decades to develop. You KEEP this book even if you return the other material for your money back.

LOOK FOR OIL SHALE

By Thomas P. Murphy

JOHN FRENCH, 47, remains an unabashed risk-taker, while most venture capitalists have grown conservative. Appropriately, he wears a little gold horseshoe on his watch chain. Fondling his horseshoe, French told me: "Venture capital means high risks for high gains. Startup companies give you this combination."

Combination is right. You don't get the prospect of high profit without taking high risk. This means that you need not only steady nerves but the patience to keep at the game. French's Research & Science Investors fund in New York flourished from its own startup in 1961 through 1968. Then came the biblical seven lean years. From 1975, French describes his results as "sideways." Never mind, that may be changing. John French figures he may have hit the big one.

Characteristically, it is not the kind of deal most venture capitalists prefer. It goes back, in fact, to the early 1950s even before French's venture fund was formed. At that time he was introduced to a bright, young Australian named Ian McFarlane who was working for the New York investment banking firm of Morgan Stanley & Co., Inc. McFarlane's personal credentials were impressive and, more important, French liked McFarlane and trusted him.

McFarlane told French that he thought there was a place in this world for small deals in mining and petroleum exploration. French agreed with McFarlane, and the two put a group of investors together to back his idea. Was the idea a brilliant success? Alas, it was not. Until recently, it lost money on balance.

Persistence, however, is the n of this particular game, and Fr and McFarlane did not give up. day in the early 1970s, the presi of a big oil company said to Mc lane: "Oil shale. Look for oil sh McFarlane got out some geolo maps of Australia.

Oil shale, you have to underst does not gush from the ground. I petroleum-like product locked in pores of rock, and getting at i quires mining the rock, pulverizi then subjecting it to retorts tha effect, use a heat and distillation cess to release the trapped oil. T are enormous deposits of oil sha our own Colorado Rockies bu commercial production yet. The l tical and environmental problem getting to that oil shale have, s frustrated all efforts.

McFarlane, of course, knew a all these problems, so he wante shale that was near a city, had a able transportation, abundant w for processing and no major env mental objections to mining. found what he was looking for a 20 miles outside of Gladst Queensland on the eastern coa Australia. Surface outcroppings shale had been noted in an area c Rundle since 1900, but no thought of oil shale as having value. McFarlane made his claims then began the slow, expensive cess of test boring to see what underneath. What was undern was a veritable mother lode o shale—high grade and accessible. first area, test drilled near a marsh right on the coast, has p tial petroleum-equivalent reserv at least 2 billion barrels, and ther two other areas nearby.

There it was, but what to do Putting big deals together for o for 25 years gave McFarlane th phistication he needed to put his

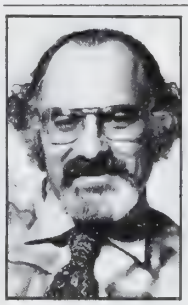
THE GREEN FELT MARKET

By Martin T. Sosnoff



"I, CAESAR, bid you welcome to Caesars Palace." The stentorian voice issues from tiny overhead speakers as the moving stairway conveys Middle America to the Maw of Casino Land. This is the iconography of Vegas, a supercolossal conveyor belt moving at 120 feet to the minute that offers rooms with adjoining crap tables. At night the accents are Deep South and Akron twang, New Yorkese and Texan drawl. The conventions are booked into 1981 and the shopping arcades are packed. Downtown Vegas smacks of Miami Beach, a geriatrics ward juxtaposed with block-long neon bedecked casinos that suck in the lonesome cowboys whose dream is the big hit, enough not to have to work for a year. Things are still cheap here—the $10 rooms of 1973 are only $26, and a couple can dine well for $20.

The Golden Nugget is my favorite downtown place. It has a hotel now and a Cantonese restaurant that is as good as anything you will find in the Chinatowns on either coast. The flavor is frontier gothic—covered wagons, gold dust and stage coaches, Tiffany lamps and multiglobed chandeliers. A poker room is studded with Stetson-hatted players, hundreds of intense dudes playing through day and night. Years ago my wife and I would spend an afternoon playing nickel-and-dime poker—hard to lose more than five bucks. Minimums for betting have changed muchly. The dollar slot machines outnumber the quarter slots, and the days are over for carrying around a cup of nickels fo evening's play.

On the Strip, when you look your hotel room the sky is crow with cranes. Every casino is buil on more rooms, 500 to 800 at a t and 50,000 units grow at a 15% Land values surge, and the dynar of employment and retail sales hardly matched anywhere in country. Vegas is beginning to att more light industry, and the big partment store chains are sched for the freshly graded shopping pla Every year is better, and the old- ers involved in land plays and ca ownership think Vegas is just star to break out of its frontier-town age. Maybe so.

How does Atlantic City com with Vegas? There is no compari Vegas will continue to grow long the Jersey shoreline is crowded w couple of dozen casinos. The s early money moving into Atla City hopes to make its investr back in three years. After that, going to be very crowded and the and municipal governments may cide to squeeze operators with h taxes. If you haven't tried the Je shore on a rainy day in December, don't know how homesick you get for any place but Atlantic Cit

Where does the investor go fo best play for his buck? The enter ment stocks have been the parial Wall Street for too long. Not one attained a heady price/earnings tio—not even Disney, cheap no 10 times earnings. No matter much money MCA or Warner C munications makes, the valua remain low. Nobody wants to p premium price/earnings ratio fo *perman* and *Jaws*. Is the market st for paying so little for Resorts Int tional earnings? Hardly. s a savings bank passbook. ■

Why trading through a broker's branch office can cost you money.

Who benefits from branch offices? Investors who need advice and the broker salesmen who give it. But, if you are an investor who doesn't need a broker's advice, a branch office can be a costly middleman between you and New York where most stock transactions take place.

When you deal with Source, you eliminate red tape. You talk directly to our trading specialists who call your order to the Exchange floor. No salesmen, no secretaries and no teletype operators get between you and your transaction. You'll always be in contact and control. And you'll get fast, accurate executions and clearance.

Average Commission Savings at Source

Stocks	Options
53%	43%

Average percentage savings from the last NYSE fixed commission schedule in effect prior to May 1, 1975 on all trades executed through Source for a recent two month period.

By dealing directly with Source, you save from 30% to as much as 81% on commissions. (Commission savings on stocks average 53%; see chart.)

Along with savings and service you get maximum security. Your assets are fully protected by the resources of our world wide clearing organization and $500,000 in account protection.

So to cut red tape, as well as your trading costs, call for our free Commissions and Services brochure at **800-221-5338** toll free. In New York State call collect at **212-269-9127.** Or send in the coupon today.

Source Securities Corp., 70 Pine St., New York, N.Y. 10005

WHY GO TO LAS VEGAS?

By Stanley W. Angrist

YOU CAN CASH IN your plane tickets to Las Vegas. There is no need to make that long trip now if it is action you are seeking, because the trade that I am recommending in this column will provide you with as much action as your nervous system can tolerate. In recent weeks that action has been in gold, silver and platinum.

Probably the biggest surprise in the precious metals markets in recent weeks has been the price action of silver. The July 1979 contract has moved from the $6.20-per-ounce level at the beginning of January to in excess of $8. That gain of $1.80 per ounce represents a profit for the longs of $9,000 on a 5,000-ounce contract (or a corresponding loss for shorts). The margin on a long or short position would be around $1,500.

But what has touched off this explosion in silver? There are numerous answers to that question but most observers would first point out the sharp drop in the amount of silver stored in the Commodity Exchange and Chicago Board of Trade vaults. On the last Friday in October the Comex vault held 64.9 million ounces; by the last Friday in January, vault stocks were down to 52.3 million ounces. No doubt speculators' fears were further fired by the events unfolding in Iran and the recent sharp increase in U.S. wholesale prices. Moreover, the tightness in the world oil market created by Iran's lack of exports will allow OPEC to increase prices more than it announced in December. This will surely exacerbate, at least in the short run, the problem of worldwide inflation.

That's the bad news. Now for the good news. It appears that silver supplies will probably increase modestly in 1979. A good part of the world's primary silver production is a by-product of copper, lead and zinc production. Since production of these metals is likely to increase at least somewhat this year, it would not seem unreasonable for silver production to increase also. About 35% of all silver consumed today comes from secondary sources. These sources include scrap recovery, Indian exports, demonetized coins and government stocks. The current high price of silver provides ample encouragement to silver scrap refiners to recover scrap. Though India is not a silver producer, her population holds large quantities of silver as a type of savings account. The State Trading Corp. has placed a legal limit of 30 million ounces on exports for fiscal 1978 (ending Mar. 31, 1979). When the price of silver is right, however, Indians have been known to export considerably more. (Indeed it is rumored that in the silver-price explosion of 1968 it was Indian exports reaching London that finally broke the back of the silver bulls. That debacle is believed to have cost those bulls about a billion dollars.)

Demonetized coin is not likely to produce more than 10 million ounces of silver, as the importance of silver coinage is declining. Government sales are relatively small, but a major question mark overhanging the market this year is whether silver will be sold from the U.S. strategic stockpile. Current holdings amount to 139.5 million ounces. On balance, I think the silver run-up has been overdone.

But what about gold? Like a number of market observers, I watch the ratio of the price of gold to the price of silver. From 1966 through 1970 it ranged between 19-to-1 and 27-to-1. In the third quarter of 1978 the ratio moved from about 34-to-1 to 39-to The recent price explosion in sil has brought the ratio down to un 34-to-1 again.

I believe that gold prices will c tinue to be strong. They will be help along by a number of factors. Th are unconfirmed reports that Sou Africa, now that it is cut off fr Iranian oil, is buying Saudi Arabi crude at prices higher than the pos OPEC price and paying for this oil gold. Iran had previously met arou 90% of South Africa's requiremer Moreover, the Swiss say that Rus has not been selling gold to the W for the past few months.

I think that a reasonable strategy follow in this trade would be to bu 100-ounce gold contract, and sel 5,000-ounce silver contract; both c tracts for December expiration would only consider doing this trad the ratio of the price of gold to price of silver was less than 34-to Because of the lag between the tim write this column and the time y read it, the ratio could have risen b to where it exceeds 38-to-1. In t case, I would do the spread the ot way; that is, buy silver/sell gold. T margin on this trade will be the s of the margins required for a gold a silver contract, or about $3,000. T round-turn commission will also the sum of the individual contr commissions, or about $100.

Under no circumstances woul risk more than $1,000 on this trad

By the way, if the 100-ounce/5,0 ounce spread sounds a bit too risky your taste, you might consider do this spread on the Mid-America Co modity Exchange. There you can u 33.2-ounce gold contract agains 1,000-ounce silver contract. The m gin required to carry this minispr should be less than $1,000, while round-turn commission is $50 both sides of the spread. If you elec use these reduced-size contracts would limit the risk to $300.

But keep in mind that a gold ver silver spread is risky and volatile. T profit opportunity is great. The opp tunity to take a bath with this spr is also large. Be careful!

The cotton chart

In my last column, the lines dep ing the use of cotton in the develop countries and socialist countries w inadvertently omitted from the ton consumption chart. Though omission diminished the value of chart, I believe the point of the umn was still understandable. ■

Do you know anybody who is somebody in business who does not read Forbes Magazine?

Forbes: Capitalist Tool

Thoughts on the Business of Life

The struggle for success is so keen in every line of business that responsible positions are rewarded to men of solid merit, of indefatigable energy, of unbounded enthusiasm, of unflinching courage and infinite faith in the worthiness of their life's work. In return, these men must be thoroughly organized, must give each executive assistant responsibilities and allow him scope to discharge them. And, above all, nonswell-headedness!
B.C. Forbes

Everything holds its breath except spring. She bursts through as strong as ever.
Emily Carr

Some grow with responsibility—others just swell.
Arnold Glasow

The more humble a man is before God, the more he will be exalted; the more humble he is before man, the more he will get rode roughshod.
Josh Billings

Let every eye negotiate for itself and trust no agent.
Shakespeare

A Text . . .

While the earth remaineth, seedtime and harvest, and cold and heat, and summer and winter, and day and night shall not cease.
Genesis 8:22

"At National Distillers, ChemLink helps us marshal our money faster and control it better. Thanks to Chemical Bank, and Chemical bankers like Peter and Jane."

F. Donald Brigham, Treasurer, National Distillers and Chemical Corporation.
Photographed at the Houston plant of U.S.I. Chemicals— a division of National Distillers and Chemical Corporation

"Tight control of company cash has long been one of the top priorities of financial officers everywhere," says F. Donald Brigham, Treasurer of National Distillers, the diversified chemical, liquor, wine, metals and textile company. "ChemLink, Chemical Bank's computerized financial management system, has made it easier for us to manage the movement of our money by giving us more timely information about the cash in our banks. And by facilitating short-term investing, it has helped produce savings that show up in hard dollars on the bottom line.

"We have 48 disbursement accounts across the country. To fund our local bank accounts we used to telephone our disbursement banks and give verbal instructions— a slow, error-prone process that generated a lot of paperwork. Now, we just type our instructions on a terminal and get automatic execution via ChemLink. We also get virtually instantaneous hard copy confirmation.

"Now, look at another situation that's just as illustrative. We have 32 lock boxes in 18 cities. Through ChemLink, all those deposits are now concentrated into Chemical Bank via depository transfer checks. Thus, ChemLink makes it possible for us to know today what money will be available for investment tomorrow. Again, for far fewer dollars than what it used to cost us to concentrate money by wire transfer.

"Chemical's determination to maintain a position of leadership in cash management is evidenced b bank's commitment to existing se vices and to adding more advance capabilities to the ChemLink syst

"As well as by knowledgeable people like Peter Barfko, our acc officer, and Jane Arkedis, our cas management specialist, who've m it their business to know what our needs are. And their advice is inv able."

At Chemical Bank, experien people like Peter and Jane are an portant factor in building a relatio ship as successful as this one. Bu are the knowledge and profession that result from continuing leade in worldwide cash management. which you'll discover as your relat ship with Chemical evolves.

SEE EVERY BEAT OF YOUR HEART.

Checking your heart rate is ow as easy as grasping a glass of range juice, thanks to the remark- ble Insta-Pulse™ heart rate nonitor from Biosig, Inc.

When held in your hands, it eads your heart rate function from ne tiny electrical impulses in your nger tips. Insta-Pulse works on the ame principle as a hospital elec- rocardiograph (EKG). Yet it weighs mere 10 ounces, measures 11″ × ½″ and is fully portable. It runs for p to one full year (over 100,000 eadings) on a single 9-volt battery.

lo waiting required.

Once Insta-Pulse is in your ands, its microcomputer chip egins to monitor every heart nuscle contraction. And instan- aneously translates that into heart- eats per minute—showing it with bright, always changing LED isplay.

(Flash) 075 (beats per minute) . . .
(Flash) 078 (beats per minute) . . .
(Flash) 074 (beats per minute) . . . and so on.

As long as its nickel hand grips re between your fingers, ulse data continues; put ista-Pulse down, and it urns itself off auto- atically.

Watch both heartbeats and heart rate patterns.

You're free to monitor your heart rate anywhere with Insta-Pulse. During a workout or after one. At home, at the gym or on the track.

Instantly, you will see how the most critical organ of your body responds to exertion. And how long it takes to return to its normal at-rest rate.

This picture of your heart recovering from activity is something you can never get with conventional pulse readings.

In seconds you can also see the effects of psychological stress, overeating, alcohol, caffeine and cigarettes. You'll learn just how valuable to your heart a short nap can be. Or check the benefits of a morning's meditation. Here, too, is an excellent tool for use in bio-feedback work; with practice, you can actually develop the ability to alter your heart rate—at will.

Not a toy. Not a toy's price.

The cost of Insta-Pulse through The Sharper Image is $149.00. It's not the only heart rate monitor available to you for about that price. However, others with their cumbersome clips and wires do not provide the accuracy of Insta-Pulse, the world's first instant heart rate monitor.

And it's shock resistant as well. Insta-Pulse contains no moving parts, is 100% solid state and its circuitry is shielded from damage by a thick, clear lucite shell. A hand lanyard provides additional security. The battery is included.

Insta-Pulse comes with a ninety-day warranty from its manufacturer, and the Sharper Image's own guarantee of satisfaction: if you are not completely delighted with it, send it back within two weeks for a full refund.

Order an Insta-Pulse now, and watch your heart function as you never could before.

ORDER TOLL-FREE

Credit card holders may use our toll-free ordering number, below. Or send check for $149.00 plus $2.50 delivery. Add $8.94 tax in California.

IF YOU'RE EVER SUED BY YOUR STOCKHOLDERS, THE LAST THING WE'LL TRY TO GET YOU IS A FAIR TRIAL.

Since 1966, American Home/ ational Union have handled over 00 cases involving lawsuits rought against directors and ficers all over the country.

In almost every case, we've tried get the claim settled out of court. The reason is simple.

No matter how fair a trial is, it can unfair to the director or officer ing sued.

A public trial can mean public barrassment.

It can hurt your reputation. It can en ruin your career.

Because once you go to trial, you uld appear guilty, to some people, en if you're not. So even if you n your case, you still lose.

In 95% of the D&O cases we've ndled, they've been successfully ttled out of court.

And that's a claim probably no her insurance company can make. fact, you could have a D&O licy with an insurance company at may never have handled a claim fore. Which means they could learning how to handle a claim your expense.

After all, it's easy to write a D&O Policy, but knowing how to settle a claim is something else.

That's why we think you should have a D&O Policy with us.

We call it our "Protect Your Privacy" Policy, and it's available for directors and officers, individually or collectively.

Our underwriters are all experienced in counseling any director or officer being sued. And in addition to helping settle claims out of court, they're also capable of organizing and consolidating the defense.

In fact, we have many lawyers on retainer who specialize in D&O Liability law. So in every case we handle, we're able to call in the best legal help available.

American Home/ National Union, member companies of AIG, are now the leading writers of D&O Insurance.

(We also offer a combination Pension Trust/D&O Policy and many other coverages to protect the executive, like Kidnap, Ransom and Extortion.)

Our "Protect Your Privacy" Policy is just one of more than 300 policies AIG offers, through our more than 160 member companies, in more than 130 different countries.

For more information, send in the coupon below.

If your privacy is as important to you as we think it is, this offer will be too.

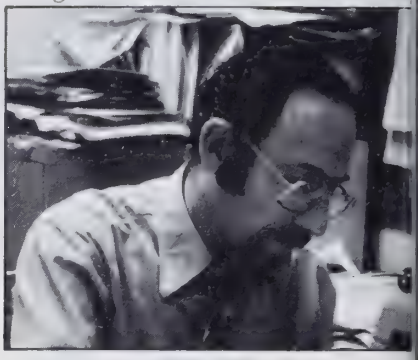
Side Lines

Some things never change

Individuals change, but human cupidity and gullibility seem eternal. Howard Rudnitsky was 27 when the picture on the left was taken, a recent recruit to FORBES' writing staff after a stint in our statistical department and working for Moody's Investors Service. A few years earlier, in 1959, FORBES had done an arti-



Rudnitsky in 1962 and in 1979
Still on the lookout against questionable merchandise.

cle warning readers against syndications like the SIRE plan, a pioneer offering of realty partnerships for small investors. Its principal ranted at us, but in the end he went to jail. Yet the game went on: Four years later Rudnitsky was reporting how thousands of investors had become locked into uneconomic syndications. Now 43 and a senior editor, Rudnitsky is still on the lookout against questionable investment merchandise. Today real estate syndication is booming again, and once again Rudnitsky is documenting it. In 1963 FORBES warned that as much as 22 cents on the investment dollar was going to middlemen. And in 1979—surprise!—in some cases as much as 23 cents is going to the middlemen *(p. 33)*.

General press and TV coverage of b ness remains, by and large, unintelli and one-sided. The general media telling us a wave of mergers is swee the country, increasing the corpo concentration. What the press rarely us is that new companies are cor along about as fast as older ones are appearing into mergers.

This by way of introduction to a feature that debuts with this issue: Up-And-Comers. It seeks out enterp that are too small to be called big b ness and too big to be small busi These companies may have sale small as $10 million, or as big as million. Who runs them? What m them tick? How have they been so cessful in an economy supposedly d nated by big business? Senior E Geoffrey Smith, who developed our ular Numbers Game feature (and recently returned from a stint as our ropean bureau manager), developed format and wrote the first article Atlanta's Crawford & Co. *(p. 64)*.

Prophecies and profits

"As long as we focus on big-ticket, hard-machinery products built around an engine, we retain our cohesiveness. . . . [And] I don't see how a 50% increase in volume can disrupt things." So said Frederic Garrett Donner, chairman and chief executive officer of General Motors Corp., in 1962.

A FORBES editor was reminded of Donner's remark when Chicago Bureau Chief Bob Tamarkin filed his cover story on GM for this issue *(see p. 44)*. For not even Donner, perhaps, could have imagined how much growth was in store for GM, then as now the world's largest manufacturing company. In 1962 GM sales came to $14.6 billion, net profits $1.5 billion. Sales last year were 332% higher (to $63 billion), net profits up 140% (to $3.5 billion). adjusted for inflation, GM has man awesome growth without visible strai 1962 dollars, 1978 sales came to $ billion (up 100% from 1962), net pr $1.6 billion (up 12%).

As Tamarkin reports, GM's strate for the 1980s include a major thrust seas in its main business, making selling cars, with no thought whatev diversifying beyond it. That is ent consistent with Donner's view of ho handle great size.

"If we were in cosmetics as wel would be a different story," he said. versity presents some problems. But *per se* is not unmanageable."

Obviously. ■

How to put your building on a strict Btu diet.

Energy, as we all know, is money. It disappears faster than we can put our fingers on it.

Soon, every one of us is going to have to start budgeting energy. The high costs of energy, as well as government regulations, are going to demand a strict accounting of the way our buildings consume energy.

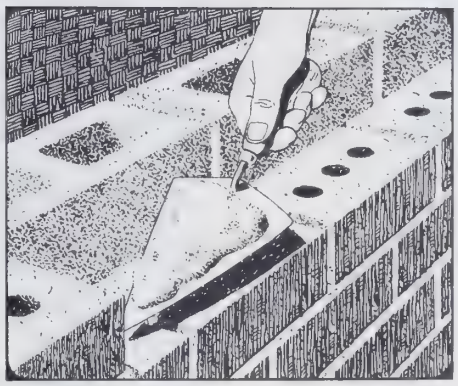
But there are ways to make a Btu stretch farther. We believe there are four important things that every business manager should know about cutting down energy expenditures:

1. *To do a good job of saving energy, you have to be concerned with the energy performance of the entire building,* not just a component like the walls, or a single system like heating and cooling.

Every facet has to be taken into account. The mass, or weight, of the walls, proper insulation, heating and cooling systems, air infiltration through doors and windows, water and lighting systems—all are critical.

Building performance standards that take this overall "thermal performance" (measured in Btus—British thermal units) into account are the best kind of standards. They give designers and builders freedom to use their skills and ingenuity. They encourage such things as proper solar orientation of buildings, reduced air infiltration and efficiently-sized mechanical equipment. A true "performance standard" simply sets an energy conservation goal, expressed as an energy budget for an entire building, and then permits that goal to be achieved by the designer, builder, and owner in whatever ways they can devise.

2. *We can use the sun's energy to cut energy costs.* There are both "active" and "passive"



solar collectors. "Active" solar collectors collect energy from the sun and then use mechanical equipment such as pumps or fans to distribute that energy. "Passive" collectors simply collect the sun's heat and hold it until it is released by radiation or conduction.

No materials serve as "passive" collectors better than masonry—brick, concrete block, stone.

Passive solar collectors have many advantages over active solar collectors. They have no working parts—nothing to go haywire. They are simple to design and build—and they are more economical.

3. *Massive walls of masonry, even when they're not designed as passive solar collectors, keep buildings warmer in winter, cooler in summer.* Because of their weight, or mass, masonry walls act like thermal blankets. In many cases, masonry walls will mean that heating/cooling systems can be reduced in size.

4. *Insulation is important when properly used, and when its limitations are understood.* We are still learning about the limitations. It's already clear that insulation is cost-effective only when used with restraint. After a certain point of thickness has been reached, the cost of additional insulation will no longer be recovered in energy savings.

And it's becoming clear that some assumptions made in the past about insulation are not justified. For example, there are indications from preliminary studies that in regions where more energy is expended in cooling than in heating, insulation used in the standard fashion in all walls may actually increase, instead of reduce, energy consumption.

One of insulation's limitations is that it affects only conduction—it doesn't affect air leakage, which is estimated to account for 25-30 percent of the thermal loss in buildings. A significant amount of air leakage occurs through windows and doors, so it's important to reduce the size of, and shield, these openings.

Masonry walls will further reduce air leakage because they are hand-fitted on the site (like custom-made suits) and thus are more airtight.

Furthermore, the effectiveness of insulation depends on the wall to which it is attached. Promoters who compare wall materials with insulation are making a meaningless comparison—the two have different functions, and one is not a substitute for the other.

Keeping to a strict Btu budget for your buildings is important today and will be even more so tomorrow. If you would like to know more about saving energy, write to International Masonry Institute, 823 15th Street, Northwest, Washington, D.C. 20005.

The president of Smedley & Sons carries lots of weight--most of it in the wrong places.

Kodak knows that paper is one of the weightier problems facing American business today. You can't stop the volume that flows into your office. It builds up on your desk, clogs your filing system, and can be difficult to find when you need it.

Kodak understands paper problems and has a plan to help you combat them—by using microfilm to do away with the overweight office.

Microfilm not only allows you to store the same information in as little as 2% of existing space, but also it allows you to find the documents you need and make excellent paper copies of them, all in seconds.

With Kodak Oracle products, for example, you can microfilm documents as you receive them, in random order. By assigning each one an identifying code on the film, you can retrieve it any time you wish—almost instantly. This is just one of many applications we can help you set up, all dedicated to fighting excess paper.

Kodak has helped thousands of companies attack paper problems at their source. We've made advances in microfilm technology that make it fully compatible with even the most sophisticated office systems.

We'd like to share some of what we've learned about getting companies like Smedley's to carry their weight in the right places. Start getting your office back into fighting trim. Send the attached coupon today.

Get a horse!

Foreign-car manufacturers are working furiously to clear an unforeseen roadblock—some of their best selling imports cannot be towed. Nissan of Japan, for example, hopes to sell 80,000 copies of its luxury sports car, the Datsun 280ZX. With sales at full throttle, it recently found the car was rated almost untowable. Front-end towing damaged that end of the body and rear-end lifting could wreck the rear parking-brake cables. Nissan and the American Automobile Association have now figured out how a tow truck can pick up the 280ZX by the rear bumper and are working on a front-end solution. Nor is Nissan the only one with a problem. The Volkswagen Rabbit's automatic transmission can be damaged if a rear-end tow isn't done just so. The Fiat Strada, which uses the Rabbit's transmission, faces the same hazard. The Japanese Mazda RX7 should be towed on a dolly to avoid damaging transmission, rear axle or steering. The reason for the sudden commotion seems to be simple oversight. The conventional tow truck, so familiar to Americans, is something of a rarity in Japan and Europe. To correct that blind spot, Nissan and Volkswagen have bought standard U.S. tow trucks to help their designers and builders.

Disco economics

Does demand command supply? In the record business, not necessarily. Fans hunting longer versions of hits they hustled to on the dance floor once had to settle for a 7-inch, 3-minute single or a 12-inch LP album that mixed the sought-for tune in a medley of other music. So record companies have been pressing—and disco fans have been snatching—new 12-inch singles with up to 15 minutes of one song per side. Despite the heady $3.98 price on the new singles (the old ones cost less than $1), companies are turning out just enough to keep appetites whetted, not sated. Why? "The same machine pressing the singles could be pressing LP albums," says Warner Bros. Records. And LP albums sell for $7.98 and up.

Own your job

New proposals to help employees buy the companies they work for are given a good chance for passage in this year's Congress. One bill that has the powerful support of two Democratic Senate committee chairmen, Russell Long of Louisiana and Gaylord Nelson of Wisconsin, would direct the Small Business Administration to make and guarantee loans to workers who want to buy companies slated for closing, relocation or sale to outsiders. In the House, another Democrat, Pennsylvania's Peter Kostmayer, wants to create a special program in the Economic Development Administration with a $100-million loan fund to finance worker-purchasers. Backers of the idea argue that employee ownership is preferable to plant closings and their resultant costs to taxpayers for welfare, unemployment benefits and job training. Profitable businesses can fold, the sponsors add, because the owner retires or because a big corporation's management may not deem a subsidiary's profits to its liking.

Winter's bite

The numbing effects of this year's fierce winter, blamed for every economic woe from high beef prices to fuel shortages, will probably prove no more lasting than the snows it brought. At least that's what the experts in Washington think. Robert Parker, who watches such matters for the Commerce Department, says that "one week's bad weather" has little long-term impact. Jerry Zeisel, a Federal Reserve Board economist, points out that January 1978 brought "horrendous" weather but the lost business was more than made up by a spending boom in the spring. Even the savage weather this February, the National Association of Purchasing Management found, did not affect two-thirds of the companies it surveyed. Orders and production were up, the association says, with items like aluminum, copper, electric motors, paper and paper products in short supply.

Budget backfire

The White House has quietly st building backfires to check the grassr clamor for a constitutional amendr requiring balanced federal budgets. Carter Administration has just leak memo pointing out how the states m have fared if the budget had been bala for the past ten years instead of run up $325 billion in deficits. Since 196 notes, balanced federal budgets m have ruled out general revenue sha which would have denied states and c munities almost $6.9 billion a yea would also have meant no money sewage treatment plants, a $27 bil item. President Carter, of course, fav balanced budget but he wants to ach it his own way. The pressure, howev building fast; with action by 34 st required, 28 have already asked Cong to call a national convention, the since the Founding Fathers held thei 1787. George Washington & Co. lef guidelines for such a powwow, howe and constitutional experts in and ou Washington are leery of what might pen in one. Jimmy Carter, moreover, a special reason to oppose it. The appointed point man for the balance-budget crusade is California's Demo ic Governor Jerry Brown, who is als running hard to take the President's p in the Oval Office.

Ho! for the open road

Like flowers, business should bloom again in the spring.

Ætna's new pension fund gives small businesses the investment power and tax shelters of a big business.

Ætna's new Multiple Asset Portfolio is a unique plan that offers small businesses the chance to invest in 1) a Common Stock Fund; 2) a Bond Fund; 3) a Money-Market Fund and; 4) a Guaranteed Account. You can invest in any one of these or any combination and you can transfer without cost to a different option* every 90 days if you feel it's advantageous.

The result: An investor directed, professionally managed pension fund that gives you more flexibility than ever before.

And, at no additional fee, Ætna will convert all accumulated assets into an income for life for your retired employee. This plan also provides a pre-retirement death benefit for the dependents of the employee.

Mail the coupon. Discover how Ætna can give your small business the financial advantages of a big business.

*Transfers are not allowed from the Guaranteed Account

Tough on Energy Costs

It's not uncommon for an American building owner to save several thousand dollars annually in fuel savings. Our buildings are designed that way.

When compared to other kinds of construction, the American wall and roof system is up to five times more energy efficient. That means lower utility bills. Less wear and tear on heating and cooling equipment.

With our systems approach to construction, the local American builder can provide time and money savings for you. And our Standing Seam Roof System* is unique in both design and application. It can save you problems and money in the years ahead.

For good-looks, construction economy and energy-savings contact the American builder. He's in the Yellow Pages under "Buildings - Metal". Or American Buildings Company, Box 800-A, Eufaula, Ala. 36027, (205) 687-2032.

*Patent Pending

Plants Coast to Coast

AMERICAN BUILDINGS

ery pulpit he can find, but the Ame motorist isn't getting the message. 150 million vehicles on the road, dr are burning 300 million gallons of line a day, and the trend creeps up despite higher prices and the "do nickel" 55 mph speed limit. Durin first seven days of July 1978, the De ment of Energy has figured out, U.S torists used more petroleum than d the American ground forces in 19 the year of the Normandy invasion American driver is also managing t Washington's and Detroit's allout e to force him into smaller and sm vehicles. General Motors, for inst has spent close to $2.7 billion on its compacts and expects them to deliv miles per gallon. These are the cars must sell if it is to maintain the ' average" mileage Washington has dated. To achieve 26 miles per gall 1983 for the GM fleet, President (Pete) Estes says, the company will to sell two compacts for every full-g automobile. So U.S. buyers have ch this as the time to develop a high for such obvious noncompacts as pickup trucks and four-wheel-drive cles. Last year, 23% of U.S.-built veh were vans and pickups.

Unspendable dollars

Since 1970 airline passengers have pumping money into a trust fund cr to improve the nation's airports an ways, but despite their crying need airport operators have been able t only a fraction of it. Federal lawm had decided that the money—90% from levies on passengers and fr the rest from a fuel tax on private ers—was to go for items like run and not for terminals and parking f ties. With the public aroused by the ronmental outcry, however, new ways proved to be the last things an wanted. The real priorities were th bidden new terminals and parking on existing airports. (The radar and paraphernalia to improve the airway better, drawing about $250 million a from the trust.) Congress did loose purse strings a little in 1976 to money for operations and mainten but not for terminal construction, the fund kept piling up surpluses year. Today, this hoard stands at $2.7 billion and will reach $3.2 billi the time the tax authority runs ou June 30, 1980. Then, unless Con takes special action, the passenge waybill tax will drop back to its pre- level—and the revenues, instead of into the airport and airway trust, flow into Uncle Sam's general fund.

THE ADVANTAGES OF LOCATING YOUR COMPANY AMIDST THE GREATEST CONCENTRATION OF POWER AND INFLUENCE IN THE WORLD.

Not only is Washington, D.C. the capital of America, it's also fast becoming the capital of business in America.

This is where they make the rules of the game that businessmen have to play by.

This is where the factory is that makes the red tape.

Yet, this is also where the greatest opportunity exists for business today. Simply because there are enormous benefits to having the federal government for a neighbor.

Notice we said neighbor. Because when you look at Washington, the view is better from Fairfax County, Virginia.

Fairfax County is 410 square miles located just thirty minutes from Capitol Hill. It offers all the advantages of proximity to Washington combined with a comfortable suburban environment. And importantly, Fairfax County offers a lifestyle that's more than tolerable; it's desirable.

The ideal choice for a Washington location is not Washington. It's Fairfax County, Virginia.

That's actually the bottom line of a report issued by the Fantus Company, a subsidiary of Dun and Bradstreet, and a leader in the field of location consultation.

The study thoroughly examined locational possibilities all over America and concluded, "Fairfax County may well be the optimum location selection for the headquarters function of a national association or the regional office of a major corporation."

The fact is that over 1200 major corporations, associations and businesses have already located here.

Companies like Mobil Oil, TRW, Honeywell and Computer Sciences Corporation are typical examples.

By locating in Fairfax County, any business influenced by government is in a good position to influence back. Company executives can establish personal contacts with key legislators and staffs on Capitol Hill, contacts that are difficult to maintain at long distance.

You don't have to be intimately involved with the Federal government to take advantage of it.

Since Washington attracts the best and the brightest, companies that locate in the area can, too. Fairfax County firms have the opportunity to tap an executive, managerial and clerical pool that is perhaps unequalled anywhere in the nation.

Transportation systems are excellent for regional, national or international corporations. Washington National and Dulles International airports have direct flights to major cities all over America and to major capitals of Europe and South America.

And a move to Fairfax County won't prove as taxing on your company. Or your people. The overall tax situation in Virginia is favorably competitive with other states.

Now that you know what power and influence will get you, look what you get for 15¢.

If you'd like to know more, The Fairfax County Economic Development Authority will be happy to send you a complete brochure with details on taxes, transportation, cultural attractions, lifestyle, costs of doing business, educational resources and other subjects critical to a locational decision.

Once you discover the advantages of locating your company in Fairfax County, right in the middle of the greatest concentration of power and influence in the world, you may reach the same conclusion that Mobil Oil and the others reached.

This may just be the best place in America for business to work.

FAIRFAX COUNTY, VIRGINIA.

Please send me complete information on all the advantages of a Fairfax County, Virginia location for my company.

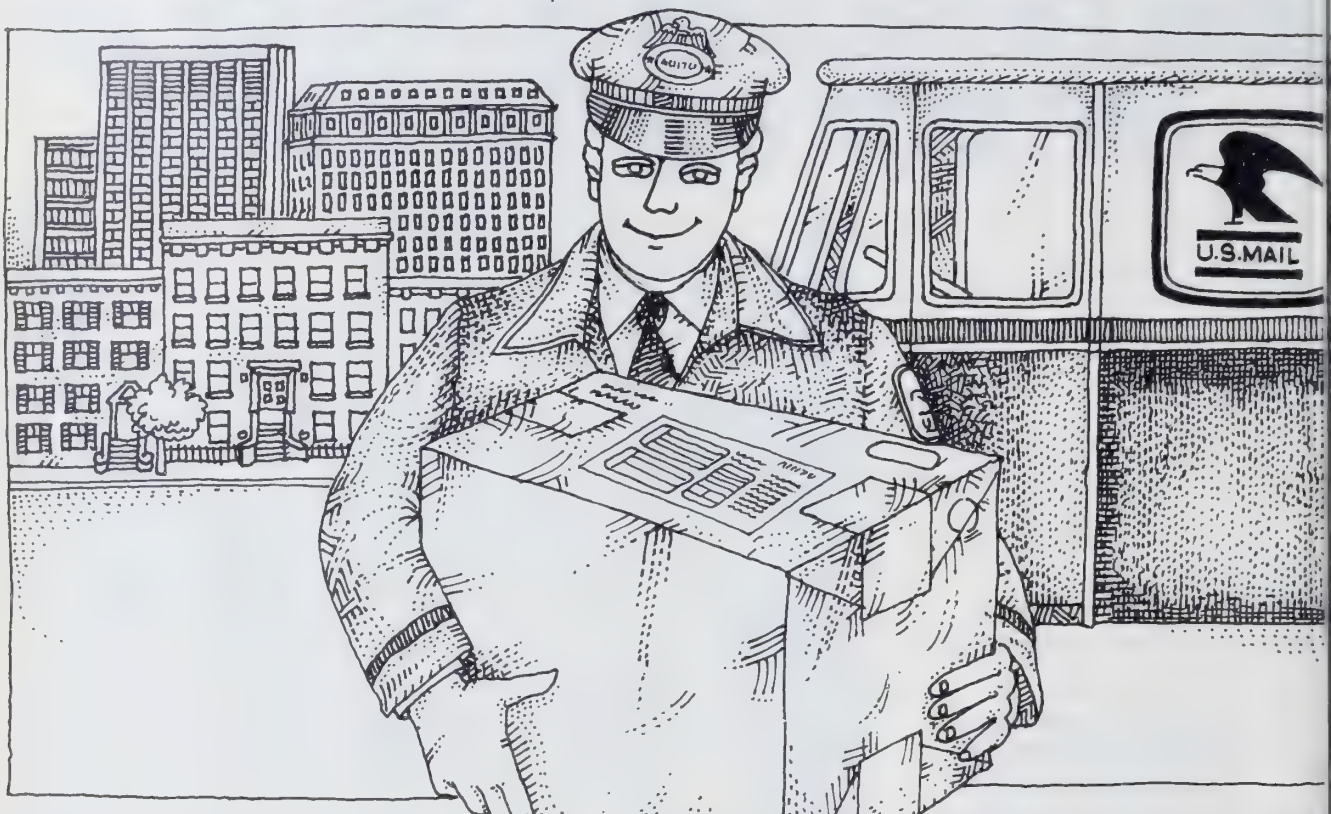
HOW THE 4 EXPRES
CAN PUT TIME O



Every business has times when it must get a package, letter or document delivered to another city as quickly as possible. That's why the Postal Service created Express Mail – to give you fast, reliable, insured, on-time delivery. That's a pretty big promise. Here's how we can keep it.

NEXT DAY EXPRESS MAIL

When it must be in another major city tomorrow, on time – no ifs, buts or maybes about it – this is the service you want.

Ask anybody who's ever used Express Mail Next Day Service. It guarantees* delivery of urgently needed parts *overnight*. Gets contracts where they have to be *on time*. Delivers the goods, whatever they may be (up to 70 lbs.), the next day.

Express Mail Next Day Service offers door-to-door service throughout the city delivery area of all Express Mail Post Offices. You can arrange a regularly scheduled pickup on one or more days of the week, at any time convenient to you that allows your shipment to be processed at the Post Office by 5 PM. That way, we can guarantee delivery the next day.

Or if you can't schedule pick-ups, you can take your shipment directly to your nearest Express Mail Post Office before 5 PM.

We serve 1,000 cities but not all of them from any one city. Cities that are possible to reach by the next morning vary depending on air transportation from the originating city.

To reach these cities, your package gets special attention from the minute you put it in our hands. Out of the Post Office faster... to the airport quicker... loading (and unloading) priority over any air freight. It flows through a streamlined system all the way to its destination!

When you have to get something to somebody tomorrow, Next Day Service is your best bet.

* Our guarantee: 100% refund of Express Mail p age upon application at origin if articles mailed 5 PM at an Express Mail Post Office are not a for claim at a Destination Express Mail Post C 10 AM next business day; or delivery is not atte by 3 PM of the next day (unless delayed by strik work stoppage).

MAIL SERVICES YOUR SIDE.

STOM DESIGNED PRESS MAIL

Whether you realize it or not, a your high-priority shipments bly go on a regularly scheduled between the same locations. ay have regional sales Offices or y centers that need information

terials delivered at a particular f day every Monday, or Friday, n five days a week. Your needs fferent from anyone else's. s why we created Custom ned Express Mail, the guaran- service that is custom-tailored n company's individual needs, irs a day, 365 days a year, to and ny place in the country. nce we know what you need, velop a shipping system that is cally tailored to your require- , and sign an agreement with pick up and deliver on time, ierchandise and reconstruction nce thrown in at no additional . It's like having your very ivate high-priority shipping ny.

e: If your shipment is not delivered or avail- ickup within 24 hours, you can claim a full postage (unless you had specified a longer ime, or unless delayed by strike or work).

SAME DAY AIRPORT EXPRESS MAIL

When tomorrow is too late, this is the service that will do the job for you. Guaranteed!†

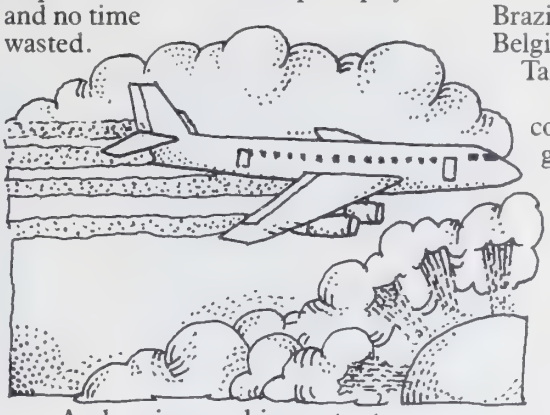
In fact, Same Day Airport Express Mail gives you the fastest mail delivery possible between 51 airports in 49 major cities. And at low rates, too.

To make it happen, we work together. You get it to us at the airport mail facility (usually in the Cargo Area).

We get it on the next available plane to your destination.

The addressee picks it up there.

We tell you – in writing – when it can be picked up at the destination airport so the shipment can be claimed promptly and no time wasted.



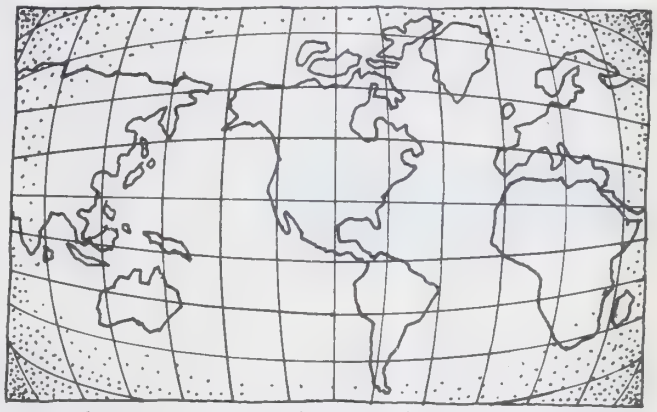
And we insure shipments at no extra charge.

Same Day Service. For super speed service, you just can't beat it.

†Guarantee: You can claim a full refund of postage if your shipment isn't available when we say it will be (unless delayed by strike or work stoppage, or by delay or cancellation of flights).

INTERNATIONAL EXPRESS MAIL

Even if you have to get a package to Hong Kong or Amsterdam in a hurry, you still don't have to take it further than your local Express Mail Post Office. As soon as we get it, the Express Mail wheels start turning. It will be delivered as fast as overnight



or on the second day to Japan, the Netherlands, the United Kingdom, Brazil, Hong Kong, Australia, Belgium, France, West Germany, Taiwan, Singapore or Switzerland.

And customers in those countries can use this service to get the same fast delivery when sending a package to you.

If your shipments regularly go to the same destination(s), it will certainly pay you to find out about our International Custom Designed Service, which is the highest-priority overseas mail delivery you can get.

For more details and prices, call your local Express Mail Post Office, listed in the Yellow Pages under "Air Cargo."

Hardware or handshake?

Bankers were choosing up sides on how (and in some cases, whether) to handle retail customers when FORBES took a look at that aspect of the business a year ago *(Mar. 6, 1978)*. In the center ring, New York, were Citibank, the city's biggest, which had opted to go all out with automatic teller machines, and a major rival, Chemical Bank (number five in New York), which was putting its money on face-to-face dealings.

The conclusion of the debate is not yet in sight. Chase Manhattan is ready to install automatic tellers and expects to have 100 of them clicking by the end of the year. This fall, Bank of America, biggest in the country, will begin a 12-month pilot program with 30 to 40 machines, probably in the Bay Area. The West Coast has lagged, Vice President Daniel Eitingon says, for two reasons: the number of branches (BofA alone has 1,100) and the California lifestyle. "We've long had facilities like 24-hour supermarkets that would cash checks," he notes, so the urge for owl-hour or weekend banking was not so pressing. Others are dropping out. New York's Bankers Trust is selling about 90 branches to Canada's Bank of Montreal to concentrate on the more profitable commercial, big-customer business.

Citibank's Senior Vice President Richard M. Kovacevich now has 400-odd machines in operation in 207 sites in the New York area, 180 of them 24-hour, seven-day "banks." More than 650,000 Citibank customers, representing haps 540,000 accounts, have signed use the machines, and are using the a rate of close to 50 million transac a year. The number Kovacevich str however, is that 85% of his custo that have used the machines once come back to the console. "That's statistic we are most proud of," he

Downtown at Chemical, Exec Vice President Robert I. Lipp still th the handshakes beat hardware. "I am against technology," he insists. "W vor a balanced approach of man and chine, employing technology to su men." Nor has Chemical neglected nology. It has about 44 of its m machines in place and besides sen branch managers out on the flo shorten lines by handling on-the transactions, Chemical has armed it man tellers with an electronic net that lets the clerk in the cage ha more than 50% of a customer's dea with the bank's computers. Lipp's word: "Our most important tool is branch manager."

Banks on both sides of the automa scene, in fact, are using the com and its by-products to speed and sim dealing with the retail customer. C for example, has completed an elec ics system ("COMETS") to extend reach of its human tellers. Manufactu Hanover has hooked its 180 metro tan New York branches into its "C system (for "customer integrated ence file"). Thus, a Manufactu spokesman says, it has been able t

ıting costs, the bugaboo of retail ing, and still keep open a wide range tions to handle the traffic.

ıtomation has anything but elimi- d the human touch. The most auto- d of them all, Citibank, has had to people. "Far from reducing," Kovace- says, "we have actually increased ustomer-contact staff by 21% since ." In addition, Citibank has in- ed spending to train new employees ld in the past three years and in gave its hands, old and new, 00 hours of training.

the machine may be coming on g for the banks but the human hand ll on the till.

Out of the pits

e winter of 1978 copper was in the freeze. Though demand was holding it had increased by 7% in 1977— s were at the poverty level, 55 cents nd, less than half the 1974 tab and han it cost in many mines to dig the . Some major producers—Zaïre, bia, Peru and Chile—were ignoring aws of supply and demand and heap- copper onto the market, and the d surplus had mounted to more than llion tons, or six weeks' supply. "An e industry," Hudson Bay Mining's rman H. Ronald Fraser told FORBES *20, 1978),* "has virtually been com- d to forswear development and re- itself to living by cannibalism."

day, the view is from the other end e mine shaft. Prices are near the $1 and headed higher. Jean Vuillequez, dent of New York's Metal Traders, who was talking hopefully about $1 er a year ago, now thinks the price d go to $1.50 a pound. "The 1-mil- ton warehouse stock of last year has ably come down to around 400,000," ys, "but the cream is gone."

hat happened was that demand "was ore buoyant than we had expected," Jack E. Thompson, president of mont Mining. And no new supplies showed up. "Two major new mines cted in 1978 didn't make it," mpson points out, "one in Iran, one exico, with combined capacity near 00 tons. The one in Mexico is be- schedule, and in Iran, well. . . ." At ame time, overproducers like Zaïre, bia and Chile have cut back. So, mpson notes, "while some were see- 00,000 to 400,000 tons' excess ca- y in 1978, it turned out that there hat much of a deficiency."

illequez is more bullish than ever. "I copper stocks are cheap," he says. "I copper is cheap, and we'll see a much r price—with fluctuations." ■

Robertshaw automatic systems control processing of 309 million gallons of watery waste daily for Metro Washington.

Recently-expanded facilities for the District of Columbia Water Pollution Control Plant at Blue Plains have 18 football-field-sized thickener flotation units and 30 vacuum filters for solids processing. With this third addition since the 1965 pilot plant, Robertshaw engineers were responsible for sophisticated systems with 48 master panels to automatically control removal of sludge wastes. Results—a cleaner discharge in sewage treatment for the District and a major portion of four adjoining Virginia and Maryland counties.

Pollution control, process efficiency, saving energy—these are some of the prime tasks for the 10,000 controls and control systems from Robertshaw Controls Company. Write to Dept. IIF, P.O. Box 26544, Richmond, VA 23261. Or call 804/282-9561. Exports: call Robertshaw International Operations, 804/285-4161.

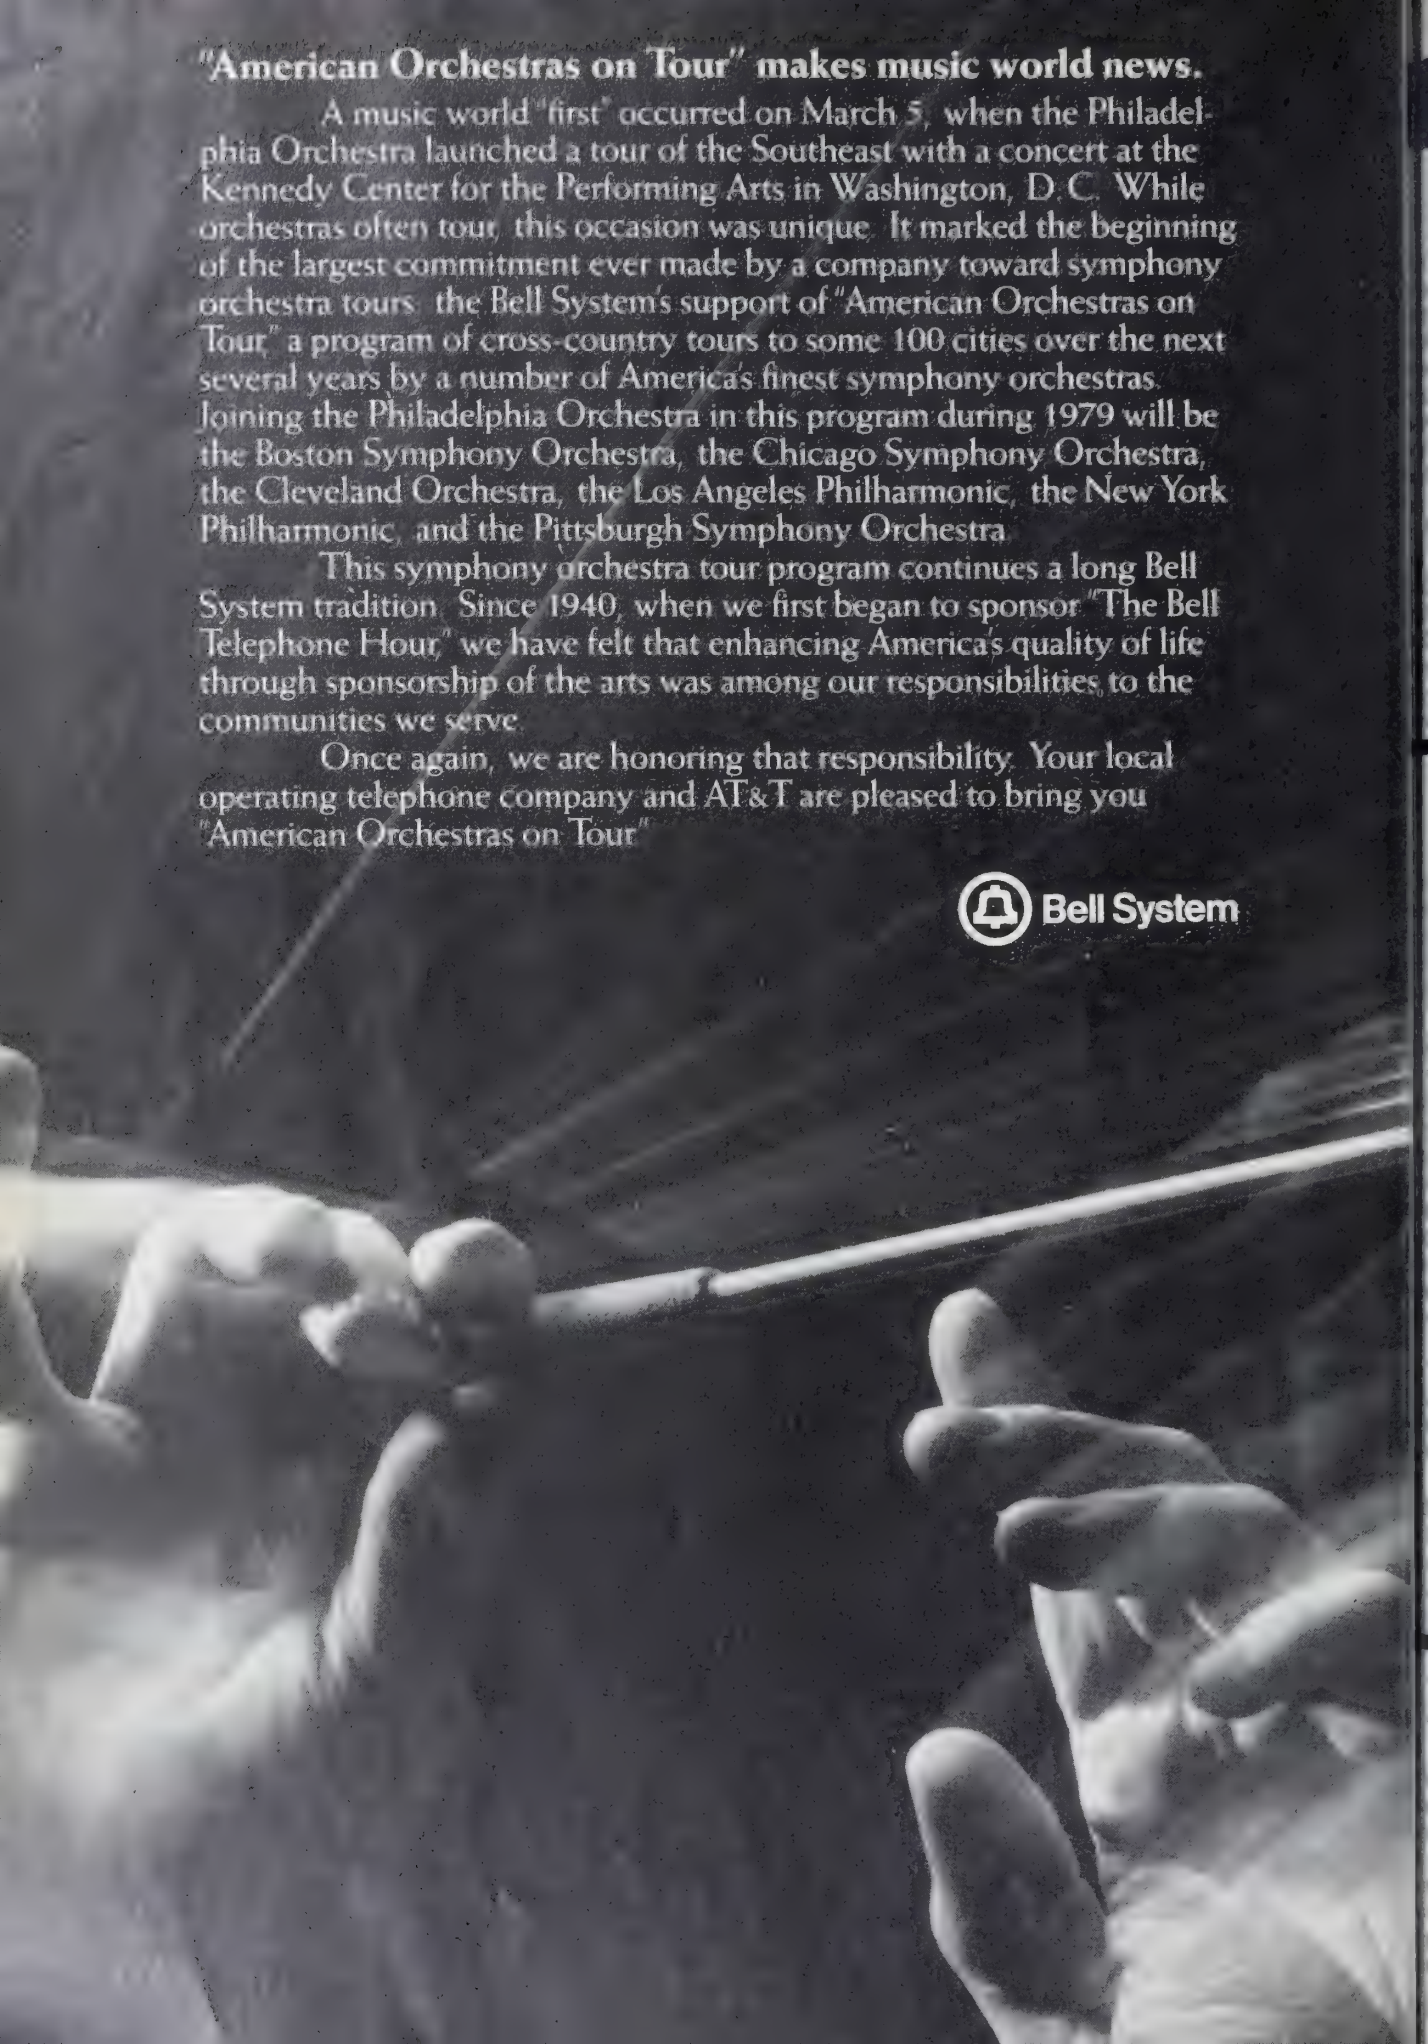
We'll take more care of you to Britain, Europe, the World.



"American Orchestras on Tour" makes music world news.

A music world "first" occurred on March 5, when the Philadelphia Orchestra launched a tour of the Southeast with a concert at the Kennedy Center for the Performing Arts in Washington, D.C. While orchestras often tour, this occasion was unique. It marked the beginning of the largest commitment ever made by a company toward symphony orchestra tours: the Bell System's support of "American Orchestras on Tour," a program of cross-country tours to some 100 cities over the next several years by a number of America's finest symphony orchestras. Joining the Philadelphia Orchestra in this program during 1979 will be the Boston Symphony Orchestra, the Chicago Symphony Orchestra, the Cleveland Orchestra, the Los Angeles Philharmonic, the New York Philharmonic, and the Pittsburgh Symphony Orchestra.

This symphony orchestra tour program continues a long Bell System tradition. Since 1940, when we first began to sponsor "The Bell Telephone Hour," we have felt that enhancing America's quality of life through sponsorship of the arts was among our responsibilities to the communities we serve.

Once again, we are honoring that responsibility. Your local operating telephone company and AT&T are pleased to bring you "American Orchestras on Tour."

Bell System

For well-fed readers

Your article on the tractorcade *(Mar.* rns my stomach, makes me want to t—not because of the action that armers are taking, but because of the eaning and callous attitude that your le conveys. It seems that after 40 of farmers subsidizing the urban and fiber bill to the tune of 20 cents ne dollar that you would report this to your well-fed readers. The farm- nope is that prices move up some so he can start redeeming his land and hinery which is "in hock." I don't e you will print this letter so I am ng a few copies to some of your rtisers.

Alternatives to No. 8

In "Are there gnomes in Con- cut?" *(Mar. 5)*, you erect a general- n on the basis of one company's on that FASB Statement No. 8 been detrimental to the dollar. e note that results of the U.S. Trea- investigation do not support that sition. The FASB *is* reconsidering ment No. 8 and, I can assure you, will be thorough and objective.

—Donald J. Kirk
Chairman,
Financial Accounting Standards Board
Stamford, Conn.

SIR: Many of us financial executives in industry presented arguments and alternatives to the FASB on Statement No. 8 but were completely ignored so that the theorists triumphed.

—William D. Serfass Jr.
Executive Vice President,
HMW Industries, Inc.
Stamford, Conn

Corporate architecture

SIR: Re your comments on corporate architecture *(Fact and Comment, Mar. 5)*. [The Philip Morris Building] is going to be a distinguished building architecturally, and will tie in with the present architecture of the area and Grand Central Terminal. I hope after you see the building you will be in a position to make a better judgment.

—George Weissman
Chairman,
Philip Morris Inc.
New York, N.Y.

SIR: As the architects for the new Philip Morris building, we are extremely disappointed in your point of view, which we feel is not well informed. You recommend the anonymous glass box as an appropriate corporate setting, which is being rejected by office workers as a sterile, punch-card world. Philip Morris deserves great credit for recognizing that humanism has an important place in the corporate world.

—Ulrich Franzen, FAIA
Ulrich Franzen & Associates
New York, N.Y.

SIR: You dismissed Philip Johnson's AT&T building a bit too quickly. It possesses qualities the Avon building does not: personality, character and a response to the New York skyline. The AT&T building will make the history books, but "that nifty number 9" never will.

—Kevin C. White
Brooklyn, N.Y.

Savin copiers

SIR: Savin Corp. is quite proud of the leadership position it has attained in the office copier industry. It was therefore disturbing to read through your Jan. 8

MORE BRITISH THAN A STIFF UPPER LIP.

Nestling near Belgrave Square, London, is the Ladbroke Belgravia Hotel. Central, but blessed with a distinct air of tranquillity.

It's small, friendly and exceedingly civilised. It has 110 rooms, each equipped with colour television, direct dial telephone, and individual air conditioning.

It's the kind of hotel where your drink is served, not in an ordinary glass, but in one of cut crystal.

Where, between sips, you can nibble on a canape or two, chosen from those presented on silver trays by the waiter. Asparagus and smoked salmon, perhaps, or a piece of robust English cheddar.

Should disaster have struck earlier in the day, or at best just minor inconvenience, you'll discover a needle and thread in your room to help rectify the situation.

The bathrooms are complete with a telephone extension, so you can retain your dignity, instead of having to scutter, dripping, to the bedside table.

And if we can't provide you with a certain something, it's really nothing to worry about.

Harrods is just round the corner.

Ladbroke Belgravia

"Life is good in Dallas/Fort Worth because we have the right attitude."

Stanley Marcus
Chairman Emeritus
Neiman-Marcus

"One of the things people always ask me about Dallas/Fort Worth is what's it like to live there? What do you do besides work? And what do you do for fun?

"In that regard, the Metroplex has a great deal to offer.

"For instance, the Kimbell, Amon Carter and Fort Worth Art Museums are three of the great museums of the country. All in a city of half a million people.

"And the Dallas Museum – it's bursting at the seams with collections and acquisitions. We have Preston Jones, Playwright-in-Residence at the Dallas Theatre Center. They're doing bold new things there.

"Audiences continue to grow at the symphonies. And there are plans for an important cultural center in Dallas that will include a major symphony hall, new museums, provisions for future development for the other arts.

"All this relates back to the communities that have been supporting these things. And to the attitude – it's positive.

"In fact, I don't know any cities of comparable size that support the arts so aggressively.

"Life is good here because we have the right attitude. That attitude has had a great deal to do with the growth of the arts and the Metroplex."

If your company is considering relocation or expansion for any of its operations, contact us now. We'll provide all the information you need on the Southwest Metroplex. Write Worth M. Blake, President, North Texas Commission, P.O. Box 61246, Dept. U, Dallas/Fort Worth Airport, Texas 75261. Or call 214-574-4430.

The right attitude.

Stanford University
Stanford, Calif.

RCA launches television's first 4-hour video cassette recorder.

When television becomes more versatile, it's only natural to find RCA right there.

The SelectaVision video cassette recorder is the first video cassette recorder with a 4-hour capacity on a single cassette.

Viewers can tape any program off the air, replay it at their own convenience – and use the same cassette again and again for additional recording. They can record from one channel while viewing another. A built-in timer makes it possible to tape up to 4 hours automatically while everyone is asleep or away. There is even a black & white camera option that enables anyone to shoot a home-grown television special.

RCA is marketing this exciting new consumer product at a highly attractive optional retail price – and with heavy promotional and advertising support. The goal: to carve out a significant share of what promises to be a billion-dollar market.

From home entertainment products to Coronet floor coverings, from Hertz rental cars to weather satellites, RCA is dedicated to innovation, quality and steady growth. © 1977 RCA Corporation

How International Paper makes Sunday supplements look good enough to eat

Now International Paper is rolling out a super gravure paper in Quebec, Canada.

It's a paper that publishers and printers definitely *needed.*

Supplement publishers have felt the pressure to make pictures look as lifelike as possible to attract advertisers of products like foods, where mouth-watering reproduction is essential.

Advertisers need better printing quality in catalogs and magazines to show off products with more detail and better realism for more appeal.

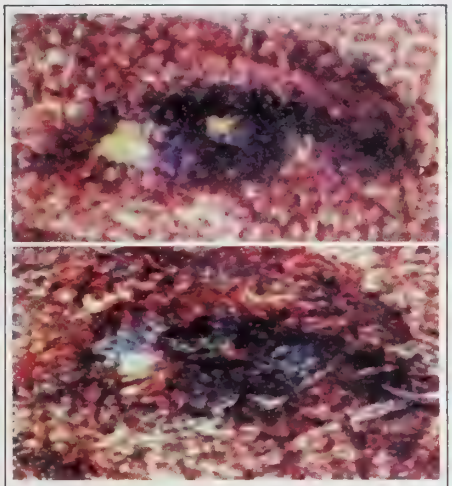
Publishers and printers have been looking toward the paper industry for new paper stocks to complement their new updated printing methods.

Committing $7.5 million

International Paper sensed their needs. So we're committing $7.5 million in Canada to produce this paper.

Now we're rolling it out!

We call this product Supercal. It's a specialty groundwood gravure sheet that fills the gap between the best gravure newsprint for newspaper supplements and the least expensive coated stock for magazines and catalogs.



Which eye is on Supercal? Ink bleeds more on ordinary gravure paper (bottom). Supercal (top) allows clearer, firmer dots for sharper detail. (Both enlarged 16x.)

We are making this newest grade in our *oldest* newsprint mill—Trois Rivières, Quebec.

IP has spent 80 years making newsprint. And 30 years making gravure papers.

Fifth-generation newsprint makers

Our seasoned craftsmen run to fifth-generation papermakers. They know their stuff.

They *have* to. The making of this specialty gravure sheet calls for a critical combination of chemicals and fibers and careful control of machines to end up with high gloss and smoothness.

Hard surface reproduces better

This super care gives Supercal a special hard surface finish. So gravure colors don't soak in and turn dull, but sit up brightly for deliciously lifelike reproduction.

That makes Supercal perfect for newspaper supplements as well as catalogs.

Supercal can even be useful for magazine publishers, too. It gives them another option in the mix of papers in each issue.

This responsiveness by IP to the printing and publishing industry is one example of how we solve our customers' problems in *every* industry—from publishing to food packaging, energy, the medical field and more.

May we help you? For further information, write: International Paper Sales Company, Sun Life Building, Montreal, Quebec, Canada H3B 2X1.

INTERNATIONAL PAPER COMPANY

220 EAST 42ND STREET NEW YORK, NEW YORK 10017

they could reach out and lift a product right off the page.

When you're spending 8 hours or more up here, engine reliability is something you want to take for granted.

You can only do it in the Gulfstream III.

As you would expect, we are carefully studying the several so-called "long-range" business jets, and especially their engines.

We are interested because (1) our own Gulfstream III will be a reality in 1980; and (2) from more than a decade of experience with the Gulfstream II, we believe we have a clear understanding of the unique requirements for powering an executive jet with intercontinental range.

In fact, the airline-proven Rolls-Royce Spey turbofan engines that power the fleet of over 225 Gulfstream IIs have now gone beyond 1,300,000 hours, routinely flying the world's business and government leaders to destinations on every continent. In total, the Spey has amassed over 13 million hours in world-wide commercial operations.

And so, we think we have a valid [illegible] for objective comparisons of [illegible] performance.

[illegible] that we've learned, no other [illegible] engine in executive service approaches the Rolls-Royce Spey in terms of total performance.

It has an incredible record of in-flight and on-time departure reliability; unmatched power versatility; excellent cruising fuel efficiency at airliner speeds above 40,000 feet; ease of maintenance; and a time-between-overhaul of 7,000 hours—about 10 years of flying in a typical corporate operation.

A new definition of the ultimate.

When the Gulfstream III enters service, no other executive airplane will be able to carry as many people as far as comfortably. And, we might add, so dependably. The key to this superiority will be these same airline-proven Rolls-Royce engines, perfectly matched to a superlative Grumman-designed airframe.

As you evaluate your investment in an executive jet for the 1980's, be sure to discuss engine reliability with Charles G. Vogeley, Gulfstream American Senior Vice President, (912) 964-3274, or Samuel L. Higginbottom, Chairman and President, Rolls-Royce, Inc., (212) 935-9400.

The place to get the facts is down here, not up there.

Gulfstream American

Fact and Comment

By Malcolm S. Forbes, Editor-in-Chief

IF WE WANT TO BE TOUGH

r reactions to those abroad who delight in thumbing their s at us, there's a simple but hard way to do it: We must our ever-greater dependence on imported oil.

ere's no other way.

ere are many ways to go about it. One is to free the gy companies from smothering price-control rigmarole. ordinary profits not plowed into the development of ional energy can be penalty-taxed. At the resultant er, *i.e.*, real, price, wasteful energy use will greatly less- nd the stuff will soon be coming on stream in surfeit—gas as well as oil; coal, gasified or as is.

And we should promptly pull the plug on those who've plugged up atomic energy.

At the first opportunity, we'd better get our thumb out on that oil storage program intended to provide us with a three-to-six-month ready reserve.

There's a price for independence, for political and economic freedom. It's not so blamed high that we can't pay it. The price of ever increasing our dependence on others for energy is what's too high.

IMAGINE—NOW WE'RE ROOTING FOR KHOMEINI

ve thought we had a dire Iranian *crise* before Khomeini, be even more catastrophic should Khomeini be unable in fact and in intellect to establish a government. A rnment that can govern, a government that can gather ient police and army strength to cope with the well- d, well-organized dissident groups ranging from indepen- e-seeking Kurds to fanatic Leftists.

Ruthless Red regimes rule right now through the barrels of their guns in Afghanistan and South Yemen, Islamic faith notwithstanding.

Khomeini could turn out to be the Kerenski of the Iranian revolution. If this 78-year-old can't govern or too soon drops dead, the result could be even more world-power-shaking than his ascent has been.

SAUDI-U.S. RELATIONS INEXCUSABLY FOULED UP

r appalling lack of understanding of, even elementary nunications with, Saudi Arabia is utterly inexcusable, ly inexplicable.

ve we no intelligence—that's with a lower case "i"—in State Department, in the Defense Department, in the dent's Office, when it comes to comprehending the Sau- roblems that result from the Iranian revolution?

e Saudis' prime concern isn't the prospect of a military ion by the Russians or from a Russian-backed puppet neighbor. The reigning family, Saud, has to be concerned the Islamic fervor that played the key part in sweeping he Shah, because royalty, *per se*, is not part of the Islamic ing.

en the popular, people-oriented, deeply and actively reli- Saud family has to be wary of appearing in any way to be . cat's-paw in the Middle East.

ven the present tense, tenuous situation there, how in God's or Allah's name could we expect the Saudis to exert pressure to support Egyptian-Israeli peace prospects, which they have intensely disliked from the very beginnings?

It's hard to believe that Defense Secretary Brown had either such incompetent Intelligence or so lacked normal intelligence that he actually offered Saudi Arabia a U.S. military base, or some such "Presence." For the Saudis, at this hot juncture in that erupting oil world, standing off a bit from the U.S. seems an obvious, safer posture.

The Saudis are friends of America. They know it is in *our* interest as well as their own to make sure Russia, directly or through outside neighbors, doesn't seize them.

But it wasn't *outsiders* who seized Iran—yet.

It was internal, and we'd better stop making Saudis' reigning family's internal situation more difficult by taking actions, making offers and Senator Church-like threats that can only weaken their relations with the rest of the Arabic-Islamic world.

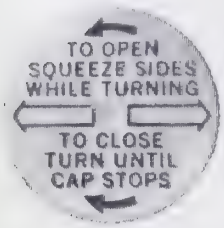
IF LEE MARVIN LOSES

the institution of marriage will be dealt a more devastating blow than divorce has proven to be.

All it takes, if a gal and a guy want the privileges, bonds and joys of marriage, is a $5 license and mutual desire.

Unmarried togetherness is voluntary, a choice knowle ably made. Why should either or both parties have the l sanctity, the legal rights and privileges of those who under to be legally bound?

COSTLY OVERKILL TO "SAVE" KIDS



When thee and me were kids at varying lengths of time ago, parents kept things we weren't supposed to swallow (like iodine or too much candy) out of reach as well as out-of-bounds. But Washington's bureaucratic regulators apparently think today's parents—and children too, I guess—are mostly idiots.

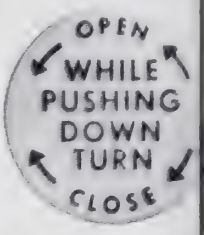
Take this business of safety tops for potions and pills. How in heck can the arthritic or merely frailing old these days get the tops off of the pills and vitamins and other things they're supposed to take? PRESS, TWIST, PUSH, PULL, etc. Colgate's new Fluorigard mouth rinse has a top on it that I (not yet either that old or frail) have to fight to get off—"squeeze and turn at the same time" it says.

Now—by law, mind you—prescriptions have to be in dark containers, in case some dummy might leave 'em in the sunlight too many months instead of on the medicine sh

At a cost of countless $millions in repackaging, have c dren and adults actually been made safer?

Multi-$billion nonsense. Another spur to inflation, lik many well-motivated, unthought-out regulatory eruptions

As it has been for decades past, there's only one way to keep kids safe from what's unsafe in the many containers every house contains. Keep the stuff out of reach, and take the time to teach your kids not to put their hands where they shouldn't.



So, too, with toys. Only caring parents can protect kids f the dangers of toys they're too young to cope with. Don't tots things of swallowable size if that's the age they're at.

The lack of common sense that runs through the end rules and regs thrown up, out and about by federal agen accounts for a larger percentage of our inflation rate than current federal deficit does.

RESTAURANTS—GO, [illegible], STOP

● **Le Cirque**—58 East 65th St. (Tel: 794-9292)—opened five years ago to great acclaim. The recent enticing of a chef from super *Le Cygne* has put the food back in the top of the class, matching the customers who continue to line up in droves. One of those rare cases where the owner, Sirio Maccioni, never stops working on the job.

● **Gloucester House**—37 East 50th St. (Tel: 755-7394). I had forgotten what a superior seafood restaurant this is. Indubitably, the best in this seaport city—which has less than a handful of decent fishhouses. Expensive, but what else is new.

● **The River Cafe**—1 Water St., Brooklyn (Tel: 522-5200). The view of Manhattan from this restaurant-on-a-barge under the Brooklyn Bridge is vastly more spectacular than the food—which isn't bad. A definite Big Apple asset, though creator Michael O'Keefe had endless hassles getting all the required city permits.

● **Primavera Ristorante**—1570 First Ave. (Tel: 861-8608). A *Regine* maitre d' with a *Parioli Romanissimo* chef has added one more to the few outstanding Italian restaurants in New York. Sauteed butterfly shrimp, splendid veal dishes and cakes worthy of the name. Forget the spaghetti. Funny, isn't it, that only Parioli Romanissimo and one or two others in all of NYC seem to be able to do well by this supposed staple.

● **Feathers**—24 Fifth Ave. (Tel: 673-0750). Limited menu, ho-hum drinks. Underdone rice and overage fish. Mostly student waiters waiting on student customers. Greenwich Village mediocrity, which is very.

● **David K's**—1115 Third Ave. at 65th St. (Tel: 371-90 When I was on Barry Gray's radio program one day w *Esquire's* Dan Dorfman, both of these discerning Manha eminences were really lauding David K's for serving just ab the finest Chinese food in New York. Never having bee went, and found they're right. The orange beef, the shr Szechuan are standouts, and to this nondumpling lover, even those were tasty.

● **Old Homestead Restaurant**—56 Ninth Ave. CH2-9040). While it may be New York's oldest steak ho only occasionally are its steaks among the better ones. Lo on atmosphere than on taste.

● **Richoux of London**—Citicorp Center (Tel: 753-77 Compared with New York City's only other "good" 24-h restaurant, nearby *Brasserie*, this one actually *is* good. If yo hungry late, the cure's here.

● **Restaurant Raphael**—33 West 54th St. (Tel: 582-89 A very attractive setting for some very good food and attentive service. Supposedly on the *nouvelle* side of cook *i.e.*, naturalness and unrich sauces, but Raphael mostly breac that pitch for tastier results. Solid two stars. Expensive.

● **Harvey's Chelsea Restaurant**—108 West 18th St. CH3-5644). A most attractive restaurant in a most unlik location. The same's true of his other spot, *Landmark Tav* (46th St. and 11th Ave.). The menu differs a bit but is equ good—especially that carrot and walnut cake with the sauce icing (when it is fresh). So too, their Irish soda bread

WHEN CRAIG CLAIBORNE STOPPED

rating restaurants, those who do it and those who read the reviews lost the best in the business. At lunch here recently, he told us he quit because such reviewing was "driving me to drink. I came to hate every minute and meal of it." He'd rather be judged by what he cooks, not by what he says about what someone else cooks.

This Buddha of culinary artistry has an unbounded wit that's sharper than any butcher's blade. Asked how he stays trim while chefing to his heart and stomach's delight, he said he'd taken up "pumping a stationary bicycle. I was so bored on it that for the first time in my life I bought a TV set to watch while pedaling. The stuff on the TV was even more boring, so after spending nearly a thousand dollars on both, I gave the whole thing up, and just decided to eat less. Sometimes."

SOLAR ECLIPSES—RARE AS RHINESTONES

an remember—ofttimes—as a kid, standing outdoors and ng a piece of film before my eyes to watch what, each time, oilled as a "rare" or "once in a lifetime" solar eclipse. seems every two or three years ever since those days, there's been a similar to-do about solar eclipses.

Don't you get the feeling that this repetitive solar phenomenon is about as rare as jewels at a society charity ball or rhinestones in a discotheque?

SURLY WAITERS

spoil more meals than bad cooks.

ONE THING LEADS TO THE OTHER

Good food, good wine, good thoughts, good deeds.

WILL THE FED OVERDO IT AGAIN?

By M.S. Forbes Jr.

One danger arising from the rise in OPEC oil prices is the possible reaction of the Federal Reserve. Higher petroleum prices, of course, will mean more inflation, and the Fed may react the same way it did after the 1973-74 oil embargo.

The then-Fed Chairman Arthur Burns severely tightened the money supply. Traditional economic textbooks said that inflation resulted from too much money chasing too few goods. Ergo, since prices were rising, the proper response was to reduce the supply of money.

Burns and his colleagues failed to see that OPEC's act was, in effect, an enormous excise tax. When sales taxes go up, so do prices of goods and services. What Burns should have done was to ease the monetary spigot, not tighten it. As a result, the ensuing recession was far more severe than it would have been otherwise. It was a case of overkill.

Will Chairman William Miller make the same mistake as his professorial predecessor?

Although many economists would advise him otherwise, he should now begin to ease up—a bit—on monetary policy. There has been very little money supply growth since October, and the salutary impact of that on inflation will be felt later this year.

If the Federal Reserve retains or tightens its current grip on the supply of money, however, we will face an unnecessary contraction of the economy.

* * *

On the subject of inflation, how many times have you heard the U.S. compared unfavorably with West Germany? The Germans have a reputation for being far more prudent than we when it comes to government spending and monetary policy.

The differences, however, aren't nearly so great as many view them.

What has helped Germany enormously (not to mention the Swiss and the Japanese) has been the catastrophic fall of the dollar on the international exchange markets. One of the biggest import items for Germany is oil. Since petroleum is paid for in dollars, the weakening greenback has lowered the effective price for the Germans.

What happens if you take out the distortions of foreign exchange? Between the third quarter of 1978 and the third quarter of 1977, the domestic rate of inflation in the Federal Republic was only two points lower than that of the U.S. Our plunging dollar worsened inflation at home *(see this column Nov. 13 and Nov. 27, 1978)* and made it milder in Germany, Japan and Switzerland.

When it comes to spending and monetary policy, Germany's record isn't so formidable either. *Government spending:* As a percentage of the gross national product, total outlays in the Federal Republic are slightly higher than those in the U.S. *Deficits:* As a portion of GNP, German government deficits since 1974 have been higher than ours. *Monetary policy:* For months now, the growth rate of Germany's money supply has exceeded our own.

We do have a real problem with rising prices, but we shouldn't be so quick to give kudos to others on their ability to battle this disease successfully.

CHINESE HUMOR

China's Vice Premier Deng Xiaoping may be a hard-headed pragmatist, but he also has a sharp sense of humor. During his visit to the U.S., Deng was quizzed by President Carter about China's policy on permitting its citizens to emigrate. How much would it be liberalized, the President wanted to know. Replied Deng with a wry smile: "Well, how many people do you want? One million? Ten million? Twenty million?"

When an American corporate executive broached the 74-year-old leader of China on the subject of his tenure, Deng answered, "Don't worry, I intend to stick around. I plan to stay on until 1985 [when the first phase of China's modernization program is supposed to be completed]." After that? "Then I will become a consultant, just as you do in your corporations."

Politeness, Not Agreement

The sources close to the Saudis said that, as a sign of politeness and hospitality, the Arabs tend to listen and nod when high-level Americans talk with them. But that does not mean that they agree. The Americans seem to think that Saudi reserve is a subtlety of diplomacy, a way of expressing agreement without the embarrassment of speaking out when in fact it is often a courteous way of avoiding the embarrassment of open discord. It seems odd that such misunderstandings should persist after so long and so close a relationship.

The New York Times

More Overkill

One study [discussed in Merril Eisenbud's book *Environment, Technology, and Health: Human Ecology in Historical Perspective*] has shown that New Guinea natives who live in poorly ventilated huts with their cooking fires actually endure more air pollution than the inhabitants of modern industrial cities. Another observation is that the increase in "background" radiation experienced by people living next to a nuclear plant is the same increase a person would experience in moving from Brooklyn to Manhattan, since the granite rocks of Manhattan produce more natural radioactivity than the sandy shores of Brooklyn.

There is much more [in this book]—an exhaustive discussion of the energy situation, an analysis of misplaced concerns about sulfur dioxide in air pollution, a history of the famous "tunafish" scare in which "poisonous" levels of mercury turned out to occur normally in all fish. . . .

—William G. Tucker,
in the *Wall Street Journal*

Woman Power

"We're running a seminar: American Women. . . . There are problems. The Arab students boycotted the keynote, for example. They said the West will never impose slavery on their men as it has on its own, the same thing Islam said downtown at the U.N. in response to the International Women's Year proposal. The keynote was the Assistant Secretary-General, the woman of highest rank in the U.N. Then the president of a large savings and loan association who also talked about money, power and money power. I'm told Islam showed up for that one. . . . She came into money and power herself by that dumbwaiter route of shuttling dutifully between president father and vice president husband, then chairman father and president husband, until both were dead from premature heart failure and she was left there hanging like a hammock stretched between dead trees."

—from the novel *Gus in Bronze*,
by Alexandra Marshall

Sandwich Philosopher

I had a big decision. Whether to teach philosophy for the rest of my life or make sandwiches. I chose to make sandwiches, and I think I've learned more from behind my sandwich counter in New York than I could have in teaching phlosophy.

—Jimmy Dell 'Orto
of Manganaro's restaurant
in New York City

Vacant-Lot Burials

In the eighteenth and early nineteenth centuries, public health standards in New York were on a nearly medieval level—garbage pails and chamber pots were emptied in the street, slaughter houses operated in the city, and burials frequently took place under the streets or in vacant lots. With these appalling conditions—and with ships coming into the harbor from all parts of the world—New York was plagued by regular epidemics of smallpox and yellow fever. During these epidemics, independently wealthy families left the city completely. Those who were tied to the city by business moved their families and establishments to Greenwich. According to a contemporary account, "Very few are left in confined parts of town except the pc classes and the negroes."

It's easy to identify a succe ful executive. He has a th button suit and a four-but telephone. ***—Robert F***

What Brits Do Best

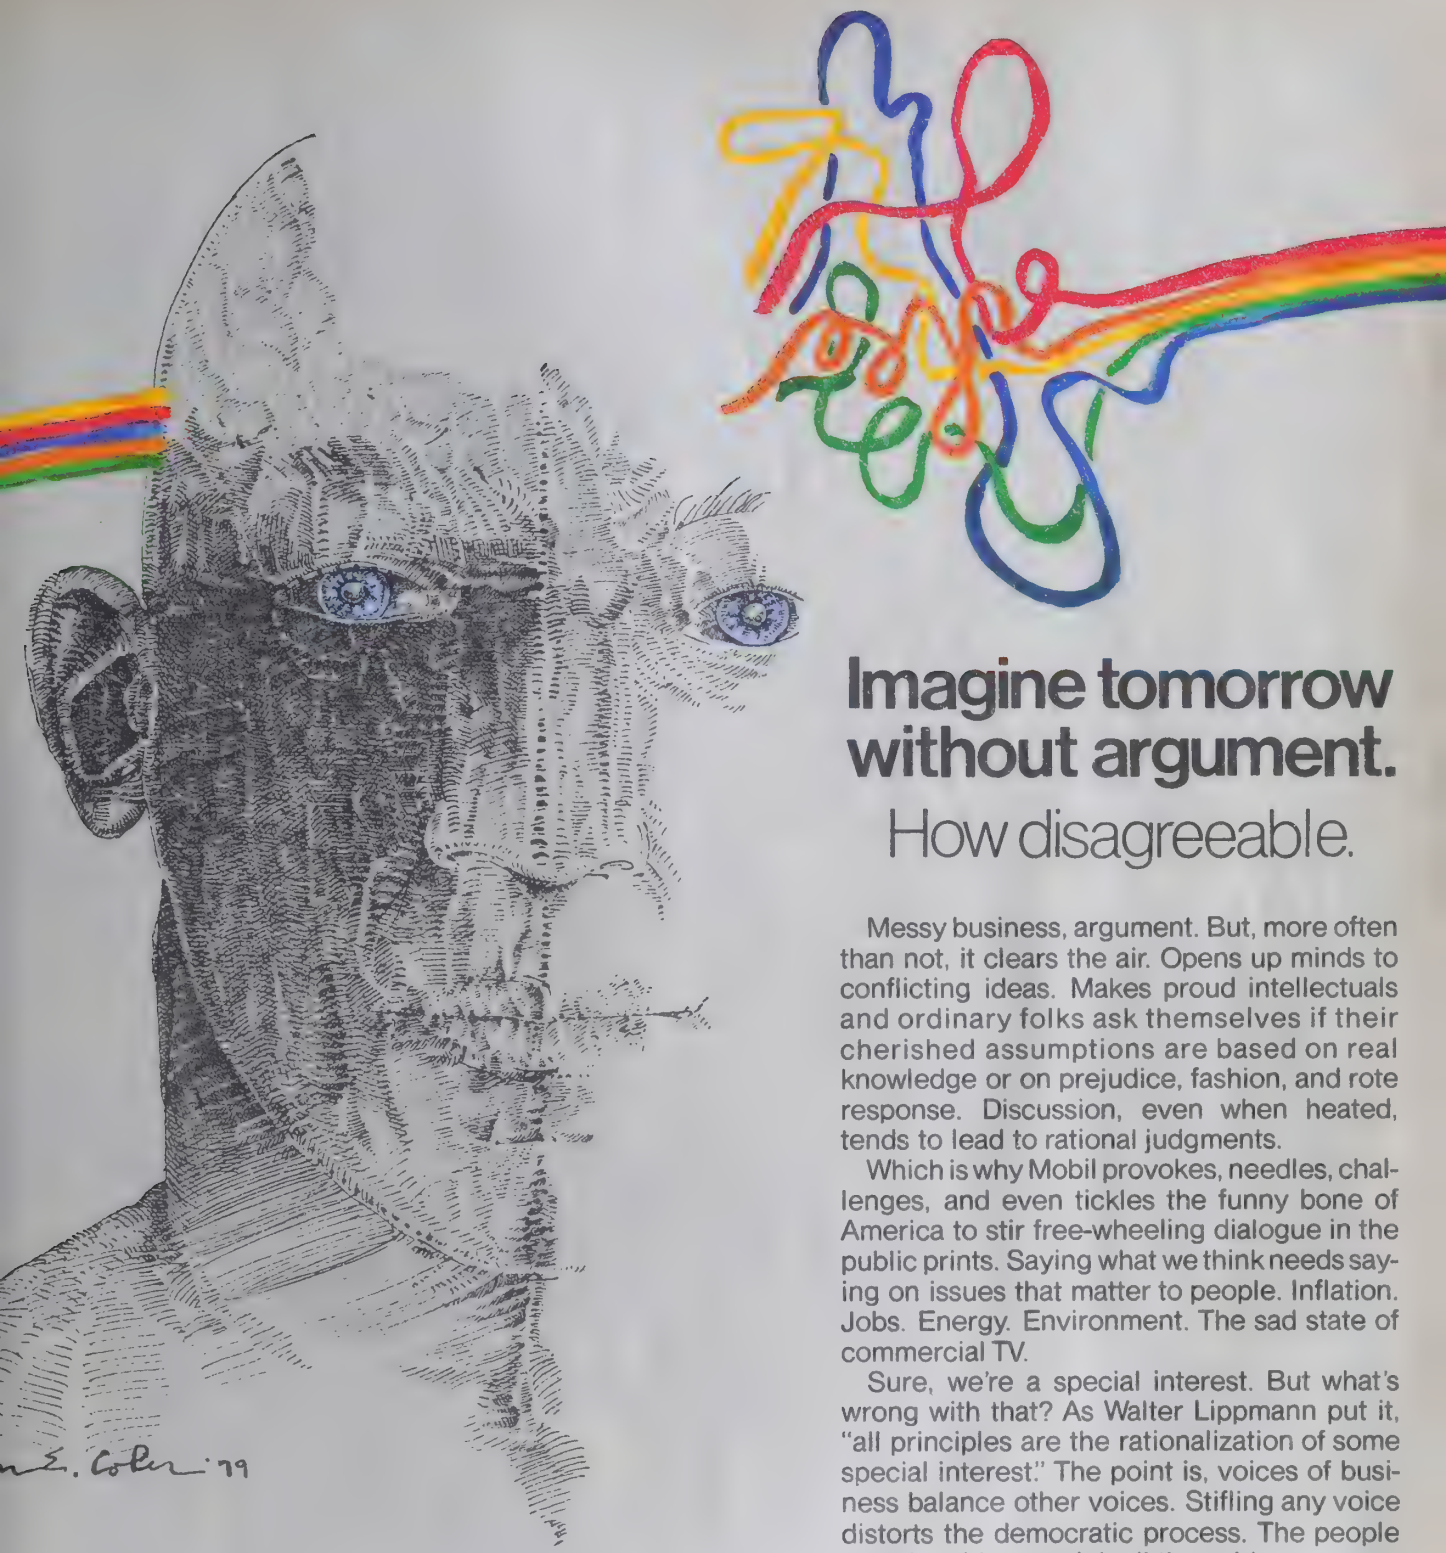
What the British do best is er trash—going to the back of your h for the barrels—deliver mail and at dawn, run schools, provide d and medical care and eyeglasses pittance, broadcast intelligent radio grams, plant pretty gardens, produc ticulate debate, maintain the char of villages and parks, brew real finance a spectacularly good library vice, stand politely in line, avoid ing to strangers and make amateu and uncompetitiveness the goal nearly every endeavor. There is money in this.

—Paul Ther
New York Times Book Re

Frozen Cuisine

In cities the size of Cincinnati Kansas City, food like barbecue chili remains an embarrassment to ple who want to think of themselv living in a big-league city that is so ticated enough to have an array of tinental restaurants—Continental taurants that are modeled, an un traveler can discover, on the conti of Antarctica, where everything s out frozen.

—Calvin Trillin, *Alice, Let'*



Imagine tomorrow without argument.

How disagreeable.

Messy business, argument. But, more often than not, it clears the air. Opens up minds to conflicting ideas. Makes proud intellectuals and ordinary folks ask themselves if their cherished assumptions are based on real knowledge or on prejudice, fashion, and rote response. Discussion, even when heated, tends to lead to rational judgments.

Which is why Mobil provokes, needles, challenges, and even tickles the funny bone of America to stir free-wheeling dialogue in the public prints. Saying what we think needs saying on issues that matter to people. Inflation. Jobs. Energy. Environment. The sad state of commercial TV.

Sure, we're a special interest. But what's wrong with that? As Walter Lippmann put it, "all principles are the rationalization of some special interest." The point is, voices of business balance other voices. Stifling any voice distorts the democratic process. The people must be able to weigh all the evidence, come to their own conclusions, and press their views on our national leaders. So future decisions in our participatory democracy will be based on the noblest wisdom of the past—the First Amendment.

Liggett is a group of growth companies with leading brands in growth industries.

Look at them as a group and the trend is apparent.

From our earliest diversification to brands like J&B and ALPO to our most recent of Pepsi-Cola bottlers and DP/Superstar physical fitness products and sporting goods, the pattern is growth.

As it will be with those we are now actively seeking.

If growth is your investment target, look into Liggett. And, if growth is your company's pattern, by all means invite us to look into you.

Dawn to dusk on a tankful. That's the new diesel-powered Cadillac.

An estimated cruising range of (540) miles based on EPA estimated mpg (city) mileage figure . . . and 756 miles based on estimated highway mpg . . . dawn to dusk on an average day. That's the available diesel-powered Fleetwood Brougham and DeVilles. These range figures are obtained by multiplying the car's 27 gallon standard fuel tank capacity rating by the EPA estimated miles per gallon rating (city) of (20) mpg and the highway estimate of 28 mpg.

Remember. Compare the *estimated* mpg to the estimated mpg of other cars. You may get different mileage and range depending on your speed, trip length and weather. Your actual city mileage and range will be less in heavy city traffi Your actual highway mileage and range will probably be le than the highway estimate. Cadillacs are equipped with GM-built engines produced by various GM Divisions. See your Cadillac dealer for details.

Italian on the job
t deal of economic activity isn't in the official figures.

quiring goods in transit to have accompanying tax certificates. Truckers slipped through this net by immediately becoming "traveling peddlers," who don't need to document their wares.

"You can't pay 100% of your taxes and live," says the owner of one small textile company in Northern Italy. "That's well known, and the law allows for it."

Indeed, the 3,000 revenue officers who have to process 10 million income tax declarations annually get to read a lot of imaginative literature. Badly equipped and underpaid—a tax inspector gets less than $500 a month—they are clearly unable to nail more than a small percentage of violators. In addition, the series of tribunals that tries cases can take 20 years to jail an offender caught red-handed. Says a lawyer in Bologna: "Last year a bill to reform the procedure was suddenly dropped. Lobbies for business and the professions certainly had something to do with that." In a highly taxed, bureaucratized society it is in almost *everybody's* interest to break the rules. It is a game where the poorest laborer uses the same tactics as the richest capitalist.

Then there's the booming textile area of Prato near Florence, where one entrepreneur claims to have started his career by reprocessing Nazi SS uniforms for export to New York as gray flannel. Today, its businessmen are indignant over British and French complaints to the Commission of the European Communities charging them with unfair competition. But the indignation sounds hollow.

An unexpected feature of Italy's underground economy is that it prospers in the heart of the Red Belt—Emilia Romagna province, where Communists have been in power since 1945. Politicians there, where Via Carlo Marx is a popular street name, have a healthy pragmatism. "The enemy for them is not capitalism, but monopoly power," says economist Sebastiano Brusco. Says Gianni Menghetti, a Communist Party spokesman: "Recovery has come thanks to the underground economy. It would be a big mistake to make all these people start paying taxes. Reintegration has to be gradual."

Thus, the irony that is Italy. Beneath a public veneer of collectivism, there is a bubbling free-enterprise sector, probably as productive and healthy as its counterparts in right-wing havens like Hong Kong or Singapore. And far from labeling such latter-day cottage industry as a contemporary sweatshop, even Communist politicians acknowledge it as an engine of national economic recovery.

Think about it for a minute. In Britain and in Sweden enterprise and hard work are wilting under the efficient hand of powerful and respected governments and rigid trade unions. Whereas Italy's weak and inefficient government can't hold in check the natural enterprise and imagination of the Italian people. ■

Why should Leonard (Hartz Mountain) Stern be hungry for money when he's already worth hundreds of millions? If you ask that question, then you don't know Leonard Stern.

The public be damned? In 1979?

By Paul Blustein and Richard Greene

A GOOD MANY businessmen have signs on their walls—"A winner never quits and a quitter never wins"—or "The impossible takes a little longer"—corny maxims like that. Leonard Stern's office at Hartz Mountain Corp.'s headquarters in New Jersey has reportedly been graced with a sign that gets right to the heart of his philosophy: "Once you've got them by the balls, their hearts and minds will follow."

That's the kind of guy Leonard Stern is: blunt, profane, cynical. He is also one of the richest men in America. In 1973 *Fortune* magazine estimated Stern's personal worth at between $500 million and $700 million, putting him at the top of the magazine's list of "The New Rich of the Seventies."

The magazine's figure was kind of shaky. It was partly figured by multiplying Stern's holdings in the family's Hartz Mountain Corp. (makers of pet supplies like flea collars and birdseed) by the then highly inflated price of the stock, which was many times its book value. Never mind. Six years have passed and Stern now has more than a high price/earnings ratio going for him. It is probably safe to say that his ownership of Hartz Mountain and vast amounts of real estate are worth a quite solid $500 million.

That definitely puts him in the Rockefeller-Mellon-Getty-Ford category. Stern is only 41. His father was a penniless German immigrant. New rich though he may be, Leonard Stern can match millions with any of the old rich.

Hartz Mountain Corp., which he will probably soon again own lock, stock and barrel, netted $27 million on sales of only $221 million in 1977, the last year it reported to the public. Since the company has very little debt and its cash capital needs are slight, this gives Leonard Stern a huge cash flow to play with. This cash flow he has poured by the millions into well-placed real estate, much of it in the formerly desolate Meadowlands area of New Jersey, from whence the towers of Manhattan can be seen even on a smoggy day.

Leonard Stern is no playboy. Friends say he is a virtual workaholic. It would be pleasant to report that Stern got where he did by being smarter and harder-working than the next man. It's not quite that simple. There's at least as much Jimmy Hoffa in Leonard Stern as there is Horatio Alger. Nearly everything he does is surrounded by controversy and leaves behind a tangle of accusations and lawsuits. Great wealth hasn't mellowed him. It seems to have made him even more ruthless.

His latest maneuver, costing nearly $70 million in cold cash, was to buy out the public shareholders of Hartz Mountain Corp.—the pet supplies company—by merging it into Hartz Mountain Industries, his privately owned real estate concern. It was a clever financial coup: The $14 Stern proposed to pay for the public Hartz shares was well below the $22.75 he had originally offered them for in 1972. (Many people had paid much more because the stock sailed as high as $39.75 before collapsing in 1974.)

Outraged, a band of shareholders screamed foul, and their lawyers noted darkly that Hartz stock, after trading in the $10-to-$14 range for two-and-a-half years, dropped precipitously to $7.75 just before Stern announced his proposal to pay $14. The protests so far have been to no avail: A majority of the public shareholders, sheeplike, voted in favor of Stern's proposed merger at a special Hartz meeting last February.

Why did Stern take Hartz Mountain Corp. private? One reason, some observers say, is to avoid scrutiny by the Securities & Exchange Commission. A former Stern relative by marriage named Sheva Berman has gone to the SEC and other governmental agencies to report all sorts of stories—concerning use of prostitutes, bribery, blatant anticompetitive business practices, physical intimidation—that have been circulating about Stern. Some of the allegations, FORBES has learned from reliable sources and court records, are more than idle rumor.

Undaunted, Stern is plowing ahead with plans to build a giant, $100 million plus shopping mall in the New Jersey Meadowlands. This move, too, has generated vocal opposition from environmentalists, politicians and much of the local press, who say Stern's mall might destroy the area's orderly development. Nevertheless, Stern recently won some key victories with the Meadowlands planning authorities.

He won none for popularity, however. For while Leonard Stern appears to be moving boldly to expand and fortify his formidable holdings, he is a man under siege. He has infuriated an astonishingly broad array of people during his rise to great financial power. A number of these people are willing to forget about being stepped on. But many aren't. And they are fighting back.

Among Stern's rougher challengers is an antitrust suit by A.H. Robins Co., Inc., the drug company and makers of the Sergeant's line of pet supplies. Trade sources figure that damages could mount to upwards of $100 million.

Hartz, with a 75%-plus share of many of its market niches, is clearly vulnerable. Part of Hartz' success is attributable to its merchandising savvy, but part is attributable to less admirable skills. A year ago FORBES quoted a Hartz distributor as saying that he had personally written ten checks for thousands of dollars to retail chains, "just to keep competition out." Other distributors recounted stories of indirect threats by Hartz to ruin them financially if they carried competitive merchandise such as Sergeant's. Under the antitrust laws, activities such as these, if proved, are almost always illegal.

Hartz refused all requests to be interviewed for last year's story, and when FORBES contacted Stern's offices for this story, his representatives refused even to return phone messages—despite calls made daily for over two weeks.

It's hardly surprising that Stern does not want to discuss the evidence that has recently been marshaled against him in the Robins case. The testimony of former Hartz employees and other pet industry sources is not only damning to Hartz' case; it is often downright lurid.

One of the most sensational depositions is that of Daniel Cashill, a Hartz district manager in 1976-77. Cashill says that two weeks before he was scheduled to resume his testimony, his wife was in an auto accident near their Shorewood, Minn. home when a pickup truck crossed over the road and piled head-on into her car. "She said before the im-

ed, she gradually went to the left," ll said in his sworn statement, he vehicle [the pickup truck] was ke he was lining it up with her, like was a magnet on her car, she de- d it. She came back to the right. He back to the right, lined up with the nd hit her head-on."

days later, Cashill continued, he st returned home after visiting his n the hospital: "She had a fractured nd a bump on her head the size of st. At 5:35, the phone rang [at]. I answered the phone, and the at the other end of the phone said, s Dan Cashill?' And I said, yes, it And the party on the other end of none said, 'Are you still going to ?' And hung up."

evidence has been produced linking Mountain with Mrs. Cashill's acci- or the mysterious phone call. But s about strong-arm tactics have—ably or not—swirled around Hartz rs.

er interesting deposition testimo- ntains allegations that Hartz used cutes to entertain pet supplies buy- ashill's former boss at Hartz, Wil- Carr, recounted his dismay at the ce: "I'll work for Hartz Mountain days a week if I have to, but I'll be ed if I'll be a pimp for them," he e once told a colleague.

sworn statements refer to other f inducements as well. Cashill re- one meeting with buyers for Tar- tores, a large midwestern retail At the meeting was Walter Albu- ue, a Hartz vice president-sales. Albuquerque] was describing the hey [Hartz] had to do business ," Cashill testified. "He men- girls for the buyers and he men- fur coats for the wives and he oned new cars and he said, 'We're posed to doing whatever it takes the business.' "

Cashill and Carr merely disgrun- former employees whose word be questioned? Hartz lawyers attacked Cashill's credibility, ac- him of lying to Hartz about being rom previous jobs and of cheating expense reports. But a number of in Cashill's testimony have been orated by outsiders. Cashill's ac- of Albuquerque's veiled offer at the meeting, for example, was sup- by the sworn statement of a Tar- n present at the meeting, Michael v. Bursaw was apparently the man to tempt with such an offer. z salesman, Bursaw testified, once ched him at a cocktail party: "He d me a key to a room in the Chica- ton and said there were a couple of ladies in the room. 'Go and have a ime on Hartz Mountain.' I handed he key back. I said, 'I really don't o owe Hartz Mountain.' "

Condominium carport breaking apart

Leonard Stern's real estate empire—like his pet supplies company—has made him a bundle. But his New Jersey construction projects are beginning to reveal visible problems, as the pictures on this page show. Hartz Mountain stands accused, too, of using carrot-and-stick tactics in its pet business that may not sit well with the law. All, critics say, because of Stern's "battle-for-a-penny" philosophy.

Cracked parking area pavement

Pavement sinking away from wall

Rickety marina near condominium project

Are prostitutes and gifts just part of the selling game? Mike Bursaw, the Target buyer, testified that in his four years in the retail trade no other suppliers made the sorts of overtures that Hartz did. And a former Hartz employee, who had worked for years in sales for a large consumer-goods company, told FORBES he was shocked by what he found going on in Stern's company. "It was just totally against my morals and against the businessman that I am," he says.

Stern's company has also been accused of using "dirty tricks" to keep its hold on the pet supplies market—the kind of thing that might be expected of a small entrepreneur trying to get started, not a multi-multimillionaire.

Consider, for instance, the story of Jack Green and Ron Siden, two victims of an apparent "dirty trick." Green and Siden are partners in a Yonkers, N.Y. company called Petway, a company less than one-twentieth Hartz' size which markets a "companion line" of pet supplies (unadvertised, generally low-priced merchandise), and which has filed an antitrust suit against Hartz. Green told FORBES that he was calling on supermarkets in New Hampshire one day a couple of years ago. "At about 4 p.m. that day," Green recalls, "we stopped in Suncook, N.H. at a Bi-Wise supermarket, part of a small chain."

After stocking his rack and straightening it up, Green met Siden for dinner and the two men returned to the store later that evening. "The rack was stuffed with our merchandise; it was all over the floor," says Green incredulously. "There was around $900 worth of merchandise that we had never sold the store." Green summoned the store manager, who asked his stock boy how the mysterious merchandise could have arrived on the rack. "The boy said, 'I don't know, but a lady came in with two shopping bags a while ago, and she's gone now." Green and Siden had coded their merchandise, and they soon figured out that the surplus goods had originally been stocked in small independent grocery stores in New Jersey and Long Island.

Why on earth would someone want to buy Petway products from independent grocers and dump them in a supermarket several states away? "This Bi-Wise store was a new account for us at the time, and was part of a chain," explains Green. "Whoever did this dumping was trying to screw up our sales figures by making it appear that our products had suddenly stopped moving off the rack. They were trying to show that we were a flash in the pan—we'd get two or three weeks of good sales, then we'd die."

Green has no proof that Hartz was behind the dumping but, he wonders, "Who else would it be?"

Says a former close associate of Stern: "Leonard always wants to outsmart everybody. He'd battle for a penny. If someone said, 'You can afford it, Mr. Stern,' he'd be *furious*. That was the minute he would fight."

"Outsmarting everybody" doesn't just mean beating out the competition. Oh, no. Stern apparently likes to outsmart even those who are—or think they are—on his side.

John Jordan (not his real name) thought he was on Stern's side until, he says, "Stern beat me out of about $2 million." Here's what happened: Jordan's company had been one of Hartz' largest suppliers of cat litter, but in 1968 Jordan agreed to sell out to Stern for a down payment of $1 million in stock plus, at the end of five years, a payment of five times the average annual earnings of the cat litter company.

What Jordan didn't count on was the profits of the cat litter company shrinking from a half-million dollars to zero—thus depriving him of his future payment. Reason: Hartz gave away much of the cat litter, Jordan says, as "free goods" to induce retailers to stock other Hartz products. "There wasn't anything I could do," Jordan storms. "I just kept the million dollars I had. You don't get into a stinking match with a skunk."

Leonard Stern
As much Jimmy Hoffa as Horatio Alger.

Meanwhile, back to that lucrative real estate operation in New Jersey—where Stern's battle-for-a-penny mentality has apparently boomeranged.

The industrial park, office buildings, hotel and condominiums that Stern built in the first half of the 1970s near New York City all sit on top of land that, until recently, was considered by many to be a useless swamp. Stern deserves prai his vision in foreseeing the enor value of the area, but critics claim his buildings were built at the l possible cost and contain inherent s tural defects. If the critics are p even partially right, Stern could fa vere difficulties in getting approv his dream proposal to build a giant ping mall in the Meadowlands.

Already some corporate tenan Stern's warehouses have reportedly plained of construction problems, one tenant, Consumers Distributin (a former subsidiary of May Depart Stores Co.), last summer pulled out building after having filed suit ag Hartz Industries. According to Con ers' complaint, the floor of its ware started chipping, cracking and crum shortly after it moved in in 1973. company brought in an outside eng to test the building; in a 1974 repo engineer concluded that the buildin "design deficiencies," and "se shortcomings in construction" o warehouse floor. In one area tested report continued, the structural stee found to be "hopelessly misplaced, sulting in a system "on the ver structural failure."

Hartz' legal response: If the prob were serious enough to drive Consu out, Consumers would not have able to stay in the warehouse as long did. Says Arthur Rothman, a one consulting engineer for Hartz, a Consumers' and other buildings: seen better construction and I've somewhat worse. We promised a re able building at a minimum of cos weren't selling Cadillacs."

It seems the condominiums Hart up weren't Cadillacs either; some c owners are talking about suing. quality of the fixtures in their buil is terrible," says Michael Grecco, caucus, N.J. plumbing contractor has been called in by Hartz condo ow to perform repairs. "I don't know o cheaper. When you flush a toilet, hear it all over the house." Other o complaints: inadequate heating, poo sulation, a defective boardwalk cracking parking lots.

Obviously, one can't do things o scale that Leonard Stern hunger without making enemies and attra litigation. But Stern has done so mu both that his ruthless image is begin to interfere with his business p mance. What makes Leonard run?

"Leonard used to be driven to b youngest of the richest," says a one close associate. "He now wants to b richest of the richest. I don't think th anything he wouldn't do to get there

That kind of attitude wouldn't been out of place 50 years ago more—"the public be damned." It seem quite out of place in 1979. ■

Who would have thought you could insulate a vineyard against freezing by freezing it?

Grapes must be irrigated to flourish and mature. They must also be insulated against crop-killing frost. Johns-Manville does both with one system.

To protect grapes against a sudden fatal frost, as the temperature drops to freezing, growers turn on an irrigation system that insulates the vineyard. When water freezes it gives up energy. If a continuous spray of water covers the fragile grape buds, enough energy is released to protect the buds and keep them from dying on the vine. The water freezes instead of the grapes.

Johns-Manville supplies the irrigation system (the pipe, the sprinklers, the controls) to help assure a full, robust harvest of grapes and other essential crops. And the same irrigation system that fends off the frost supplies the moisture for growth.

In addition to irrigation systems, J-M is a worldwide supplier of fiber glass products, non-fiber glass insulations, roofing materials, industrial products, paper and forest products, and asbestos fiber and other basic non-metallic minerals. And each business segment is backed by a company with 121 years of proven experience.

To discover more about how this $2 billion company can put its problem-solving capabilities to work for you, write Johns-Manville Corporation, P.O. Box 5705-J, Denver, Colorado 80217.

Ideas to build on.

The duplicators for those who appreciate the virtues of simplicity.

When you push a few buttons on a Xerox high-speed duplicator, a miracle occurs.

A multitude of complicated jobs are converted instantly into simple ones.

For example, you can get a Xerox duplicator that copies on both sides of a piece of paper, automatically.

That reduces, automatically. Collates, automatically.

Feeds and cycles up to 200 originals, automatically.

And even makes two-sided 8-1/2″ x 11″ copies from unburst computer printouts, automatically.

But of all the virtues of simplicity, the greatest is this:

It increaseth productivity.

Since Xerox duplicators are so easy to use, people can spend more time using them, and less time figuring out how. Anyone who can master the technology of pushing buttons can operate one of our duplicators.

So if you appreciate the virtues of simplicity, look into the virtues of a Xerox 9200 or 9400 duplicator.

We'll even arrange a simple demonstration at your convenience.

Just in case you don't accept miracles on faith alone.

There's more than corporate ego at stake in General Motors' dete mined drive to catch up with Ford overseas.

GM gets ready for the world car

By Bob Tamarkin

FOR ALL ITS DOMINANCE of the U.S. auto market—a 46% share—giant General Motors Corp. is an also-ran in the rest of the world. Outside of North America last year, GM sold 1.8 million cars and trucks to 8.5% of the worldwide market, placing fourth behind Toyota, Nissan and Ford. Worse still, Ford—number two in the U.S.—has outsold GM abroad for 14 straight years.

So what? Who needs overseas when you sit inside the world's best auto market, when you are a self-financing titan that regularly earns between 15% and 20% on your stockholders' money? Why risk assets overseas? The answer: A fast-changing situation requires that GM drop its Fortress America mentality and become a world company in the sense that International Business Machines is. The old auto market called for one car in Europe, say, and another for the U.S. The new auto market, with its emphasis on fuel efficiency, calls for a car that combines European economy with American comfort and convenience. A world car, in short. To produce it, GM is turning itself into a world company.

On the wall in the walnut-paneled Detroit office of Howard H. Kehrl, executive vice president for GM's overseas group, hangs a huge world map that would have served Eisenhower for D day. The barrage of tiny red flags indicate where GM will be spending between $10 billion and $13 billion in the car wars of the Eighties. An engine plant in Australia, a battery plant in France, an assembly plant in Mexico, a radio components plant in Singapore. Some 20% to 25%—up from its historical 15%—of GM's annual total capital outlay will go to mobilize its global operations.

From such far-flung outposts GM hopes to put together the centerpiece of its strategy: a world car, blending U.S. and foreign design, that can be built, with few changes, for any market. Still on the drawing board in a shroud of hush-hush security tighter than that for the Manhattan Project, is the J-car, scheduled for production in 1981. A compact front-wheel-drive, four-cylinder hatchback sedan, the J-car will be powered by an overhead camshaft 1,600-to-2,000 cubic centimeter engine. Volkswagen, Honda, Fiat, look out!

The J-car will get about 30 miles to a gallon of gas. The engine—installed transversely to allow for more interior room—will be spunky. Sensitive steering will make for quick handling like foreign imports. The J-car will replace Chevette, the forerunner of GM's world car. First produced in Brazil in 1972, the Chevette is now assembled in five foreign countries under the Gemini and Kadett names. In 1975 GM brought it to the U.S. Chevette has been a tough competitor against today's generation of world class cars—Ford's Fiesta, Chrysler's Omni-Horizon, VW's Rabbit, Toyota's Corolla, Fiat's Ritmo. Having sold 494,000 Chevettes overseas last year and 247,000 in the U.S., GM is confident it can market a single world car design.

GM plans spending $240 million to build a plant in Australia to produce J-car engines. About two-thirds of the engines will be shipped to Europe and Southeast Asian markets. Three more plants around the world also will make engines for the J-car, which will be sold in the U.S., Canada, Europe, Africa and Asia.

Here too is an aspect of GM's new strategy. Under Australian law, cars sold in that auto market were to be substantially built from Australian components. GM is asking the Australian government, in return for the jobs and the foreign exchange earnings the engine plant will produce, to waive its 85%-made-in-Australia rule. In exchange for exporting engines, GM has won the right to bring in other components from abroad, so that it will be selling in Australia, not an Australian car, but a world car with an Australian engine. Thus does GM hope to breach the economic nationalism has fragmented the world auto mark

Of course, more than business judgm lures GM to distant shores. Corpo pride is at stake, too. To think of itse second to anybody makes GM uncom able. "I'd like to see us be number outside North America," says Chair Thomas Aquinas Murphy from behi desk flanked by piles of folders. Now, four years at GM's helm, the confi Murphy may be the first GM chair determined to make that happen.

Tall and solemn, Murphy, 63, is a soned strategist with a knack for mal GM move. He proved it when GM g bled—and won—at downsizing its cars. "I think we surprised a lot of ple," says Murphy, who rallied G market share from a 20-year low.

Now GM is rallying again, mob ing for a full-scale offensive o seas. Over the past year, shuffled its manpower, integrating foreign and domestic staffs. Everyt was coordinated from marketing to chasing. The heads of its foreign o ations were promoted to vice presid and Kehrl—the heir apparent to P dent Elliot M. (Pete) Estes—repla Reuben Jensen as head of GM Over Operations. The New York-based o seas division was brought to Detroi culture shock for many of the 500 tr planted GM-ers. As names on organ tion charts became live bodies cramped corporate corridors, a pater istic GM even offered free driving sons to native New Yorkers used to ing only subways and buses.

Meanwhile, it launched its first NA style "project center" in Warren, M to coordinate future world-car desi among its five U.S. car divisions and overseas subsidiaries in England, G many, Brazil and Australia.

GM starts from a position far beh Ford overseas. Estes is blunt about "Our first objective [overseas] is to m ahead of our chief domestic competit

t only did Ford beat GM overseas as ards time, Ford also was way ahead of I in internationalizing its overseas op- tions. GM was still Vauxhall in Brit- , Opel in Germany, Holden in Austra- when Ford was producing cars for all se markets, built from interchange- e parts.

Our reputation in the U.S. doesn't e us very far, even in Europe," la- nts one GM executive. "You have to ve you're going to be part of the coun- and will contribute." Unlike Ford, ich has carried its name on every car l overseas for 75 years, GM has little nd recognition abroad. Concedes rphy, "I have to say in all candor, we en't been as good in those areas as competition. . . . I guess Ford has n doing a better job of satisfying cus- ners in overseas markets."

mall wonder GM is practicing shuttle lomacy. Like roving ambassadors, rphy and Estes are flying around the rld more these days, spreading GM's ne and goodwill—cutting ribbons at v plant starts in Mexico, talking to Chinese technocrats in Peking, looking in on operations everywhere.

GM is hardly starting from scratch overseas. It has almost 200,000 workers and 5,000 dealers outside the U.S. Its international sales last year were close to $11 billion, its international net after taxes just under $300 million. But Ford netted almost twice as much overseas on sales only about 35% greater than GM's—a double embarrassment for GM. Despite last summer's nine-week strike in Great Britain, which cost Ford $195 million, or $1.63 a share, its overseas earnings were still up 9.2%, while its North American profits slipped 15%. Ford's overseas net supplies much of the $2 billion for its domestic capital spending *(see chart below)*.

Everywhere GM turns overseas it runs into Ford. In market share, the two are running neck-and-neck in Asia-Pacific, Africa and the Middle East. But Latin America is Ford Country. Ford's outselling GM 3-to-1 in Argentina's small-volume market forced GM to end its auto operations there last summer after 50 years. Ford leads the market in Venezuela, after recently expanding its plant.

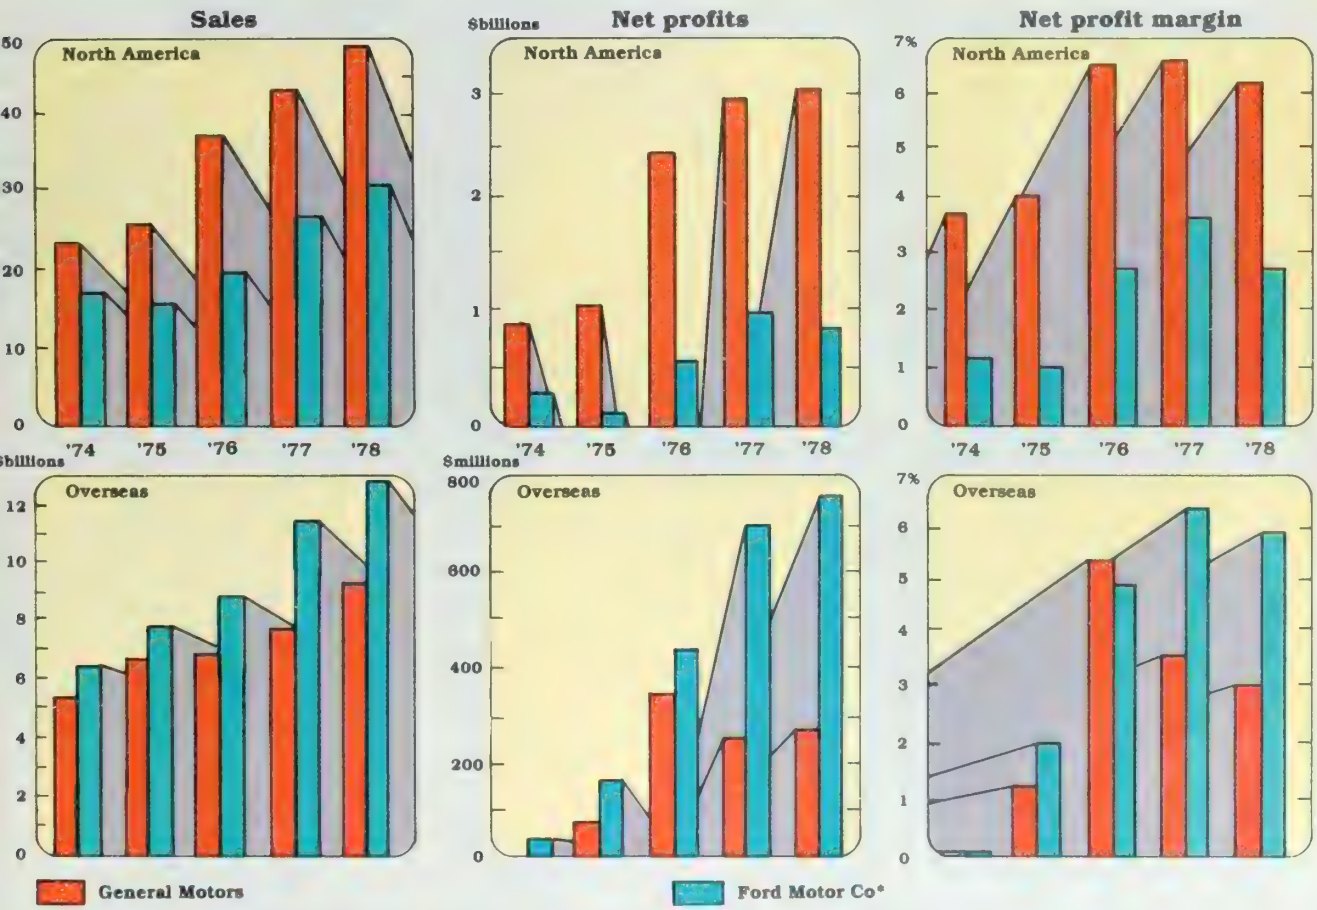
However, GM is beginning to close the gap. It expects to double its output in Venezuela with Chrysler's recently acquired facilities. GM also bought Chrysler's Colombia plant, giving it access to that market for the first time. In Brazil, GM sells about 180,000 vehicles compared with Ford's 159,000. Yet both are far behind Volkswagen's 370,000 units, or 51% of Latin America's largest market.

In Mexico, where Ford (with 70,000 units) is leading, GM is determined to catch up with a $350 million investment that will double GM's capacity to 100,000 units by mid-1982. The expenditure is one of the largest at one spot in GM history, says Estes (Ford nervously calls it a "very aggressive move"). VW dominates the 205,000-unit Mexican market with 28.5%.

Another element in the GM strategy: Get into the promising markets fast and in any manner—expansion, acquisition, joint venture. GM already has joint ven-

Two different worlds

For both General Motors and Ford, doing business in the U.S. and abroad has been a consistent study in contrasts. In the U.S. GM's profitability has been double that of Ford. Abroad, Ford's profitability has been double that of GM.



* Ford figures include income from the following nonautomotive operations: Basic Products Operations, Electrical, Electronics and Climate Control Operations, Ford Tractor, Ford Aerospace & Communications, Ford Motor Land Development and Ford Motor Credit—about 7% of total 1978 sales.

tures in Japan, Kenya, Korea, Iran and Yugoslavia. And it's looking for others. Historically, GM bought its way into foreign markets by acquiring Vauxhall (1925), Opel (1929) and Holden (1931). Today these lines are its strength.

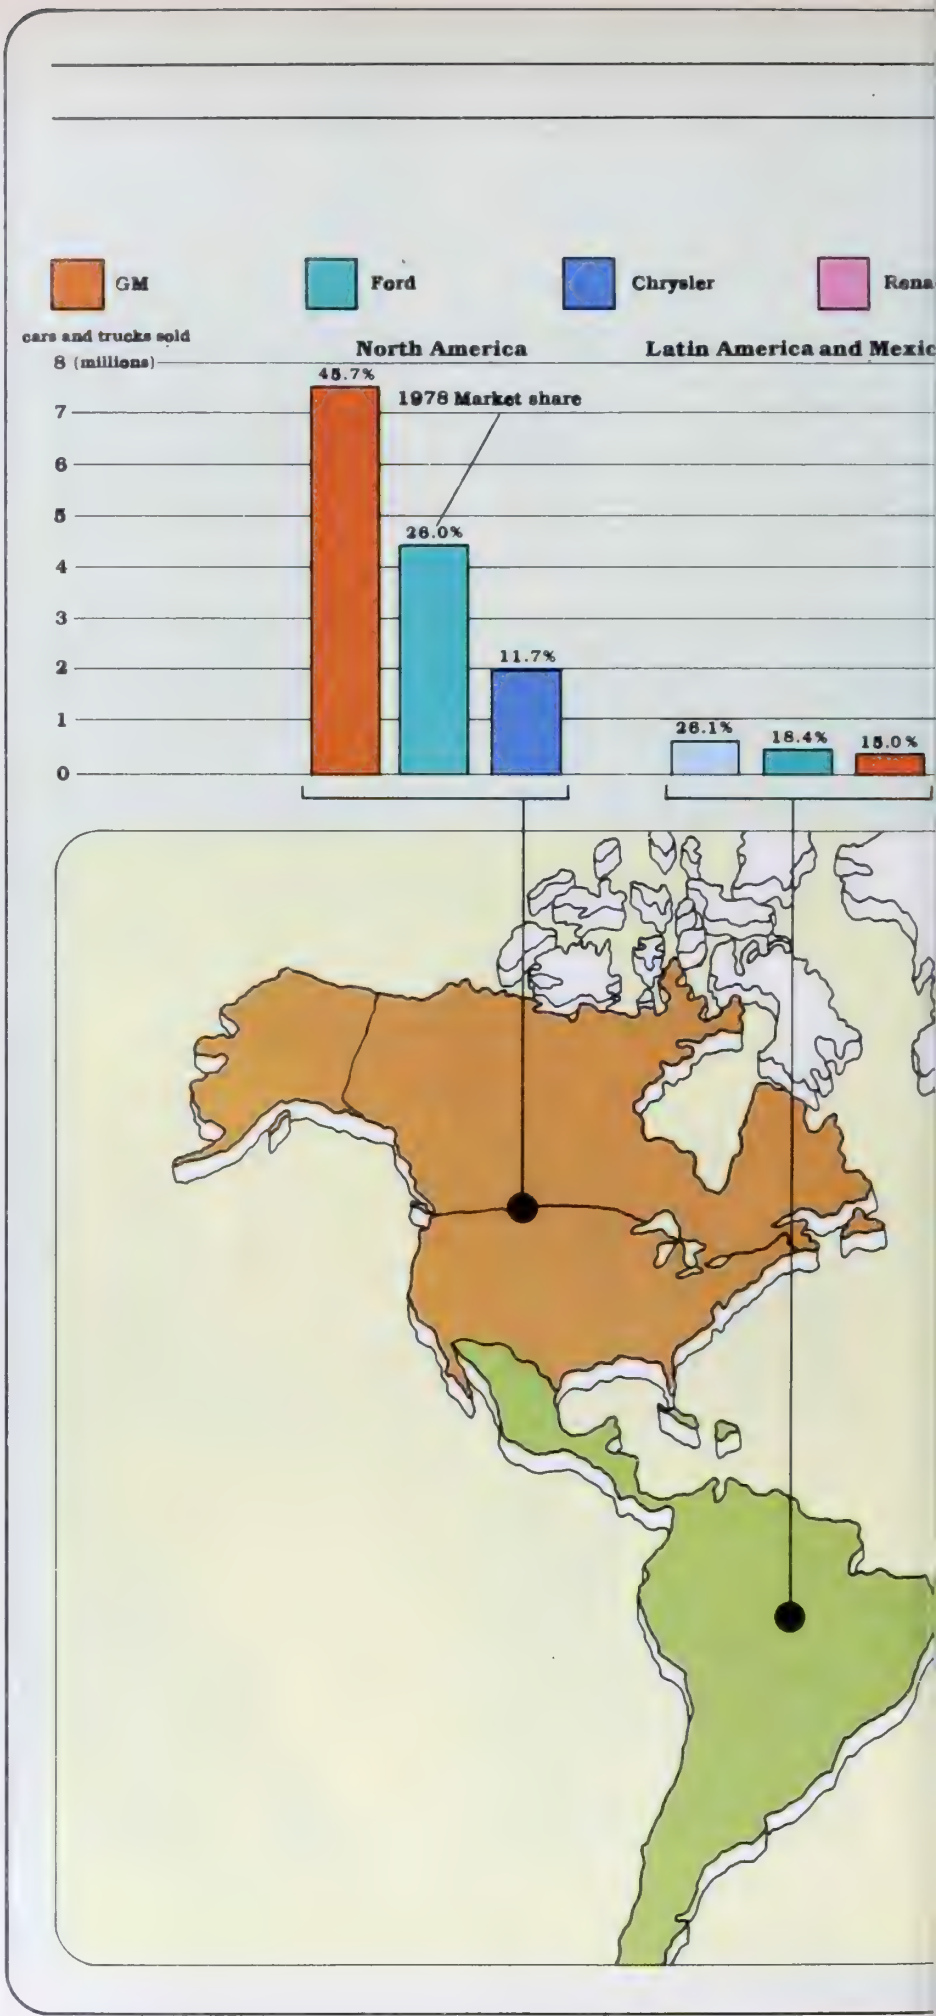
The prime European market is GM's biggest problem. There Ford is substantially ahead, outselling GM by some 200,000 cars a year. "When I lived in London," smiles Gordon MacKenzie, former sales vice president of Ford's European operations, "I woke up every morning certain of two things: That day it would rain. And we'd beat GM."

Ford began digging in back in 1967 when it reorganized its 15 European companies into Ford of Europe. It moved fast to take advantage of the European Common Market (FORBES, *July 1, 1972*) as it streamlined operations, cut duplicate product lines, combined dealerships and expanded parts-sourcing across borders. (Its Fiesta, for example, is assembled in Spain with parts from England and Germany.) In 1976 it opened a $1 billion assembly plant in Valencia, Spain, increasing its European output by over 200,000 units—its lead over GM today.

GM has been slow to integrate components, and its car lines compete as vigorously with each other in Europe as in the U.S. Short of production facilities, it is scouting France, Spain and Austria for a new plant site. After 68 years, GM has yet to set up a sales office in Spain.

In Europe GM sells 1.1 million cars and trucks, ranking it fifth with about 10% of the market. After buying Chrysler's European operations late last year, Peugeot-Citroën is now first with 17.3%. It is followed by Renault (12.8%), Ford (12.2%) and Volkswagen (11.4%). The Japanese (Toyota, Nissan) combined have 6.5% but are solely importers.

In such a fragmented business, market shares are unlikely to change abruptly. But GM has a card up its strategic sleeve that could alter the numbers—the X-car. Designed with export sales in mind, the X-car debuts next month. Sporty, front-wheel-drive sedans that will replace the Chevrolet Nova, Pontiac Phoenix, Oldsmobile Omega and Buick Skylark, X-cars are gas stingier, 800 pounds lighter and 20 inches shorter than the above GM compacts, yet have the same interior space. Next year GM wants to export 80,000 of them to the European market. The exchange rates willing, GM intends to export 100,000 cars, including X-cars, to Europe in 1980, five times the figure for 1978. (U.S. automakers now export 425,000 cars worldwide annually, including complete knockdown kits assembled in the importing countries.) Hoping to stimulate overseas interest in its first full line of small cars since the Fifties, GM quietly invited 300 of its European and Japanese dealers to Detroit last summer to preview the X-car, dubbed by GM



Congestion ahead?

all its dominance of the U.S. market, General Mo- is nothing special overseas. Some able, well-heeled petitors—not least of them Ford Motor—are well entrenched and not about to give way gracefully before the allout effort GM is making to expand its market share abroad.

insiders "the import fighter."

In its assault on the overseas markets, GM will be going up against more than Ford. The Europeans, too, are beginning to recognize the importance of achieving the economies of scale and hurdling national boundaries.

France's Peugeot-Citroën took the merger and acquisition route by buying Chrysler's British operations. Others favor joint ventures to get economies of scale. Fiat, Renault and Alfa Romeo, for example, own a diesel engine plant in Italy. Next year Fiat and Peugeot jointly will be making a light-duty truck.

Such ventures hardly worry GM so much as the closer encounters of the political kind. Already Volkswagen, Renault, Volvo, British Leyland and Alfa Romeo are either partially or wholly owned by governments. If governments decide to run these labor-intensive companies at huge losses in order to save jobs, it would be difficult for GM or Ford to compete. "Whether that potential will be realized in the marketplace remains to be seen," says John McCormack, head of GM's European operations, "but it's kind of scary."

GM pride—as well as tactical logic—demands that GM tackle the tough Japanese market. Meeting the Japanese government's fussy safety and environmental standards results in a $6,400 Camaro carrying a $15,400 price tag in a Tokyo showroom. But GM won't give up. Next month it will market the Chevette through its 34%-owned Isuzu Motors Ltd. Japan dropped all import duties on foreign cars last year under pressure to open its markets, but so far imports are running less than 1% of sales.

In China, GM sees few prospects for cars, but big possibilities for its locomotives and diesel engines, trucks and earthmoving equipment. Here GM is being commendably flexible. It has told the Chinese it is prepared to barter its products for raw materials—as it already does with South Africa.

GM's decision to expand overseas has little to do with a slowing domestic market, insists Murphy. With 120 million cars on the roads today, the annual replacement rate would be 12 million. A growth rate of 2% to 3% on top of that, says the ever-optimistic Murphy, and "you're going to have an attractive opportunity here." It was Japan's mature market, among other factors, that drove its automakers abroad in the 1960s.

The simple fact is that the international and domestic markets are no longer separate, discrete entities; they are fast merging. In a sense, GM is going overseas to protect its American market. To create the cars of the Eighties, it needs the volume that the world market can supply; an economical world car, salable here, will help keep down GM's overall fleet fuel average and enable it to sell additional bigger cars, where the big profits are.

Ford has had its hands full at home trying to meet the government's corporate average fuel economy (CAFE) requirements. "We are at 19 miles per gallon by our fingernails," says MacKenzie. In the past three years Ford has had to slash its overseas expenditures because of the pressures at home to build smaller, lighter cars.

On the other hand, GM is meeting the corporate fuel economy requirements with little trouble and, with its new X-car, should have few worries meeting them next year as well.

As a consequence of all this progress General Motors is likely to be less generous with its shareholders than in the recent past, when the giant automaker often seemed to be making so much money it didn't know what to do with it. In the five years immediately preceding 1978, GM paid out in dividends 62 cents on every dollar it earned; even with this generosity, it financed its capital spending mainly out of cash flow. In 1975, GM borrowed $600 million. In reducing the year-end extra last year in the face of slightly higher earnings, GM management was signaling to its stockholders that they could expect somewhat less generous dividends for a while at least. To build whole new lines of cars while expanding overseas is going to put a strain even on GM's resources. Last year's payout was a subpar 49% of the year's earnings. What will happen this year is by no means predictable since there could be an auto strike this summer. But even without a strike GM will have to husband its cash for a while if it is to retain its virtually debt-free stance.

It is possible that GM's new global strategy could fail. Economic nationalism is a formidable hurdle, and Ford—to say nothing of Volkswagen, Peugeot and the Japanese—is a tough competitor. Still, the strategy looks and feels right. "It's a tough market in general," says Donald Petersen, executive vice president of Ford International Operations. GM will make it a little bit tougher."

Once again General Motors is proving, despite its huge size and despite the near-maturity of the automobile market, that it is a fine industrial machine, capable of reacting, if not with speed, certainly with efficiency, to drastically changing circumstances. Those trustbusters who still dream of dismembering GM would do well to remember that the Chevrolet division's Chevette, now the best-selling subcompact in the U.S., has been a major weapon, not only in checking import inroads, but in enabling GM's other divisions to keep producing and selling bigger cars—thus helping preserve the consumer's freedom of choice and tens of thousands of jobs. GM is no longer—if it ever was—a loose collection of companies, but an integrated whole well on its way to becoming a global whole. ■

Chevrolet General Manager Robert Lund

Chevrolet's world car

At General Motors' Lakewood, G plant, where assembly-line work once built the heavy Pontiac Gra Prix, the retooled operation n churns out the popular little Chevro Chevette at a rate of 45 an hour.

The Chevette is GM's first ma response to the changes the ene crisis wrought in the auto mark Carrying a price tag of $3,644, t Chevette is a good 10% cheaper th Toyota's and Datsun's comparable hicles. If it meets GM's goal of selli 340,000 units in the U.S. this year will equal the volume of Datsun's a Toyota's best-sellers combined. A though Chevette sales lagged behi predictions in the first quarter of t 1979 model year, you can bet that G will be pushing sales from here o Every 29-mile-per-gallon Cheve sold lowers GM's fleet average co sumption and enables GM to bu more bigger, more profitable cars.

Robert Lund, the able, 59-year-o general manager of the Chevrolet vision, says the company has no i mediate plans for raising Cheve prices—thus serving notice to J German and Japanese competito that no longer would Detroit let the have the small-car market by defau

r own fears and guilt feelings do more to o OPEC intact than the realities of eco- nics, says this maverick oil expert.

Is OPEC a paper tiger?

SK ARNOLD SAFER, the outspoken and scrappy oil economist at New York's Irving Trust Co., what troubles and the current oil short- ply for the world's economy and ply snappishly, "The shortage is a on of price, not physical supply. has enough capacity to supply the s needs, even without any Iranian capacity. Oil is around. The trou- hey want $21 a barrel."

ble enough, but in one sense Safer ptimist. One of the great doubters the world's oil economists, Safer rnly denies that any physical ge of oil is shaping up for the fore- future. "Projected world oil ges are analogous to a receding ho- he says. "No matter how rapidly ove toward it, it's still the same e away."

oes on: "In the early Sixties, the mmunist world had a 33- to 35- pply of oil available to it at current tion levels. And it hasn't changed since then, though production's p. By 1980 it'll be over 35 years, 36, 37, because consumption is g, and maybe if reserves in the Sea and Mexico prove up, even to 40." Beyond that, big wildcat ons in Canada's Beaufort Sea, off- Vietnam and China could change ole picture.

doesn't dispute the existence of a squeeze since Iranian production d out last December. But he see any reason to panic. In the uarter, he says, consumption is lly the highest it gets all year. In cond quarter it normally drops . Inventories are large enough to re of the temporary shortfall, and ortages are likely to result from industry's determination to hus- hese inventories against difficul- rebuilding them next fall. There ely to be *some* shortages this sum- ut nothing on the order of 1973-74. at that, Safer insists there's still enough capacity around to meet the demand—in places like Saudi Arabia, Abu Dhabi, Kuwait and Iraq—if the producers could be persuaded to produce it. What's holding them back is the matter of price. The question, of course, is just how high prices will have to go in order to call this capacity into production. Ironically, if Iran should succeed in getting back into

Irving Trust's Arnold Safer
Is OPEC headed for a crash?

full production, the surpluses that beset the industry last year might reappear.

So what worries Safer is the price the world's economy will have to pay for its energy consumption. Safer conservatively figures that prices will hit $16.20 by year-end, up $3.50 in a year, nearly twice the increase OPEC scheduled last December. Says Safer: "With OPEC production at 10 billion barrels a year, every buck a barrel is $10 billion drained from the world's purchasing power—a prospective $35 billion." As this purchasing power drains off, the recession Safer and the Irving Trust forecast for early 1980 could conceivably develop earlier. Safer fears the result will be mandatory wage and price controls for the U.S.—not to get the country through the shortage, but through the 1980 elections.

Safer continues to believe that OPEC bears within it the seeds of its own destruction. Because OPEC faces the monopolist's death sentence: The higher oil prices go, the less oil people use, and the easier it is to develop competitive supplies. And that's exactly what's happening. Safer points out that between 1963 and 1973, noncommunist world oil consumption rose by 26 million barrels a day, 20 million of which were provided by OPEC. But since 1973 consumption has risen a mere 1.5 million barrels. Non-OPEC production has risen 3.6 million barrels, while OPEC production has declined by 2 million barrels a day. Safer expects OPEC production to decline another 2 million barrels a day by 1983. So far the Arabs, floating in a sea of money they are hard pressed to spend or invest, have been able to withstand the decline. But how much further can they afford to cut back? "Eventually," Safer says, "OPEC'll crash. How far will prices have to go for that to happen? I don't know."

Safer believes the Iranian crisis is introducing strains within OPEC. OPEC was never any more than a price-fixing mechanism—it was never able to control production—but now the cartel's price solidarity seems to be breaking up. Many producers have been adding special surcharges to the official OPEC price. Iran is now attempting to auction its oil off to the highest bidder—and the last thing a monopoly can endure for long is an auction market. "The whole OPEC discipline will break down eventually," Safer argues. "Companies will bargain for leverage."

Meanwhile, the problem remains, and part of the U.S.' inability to cope with the problem, Safer says, is its misconception of just what the problem is. The U.S. may be running out of oil, but the world is not. "All the proposals are premised on an eventual running out of oil—that's 100% wrong." And from a bargaining point of view, it's bad psychology; it weakens the buyer's resolve and strengthens the seller's. "By crying world shortage," he says, "we've paralyzed the apparatus in Washington."

Letting economic forces take their course is hardly painless: Keep paying higher prices, until so much new oil and alternative energy comes forth that OPEC cracks. Meanwhile, Safer says, let's not be paralyzed by the myth that we are sinfully consuming more oil than the world can produce. ■

A turnaround at Fairchild Camera? Haven't you heard that one before? But this time it may be for real.

At long last

By Kathleen K. Wiegner

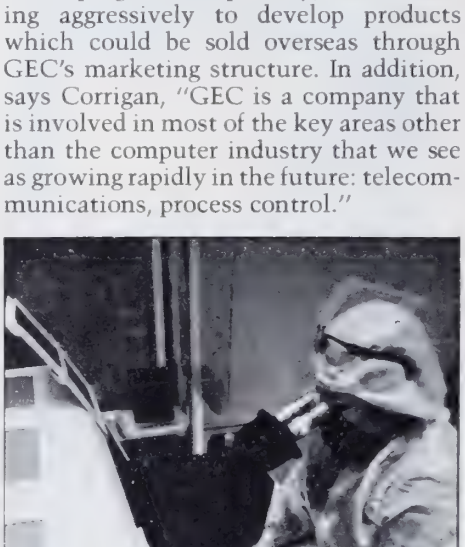
A YEAR AGO the kindest word to describe Fairchild Camera & Instrument Corp. would have been "troubled." More bluntly, it was a mess. The company was getting clobbered in its digital watch division to the tune of a $24.5 million pretax loss. Its basic semiconductor business was based on an older technology that was being upstaged. On sales of $460 million Fairchild only earned $11 million, a far cry from the $27 million it earned in 1974 on sales of $385 million. At 2.4% its net margins were among the industry's lowest. Appropriately, its stock, once a high flyer, sold at 25, or 27% below book value.

But times have changed. For 1978, Fairchild reported record sales of $533 million, but more important, net more than doubled to $24.7 million. Profit margins were up to 4.6% and backlog rose 55%. Fairchild's 1978 net would have been even higher but for its fourth quarter decision to bite the bullet and get out of digital watches. That decision ended a big drain on profitability but cost it almost $6 million pretax.

So why is the stock still in the doldrums? Primarily because Fairchild followers have been burned before. Fairchild had what looked like a turnaround back in 1973-74 but never quite recovered from the 1975 recession in semiconductor sales, largely because of its watch problems. Fairchild Chairman and President Wilfred Corrigan is all optimism: "We have now gotten rid of a bunch of subcritical businesses and are going to refocus on the high technology areas." But Corrigan has made such promises ever since he became president in 1974.

The skepticism is thus understandable. But it may overlook some strategic moves that make Fairchild's future look better than the experts think.

To underline his commitment to high technology, last fall Corrigan hooked up with Britain's General Electric Co. (GEC) in a joint venture aimed at establishing one of the largest and most advanced integrated circuit plants in Europe. The U.K. plant will duplicate Fairchild's new $50 million plant in San Jose, Calif., dedicated to manufacturing metal-oxide-silicon (MOS) semiconductors, those cheap, high-density circuits for which markets have been growing more rapidly than for the more expensive, high-speed bipolar circuits where Fairchild is the leader. Fairchild was late in developing MOS capability, but is moving aggressively to develop products which could be sold overseas through GEC's marketing structure. In addition, says Corrigan, "GEC is a company that is involved in most of the key areas other than the computer industry that we see as growing rapidly in the future: telecommunications, process control."



Fairchild wafer fabrication at San Jose plant
Focusing on the state of the art.

As the third largest semicond maker, after Texas Instruments and torola, Fairchild would like to move manufacturing whole systems as and Texas Instruments have done just the components used by the temsmakers. As technology advanc that more and more capability ca put on a single silicon chip, compon have become, by their very nature, and more complete systems. These tems attack the hardware end o computer manufacturers because can replace critical sections of ind ual computers. Microprocessors, fo ample, are really computers on a s chip of silicon because they have memory and logic. The linkup GEC, which manufactures elect systems, will aid Fairchild in ma this systems jump.

Like competitor National Sem ductor, Fairchild is also trying to the computer mainframe bus through its recent purchase of 35 California's closely held Magnuson tems, which makes computers com ble with IBM's 370 and 3031 system

Besides the computer market, child looks for growth in the auto in try, where last year it sold about million in components to the aut dustry. In June Corrigan made a with Robert Bosch, GmbH, the German auto parts manufacturer Fairchild to provide Bosch with k how in manufacturing electronic tion modules in exchange for supp Bosch with components and subas blies. "The Bosch arrangement is a tern of how you are going to have business in Europe in the future," Corrigan, aware of the growing str of economic nationalism.

One continuing bright spot for child is its computer test systems w test microprocessor and memory cir in other computers. In testing equip for microprocessors Fairchild is the ing manufacturer; in memory tester second only to Teradyne. In 1978, ings from these products adva sharply, accounting for an estim 25% of net.

But problems remain. Corrigan to move quickly in the MOS produc where technology is now moving to circuits that combine the advantag MOS with the high speeds of Fairc bipolar circuits. Magnuson, like makers of IBM-compatible comp will be directly hit by IBM's newly duced 4331 and 4341 mainframes volume production is reached. And ty income from some of Fairchild's nal patents begins running out next

If Corrigan can handle these lems—and the evidence is that he there is every reason to expect that child's turnaround this time won't ephemeral as those of the recent pa

City Investing's Rheem and Ruud Divisions, world's largest producer of water heaters, want homeowners to be informed about solar water heating system

Heat from the sun is free. But the equipment you need isn't. A lot of people are still in the dark about what's practical and what isn't.

We hope to shed some light on a subject too little understood.

Can I heat my whole house from the sun?

Solar energy for whole-house heating is still in its infancy. Systems are available but they require a big investment. The equipment needed for widespread practical use is still a few years down the road.

We're making progress here. But the immediate future is concerned with *water* heating

Why should I be interested in heating just the water in my house?

In most parts of the country, fuel bills are heading in only one direction. Up.

Solar water heating systems can be a practical way for many homeowners to save on both fuel and fuel costs.

What's more, these systems are available *now*.

What hardware do I need?

Solar collectors (skylight-like panels mounted on your roof or on a small platform beside the house to absorb the sun's rays.

At the proper angle, panels can even go on the side of the house, or on an outbuilding.

The most important thing to remember is this. Wherever you decide to put them, be certain that the panels face due south. You also need a storage tank. Interconnecting pipe. And in most cases, an auxiliary heater.

generating heat
nfusion.

How do most solar water heaters work?

Solar water heating is incredibly simple. In direct-type systems, water is pumped from the storage tank through the collector panels (where it absorbs heat from the sun's rays) and back to the tank again, ready for you to use.

Other systems use a separate fluid to collect the heat. This circulates through the pipes and collector panels, eventually transferring its heat indirectly to the water in a storage tank.

Both systems are efficient.

Can I really save money with a solar water heater?

Yes. But even if you couldn't, solar heat makes all kinds of ecological sense.

Happily, it also makes economic sense. A good solar water heater costs about $1,800 plus installation, fits into your existing system, and provides 50%-80% of the hot water needs of an average family.

Why is City Investing telling you all this?

For years, Rheem *Solaraide* and Ruud *Solar Servant* storage tanks have been essential components in other solar heating systems.

Behind both Rheem and Ruud is City Investing. So we have a big stake in solar heating, and we're continually expanding it.

Last year, we introduced *Sun Set*, the first complete solar water heating system of our own.

This year, we're expanding our product lineup with a new, direct solar system designed for special climates.

Our new *SunDirector.*

The *SunDirector* incorporates important features seldom seen in a single system.

It has high-performance copper panels designed to absorb and transfer maximum energy from the sun.

After each cycle, water automatically drains from the panels and returns to your tank. So the panels won't freeze up in cold weather.

A unique control mechanism tells the system when there's enough solar energy outside. So water circulates only when heat can be added. And you save dollars.

The point is this. City Investing, through our Rheem and Ruud Divisions, is already the world's largest producer of conventional water heating systems. We intend to be leaders in the solar field, too. And results of our work, particularly over the last two years, prove that we're on the way.

Meeting basic needs is basic to our thinking. And the same kind of thinking guides the profitable growth of all City Investing operations.

Our companies profit from good ideas.

In housing, we plan and develop entire communities. We're a major builder of single-family houses and mobile homes.

In manufacturing, the talents that have made us world leaders in the production of steel shipping containers and water heaters also enabled us to introduce the *Sun Set* and *SunDirector.*

In insurance, we're a major property and casualty underwriter, specializing in policies tailored to business needs.

To learn more about us, just clip the coupon.

Here's a stock that sells for one times its cash, or—looked at another way—two-and-a-half times operating earnings. What's the hitch?

The stock nobody loves

The Streetwalker

BLASÉ, ARE YOU, about bargains? Most of us are these days in a stock market where good companies routinely sell for five times earnings and yield 6%, 7% or even more. But here's one that still should make you sit up and take notice.

This stock has behind it $19 a share in cash and earned an estimated $3.40 in the fiscal year ending Mar. 31. It recently sold for $20 a share—about one times cash, six times earnings and yielded 5% on its conservative $1 dividend.

Must be a lousy company, you say, in a dying business. Not so. It is deep into offshore oil production and into energy conversion—both growth businesses. Its earnings are *not* about to collapse: They should hold about even in the new fiscal year, down at most by 10%.

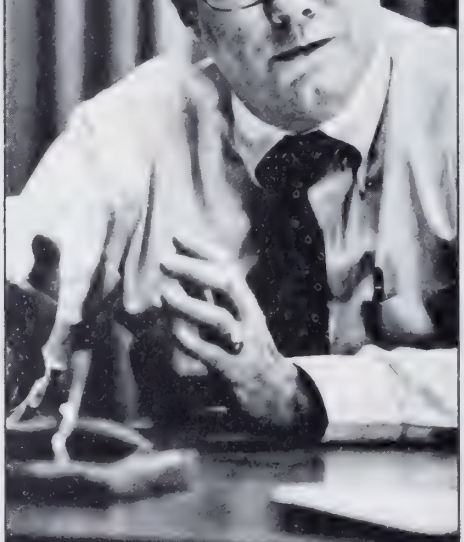
Its name? J. Ray McDermott & Co. Actually, it's two companies. In 1977 McDermott, New Orleans-based marine construction company acquired New York's Babcock & Wilcox, thus adding steam boilers and generating equipment to its own offshore production platforms. The combined company will have revenues of $3 billion this year and net profit of well over $100 million. Both outfits are highly regarded for their engineering. And all that cash just sits there waiting to be put to more productive use than in money market instruments.

So, why has this stock got leprosy in investors' eyes? To find out, The Streetwalker queried the analysts.

One thing that made them all bearish was the earnings trend: flat or down a bit this year. The estimates ranged from $3.40 a share (James T. Rice of New Orleans' Howard Weil, Labouisse & Friedrichs) down to $3 (Peter Vig of Montgomery Securities).

There were some other problems, too.

George Gaspar, who does the Gaspar Report on the oil service industry for



J. Ray McDermott CEO James E. Cunningham
Suddenly boss of two companies in one.

Milwaukee's Robert W. Baird & Co., points out, as do others, that McDermott's cash hoard is not unfettered. It is the result of fat foreign earnings in the mid-1970s aftermath of the Arab oil embargo, when companies and nations intensified the search for oil. McDermott chose not to defer U.S. taxes on those foreign earnings so the money either stays permanently abroad or pays a penalty of 25% or more upon repatriation.

Want more bad news? The company pleaded guilty in February 1978 to illegal payments and fraud, pleaded no contest in December to federal charges of bidrigging and fraud. Four of its officers face trial in June on the latter charges, and an Internal Revenue Service investigation of the company and its officers contin over the payments case. All this does company's reputation little good, n mention its stock market image.

Peter Vig, the offshore industry ana for Montgomery Securities of San F cisco and Dallas, believes that for competition—Japanese, for example going to make a growing impact on marine construction business domin by McDermott and Halliburton's Br & Root division, which now share s 60% of the $3.7 billion market.

If none of this sounds devastating, enough to account for the low stock p in a market like this, where every fears the worst. But what does the c pany have to say about the prospe We talked with James E. Cunningh the newly appointed chief executiv McDermott. He dismissed fear of for competition. "We're the lowest-cost ducer," says Cunningham, a 55-year chemical engineer who took ove CEO from ailing Charles Graves in ruary. He has a point. McDermott been in the oilfield business since and pioneered construction in the Gu Mexico. It has worked to keep i ahead with new equipment and meth in the big-ticket offshore production pipeline businesses. It has the pe with the knowhow, the mostly Lo ana and Texas Gulf Coast work f that has helped make offshore o uniquely U.S. business worldwide.

If the competitive realities seem threatening than the low market p would suggest, what is the chance c acquisitor moving in on McDerm with a tender to take advantage of Street's coolness toward the stock? great. McDermott is a company likes its independence. It walked a from merger with Schlumberger in 1 fought hard and overpaid for Babcoc Wilcox in 1977 as much for take insurance as for diversification.

If an unfriendly buyout should a it's a good bet that McDermott w run for cover to a merger with Da Dresser Industries. There's a year-an half-old rumor linking the two, insp partly by oil-patch friendship of the ple running the two companies and p ly by the fit—so like Halliburton Brown & Root. "It would be a comb tion of talents," says McDermott's Cunningham in a very friendly t "But we're both of such a size tha would be difficult to do."

So, as Cunningham suggests, ma the biggest defense against a takeov the big bite involved. Assuming would have to pay a premium of at l 75% over market value to land a c pany like this, you are talking abo tender offer worth $1.3 billion inclu the big issue of convertible preferred resulted from the B&W takeover. Ev you could bring home a good piece o

Here's what we've been keeping under our hat.

It's no secret really.

The Northerners upped dividends for the sixth year in a row.

If this sounds familiar, that's fine with us.

Because there's one key word for Northern Natural Gas Company.

Growth.

Earnings were up five out of the last six years.

Revenues were nearly $2 billion.

Earnings per share? $6.15. Our second highest ever.

These are the facts. As you'll see in our 1978 Annual Report.

What else has improved for the Northerners?

Our Natural Gas Group bettered Northern's storage capability by filling our newest liquid natural gas storage tank with over 26 million gallons of energy. The largest tank of its kind in the nation.

Our Liquid Fuels Group has increased retail LP-gas outlets to 224 in 19 states.

Northerners in our Petrochemical Group added four new products to our PEAK® automotive line and began operation of a new 200 million pound per year polypropylene plant.

Northerners in our Exploration & Production Division now have acquired over one million net acres of offshore and onshore domestic gas and oil leases to explore.

So now you know what's going on under our hats.

We come up with new ideas every day. Ideas on how to do things better. Ideas on how to keep on growing.

And at the rate we're thinking about where we're growing, we might, just might, outgrow our hats.

Contact your broker for more information.

With blood, sweat and tears Jim Kerr turned Avco from a sick company into an immensely profitable one. His reward? A stock that sells at two times earnings.

Isn't anybody listening?

Avco Chairman James Kerr
Delaying retirement so acquisitors won't reap the spoils.

By Paul Gibson

THE CLOSE-CROPPED black hai gray now and modishly long; Air Force hero's rugged face lined. James R. Kerr, now 61, shows strains of the past few years. "I'm an man and tired," the Avco Corp. ch man tells an interviewer, not looking and tired but meaning that he would to retire. Why doesn't he? "What l me here for the last two years," he plies, "was your damned magazine."

In 1974 FORBES criticized Avco for versifying too widely and for indulgin all the then-current corporate f Events proved the criticism was Avco was already big in consumer nance and aircraft engines and parts, caught up in the frenzy of the Sixtie leaped into such hot fields as life in ance, land development, TV casset credit cards—and, folly of follies, mo making. Credit cards—Carte Blanch was a disaster; Avco lacked the tra er's-check business to back it up. So TV cassettes, where Avco was far early. The insurance portfolios w heavily into common stocks and sho a horrendous decline in earnings in crashes of 1970 and 1974.

Avco and its stockholders paid price. Its stock almost dropped ou sight, sinking from 49 to 2 by 1974. A not only stopped paying common d dends but also let arrearages pile up o preferred issues. There were huge wr offs and a cash squeeze.

Turnaround is a much abused w but it does describe what Kerr wrought at Avco—at the cost of sh dering a work load that would have ki a lesser man. After another writeof 1974, Kerr put Avco solidly in the bl and since then has been reporting st ily rising earnings. Last year Avco ear $122.7 million, up 14% for the yea return, fully diluted, of 13.8% on st holders' equity. Preferred arrearages h been cleared away and common d dends now run at $1 a year.

Kerr has slowly reduced Avco's di debt obligations to a manageable 36% capitalization from 56% in 1974. He manfully whipped into shape the inv ment portfolio owned by Avco's Paul vere Equity Management Co. Before began supervising every investm made, the portfolio was "literally un water," according to Kerr, with bad vestments. Since then the portfolio's vestment value has grown an ave 11% annually, to over $1 billion, w investment income has easily triple $75 million. Once a heavy speculato new equity issues, Avco now owns a handful of solid stocks, and puts m of its funds into A-rated bonds, comm cial mortgages and federal governm agency obligations.

Avco is still a conglomerate but

Take a closer look at America's newest billion-dollar telecommunications system.

No ad can give you all the information you need to evaluate a dramatically growing company.

Many times, though, an annual report can.

That's why we'd like to send you ours. We're United Telecom, operators of United Telephone, America's third largest telephone system, United Computing Systems and North Supply Company.

While we can tell you here that United Telecom is America's newest billion dollar telecommunications system, our annual report can tell you how it happened.

It will also give you some insight to our astonishing growth from $130 million in annual revenues in 1966 to more than $1.4 billion today.

And best of all, it will give you an in-depth look at the people behind one of the major telecommunications companies in America—a company that has doubled its revenues in just 6 years.

Send in the coupon today. We'll have our annual report on its way to you in no time.

An affirmative action employer.

March 9, 1979

Mr. Allen Kay
Executive Vice-President
Kay, Thomas & Anthony, Inc.
909 Third Avenue
New York, New York 10022

Dear Allen:

Thanks very much for your stimulating presentation last Thursday on "Information Management as a Cost-Cutting Tool."

Our people were very favorably impressed with the thoroughness and insight demonstrated by your research into this area.

However, we've decided to table for the time being any further explorations. Our "paperwork flow," we feel, is not great enough to warrant further action, since the vast majority of it consists merely of ordinary business letter like this one.

But thanks anyway for your help. And should the need for any in-depth cost analysis arise, we'd like you to know that your people will be among the first we'll contact.

Best regards,

Warren Stewart

Warren Stewart
President

WS/bc

$4.77

IT'S JUST YOUR AVERAGE EVERYDAY BUSINESS LETTER.

Remember the last business letter you wrote? Well, between the part that began "Dear so-and-so" and the part that ended "Best regards," you spent nearly $5.

That's one estimate of how much it costs a business just to produce a letter.*

Now, if a simple business letter costs that much, imagine how much it costs to create and handle all the other information you deal with daily.

At Xerox, our business is helping you manage information. And that includes helping you manage the costs of managing information.

We make electronic typing systems that help you create, edit and store information in a fraction of the time—and money—of ordinary typewriters.

Duplicators and computer printers that make Xerox-quality copies for just a few cents each.

And computer services that give you the benefits of a computer without the expense of owning one.

In fact, everything Xerox does helps you manage information. But we also provide you with an interesting side benefit:

We help you manage your money at the same time.

longer a grab bag. Kerr is an operating man and personally involves himself in all facets of the complex operation.

"I've spent a lot of time rebuilding this mother and now I've got this company exactly where I want it," says Kerr. But he says it in full recognition of the fact that his troubles are not over. Avco's stock rebounded smartly in 1978 and reached $35 last November. Then it tumbled and today languishes at 20, where it sells for less than half book value and barely two times this year's expected earnings of around $9 a share. That's just about the lowest multiple on the Big Board. What's wrong?

"Damn analysts are like sheep," Kerr exclaims. He says The Street panicked and urged its customers to dump the stock without checking the facts on two important events. The first blow fell when Avco reported a sharp earnings drop in last year's final quarter. But there was an explanation for this: Avco had a huge capital gain in the 1977 quarter from the sale of some California land and this made a poor comparison inevitable. Actual operating earnings were up. The second problem is Iran, where Avco is deeply involved.

Khomeini's helicopter in Iran
Waiting for repair calls.

Avco is a major supplier of engines and engine parts to Iran's huge helicopter fleet, and was negotiating a deal to manage a new Iranian naval base when the Shah's government collapsed. But, says Kerr, any setback in Iran will be temporary, hurting this year's net by $5 million at most—about 38 cents a share—and will not mean a writeoff since the Iranians have prepaid for work now in progress. "Someday, somebody is g to have to fix those 565 Iranian hel ters," adds Kerr. If Iran is a thre Avco it is more in the loss of f business than in present dollars.

Yet another problem is the huge p tial dilution that hangs over the pany. Hangovers from Avco's acquis days are two huge issues of conve preferred stock and two of conve bonds. Were all the issues to be con ed, Avco's common capitalization w be doubled. This would, of course prove its balance sheet but would gr reduce earnings. On a fully diluted l Avco earned $5.05 last year *vs.* $8.96 predilution basis.

Considering Avco's unhappy past perhaps not so surprising that the lysts panicked at the first signs o news. However, this time the situ is very different from that of the Seventies. Of all Avco's eight major nesses, only one, the ill-fated Avco bassy Pictures, is still deeply in the Avco's $178-million-a-year Lyco Stratford division will prosper no m who comes out on top in Iran sin supplies helicopter engines to a m international manufacturers that cludes Bell, France's Aérospatiale, C dair and Italy's Augusta, as well a engines for the U.S. Army's XM1 that Chrysler is going to build. In sumer finance Avco is now a highl spectable number three in an imme profitable business. The Paul Rever Insurance division increased its ear to $26.7 million last year—almost over 1976. This year Avco shoul 19% on stockholders' equity—an a average showing.

Put together this solid corporate s tion with Avco's dismal standing i stock market and you get the pe recipe for a takeover. As a conglom Avco is doubly vulnerable; a tak artist could easily sell off valuable ch of the business and end up ownin rest at a modest cost. Or, look at i way: The would-be acquisitor coul twice the present market price for common and, even allowing for co sion, would get his money back earnings in about five or six years.

Between frequent visits to Avco' flung operations, Jim Kerr presides the $4.6 billion (assets) conglom from a Grecian-pillared mansio Greenwich, Conn. once inhabited b late Henry R. Luce. He gives the de impression he would like to retir not if it means leaving his hard turnaround to be reaped by outsid quisitors. "I should watch my wei he says ruefully, and then digs int ice cream with chocolate sauce serv the corporate dining room. He need bit of solace. What irony if Jim should lose control of Avco after wo so hard and so successfully. ■

Reach. That's what you'll have in Arkansas. We're the hub of America's biggest market: over 70 million people who can be reached in a single day. ARKANSAS

Fast-growing Crawford & Co. makes a pretty penny doing other people's dirty work in the insurance industry.

Ambulance chasers —and proud of it

While mergers annually swallow h dreds of good-size American corp tions, our dynamic economy con ues to produce new businesses tined to grow and take their place the FORBES 500 lists. Which are th up-and-coming companies? What portunities have they grasped to them fast growth? What problem they face? In this new regular feat the editors throw the FORBES spotl on the growing universe of compa that are too big to be called s business and too small to be ca big business.

THERE ARE PLENTY of reasons why C ford & Co. of Atlanta, Ga. *ought* to be of the mangiest dogs in the corp kennel: It operates in an enormo fragmented mom-and-pop industry zero economies of scale; it doesn't superior technology or any other qui perceptible commercial advanta there is almost nothing Crawford ca that the vast majority of its far l corporate customers don't already d themselves; its labor-intensive busi is so unpleasant that its personnel t over rate is appalling. To top it off t is federal and state legislation pendin already on the books, that theoreti should put at least half of its busines the endangered species list.

But this company is nobody's m dog. Debt-free Crawford & Co. did million worth of business last year. S 1974 its return on equity has aver 27.8%—better than Kellogg or Hou Natural Gas, both among the 35 profitable major corporations in the Its internally generated earnings grown an average of 19.7% a year 1974, which is well above the norm

Today founder James H. Crawf family (not active in the busines worth at least $65.3 million and sa has no intention of selling out. And should it? There are no estate prob since the stock is held in four trusts generate over $2 million combine dividends. The value of their holdin commanding 75% of the common doubled more than three times 1974 as Crawford earnings went fro cents to $1.29 a share and its stock ed o-t-c) went from 1⅞ to 16¼.

Crawford is in the decidedly ungla ous business of insurance claims ad ment, one of the great remaining serves of the small businessman wo out of his own home. It's the se largest independent after UAL subsi GAB Business Services, which roughly 35% more volume but earns half as much. Independents like C ford survive on the spillover of cl that insurance companies can't, or wish to, handle themselves. founder Jim Crawford—who died at 1963—would never have believed fielding an army of underpaid, ha

"I find it easy, frankly, to get people to work for me. Maybe I'm just that right combination of sonuvabitch and nice guy that gets it done."

The name that's a leader in calculators and electronic cash registers

KIDDE

Victor Business Products is Kidde's outstanding performer in office products. The reasons? More than 6,000 facilities, for sales and service in every U.S. county and 80 nations. State of the art products like the new 600 series calculator that sets new standards for reliability and performance. And premium features across the line, without premium price tags.

Victor electronic cash registers are also scoring big in the fast-moving world of retailing. With ECR products that range from stand-alone units to expandable systems with data communications capabilities.

These quality products, and hundreds of others from Kidde, have helped produce record sales, net income and earnings per share year after year. And now annual sales are at a rate in excess of $2 billion. To learn more about Kidde, write for our Annual Report. Walter Kidde & Company, Inc., 9 Brighton Road, Clifton, New Jersey 07015. And to find out more about the Victor Business Products, call Victor's toll-free number (800) 447-4700; in Illinois (800) 322-4400.

trained youngsters whose job is to get auto accident victims to accept as little money as possible from their insurance companies could be anywhere near as profitable as Crawford & Co. is today.

"Jim Crawford and my predecessor, Andy Robertson, both had this strange feeling that we were put on earth to serve the needs of the big insurance companies," says jut-jawed Crawford Chairman T. (for Thomas) Gordy Germany, who became chief executive in 1973. "They were completely and totally intimidated by them, perhaps because both men had worked many years for insurance companies before joining Crawford. Crawford and Robertson thought if they raised their rates they wouldn't continue to get the business from the insurance companies. So our rate structure was totally inadequate. It was stupid."

So Germany, who joined the company penniless in 1948 (he was unable to wait a required three years to get into medical school), raised Crawford's prices. As a result, operating income rose from 9% in 1972 to 13.3% in 1978. He says the insurance companies are willing to pay Crawford's increased prices because Crawford adjusters are well educated (Crawford still hires only college graduates, though that may change), because with 711 offices in 50 states, Canada and Puerto Rico they are often closer to the scene of the accident, and mainly because they work harder. They work harder not because they're paid more (today a Crawford adjuster starts at $11,000 if he's lucky) but because their chances for one day making big money are much better than those of an insurance company adjuster.

"You'll work your tail off for the first five or ten years if you think you'll make a big chunk of change down the road," says Germany. "We've got 625 branch managers. Half receive 40% of their branches' profits. This year a substantial percentage of our managers will make over $50,000 and nearly 15% of those will make over $100,000. This is a good carrot."

But it is not an easy carrot to reach. Perhaps 90% of Crawford's adjusters quit within six months. "A lot of people can't say 'No' to little old ladies," Germany explains. "You're dealing with people who are mad. When my man goes to see the parents of some kid you ran over, they're not going to invite him in to have coffee. You're walking into a hornet's nest on almost everything you do.

"My son thinks I'm a slave driver," he goes on, "and I am. You've got to have a certain amount of that in you to make money today. Look: We buy a few cars and some desks. So if you've got four, five or ten people working and you can get them to produce two or three times their salary you're going to make money like a burglar." And he does.

But Gordy Germany has his problems, too. About half of Crawford's revenue is from automobile and casualty insurance claims and Germany concedes the auto side of the business has been declining for five or six years. But he vehemently denies this has to do with the increasing trend to no-fault auto insurance.

"No-fault is like anything else the government does," he says. "It's the biggest screwed up mess that ever came down the pike. Every state has different rules. All it did was further complicate and confuse the claims business, and anything that does that is good for me! The government is now talking about federal standards, but laws are passed by legislators who are, by and large, lawyers. And lawyers are not going to legislate themselves out of business! They'll put loopholes in there like thresholds beyond which no-fault doesn't apply. They're up to $1,000 now. But any lawyer worth his salt who can't come up with $1,000 in alleged expenses or injuries—they ought to take his ticket away from him!"

What *has* hurt Crawford's auto claims business, says Germany, is the increased willingness of insurance companies to handle routine claims by telephone or through the mails instead of the traditional face-to-face confrontation. This has dramatically increased the amount of claims they can handle internally. But he thinks things have bottomed out. "A backlash is coming," he predicts, "because a lot of the claims we're getting now are claims the insurance companies tried to handle by mail or phone three years ago but didn't get the signed release or didn't get the real details and now find themselves with $600,000 lawsuits and no files. *These* are the ones that now will take months and months, and will generate fat, juicy service bills for us. So this is helping us, really."

"A lot of people can't say 'No' to little old ladies. . . . When my man goes to see the parents of some kid you ran over, they're not going to invite him in for coffee. You're walking into a hornet's nest on almost everything."

What helps Crawford even more, however, are the new businesses that Germany has taken the company into—like self-insurance claims adjustment, for example. It now accounts for 15% of Crawford's volume. Major corporations have realized in recent years that it's often cheaper to pay their own casualty losses directly, up to a certain amount, rather than letting the insurance company do it, because that means they have use of the capital for far longer. For a flat fee, Crawford will handle all of the claims for self-insured companies like Great Atlantic & Pacific Tea Co., Weyerhaeuser, Kraft Inc., and even fast-growing mail-order insurance companies like Colonial Penn Group, Inc. For Crawford most of the work is routine and requires more paperwork. "Insurance companies require a helluva lot of detailed reports whereas A&P won't," Germany explains. "A&P will say, 'If it's under $2,500 don't even bother us. Just give us a monthly loss statement.' A&P doesn't want to have to deal with 14 different claims adjusters. They want a standard product. You may have to bid a little tight that first year to get the business but once they get in bed with you it's difficult for them to change and you can renegotiate the fee."

Germany has also taken Crawford into property insurance—now 15% of volume—which Jim Crawford had long resisted. "If a house burned down we would stiff-arm that basically because Crawford had been a casualty adjuster," says Germany. "Well, you don't just sit there and do that forever!"

Perhaps the most promising of Germany's new ventures is in a very different field: rehabilitation services. With workmen's compensation laws in many states now require that insurance companies provide rehabilitation for long-term disability cases. They're only too happy to comply. "An insurance company has to put up $2 million to $3 million in reserves for a young man in his 30s who has become a quadriplegic because of a job-related accident," says Germany. "The only way they can get that money down is for the guy to die—or for him to go back to work. Our people—and they've all got a masters degree in rehabilitation services—will give the man reconditioning process to convince him that he's not a vegetable; he can walk. Then they'll give him a battery of tests to determine what he can do and train him and find a job for him. Some states provide this service but like any governmental agency they screw it up. We charge $35 to $50 an hour, but something happens. That's just 4% of our business now. In five years it ought to do $20 million."

The formula couldn't be simpler: specializing in the dirty work of a major industry and providing both the incentive of rapid advancement and the spur of a frenetic work pace, Crawford & Co. has insured its own survival through sheer perspiration. What Gordy Germany has contributed is the corporate self-respect of adequate pricing, superior profits and a convincing demonstration that the organization can apply its formula successfully to new fields.

A growing tangle of litigation has created major headaches for American insurers. And a golden opportunity for a little company with the right formula and the good management needed to seize it. **—Geoffrey Smith**

The Royal Carriage.
A Father's Day gift for the king who has everything.

This new Crown Royal pourer is a most elegant way to serve the world's finest whisky.

To order yours, simply send $14.95 (plus local and state taxes where applicable) together with your name and address and the name you want imprinted on the Royal Carriage (up to 20 letters).

Mail to: Royal Carriage, Dept. FB1, P.O. Box 6000, Ronks, PA 17572. Allow six weeks for delivery. Offer may be withdrawn without notice.

Pan Am introduces 3 new ways to fly the world.

Some of the people we fly each day can afford the best service in the world.

And some simply want good service for the best prices in the world.

So, for our First Class passengers, flying on our long-range 747SPs, we're offering a brand-new idea in deluxe service. Unique reclining Sleeperette® seats and private table-for-two dining with excellent international cuisine.

For the business traveler, and others paying full fare, most of our 747s offer Clipper® Class, a separate section with free drinks and headsets. Plus a lot more attention on the ground and in the air.

For people taking advantage of our special fares, we have Full Service Economy Class. This offers the same high standard of service Pan Am Economy passengers have always enjoyed.

To bring you these three kinds of service, we have the largest fleet of 747s and 747SPs—the most advanced planes in the skies. With the kind of specialized service that can make all the difference on a long-distance flight.

See your Travel Agent or transportation department. And choose the way you want to fly the world. On Pan Am.

Clipper® Class, the separate section with an empty seat beside you whenever possible.

Pan Am's new 747SP First Class service features exclusive reclining Sleeperette® seats and the finest international cuisine, served individually or at a table-for-two.

Full Service Economy Class. Same great Pan Am service for those taking advantage of special fares.

We fly the world he way the world wants to fly.

PAN AM®

GEOBANKING®

The Manufacturers Hanover Way of Worldwide Banking

Geobanking.
It is money moving and working around the world.

It is the Manufacturers Hanover way of worldwide banking.

Unlike most major international banks, Manufacturers Hanover does not enter a region or a country with a rigid operational philosophy.

Instead, it adopts a way of banking that works best for a particular place at a particular time.

Geobanking.
It is wholly responsive, since it fine-tunes banking to national and regional needs.

It is flexible, admitting swift adjustment to changes in prevailing conditions.

And Geobanking enables Manufacturers Hanover to marshal strengths from the worldwide resources of a $40 billion organization.

MANUFACTURERS HANOVER

gium, heads the brand-new M&A department of Swiss Bank Corp.

For several years FORBES has been following the rising tide of foreign investment in the U.S. (*"The new immigration,"* FORBES, *Nov. 1, 1975*). The tide has continued to rise.

In 1977 in the U.S. the cumulative foreign investment totaled more than $34 billion in real estate and manufacturing plants. Last year it was more than $40 billion. This year it should mount to at least $45 billion, according to the Bureau of Economic Analysis, with a growing proportion—about 40% this year—in direct manufacturing. These data represent only reported or traceable investment. Sources suggest the figures could be up to $3 billion too low.

It's quite a paradox. Europeans and Arabs criticize U.S. economic policy and sell the dollar short. Yet their big investors pour money into the very economy that they say is going to pot. But whatever the contradictions, there is good money to be made by people who are in a position to act as go-betweens for money that wants to emigrate to America.

"Last year we handled $884 million in domestic and foreign investments," says Robert Ellis, a vice president of Coldwell Banker, the huge realty firm. "About $200 million was related to foreign capital. On that, we could make anywhere from 3% to 5% of each deal—around $6 million to $10 million overall."

That's one firm alone. Allowing for really giant deals, where the fees may average less than 1%, it is probable that American finders, bankers, realtors, brokers, accountants and lawyers earned at least $60 million to $100 million last year in handling all this foreign money.

Europeans have traditionally bought land and real property, and a well-developed finders industry long ago formed around the sale of commercial buildings, shopping centers and farms to foreign pension funds and syndicates. So much foreign money has poured into U.S. real estate that returns have dropped from the 12% level of two years back to around 7% today. Like most big investors, the Europeans are more interested in preservation of capital than in return on capital, and the U.S. strikes them as the ultimate haven; deals on some prime property have yielded the foreign investors 5% and less. Americans may be depressed by their economic predicament, but Europeans take a different view. They see a fundamentally conservative political situation, sensible trade unions and several thousand miles of ocean separating us from the Soviet Union.

There is a comforting solidity and passivity in real estate ownership. The foreigners have been slower to buy American businesses.

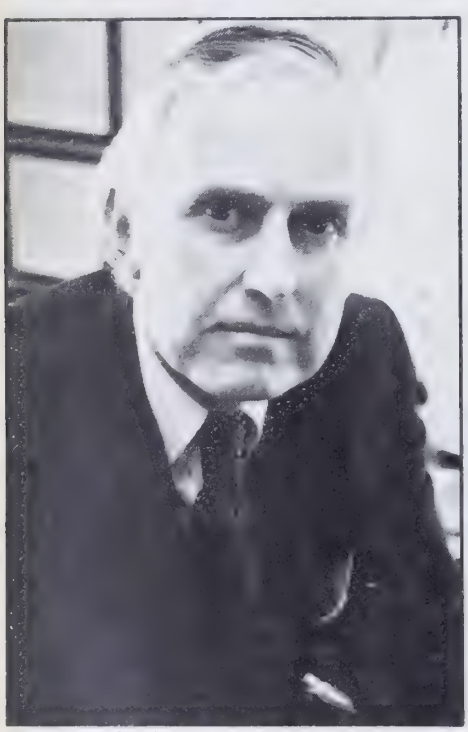
Says Southeast First National's Beahn: "The foreigners are saying, 'We have our real estate, we have our blue chips, now we want operating companies.' " Is the rest of the world taking over the U.S. only because our dollars are cheap? "That's a myth," says John P. Birkelund, chairman of New York's Rothschild-owned investment banker New Court Securities Corp. "The inflow of foreign capital will continue even if the dollar turns strong. Any company that wants to be in the big leagues has to have representation in the U.S. To be successful means to be here."

Another myth is that "the Arabs are buying up America." According to the Department of Commerce, all the citizens of OPEC nations together own less than 1% of foreign direct investment in the U.S., and little of that is in manufacturing. "We just haven't seen that Middle East money," says Coldwell Banker's

Ellis. "It's concentrated in small pockets. They [the Arabs] don't like passive long-term investments."

To date, therefore, the invasion is chiefly European, Canadian, Latin American, in that order, with the Japanese becoming more active slowly and carefully—as is their wont. Japanese capital, however, unlike European capital, is rarely refugee capital. The Japanese see an increasingly protectionist mood in the U.S. and are therefore anxious to protect their stake in the U.S. market by manufacturing here.

The big investment bankers are the beneficiaries of foreign investment on the biggest deals—like Dillon Read, which found Germany's Tengelmann to buy Great Atlantic & Pacific Tea Co. for $77 million. Or Atlantic Capital Corp., Deutschebank's U.S. institutional bank-



New Court's Chairman John Birkelund
"To be successful means to be here."

ing arm, which handled the DB's client, the Bartlesmann Group, in its purchase of 51% of the $100 million-valued Bantam Books. "But the real growing market," says Richard Urfer, Atlantic Capital's senior vice president, "is the $5 million to $50 million deal—in just about all industries." Enter the finders.

Smaller foreign buyers are bewildered and frightened by the barrage of disclosure required in U.S. acquisitions. They need help structuring the deal to get around several disadvantages, including the most important: Foreign companies ordinarily can't acquire with stock, since they aren't SEC registered; almost all sales are for cash, with attendant capital gains problems for the American sellers. Foreigners, too, must learn about the U.S.' ever-growing welter of health, safety and environmental laws. "You have to convince them that to come into our sandbox they have to play by our rules," says Dillon Read's Abram Claude Jr. "God, that's a struggle."

That's where attorneys like Parsky, politically connected to foreigners and adept at tackling the U.S. bureaucracy, come in. He is fighting an Internal Revenue Service proposed regulation that could alter the tax exemption historically given to income received by foreign governments on their U.S. financial investments. The regulations could require foreign governments to pay taxes on their real estate and corporate investments, and thereby lose the exemption they now enjoy on their portfolio investments. Parsky is afraid this could cause foreign governments to rethink buying or holding U.S. bonds and securities.

Parsky and his colleagues had been busy trying to buy New York hotel property for a foreign consortium. They are currently setting up a domestic investment bank for a Middle Eastern group, and buying companies for government investment portfolios. Parsky dislikes the term "finder." Okay. Call it a professional go-between, then. Parsky and Wassner both charge by the hour, with no fees contingent on success, which Wassner claims "is usually cheaper than a finder's fee as a percentage of the deal."

What is an accounting firm like Main Lafrentz doing in the finder business? Most of its M&A work is simply structuring the deal, but the "finder" part comes in as partner Wassner explains: "In many cases, the merger originates with a European client who goes to our international office and asks for help ting started in the U.S. They send hir my office. One European company an advertisement in the *Wall Street J nal* asking for merger candidates and five responses—all from finders." So how, it seems more respectable to h your own accounting firm as your "f er" rather than somebody who calls h self one.

Call them what you will, the betweens work hard for their mo Wassner has been working for ove months on an acquisition of its U.S. tributor by an Irish company. Thinl it, partners in a major accounting bill at $100 an hour for their servi Another transaction was quicker: Hyde-Thomson, chief executive of ain's Ipstock Johnsen Ltd., flew to N York every few mornings for six we on the Concorde, spent several hour Kennedy International Airport worl on the acquisition of Medusa Co Marion Brick Corp., and then flew h to London in time for a late-night sn

Specialists like Parsky and Was have benefited so far because ot haven't moved in yet; Parsky says th are very few other big corporate firms that are pushing as hard in U foreign mergers and acquisitions, bu says Shearman & Sterling is one that

By contrast, foreign investment U.S. real estate is a well-established b ness. One of the five largest land com nies in the U.S., in fact, is the Lehn Group, headquartered in Hamburg. Canadian office started in 1965, and U.S. arm was established in 1971. Le

The White Knight from the East

If there's anything Japanese businessmen hate, it's a fuss. But times change. Last month, Tokyo's Dainippon Ink & Chemicals, Inc. successfully outmaneuvered France's Rhône-Poulenc for Polychrome Corp., a $100 million (sales) lithographic supply company in Yonkers, N.Y. Dainippon did it with a tender fight, the first known instance of one involving a Japanese company in the U.S.

Last September, Rhône-Poulenc announced it was seeking a buyer for its 40% holdings in Polychrome—973,508 shares at $20 a share. DIC came up with the price in January, but Rhône-Poulenc changed its mind.

At that point, most Japanese companies would have politely withdrawn. Not DIC and its U.S. investment banker, Smith Barney, Harris Upham & Co. Polychrome and DIC had already allied themselves through trade and licensing agreements; the two companies negotiated a tender and, with DIC cast in the role of the White Knight of the East, rode into battle. When Rhône-Poulenc tendere at $17.25 a share, Polychrome CE Gregory Halpern refused to sell hi controlling 13%, and DIC topped th French offer at $21. When Rhône-Pou lenc went up to $22, DIC went to $2

That was too much for the French well versed in U.S. takeovers. The sued in state and federal court. A though civil lawsuits are a rare an traumatic experience for a Japanes businessman, DIC again stood fast.

By March, it was all over; Rhôn Poulenc dropped its suit and accepte DIC's final offer of $26. Smith Barne and the principals aren't talking, bu one source close to the deal said th outcome went "against the expecta tions of nine out of ten people yo might have asked a month ago."

By steeling DIC to the ordea Smith Barney stands to gain fees about $625,000—a $125,000 min mum and a 20-cent-a-share "success fee. And the Japanese have prove they can play as tough as anyone else

Among big foreign investors in U.S. industry, the Germans aren't the most numerous. But in total sales they're taking the lead.

Foreign investors in the U.S.— the pace quickens

THE COMBINED SALES of the companies listed below—the "100 largest foreign investments in the U.S."—amount to $113 billion, a staggering 40% increase over the last time this table was published (FORBES, *Nov. 15, 1977*). Less than 17 months ago, FORBES described the pace of foreign investment in American manufacturing as a "discreet amble." Now, it resembles the fury of an Olympic 100-meter dash. Last year alone 358 intended investments from overseas were announced, more than double the total three years ago.

More investors on our list are domiciled in the U.K. and Canada (23 and 22, respectively), but it is West Germany, with an even dozen, that dominates the field. Those 12 companies have a stake in $24 billion worth of U.S. sales. U.S. sales of the U.K.-based investors totaled $21 billion, Canada $13.4 billion.

Why the bulge? In great part it's due to the sheer heft of four new additions to the German column. The Tengelmann Group is spending $78 million to acquire 42% of ailing supermarketer Great Atlantic & Pacific Tea. Thyssen, the heavy industry giant, purchased automotive parts manufacturer Budd. Despite White Motor's 1978 results—a dismal $300,000 profit on revenues of $1.1 billion—M.A.N. is planning to purchase a majority interest in the truck and farm equipment company. And the Friedrich Flick Group, besides adding to its stake in W.R. Grace, picked up over 35% of U.S. Filter.

This year's table introduces 14 new foreign investors, including the government of Kuwait. Among the additional 10 new names listed in the "25 runners-up" are the Canadian brewer, Molson Cos., German chemicals manufacturer Schering and the Pirelli Group, which spent $60 million to buy the electric power cable operations of General Cable.

A word about the method. FORBES rankings are determined by adding up the sales of a foreign investor's American subsidiaries and the sales of any U.S. companies in which that investor owns 5% or more of the common stock.*

Checking procedures included questionnaires to some 1,700 companies. Given the traditional reticence of many foreign investors, the list is necessarily incomplete. **—Thomas Jaffe**

*Ownership of more than 5% of the common stock in a public company must be reported to the Securities & Exchange Commission.

What is NCR up to now?

We're up to more than 4,500 computer systems for manufacturing.

Your home, very likely, contains an article that was tracked by an NCR computer system at the point of manufacture. We can say that because more than 4,500 manufacturing companies now count on NCR computer systems to reduce their costs.

High marks in industrial markets—Our growth in this market is dramatic. NCR has installed more computer systems in commercial and industrial companies in the past five years than during the preceding ten.

In addition, factory data collection systems from NCR's Data Pathing Division, expand NCR's user base among the nation's largest manufacturers, including four of the top ten.

Manufacturers depend on NCR systems—Why are we a leader in manufacturing? Companies such as Beech Aircraft, Bell Helicopter, Caterpillar Tractor Co., Liebherr Construction Machines and Xerox helped put us there.

They depend on NCR systems for management information.

Providing business equipment for almost a century—But helping manufacturers fight rising costs is nothing new for NCR. We've been in the business equipment field for 95 years. Manufacturers look for this kind of experience when they choose an EDP system.

Support where needed and when—And they look for support. NCR supplies it, with 16,000 highly trained field engineers around the world. This global support network is especially important to companies with plans for expansion.

Industry is just one of the fields where NCR is a leader. We're also up to management's most demanding requirements in retailing, financial, commercial, healthcare, education and government markets.

Now you know why NCR is a world leader in general-purpose computers.

NCR

One of these homeowners is thrifty, safety conscious, and a sitting duck for financial disaster.

He doesn't even know it. He thinks he's done his best to protect his home and his possessions. He hasn't.

Many people, like the man on the left, believe they have adequate homeowners insurance. But inflation has been pushing up the value of their homes. They don't update their coverage every year. So when disaster strikes, they are unable to fully recover their losses.

Rising replacement costs are one reason. In the last 10 years the cost of re-siding a home jumped 132%, re-shingling a roof 155%; and repainting a living room 142%.[1] In the last five years alone, the cost of building a new home has increased 63%.[2]

As a group of property and casualty insurance companies, we don't want you to be a sitting duck by not having your insurance provide full protection for your home. Check with your agent to be sure your homeowners policy reflects the amount of additional coverage inflation has made necessary.

Here's what we're doing to help protect you:

- Offering policies with a built-in inflation clause.
- Supporting strict building codes to reduce fire risk.
- Designing new coverages to meet the special insurance needs of older homes.
- Helping to develop safety standards which protect life and property.
- Operating special claims assistance and damage repair programs in times of catastrophe.
- Conducting fire prevention and arson control programs.

Here's what you can do to protect yourself:

- Re-evaluate your home insurance needs annually with your agent.
- Take a higher deductible if you can. It lowers your premiums.
- Install a smoke detector or burglar alarm. Many companies offer premium discounts for such devices.
- Get a receipt or appraisal for all major household items (furniture, antiques, jewelry, art). Duplicate it and keep it and all such records in a safety deposit box away from your home.
- Inventory all your possessions and take photos of each room to document what you have.

Harris technology on the job

n information systems, Harris produces data processing erminals, general-purpose computers, vord processing systems and supervisory control systems.

Harris offers a complete family of high-performance, general-purpose computer systems. Providing virtual memory, data base management and a multitude of anguages for scientific and comrnercial applications.

Harris computer system at Shell Oil's Science and Information Center

Harris technology works worldwide—in communication equipment, information systems, government systems, semiconductors and printing equipment. For information, write: Harris Corporation, Melbourne, Florida 32919.

HARRIS

COMMUNICATION AND INFORMATION PROCESSING

Twenty-five years ago, Dwight D. Eisenhower proposed the Interstate Highway System. Now we need to keep it going.

Dwight D. Eisenhower. General, 34th President.

In the summer of 1954, President Eisenhower set forth "a grand plan" to build the most ambitious engineering and construction project in modern history. The National System for Defense and Highways.

The project's scope was mind boggling. Some 40,000 miles of limited entry freeways would criss-cross the country, linking nearly every city in the continental U.S.

Now the Interstate Highway System is virtually complete.

Its influence on American life has been enormous.

You can now travel coast to coast in a fraction of the time and do it more safely. The System saves an estimated 8,000 lives every year.

Let's keep this great idea going.

The Interstate Highway System has been a tremendous success. But much of it is nearly 20 years old—the practical lifespan for such a road. And needs to be refurbished.

Very simply, the time has come for another "grand plan." Our nation should rebuild its Interstate now.

At ☆LONESTAR, we have the technology and capacity to help this nation build its great projects.

Throughout history, America's important building projects have contributed to the growth and prosperity of our country. ☆LONESTAR believes it's time for more, and we believe we can help.

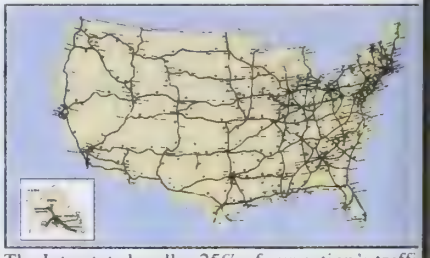
☆LONESTAR is America's leading cement company and the cement industry's leading innovator. For example, ☆LONESTAR technology is

An interstate highway about 60 years ago.

helping the energy producers in the development of new gas and oil fields. By using our highly sophisticated cement products, producers can now drill deeper and more efficiently than ever before.

☆LONESTAR—a thriving builder of America.

Besides being first in cement ☆LONESTAR is one of the biggest and



The Interstate handles 25% of our nation's traffi yet takes up only 1% of its road mileage.

most successful building material suppliers. In lumber, aggregate, and ready-mix concrete for construction In home care centers for the do-it-yourselfer. Lone Star Industries Inc One Greenwich Plaza, Greenwich Conn. 06830. An exciting company A thriving company.

A great American builder.

☆LONESTAR

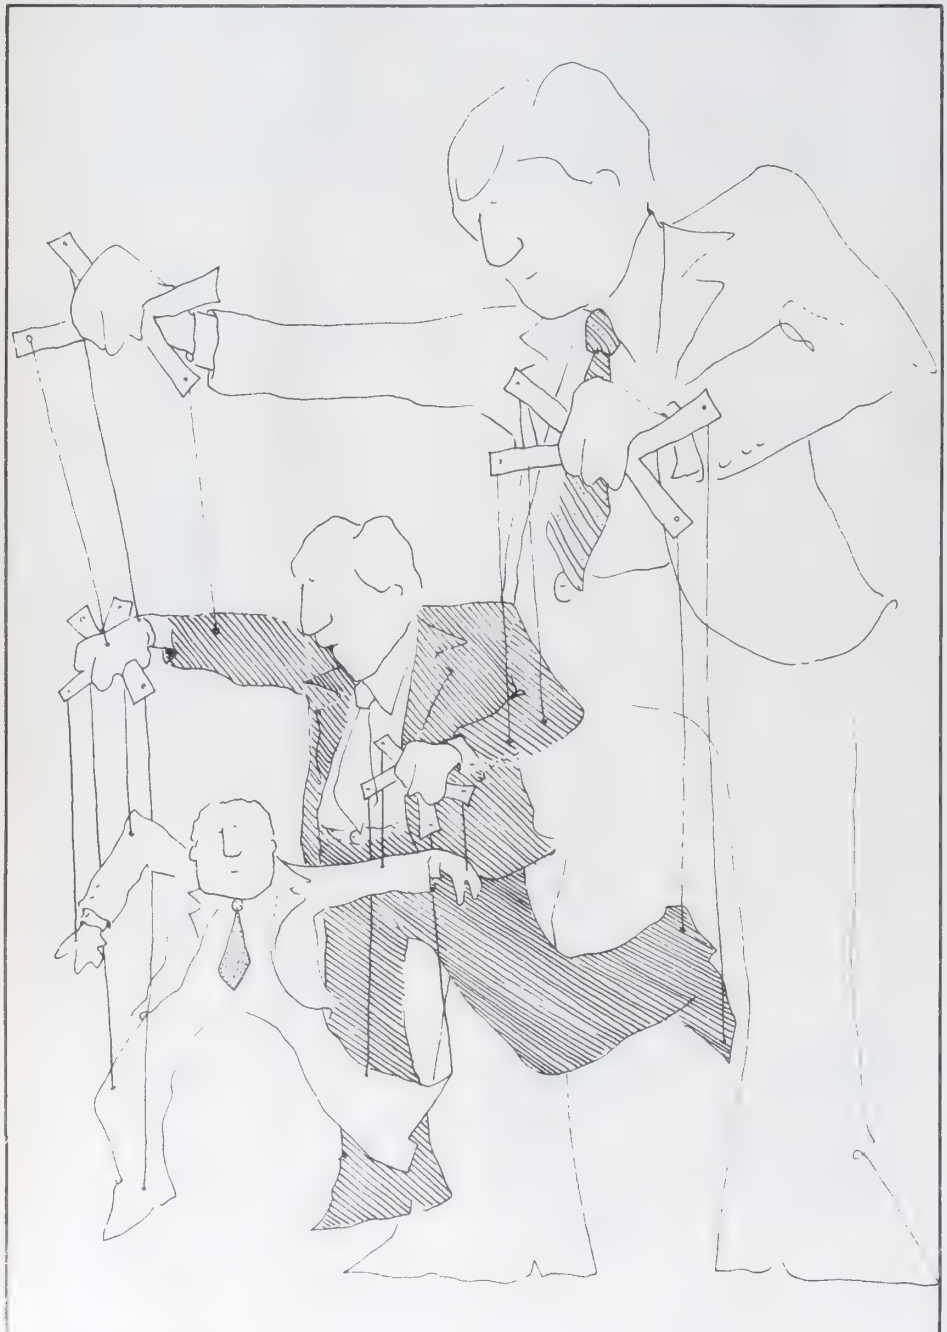
Life insurance companies are the hottest items in the takeover game. Why? Because these outfits have such nice, flexible balance sheets.

It's called creative accounting



By Paul Gibson

HAVE YOU NOTICED how hardly a seems to go by without so body's making a takeover bid an insurance company? What's the rush all about? What do the buyers kn that the rest of us don't—which ma them willing to pay up to 2 times b value for shares that sell in the mar for as little as book?

Since late 1975 close to $2.6 billio cash and stock has changed hands some 50 or so insurance firms have c under new ownership. The flurry of d have ranged from tiny, with Citiz Security Life Insurance Co. paying un $1 million for American Capital Life to last fall's $642 million acquisitio Franklin Life Insurance Co. by cash- American Brands, Inc. Deals worth c to another $1 billion are expected t sealed in the coming months by fi like USLIFE Corp., which in Febru announced its 17th acquisition.

Within recent weeks Life Insura Co. of Georgia has gone on the block be bought by a group of European in tors. A Dutch company has bought th U.S. life insurance companies and a German outfit has bought into one. M Corp. has acquired Great Southern Insurance Co. while Aetna Life & C alty Co. is bidding for American Insurance Co., for whom Lincoln tional Corp. has raised its offer tw Other insurers, including Republic tional Life Insurance Co. and Monum tal Corp., are rumored to be take candidates.

There's plenty more where that c from. Life insurance is a huge indu In the U.S., citizens hold over $2.3 lion of life insurance. That's an ave $32,400 per family, or roughly do their annual disposable income. The lar volume is divided almost evenly tween the stockholder-owned firms the mutuals, but while there are some 141 mutuals (Prudential Insura Co. of America, Metropolitan Life In ance Co., etc.) the stockholder-ow part of the industry is highly fragmen there are at least 1,600 firms—40 Arizona alone. Many are scarcely m than mom-and-pop operations and fe than 250 write annual premiums w $30 million or more. Their numbers geoned in the 1960s when top salesm particularly those working for the mutuals, quit to set up their own com nies. Entry was easy. All you needed $2 million or $3 million for capital u state requirements. In the then-buo stock market it was easy to raise mo by issuing stock. Now these entre neurs are reaching retirement age an willing to be bought out—at a price.

The attractions, if obscure to a man, are crystal clear to financial lysts. A life insurance company is es

f getting to the meeting takes longer than the meeting, there's no place like Hilton.

raveling is part of business. But traveling etween your hotel and your meetings oesn't have to be. Not if you're staying at a ilton. Because Hilton has a knack of being here your business is.

There's a Hilton to serve you in the down- own of most major cities. There are Hiltons the suburbs. And if your business keeps ou out by the airport, you'll appreciate the any Airport Hiltons.

Each conveniently located Hilton offers comfortable rooms, full meeting facilities and famous Hilton Rainbow Service.

So the next time you go on a business trip, remember there are more than 174 Hiltons in the country to help you take care of business.

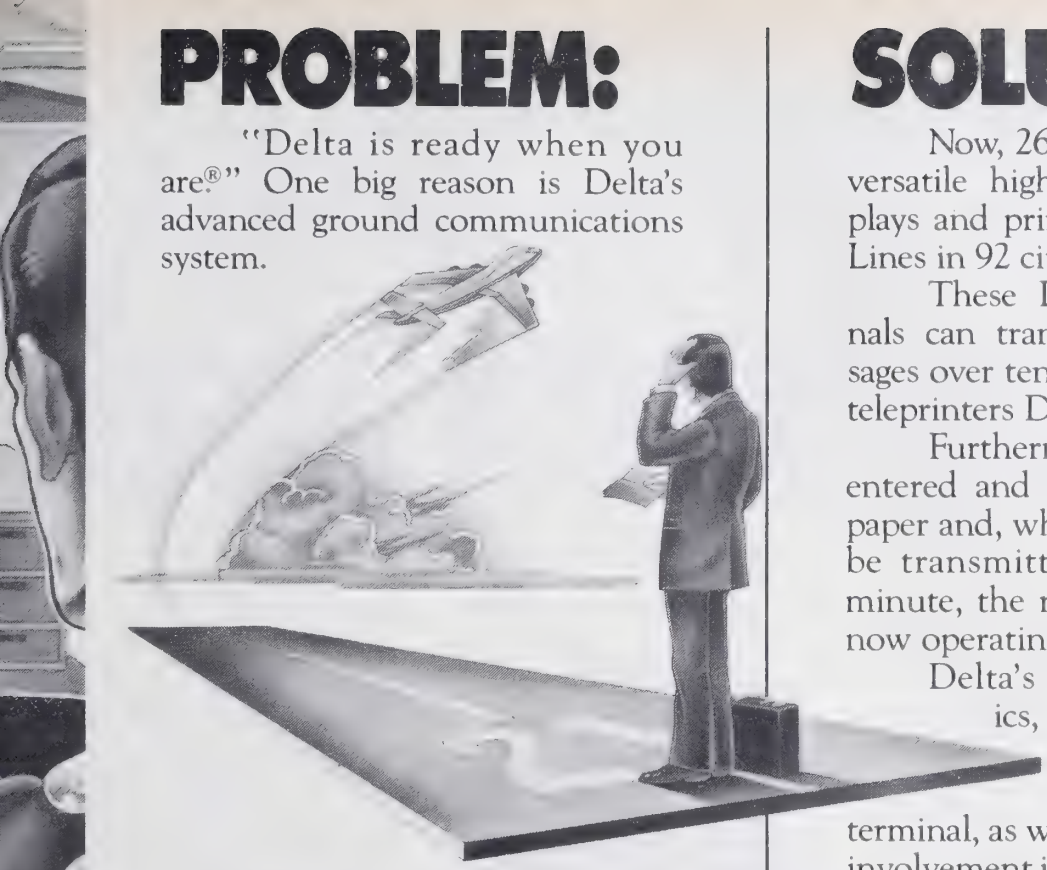
For reservations and information, call your travel agent or your local Hilton Reservation Service.

There's no place like HILTON.

WE HELPED DELTA BREAK THEIR 100 WPM GROUND SPEED BARRIER.

PROBLEM:

"Delta is ready when you are.®" One big reason is Delta's advanced ground communications system.



Arriving data was sometimes received too late.

All Delta's administrative communications are handled by a message switching system. For years, this system depended on punched-tape 100-word-a-minute teleprinters. But increasing traffic, busier holidays, and the need for faster weather reporting began to put a strain on the existing system.

Information about arriving flights has to reach the airport before the plane arrives. And with their traffic increasing, Delta could foresee the need for a new ground communications system.

They called in the Bell System team of airline specialists headed by their Bell National Account Executive.

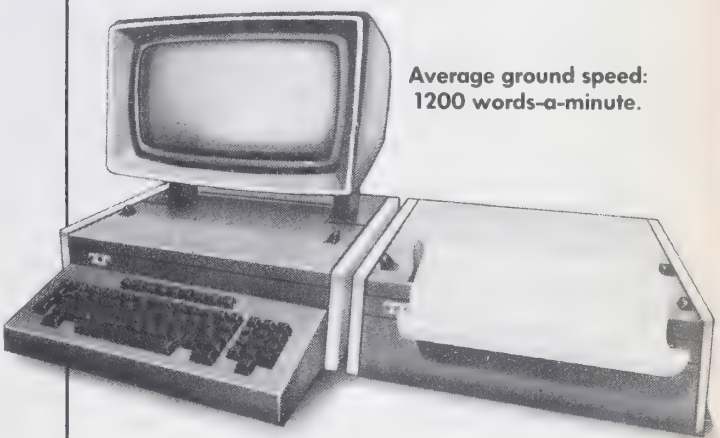
SOLUTION:

Now, 260 of the Bell System's versatile high-speed keyboard displays and printers serve Delta Air Lines in 92 cities.

These Dataspeed® 40 terminals can transmit and print messages over ten times faster than the teleprinters Delta was using.

Furthermore, messages can be entered and edited without using paper and, when ready to send, can be transmitted at 1200 words a minute, the rate at which Delta is now operating.

Delta's dispatchers, mechanics, administrative personnel like the simplicity of the Dataspeed 40 terminal, as well as Bell's continued involvement in their total communications.



Average ground speed: 1200 words-a-minute.

Whatever your business, if you haven't talked systems with your problem-solving Bell Account Executive lately, you're missing something.

The system is the solution.

Bell System

tially a pool of money, belonging to the policyholders but in fact available for the benefit of whoever controls the company. This is not a matter of hanky-panky. It is perfectly legal. Life insurance companies have the great advantage of collecting current dollars to be paid back in greatly depreciated future dollars.

Life companies, most of which trade over-the-counter, no longer sell at the huge mutiples they commanded in the late Fifties and early Sixties, when 35 and more times earnings was common, which is precisely what makes them attractive to companies with takeover in their hearts. Typical P/E ratios around 7.

"Most life companies are candidates for takeover," says Joseph C. Noback, a consulting actuary with Milwaukee's Milliman & Robertson Inc., who advises a number of insurance companies. If there are plenty of sellers there are also plenty of buyers and almost as many reasons for buying. This industry is virtually recession proof—no cyclical downturn since 1960—and is benignly regulated. Most life companies have a huge positive cash flow: On average the industry takes in $2.75 in premiums for each $1 paid in benefits to policyholders. Life companies sit on a $350 billion pool (including health premiums) of investment funds that earn around 7%. The industry's cash flow is around $30 billion after paying death and other benefits, plus taxes and costs on a total income of nearly $98 billion. With $30 billion piling up each year, little wonder the industry is such a tempting acquisition target.

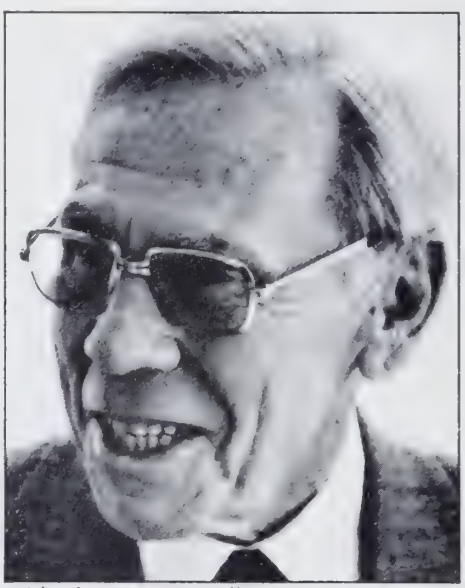
While the industry's growth rate is modest—roughly 3% compounded annually, adjusted for inflation—its earnings flow is consistent and highly predictable. There's no pollution, no energy problem and scant chance your product will become obsolete overnight. Figure it this way: The typical life company makes about 12% on equity after tax.

There are, however, other benefits to owning a life insurance company. By consolidating highly liquid balance sheets with your own, many noninsurance companies greatly improve their overall credit-worthiness.

There's a growing fear even among larger insurance companies that if they don't do some acquiring themselves, they will be acquired. For example, NLT Corp., with a $740 million market value, spent $280 million cash to buy Great Southern. "We had almost $1 billion in capital surplus that was a stone around our neck as far as any compound growth in earnings," explains NLT Chairman Russell L. Wagner, adding that NLT's return on its investment was below the industry average. Translation: If NLT couldn't make better use of its assets, then somebody else might. By investing part of the surplus in another insurance company instead of lending it out, NLT got a better return and simultaneously lessened the temptation its cash hoard offered to would-be acquisitors.

Acquisition is also a relatively inexpensive way for an insurance company to expand. As USLIFE's Chairman Gordon E. Crosby Jr. sees it, the cost of data processing systems plus training and keeping a professional sales force is fast rising beyond the resources of small and even medium-size insurance firms.

U.S. industrial companies are also entering the field again, just as they did in the 1960s when the vogue among conglomerates was to have a captive insurance firm. This time the pacesetter was Continental Group Inc. Its 1977 purchase of Richmond Corp. for $372 million was seen on Wall Street as a neat way to raise money for its diversification program. Since then others have followed suit, including Anderson, Clayton & Co., the food processor; Pullman Inc.,



NLT's Chairman Russell L. Wagner
Threading the labyrinth.

the railcarmaker; a slew of others, including Merrill Lynch & Co., Inc., and The E.F. Hutton Group; and, of course, American Brands. After all, selling life insurance is more socially acceptable today then selling tobacco.

For industrial companies in particular, there are alluring bookkeeping possibilities for managing earnings. "There's currently plenty of leeway in restating net assets as they move from one company to another," says actuary Samuel H. Turner of Tillinghast, Nelson & Warren Inc., the Atlanta, Ga.-based consultants.

Essentially three main areas are affected in the recasting of accounts. The investment portfolio can be changed from book to market value, which nowadays is usually lower. Then deferred acquisition costs—the price paid originally for putting business on the books—are written down to zero, apparently on the theory that they have no marketable value (actually they do). To offset these book losses, reserves set up years earlier policies in force, etc., are dramatic lowered. Most reserves were set figu 4% yield from the portfolio. That m sense in the 1950s and early 1960s. W today's sky-high interest rates, th portfolios yield 7% or more. So dow the reserves. Buried in all the paper th and dozens of other moves produce complex tax transactions that leave but the most skilled accountants baf and even have actuary Turner admitt "This is a never-never land."

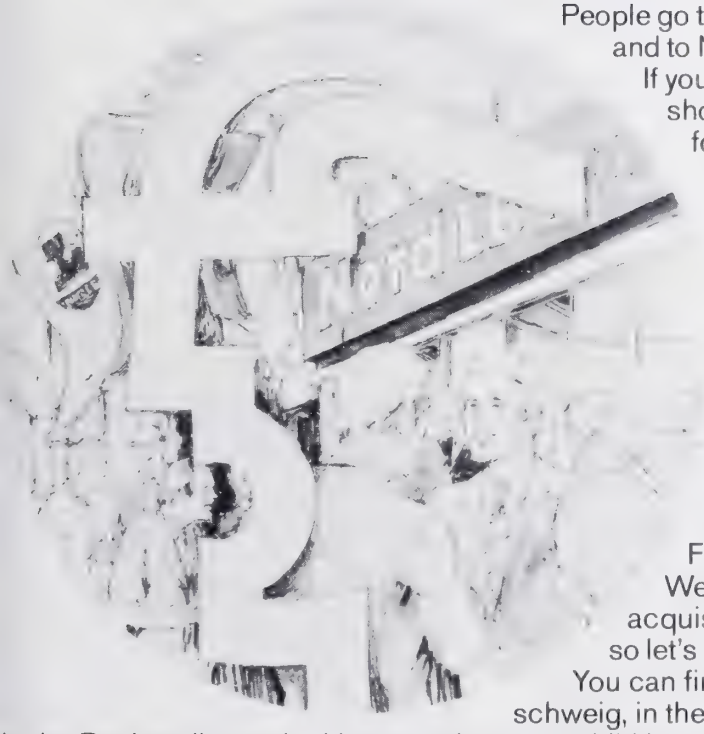
Smith Barney, Harris Upham & Inc. notes one company in 1976 that p $15.9 million cash for a company wh "adjusted" statutory equity more t doubled, to $20 million, just by g through the accounting process.

Explains Turner: "In the absence specific guidelines, you can reprog future earnings. You can take earni reported in the past and report th again in the future. Or you can take ea ings that will have been reported in future and bring them back into curr equity to avoid creating goodwill on y books." Confusing? Certainly. Yet all gal and seemingly blessed by the counting profession. Moves are af however, to bring out a set of guideli to limit some of the accounting artis now taking place. But don't hold y breath. When Continental made its c it paid roughly 1.1 times Richmor book value. By late 1978 most deals w closing at nearly twice book and t spring sellers are asking as much as times book. "Frankly, I think prices getting too high," a Wall Street de maker with a dozen acquisitions to credit told Forbes. Understandably, prefers not to be named.

Where will the boom end (as all boo do)? Probably when prices get so h that the deals no longer make sense. T "fair" price set by the dealmakers is u ally nothing more complex than price paid for the latest deal. Possib too, changes in the laws and regulati will one day shift the balance of adv tages back to the policyholders and aw from the stockholders. But for now, W Street is making hay. For handling NLT-Great Southern merger, for exa ple, Morgan Stanley & Co. Inc. and L man Bros. Kuhn Loeb Inc. collected $ million in fees plus out-of-pocket penses. Everybody, in short, gets m except the policyholder.

In a way it is all a sign of the times— unfortunate one. Businessmen are rel tant to invest in physical assets—pla and equipment. They prefer financial sets. So far as the economy is concern buying insurance companies is not p ductive investment but mere paper-sh fling. But the logic is compelling fr the individual buyer's point of view. Sa USLIFE's Crosby, "You are going to se lot more mergers ahead." ■

Bank Service International



People go to the Hannover Fair to do business across frontiers, and to Nord LB to transact international financial business. If you want to do business successfully in Germany, you should choose the Norddeutsche Landesbank (Nord LB for short) as your partner. For we offer you more than just financial strength and knowhow: we have the contacts with industry and government that you need – all over Germany and specially in Land Lower Saxony. So you too can benefit from our particular advantages of location, for Nord LB's home ground, Hannover, is also the home of the world's most important industrial trade fair.

The Hannover Fair offers an unrivalled entrée into German business circles – and Nord LB is delighted to effect the introductions. With us as partners you have an inside track of many profitable, forward-looking investment opportunities in the Federal German Republic.

We know the rewarding outlets for investment or acquisition finance. Our banking service is international – so let's work together!

You can find us in the city centres of Hannover and Braunschweig, in the service area at Hannover-Langenhagen airport, in the Bankenallee at the Hannover-Laatzen exhibition site, telephone 0511/89 76 48-49, and in the Niedersachsen-Pavillon at Stahlstraße/Mannheimer Straße, telephone 0511/89 26 81.

Meet the newest multinationals: U.S. insurance brokers, with Alexander & Alexander setting a torrid, $600-million-a-year pace.

The megabrokers

By Paul W. Sturm

BESIDES TODAY'S acquisition mania in life insurance, there is an equivalent urge to merge among the big firms that broker a wide range of insurance services for major corporations. Leading this growth parade is New York-based Alexander & Alexander Services. When it went public in 1969 with sales of just over $20 million, A&A was the third-largest broker in a sleepy, fragmented industry. Today, over 140 acquisitions later, it boasts annual revenues of $319 million and profits of $43 million. Net margins—now above 14%—have improved steadily, and A&A is second in size only to longtime leader Marsh & McLennan—expansion unmatched in the corporate world since the wild 1960s.

A&A, however, wasn't alone in its race to blanket the U.S. by buying up local insurance brokerage offices, and that trend has now led overseas. During the past nine months, four big U.S. brokers have announced plans to combine operations with major London-based firms. A close look at these new entities *(see table)* shows that A&A will score the top gains. When the projected pairings are completed, it and Mar soon to be roughly equal in size and itability—will emerge as $600-milli year megabrokers that dwarf com tors like Corroon & Black, Frank B. & Co., Fred S. James & Co. and priv owned Johnson & Higgins.

Why the flurry of transatlantic a ity? "We want a worldwide orga tion," says A&A President John B dus, 51, who just wrapped up a $30 lion merger in Kansas City. "All the houses waited until they reached a tain size before moving internationa

Something else, however, bette plains the timing: Domestic bro bread and butter is commercial pro and casualty business. The top six still place only about one-fourth o annual $40 billion in premiums, so th ample room to increase market sha home—as A&A's Missouri acquis proves. But a substantial chunk o business they bring in goes straig Lloyd's of London. That means hir U.K. broker who, of course, gets a sh the commission. And juicy commis they are. The wholesale nature of Ll brokerage yields operating margins haps half again as good as the 30% brokers already enjoy.

Lloyd's has always protected this itable coziness by limiting the parti tion of foreign brokers. But last sp when the idea for a competitive York insurance exchange was bu *(see* FORBES, *Mar. 19)*, Frank B. Hall permission to acquire Leslie & Godw lackluster U.K. house owned in pa the Rothschild family. Lloyd's leade sensitive to the response further pr tionism could provoke, opened the crack to Hall: Its $50 million pur was approved with only technical tions, and immediately other brokers rushed to wiggle in.

With its hefty chunk of major corp clients, Marsh & McLennan becam choicest would-be partner for any Ll member, and it signed on last fall C.T. Bowring, a diversified financia vices company and the largest U.K. i ance broker. Then came what prov be an opportunity for Alexander & ander. Two top-drawer U.K. brok Sedgwick Forbes and Bland Payne gan their own merger talks, thus pr ing A&A, which gets its mark strength from a broad base of M America clients, with a perfect fit a unusually strong international part soon announced plans to unite wit merged British companies.

Tight Lloyd's restrictions still mine the nature of these combina and both the A&A and Marsh deal be poolings of business instead of ou acquisitions. But the new operating ties should function effectively as after shareholders approve bina holding companies along the lines o

Who's the biggest of them all?

Here are the combined 1978 results of U.S. and U.K. insurance brokers that have pooled or merged their activities. The new links, all to be implemented formally by the end of this year, will change the industry's pecking order dramatically. Though longtime leader Marsh & McLennan is still on top in terms of revenue, fast-rising Alexander & Alexander now makes more money.

tation by landing the Mobil account, and he views the future with a salesman's optimism. "We are going to grow regularly between 12% and 40% a year. Over the past couple of years, we've been at the top of that range. Now, coming into a down cycle, we'll be at the lower end."

During the relative slowdown in insurance premium growth that lies ahead, the fast-paced brokers can emphasize diversification. Already, A&A and other big insurance brokers earn significant profits from related activities like actuarial services and benefits consulting; and Marsh & McLennan's Putnam Group subsidiary brings in $24 million a year in securities management revenues—a figure that will soon expand with the acquisition of F. Eberstadt & Co. A&A, meanwhile, is carving out a niche by selling its expertise in property tax planning.

"A company growing as fast as we are simply can't slow down," concludes Bogardus. "We're moving toward being a full-service financial institution"—meaning, of course, that A&A will soon be up against giants like American Express, Citicorp and Merrill Lynch. Such aggressive outfits—not small-town mom-and-pop insurance agencies—will then be A&A's toughest competitors. Its new international connections make it that much readier to take them on. ■

"That's a Butler building?"

Yes, that is a Butler building.
In fact, you probably see beautiful Butler buildings all the time and don't know it.
Because Butler buildings offer total design flexibility and can be as tasteful and dramatic as any building.

Yet, they also give you all the important time and money savings of systems construction.
To learn more about energy-saving Butler buildings, call the local independent contractor who can build one for you. See "Butler Mfg. Co. Builder" in the White Pages. Or write Butler Mfg. Co., Dept. B-397, BMA Tower, Kansas City, Mo. 64141.

BUTLER

With typically Gallic realism, France is pushing solar energy with indirect subsidies and rather modest expectations.

Harnessing the sun

By Lawrence Minard

A LITTLE OVER A YEAR AGO, Henry Durand's life seemed secure. A Ph.D. in nuclear physics from the University of Paris. Another from Oxford. A distinguished research career, first at prestigious Saint-Gobain-Pont-à-Mousson (owner of CertainTeed) and more recently at the Netherlands' giant Philips, where he oversaw 500 researchers. A striking wife and young son.

Then the phone rang.

"It was Sunday," recalls the elegantly attired Durand, now 51, in his bright, tastefully modern Paris office. "Someone from the Elysée [France's White House] told me [President Valéry] Giscard d'Estaing wanted someone from private industry, me, to head the government's solar energy agency, Commissariat à l'Energie Solaire [COMES]. But this was before the elections, you see, and everyone was saying the Socialists and Communists would win. I was afraid I'd be out of a job before I'd begun."

Why chance it? On the other hand, how do you say "No" to le président de la république? He decided to hedge his bets. With a guaranteed lifetime professorship at the University of Paris to fall back upon, Durand gambled. Giscard d'Estaing won a close election and handed Durand a chance to cover himself with glory—as the architect of one of the world's greatest solar industry programs.

As president of COMES, Durand directly or indirectly controls most of the $70 million that French government agencies and petroleum and utilities companies spend annually for solar research and development. This sounds like little against the U.S.' $718-million-a-year solar budget, but Durand claims his country's effort produces more, dollar for dollar, because of France's long experience in the field and well-coordinated programs among different agencies. He expects France's sales of solar heating equipment to increase fivefold in the next six years, to $150 million annually, thanks largely to an ambitious new French government subsidy program.

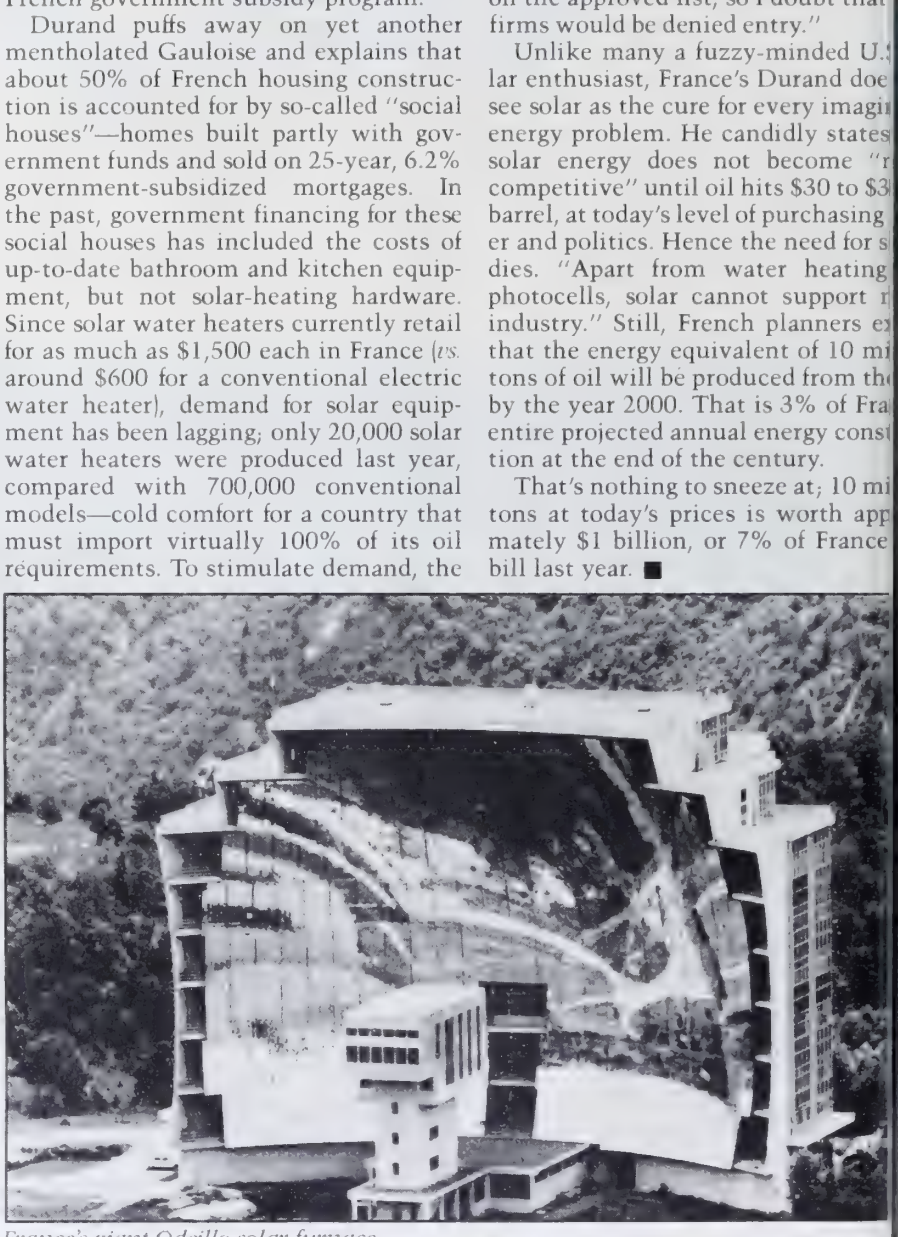
Durand puffs away on yet another mentholated Gauloise and explains that about 50% of French housing construction is accounted for by so-called "social houses"—homes built partly with government funds and sold on 25-year, 6.2% government-subsidized mortgages. In the past, government financing for these social houses has included the costs of up-to-date bathroom and kitchen equipment, but not solar-heating hardware. Since solar water heaters currently retail for as much as $1,500 each in France (*vs.* around $600 for a conventional electric water heater), demand for solar equipment has been lagging; only 20,000 solar water heaters were produced last year, compared with 700,000 conventional models—cold comfort for a country that must import virtually 100% of its oil requirements. To stimulate demand, the national assembly voted last Februa raise the social-house support ceili include solar heaters along with m bathrooms and kitchens—an ind means of subsidizing the industry.

"So, whereas our new houses have only with refrigerators and ranges," Durand, "we hope they will now with solar water heating and perhaps solar space heating." Durand adds th new legislation "amounts to an ind solar subsidy of about 50%"—so high the government expects solar he equipment installations to hit 50 units by 1985.

Will American solar equipment m be allowed to compete in what may amount to a $150-million-a-year ma Durand replies that none of the 28 m currently approved by the French go ment under the subsidy program is A can. Then he quickly continues: there are South African and Israeli on the approved list, so I doubt that firms would be denied entry."

Unlike many a fuzzy-minded U. lar enthusiast, France's Durand doe see solar as the cure for every imagi energy problem. He candidly states solar energy does not become "r competitive" until oil hits $30 to $3 barrel, at today's level of purchasing er and politics. Hence the need for s dies. "Apart from water heating photocells, solar cannot support industry." Still, French planners e that the energy equivalent of 10 mi tons of oil will be produced from th by the year 2000. That is 3% of Fra entire projected annual energy cons tion at the end of the century.

That's nothing to sneeze at; 10 mi tons at today's prices is worth app mately $1 billion, or 7% of France bill last year. ■



France's giant Odeillo solar furnace
Planners foresee miniversions in 500,000 French homes.

Securities Processing.

In 1970, Wells Fargo began clearing securities directly on both coasts.

For the first time, it was possible to trade at both ends of the continent through one bank, and stretch the trading day by six hours.

A lot of things have changed since 1970.

But none of the above.

Pioneering. Wells Fargo Bank.

Market analysts agree almost completely about some of the stocks below—and disagree wildly about the others.

Statistical Spotlight

"Sure things" versus dark horses

IN HORSE RACING it's the differences of opinion that make for big winners—or big losers. The same holds for the stock market. Stocks about whose future earnings Wall Street has the sharpest disagreement tend to be volatile, while the stocks about which institutional analysts and investors agree can be correspondingly tamer. The corollary to that proposition is that the best profit opportunities exist where uncertainty lurks. Will steel imports decline? Will copper prices remain high? Will the oil companies be able to pass on higher crude prices? Will turnaround candidates Schlitz, Occidental Petroleum and kins-Johnson actually turn around? analysts aren't sure. If you think *yo* you have a nice profit opportunity.

The amazing thing about the co sus list below is the almost loc agreement among market analysts some of the most complex Ame corporations in terms of their pr lines—companies like Transam General Electric, Eltra and Consoli Foods. Given these companies' div of product, all the consensus can m that the company has managed to lish a widespread certainty about ture earnings pattern. Food comp also seemed more predictable. Cl creating an image of orderly ea growth pays off in teaching the an to groupthink.

But if you are looking for excitin ratios and a chance for real gains, l the anticonsensus side.■

Consensus

There is little disagreement among analysts about the earnings prospects of the 30 companies below despite the fact that many have product lines that are as scrambled as eggs in an omelet.

Does an organization like this exist in your city?

No? The people of Tampa, Florida thought "No" too. Yet a ring just like this flourished there for four years.

Until a crack arson strike force closed in and convicted 19 of its "employees." In two years, Tampa arson fires dropped

47%, which gives you some idea how much damage arson for profit can do.

Can you fight it as successfully as Tampa did? You can. Finally, the laws and tools are in place:

For the first time, arson is classified as a "Part I" crime by the FBI—on a level with murder and forcible rape.[1] (And about time—arson cost over a billion dollars and 700 lives in 1977!)[2]

For the first time, *local* prosecutors are working with federal officials, using mail-fraud and racketeering statutes to bring sophisticated law enforcement forces to bear on this crime.[3]

And Ætna, together with other insurance companies, is marshalling its resources: gathering information, planning anti-arson seminars, encouraging arson control programs and advocating tougher laws to increase the prosecution of arsonists.[4]

Arson is a crime we all have to pay for. Your help is needed to stop it. Don't underestimate your own influence. Use it, as we are trying to use ours.

Ætna wants insurance to be affordable.

[1] One result of this re-classiation—passed by Congress in ctober of last year—is that the BI will publish statistics on the cidence of arson in every major y. This means increased public rutiny—and public outrage—at e rate of arson in this country, and *that* is an important precondition for action!

[2] These shocking statistics are from a 1977 study by the National Fire Protection Association. Of course, arson-for-profit is only part of the problem. Vandalism, arson-for-revenge and arson to cover up *another* crime also contribute to this loss.

[3] A little-known federal law with the name of "RICO" (short for the "Racketeering Influenced and Corrupt Organizations Act of 1970") gives the justice system the tools to charge, indict and convict members of arson conspiracies like the Tampa-based organization.

[4] To coordinate industry efforts with government agencies and neighborhood groups, the Insurance All-Industry Committee for Arson Control was established in 1978.

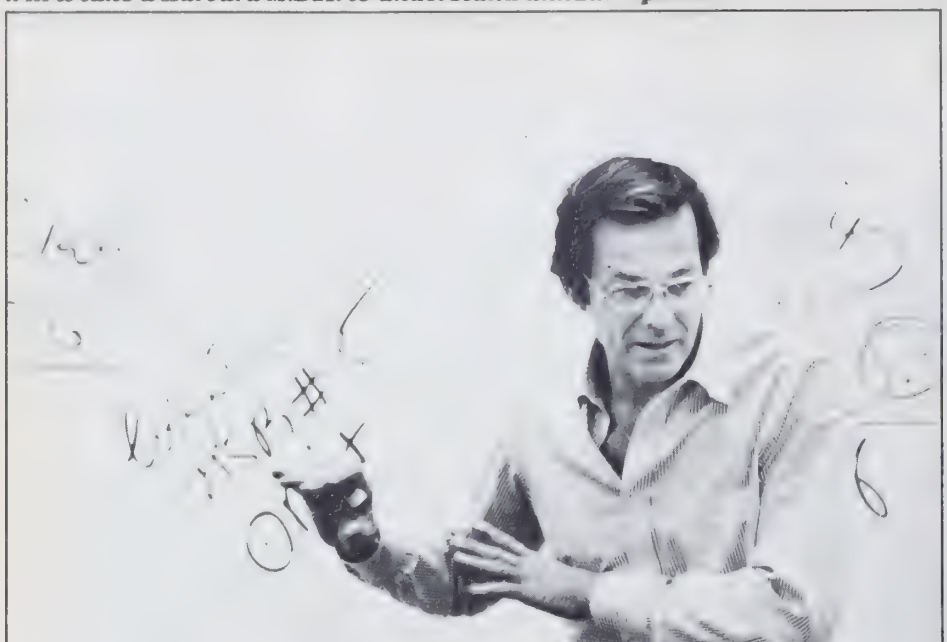
Professor David F. Hawkins
Will it take a Harvard M.B.A. to understand annual reports?



Chronic inflation has rendered corporate earnings figures almost meaningless, and experts' remedies may make things rougher.

Is the cure worse than the disease?

By Lawrence Minard

SUPPOSE YOU BOUGHT A HOUSE for $25,000 in 1955 and you rented it out in 1978 at a sum that cleared you $5,000 after expenses. What kind of a return are you getting on your investment—20%? Not so fast. There's another factor. That house could now be sold for $75,000, the cost to buy another one just like it. So, maybe your return is only 6.7%—$5,000 on $75,000.

Does it make any difference which figure you use? Maybe not with a house, where current return is relatively unimportant. But if you are running a business it makes a very big difference whether you figure your return is 20% or 6.7%. At 20% you'd be delighted to invest more money. At 6.7% you'd be better off with the interest on Treasury bills.

Which brings us to the subject of inflation accounting. Inflation accounting is a lot more complicated than our house-renting example, but the house will serve by way of illustration.

If you use the original cost of the house to figure your return you are using *historical-cost accounting.* That's what business uses today. It values your assets at what they originally cost, no matter how much more valuable they may have become after years of inflation.

We say it is much more complicated in business, partly because in our example we did not allow for depreciation. Suppose Internal Revenue agreed that two-thirds the value of your house was depreciable over 40 years. At that rate your depreciation would be $416 a year under historical-cost accounting. But u current-value accounting, depreci would be three times as great—$1, Now you have an even bigger gap tween the two ways of figuring you turn. Under historical-cost accoun your net return is $4,584—18.3%. U current-cost accounting your profit i duced to $3,750—5.0%. Quite a di ence! There are those who would a that the figures based on historic cos meaningless in a period of chronic i tion. So, you are kidding yourself if think you are earning 18.3% on investment in that house. You are r earning only 5.0%.

Most of the experts now agree publicly owned corporations should plement their historical-cost accoun with some inflation-adjusted accoun Trouble is, there are several ways t this. The official accounting rulema body, the Financial Accounting S dards Board, wants business to adopt rent-cost accounting. To put it sim the FASB would require you to rev your house to $75,000 (its current v and depreciate it accordingly.

Since 1975 the Securities & Exch Commission has required a more so ticated supplementary disclosure proach: replacement-cost accountin assumes that if you were to repla steel mill or a shoe factory, you w not simply duplicate the old one. would use different machinery, a d ent kind of building. The new fa would cost a lot more than the old tory, but it might also be more effic and so relatively less expensive in long run.

Complicated? It sure is. It leaves s observers—including us—wondering might not be better to leave well en alone and stick with the present, ad tedly inadequate methods of histor cost accounting.

To get an authoritative opinion went up to Cambridge, Mass. to i view David F. Hawkins, Harvard B ness School's bright, articulate prof of finance and accounting. Said H kins: "The SEC's concept assum company would replace with *better* a than the ones it has now, while the F assumes you'd replace, say, one ou date chemical plant with another ou date chemical plant.

"Apparently the FASB feels inve need to know the current value of a currently owned. See, what they're r doing is moving us through the door to an accounting concept diff from the one they've stated. The said they're using current-cost acc ing. But in fact they're moving u current-*value* accounting. In this att

THE TRUCK STOPS HERE

. . . and when it does, customers can be sure they're being charged uniform, equitable rates for the services they receive.

How do shippers know the rates are fair? Simple—the rates are public. That's right. Public. It's no secret.

There are, in fact, about 60 rate bureaus in the United States. It's their job to keep track of the rates on the hundreds of thousands of commodities traveling between some 125,000 points in this country. And to protect the motor carrier customers by preventing rates from being used unfairly to the benefit of some and the detriment of others.

If these bureaus were dismantled, a move favored by critics of a regulated trucking industry, confusion and rate abuse would certainly follow.

Rate bureaus are neither mysterious nor self-serving. Rates for regulated carriers are not arrived at in secret, in the back of some smoke-filled room. Hearings carried on by rate bureaus are open to the public, and the basic supporting documents and testimonies are available for public inspection. The member carriers do vote privately on each proposal. That way their views won't be held against them, inhibiting fair and impartial consideration.

And the rate bureaus aren't all-powerful, either. Every rate change recommended through the bureau system must be authorized by the Interstate Commerce Commission. The ICC does not authorize a change until the customers and the public have had an opportunity to object. When a rate is contested, the total burden of proof for the change falls upon the rate bureaus. If the bureaus can't satisfy the ICC, the change isn't authorized.

Let's look at some of these changes. In one bureau, for example—the Middle Atlantic—for the most recent period in which figures are available, *fully 87 percent* of all rate-change proposals submitted were *reductions*. Of those, 56 percent were reductions in truckload rates; 31 percent were reductions in less-than-truckload rates. The remaining 13 percent were primarily technical adjustments, most of which were *also* reductions.

Surprised? Wait . . . there's more. Collective rate making is *voluntary*. Carriers that feel they can justify different rates from those recommended by the rate bureaus and approved by the ICC are free to file separately with the ICC. And a bureau cannot protest this filing.

In the region covered by the Middle Atlantic Bureau, during the same period as above, there were 1,138 independent actions—almost half as many rate changes as were processed through the Bureau.

Instead of stifling competition and rate reductions, then, the collective rate-making structure actually encourages them. Of course, there are increases as well, enabling carriers to meet rising expenses.

But the important point is that the rate bureaus are working to protect the customer and the public. Without the bureaus, the freight transportation system would break down—fragmented into thousands of individual companies totally lacking in the coordination necessary for a healthy economy.

Rate bureaus are the cornerstone of today's trucking industry. Both Congress and the U.S. Supreme Court have recognized that fact, and it remains true today. For efficiency, stability, openness and equality of treatment—the rate bureau system is the answer.

Today's Trucking Industry...It Works for America

FORBES 5th ANNUAL ARABIC ISSUE

A VITAL COMMUNICATIONS BRIDGE BETWEEN AMERICA AND THE ARAB WORLD

Presenting an important opportunity to reach the Arab market—FORBES' 5th Annual Arabic Issue, to be published in September, 1979.

This special issue is printed entirely in Arabic and written to the specific interests of executives at the center of power and influence in the Middle East . . . those leaders of the Arab world who need and desire to know more about American business and how it operates.

The Arabic issue will be distributed to a carefully-researched list of over 20,000 businessmen, financiers, journalists, government and educational leaders throughout the Middle East.

It is an issue the Arab business community greatly anticipates as the single most important reference source on American business written in Arabic. As such, the issue becomes a powerful communications vehicle for your company's advertising message.

Plan now to advertise in the Annual Arabic issue of FORBES, your most important advertising opportunity to reach the influentials in the Arabic-speaking world.

Our readers comment on last year's issue:

"The publication is of great value and is worthy of our appreciation, especially the section containing the Forbes Directory." (SHAIKH) SALEH MUHAMMED JAMAL, *Director, Chamber of Commerce, Saudi Arabia*

"We are most grateful for the Arabic issue which was very beneficial for us in several fields. We are fully confident this magazine will lead us to expand the volume of our busines activities in the future." G.A. GHANEM, *General Trade Representatives, Damascus, Syria*

"I thought the original idea of an Arabic issue was a great one, and it is apparent that every year the issue gets better." GERALD H. TRAUTMAN, *Chairman, The Greyhound Corporation*

"Our Middle East people have looked at the Arabic issue and rate this as 'carefully accurate and well done.' They particularly noted that your issue is quite unlike any Arab business journal of which they are aware." C.C. GARVIN, JR. *Chairman, Exxon Corporation*

dividends—to *cash*, the one thing accountants can't screw up. True earnings? Who *knows* what the hell they are! And even so, cash-flow analysis these days takes a good deal of sophistication, plus intimate knowledge of the company."

We asked Hawkins for an example of how an unsophisticated investor might be misled by the FASB's new proposed rules. He pointed to the inflation-accounting income statement entry, "Inflation Gain (or Loss) on Net Monetary Items." The FASB instructs companies with an excess of monetary assets (example: cash on hand) over monetary liabilities (example: any debt) to reduce its net monetary assets by the general-price-level increase; conversely, companies gain from having more monetary liabilities than monetary assets. This seems to make sense: Assuming 10% inflation, a $100 bank account is worth only $90 at year-end, while a $100 debt requires only $90 in year-beginning dollars to be paid off at year-end. However, chronically debt-ridden public utilities, say, will look like heroes on their net monetary items. Hawkins worries that unsophisticated investors (and rate regulators) may get taken in by this kind of silly money:

"With huge debt—monetary liabilities—utilities will show huge monetary gains. But the utility can't pay that gain out in dividends. It can't pay down its debt. It can't buy new plant and equipment. So what does this number across from 'Inflation Gain on Net Monetary Items' *mean* to an investor? Very damn little, I'd say."

Conversely with banks: They are almost certain to report huge net monetary assets, and so huge "losses." But pity the investor who takes such losses as a signal to dump bank stocks:

"A sophisticated investor wouldn't necessarily dump bank stocks. Bankers aren't stupid. They know they'll lose purchasing power on the principal they have invested in a loan, but that's why interest rates are so high—to *recover* that lost purchasing power. So with higher interest rates, the bank will be getting more operating income—and that's *real cash* that they can do something with.

The FASB's proposed inflation-accounting rules will increase depreciation charges for most affected companies, and so reduce their net income figures. This squeeze worries Hawkins:

"The unsophisticated guy will look at the inflation-adjusted earnings number, which will probably be negative, and say, 'Oh, this is awful!' and be scared away. But the sophisticated guy will understand that the stock market values companies on a *relative* basis—as the negative numbers change, the stock moves up or down. . . . Also, the sophisticate will be able to discern the relative change in the company's dividend-paying ability from the changes in the earnings numbers. And remember, the FASB assumes old plant will be replaced with old plant. The sophisticated analyst will know goddamned well management will replace old with modern, and that the FASB's depreciation charge is a phony number."

As an example of the potential confusion to investors of the FASB's draft, consider Hawkins' estimates of U.S. Steel's 1979 inflation-adjusted earnings:

"U.S. Steel's 1979 earnings might look like this: On a historical-cost basis, at least $4 per share; on a price-level-adjusted basis, a $2.92 per-share loss, before monetary gains; and on a current-cost-adjusted basis, it could be something like a $2.51-per-share loss. But you know what my holding gain estimate for the company is? Between $500 million and $700 million—a minimum of $5.80 per share! And I estimate the monetary gain will be about $190 million ($2.21 per share). So when you include the monetary gain and the holding gain, that negative earnings number turns into a very positive number."

Remember doing our own income taxes? The tax rules are so complex today that even the financially sophisticated among us must fall back on tax accountants. Will this also happen to annual reports and other corporate information?

So what will U.S. Steel earn? Minus $2.92 a share? Plus $4 a share? Zero per share? Getting back to public utilities for a moment, can't you just imagine the fun that unsympathetic rate commissioners will have when the utilities complain their profits are too low?

Hawkins himself would have preferred an even more complicated accounting scheme than that proposed in the FASB's draft. His ideal solution would have used the SEC's replacement-cost method to calculate depreciation and cost-of-goods-sold, and price-level accounting for all other business costs and revenues. And Hawkins says he would have omitted holding gains and losses from assets.

Hawkins insists his two-approaches-in-one scheme would be superior, and makes a good case:

"If you use the SEC concept of current cost for your depreciation and cost-of-goods-sold numbers, then you are reflecting what management thinks they'd spend to replace their assets. Now *that* is cash that management probably won't disburse to shareholders as dividends. On the other hand, management has been creating purchasing power during the year. I'm trying to capture how well management has done in bringing *in* purchasing power during the year versus the *distribution* of purchasing power during the year. That purchasing power at end is probably the best indicat what the company will have availal pay out over the near future."

Hawkins claims he suggested hi proach to the FASB back in 1974, ously to no avail. "The FASB is tre a thin line between going toward complicated accounting concepts are correct in theory but difficult to in practice, and what it can get peo go along with. It feels that 80% t perfection is better than no perfecti all, and that you can get 80% of th by making it simpler for people."

Hawkins and most accounting ers believe that the FASB's draft w implemented more or less as pro the draft's chances are improving now because the board is assidu gathering businessmen's thought how to polish and best implemen draft. FASB study groups for such liarly affected industries as bankin petroleum have been created. And is inflation itself, making the histo cost numbers daily less meaningful

But, warns Hawkins: "The sop cates will take these newly publ numbers and manipulate them in phisticated analyses; the major in tional investors will get the advice and respond first. The unsophisti I'm afraid, will get left behind." For who believe the market is efficien that inflation-corrected financial ments won't mean anything an Hawkins has this pithy wisdom:

"It's not fully efficient. If you inside information you have an a tage, and there are two kinds of i information: the kind you go to ja and superior analysis, which give superior insight into the value of an ty. The upshot is that this new infl adjusted information will be very to investors who understand it, ca nipulate it and can relate it to e valuation. But that's a small popul of investors. Thus, this inflation-a ment information will just force investors to become even more r on the select few outstanding, c tent advisers than they already are.

Still, inflation is a fact of life an accountants are under pressure to nize it. But remember the days many of us did our own income The tax rules are so complex toda even the financially sophisticated a us must fall back on tax accountan the same thing going to happen to a reports and other corporate informa Will we all have to pay experts to pret them for us? That will be a sa for the individual investor and f called People's Capitalism.

Professor Hawkins agreed. His p crack to us was: "Don't you know FASB stands for? Financial Assuran Scholars and Bookkeepers." ■

"When I read Time, I'm thinking about the world. When I read Playboy, I'm thinking about me."

—John Springer, Architect

If you advertise to men, e implication in that state- ent is extremely significant.

Because it suggests that hn Springer, a young man ith a lust for the good things e offers and the means to get em, may be more receptive your advertising when he's ading PLAYBOY than he is hen he's reading Time. That 's more in the mood to spond to your advertising in AYBOY.

And if that's the case, it comes even more significant. ar more. Because in PLAYBOY, ou reach the same kind of en who read Time—men like hn Springer, who already rns close to $40,000 a year at s young age—only a lot more them. And in PLAYBOY, you ach them for a lot less than u do in Time. $22,500 less for four-color page.

Different functions. A different frame of mind.

John Springer had some other teresting things to say about read- g Time and reading PLAYBOY. We'd e to quote him verbatim:

"I read Time for an overview of e business and political scenes. me is like an office memo. It's for ick information. I read it mostly on anes. For a recap. Time is like a wspaper to me. If you miss it, at's it.

"When I read PLAYBOY, I'm in a tally different frame of mind. I'm on different thought wave. I'm in a ore relaxed atmosphere. I'm read- g it for my pleasure. PLAYBOY is ore about me. How I live, what I . There's more information in PLAYBOY. PLAYBOY is a resource for me. Also, PLAYBOY tends to stick around. I keep back issues and go back to them.

"The photographs, the articles, the ads, they all make up part of my experience in reading PLAYBOY. They're all more appropriate for the things that I do that are outside my business life. Cars, skiing, jogging, stereo systems. I do read about them in more detail in PLAYBOY."

Those are just one man's feelings about the different reasons he reads two magazines and the different functions each magazine fulfills for him.

Of course, we don't presume to draw any conclusions from them.

The same kind of men who read Time and Newsweek read Playboy. Only a lot more of them read Playboy.

But we do have some facts that may help you draw your own about where your advertising belongs.

Playboy men. One of the most powerful buying forces you can find in any one place at any one time anywhere.

More than 14 million men read PLAYBOY every month. They buy 4 of every 10 pieces of stereo equipment men buy, 1 of every 3 imported cars men buy, 3 of every 10 bottles of scotch, gin, vodka, rum and wine men buy, 1 of every 3 expensive cameras men buy, $34 billion worth of life insurance last year alone. More PLAYBOY men own stock than Time men. PLAYBOY men buy more new cars than Newsweek men, more skis than Sports Illustrated men.

It's that way in virtually every product category and compared to every newsweekly, sportsweekly or men's magazine.

PLAYBOY is the perfect editorial setting for selling.

Which brings us to our own conclusion.

In PLAYBOY, you can reach a lot more of the same kind of men you reach in Time, for a lot less money.

And sell them a lot more.

The Playboy reader. His lust is for life.

ENERGY

Connecticut has it. Power to spare, now and for years to come.

Energy availability is a critical factor in any locational decision. And there's plenty of it in Connecticut. We haven't had an energy-related production curtailment or shut-down in more than 300 years. We intend to keep things that way.

After all, you can't make a profit if your lights go out.

To find out more about Connecticut's locational advantages, contact, in confidence, Commissioner Ed Stockton, Connecticut Department of Commerce, Suite 710, 210 Washington St., Hartford, CT 06106. Or call 203/566-5037.

CONNECTICUT *generates*

Al Rockwell's Grand Plan didn't entirely wo out at Rockwell International. But enough it did to create a first-rate company.

The best laid plans . . .

EVER SINCE he and his father merged their family-run, auto-based Rockwell-Standard Corp. in 1967 with North American Aviation, the prime contractor to the Apollo space program, Willard F. (Al) Rockwell Jr.'s object had been to repeat on a broader scale the kind of diversification by which he and his father had gradually enlarged Rockwell-Standard over the years.

The new diversification was intended eventually to include at least $1 billion in consumer products business. To that end Al Rockwell acquired Admiral Corp., with some $500 million primarily in refrigerator and TV sales, then another Rockwell company (Rockwell Manufacturing) with its $100-million-plus (sales) line of power tools, then ventured into the wild market for consumer semiconductor products like calculators. "We had bitten off quite a bit relative to our management depth and financial resources," says Robert Anderson, now 58, whom Al Rockwell had hired away from Chrysler in 1968 and then made president in 1970 and CEO in 1974.

Willard F. Rockwell Jr
Things are in good hands.

Just how big a bite first became apparent when Texas Instruments and the Japanese (plus the 1974-75 recession) hung Rockwell International out to dry in calculators. Then Zenith, RCA and the Japanese repeated the process in television (FORBES, *Dec. 11, 1978*). The Admiral Group lost $9.4 million in fiscal 1974 and about $20 million each year thereafter. Power tools made some money and refrigerators a little, but nowhere near enough to make up for the doubling of long-term debt and the tripling of interest costs. "People kept asking if we were in trouble," recalls Anderson.

The company was never anywhere near that. It always had cash in th and even in its worst year, fiscal 19 made 9.5% on equity—no triumph, sure, but certainly no disaster eithe the venture into consumer goods been a virtually unmitigated disast

Last September the board agreed t down Admiral's U.S. TV business ar the rest of the subsidiary. Of its consumer goods business, only p tools, now over $200 lion, would remain. A Rockwell would step from the chairmansh February 1979, at the of his 65th year, inst in 1980 at the end of it had planned.

"We have not co ourselves with glo the consumer bus es," reflects Anderso wasn't the marketing can hire marketing b We were just never s participants in the kets we got into—a course, we ran into Inc. How many o technologically sophisticated cons producers ever started with 3% to the market and built themselves significant factors? We agree with ton Consulting Group on this one have to be number one or number t or at least a real strong number thre we never were."

But if Al Rockwell's venture int sumer goods didn't work out, the r his diversification program did. I fiscal year that ended Sept. 30 o year, the company did nearly $6 b in revenues and earned close to 16 stockholders' equity before writ Bob Anderson ticks off the four re ing legs of the company's diversific "Aerospace; automotive, which third of our profit last year; electr which is our fastest-growing bus 15% to 20% a year; and general ind

What's worrying everyone about retirement systems?

J&H invites you to review a landmark study of pensions by Louis Harris & Associates.

The things employees and business leaders the Harris organization during its study *merican Attitudes Toward Pensions and irement* challenge many current assumptions. Johnson & Higgins commissioned the study et a sharper focus on public issues involved in very complex subject. Harris polled 1,699 ent and retired employees and a cross section xecutives at 212 companies. The data reveal:

- Why business and government can expect heavy pressure for higher benefits.
- Why more employees than estimated want to work beyond normal retirement.
- What employees say is more important than guaranteed benefits, vesting or portability.
- What vital advice retired employees would give to those currently employed.
- How business leaders really feel about the unfunded pension liability problem.
- How employees and business leaders assess private plans versus Social Security.

There is a wealth of information for business ers, Washington policymakers, and others in study of American retirement systems. You invited to review a summary.

Newsweek
INTERNATIONAL

data
center

The Source.

Introducing the Newsweek International Data Center—an exclusive and comprehensive media/marketing research resource for international advertisers.

There's never been anything quite like it—a computerized repository for the diverse media/market data so valuable to multi-national business: statistical tracks on major product use, market composition and media habits of key consumers.

But now there is.

We at Newsweek International have gathered together the major media/market studies of Europe, Asia, the South Pacific and the Middle East.

With retrieval access to this data in New York and London, we can immediately turn your media/marketing queries into hard, useful facts.

And at no charge whatsoever.

Exclusive and Extensive Data

Much of this data is exclusive to Newsweek International, like the Asian Profiles study of 1976. For the first time, those of you who market in the eight major cities of Asia have access to a definitive study of the lifestyles and media habits of Asian executives.

There's more. We've included data from other, equally reliable sources:

The recently completed Pan European Survey, perhaps the first—and certainly the most comprehensive—study of European executives which sets aside the limitations of national boundaries.

The Australia-wide survey of readership of magazines, by the Roy Morgan Research Centre.

The McCann-Middle East media study ...the only definitive media research yet done in the Middle East.

All of this data is now available to you, without charge.

Telephone Link to the Data Center

You simply call your Newsweek International representative and pose your problem.

He then becomes the liaison between you and the Data Center. With startling immediacy, you'll have the information you requested on your desk, ready to feed into the decision-making process.

An Extraordinary Magazine Service

Only Newsweek International offers this unique service to the international marketing community.

As far as we know, there's nothing quite like it in all the world: a comprehensive media/market research bank open to international marketers without charge.

But then again, there's nothing quite like Newsweek International itself...a magazine of global scope and universal authority...received, read and responded to by nearly two million key international consumers each and every week.

And ready...with data and with prospects...to help you sell in any of these major world markets.

Martin F. Carey, your Newsweek International representative in New York. Call 212/350-2556.

Tenneco's drilling platform in the South Marsh Island area of the Gulf of Mexico, 60 miles off the coast of Louisiana.

Another Tenneco Venture:

South Marsh Island 61-C.

An important discovery in a series that has made us a leading producer of natural gas in the Gulf of Mexico.

Tenneco's giant drilling platform in the Gulf of Mexico, South Marsh Island 61-C, is our most prolific producer of natural gas yet. The 11 wells on the platform are expected to produce about 90 billion cubic feet of natural gas in their first year, more than is consumed annually by the city of Boston.

This discovery is significant because it typifies Tenneco's continued commitment in the Gulf. We obtained the rights to the principal lease involved after another firm had drilled a dry hole and abandoned it. Convinced that natural gas was there, we drilled and discovered large new reserves.

In the last 20 years, Tenneco has spent over $800 million just for the right to explore the 117 leases we currently hold in the Gulf of Mexico. And in each of the last two Gulf lease sales, we've won the most sought-after block.

Our commitment has paid off, for Tenneco has become the third largest producer of natural gas in the Gulf. Our total yearly production there—approximately 332 billion cubic feet—now exceeds the annual gas consumption of all of New England. We also produce more than 11 million barrels of oil in the area.

We're still increasing our commitment to the search for energy. In 1979 we will invest about $600 million in oil and natural gas exploration and production, most of it right here in the United States. This effort is important because, although America has enough natural gas to meet its immediate needs, over the long run the country must supplement its known reserves. Last year Americans consumed approximately 19 trillion cubic feet of natural gas while only 10-12 trillion cubic feet were discovered. To help keep supplies flowing through our 16,000 miles of pipeline, Tenneco is aggressively planning energy projects here, with neighboring nations, and around the world.

Although energy makes up two thirds of our business, Tenneco continues to supply other basic needs like food, automotive components, chemicals, ships, packaging, and farm and construction machinery.

That's Tenneco today: growing in energy...and more.

For more information on Tenneco, write Dept. D-1, Tenneco Inc., Houston TX 77001.

For the first time in years, some of the big common stock mutual funds have been attracting net new money.

A flicker of life?

By Richard Phalon

FOR YEARS NOW, the so-called growth mutual funds have been doing everything but growing. Their assets melted like a cake of ice in a tropical sun as the portfolio value of overpriced glamour issues plummeted and stockholders reacted in droves by cashing in their fund shares.

Even such big names as the T. Rowe Price Growth Stock Fund, which practically invented the growth stock concept, have been feeling the heat. On Wall Street, however, nothing is forever, even bear markets. The IBMs, Johnson & Johnsons, Avon Products and Polaroids that make up such a big chunk of the growth stock fund portfolios have been staging a modest comeback. The result is that Rowe Price Growth and a few other big old-line funds with the same investment objectives are showing a positive sales flow for the first time in ages.

For the $974.8 million Rowe Price open-end the turn came in the last quarter of 1978, when the fund took in $49.6 million in sales and paid out only $49 million in redemptions. "I think we'd been in redemptions since 1976," says Cornelius C. Bond Jr., president of the fund. The pattern is the same at the $748.7 million (assets) Chemical Fund, which drew $15.1 million in net sales during last year's fourth quarter. In the same quarter of 1977 it had net redemptions of $15.6 million.

The trend has spilled over into this year. The David L. Babson Investment Fund, Inc., for example, reported a positive cash flow in February, despite a weak stock market. Some of the earlier gains chalked up by the glamours were wiped out by the combined weight of rising inflation and the other scare headlines that have been dominating the news. But Alfred J. Hoffman, the ebullient president of Babson Investment, thinks there isn't enough evidence in yet to judge the staying power of his fund's turnaround. "We're in kind of a flip-flop period," he says. "It's still too soon to tell."

Cornelius C. Bond Jr. of T. Rowe Price
For the first time in ages, net sales.

Michael Lipper, head of Lipper Analytical Distributors, Inc., which monitors the industry's investment performance, makes the same point. The latest sales and redemptions figures, he says, "are interesting but by no means conclusive."

In short, the trend offers scant encouragement for those looking for portents that the individual investor is drifting back into the market. No matter how you parse the increased interest, most of it is apparently coming from institutional investors. Some of the best customers seem to be comparatively small ($1 million to $5 million) internally managed pension funds that want the diversification of an open-end portfolio and feel that growth stocks are once again a buy. "These guys," insists Neil Bond, "are saying, we didn't want growth stocks at 35 times earnings in 1972 but, hey, at 8.5 times earnings, they're a lot cheaper."

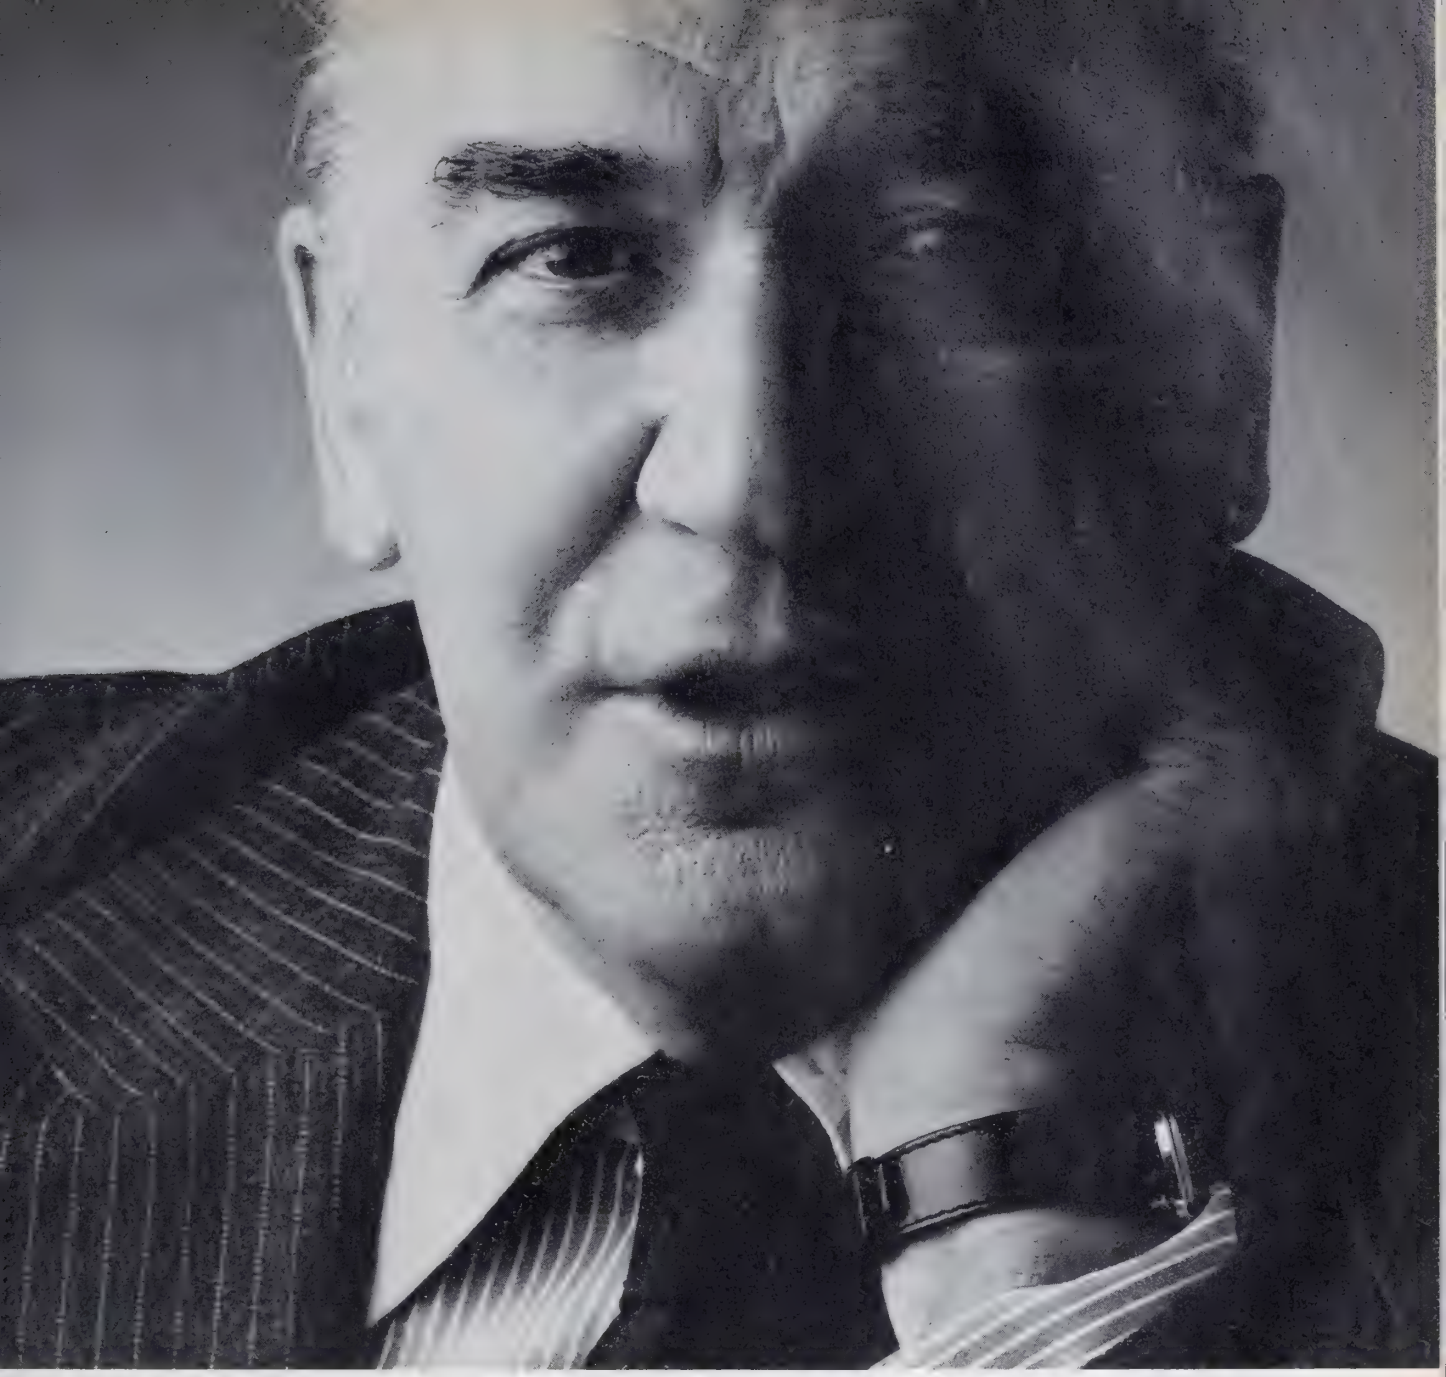
A look at the Rowe Price portfolio provides a startling insight into e how much cheaper. More than a t the fund's assets are locked int high quality items as IBM, 3M, Sc berger, Avon Products and Coca-C

Over the last five years, the pound average-annual-earnings-pe growth on those stocks has range where from 8.9% (Avon Produc 41.6% (Schlumberger). Last year on all 66 companies in the Rowe portfolio rose an average of about The market's response, of cours been pretty much a big ho-hum. absolute basis, says Neil Bond, the current average P/E, 8.5 times ea is "probably" the lowest in the fun year history. (In 1973 it stood at a ing 17.8 times earnings.) Other g stock fund portfolios might be a bi or a bit less venturesome than the Price list, but the numbers are much the same everywhere.

The funds have seized upon th gain-basement aura of the numbe major selling point, but it is questi how much of a pull that kind o chandising can exert on individual tors in a period when risk-free Tr notes are yielding close to 10%. tors burned in the growth stoc morseless descent from 1972 hav memories, and Alfred Hoffman c son Investment concedes as much

With so many disappointed inv on their shareholder lists, these will face tough slogging in attractir money from individual investors the market starts to rise again. Inst cutting their losses immediately investors elected to hang on to shares in the hope that one day might come back far enough to them to break even. Hoffman, lik ers in the industry, refers to this "break-even syndrome." In effect of stock has been hanging over the Even a modest gain in net asset va likely to trigger a flood of redemp Redemptions are still running at a paratively high rate, though at a ra appears to be tapering off, if the nu at Rowe Price, Chemical, Babso some of the other funds mean any

What comfort, then, can Wall draw from the modest improvem the sales of growth stock mutual Only that the low earning multipl now attract smaller institutional tors may yet draw the individual tor back into the stock market. But that is just a hope. All the signs a the individual investor, where he terested in the funds at all, is still p his money into high-yielding market funds whose net sales las multiplied 35 times, to $7 billion.



lliam Bray, managing director Europe, tells how A&A works from a client's point of view:

"We coordinate multinational risk planning so clients have uniformity without overspending."

"To put together a worldwide gram for multinationals, we st first understand their corpo- philosophy. Our international cialists and loss control people n visit all of the major client s, gathering data through vari- risk analysis techniques. After iewing and analyzing the data, put together the most imagina- program we can conceive— that matches our client's losophy and complies with ying local tariffs and legislation. properly coordinating and nning multinational programs, can help avoid errors, duplications and omissions—thus providing uniformity of worldwide coverage with maximum cost effectiveness. We have skilled multilingual personnel in 36 countries, assuring the same level of service around the globe that we provide in the United States."

Working from a client's point of view is our way. In London, where Bill Bray is based. And in over 110 cities here and overseas. That means working as allies, solving business problems together. Our international network does the painstaking field work that enables multinational clients to coordinate their far-flung risk management and benefits planning into a cohesive, more cost-efficient package.

We think our dedication to acting as an ally of the clients we represent is a big reason why A&A has become a worldwide leader in the insurance brokerage and financial services business. We have the facilities, expertise and strength to act as effective allies. We work from the client's point of view, whether the corporation is large or small.

Alexander & Alexander
The Allies

Faces Behind The Figures

Employee rights and civil wrongs

Last year Michigan passed a law granting employees the right to see their own personnel files. That may be only the first step in a larger, broader trend, says Alan F. Westin, editor of the *Civil Liberties Review* and faculty member at Columbia University School of Political Science.

Many companies, perhaps to stave off more such legislation, are already getting on the bandwagon. Nearly 120 corporate leaders were interested enough last year to attend a seminar on employee rights run by Westin and sponsored by the American Civil Liberties Union and New York University Law School. He plans a similar conference in June.

"Apart from the direct economic issues," says Westin, 49, a Harvard Law School graduate, "I think the most important issue in the corporate world of the 1980s will be employee rights. The sense today, especially among younger people, is that the corporation may have a right to your energy, your mind and your best effort. But it can't have control of your private life nor base promotion, hiring or pay on anything but job performance." A good many major companies seem to agree. Funding for Westin's conference this year will come from such organizations as the Aetna Foundation, AT&T, Exxon Corp. and IBM.

Byron C. Radaker of Congoleum
With the profits he's found in shipbuilding, there'll be no more baths at Bat

Waiver of the rules

For three years the world shipbuilding industry has been heading for a watery grave. In just the last 18 months, more than a dozen Japanese yards have closed, and governments in at least six other countries are starting or expanding subsidy programs to keep their struggling shipyards afloat.

Look at the performance of such yards as Congoleum Corp.'s Bath Iron Works in Bath, Me. Last year the 95-year-old Bath division netted $19 million on sales of about $211 million, after four barely break-even years. Escalation clauses in N contracts have helped avoid disast overruns like those of the early 1970s

Changes in the way the Navy bo the new FFG Class guided-missile ates helped, too. Instead of testing first completed ship from an orde several, the Navy ordered just one pr type, tested it, made modifications then ordered a production run. method will allow Bath to produc ships, all cookie-cutter copies of other, on something like an asse line, with subassemblies built in a p and then put together in the yard.

Byron C. Radaker, 45, Congole president and CEO, hasn't always such smooth sailing. He came to Co leum in 1975 after lasting just t months as CEO at CertainTeed Prod Corp. A scandal involving insiders ing with a company-owned land deve ment concern, he says, had nothing t with his leaving, which, he expl stemmed from a strategy decisio CertainTeed's French owners, St. bain Industries. They wanted to ste production of fiberglass strands use reinforcement, and he didn't.

Congoleum Chairman William D. Jr. hired Radaker and Eddy G. Nichol a 38-year-old onetime protégé of Atl businessman J.B. Fuqua, and let t fight it out for the top spot. "It was guys on a parallel path," recalls vi Radaker, reaching for an ever-pre pack of cigarettes, "and it worked just fine." Nicholson has since shunted to the position of vice chair

Since 1975, the boyish, round-face daker has liquidated 40% of Congole assets, mostly unprofitable furniture panies. Two years ago, he bought C

Noll, an auto-parts distributor that netted $11.6 million pretax on $124 million sales. And he used a $35 million windfall from a patent infringement suit against flooring competitor Armstrong Cork Co. to pay debt down to $16 million. Return on equity was nearly 25% last year, up from the five-year average of only 10%. Sales were up 48%, to $576 million, net income up 69%, to $42 million, $3.58 a share.

No business like railroads

"Something about this business gets into your blood and under your skin," says William M. Gibbons, trustee of the Chicago, Rock Island & Pacific Railroad. No question: He's been bitten by the railroad bug. Gibbons is 59 years old. As a partner in the Chicago law firm of Moses, Gibbons, Abramson and Fox, he handled bankruptcies for over 15 years, but never encountered the railroads, except to ride on one. Now his office is filled with Rock Island memorabilia—what wasn't sold at a recent auction to rail fans. A mother-of-pearl Rock Island wall clock chimes as it did 120 years ago; on his desk the replicas of bygone trains and miniature locomotives vie for space with merger testimonies and daily progress reports.

But the railroad continues its slide begun about a dozen years ago; the Rock Island is in admittedly terrible shape. Now in his sixth six-month extension granted to turn the railroad around, Gibbons will ask for yet another year and, on Apr. 4, for a court-appointed consultant to determine what track should be upgraded and what should be scrapped. His old Chicago law partner, U.S. District Court Judge Frank J. McGarr, who picked Gibbons to do battle with the Rock's problems, will accept the papers.

Gibbons has been greeted with two terrible winters. His push for FarmRail—a joint contract proposal between railroads carrying grain—stalled for lack of another railroad to join in a contract. And, of course, there's Henry Crown, major secured bondholder and former director of the Rock, whose family owns 18% of the St. Louis-San Francisco Railway Co. and 8% of the Rock's common stock. Crown wants the Rock Island liquidated to get some of his money back. Unlike Gibbons, the hardheaded Crown isn't interested in playing with trains.

William M. Gibbons of the busted Rock
He wants another try at life support before they pull the plug.

Disinterested

Prince Muhammad al-Faisal al-Saud of Saudi Arabia, 42, is either a visionary or a man with so much money he doesn't know what to do with it all. In 1976 he startled the world by proposing to solve Saudi Arabia's water problem with icebergs towed from Antarctica. His latest project is more down-to-earth: the Islamic Investment Co., a mutual fund for devout Muslims.

Since the Koran considers interest to be usury, IIC issues certificates of "participation and loan" for investments cleared by a religious advisory board (alcohol, pork or gambling is strictly forbid-

based on charges made by Mayor Dennis Kucinich after a meeting with Cleveland Trust Chairman M. Brock Weir, the Feds had better take another look. Maurice Saltzman was there, and he says it wasn't anything like the way the mayor described it. So who is Saltzman?

The 60-year-old founder and chairman of Bobbie Brooks, the $165 million (sales) women's apparel manufacturer, was a strong financial supporter of the boy mayor. In earlier days, Kucinich used to caddy for Saltzman. It was Saltzman who arranged the meeting between Kucinich and Weir last December as the city was teetering on the brink of bankruptcy. At that session, Kucinich claims, Weir tried to hold Cleveland hostage by promising to roll over $5 million in city debt held by Cleveland Trust only if Kucinich sold the city's money-losing utility, Municipal Light, to privately owned Cleveland Electric Illuminating. Kucinich alleges that Cleveland Trust, because of close ties to CEI, would benefit from the distress sale.

But Saltzman denies the bankers ever made a take-it-or-leave-it offer. "Dennis didn't repeat what happened at that meeting correctly," he states. "Brock didn't tell him to sell Muny Light. *I* offered it as a possibility to keep the city solvent. Anyway, if the bankers were out to destroy Cleveland, they would have called in the notes and asked for their money back. But they haven't, because they are concerned about the city."

Maurice Saltzman of Bobbie Brooks
Mr. Inbetween heard it differently.

For Saltzman, one of the few businessmen among Kucinich's allies, that's quite an admission. "Businessmen *need* a strong Cleveland in which to operate," he says. "Dennis has got to realize that you can't run a city without assistance from the business community. Until he realizes that—until he grows up—he won't be able to accomplish things here."

Kucinich thinks he scored big a few weeks ago when the city's voters turned down a referendum to sell Muny Light, and instead voted to increase the city income tax from 1% to 1.5%. But that adds only $25 million to the city's coffers, no more than a Band-Aid for Cleveland's deep financial wounds. The election did nothing to cure the city's long-term problems, says Saltzman.

But, he adds, the recent turmoil did resolve one dilemma: "The average guy doesn't care about all these financial problems, and he doesn't want to see all this strife within the city. That's why I think that Dennis Kucinich, politically, is doomed."

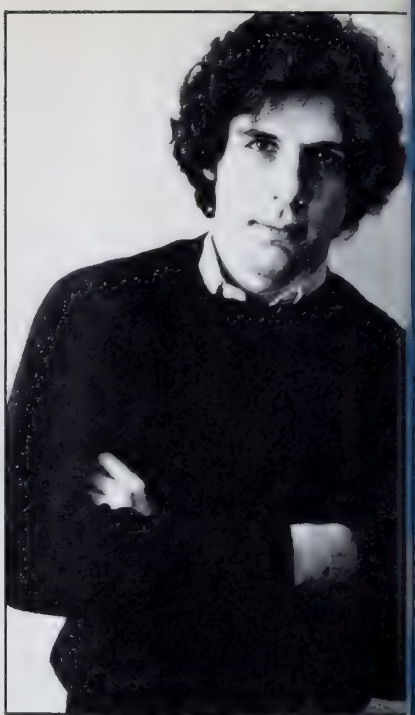
Keep on dancin'

If you are sick of disco, you'd better find a cure. Warner Bros. Records Inc. thinks it will be around for a long, long time. Almost to prove it, they've given a fast-talking 29-year-old high school dropout from Manhattan's Lower East Side a reported $7 million to build a roster of disco music performers.

To hear Ray F. Caviano talk, you'd figure maybe he was a hip marketing man from Procter & Gamble or est. His market is "a variable of owners, disco DJs, radio people." His objective is to develop "the imagery, the aura, the persona of the artist" for Warner/RFC Records, a new affiliate of Warner Bros. Records. He is president of RFC (his initials) and executive director of Warner's new disco department.

Disco is the biggest new development in the $4 billion phonograph record business. The music has been evolving in the last decade in urban America's black, Hispanic, homosexual and chic European dance halls. That's where disco jockeys have been creating their own dance music by using their record playing equipment to extend, superimpose, alter sound levels and otherwise excite a new generation of dancers.

Caviano has been in magazine and music promotion since his teens. He worked for *Rolling Stone* in its early days and was involved in the promotion of *Switched On Bach*, a novelty recording of J.S. Bach tunes played on a Moog electronic synthesizer. He brings to his new jobs a highly developed sense of what it



Ray F. Caviano of Warner/RFC
A new demimonde of fun and profi

takes to make and market enter ment products. He guesses that records now account for $500 milli the industry's total sales and that should at least triple before the b subsides. (The disco business alon cluding records, lighting and decor, an estimated $3 billion plus.)

The phenomenal success of both film and the soundtrack record of *day Night Fever* boosted disco's res ability, if for no other reason tha cause the actors and the musicians white and heterosexual: what the m industry calls a "crossover." The upb als of the 1960s are gone from the sciousness of the new generation according to Caviano, are "into up-po, happy, bright, escapist" dance m

Caviano best demonstrates the fra manipulative aspect of disco with a uct he turned out when he first g Warner Bros. last winter. Taking a track from a new Rod Stewart all Caviano remixed and extended it zingy 12-inch single that Stewart b recognized and, at first, resented. Bu record zoomed to the top of the p well as the disco charts. Disco p like Caviano, who can produce recor well as market them, can have an in nately strong grip on their eagerly sive customers.

Anybody who doubts that this e the music business will thrive sh listen to the words of one veteran r man: "They say it's just noise, you understand the lyrics, it's low class. sounds like your mother when rock roll began, but it's what the rock e lishment is still saying about disc you know it's here to stay—a while

One mind.

The thrift institution specialist and the corporate finance expert exchange ideas. They share perceptions with the commercial paper trader, with the bond trader. First Boston is a set of contiguous minds. Each expands another's view.

Exchange quickens insight.

Since 1934, First Boston has offered a comprehensive range of investment banking services, a diversity of minds in series. The greater the number of services, the greater the series of minds, the more valuable the insights, the greater each person's ability.

Creative exchange has enabled First Boston to develop new short-term notes, similar to commercial paper, for issue by thrift institutions. A financial manager now has the flexibility of access to the money market on either a secured or an unsecured basis.

Innovation expands with insight.

With a strong permanent equity capital position, First Boston executes insights. We make knowledge work. We can put it to work for you.

Start First Boston thinking about your needs. Call on professionals like these two men in our headquarters in New York: Mike Bruno of Sales and Trading for Thrift Institutions (left), and Curtis Welling of Corporate Finance.

MONEY & INVESTMENTS

If we don't know where we are, how can we tell where we are going?

IBER the old gag about the govern-official on his hands and knees on lvania Avenue searching intently nething during the midday rush? at are you looking for?" asked a by.
watch."
ere do you remember that you had "
er on Massachusetts Avenue."
en why look here?"
e light is better."

Recent behavior of economists, analysts, forecasters, journalists reminds one of this old story. Widely accepted statistical data are often inaccurate; seasonal adjustments are off balance. The light is good but the watch just isn't there. Many experts don't understand what they're looking at or for.

Willis Winn, president of the Federal Reserve Bank of Cleveland, is one of those who are fully aware of the shortcomings of the current methods of economic measurement. Statistical measures say the economy is mixed; Winn's experience tells him something else. The machinery producers in his district are working all out with big backlogs. But housing is slowing and grain shipments have been held back by bad weather. Old standards just don't provide useful benchmarks, he says. "It's as if the economy has had a severe flood and the money is cutting new channels."

Viewed pragmatically the economy presents a mixed picture of weakness and strength. Industrial production is moderate, retail sales other than autos are soft, housing is falling and personal income is rising at half the 1978 rate of increase. The leading indicators have fallen for three consecutive months.

On the other hand, durable goods orders are rising strongly; capital appropriations are at record levels; prices are rising much too rapidly without much consumer or business resistance.

The contradictions arise partly because of inadequate data. The problem of misleading measurement is so serious it is almost impossible to make valid economic judgments. Almost everyone recognizes that the popular money-supply numbers have been distorted greatly by massive shifts in the flows of savings and checking deposits. Few are aware, however, that other data are also out of whack. Take inventory-to-sales ratios. They seem to show that inventories are in good shape relative to recent sales. But as explained in the chart on this page, inventories are much higher when expressed in current values. So take monthly personal income reports. These are constantly thrown out of line by "annual rate" adjustments that multiply by 12 a onetime increase in bonuses, tax rebates or social security adjustments.

Once the leading collector and disseminator of excellent statistical data, the U.S. is, statistically speaking, now operating in the dark. Users of the data don't even realize they're putting bronze-age entries into ultrasophisticated econometric models. Gibberish in, gibberish out.

So, our policymakers are operating with little sense of whether they are pursuing the right policies—or even whether there is such a thing as a "right" policy—at a time when all the old landmarks have turned into mirages. ■

Statistical mirages

key measure of the U.S. economy's health the inventory-to-sales ratio ished monthly by the Department of Commerce. Commerce tracks inven-s in several ways, but the most widely publicized (hence, most widely used) is seriously flawed. Contrary to popular opinion, the data do not measure s.They compare sales expressed in current (1979) dollars to inventories as ed on the books in dollar values that may, for companies using LIFO unting, go back to 1974 or earlier. Significantly, Commerce computes her inventory-to-sales ratio for internal use, one that allows for inflation and ccounting changes, which currently shows that inventories are substantially ter—though still below the danger point—than is commonly believed.

The idea of tax-exempt single-family mortgage revenue bonds is simplicity itself. The danger is potential for abuse à la REITs.

TOO MUCH OF A GOOD THING?

By Ben Weberman

REMEMBER the REITs? They attracted so much public interest with their combination of high yields and tax shelter that billions poured in—more money than could be invested sensibly. So the sponsors invested nonsensibly. I'm afraid something similar may happen with the popular tax-exempt single-family mortgage revenue bonds.

The idea is simplicity itself. By raising money under their tax exemption, municipalities can get it cheaper than you or I. Proceeds finance single-family housing within the municipality. The home buyer gets cheaper mortgage money; even with fees and spreads added, he can borrow at 8% to 8.95%. The investor gets a high-yielding tax-free bond. The sponsor and the underwriter get fat fees—fat enough to encourage loose practices. The U.S. taxpayer picks up the tab.

The whole thing started only last July when a $100 million mortgage poolwas sold publicly in the name of the City of Chicago to yield 7⅛% tax free. As much as $5 billion may come to market this year.

But how many of the investors really know what they are getting into? These are not full-faith-and-credit nor even moral obligation bonds.

Other than insurance covering the first 10% of foreclosured losses on most of the issues, all risk is carried by the investor. The city, county or state disclaims (usually in very small type) any obligation—even moral obligation. This is true for big Chicago, Ill. and for small Pekin, Ill. *(see illustration at right).* The institution that makes points and a fat fee putting together the pool of mortgages has no liability. And the underwriter has long since left the picture.

The general pattern for each of these issues involves a governmental sponsor. The money is raised for a trust organized by one or more mortgage institutions.

Now I don't mean to suggest that you should not buy any of these private family mortgage revenue bonds. Many of the issues have been put together responsibly. But Brenton Harries, the outspoken president of Standard & Poor's, worries about the big volume of the private housing mortgage revenue bonds and the quality of some of the issues. A number of the pools have applied for an S&P's rating and then pulled back when it became apparent that the rating would not be glorious.

I can't recommend specific issues in this column because they come to market and are sold quickly with very little secondary market trading. You must be informed about offerings. But here are some caveats:

Check for a limit on future offerings. Pueblo, Colo. was among the first of the issuers. The city authorized a $20-million issue to raise money for Midland Federal Savings Loan. The ink was hardly dry wh the County of Pueblo authorized additional $25 million to be lent three other institutions. The are which are almost geographically ide tical, cannot absorb so much mo gage money in one year. Furthermo Midland's headquarters are in Denv and it doesn't make many loans Pueblo. Such conditions could ve well generate an urge to lend aggr sively—à la REITs.

Check for borrower mix. The $ million Minneapolis Housing & Re velopment Authority home, own ship issue is more worthy. Steven Rosen of the research department Dean Witter Reynolds has put ou 32-page study of some of the positi and negative factors in the single-fa ily mortgage revenue bond issu This study points out that Minnea lis, itself, carries a rating of Aaa. T mortgage loans for this issue will serviced by 26 lending institutio and the size of the offering is small terms of local mortgage demand i rapidly growing city.

Look at the sponsor and borrow mix. The Health Care & Resident Facilities of Jefferson County, A overlaps some directors of the gove mental body and the five lending stitutions originating the mortgag Furthermore, county population declined from 85,000 in 1970 t currently estimated 83,000, so there no shortage of housing. The une ployment rate of 7.2% on Sept. 1978 was higher than the state av age. In 1977 the entire county applications for only $41 million mortgages. The proposed $48 milli issue was realistically reduced to $ million—still large. ■

Ben Weberman is economics editor of FORBES *magazine.*

New Issue

In the opinion of Chapman and Cutler, Bond Couns under existing statutes, regulations and judicial decisio interest on the Bonds is not includable in federal gro income and is therefore exempt from all present fede income taxation.

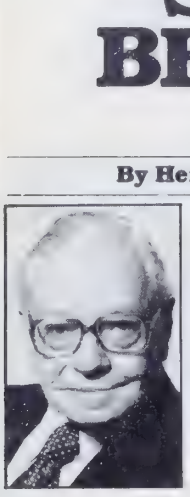
The Basic Energy Company

Some highly respected investment advisers are counseling their clients to get out of the market and stay out.

SPREADING BEARISHNESS

By Heinz H. Biel



THE STOCK MARKET rally after the turn of the year had raised hopes for better things to come. But then, at least for a while, the market succumbed to an avalanche of unpleasant news—a victim of realities. Lately it has been blowing hot and cold in response to front-page news, making it tough for prognosticators.

Despite the market's readiness to react to good news, while being remarkably impervious to Murphy's Law, bearishness seems to be spreading. Two very large insurance companies find it timely to gloat over selling many hundreds of millions of dollars' worth of stock last year. Most market technicians it seems are bearish, and some highly respected investment advisers are counseling their clients to get out of the market and stay out.

I don't deny that I share the feeling of considerable apprehension, but I cannot visualize a price collapse à la 1974. The market has not been carrying a great deal of excess weight that has to be shed in a corrective bear market. The DJI is already selling at barely eight times probable 1979 earnings. Of course, profits may be lower next year and the multiple can decline even further, but realistically, how much room is there on the downside?

If the market should decline, with the cost of living index rising at a rate of over 10% a year, stocks will get another black mark as an inflation hedge. As far as the *averages* are concerned, there is no alibi for poor performance. However, already in the first two months of the year, 13 of the 30 companies included in the Dow Jones industrial stock average have upped their dividend, lifting the annualized rate on the DJI to $51.77. This is an increase of 68% over the 1971 dividend of $30.86. At least the *income* from stocks is quite well hedged, which is more than one can say for bonds, whose fixed interest becomes less valuable in purchasing power with every passing year.

Update: A few months ago (FORBES, *Jan. 8*) I mentioned the floating rate notes of the New York Bank for Savings due Dec. 1, 1981. The interest rate of these notes is paid and adjusted *quarterly* to reflect the ups and downs in the U.S. Treasury bill rate. For the quarter ending May 31 interest will be paid at the annual rate of 10.75%, up from 9.95% in the preceding quarter, and only 8% (the bottom rate) a year ago. Because of the nearness of maturity (less than three years) these notes should not be bought unless available at par or only a nominal premium above par. The current price of 100¼ is just about right.

While many of the Wall Street pros are in a deep gloom-and-doom mood, speculators once again are having a lot of fun in casino stocks. That's where most of the action is. Just as a gambler trusts his luck and doesn't really care that the odds are stacked against him, a speculator should not ask a security analyst whether casino stocks are worth their selling price. He also should be careful not to multiply the number of outstanding shares by the price of the stock. It might shock him and take all the enjoyment out of it.

If you have been watching only the better-known casino stocks, which are listed on the New York or the American stock exchanges, you can't even imagine how wild the gambling is in the over-the-counter market. Here is an example: Last October, a month or so after the first spree in casino stocks had subsided, Caesars World gave its shareholders rights to buy units (consisting of two common shares and one warrant) of *Caesars World of N.J.* This company is building and will own and operate hotel/casinos in Atlantic City. The parent retaining ownership of some 80% its New Jersey subsidiary. The unit priced at $10, started trading in the 20-to-30 range. Recently they sold high as 140! You can't do better than that in roulette or blackjack. That is you were lucky and bought the stock at 20 or 30.

To say that interest in gambling stocks is lively would be the understatement of the year. Take the case of *Elsinore Corp.*, which is being spun off from *Hyatt Corp.* Elsinore is operating hotel/casinos in Las Vegas and Lake Tahoe, Nev. and plans a joint venture with Playboy Enterprises for a 500-room hotel/casino in Atlantic City. Although most Wall Street pros had never heard of Elsinore, except as the setting for *Hamlet*, about 2 million shares changed hands on just the first three days after the stock, then still trading on a when-issued basis—got its NASDAQ quote symbol. Although by far the most actively traded over-the-counter stock, Elsinore wasn't even quoted in the *Wall Street Journal* or any other newspaper at the time.

In contrast, another heavily traded over-the-counter stock, *De Beers Consolidated Mines*, looks like an ultraconservative investment. Perhaps it is, if we remember that whatever risk there may be are adequately discounted and reflected in the stock's low price in relation to earnings and high dividend return. There is no assurance that De Beers can continue indefinitely to mine diamonds in southern Africa, or that it can maintain its virtual monopoly in the pricing and marketing of diamonds, but there are risks in every industry, every business. I think it is probably "safer" to mine and sell diamonds than to mine copper and be at the mercy of the market.

Although De Beers, at 6½, now sells at its best price in over five years this is only at about 2.7 times 1979 earnings of about $2.40 a share. Dividends for last year totaled 75 cents for a yield of 11½%. (The 15% South African withholding tax can be reclaimed on your own federal income tax return.) The stock is traded here over-the-counter in the form of American Depositary Receipts, enjoying a close and extremely active market. The company's financial position is enormously strong. ■

Heinz H. Biel is a vice president of the NYSE firm of Janney Montgomery Scott.

A new way to invest for high current income free from state and local income taxes.

Fidelity Government Securities Fund, Ltd., offers the prudent individual a number of significant advantages available together for the first time in a single investment.

High Quality and High Yield.

The Fund seeks a high current income from obligations issued by the U.S. Government and government agencies.

Traditionally, these have been among the most conservative investments available. And, while their value changes with changes in interest rates, they are free of credit risk. Furthermore, they provide an income that rivals many attractive savings opportunities.

Compare These Benefits:

1. No State or Local Income Taxes
2. 100% U.S. Government Securities
3. No Sales Charge
4. No Withdrawal Penalty
5. $1,000 Minimum Investment

No State or Local Income Taxes.

Better yet, The Fund invests in only those securities that are exempt from state and local income taxes in all 50 states. This feature alone distinguishes it from other funds and savings alternatives.

Low Initial Investment.

The minimum initial investment is $1,000. Individual government securities and savings certificates normally require a higher minimum purchase.

No Sales Charge or Withdrawal Fees.

There is no sales charge for Fidelity Government Securities Fund. All of your initial investment goes to work seeking high income free of state or local income taxes.

Moreover, there is no early withdrawal penalty. Income from The Fund may be received either monthly or quarterly. You may also choose to reinvest income and thereby automatically compound earnings.

Additional Advantages.

Fidelity Government Securities Fund offers diversification and is under continuous professional management. In addition, you need not be concerned with record keeping, coupon clipping or other maintenance chores.

FIDELITY GROUP

Over $4 billion of assets under management.

Learn More.

Complete facts are available and we urge you to get them by simply returning our coupon. Better yet, call toll-free for more information.

the Solar Law Reporter

Present and future uses of solar technologies—from solar collectors to wind machines to energy farms—are placing increasing demands on the legal system. A new field of law—solar law is emerging. A bimonthly publication, the **Solar Law Reporter,** will serve as a source of timely information for lawmakers, professionals, academics and the solar industry.

The **Solar Law Reporter** will contain:

—information on statutes, regulations and judicial decisions

—analysis of legal problems and issues

—abstracts of additional solar legal materials

Technologies covered include biomass, ocean energy, passive, photovoltaics, solar heating and cooling, solar thermal conversion, storage systems and wind energy conversion.

Subscriptions will begin May 1979.

$7.50 per year—six issues

80-126 pages per issue

Distressing though it may sound, by the time you hear a story, there's nothing in it for you.

IN SEARCH OF A STORY

By Srully Blotnick

I'VE JUST returned to New York from a trip to Texas, New Mexico, Arizona and California, where I talked with investors in my psychological sample (FORBES, *Mar. 5*), particularly those approximately one in seven whom I characterize as high rollers. A high roller is one whose average level of expectation is at least twice that of other investors of the same age; his tolerance of risk is high and he must have action—patient, long-term investing is not for him. What are these itchy-fingered brethren doing? Sitting on the sidelines and seething with restlessness. I mean, they are rarin' to go.

Accompanying their impatience is cash. Like the more conservative investors in my sample, they are liquid—the bulk of their bankroll is temporarily tied up in high-yielding certificates of deposit, Treasury obligations or money market funds. But it's not a situation they enjoy, and the money is burning a hole in their pockets. Where to put it? That's the question all have asked and few have answered. In the words of one investor in my sample: "What we need is a new toy."

For high rollers, the stock market is not a place to invest but a game against which to test their luck and skill. Whereas an ordinary investor gets nervous if a stock he holds goes up, say, by 50%, and thinks of selling, the high roller won't even get interested in a stock until it *has* gone up 50%. He wants to get on a moving bandwagon, not a stalled one.

In my sample of some 1,100 investors, approximately 15% are high rollers; they are closer to 20% of the national investing population.

In my studies of investor psychology, these high rollers have repeatedly emerged as the single most important factor in the birth of a hot stock—that is, one which zooms to two, three or even five times its former value in a matter of months. A large group of *typical* investors who simultaneously start to chase a particular stock won't turn it into a hot stock. That's why my psychological profiles are so important: To know how far a stock will go, it is more important to know what *sort* of person is buying it than it is to know how *many* people are buying it. Why? Because at some point after a reasonable profit the *average* investor will say "enough" and cash in his chips. High rollers, however, whose levels of expectation are always inflated (and can become more so with little provocation), can easily convince themselves that "the sky is the limit." They do not sell on the way up but hold or buy more.

For instance, in the course of 11 trading days in 1967, 46 of the investors I track descended on the stock of Control Data. During the summer of 1973, 51 of my investors leaped on National Semiconductor. And finally, in the fall of 1978, 39 pounced on Holiday Inns. Each of these stocks skyrocketed as they did so. Last fall, for example, Holiday Inns doubled in a single month.

What was striking in each case was that the high rollers were present in disproportionate numbers, constituting approximately one-third of the people who pounced—more than twice their representation in my sample. They were clearly spearheading the effort to make the stock skyrocket: Not only did they invest a large portion of their capital in such stocks but they made more transactions than did others playing those stocks.

Dr. Srully Blotnick is a practicing psychologist and author of the new book, Winning: The Psychology of Successful Investing.

Are these high rollers winners? Alas, no. My studies show that the vast majority of them will suffer substantial losses. Why? Because by the time they notice the noise and excitement, the party will be over. The stock will have gone from 10 to 20, or 15 to 30, quietly on low volume. For example, they tended to buy Holiday Inns closer to 30, the top, than to 15, the starting point. Distressing though it may sound, by the time you hear a story, there's nothing in it for you. Basically, a hot stock is one on which others already have made money. Someone has to buy the stock from the early birds. That's where the high rollers come in. It is their job to buy the stock at the high prices, having convinced themselves—and you—this is only the beginning."

Certain losers that they are, the high rollers are important to watch for a number of reasons. When a large number of them are in a particular stock or group of stocks, it is probably time for the rest of us to get out of those stocks. When the high rollers are restless but inactive—as at present—it is only a matter of time before a stock or group of stocks get hot. When that happens those of us who are lucky enough to own those stocks will have a chance to sell to the high rollers at a good price.

If there is a group of stocks that is hot right now, it is the gambling stocks. What do my high rollers think of gambling stocks? While many hold them, few are buying them now. What does this tell the rest of us? Probably that the force that has impelled these gambling stocks upward has about run its course and that there are a good many weak holders around who are fated—as high rollers usually are—to dump stock on the market on the way down. Conversely, the mid-size oil and gas production companies, although they have had a good move, probably have not yet gone so far as they can go because they have not yet excited the high rollers.

I hasten to add that my sample is easier to read looking back than looking forward. However, if pressed to make a prediction from my recent findings, it would be this: If it can only get some good news, the stock market is ready to explode upward. The big investors are liquid; the high rollers are straining at the bit. Both groups are looking for an excuse to buy— looking for what in the Sixties they called a "story." Heard any good stories lately? ■

GROWTH IS ALIVE

Many leading growth stocks are still selling well below their all-time highs while their earnings per share and dividends have risen to new peak levels.

Some investors—sensitive to good value—realize this and are buying. Others, however, will probably wait until the top of the market to buy. SAD.

Can we interest you—NOW?

If tax time gets you down, try a face-lift you think you'll feel better. After all, it's t deductible.

OVERLOOKED DEDUCTIONS

By John Train

UNDER the proper circumstances, you can deduct all the following:

Casualty losses to property from accident, theft, vandalism, fire, storm, flood, etc., where unexpected and violent, even if the taxpayer has been "ordinarily" (but not "grossly") negligent. The cost of restoring the property to its previous condition is deductible, failing proof of the reduction in its value.

Contributions in the form of travel expenses to do volunteer work, and taking children sponsored by a charitable organization swimming, fishing, to dinner or whatever; or in the form of expenses of parties to promote balls, etc., of a charitable organization; or of the value of office space for the organization.

Contribution of a restrictive easement on one's land to preserve its beauty, such as a limitation on development, or of a right-of-way for a recreation trail along the edge of one's property.

Contribution of property to a tax-exempt organization at fair market value if the organization can use the property for the purpose that is the basis of its tax exemption: *e.g.*, a gift of manuscripts to a library. (If the organization cannot so use it, then the deduction is reduced by 50% of the donor's unrealized capital gain.)

The cost of investigating an investment proposition (even for nonprofessionals) that is entered into and then abandoned.

The cost to investors of entertaining Wall Street sages (prospective hostesses please note) and other *cognosce*

Face-lifting, even if not recomm ed by a physician.

Farm losses, if the farm is ru profit. The IRS presumes this to if the farm makes money in tw of five consecutive years, except for horse farms it's two out of sev the farm really is intended to b for profit, losses are deductible e they don't satisfy that test. To re contention that any activity i entered into for profit, one is advised to operate it under a name; engage professional help involved personally; form an adv panel of experts; keep meticulo counts; discontinue unprof lines; and make feasibility studi

Losses resulting from misrepresent This is a curious point, and not ge ly understood. If you've been g you may be able to claim a casualt on the grounds of theft. For insta you lend money on the basis of a balance sheet, or indeed take a ba bogus stock, you've been defraude can deduct your loss.

Losses on sales of securities or p ty between a couple or siblings c ents and descendants are automat *dis*allowed.

Medical expenses: Air-conditi an elevator or a swimming p medically required, minus the r ing increase in the value of the h a stereo system for an incapac person.

Medical expenses (if more than adjusted gross income): acupun birth control pills, chiropra Christian Science "practiti (who often don't see the patient chiatrists (even if unlicensed) contact lens insurance and m and prescription drug insurance

Medical expenses: The entire co special school for a child with a ing or physical disability; trans tion to and from a physician meeting), including the expens parent who accompanies a child

My basic objective is to own a portfolio that will at least double income and market value within a ten-year period.

INVESTING FOR GROWTH

By T. Rowe Price

FOR NEW READERS of my column and to remind my previous readers, I would like to repeat my basic investment principles and fundamental beliefs.

My aim is to help the nonprofessional investor to select and maintain a broad diversified list of common stocks that will enable him or her to be successful in achieving investment objectives and to avoid some of the mistakes the author has made during nearly 60 years of investment experience. My basic objective is to own a common stock portfolio that will at least double income and market value within a ten-year period (barring financial panic). No one can achieve perfect investment results. My goal is to have three of my four stock selections turn out profitable.

The investment philosophy is the same that has proven so successful for me since I started a model inflation or growth stock portfolio in 1934. This philosophy recognizes that no one is capable of guessing the ups and downs of the stock market cycles over a long period of years; that it is not necessary to know or to try to guess the trends in the stock market to succeed. The philosophy is based on the fact that many of the fortunes of this country are made and kept by people who own successful business enterprises that continue to grow and prosper over a long period of years. These business people did not attempt to sell out and buy back again their ownerships of the businesses through the ups and downs of the business and stock market cycles. Neither should investors try to catch the swings.

My investment program provides for no more than 50% of invested capital in common stocks and 50% in dollar obligations, primarily short (90 days to three years) and medium (three to ten years) maturities. This program has been in effect since 1966, and is discussed in some detail in my fourth column published in FORBES *(Dec. 11, 1978)*. For younger investors, the percentage in common stocks can be higher than 50% but should remain well below 100%.

I measure performance in terms of a) growth of market value and b) growth of income. Market value: Eighteen months is too short a period of time to draw conclusions other than to get an indication of the trend and to make a comparison of results with stock indices. All individual stocks and all groups are unlikely to perform well at the same time. Growth stocks, for example, are usually strong when other groups are weak and vice versa. For short periods, psychological factors are of greater influence than are economic factors.

Here is how my selected portfolios have performed compared with the averages over the 18 months since I first compiled them in August 1977. (But remember 18 months is a short period as far as investment results are concerned.)

Market performance
18 months ended 2/28/79

Group A	+37%
Group B	+ 1.6
Group C	+25.1
Total	+21.2%
Stock indices	
Dow Jones industrials	– 6.1%
Standard & Poor's 500	– 0.5
NYSE composite	+ 1.9
Amex	+36.3
NASDAQOTC composite	+22.4

Income, or cash dividends paid, is a better short-term indicator than i ket performance because it is base earnings, and it is an actual retur invested capital. The exhibit sh that of the 21 stocks in Group A, three—Dome Petroleum, Ma Power and Teleprompter—paid dividends. Total income for the g increased 29.1%. In Group B, only stock—Digital Equipment—paid dividend. Income for the group creased 23.3%. In Group C, Rand Exploration is the only one that no dividend; UNC Resources pa initial dividend in 1978; Kerr-M and St. Joe Minerals did not inc dividends, while Newmont's and ston's dividends declined. Grou showed a 25.1% increase. The portfolio increased 21.2%.

Comparison of income
1977-78 with stock indic

Group A	+29.1
Group B	+23.3
Group C	+26.7
Total	+26.7
Stock indices	
Dow Jones industrials	+5.8
Standard & Poor's 500	+9.2

An alternate list

In past articles I have menti several additional stocks that I and that qualify for growth of m value and income. Here is an u date list of eight such stocks: Bard; Camflo Mines; Ethan A Frigitronics; Cross & Trecker; I pore; Thermo Electron; Tosco.

Two of these stocks, Ethan and Frigitronics, have just rec been added to my portfolio. were purchased last fall for the time and, guess what? A month my initial purchase, they dec 25% and 30%, respectively, in m value. How is this for good timi an experienced investor? Of c my investment strategy require purchase of additional shares of stocks at lower prices. The av cost of present holdings is 2 Ethan Allen common, 83 for Allen 5¼% convertible bonds 16½ for Frigitronics. This group the exception of Bard, is more s lative than most of the other experienced dynamic earnings g and has paid no or low income eight stocks listed above perfor follows:

Earnings growth 1977-78 +44
Income growth 1977-78 +34
Growth in market value in 18 months through 2/28/79 +47

T. Rowe Price, founder of the mutual fund and investment counseling firm bearing his name, is retired and living in Baltimore.

A Special Invitation from VALUE LINE

To Investors Who Use Discount Brokers

. . . and make their own investment decisions

growing minority of investors e turning to discount brokers to it commission costs. Generally, is is appropriate only for those no make their own decisions, nce most discount brokers do ot provide investment research. o; if you're doing business with discount broker, you need the est independent research you an get. (Your commission savgs on just a few trades may pay r a full year of such assistance.) ere's how Value Line can help:

e'd like to send you Value Line's test full-page Reports on each of 700 stocks under continual reew. These come to you ready for stant use, fully indexed and ose-leaf bound in the *Investors eference Service* (available sepately for $45) . . . and will be ystematically updated by new eports in the weeks ahead. Filing kes less than a minute a week. l this material is so organized in our binder that you can quickly rn to a continually updated reort on almost any leading stock.

iese comprehensive Reports cov almost every stock that's likely be of interest to you. The 1700 ocks covered by Value Line acunt for approximately 96% of all illar trading volume in the U.S. uity markets. With Value Line, u're really "well armed."

typical Value Line full-page Reort on a stock includes 22 series vital financial and operating statics—going back 15 years and timated 3 to 5 years into the ure—plus ratings and estimates relative Price Performance in next 12 months, long-term pertntage Appreciation Potential, Quality (Safety), current Yield and P/E compared to past norms, and Value Line's analysis of ongoing corporate developments. About 130 Reports are issued every week —1700 every 13 weeks, in regular sequence.

But perhaps most significant of all is the objective Value Line Ranking System which reduces thousands of hours of research by 70 experienced analysts and statisticians to two straightforward signals, the rank for Timeliness and the rank for Safety.

Stocks to Avoid Now. Because Value Line applies *uniform standards of evaluation* to all 1700 stocks, you can quickly and easily identify which stocks we currently rate *relatively* best and worst for your particular goals. We especially suggest you avoid the 400 stocks currently ranked below average for Timeliness (Performance) in the year ahead.

In addition to the full-page Reports, Value Line's key investment ratings and measurements for *all* 1700 stocks are updated EVERY WEEK in our 32-page weekly *Summary & Index.* With Value Line, you are never left "hanging."

Double Bonus Offer. If you're an independent investor—if you call your own shots—you should settle for nothing less than the best. So we invite you to let us send you The Value Line Investment Survey every week for the next 12 months. Plus two immediate bonuses—the two-volume *Investors Reference Service* (described above) and our penetrating new 96-page guidebook, *"Evaluating Common Stocks,"* which explains how even inexperienced investors can apply thousands of hours of professional research to their own portfolios by focusing on only two unequivocal ratings, one for Timeliness (Performance in next 12 months), the other for Quality (Safety).

Money Back Guarantee: You take no risk in accepting this offer. If you're not satisfied with Value Line for any reason at all, just return the material you have received within 30 days for a full refund of your subscription fee.

Special Introductory Trial Offer. Or if you prefer—and if no member of your household has subscribed to Value Line in the past two years—you may take an introductory 9-week trial for only $29. You get the same bonuses and the same money-back guarantee.

This subscription is tax-deductible if utilized to aid in the management of your investments.

Please give us your instructions on the coupon below and mail it today.

Stock Trends

Yes, there have been losers. The outstanding loss to date has been Houston Oil & Mineral, having declined over 50% since recommended in August 1977. The other obvious mistake was to switch Sabine into Rite Aid. Sabine has had a sizable advance, while Rite Aid is down slightly. The other principal losses worthy of note are Lowes, Homestake, K mart, Kerr-McGee, McCormick, Pittston and St. Joe Minerals. I have not sold any of the poor performers in my portfolio, and do not plan to do so at the present time. My Houston Oil & Mineral cost only 6⅜, and its sales would result in a big capital gains tax. A little luck in their drilling could make its purchase a better bet than its sale.

The other stocks that have not performed well so far are in industries that have been in a temporary declining earnings trend or stocks that are currently out of fashion with the public. However, for an investor who has just started a buying program I would recommend Frigitronics in place of Houston Oil & Mineral. Frigitronics is selling at about the same price as Houston and is in a business with a great future. Furthermore, Frigitronics' earnings are less likely to be adversely influenced by a decline in the business cycle.

Many investors, particularly those with limited funds, do not want to own 60 different stocks. In my judgment a large list of stocks is necessary a) to reduce the risk of concentration in a few issues and b) to provide an opportunity to the investor to profit from the many growing industries of the future.

For the benefit of those requestin smaller list, I have selected 30 sto in the accompanying tables, placed asterisk before 29 of those names added Frigitronics for the 30th. T shorter list, like the longer one, gi broad diversifcation among differ industries and different natural sources. For an investor w $100,000 or less, I recommend shares of several mutual funds w different managements.

When you invest your money not think about buying or investin *stocks.* Think about businesses in tile fields, and about ownership of gible properties consisting of c modities and natural resources are going to increase in value ov period of years. You are investin assets and earning power, not pieces of paper. ■

NC: no change

It was widely believed that some Arab petroltates, newly flush with oil money, were indulging their taste for sweets.

LET ME HEAR THAT BEET

By Stanley W. Angrist

NOT EVERYTHING costs more. I know that is a radical statement that most people would find totally incredible. But indeed in this column I will discuss a commodity that is selling for a fifth of what it sold for in late 1974. Of course, you are expecting me to name some not very popular vegetable like rutabaga or some rare metal like vanadium and, therefore, you will yawn and say: "So what, who needs those items?" Instead, I am going to tell you that is exactly what has happened to the price of sugar, and in the U.S. we consume sugar at the rate of 95 pounds or so per person on an annual basis. Not very important, indeed.

It is not hard to figure out why prices are so low. Current sugar supplies are vastly in excess of needs. This has driven prices well below the cost of production, even in parts of the world where costs are lowest. How and why did the world get in this condition? Answering these questions in a meaningful way requires a little historical background.

Sugar prices started to run up in early 1974 from a base price of about 15 cents per pound. By November, the nearest futures price had reached more than 65 cents per pound. Long holders of a single sugar contract would have realized a profit in excess of $55,000 on an original margin of about $1,000. This move by sugar has probably been the single most profitable move in the commodity markets in recent memory—if not all time. The events that fueled that move seem innocuous enough in retrospect—stocks at the end of the season dropped to "only" 16 million metric tons and production roughly equaled consumption. Furthermore, it was widely believed that some of the Arab petroltates, newly flush with oil money, were indulging their centuries-old taste for sweets. From such gossamer are incredible bull markets woven. Sugar then proceeded to drift down into the trading doldrums. Dull! Dull! Dull! This little story is told with graphic simplicity in the chart below.

Almost 40% of the world's sugar is derived from sugar beets. And almost all beets are raised in centrally planned economies. (The U.S.S.R. is by far the world's largest producer of beets.) Cane production also is fairly unresponsive to demand. In many countries, employment considerations have become more important than profitability. Thus low reserves produced by low prices have failed to materially affect supplies. Adam Smith's invisible hand seems to be stuck in somebody's pocket.

Most sugar observers believe that the key to forecasting sugar prices is the International Sugar Agreement of 1977. If the U.S. and the European Economic Community fail to subscribe to the agreement, the effort is certainly doomed. Basically, the chief tool of the ISA is export quotas. The idea is fairly simple: Hold excess sugar off the market in times of surplus so that normal demand pulls on the available supplies. Supposedly this demand against limited availability would then pull prices, lifting them to the 11-to-12-cent range of the agreement.

The Senate has withheld its ratification of the ISA in an effort to obtain higher support prices for U.S. sugar producers. There is some talk that the key sugar state senators would like to hold out for a 17-cent-per-pound support price, but that rate is nearly twice the world price for sugar, and such a move would bode poorly for the Administration's efforts to control inflation. The Administration seems to be willing to settle for a support price of 15.8 cents. If such a support bill passed, it is widely believed that the Senate would ratify the ISA. However, with each passing week, the feeling is becoming more prevalent that agreement on U.S. sugar legislation is not at hand.

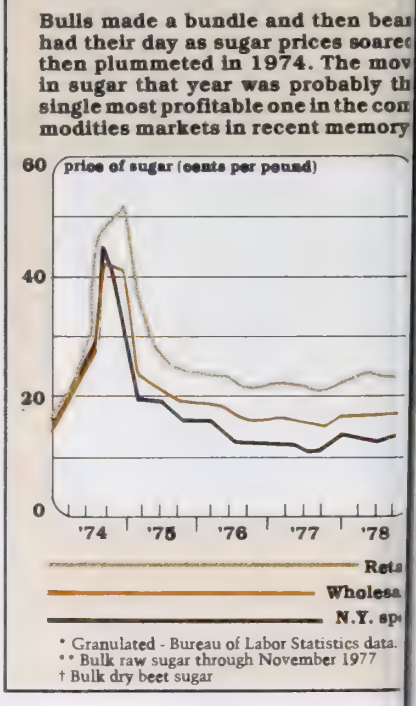
According to F.O. Licht, a key sugar market observer, world stocks at Aug. 31, 1979, the end of the season, are now projected at 32.3 million tons in comparison with 29.8 million tons a year earlier. World production is estimated at 93.2 million tons *vs.* estimated consumption of 90.3 million tons. Thus stocks at season's end can be calculated to be 35.7% of consumption—a historically high level. Sustained rallies in the face of this overhang are hard for me to imagine.

I would short July sugar on rallies above 8.85 cents. I would risk no more than 30 points above my entry position. (Sugar is quoted in cents and hundredths—points—of a cent per pound; so a 30-point risk on a 112,000-pound contract translates into a $336 risk.) A decline of 100 points ($1,120 per contract) is not an unreasonable expectation for the commodity. The margin on a sugar contract is $1,000 while the round-turn commission is $75. ■

Stanley W. Angrist is a professor at Carnegie-Mellon University, and the author of Sensible Speculating in Commodities.

Sweet moves

Bulls made a bundle and then bears had their day as sugar prices soared then plummeted in 1974. The move in sugar that year was probably the single most profitable one in the commodities markets in recent memory



* Granulated - Bureau of Labor Statistics data.

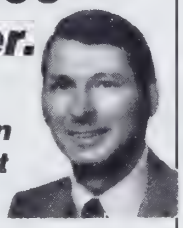
Wage Earner $33,900 Richer.



Wins 3 times in U.S. Gov't Lottery

NEW YORK, N.Y. (Special)—When Phil Donaldson collected $9,900 he was amazed. When he won the second time a few months later—another $24,000—he was astounded. This lucky Michiganian pocketed $33,900 and could collect thousands more in royalties—month after month for years. You could, too, in the little known U.S. Gov't Lottery. Every month nearly 1000 Americans win valuable oil rights to public lands in oil-rich states for just $10.

The odds are much better than state lotteries—and when you sell your lease you're assured a cash payoff plus additional royalty rights. Any U.S. citizen over 21 may enter giving you the same chance to win as Gulf, Exxon, Shell, etc. It costs nothing to get details, entry cards, etc. Send name and address to **Energy Group of America, Dept.** FO479, Empire State Bldg (Suite 3308) New York, NY 10001.

13,000,000 MEN WILL RENT A TUXEDO IN 1979

Our youth oriented business is growing . . . we're up 21% over last year. WHY? We have modernized the formalwear rental industry! Proms and formal weddings are more popular today than ever. This high ticket ($35-$45) . . . high percentage gross and net profit business can be yours without any previous knowledge. We train, finance & support you with in-store assistance and national advertising. 141 Franchisees are convinced! CAN WE CONVINCE YOU? Call collect:

June reared that bunch of
flowers you carry
from seeds of April's sowing.
ROBERT BROWNING

He is my friend, that succoreth
me, not he that pitieth me.
THOMAS FULLER

The greatest revolution of
our generation is the discovery
that human beings, by changing
the inner attitudes of their
minds, can change the outer
aspects of their lives.
WILLIAM JAMES

Many men spend their lives
in gazing at their own
shadows, and so dwindle
away into shadows thereof.
AUGUST HARE

I must accept life
unconditionally. Most people
ask for happiness on condition.
Happiness can only be felt if
you don't set any condition.
ARTUR RUBINSTEIN

It is an absolute perfection
to know how to get the very most
out of one's individuality.
MICHEL DE MONTAIGNE

To be worth anything, character
must be capable of standing firm
upon its feet in the world of
daily work, temptation and trial.
SAMUEL SMILES

Before an egg can grow into
a chicken, it must first
totally cease to be an egg.
Each thing must lose its
original identity before it
can be something else. Therefore,
before a thing is transformed
into something else, it must come
to a level of no-thingness.
PERLE EPSTEIN

The significance of man is that he
is insignificant and aware of it.
ERNEST BECKER

Thoughts on the Business of Life

When you cease to dream
you cease to live

Everybody has to be somebody
*to somebody to be anybody.**
MALCOLM FORBES

One kind word can warm
three winter months.
JAPANESE PROVERB

I believe in the possibility
of happiness, if one
cultivates intuition and
outlives the grosser
passions, including optimism.
GEORGE SANTAYANA

See everything. Overlook a
great deal, improve a little.
POPE JOHN XXIII

Only the shallow know
themselves.
OSCAR WILDE

We cannot easily discover our
real character from a friend.
He is a mirror, on which the
warmth of our breath impedes
the clearness of the reflection.
JEAN PAUL RICHTER

We forfeit three-fourths
of ourselves in order to
be like other people.
ARTHUR SCHOPENHAUER

*The Sayings of Chairman Malcolm, *a collection of over 500 thoughts embodying the wit and wisdom of Malcolm Forbes. Now available at $5.95. Send check and order to Forbes Inc., 60 Fifth Avenue, New York, N.Y. 10011. Add appropriate sales tax on New York State orders.*

Ye who fear death, remember
April with its swords of
jade on a thousand hills.
JOHN RICHARD MORELAND

The beautiful! It is beauty
seen with the eye of the soul.
JOSEPH JOUBERT

And the heart that is
soonest awake to the flowers
is always the first to be
touched by the thorns.
THOMAS MOORE

Imagination makes a much
better friend thán enemy.
ARNOLD GLASOW

I have learned this at least
by my experiment: that if one
advances confidently in the
direction of his dreams, and
endeavors to live the life
which he has imagined, he
will meet with a success
unexpected in common hours.
HENRY DAVID THOREAU

A Text . . .

Unto the pure all
things are pure.

Beauty is rather a light that
plays over the symmetry of thin
than that symmetry itself.
PLOTINUS

The silence of the place was like
a sleep, so full of rest it seemed.
HENRY WADSWORTH LONGFELLO

The true test of being
comfortable with someone else
is the ability to share silence.
FRANK TYGER

When a car is built well it shows.

here's a lot of news in lds today.

In a day and age when people are paying upwards of $25,000 for a luxury car, the 1979 Oldsmobile Toronado is indeed a value.

Whether you compare it to cars de in this country or any other, 'll find Toronado offers very impressive features. Like a Citroen, Toronado has front-wheel drive. Like a Mercedes, it has diesel availability. And like many of the world's other fine road cars, Toronado has a plush interior. Velour is standard. Leather seating surfaces are available.

Toronado would be a value even if it were priced as high as these world cars. But it isn't.

With Toronado, your dollar buys the luxury you want. Especially this year. Toronado has more standard features than ever before. Many of which are standard on only a very select group of cars. Domestic or imported.

The 1979 Toronado. Bought or leased, it is solid proof that elegant values still exist in the world.

Test drive one today.

Oldsmobile

The all-new Toronado

Have one built for you.

From "pole" to "pole," Brazil is reaching new heights in petrochemicals. With the help of worldwide Citibank.

Towering distillation columns highlight a new petrochemical complex—or petrochemical "pole," as it is called in Brazil—that is one of the largest simultaneously planned and constructed chemical installations in the world.

It is the second such pole built in Brazil—and the forerunner of a third. Purpose: to cut Brazil's dependence on petrochemical imports, by making raw materials available for products ranging from plastics and pharmaceuticals to fibers and fertilizers.

"We look to Citibankers...for innovative financing approaches."

Under a creative financing formula that coordinates participation by public and private sources of funds, both Brazilian and non-Brazilian, Citibank has provided substantial financing for the new $3-billion complex.

Says Otto Vicente Perroni, President of Petroquimica do Nordeste S.A.—known as COPENE, and the major component company within the complex: "We look to the Citibankers we work with not simply for funds, but for knowledgeable and innovative financing approaches."

At COPENE's Camaçari site: President Otto Vicente Perroni (right), with Citibank Vice President Robert E. Cushman.

"Citibank has actively participated"

Adds Citibank Vice President Bob Cushman: "For more than sixty years Citibank, with eleven branches throughout Brazil, has actively participated in the country's development, providing both funds and financing expertise."

To customers large and small, multinational, regional or local, Citibankers bring the resources and facilities of a leading international ba

They bring, also, a commitment shared by Citibankers everywhere: work with dedication toward the economic good and growth of ev area Citibank serves, worldwide.

FIRE–
THE POWERFUL SERVANT
WE NEED MORE
EVERYDAY
Fire does much more than keep us warm. As our most widely used form of energy, fire makes our metals, chemicals and plastics; refines our petroleum; propels all our internal combustion engines and produces most of our electricity.
St. Joe is a large and growing basic source of fuels for fire. We are one of the largest coal producers in the U.S. and have a growing position in oil and natural gas. We are continuing to increase our capacity and reserves of all these fuels through development of production facilities and worldwide exploration. Our projected capital expenditures for 1979-83 include $431 million for oil and gas, $303 million for coal and $237 million for non-ferrous metals.
For more information, including a timetable of our specific plans for growth, write to Dept. 4 for our annual report.

LIBRARY

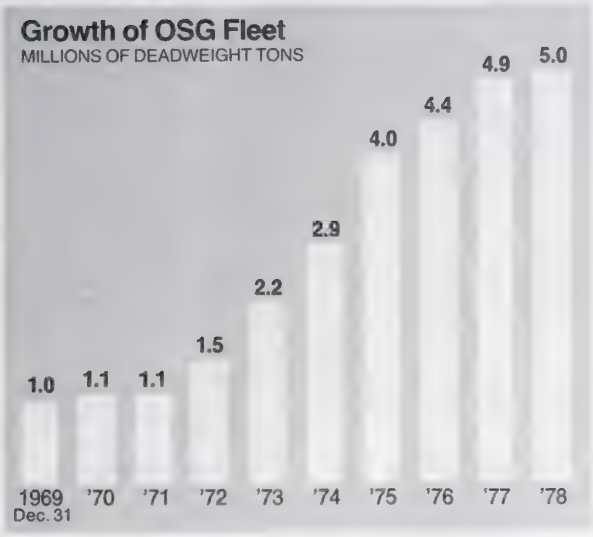
With one of the most modern and efficient fleets afloat, OSG transports oil, iron ore, coal, grain and other bulk commodities to ports around the globe.

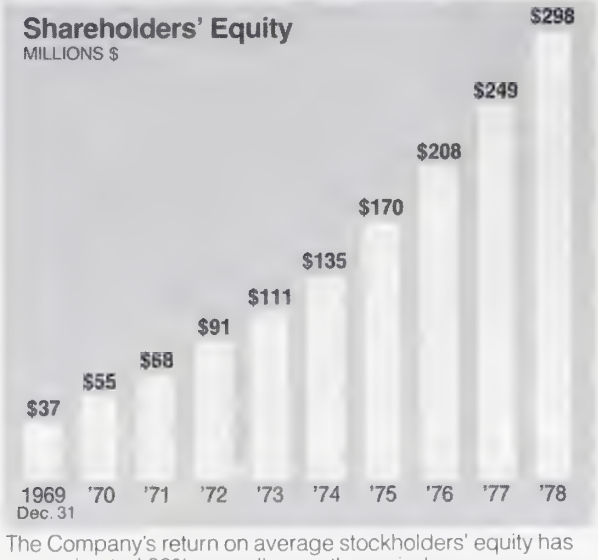
OSG is the only public company engaged exclusively in bulk shipping in both the U.S. and worldwide markets.

In 1978, the Company's net income exceeded $54 million. Since 1969, earnings per share have grown at a compounded rate averaging over 20% annually.

Our ability to sustain a steady growth in earnings has been due primarily to a chartering policy strongly favoring medium- and long-term contracts, and to continuing fleet expansion. Over the past nine years, our fleet has increased from 1,000,000 to 5,000,000 deadweight tons.

We would be pleased to send you a copy of our 1978 Annual Report containing a description of our industry and detailing the results of our operations.





The Company's return on average stockholders' equity has approximated 20% annually over the period.

OSG Overseas Shipholding Group, Inc.

Forbes

April 16, 1979
Volume 123, Number 8

Companies: Once merely an also-ran to Master Charge, Visa has now surpassed it. Its next target, American Express, will be a lot tougher. **43**

As I See It: How does George Shultz, Renaissance man of the Nixon cabinet, feel about the Carter Administration? In a word: "Tense." **48**

Cover Story: At an estimated $44 billion a year, theft is now as big a business as the U.S. steel industry—and growing a lot faster. **55**

The Money Men: Wall Street's herd instinct is nothing compared with the Japanese brokerage houses—except for Loeb Rhoades, Hornblower's Tokyo operation. **66**

Switzerland: Zurich money men are nibbli again at U.S. stocks. view of their track reco is that good? **128**

Features

France: *A Cri d'Angoisse.* The steel crisis that burst into violence in Lorraine and Paris last month has been building for decades. **45**

Real Estate: *Washington's Bureauboom.* Real estate is a great business in the nation's capital. **46**

Companies: *Supercompany.* A few years ago George Mead thought the magazine business was a "dead duck." Its stunning comeback has made Mead's little Consolidated Papers superprofitable. **70**

Aviation: *Showing The Tricolor.* The Concorde may be a supersonic white elephant thus far, but France's state-owned aircraft company is whirling along merrily in the helicopter business. **75**

Companies: *You Gotta Believe.* Ingersoll-Rand does. But its faith has been sorely tried. **81**

The Streetwalker: *How High Is High?* Oil-in-the-ground companies may be to 1979 what the gambling stocks were to 1978. ..... **87**

Companies: *Discounting With A Difference.* Now that even the department stores have jumped on the bandwagon of "specialty retailing," Melville Corp.'s Frank Rooney, its high priest, is off on something else. **93**

Tenders: *Wanna Buy A Bridge?* Here's a takeover off the beaten path: An international toll bridge. **99**

The Up-And-Comers: *The Breakthrough Point.* How Pall Corp. successfully passed it. **100**

Companies: *Up From The Ashes.* Roy Ash calls it "changing the corporate culture." What it means is trying to rejuvenate stodgy old Addressograph-Multigraph. **104**

Companies: *Pay 'n Save Grows 'n Grows.* With lavish incentives to its managers, this Seattle-based regional drug chain ranks first in the FORBES yardsticks for growth over the last five years. **110**

Pension Funds: *Running Harder.* The banks can't take anything for granted anymore. **116**

Pension Consultants: *"They Are Scaring The Hell Out Of Us."* 1

Statistical Spotlight: *Return Of The Golden Ones.* A sequel to our 1978 Most Likely To Succeed. 1

The Banks: *Every Man For Himself.* Competing with Sears, Roebuck doesn't frighten Citicorp and BankAmeric nearly as much as it scares some smaller banks. 1

Companies: *Avon Walks The Tightrope.* Keeping the Avon lady happy while planning for the future. 1

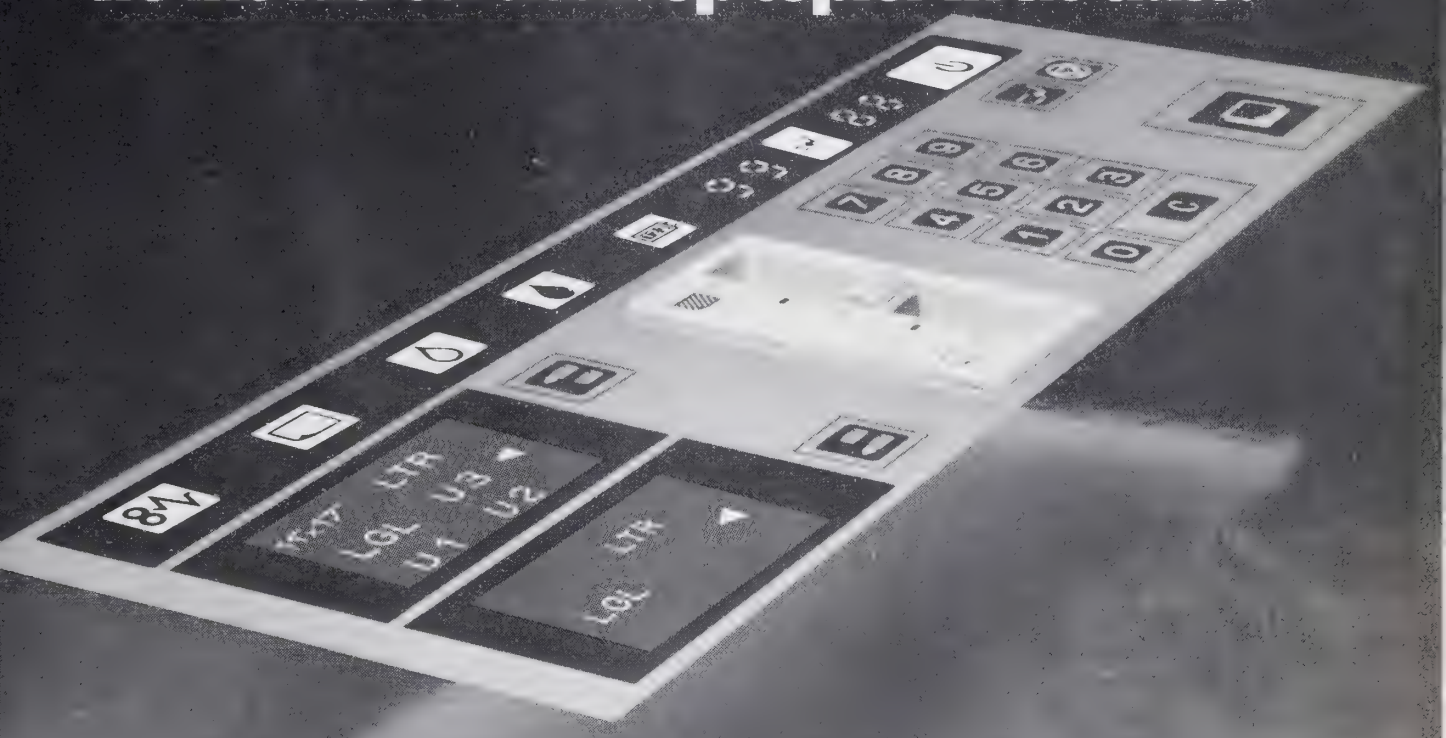
THE AGE OF MICRONICS IS HERE.

At 32 copies per minute, it's the fastest desktop copier in its class.



Canon proudly announces its premier duct of the Age of Micronics. The incredi- NP-80.

What is micronics? It's a combination of ce-age technology and our own engineer- /optics/electronics expertise. And what s that mean for you? High quality copy- is made easier, more efficient, and sig- cantly faster.

32 Copies Per Minute. With a running ed of under two seconds per copy, the -80 is the fastest desktop copier in its ss. What's more, there is no warm-up or ting time. Your first copy is ready in only seconds.

Micro-Computer Control. But you get re than just speed. The NP-80's built-in cro-Computer controls several features signed for convenient, reliable opera- n. It actually monitors the entire copying cess, taking operational adjustments off ur hands.

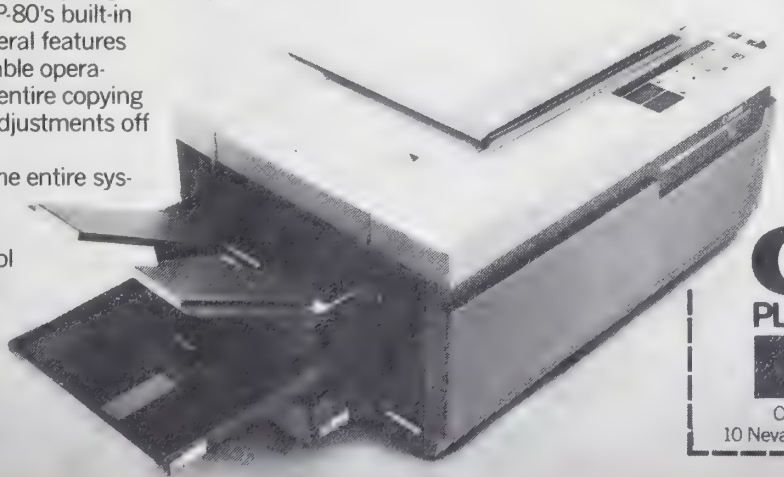
Sensor Control Panel. The entire sys- n responds to your mmands through a touch nsor smooth-surface control nel. A bright digital display es you all the copy ormation you ever ed.

Interrupt Function. great for squeezing short s in the middle of a long copy run. The computer memory keeps track of your original long run copy count after your short job is completed and automatically returns to the original paper size.

Double Cassette Paper Supply System. Switch paper size instantly! You can keep two paper sizes (up to 700 sheets) loaded at all times.

And other benefits keep on coming. The NP-80 automatically shuts itself off thirty-six seconds after your last copy run. A unique seamless CdS drum is designed for more speed and longer drum life. And a new roller developing system uses less developer toner to produce completely dry, superior quality copies.

The NP-80 is fast becoming the ultimate plain paper copier. Don't be the last person in your business to enter the Age of Micronics. Find your authorized Canon copier dealer in the Yellow Pages. Or mail in the coupon below.



Yes, I'd like to enter the Age of Micronics.

☐ Please send me more information on the NP-80.

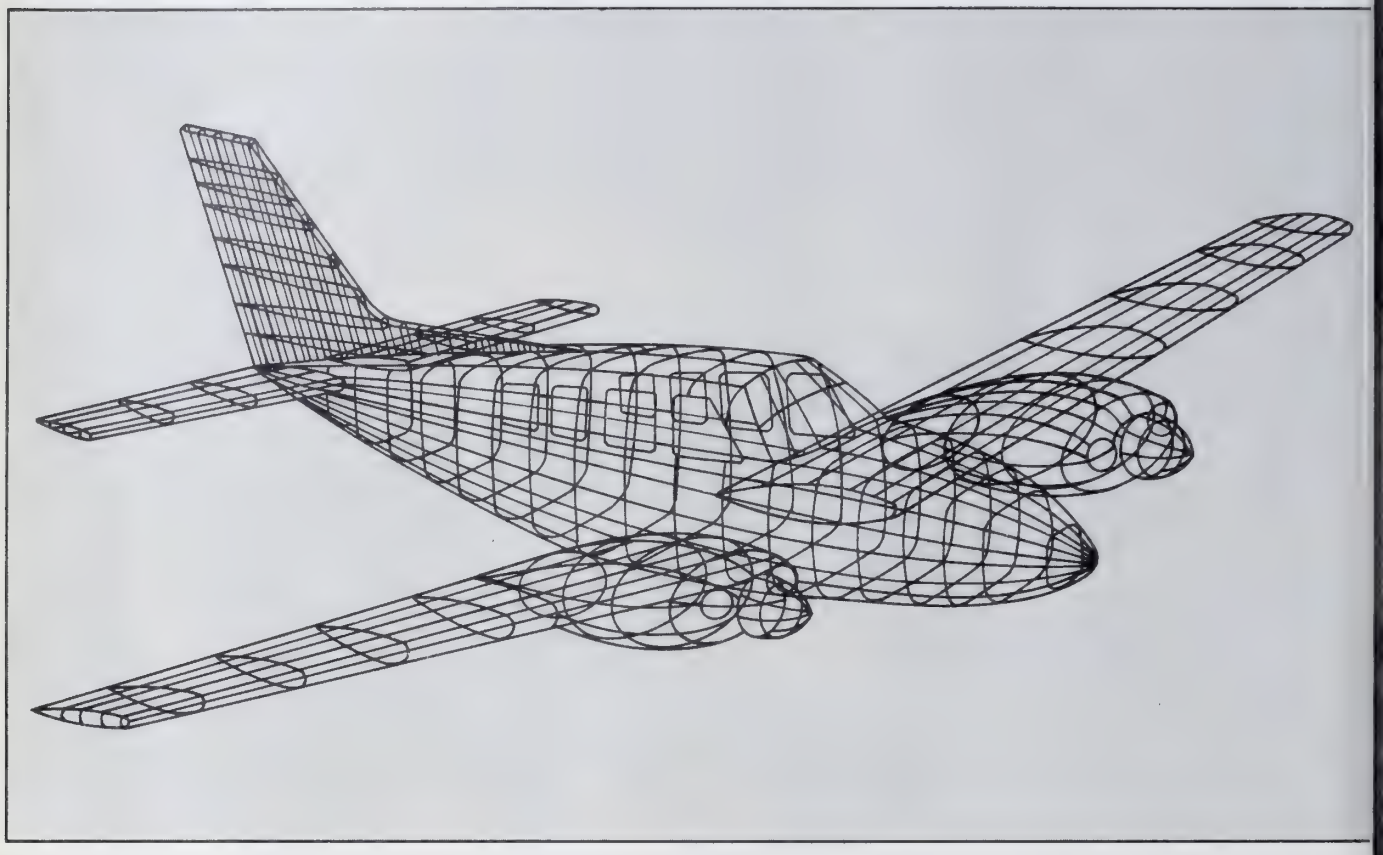
A little insight into what makes Beech Aircraft fly.



Glance at the surface of Beech Aircraft, and you'll see this: A company that's had six consecutive years of record growth in both sales *and* earnings. A company that ranks 29th in growth in a *Forbes* study of America's 1,006 largest corporations. And a company that began fiscal year 1979 with its best first quarter ever.

Take a look beneath the surface, though, and you'll see just how we've achieved this remarkable record.

To begin with, you'll see the wide range of products we build. Everything from 2-place, 120 mph training airplanes, to 15-seat, 300 mph corporate transports, to environmental systems for the Space Shuttle Orbiter.

Next, you'll discover that into into each of these products we build the kind of meticulous quality you can see and feel.

And last, you'll see that we've engineered our company with the same attention to detail, stability, and performance that's gone into the engineering of our airplanes.

	1973	1974	1975	1976	1977	1978
Net sales	$204 6	$241 6	$267 1	$346 9	$417 4	$527 5
Net income	$10 0	$12 4	$15 6	$20 6	$25 4	$35 5
Dividends	$3 1	$3 6	$4 4	$5 3	$7 0	$8 3

All figures in millions

Through the years, it's helped us be in the right place, at the right time, with the right product.

For example, in the early '60s, most general aviation manufacturers were developing jets We chose to develop jetprops in stead, because of their fuel effi ciency. Today, in a highly energy conscious marketplace, our jet prop King Airs outsell all busi ness jets combined. And they out sell all competitive jetprops by more than 2 to 1.

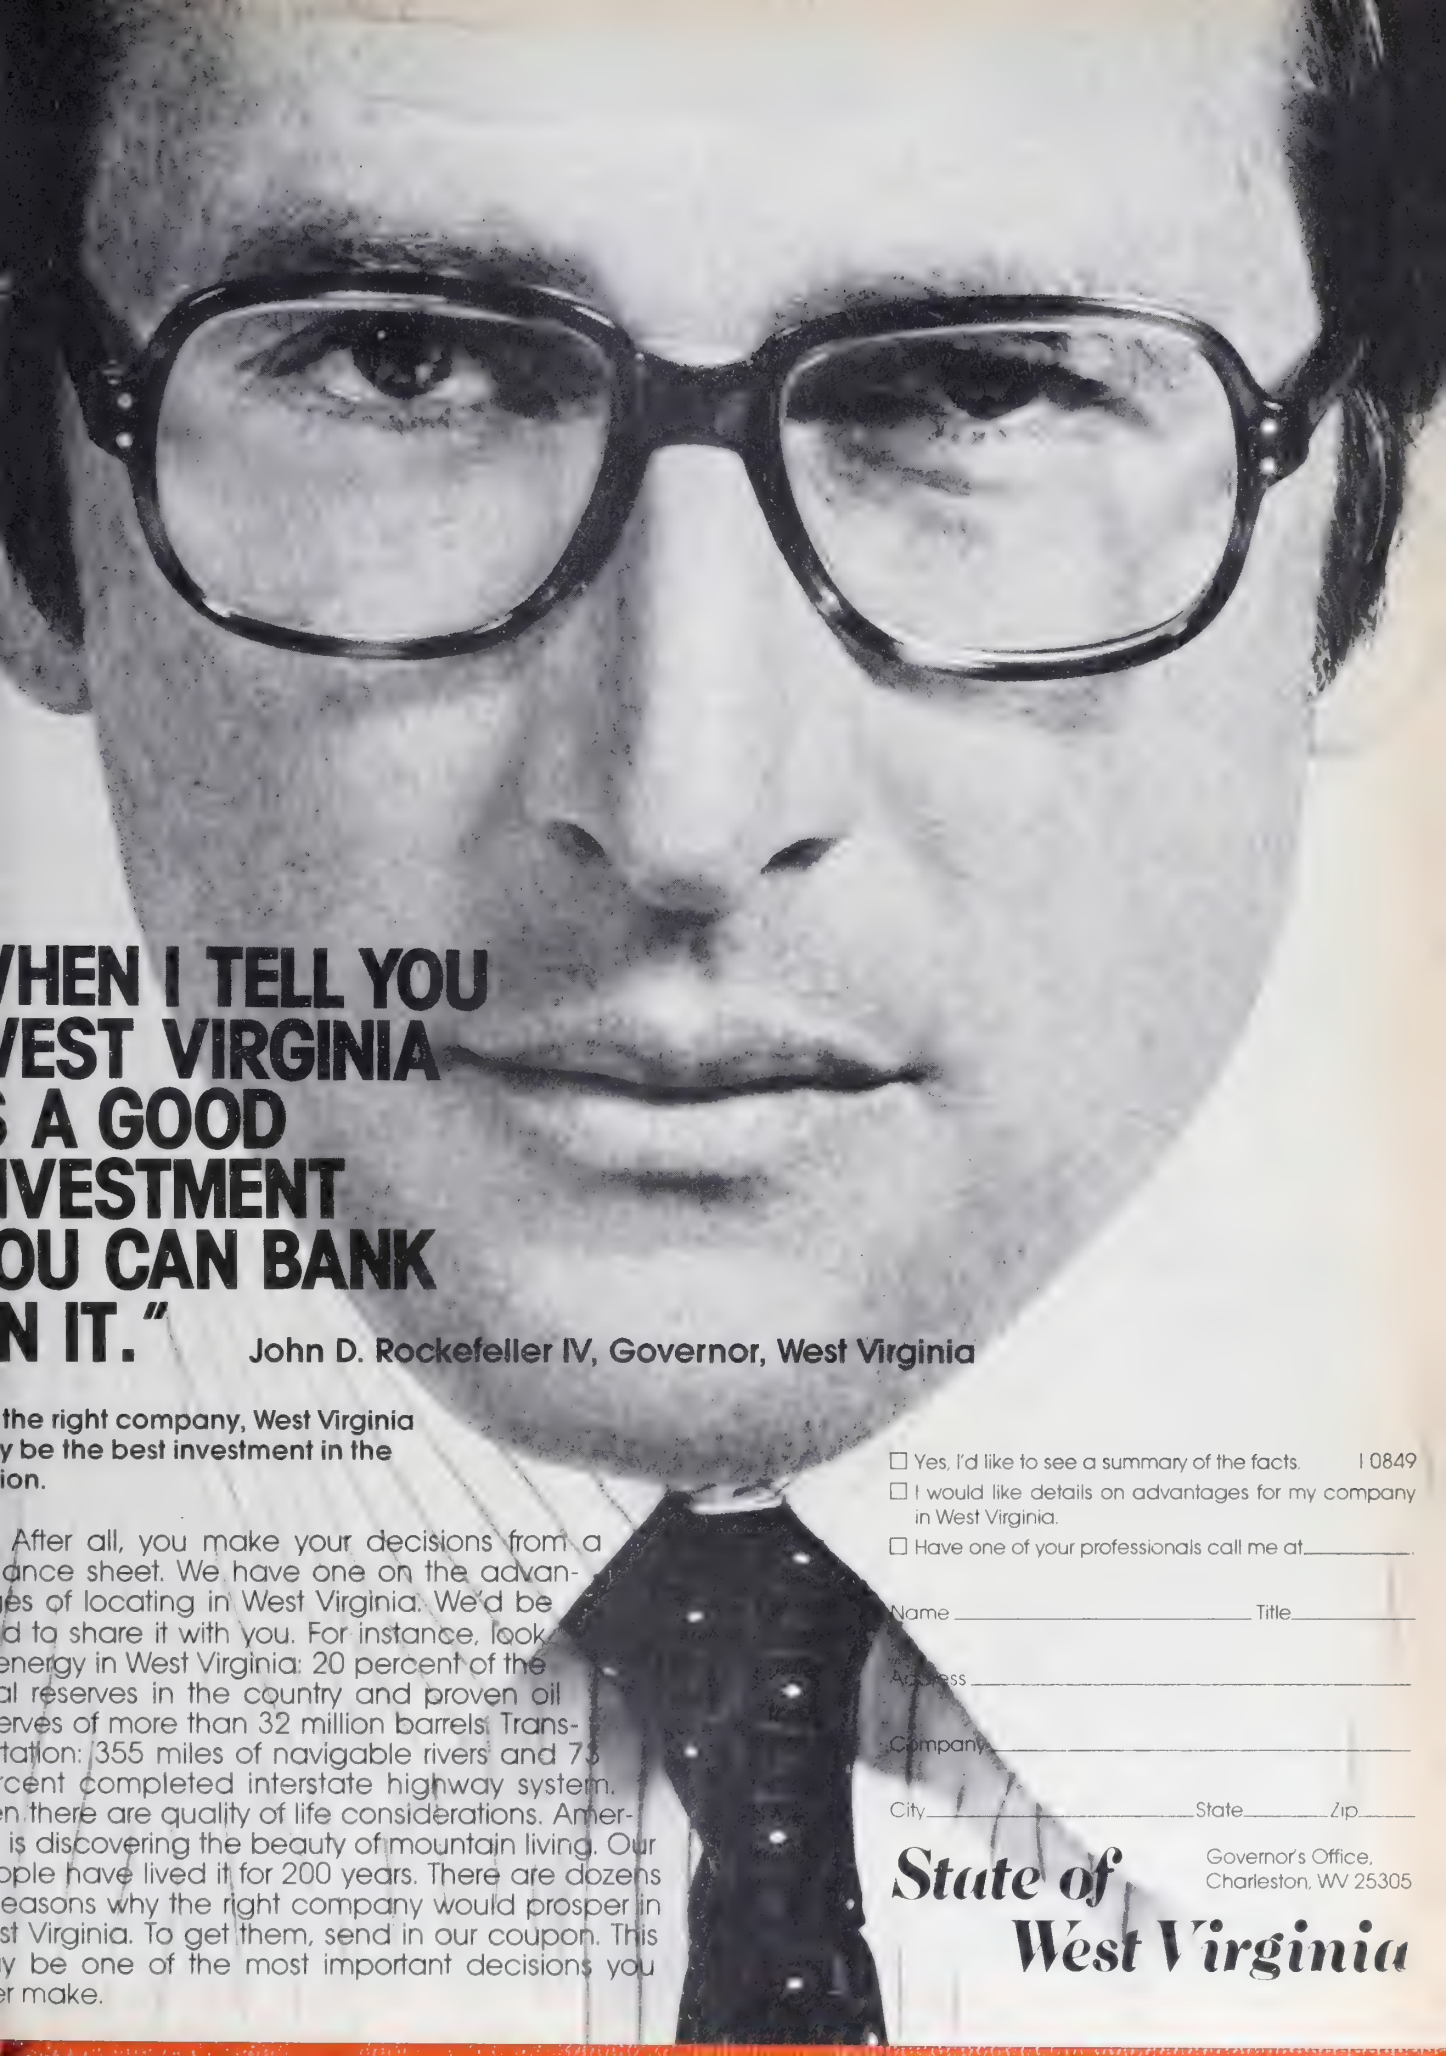
Quality products. Quality man agement. To us at Beech Aircraft it's the only way to fly.

For our complete growth and earnings story, write for a copy of our annual report to: Beech Air craft Corporation, Dept. K, Wich ita, Kansas 67201.

Beech Aircraft Corporation

Beechcraft

Beech builds quality airplanes. And vice versa.



VHEN I TELL YOU VEST VIRGINIA S A GOOD IVESTMENT OU CAN BANK N IT."

John D. Rockefeller IV, Governor, West Virginia

the right company, West Virginia y be the best investment in the ion.

After all, you make your decisions from a ance sheet. We have one on the advan- es of locating in West Virginia. We'd be d to share it with you. For instance, look energy in West Virginia: 20 percent of the al reserves in the country and proven oil erves of more than 32 million barrels. Trans- tation: 355 miles of navigable rivers and 7 rcent completed interstate highway system. en there are quality of life considerations. Amer- is discovering the beauty of mountain living. Our ople have lived it for 200 years. There are dozens easons why the right company would prosper in st Virginia. To get them, send in our coupon. This y be one of the most important decisions you r make.

☐ Yes, I'd like to see a summary of the facts. I 0849

☐ I would like details on advantages for my company in West Virginia.

Contributing Editor Phalon

Crime without punishment

A professor's 12-year-old son and two of his younger classmates were recently caught stealing candy from a supermarket. The manager apprehended them, got their names and after sending them home called the professor's wife. The boy received a sharp reprimand, after which he ran to his room, crying. An hour later when his mother went to talk with the boy, he blurted out: "It's all your fault; you're too permissive." It is hard to answer the child. Modern Americans are being taught that their misdeeds are not their fault; it is the system, whatever that is, or their parents or schoolteachers who are to blame.

In researching the cover story, *The game where nobody loses but everybody loses*, which begins on page 55, Contributing Editor Richard Phalon found a corresponding indifference to the epidemic of nonviolent theft which is afflicting our society. Almost every lawman interviewed seemed as frustrated by the public's increasingly casual view of crime as by the law's own inability to cope with the alarming rise in property cr Criminologist Marilyn Walsh, for ex ple, talks of the "demoralization" o city burglary squads that are founde under the weight of tumescent loads. In some jurisdictions, the case is so heavy that investigations are "The police are being reduced to the l of clerks," said one official. "All you is some hand-holding and three piec paper—one for the police files, one your files, and one for the insur company."

In New York City Phalon found lawman who had recently been rippe himself. The official came downstairs morning to find that somebody broken into the 1977 Ford van he parked in front of his apartment buil the night before and had taken the front seats. "They had to work at get those seats out in full view of any sersby, and God knows how many ap ment windows," the lawman said. "T knew that nobody who saw them going to say a word." To paraphrase w the little boy said to his mother: We becoming a very permissive society.

Dial-a-gnome

If a Swiss banker jumps out the window, Voltaire is supposed to have said, follow him at once: There is 10% interest to be made in the process. That probably overrates Swiss bankers' judgment, but clearly they are discreet, efficient—and their currency is the soundest around. An ideal combination for rich depositors like Iran's deposed Shah, who is rumored to have $16 billion socked away in Alpine security. Over a four-day visit with nearly a score of Switzerland's top investment advisers, FORBES Associate Editor Paul Sturm *(see story, p. 128)* discovered a less-well-known attribute: their surprising accessibility. Teleph Swiss Bank Corp.—nearly as large New York's Manufacturers Hanov and the switchboard will gladly straight to the desk of a senior president.

But despite the absence of PR men, gnomes know when to keep m Though most Swiss banks have ul modern computer systems, they o skip written statements entirely. "S pose you live in some Latin Ameri dictatorship," explains one Zurich p folio man. "Do you want a fat bro envelope from Zurich in your mail every month?"

How to Cut Your Income Tax to Zero

Tax law says you don't have to pay taxes — even if you earn between $15,000 to $35,000 or more!

Nobody likes to pay taxes. And the tax laws in this country say you don't have to.Most people think that the wealthy are the only ones who can save thousands of dollars each year on their taxes. But anybody with an average income can take advantage of the tax law.

In the next 12 months you can reduce the amount of federal and state taxes you pay, to almost nothing.

Let me explain exactly what I mean. Tax shelter's nothing more or less than taking advantage of the tax laws that were put there for a reason. The reason is to help you and motivate you to invest so you will help the economy of the United States. (Your investment doesn't have to be cash, either. It can be just a bit of your time.)

The key to saving on your taxes is a little thing called "depreciation". You see, the U.S. Congress years ago decided that depreciation on certain kinds of properties could be deducted from your taxable income. (Depreciation in theory means, that your property goes down in value because of physical as well as functional deterioration.)

So now, even if your income is only 15,000 to $35,000 a year, you can quite easily acquire enough property with enough depreciation that your tax bill is zero or close to it. And you can buy those properties without any cash of your own. Read on and you'll see how.

Here's a simple example: If you bought a duplex for a total of $75,000 and bought it entirely with someone else's money — and I'll show you how to do that in a minute — how much depreciation and tax savings would that give you.

Let's say you rented your duplex out for $800 per month and you have to pay back your loan of $75,000 in 30 years with 10¾% interest. Your monthly payments would now be $700.11, leaving you with $100 to pay for taxes, insurance and other expenses. (The $75,000 loan would self liquidate by the rent you'd receive)

Now here comes the good news. This property would give you approximately $6,250 in depreciation. Your $6,250 could be deducted from your taxable income. How's that for a deduction!! That's without any cash investment on your part.

But that's not all. If you are now making $20,000 a year, instead of paying $3,999 that you would normally pay, you now pay only $2,229. That's a nice little chunk of money to get back after you file your tax return.

If you bought two properties just like the one above, your tax would be only $710.

But that's still not all. By using your cash rebate wisely, you can improve the value of your $75,000 property by 10% to 35%. How? By making the right kind of inexpensive improvements, which will allow and justify an increase in rent by 10% to 35% or more, which of course will increase the value of your property by a like amount. (And I do know what I'm talking about here, as I've been doing this for a number of years with millions of dollars worth of property.)

Now that your $75,000 property is worth more, you could sell it and pocket your profit, but there's a smarter and wiser step to take. Don't sell it, keep it. Why? Because of the tax shelter it's giving you. (If you need the cash, you might go ahead and sell it anyway, or better still, get a second mortgage on the new equity you created and keep the property and all the benefits it's giving you.)

You see, now you've got that tax shelter every year. What do you do now? Go out and repeat the process if you want more shelter. If your income is $30 - 40,000, you'll want to repeat the process several times until the point that your tax liability is zero or close to it.

It really is a great deal — you not only save thousands of dollars each year in taxes, but your net worth will be climbing rapidly. (Both because you are improving the property and as a bonus, your property is moving up in value ($7,000 to $8,000 each year)just because of that thing called inflation.)

But wait a minute, you say! How do I buy a property using other people's money without using any of my own? Well I thought you might ask that, so I'm ready with the answer.

In fact, I wrote a complete book about it. Now don't get upset and stop reading now! I know most books written on tax shelter and the buying of income property are fairly difficult, complex and confusing, but mine is not. I wrote it in language which anyone can understand and I know it works, because I've done it myself. In just 48 months I netted over one million dollars and paid less taxes in those years than the guy that makes $20,000 a year.

Tax shelters are nothing more or less than taking advantage of the tax laws that were put there for a reason.

So now here comes the sales pitch! I want you to stop paying so blasted much in taxes. Not because I'm trying to start a tax revolution, but because tax laws are there that allow you this privilege

Oh, yes, and I want to sell copies of my book, *HOW TO WAKE UP THE FINANCIAL GENIUS INSIDE YOU!* This will not only show you how to save thousands of dollars on your taxes (or even reduce them to nothing) but it also will show you how to build a very large networth of several hundred thousand dollars or even several million dollars or add $500 or $1,000 to your monthly paycheck.

Now, if you can't quite believe everything I've said (I don't really blame you. Most people, including myself, are basically skeptics.) then I would encourage you to check me out. Call or write my bank (Utah First Bank, 3135 South 1300 East), or my accountant (Charles Huber & Assoc., 1050 Beneficial Life Tower), or the Salt Lake Chamber of Commerce, (19 East Second South, All in Salt Lake City, Utah).

Department of the Treasury
Internal Revenue Service

Instructions for
Form 1040
and for
Schedules A, B, C, D, E, F, R, RP, and SE

(Tax Tables—pages 31-42)

From the Commissioner

These instructions contain information needed to complete Form 1040 and Schedules A, B, C, D, E, F, R, RP, and SE. Form 1040 appears to be the right form for you. But before starting, please check to see if you can file Form 1040A instead. Form 1040A is an easier form to complete and you should file it if you can. (See page 4 of the instructions—Which Form to File.)

Although the appearance of Form 1040 is somewhat different from last year's form, the line items are the same.

If you do your own return, the revised instructions this year should help you. They have been rewritten in simpler language and have been rearranged to follow the lines on the form more closely.

If you decide to have someone else prepare your return, select a qualified person. If you pay a preparer, the law requires the preparer to sign the return, enter the preparer's identifying numbers, and give you a copy of the return.

Ask your preparer to consider whether you can file Form 1040A instead of Form 1040.

We are always looking for ways to improve our forms and instructions. If you have any suggestions for improvement, please write to us.

If you need help, please call us at the number listed for your area on page 46, or visit an IRS office.

Tax Law Changes

Congress recently enacted legislation that allows credits for one or more dependents for your personal residence. See page 45 of Form 1040 should be used. To claim these credits, Congress also enacted legislation that

A little known tax law being used by thousands to legally eliminate income taxes.

Also, when you order, why don't you postdate your check by 30 days. If there's *anything*, and I mean anything at all you don't like, then send my book back and we'll send you your check back the same day.

But if you're going to do something, do it NOW. Don't put this paper down without taking action. In fact, if you've decided to order or if you have any questions, go to the phone right now, pick it up and call 801-973-4053, 24 hours a day, and you can order by credit card. (The same 30 day guarantee applies to credit card buyers.) The investment I ask you to make is only $15.00.

Here's a small list of some of the things that this publication is guaranteed to do for you. It will show you how to:

- Shelter your income by legally avoiding paying federal or state income taxes
- Add cash to your monthly salary
- Benefit from inflation rather than being hurt by it
- Buy income properties for as little as $100 down
- Begin without any cash
- Put $10,000 cash in your pocket each time you buy (without selling property)
- Double your assets every year.
- Buy bargains at one half their market value
- Allow you to travel one week out of every month
- Save 10% of your salary
- Reinvest your tax savings for even greater tax shelter

To order, simply take any size paper and write on it the words "FINANCIAL GENIUS" - Dept. G-539. Send with your name, address and a check or money order for $15.00, to me Mark O. Haroldsen 2612 South 1030 West, Salt Lake City, Utah 84119. To speed up the process you can pick up the phone right now and call 801-973-4053, 24 hours a day,and use your credit card to order. We take all major cards.

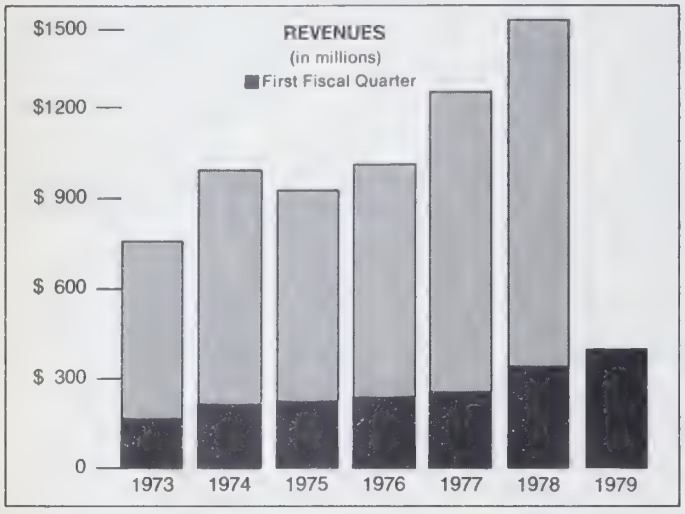
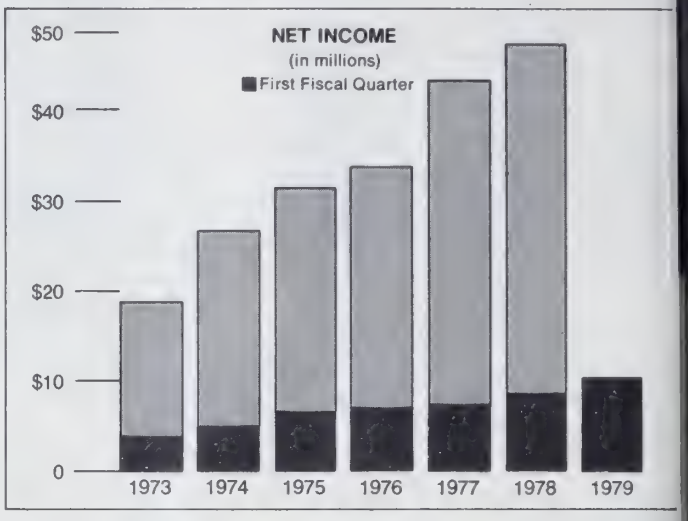
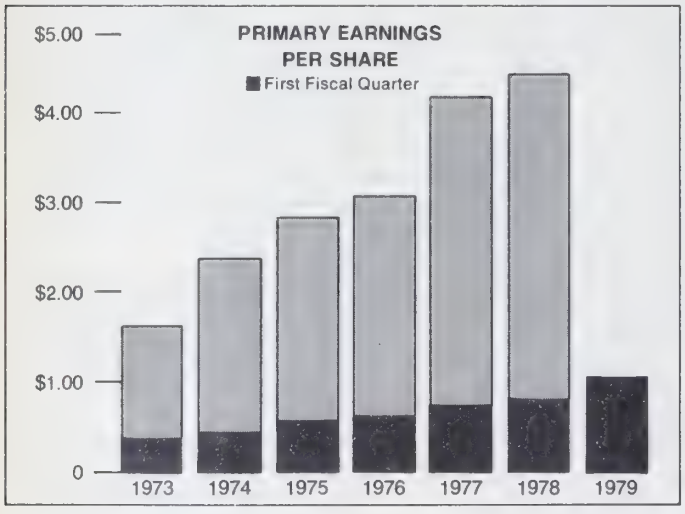
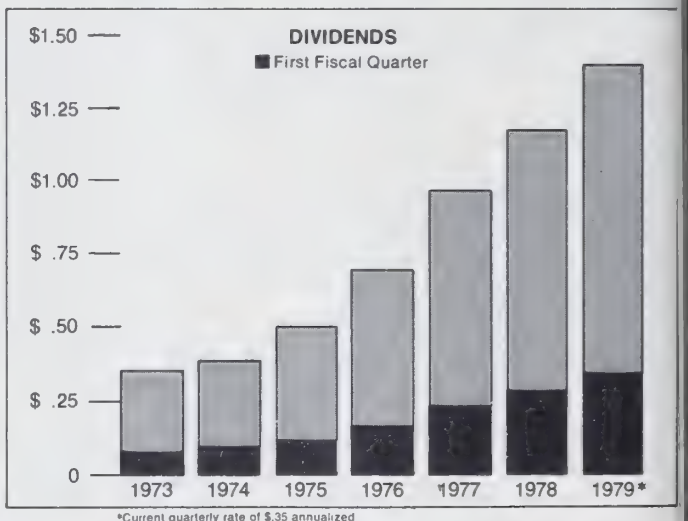
ALCO STANDARD'S SIX CONSECUTIVE GREAT YEARS

Have positioned the Corporation for its latest record quarter.









*Current quarterly rate of $.35 annualized

Alco Standard Corporation Financial Summary Three Months Ended December 31		
	1978	1977
Revenues	$436,472,000	$341,468,000
Income Before Taxes	20,277,000	16,071,000
Net Income	10,727,000	8,721,000
Primary Earnings Per Share	$1.06	$ .81
Dividends Per Share	$ .35	$ .29

Alco Standard reports its best first fiscal quarter results ever for revenues, net income and earnings per share for the three months ended December 31, 1978.

Revenues climbed 28%, net income 23% and earnings per share 31% compared with the same period a year earlier. Revenues of $436 million were the best for any quarter in the company's history.

During the quarter, a year-end extra cash dividend of $.06 per share was declared, along with a regular quarterly dividend of $.29 per share. The year-end extra has now been declared for the three latest years—in an increasing amount each year.

In the second quarter, the Board voted to incorporate the year-end extra payout as part of a new quarterly dividend rate of $.35 per share. The indicated annualized dividend rate is now $1.40 per share, compared with a previous yearly rate of $1.16 in fiscal 1978. This represents the 14th consecutive year since the founding of Alco Standard that the dividend has been increased.

The outlook for the balance of Alco's fiscal year remains optimistic, principally because of strong incoming order levels for the manufacturing and distribution groups.

If you would like to know more about Alco Standard, we invite you to write for a copy of our 1978 Annual Report and our new First Quarter Interim Report. Alco Standard Corp., Dept. F2, Box 22479, Cleveland, Ohio 44122

The Corporate Partnership™
Serving the areas of Manufacturing, Distribution, and Resources

ONE REASON WE PLACE MORE COPIERS THAN XEROX IS WE'RE IN MORE PLACES THAN XEROX.

It may come as a surprise, ut we're in nearly 500 more places han Xerox.

In fact, with over 600 branch nd dealer locations, Savin has the rgest copier distribution and ser- ce network in the country.

But Savin does a lot of things fferently than other copier com- anies.

Savin doesn't discriminate gainst its own copiers. Savin ases its discount allowances on ne combined use you give all your avin copiers. Not on how much ou use one particular model. Like you-know-who.)

On top of that, you get a wer cost-per-copy rate quicker. Quicker than who? Quicker than uess-who.)

Your Savin representative won't write you off after he's written you up. He's around so much, you may come to think of him as an accessory for your Savin.

In addition to selling, renting and leasing copiers, he regularly evaluates your needs.

He'll make sure your Savins are in the right place. That your place has the right Savins. And that your Savins are doing what they're supposed to be doing.

As your business grows.

Savin copiers don't only copy. They multiply. With all that Savin has going for it, it figures that Savins have a way of reproducing themselves.

Let one in and, before you know it, there's another one.

(Which is why we've developed our CMD Program. It deals with major multiple placements exclusively.)

Savin doesn't make you sorry you bought what you bought when you bought it. If you bought a Xerox 4000 for $22,000 a few years back, you might be mighty sorry. Because now you can get one for less than half that.

That goes for their 3100 model, too.

But it doesn't go for any Savin.

They're still going for what they went for.

And going fast, at that.

If you're interested in placing Savins at your place, call us. 914-769-8805, Monday through Friday, 9:00 am to 5:00 pm E.S.T. We'll tell you all about our CMD Program. We'll tell you all about the Savin Success Story, too. And the new measure of reliability and technology our incredible 700 series is bringing to American business.

savin

We've seen the future. And it works.

The shrinking paycheck

The great American paycheck, once as proud a standard to the world as Old Glory, has lost much of its luster. The U.S. had fallen to fifth place among the top 12 industrial nations by 1977, the last year with available statistics; in 1972 it stood at the head of the pay line, according to a survey by Towers, Perrin, Forster & Crosby, the international management consultant firm. Japan, with average hourly manufacturing earnings of $6.70 an hour (based on October 1978 exchange rates), is now tops, followed by Sweden, with $6.13, Belgium ($6.10), West Germany ($5.76) and the U.S., with $5.63 an hour. Japan's lead actually is probably far greater, because it is the only country in the industrialized world where a worker's wages are topped by the fringe benefits sanctioned by a benevolent government. Towers, Perrin, which numbers salary administration and executive compensation among its specialties, says the disparity becomes much greater on management levels. Salaries of chief executives for U.S. overseas subsidiaries can now run as much as 40% to 50% higher in Belgium, Holland or West Germany than the compensation of their counterparts—in the same company—on this side of the Atlantic. Five years ago a difference of 10% or 15% was noteworthy.

Call and complain

One of Washington's newest hot lines—the General Accounting Office's toll-free number for reports of federal fraud and mismanagement—is functioning "beyond all expectations," according to Comptroller General Elmer B. Staats. The GAO line was hooked up in January and more than 500 calls a week have been coming in ever since. A respectable 62% of the gripes, Staats says, are worth investigating, and about two-thirds of those involve "intentional wrongdoing." Half the complaints are about federal workers; most of the others concern government contractors or recipients of federal aid. The number? 800-424-5454.

Pizza progress

Is pizza on its way to becoming the national dish? Figures for cheese production in the U.S. certainly point that way. In 1977, the latest year for which the National Cheese Institute has official numbers, American dairymen churned out 544 million pounds of mozzarella, a basic ingredient of pizza, second only to cheddar, which topped 1.5 billion pounds. Preliminary figures for 1978 show production of the creamy Italian delicacy still climbing, passing the 594 million-pound mark. In 1973, cheddar's total was 1.3 billion pounds, compared with a modest 374 million for mozzarella. The per-capita numbers tell the story even more graphically. In 1964 consumption broke down to a canapé-size 0.6 pounds for each American. By 1972 it was up to 1.6 pounds per capita, and by 1977, to a lip-smacking 2.5 pounds.

Tossing a pizza

A bigger slice of the pie.

Furor before the fact

Gasoline rationing may still be only a blur on the horizon (although a persistent one), but those who would be deeply involved in any such program are already complaining about it. Service-station operators have little liking for the idea and the National Congress of Petroleum Retailers is asking the Department of Energy for a 2-cent-a-gallon price hike to cover the cost of handling gasoline coupons should any program be put in place. (The gas pumpers want another 3 cents a gallon to cover overall costs of keeping their stations open.) Bankers are also raising a protest over getting stuck with all the work should rationing arrive. The chore, the American Bankers Association has told Congress, should be handed to savings and loan associations, big corporations, government offices and d ment stores as well as banks. If have to carry the full load, the ABA it "will merely add lines at the ban top of lines at the gas stations."

The poverty line

The poverty line set by the federal ernment, an Oregon campus econ contends, has been drawn in the v place. The Washington experts, say Morton Paglin of Portland State versity, ignore what he calls "in income—multibillion-dollar, no items like food stamps, public ho and Medicaid—and this greatly di the poverty picture. By his lights poverty rate in the U.S. is 3% o population instead of the 12.3% fi by the Census Bureau. The bureau, lin notes, tagged the poor at 25.4 m Americans in 1968 and at 24.7 milli 1977, showing practically no declin tually, he insists, fewer than 8 m Americans should be considered as in poverty. The government's figur argues, ignore the fact that from 19 1975, "in kind" assistance went $4.9 billion a year to $19.7 billion.

Buy-American barrie

The car buyer looking longingly at cent-to-10-cent-per-gallon differenc tween leaded and unleaded gas could become a factor in the sale o ported automobiles. About the choices available in a car that can us cheaper leaded fuel come from ab And if the shopper lives in Calif that state's superstrict clean-air limit the options to just three: Honda, three BMW models and $48,000 Porsche 930 Turbo. Drive other states have a wider but still lir range—Honda, Datsun, Renault, V wagen, Fiat, Audi and Porsche. The American shopper, it seems, is o luck for now.

Bargain-basement brok

The "discount broker," created by Congress in May 1975 when it decre end to Wall Street's system of fixed missions, is riding high and looking higher. Quick & Reilly Inc., the firs biggest New York Stock Exchange r ber to move into the no-frills, cu format, started with 1,400 custome 1975. It now has thirteen offices s from Boston to Florida, a staff of 19 44,000 accounts, and last week Quick (Reilly is no longer with the added his own clearinghouse servic

Introducing the last word in First Class.

Today, with the development of our long-range 747SP, Pan Am can take you to places nearly halfway around the world non-stop.

But non-stop flying doesn't mean much without non-stop service.

So, for First Class passengers on our 747SPs, we are proud to introduce new ideas you won't find on any other airline.

Like our new Sleeperette® seat. When it reclines, the Sleeperette® stretches out to the length of four-and-a-half of our windows. Perfect for reading, enjoying stereo or getting a good night's rest.

Another First Class exclusive: a choice of banquette table-for-two seating or individual dining at your Sleeperette® seat. And, of course, superb international cuisine.

Whether you fly First Class on our 747SP with the Sleeperette® seat, or on our traditional 747, you'll experience the same high standard of service that our First Class passengers have always enjoyed.

You see, we want to be the world's first choice in First Class service.

See your Travel Agent or transportation department.

PAN AM®

We fly the world the way the world wants to fly.

One of the most familiar landmark in the world of finance.

By now just about everyone r nizes the Pyramid as the symbo Bankers Trust.

We've been one of the 10 lar commercial banks in the nation over 25 years.

But we're not just a cornerston American finance.

Since we began making our mar New York some 75 years ago, our s has become worldwide—with a work of offices across six continent

Everywhere you find us, you'll the experience and expertise neede provide a long list of quality serv

Like SITS—the first tape-to-t communications system for fast accurate securities handling. Or first computerized letter of credit tem. We also expanded computer banking with our Cash Connector– most complete link between man bank ever devised.

And yes, we're still *the* bank trusts—the preeminent bank in the of employee benefits and a leade almost every aspect of trust adm tration and investment.

Wherever you see the Bankers T Pyramid, you're dealing with a service bank in the fullest sense of word, with the capacity to raise, and manage money worldwide.

Whatever your needs, a visit to the Pyramid can be a rewarding experience.

70's.

EO COMMUNICATIONS:
NO LONGER THE
LM OF SCIENCE FICTION.

or almost as long as television
isted, scientists, dreamers, and
ate soothsayers have speculated
the day—far in the future—when
ion would be used as a practical
ss tool.
oday that dream is indeed a

arge multi-national corporations
ll as smaller domestic companies)
have found TV to be the most efficient means of communicating with widely dispersed employees. Insurance companies, fast food chains and major manufacturers—recognizing that people can learn from television in 1/6th their normal time—have saved untold amounts by putting employee training programs on tape.

Traveling salesmen, retail stores, and hundreds of other businesses have discovered that video tape is the perfect medium for demonstrating unwieldy products; it has allowed business to reduce sample inventories, cut travel costs, and generally increase productivity.

Even doctors, dentists and lawyers have found ways to utilize the medium to their advantage.

Often for less money—and always with significantly more impact—than any other audio/visual medium.

At Sony, we offer not merely the equipment, but also the practical experience to tailor a video communications system to fit both your needs and your budget, forever keeping the great arbiter of all business innovations in mind: your profits.

AN INTEGRATED SYSTEM VERSUS THE PIECEMEAL APPROACH.

There are any number of companies today that specialize in building cameras, tape players and other sophisticated video hardware.

But even the most advanced video equipment can become a worthless morass of electronic junk unless it's put together in a coherent, sensible manner.

At Sony, before we talk about a single megahertz or digital time base corrector, we analyze your communications needs.

We meet with your people.

Look at your goals.

Study your logistics and budget.

And then—and only then—drawing upon our experience with literally hundreds of other companies, do we feel qualified to recommend a comprehensive video communications system.

Admittedly, our capabilities allow us to offer you anything from the simplest black and white video recorder to something approaching the CBS Television Network in size.

But being the only communications company in the world to produce the full range of video equipment, including video cassette players and recorders, cameras, monitors, editing units—even the video tape itself—offers several distinct advantages to the video neophyte.

There is only one company to deal with.

Only one service organization to call.

There is no need to worry that one piece of equipment is incompatible with another.

Or totally obsolete.

HARNESS THE GENIUS OF THE WORLD'S PREMIER VIDEO MANUFACTURER FOR YOURSELF.

Over the years, the name Sony has become synonymous with electronic innovation and quality.

In 1955, Sony marketed the world's first transistor radio.

In the 60's we introduced the miniature television set.

Sony Trinitron color television sets have often been heralded as the world's best.

The Sony Betamax system is so innovative that several of our competitors are using our patents.

And today, our video communications systems are being used by over 800 different sized corporations, a handful of whom are listed below.

Viva Miami!

"Something always seems to come along to save Florida," FORBES noted a year and a half ago *(Nov. 1, 1977)*. This time, salvation rode a flood of Latin American dollars, generated by deep-seated fears that a new wave of unrest south of the border could wreck the economies there and wipe out private fortunes and their owners. Banks from New York and other money centers were flocking to Miami to get in on the action and the city-by-the-sea was headed for a new crest.

The money is still coming. Southeast Banking Corp., the state's biggest, has more than $850 million in Latin wealth in its coffers and Vice President-Treasurer Thomas B. Walker estimates the total in southern Florida at $1.5 billion to $2 billion. Miami's economy is in ferment and the only question, says Charles J. Zwick, Southeast's president, is: "How much solidity is there underneath?"

From the looks of things, a solid foundation is taking shape. Along with the nervous millionaires, investors are eyeing Miami, not only from Latin America but from as far away as Hong Kong. A planned $20 million bank building indicates the international mix that is the new Miami. It will house the regional headquarters of Florida's Barnett Bank; the money is coming from a Miami plastic surgeon, from Latin America, from a New York insurance company, from a big Spanish construction firm, Madrid's Huarte y Compañía; and the project was put together by Miami entrepreneur David R. Weaver, a young Canadian who is the son-in-law of a Texas congressman. Within sight of the Barnett tower, the U.S. subsidiary of Hong Kong's Swire Properties Ltd. has teamed with a local developer to buy 33 of the 44 acres on Claughton Island in Biscayne Bay to erect a 2,000-unit, $150 million condominium. A few years ago, with miles of them standing empty, "condominium" was a dirty word in Miami.

West of Miami's International Ai the first buildings of a new 60(square-foot free-trade zone are abc open their doors. Two Colombians, man Leiva and his wife Maria Ca are building the $25 million zone, v $10 million loan arranged by First o ton Mortgage Corp. and the rema from investors, mainly Latin. The I think it is the first privately owned trade zone in the world.

The airport itself is bursting a seams. Director Dick Judy's run handled close to 17 million passe last year and air cargo worth $4 bi With only New York's Kennedy m more international freight, Judy' complaint is a lack of lift to handle and he rejoices at the arrival of carriers like El Al and Lufthansa. (I 71 scheduled carriers will use Miam year, compared with 67 for Kenned

The money men are still comi dozen "Edge Act banks" (subsidiar out-of-state banks that can handle international financing and foreig posits) are operating in Miami and January 1978, 13 overseas banks either arrived or applied to do so, co from Israel, Canada, Great Britair gentina, Spain, Brazil. (The latest to for Florida is South America's bi Banco Do Brasil, with $49 billion sets.) Some of these, the Canadian example, have followed sun-se well-heeled fellow-citizens to Fl The others are moving in to get in o money flow. Alexander (Mac) V president of Southeast Banking C banking group, expects that flow to tinue and he sees only one cloud o ami's horizon—New York's pro "free banking zone," which woul banks there function in a way com ble to wide-open offshore financial ters like Nassau. That, he fears, create "revolving doors" to siphon ey into overseas markets and wealthy Latins into bypassing M and heading north. But if that sl

The Temple of Heaven, Beijing

Where do you find the experience you need to trade with China?

Ask Chicago's Bank.

Whatever it takes financially to do business with the People's Republic of China, First Chicago is doing it.

Since January 1978, we've had a fully operative correspondent relationship with The Bank of China. First Chicago was the first U.S. owned bank to have one. And this relationship enables us to provide every banking service you need to trade with China.

During our first full year of experience, we negotiated hundreds of letters of credit ranging in size from ten thousand to tens of millions of dollars. For imports ranging from mineral ores to machine tools, from textiles to hand painted egg shells.

We've handled documentary currency collections for soft drinks and steer hides, tractors and tin plate, and countless other exports to China.

First Chicago has helped companies from all over America and the world get their message across to the Chinese. We've helped them contact the right agencies, locate markets and sources. We've assisted with negotiations and helped structure billion dollar proposals for our customers.

No other U.S. bank can provide this wealth of experience with China.

China is a land of opportunity for businesses of all sizes. To put First Chicago's worldwide financial force to work for you, phone Gregory Tallas, Vice President, at (312) 732-8513.

In America, or anywhere else in the world, ask Chicago's Bank.

You'll profit from our experience.

On January 17, 1980 the world's greatest ship embarks on the world's greatest cruise. The Queen Around the World.

In celebration of her 10th anniversary, Queen Elizabeth 2 sails from New York westward around the world. In 80 days, she will travel almost 30,000 miles, through seven seas, touching four continents, visiting 26 ports.

What a world you'll see! The Caribbean, the Panama Canal and Mexico. The Orient, including Japan and China. The magic of the Taj Mahal. The Black Sea, Russia and Romania. A northward passage of the Suez Canal into the Mediterranean and the gateways to the ancient world—Egypt, Israel, Turkey, Greece and Italy. Then along the French Riviera, through the Straits of Gibraltar to Spain, France and Great Britain.

What a world to see it from! The Queen. The only ship in the world especially designed for world cruising with the largest, most sumptuous staterooms afloat. The Queen is nine hundred feet of sheer majesty. Thirteen decks of fun and excitement surrounded by the romance of the open sea. Dining, dancing, swimming, and relaxing. World-famous authors, lecturers and over 500 entertainers. And the impeccable service of her British crew.

Where would you prefer to board? You can join the Queen's World Cruise at any one of three embarkation points: New York, Ft. Lauderdale or Los Angeles. From Ft. Lauderdale, departing on January 19, you'll spend 78 days cruising and visit 26 ports. From Los Angeles, departing on January 31, the cruise is 60 days, calling at 21 ports.

Free air fare to and from your hometown. As a special bonus, our world cruise passengers will receive complimentary air tickets to or from their hometown when they book the full cruise. (60-day minimum). Rates for the entire 80-day cruise from New York are $9,950—$54,000 per person, double occupancy. Rates for the 60-day cruise from L.A. are $8,650—$46,500 per person, double occupancy. And if you don't have time for the whole cruise, we offer an attractive and exciting variety of shorter segments, with air/sea packages available.

The world and the Queen are waiting for you. Reserve now. See your travel agent or write Vaughn Rickard, Cunard, Dept. FO416, 555 Fifth Avenue, New York, N.Y. 10017.

Wallflowers in bloom

A year ago, FORBES *(May 1, 1978)* ti off 25 "Wall Street wallflowers," st selling at less than five times their jected 1978 earnings, and comme that while some properly belonged i doghouse, others deserved be Chrysler, for example, was a trou company, but was Ford? Ford's low i seemed to reflect nothing more th lack of interest in anything invol automobiles.

Since then, investors have taken a ond look at FORBES' wallflowers. P earnings ratios may not have cha very dramatically but prices have average they have handily outperfor the market. Thirteen of the 25 scored gains ranging from 25% to 1 Columbia Pictures, about 16 a year (presumably because of the forgery theft charges hanging over its fo president), has jumped to more than 33% gain. The conglomerate Tele has climbed 91%. The savings and companies on FORBES' 1978 list have shaken off the cloud they were labo under. Gibraltar Financial has rea 14, a 75% gain; Great Western Finan has enjoyed a 29% rise; TRANSO Financial is up 35%; and United Fi cial, propelled by a takeover bid by tional Steel, has jumped 131%. K Aluminum recorded a 45% gain and can Aluminium, a 50% improvemen

As a group, the wallflowers did m better than the market, with a 27% compared with 8% for Standard & P 500. Its average was brought down by fact that not all of the wallflowers tapped. J.P. Stevens, still the targe unrelenting trade union pressure, barely moved. TWA and Pan Am c not sustain the runups they had, and languished during a year of lawsuits calls, high-level firings and other troul

If all this proves anything, it is many stocks sell at a low P/E ratio, because they deserve it, but because are temporarily under a cloud. clouds often have a very silver lini like Teledyne's or Columbia Pictures

THIS FAMILY OF VOLVO OWNERS HAS ONE MILLION MILES ON IT.

Some years ago, Barry Vandenberg, an insurance agent from Oxnard, California, decided on some life insurance for his family.

He wanted his whole family to drive Volvos, because he felt Volvos were the safest cars on the road.

Sure enough, as the Vandenberg children reached driving age, the Volvo population exploded. Today the Vandenbergs own seven Volvos, with a total of one million miles on them.

"These Volvos are still running beautifully, even after all those hard miles," says Mr. Vandenberg. "More importantly, Volvo's safety features help me sleep better at night. My kids are too old to coddle. But they'll never be too old to protect."

Statistics show that 9 out of 10 people who have bought new Volvos are happy, especially with Volvo's safety features.

Building roomy, dependable, safer family cars has always been a Volvo tradition.

It's nice to see that for some families, buying them is a tradition, too.

VOLVO

A car you can believe in.

Raytheon invented this new way to pop corn

Our microwave popcorn popper is new. It's one of the latest accessories developed by Raytheon engineers to help Amana Radarange® microwave oven users enjoy microwave cooking to the fullest.

But, there's an interesting story behind our new popcorn popper. Because, in a way, we've now come full circle with our involvement in microwave cooking.

Back in 1945, in a Raytheon plant on the outskirts of Boston, an inquisitive, self-taught genius named Percy Spencer made a remarkable discovery. When popcorn was placed in a field of microwave energy, it popped! And microwave cooking was born.

A billion dollar baby.

The first Radarange microwave ovens were for commercial and institutional use, a market pioneered and developed by Raytheon.

Then, in the mid-60's, Amana joined Raythe The resulting combination of technical skill an appliance know-how set the stage for a break-through in home cooking, and in 1967 Amana introduced the first 115-volt countertop microw oven for home use.

years ago.

The rest, as they say, is history. Today, the
et for microwave ovens exceeds $1 billion a
And Amana continues as a solid leader in
ndustry.

But Raytheon's appliance business is much
than microwave cooking. From Amana—
ric ranges and cooktops; energy-saving
gerators, freezers, and air conditioners. From
ric—another Raytheon company—gas and
ric ranges, plus the revolutionary new com-
ion microwave-electric ME range. Together,
make Raytheon one of the country's larger
major appliance manufacturers.

Major appliances—one of five basic business areas at Raytheon. The others are electronics, energy services, heavy construction equipment, and educational publishing. For copies of our latest financial reports, please write Raytheon Company, Public Relations, 141 Spring Street, Lexington, Massachusetts 02173.

RAYTHEON

The powerhouse.

Burroughs large computers give you reliable, cost-effective power for high productivity. And they're easy to manage.

Our family of large computers includes the B 7800, and the B 6800 (shown below). These multiprocessing, multiprogramming systems offer outstanding price-performance. Particularly in extensive data communications network operations, and large-scale data base management.

And for computers that are among the most powerful you can buy, they're amazingly easy to use. Because Burroughs Master Control Program manages the system for you. It simplifies operation and control. It automatically schedules and allocates the system's resources to optimize throughput, leaving programmers free to concentrate on data processing applications.

Our large computers are also totally compatible with each other. For example, if you want to expand from a single processor B 6800 to a multiprocessor system, or move up to a B 7800, you can do it without reprogramming or recompiling.

And remember, when you buy a Burroughs computer you get more than just equipment. You get the bonus of dealing with a total capability company with 90 years experience. And the security of knowing the whole Burroughs organization is behind you.

We call it "Total System Support." Hardware, system software, programming aids, application programs for major lines of business, customer training, system maintenance — even the business forms and supplies you need.

For additional information, call your local Burroughs office or write Burroughs Corporation, Department FRB-4 Burroughs Place, Detroit, Michigan 48232.

Well-balanced mix

We believe FORBES has failed to ap- te the role of aerospace in Textron 5) and has exaggerated the effect of events.

r article on Textron states that Bell pter's growth had "somewhat un- ed the company." In 1978 the entire Aerospace Product Group within Textron accounted for 33% of our sales volume. The Metal Product divisions produced almost the same net income as the Aerospace divisions in 1978 and our Consumer Product companies contributed a larger share. We think it's a well balanced mix.

It is true that roughly one-third of Bell's business has been in Iran, but we believe the commercial helicopter business, with higher margins than foreign military sales, will be the fastest growing part of Bell Helicopter's future.

Bell Helicopter expects to have its second highest sales year in 1979, second only to the record 1978, with a healthy diversification of customers.

—J.B. Collinson
Chairman,
Textron Inc.
Providence, R.I.

What about the users?

SIR: That was a good editorial on safety tops for potions and pills *("Costly overkill to 'save' kids," Fact and Comment, Apr. 2).* As an arthritic, I have been reduced to chewing the top off my motrin bottle, or putting it on the floor and stomping it off. But all the nonexistent babies in my apartment are safe.

—Ellen Stoutenberg
New York, N.Y.

Reaction to Sir Arthur

SIR: Sir W. Arthur Lewis has been living in academia too long *("As I See It," Mar. 19).* He says that "To be doubtful about the U.S., one would have to be doubtful about its capacity to make and exploit technology, doubtful about its entrepreneurship. . . . I don't know what evidence there is for any long-term downward shift in these things."

If he doesn't detect a long-term deterioration in the quality and quantity of entrepreneurial spirit over at least the last two decades, he is not living in the real world. He misses the seemingly irreversible flight from productive industry toward sterile services and counterproductive government employment.

—Emil Skocpol
Dallas, Tex.

SIR: To say that the U.S. could live on its own resources may be true—so did Robinson Crusoe, but he didn't do so well, come to think of it. Sir Arthur carefully avoids the major problem of petroleum and how it is going to be paid

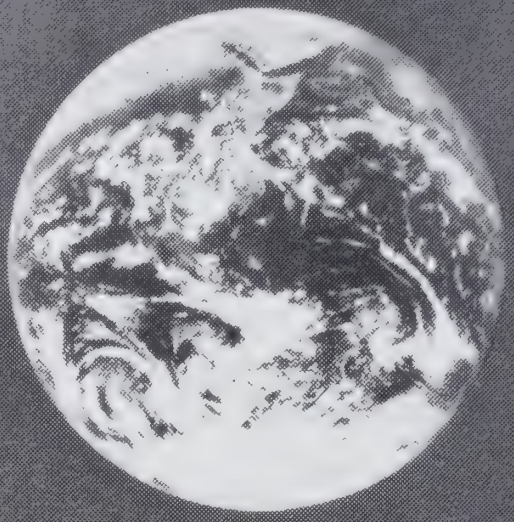
B·A·T Industries' home market...



...and how we did in it last year

A weather satellite view of the earth, taken last year from 22,000 miles.

Out of nearly 200 countries in the world, B·A·T Industries last year traded in more than 140 and manufactured in 78. For us virtually the entire globe is a "home market", with over 82% of assets outside the U.K. Nor is our diversity purely geographical. We are in tobacco, retailing, paper and cosmetics.

Some highlights of our year: tobacco sales grew in volume by over twice the world average; the acquisition of Appleton Papers reinforced the Group's position as one of the world's leading manufacturers of carbonless copying papers; in cosmetics, Lenthéric is now Britain's leading fragrance house.

All this, and much more, resulted in a turnover (including £2,547 million tobacco excise) of £6,676 million and an operating profit of £499 million in the year ended 30th September 1978.

At B·A·T Industries' AGM on 15th March, the Chairman said: "During the year all four Divisions made steady progress. Operating profit was £499 million or 5% higher than the previous year. Comparisons of performance are made increasingly difficult by the strengthening of sterling against many currencies, which adversely affects transactions across exchanges and means that, when the results are translated into sterling terms for reporting purposes, they appear less favourable. We calculate that had the pound been at the same level at the end of the financial year as it was at the beginning, our operating profit, when translated into sterling, would have been as much as £34 million higher.

Particularly notable achievements for the Tobacco Division were the volume recovery in the West German market, the rapid increase in market share in Venezuela and the continuing growth in Brazil. The Division also benefited from the first full year of trading with Lorillard brands internationally. Four State Express brands have been launched on the U.K. market and a foundation has been laid for growth and profitability.

In retailing, our U.S. operations achieved a substantial increase in trading profit; however, in the United Kingdom International Stores' margins suffered as a result of the "High Street war".

The Paper Division, which has extended its activity into the U.S.A. with the acquisition of Appleton Papers, has achieved commendable results in difficult circumstances.

I am pleased to report that profits are back on an upward trend in the Cosmetics Division.

During the past year, negative factors in Britain have become far more serious. Britain will only find a solution to its economic difficulties if common cause is made in the search for industrial and fiscal policies which will reward the provider of capital and the wage earner alike through increased productivity. The focus of the debate has to change from the current preoccupation with income redistribution to a consideration of the ways in which additional real income can be created.

Prospects: For the Group, last year's growth continues in all divisions despite the uncertainties facing international business. I expect there to be a moderate increase in profit attributable to shareholders for the twelve months to the end of September next, provided there are no major shifts in exchange rates."

Peter Macadam.

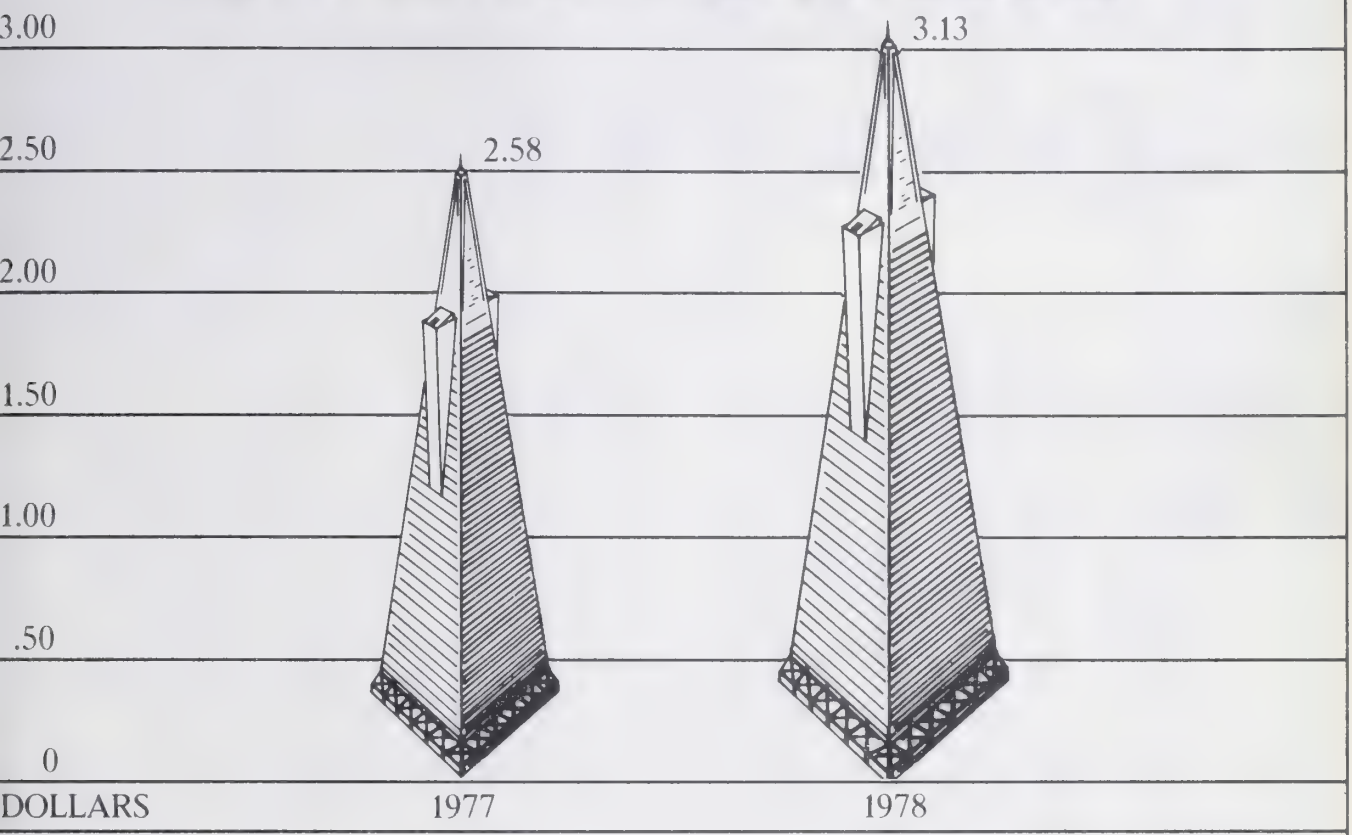
A Record Year for Transamerica



In 1978, Transamerica's 50th anniversary year, operating earnings surpassed $200 million for the first time, reaching $208.3 million. This milestone was achieved only two years after annual earnings first exceeded $100 million in 1976.

Operating income in 1978 was $3.13 per share, an increase of 21 percent over 1977. After-tax return on average equity exceeded 19 percent.

Record performances were contributed by our life insurance, property and casualty insurance, consumer lending, entertainment and travel subsidiaries.

Fact and Comment

By Malcolm S. Forbes, Editor-in-Chief

DON'T LOSE PERSPECTIVE ON THE U.S.A.

is frighteningly unstable. Mexico's sore. China ignores vice on Vietnam. Other Arab nations are angry over the an-Israeli peace pact. OPECers swiftly kick up their of oil. Inflation's still climbing. Gold's orbiting into outer The dollar gets shortchanged with every headline crisis. 'd think from what you read and hear here and around orld that the United States of America was going to hell ucket.

is is hell, then the devil's got a lot of customers anxious in.

In every other land, America from sea to shining sea remains the ultimate in stability, opportunity, individual liberty, freedom and the unwavering *intention* to provide justice for all.

Our money, in its paper form, seems pale next to the Swiss franc, the mark and the yen. But, for the preservation of everything that money can buy, and for the freedom of mind and body that money can't buy, these United States are unequaled.

Let's keep our perspective as we wrestle with our problems and challenges.

IS PERSONAL DEBT OUT OF HAND?

of the high notes played by our innumerable trumpeters ession is the record size of consumer indebtedness. This , say they, that any day now consumers will sharply curb pending.

consumer debt simply isn't as out of hand as the total s would indicate.

e and more it's two- (sometimes three-) income families abitors who are buying durable goods, soft goods, cars omes on time. And the time over which payments can be ned grows longer as the amounts involved grow larger.

he monthly-payment pressure isn't bigger. The psychological reaction seems to be "so what" if monthly payments go for 30 years instead of 20. As far as buyers are concerned, it seems to be a matter of how much each month, rather than the grand total way down the road somewhere. So, too, with car sales and other major commitments (which now even include vacation packages). And it's not the lack of customers that is slowing down housing starts. It's the lack of money. Mortgage granters are hobbled by interest ceilings.

Benjamin Franklin wouldn't recognize this monthly-payment world, but that doesn't mean it's bad, immoral or—yet—out of hand.

THE VOICES OF GLOOM 'N' DOOM

ıder and more numerous every day.

ny thing, though. Of the three dozen CEOs I've had on to talk with in the past month, unlike the boss in this *Yorker* cartoon, only two have reported any actual overall urn in their own substantial companies. And these 36 the business spectrum.

COUNTLESS BAD ADS, AND ONE THAT'S GOOD

Those who adorn themselves in the names, insignia and initials of expensive Adorners appear more cheap than chic. Like wearing a high price tag. And the Makers who make billboards of their patrons reflect a tastelessness that verges on the vulgar.

Who can resist this stopper? We couldn't, and our first Polavision reel was of our twin granddaughters wobbling all over the lot, each on her first pair of skates. This is advertising that *sells*.

Polavision. Instant Movies from Polaroid
Seeing his first steps 90 seconds after his first steps, you hold your breath again.

POPE JOHN PAUL II SEEMS TO HAVE

all the makings that gave Pope John such a wide and deep influence on many of the world's people and their leaders.

It was said, when this Polish Cardinal was picked, that such status would put an end to Polish jokes. In fact, it brought forth a whole new outpouring. One of the first I heard was that, since the Vatican ceiling was in danger of collapse, they decided they needed a Pole to hold it up. A week later, in a superb *Time* cover story on Pope John Paul II, we read that actually "Pope John XXI (1276-77) was killed when the ceiling of papal palace collapsed."

And the same article reported a Roman cab driver as say "Why shouldn't we have a foreign Pope? After all, Saint P was one."

If his successful war-preventing mediation in the Argent Chile dispute is a harbinger, this pontiff is going to h powerful influence far, far beyond the Catholic Church its

SPEAKING OF POPES . . .

There was the one who appeared before the gates of Heaven at the same time as a lawyer. Saint Peter gave the Pope ordinary Heavenly quarters, raiment and treatment. But to the lawyer he gave the grandest suite and Heaven's best of everything. The confused barrister asked why he was being tre so much more lavishly than the pontiff.

Replied Saint Peter, "We have numerous Popes here, you're the first lawyer we've ever had."

SOUTH DAKOTA SENDS STATESMAN TO THE SENATE

South Dakota's newly elected U.S. senator (R.), Larry Pressler, has promised to introduce promptly a bill that would break up "media giants like the Dow Jones monopoly, which controls nearly all the national financial publications," like the *Wall Street Journal, Barron's,* and the Dow Jones news service.

While Dow Jones may consider this statement a mixed accolade, the several hundred other periodicals, services, newsletters, magazines, radio and television commentators on the financial scene are apt to feel slightly slighted.

Senator Pressler's motive comes into focus when one rec that the *Wall Street Journal*, in a front-page story, once scribed then-Congressman Pressler as "a show horse works hard to create an image, not to create laws."

Now that the freshman senator has reformed and emerge a would-be lawmaker, do you suppose he'll make it to surface of South Dakota's Mt. Rushmore?

WHAT A GREAT IDEA!

Presently there are about 15,000 miles of abandoned railroad beds in the nation, and, if dollars and common sense are allowed to prevail, there soon should be thousands more from Amtrak abandonments.

The Department of Interior, which too often presents obstacles to the use of the 500 million acres that come under its aegis, is moving to convert portions of these abandoned rail rights-of-way into bicycle, jogging and hiking trails. It bud ed $5 million last summer for pilot projects in nine states received requests for $70 million in projects—and the wor now under way.

Isn't that a truly splendid idea? What a wonderful wa make a useless thing into an infinitely useful and enjoy something.

SURE JINX

hen our kids were young, we used to load the five of them two Norwich terriers into the station wagon and drive) miles from our New Jersey home to a cabin in Moose, ming. Invariably, my wife would go through the roof—ost literally—when either I or one of the kids would ob-, several hundred miles down the road, that "Thank ness, we haven't had a flat tire," or "Gee, Mom, none of notels have refused the dogs yet."

e was absolutely convinced that verbalizing such luck ld almost instantly change it.

cently, we had embarrassing confirmation of that widely espoused theory. The Jan. 15 issue of *Fortune* carried in its letters to the editor section two pictures—correcting misidentity in captioning in a previous issue. I sent the page along to our editors and copy people, observing that at least we weren't guilty of errors that flagrant. Naturally, it was in the very next issue that we identified Westinghouse's vice chairman and chief operating officer, Douglas D. Danforth, as CEO Bob Kirby, who happens to be known personally to several FORBES staffers.

What do you imagine is the Force enforcing this Law of Jinxing?

IN JOB-SEEKING, THE NEXT DUMBEST THING

arking envelopes to prospective employers "personal and idential" is overtooting, overtouting. The thought came to l reading this gem:

our friends, contacts, and business associates need to be alerted to my abilities. Certainly many of their organizations could withstand [Yep, "withstand" is what the man wrote] an infusion of marketing ingenuity and aggressiveness."

I'd guess they might withstand this job application, too.

TOO LITTLE
usually lasts longer than too much.

TOO FEW
accomplish twice as much as too many.

A POOR COUNTRY LEARNS ABOUT MODERNIZATION

By M.S. Forbes Jr.

PEKING—China's great need for nodernization becomes readily apparent to the visitor. In wintry Peking ne finds bureaucrats and officials vearing heavy clothing inside beause many government office buildngs lack sufficient heat. Go to a store: The abacus is used instead of a cash egister. Go to a construction site: There are few trucks. Dirt is removed n carts pulled by people in harness. One sees cement blocks weighing perhaps 1,500 pounds being hauled on atbeds, each pulled by one man. Horsepower in China is literally just hat. Outside Peking, work animals, hin and calloused, are everywhere.

The Chinese make no secret of all f this. Wherever one goes—factory, chool, commune—the officials inariably end their speeches with omething like, "We are backward nd we are looking for assistance from he industrial countries."

China recently shocked Japanese usinessmen by delaying or canceling arge orders for industrial equipment. The Chinese have been dragging their eels with a number of European and American businessmen as well.

This, of course, is a significant hange from only a few months ago vhen China seemed to be on an interational buying spree. But now bueaucrats have been adding up the cost of their original modernization plans and they're starting to realize that they can't do everything at once. As one official put it to this writer, "The goals have not changed, but the stress has." Before you build a copper smelter, for example, you must first develop the copper mines.

In addition to the lack of money, another serious problem is China's shortage of skilled workers. Some of our group ran into several European engineers working at a supposedly secret Chinese factory utilizing advanced foreign technology. The engineers' tale of woe was long. The Chinese didn't know how to operate the sophisticated machine tools; inventory control and quality control were alien ideas. Said one engineer, "It takes 16 weeks for them to do one or two weeks' work."

The lack of skills was exacerbated by the Cultural Revolution. The visitor quickly learns how devastating this movement was to China's development. Universities were closed down. Studying was condemned as "bourgeois" and "selfish." Research and development ground to a halt. A generation of youngsters lost a critical decade of education.

It would be a mistake to underestimate this country's ability to modernize, however. The desire to learn is palpable. More important, the Chinese seem now to recognize the potency of incentive. Everywhere officials will tell you, "Politics should not interfere with economic laws."

Take China's communes. Farm laborers earn "work points." The more you do, the more work points you are awarded. When cash is received for the crops, the amount of money the peasant receives is determined by the number of work points he has earned.

The Chinese government is no longer embarrassed by the private plots. At one commune, we were told that while private plots made up only 7% of the tillable land, they produced 25% of the value of the brigade's output. Under new government rules, the more a commune produces, the higher the price per increased unit of output the commune receives.

The Chinese are experimenting with incentives for the factories as well. When one of our group asked trade union leaders what their chief function was, they replied, "To increase worker productivity." The Chinese are not only interested in merely enlarging output. One official asked this writer, "Do your engineers study economics and finance? How are they taught to be economically efficient in their work?"

All this, of course, should not be taken to mean that China has become a hotbed of laissez-faire capitalism. Far from it. But ideology is taking a backseat to economic development.

Other Comments

Often comments by others stimulate, irritate, abuse or amuse this editor's mind.—MSF

Bravo!

Intelligence is an operation that has to be run with as little political interference as possible. By political, I mean the Congress and the President. All the mistakes cited against the CIA have occurred at the express direction of several Presidents. How do you expect an agency made up of highly professional people to maintain their capabilities if the press is constantly harassing the organization on problems not of their creation? How do you expect a foreign nation to make it possible for us to acquire intelligence from them when the sources are immediately spread across the press and all of the media? I think it is time that the media take a good, hard look at themselves and assess the damage they have done to intelligence in this country and to take a position of helpfulness rather than anti-intelligence.

—Senator Barry Goldwater, *Wall Street Journal*

Universal Harmony

Einstein's God was the God of Spinoza, the 17th-century philospher who believed that God revealed himself in the structure of nature. "I believe in Spinoza's God who reveals himself in the orderly harmony of what exists, not in a God who concerns himself with the fates and actions of human beings," Einstein once wrote. He was certain that God would have chosen a simpler structure in nature rather than a complex structure. Einstein couldn't accept the notion that God would have structured matter so that randomness governed its behavior. "I shall never believe that God plays dice with the world," he said.

—William Stockton, *The New York Times Magazine*

High-Priced Bargains

There are people in this world who have expensive hobbies. There is the fellow who bought a bottle of Bordeaux wine for $29,000. I, however, grow vegetables. Vegetable growers indulge their land as they would never indulge their children. There are thousands of us, each tilling God's Little Sixteenth Acre with fortune and fanaticism.

But we have all come to this state for the simplest and most attractive of all reasons: Vegetable gardening works. It is relatively reliable and relatively controllable. Relative to the rest of life. The average parent may, for example, plant an artist or fertilize a ballet dancer and end up with a certified public accountant.

Gardening is also much more predictable than governing. If you try to fertilize foreign soil with billions, it may ungratefully sprout a generation of anti-Americans. Pour money into an antipoverty program and you may have only nurtured another middle-class bureaucratic weed. In real life, it is increasingly hard to know what is needed, who the enemies are and what the results of our best efforts will be, whether we are working in science or education. But in the garden, friends are as obvious as the sun. Enemies are as real as the root borer. The goal is as tangible as a head of cabbage. You don't need a consultant to assess failure and success. Under those fertile circumstances even the tomato that ends up with a $1 price tag begins to look like a bargain. At least it's one investment you can sink your teeth into.

—Ellen Goodman, *Boston Globe*

Invading Japan

As Trade Negotiator Robert Strauss puts it, "We could have landed a thousand tanks in Japan 30 days after Pearl Harbor easier than we could land a thousand Ford cars today."

—*Time*

Altering 'em All

Glenn Wolfe believes in marriage, faithfully and, most might say, to a fault. He is 70 years old and going back to 1927 he's been married 22 times, once for as short as 30 days and never for more than five years. Now he's eyeing wife No. 23, Eve Mejias, a 17-year-old who is wa for a court in Blythe, Calif. to act f ably on her petition to be declare adult so they can wed. Most of his riages ended in divorce, but Mr. W said that this time he is "as clos heaven as I can get." Why, he ad "No. 20 called yesterday and wante come up with the baby."

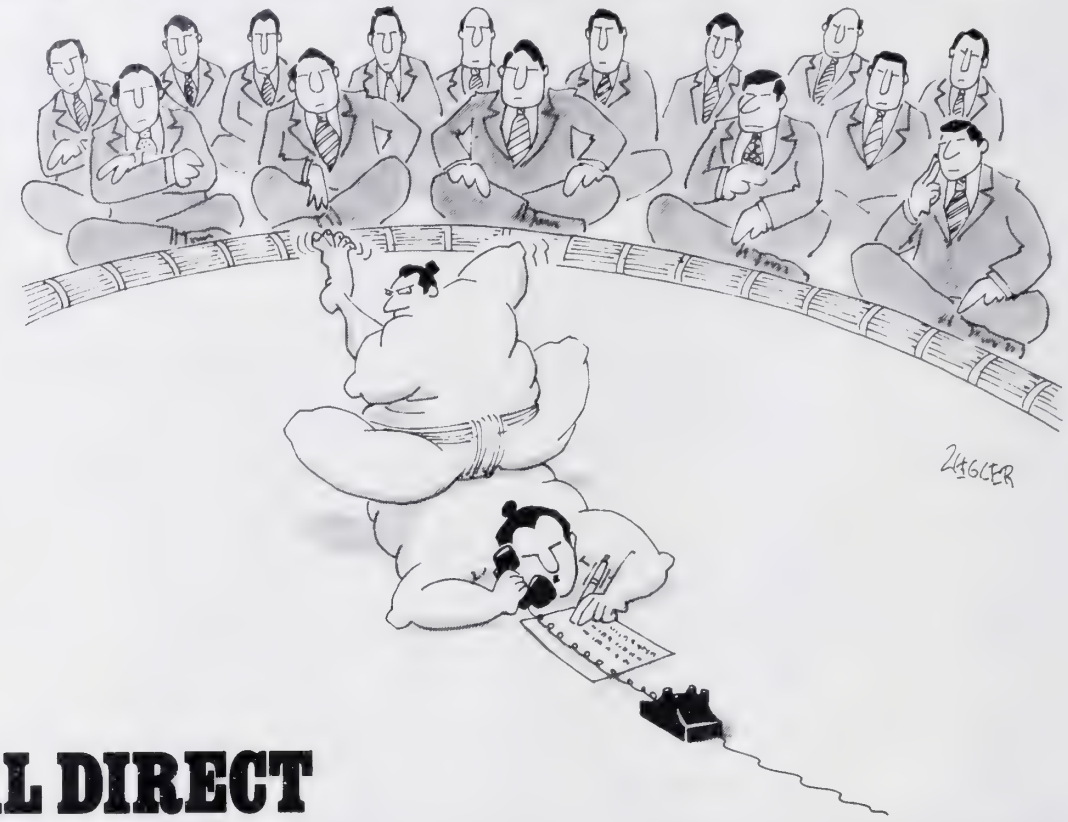
HOW TO TALK TURKEY TO TOKYO



DIAL DIRECT

If you have International Dialing, the world is only a chopstick away, because you can call anywhere, all by yourself. Here's Tokyo. Just dial:

INTERNATIONAL ACCESS CODE COUNTRY CODE CITY CODE

011 + 81 + 3 + LOCAL NUMBER

There's money in it for you, too. A saving of $1.20, which is more than 13% on a 3-minute call to Tokyo.

ALMOST DIRECT

Until your area has International Dialing, here's the way to make a fast overseas call. Dial 0, and be ready to tell the Operator the country, city and local phone number you want and whether your call is Station or Person. The less time you spend on your end of the call, the faster you get to the other. And you leave the Operator free to handle more calls, more quickly. And on Station calls not requiring special operator assistance, you can get the same low rates as International Dialing.

P.S. Everyone can dial direct to Canada, the Caribbean, Alaska, Hawaii, and parts of Mexico–just as you dial direct to cities inside the continental U.S.

Selling sushi or saying sayonara, keep a record of the country and city codes and the phone numbers, and use them to call the world–fast.

CODES FOR PRINCIPAL CITIES IN JAPAN (81)

Bell System

er nosing past Master Charge in the credit-rd race, Visa is ready to try playing American press' game. This one looks a lot tougher.

Visa takes aim at American Express

By John Merwin

DIZZY DEAN WERE still around, he night admire the boisterous style of Visa President Dee W. Hock. In a l filled with financial executives to subtlety or silence, Hock likes to about how Visa is setting the charge-world on its ear and what Visa will chief competitors Master Charge American Express. Some might call 's act pure hotdog, but as Dean, the St. Louis Cardinal pitching genius natural philospher, would say, "It braggin' if ya done it."

leed Hock and Visa International done it. Operating as a private cor-ion owned by its 11,300 "mem-(mostly banks), in five years it has oped a worldwide marketing force, highly sophisticated computer pro-ng centers and has united scores of ent bank cards under one interna-l banner. During the last two years umber of Visa cardholders has in-ed 64% and the volume of transac-billed has risen 91%, coming most-om retail stores and restaurants. merely an also-ran to Master ge, Visa today has surpassed Master ge worldwide in cardholders and in volume *(see chart, p. 45)*, though er Charge retains the lead in U.S. ne. Now it is trying something tougher, taking on American Ex-in the travel-card and traveler's-markets.

ical of Hock's boisterous procla-ns is his latest about the bead Visa is drawing on American Express. "Within five to ten years we expect to be neck-and-neck with whoever happens to be the leader in traveler's checks," Hock explains, politely omitting the leader's name. "We are going to nibble at American Express' travel-card market, too," he adds. (He is far less concerned with the less threatening Diners Club—2.5 million regular cardholders—and Carte Blanche, 800,000 cardholders.)

Visa President Dee Hock
Subtlety is not his strong suit.

Hock, 50, was reared in a small Utah town and attended school through junior college. He spent 22 years in consumer finance before accepting the Visa presidency nine years ago. He is a hard-driving man who has surrounded himself with an aggressive, talented staff.

Two factors, one ironic, account for Visa's recent success against Master Charge. Until 1976 Visa would not allow a bank pushing Master Charge to issue a Visa card, believing the two systems should compete from separate banks.*

Three years ago—here is the irony—the Justice Department *forced* Visa to allow Master Charge banks to issue Visa cards. Because far more banks issued Master Charge than issued Visa, most of them quickly added Visa cards to their programs, dramatically driving up Visa's volume and number of cardholders.

Hock's baiting of Master Charge seems to be hitting its mark on John J. Reynolds, president of Interbank, who at times is obviously irritated by Hock's statements. "I try to reply only when his comments are obviously flip and unfair to our industry," says Reynolds, whose counterpunching style differs greatly from Hock's aggressive approach.

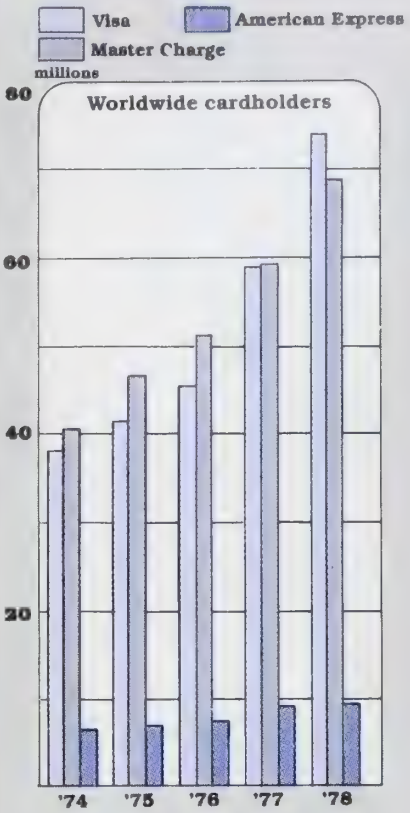
The second reason for Visa's overtaking of Master Charge is its more nimble style. Visa is fashioned as a typical corporate hierarchy whose executives can move fast; Master Charge, governed more by committees, moves slower.

The result has been several important firsts for Visa. Today Visa is known worldwide under one trendy name, while Interbank uses several different names. Visa has surged ahead in foreign markets, leaving Master Charge to play catch-up. Visa was first to introduce a debit card used much like a check—the buyer signs a sales ticket authorizing a deduction

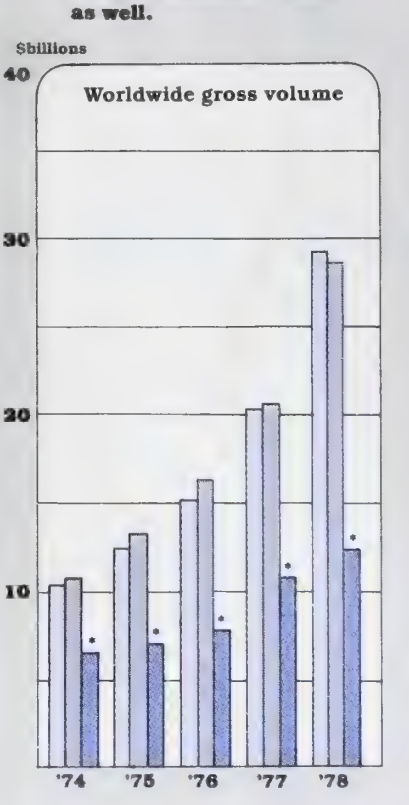
**Because at one time Visa's predecessor, BankAmericard, was owned by Bank of America, many banks were unwilling to issue a card bearing BofA's name. So they formed a rival organization, Interbank Card Association, and began issuing Master Charge cards. Master Charge quickly overtook BankAmericard and remained ahead until last year.*

Charge!

Visa has now taken the lead in numbers of cardholders . . .



. . . and in the gross volume of business billed as well.



*estimated by Merrill Lynch

from his checking or savings account. Master Charge hopes to get its debit card into circulation later this year.

The stakes in the Visa-Master Charge race are getting bigger daily. Banks love to extend credit on charge cards. Such loans—most fetching interest at an annual rate of 18%—have risen 120% in the last five years. Meanwhile, the delinquency rate on these high-interest loans has dropped from 2.89% to 2.74%. Facing a strong challenge from Visa, Master Charge increased its advertising budget 40% last year, but still lost ground and headlines to Visa.

Perhaps the most frustrating race Master Charge is losing to Visa is in the traveler's-check business. Not long after Master Charge beat Visa to the punch by announcing a traveler's-check program, Citibank, which issues its own checks, sued Master Charge, claiming that bank tellers could squeeze Citibank and others out of the market simply by pushing Master Charge checks over competitors'. The suit has stalled the Master Charge program dead in its tracks.

Visa, meanwhile, is driving full bore into the traveler's-check business, dominated by American Express since 1891. Precise figures aren't available, but American Express is believed to control 60% of the traveler's-check market, with most of the rest spread among Bank of America, Citibank, Barclays and Thomas Cook. On average last year American Express had $2.1 billion in float—the proceeds of checks purchased by travelers but not yet cashed—much of it invested in tax-free obligations.

To challenge American Express' dominance in traveler's checks requires a willingness to fight the company's reputation and its staggering advertising budgets. What makes Dee Hock and Visa think they can do it? First, Visa is offering major banks an opportunity to sell Visa traveler's checks beginning next fall. They keep the float themselves. Sounds good, but the check business is loaded with front-end costs for printing, selling, security, bookkeeping and clearing, which can cost a bank plenty unless it sells a good volume of checks.

Sensing this uncertainty, Visa has geared its new promotional campaign to a second appeal of the checks, an ego factor. Displaying the bank's name prominently at the top of a check, Visa's ads scream at prospective issuers, "Sell this check and promote your own bank's name." The largest takers so far are Wells Fargo, Western Bancorp, First National Bank of Chicago and Barclays. The key participant is Barclays, currently the fourth-largest issuer of traveler's checks, which will bring valuable experience and credibility to the Visa effort.

Visa's battle against American Express will be a tough one. A FORBES survey of 20 of the largest U.S. banks indicates that many are either sitting on the lines waiting to see how Visa fare planning to stand pat with their cu American Express check program.

Besides advertising expertise, A can Express holds one other trump It can easily sweeten its present with banks that sell American Ex checks. It could, for example, let banks hold sales proceeds longer b forwarding them to American Exp "Before we sell a single traveler's che Hock quips, "banks are going to ge proved deals from American Expr One banker notes American Express are already "a bit more humble than ever seen them."

While Visa is preparing its assau the American Express traveler's-c business, it also is busy trying to vince potential cardholders that the charge most anything on a Visa card can be charged on an American Ex card. If cardholders are convinced, would be bad news indeed for Amer Express. Why should a cardholder $25 a year for an American Express when a Visa card is free? And why sh a merchant give American Express a ger cut (typically 3.6% of the purc than Visa (usually 2.5%) and put up not being paid as quickly?

Logical as these questions sound, don't take into account American press' considerable snob appeal.

Several years ago a leading hotel c began suggesting that its guests ch their bills on a bank card instea American Express. So many patrons tested—"What's wrong with my Am can Express card?"—that the c quickly dropped the suggestion. T half of the chain's charge-card custo use American Express.

But that isn't the only reason innk ers love American Express. Amer Express travel agents send lodging b ness their way. The company also sp millions of dollars each year cospon ing ads with hotels and restaurants accept the American Express card. N rally, the more business you do American Express, the more gene American Express can be.

Last but not least, the American press card does have several advant for the globe-trotting businessman, s as no credit limit, check cashing p leges, special billing procedures and course, that snob appeal.

While the bank cards aren't abou steamroller American Express, Hoc Visa is ready to try. "For the last fiv ten years American Express has b without major competition in the tr and leisure market," he says, almost voring the seeming odds against h "They've got good coverage and the r keting expertise." oo bad they weren't destroyed in the war," s a Frenchman of his country's aging steel lls. What bombers didn't do in 1945 the vernment is doing now.

The cross of Lorraine

ncial workers and far-Left students taking to the streets of Paris
ite appearances, President Giscard d'Estaing hangs tough.

By Lawrence Minard

SINCE 1974 President Giscard d'Estaing's unflinching determination to end costly government supports for France's feeble steel industry has resulted in the elimination of well over 20,000 jobs. In the coming 18 months the giant partly government-owned SACILOR and USINOR groups, which between them account for over 80% of France's 33 million tons of steelmaking capacity, plan to fire 22,000 more steelworkers. Reaction was slow in coming but anger is now building fast. In the north of France and in Lorraine, historic heart of the French steel industry, workers earlier this year: marched 50,000 strong through the streets of Metz demonstrating against government policy; wounded seven policemen in Denain with rifle fire in the night; ransacked steel employers' offices in Valenciennes and Metz, and disrupted rail service and occupied a television station in Longwy. Last month their fury spread to Paris, where over 60,000 workers, most of them from Lorraine and the north, swarmed through the streets smashing windows and roughing up policemen in the Place de l'Opéra. Over 200 people were injured, including 60 cops, before the mob was dispersed.

The *cri d'angoisse* is most plaintive in Lorraine, which must bear the brunt of this economic cross. For nearly a century it has been to the French steel industry what the Pittsburgh area has been to American steel. In 1974, when French steel production peaked at 27 million tons, Lorraine's drab steel towns along the Moselle, Orne, Chiers and other local rivers accounted for over 53% of the total. That year Lorraine employed over 84,000 steelworkers. "By 1981 there will be 41,000," says Jean-Claude Ralite, 43, a top planner with APEILOR, a state agency working to diversify Lorraine's industry. "That statistic," Ralite says with a trace of despair, "gives you some idea of what we're going through."

Lorraine's steel crisis has been building for decades. The area's iron ore and coal deposits—seized by Germany in 1870 and again in 1940—have been steadily depleting. The mills are inland; transportation economics now favor coastal installations. Worse, the mills themselves are hopelessly out of date. "The German steel industry was lucky," says a Metz industrialist. "When we won the war we looted whatever machinery wasn't bombed. We ended up with antique mills, while Germany used your Marshall Plan to build brand-new ones. It's too bad *our* mills weren't destroyed!"

Nor, because of suffocating government price controls, was there much incentive for French steelmakers to modernize. The labor force was sacrosanct—no firings. The more the mills deteriorated and job redundancies grew, the more

money the government threw at the industry in an ultimately futile attempt to preserve jobs. France became one of the most labor-intensive steel producers at a time when French labor was not cheap. France produces just 149 tons per worker, *vs.* 190 for Germany, 249 for the U.S. and 327 for Japan.

Says Michel Barba, a wavy-haired consultant recently appointed director of the USINOR group: "French steel is the only industry I know of that was never limited by the availability of money. By last December our [the industry's] debt totaled over 35 billion francs [$8.3 billion]—one entire *year's* sales. And debt service! The annual service came to 5 billion francs [$1.2 billion]!"

Belatedly, but firmly, the government is now facing up to these problems. It has eliminated price controls. It is giving management a free hand in firing workers. It has guaranteed the industry's $9 billion debt, but is refusing to give any more money. To make sure the debt is paid, it has installed a banker, Paul Mayoux, as chairman of SACILOR (sales: $2.3 billion) and Claude Etchegaray as head of $3 billion sales USINOR. Both are known as tough managers.

France is not getting out of the steel industry altogether. Instead, it is relocating its mills from the interior to seaside locations: Dunkirk in the north, Marseilles in the south. The new 3.5 million-ton-capacity Fos works near Marseilles, jointly owned by USINOR and SACILOR, is said to be at least as productive as the most modern Japanese mill; officials hope to export its output throughout the Mediterranean basin.

Where does that leave Lorraine? Hurting badly, and with the pain about to mount sharply. Its first steel layoffs, between May 1977 and last November, resulted in the elimination of 16,000 jobs. "But the phase-one cuts were not painful," says a young government planner, explaining that virtually all of the 16,000 cuts came from early retirements and job transfers. The hard-core unemployed amounted to only 1,800. "And over 1,200 of those were foreign workers."

The second phase, in which another 15,000 jobs will be eliminated, begins next month and will continue until the end of next year—just before Giscard d'Estaing must run for reelection. Here is where the cry of anguish has already begun to be heard. These jobs are held by *Frenchmen*—most of them under 50. What will they do to earn a living? "There is only one solution," says APEILOR's Jean-Claude Ralite, "and that is to create *new* jobs. Our effort is now going in that direction."

Armed with generous government subsidies, APEILOR has already rounded up some 8,000 new manufacturing jobs, mostly related to the automobile industry. Ralite's eyes are now set on a real plum: Ford Motor Co. says it will build an 8,000-employee assembly plant somewhere in Europe. Lorraine is under active consideration—Henry Ford II plans to discuss the matter with Giscard d'Estaing this month—but other European governments are offering their own juicy incentives. Ford won't make a decision until summer. If Ford should go elsewhere, hopeful rumors persist that General Motors is interested in locating in Lorraine.

Whether Ralite and his planners will be able to create over 15,000 new jobs 1981—when Giscard d'Estaing must ju tify his tough steel modernization po cies to the voters—is far from a sure b But thus far, Giscard d'Estaing and Prir Minister (and former economics prof sor) Raymond Barre show no signs backing off from their brutal steel mo ernization program—or even slowing t mass layoffs. Perceiving no threat fr the French Left, d'Estaing and Ba clearly think they will weather the poli cal storm that has broken. ■

Outside money, the Metro and what they ca "generators" are beginning to make a majo difference in downtown Washington.

Reversing an exodus

By Fern Schumer

THE NATION'S CAPITAL is in the midst of a building boom. With the occupancy rate on commercial office space at 99%, the highest in the country, downtown Washington bustles with over $1 billion in projects under way. No boom is eternal, of course, and office space in the District's central business area could be overbuilt by 1981. But today's boom is still a boon for the local economy.

Ponder this: In one square mile between the White House and the Capitol, 16 new public and institutional structures and 35 new private buildings will rise by 1981. They will add 2,600 new housing units, 5,300 new hotel rooms, 8.2 million new square feet of office space, 1.3 million square feet of stores and 6 million square feet of public facilities.

To top it off, 64% of the buildings to be completed in 1979 are already leased. Rents are up over 45% in the last four years, hitting $14 per square foot for prime space. And in the next two years rents are expected to be anywhere from $15 to $18 per square foot.

Total office building construction around the nation has recovered mightily since the recession—from $3.9 billion in 1975 to $10 billion in contracts this year, according to the F.W. Dodge Division of McGraw-Hill Inc. Some cities, such as Houston, didn't stop growi even during the recession. But Washir ton has something special going for it, course, namely the federal governme Fueling part of the Washington buildi boom is the proliferation of attorne accountants and trade associations the to contend with the government's ev expanding role in everybody's busine Then there's Metro, the new subway sy tem, luring developers to the blight area east of 15th Street.

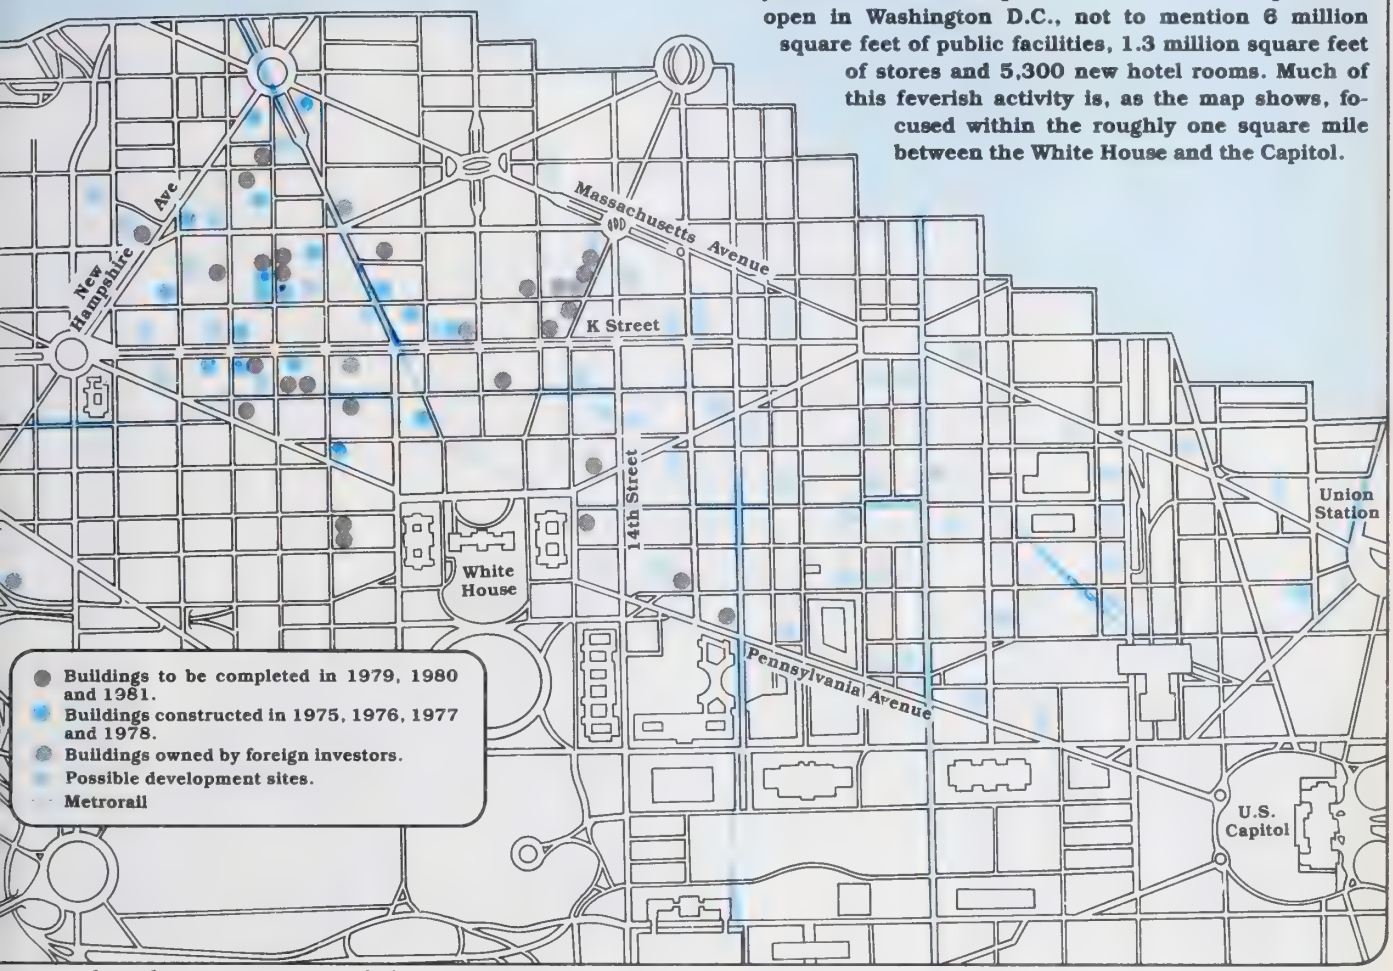
"Generators" is a real estate word structures that create spin-off develo ment. For instance, developers plan build three buildings on the Thomas C cle block, where the main trade now prostitutes. Why? Because the city pla to build a generator—the Washingt Civic Center—three blocks away.

Big out-of-town money has shown u including Boston developers Cabot, Cab and Forbes, as well as Marriott Cor Sheraton Corp., Prudential Insurance a New York Life Insurance. Demand for t downtown buildings that come on t market is fierce. A good site is difficult acquire and sure to be expensive. Foreig ers want in, too. It is rumored two Cana an firms made the largest purchase in D. history, $50 million, for one building.

But the supply is limited because good many owners would rather not se James O'Brien, vice president of t Washington office of Coldwell, Bank

Washington's real estate boom

By 1981, 8.2 million square feet of new office space will open in Washington D.C., not to mention 6 million square feet of public facilities, 1.3 million square feet of stores and 5,300 new hotel rooms. Much of this feverish activity is, as the map shows, focused within the roughly one square mile between the White House and the Capitol.



nmercial Brokerage Co., one of the ion's largest real estate chains, ex- ns that reluctance: "What are you ng to do with the money after you sell uilding? Invest in another building? y bother when you're getting high urns and have the best investment urity in the country? And to sell ans you have to pay capital gains es." The tax on a $5 million gain, for mple, could be more than $1 million. ven so, of the large downtown build- s partially or completely sold in the four years, about 50% have been ght by foreigners. "The vast majority foreign investors are competing for nership on a very small corridor of the ," says real estate attorney Richard dyac, who represents more than t Arab investors. "They want basic ce buildings in a highly desirable area. ey recognize they may pay quite a bit re than a building is worth, but they'll a fairly decent return and the appre- ion value is there."

bout 95 possible development sites exist in the metropolitan area, on ch about 40 million to 50 million are feet of office space could be built, ording to a Coldwell, Banker survey. at includes building in the surround- ing suburbs, which also has been boom- ing.) One man likely to be involved in whatever comes next is Oliver T. Carr Jr., president of the Metropolitan Wash- ington Board of Trade and of the private- ly held Oliver T. Carr Co. Carr's com- pany is the largest private developer of downtown projects with developments representing about $500 million in in- vested capital in the city. Says Carr, "Al- though D.C. has one of the largest central business districts in the world, land is a limited resource and it won't be expand- ed." What's more, the District has a spe- cial advantage—or disadvantage. Wash- ington zoning laws prohibit buildings over 130 feet high except on Pennsylva- nia Avenue, where 160 feet is okay.

Carr was a small single-family home builder who saw an opportunity and built—when the 1968 riots and the burn- ing sent other developers into surburban Virginia and Maryland. That supreme confidence in the city has made Carr today the bellwether of Washington's flourishing downtown building market. His company has built and hopes to build about 10% of Washington's private of- fice space. He owns, has developed, leases or manages nearly 30 big buildings in the downtown area. But Carr is very secretive about total investments in his projects, his annual income and his own net worth.

To hear Carr tell it, his insight to re- turn to the city was no great prophetic vision. "I just didn't think the city was dying. The exodus of other developers allowed us to enter a market where only a couple of people were still working.

"Besides," he adds offhandedly, "the less you have the more you can take. Fifteen years ago, there wasn't much to risk, so I could be very brave."

Carr, for one, thinks there's a lot more money to be made. "The revitalization of the whole downtown area is only 50% complete now," he says. "We will need a major revitalized shopping area, theaters and more entertainment. The public spaces in the whole downtown need to be reexamined and rebuilt in many cases. So, there's still a long way to go."

But newcomers and amateurs had bet- ter take care as they go up against the professionals. Predicts Coldwell, Bank- er's O'Brien, "We anticipate an overbuilt office situation in downtown Washing- ton in about 1981 or 1982.

"Virtually all prime remaining parcels," O'Brien cautions, are "being picked over by both users and developers." ■

This blunt economist and businessman blames President Carte Administration—not business or labor—for the latest burst of infl tion and for a messed-up energy situation.

Ex-Treasury Secretary George P. Shultz

Only Henry Kissinger was more important to the Nixon Administration than George P. Shultz, Nixon's coordinator of economic policy from 1972 to 1974. An economics professor trained at M.I.T., this former dean of the University of Chicago's Business School became the first man in history to hold three cabinet posts: Secretary of Labor, first Director of the Office of Management & Budget and Secretary of the Treasury.

Shultz was one of the few top Nixonites to emerge with his reputation unscathed, free from the taint of Watergate and having gained a solid reputation both as an administrator and policymaker. Today, at 58, he is president of Bechtel Corp., the construction company, and a professor at Stanford Business School where he lives on campus. His directorships include Sears, Roebuck & Co. When Sears recently sued the U.S. government over conflicting antidiscrimination regulations, the move had a dist Shultz flavor to it.

What does Shultz think of Presi Carter's economic performance? In interview with Forbes reporters in M hattan last month, he was blunt in reply to that question:

"I'm very tense when I see what are doing in Washington now."

Forbes: Let's talk about how the ter Administration is performing in light of the principles you set up in

ok, *Economic Policy Beyond the Head-*
s.* How is Carter handling energy?
hultz: Terribly. They are making the
situation they inherited worse. It's
ressing that the President's reaction
energy problems, old and new, is to
e with more controls. I think the an-
er is to cure with more freedom.
ORBES: But there's the question you
ed in your book about efficiency ver-
fairness. Decontrol, which you favor,
ght be efficient but would it be fair to
ich the oil industry at the expense of
d-pressed consumers?
hultz: We should grow up. The en-
ergy problem is so serious that if a
few people make money as a result
eing enterprising and helping solve it,
be it. Deregulating so our energy
es rise to world levels would mean
l retail prices would go up, although
by a tremendous amount. We would
e conservation brought on by the
ner prices. Besides, it is quite possible
lesign a windfall-profit tax.
ORBES: Consumers won't drive much
or lower their heating temperatures
much even with higher prices.
hultz: It is not realized that the prices
electricity for residential users over
last ten years have *not* increased in
terms, that is, adjusted for inflation.
they've increased for industrial users
ut 20% in real terms—so industry has
de tremendously successful conserva-
efforts. Residential consumers
en't done much. It's not hard to fig-
out why when you look at what's
pened to the relative prices.
ORBES: Is deregulation enough?
hultz: No. The President says he's for
lear power plants, and everything he
s undercuts the nuclear industry. He
uld stop appointing flaky people to be
inistrators of regulation. If we get
ple administering whose object it is
top anything from happening, that's
at you're going to get—nothing hap-
ing. If you get people whose attitude
'It's my job to see objectives of regula-
are carried out, but it is not my job
prevent anybody from doing any-
g," you'll get a different result.
ORBES: How about some specific ex-
les of flakiness?
hultz: We've just shut down five
nic power plants because of mistakes
ome calculations. But on television,
guy responsible says the plants are
. What kind of nonsense is that?
hen we have Sohio. It wanted to build
peline, knew where to build it, the
ineering was complete, the financing
was there. Sohio even agreed to build some scrubbing attachments to a Southern California Edison plant costing them around $80 million—which had nothing to do with their pipeline. Even so, take a look at what they went through.

FORBES: President Carter projects a deficit this fiscal year of $33.2 billion going up to a surplus of $39.2 billion in 1982. Are these numbers real?

Shultz: No. Their assumptions about the economy, prices and the momentum of current programs should be questioned. Some legislative proposals of the President's Congress has already brushed off, like changes in Social Security benefits. So projections based on these programs are not going to turn out to be right.

They should be running a budget that is close to balanced, if not in balance right now. After all, this inflation helps balance the budget because everybody pays more taxes as they go into higher brackets. You even pay more Social Security tax because the earnings base rises.

FORBES: If you were Secretary of the Treasury again, would you come close to balancing the budget this year?

Shultz: You'd have to take draconian measures on spending. Remember, President Carter campaigned on the basis that the economy was too soft and should be stimulated. He criticized President Ford for vetoing so many spending bills, but if Ford's struggle had been continued we might have a reasonable budget now. You make a change today and it doesn't make much immediate difference in federal budgetary terms, maybe $100 million or $500 million. Two years from now it could make a difference of $2 billion or $3 billion.

FORBES: Where would you start today?

Shultz: They've got to be tougher on the budget than they already are. Most important, the Federal Reserve has got to be very disciplined in its money-supply operation. Miller is doing that now. Interest rates are labeled high, but aren't in real terms. If you pay me 10% and inflation is going on at 10%, I haven't gotten any real return.

FORBES: Do we really *have* to have a recession?

Shultz: I don't think we really needed to have one, but I think the Administration has built one into this situation. They have changed the declining trend in the rate of inflation into an accelerated trend—from 5% or 6% to 9% or 10%.

FORBES: You blame Carter for this?

Shultz: The stimulation, the change in policies took place the moment President Carter entered office. He was the great stimulator. Remember, he sent his team over to lecture to the Germans and to the Japanese and tell them they should stimulate, too. His constant theme was that inflation was not a problem, there was plenty of capacity in the economy, don't worry about it.

Well, since his analysis of the economy was wrong, his policies were wrong. So we have this roaring inflation, produced with the full cooperation of the Federal Reserve. Arthur Burns was criticized by the Carter Administration as too tight-fisted all during the period he was expanding the money supply too fast. Meanwhile President Carter did other things, such as hiking Social Security and minimum wages, that added to inflation.

"The President should stop appointing flaky people to be administrators of regulation. If we get people whose object is to stop anything from happening, that's what you'll get—nothing happening. If you get people who say, 'It's my job to see the objectives of regulation are carried out but not to prevent anybody doing anything,' you'll get a different result."

FORBES: But *why* do we have to have a recession?

Shultz: Because people are saying, "My God, you're out of control." This inflation is politically unpopular at home and devastating to the world economy. The reaction coming from abroad shows in the declining dollar. Slamming the brakes on now will produce a result which we will probably call a recession.

FORBES: Are you predicting a rerun of 1974-75 when we had tight money and a recession, which brought down the inflation rate?

Shultz: Even that was only a rerun of earlier episodes. In the mid-Sixties the Kennedy Administration really had it going—low inflation and high employment. Along came Lyndon Johnson and his Great Society and his Vietnam War and a refusal to recognize the fiscal and monetary implications of his decisions and we blew it. So inflation rose to 6% by 1969. Toward the end of the Johnson Administration and carrying into the early Nixon Administration, disciplined fiscal and monetary policy was pursued. The result was, the rate of inflation declined to about 4% during 1971. But we didn't have the guts to stick with a steady-as-you-go strategy. So we blew it and we had a deeper recession.

Now we've got the problem all over again. Each time at a higher rate of inflation. The question will be, can we stick with the policy we know we've got to have long enough to get inflation under control? Or will we blow it again?

FORBES: You had experience with price controls yourself. What do you think of the wage and price guidelines administered by Kahn?

Shultz: I think it is a bad mistake. The

rge P. Shultz and Kenneth W. Dam, Econom-
olicy Beyond the Headlines *(New York: W.W.*
on & Co., Inc., 1977).

guidelines are producing more inflation because there is a growing conviction that they are bad and won't work. The government has put into place over the last two years a tremendous number of inflation-producing actions and we're getting the results. There isn't any way you can somehow beat on business and labor unions to mitigate the results. Like food prices are up, but aren't controlled. So they crack down on middle-size business or embarrass somebody. It's not going to do any good.

FORBES: You were chairman of the Cost of Living Council for part of the period when President Nixon administered wage and price controls.

Shultz: Our first freeze—I thought it was a mistake—was understandable in that labor and management and the public generally wanted controls. The President was taunted by his Democratic opponents who gave him a law with sweeping authority to do anything he wanted in the American economy.

The second time around, in the middle of 1973, when he put on a freeze, I resigned over that, though it did take me several months to actually leave.

FORBES: What do you see ahead for the dollar?

Shultz: The dollar will get terrifically strong as soon as people are convinced that we are coming to grips with inflation. The world financial observers thought the U.S. economy was unraveling and that's why the dollar was unraveling. This had devastating consequences for everybody else.

FORBES: Since Nov. 1 the dollar has been much firmer.

Shultz: Yes, and note this contrast: The world financial markets just laughed when President Carter said, "I'm serious about inflation so I'm going to impose guidelines." The dollar deteriorated further. People said, "My God, the man doesn't understand the problem." It was such an adverse reaction that it forced these moves on Nov. 1 that *did* strengthen the dollar. The key move was the Administration realizing that the Federal Reserve has got to be tougher.

"The wage and price guidelines are producing more inflation because of the growing conviction that they're bad and won't work. The government has taken a huge number of inflation-producing actions and we're getting the results. There's no way you can beat on business and labor unions to mitigate the results. It's not going to do any good."

FORBES: Do you favor the proposal to force the federal government to balance its budget?

Shultz: No. It's a movement born of this utter frustration—like Proposition 13. At the federal level I am in favor of the constitutional amendment to limit spending, to get ourselves on a long-term track in managing the federal budget.

FORBES: Do you feel, as a prominent Republican, that a proposed program of cutting taxes is enough to get your party back in office again? That kind of program doesn't have anything in it blacks, for the cities.

Shultz: Of course, it isn't enough offer. But taxes today are the most portant single thing in the econo sphere. As far as the problems of the are concerned, whatever their colo think more freedom in this cou would do more for them than any o single thing. Freedom from the tren dous taxes the poor pay, for examp the highest rates of anybody. If a pe on welfare goes out and earns some m ey, that money is taxed at a marginal of 100%. Freedom from the minim wage, from the effects of all this reg tory activity, which tends to shut d job opportunities.

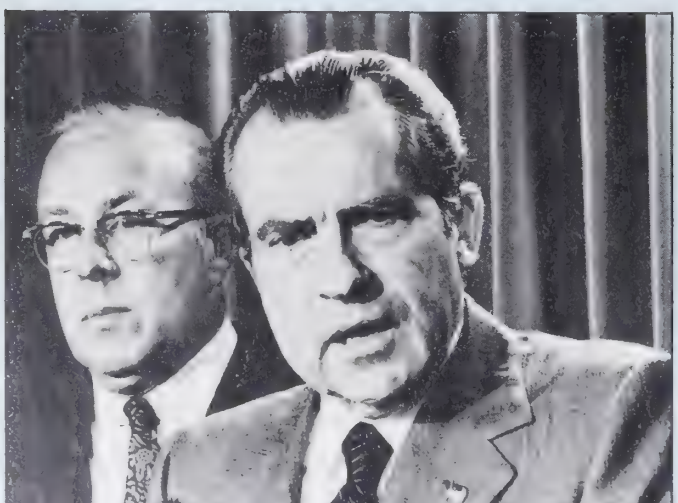
You could try freedom. As I wrot my book, you could try less red t Take the total flow of money that's posed to go to the poor. A tremend slice goes out to middle-class people are ministering to the poor.

FORBES: Which Republican candid do you think could win the 1980 pr dential election?

Shultz: The first question you hav ask about anybody who wants to run President is not, "Can he be electe but, "Can he handle the job?" I re think we must come to that in this co try. Now I believe the four leading publican contenders could handle the well: Reagan, Connally, Bush and Ba

FORBES: Why did you leave out for President Ford?

Shultz: Because so far as I can see leaves *himself* out. My impression is he keeps the idea alive to maintain in ence in Republican councils. ■



Shultz and President Nixon
"The President felt we were harassing him."

When the IRS audited Richard Nixon

FORBES asked George Shultz: Was your biggest moral cris when John Dean produced an enemies list and wanted th Internal Revenue Service to harass everyone on it?

Shultz: I didn't feel it was any big crisis in my life. I fe this was something we had no business doing so I just tol the IRS, "Do nothing." Of course the Watergate tape indicated that my decision was somewhat unpopular wit the President. He is quoted as saying something lik "Doesn't he know why we placed him over there?" But n one ever said anything more about this to me personally.

Actually I had more flak from the President about anothe IRS situation. The head of the IRS came to me and said th computer has kicked out the President's tax return fo audit. What should we do?

It was an easy question to answer: I said, "Go audit th President's tax return."

It touched off a chain of events that was not at all pleasan I got a call that the President felt we were harassing him. H wanted to know, had any other President had his tax retur audited? He wanted to know before seven o'clock nex morning. The answer was that *every* recent President had ha his tax return audited. Some have been assessed for bac taxes. That is because they were wealthy men and ha complicated returns, including President Nixon.

If your whole office depends on one copier, this is the one to depend on.

Introducing the $1895 desk-top by Pitney Bowes.
The most reliable copier in its class is the new Pitney Bowes 458 drytone copier. Designed for offices requiring a few dozen copies a day, this fast, dependable, inexpensive machine delivers crisp, snappy results—copy after copy.

The new 458 is engineered simply, for unbeatable reliability and economy. It omits costly, temperamental built-ins that lower-volume users don't need. Since you don't buy frills, you don't pay to keep them working. And you save from less down time—often the greatest economy of all.

Finally, the 458 copier is designed to make life easier for everybody who uses it. Convenient, flexible, simple to maintain and service.

For a free demonstration in your own office, just send us the completed coupon. It's a show you can't afford to miss.

One of the third world's first needs is good communication.

Here's what we're doing about it.

Report from GTE

How can an emerging nation emerge, if it n't tell the world what it needs?

One obvious need is communications.

And GTE is in a unique position to help bring odern communications to these nations.

We supply electronic, microwave and satellite rth-station systems. We also own and operate ur own telephone companies and, with AT&T, erate a domestic satellite communications stem.

ntering the world by satellite.

Beginning with the early communications sat- ites of the mid-sixties, the nations of the world d available external communications of the ost modern type.

So modern, in fact, that they were more up-to- te than the total communications of many de- loped countries.

TE, the satellite company.

GTE has designed and built earth stations to rve satellite systems for fifteen years. We also erate these stations, and train local personnel to take over their operation, usually within a year.

We have provided 45 earth stations for telecommunications, for the Dominican Republic, Algeria, Chile, the Philippines and many other countries.

Communications in depth.

GTE is also a leading supplier of other telecommunications systems, from microwave radios that span jungles, mountains and other difficult terrain... to central telephone exchanges that are the equal of any in the world.

Reliable systems for both domestic and international telecommunications are available from GTE.

The right place at the right time.

This may help explain why we have been so successful in helping the emerging nations get modern communications.

It's another demonstration of how we try to be in the right place at the right time for all our markets, from communications to electronics.

GTE

The machine that pays for itself

When you're in the business of assembling parts, you're in the business of holding costs down while keeping quality up. Which is a tricky business these days. Manufacturers have found the answer to the problem. Bodine in-line assembly machines. ■ Bodine modular machines have produced millions of small assemblies such as those shown here, products made in high volume to rigid specifications and yet at considerable savings. ■ With today's skyrocketing labor costs, both direct and indirect, managers hardly have to be persuaded of the wage-saving advantages of automated assembly systems. But they also must look hard at the possibility of long delays in changing over to new equipment, and they must worry about sacrificing quality control in their products. ■ Conversion even from a completely manual operation can be made swiftly and with a minimum of de-bugging time. ■ As for quality control, the simplicity of the Bodine drive system eliminates much of the need for monitoring and adjustment. Most of the motions of the system are timed and driven by the main drive shaft, and these include self-inspection features that keep constant tabs on output. ■ All of this adds up to higher production rates, fewer returns, and the elimination of costly major retooling for product changes. Which means savings added to savings. A Bodine assembly machine pays for itself. And then it starts to pay for itself all over again. ■ Write or phone Frank J. Riley, Vice President, The Bodine Corporation, 317 Mountain Grove Street, Bridgeport, Conn. 06605, (203) 334-3107.

buyer at a leading New York store says "inventory shrinkages"—a phemism for theft—amount to a staggering 10% of sales. What es the store do about it? The same as any other business: "We mark erything up accordingly," she says.

The game where nobody loses but everybody loses

By Richard Phalon

I E HAD PARKED at the far end of the truck stop and was checking the tires on the side of the trailer from the diner when they jumped There were three of them and he better than to fight back as they ed him into the car. It was four s later, a little after 3 a.m., when the e made a routine swing through a ng lot downtown, less than a dozen s away. The cops found him hand- d to the steering wheel of a stolen y. His eyes were still taped, but wise he was okay. The three hoods gone, the trailer was gone, and so ts $60,000 load of highly negotiable jeans.

e scene was Jersey City, N.J., but it l have been Miami, St. Louis, Hous- Los Angeles or Anywhere, U.S.A. A ening so frequent that hijacks like it nown in the trade as "give ups"— ne more statistic in the evolution of rty crime as one of the nation's st and fastest growing industries.

me an industry? Well, consider Projecting the Department of Com- e's 1975 and 1976 figures to 1978, es estimates that theft of various cost U.S. business $40 billion last If our figures are correct the cost een increasing at a compound rate % a year. Add to this a probable $4 n a year in personal property stolen individuals and you have a business compares in size with the U.S. steel try.

e theft industry employs tens of sands of people in its direct work many thousands more indirectly— ance adjusters, private guards, extra emen hired to deal with the public's dic concern over crime. Its depreda- are, on the one hand, a cost of business and, on the other, a s for lightly scrupled businessmen n an edge on their law-abiding com- ors. In a sense it is like the unneces-

sary surgery that is so prevalent today: a ripping off of one group for the benefit of another group, with the cost diffused throughout society as a whole via medical insurance.

That diffusion seems to be the major reason the American public has become so relaxed about the growing incidence of nonviolent crime. Through the insurance mechanism everybody contributes to a pool to compensate the victims. Thus, the victims get off lightly, the thief makes out well and the insurance company makes a sale. Insurance costs big money, though, and so does security. Most of the burden is simply passed on to the public in the form of higher prices—a businessman must recoup his costs, after all, or go out of business.

Thus, the growing theft industry is a major source of rising prices—what the economists call "inflation." (Yes, crime rates do impact prices, just as pollution control, taxes and politically powerful farmers do.) And if something is stolen, you might just as well kiss it good-bye. According to the FBI's Uniform Crime Reports, no more than one out of every five burglaries or thefts is "cleared" by arrests. Recoveries run to less than a third of all property reported stolen, and of those arrested, only 59% are convicted. "The odds against getting caught are very long, and the odds that a thief will do time are even longer still," says Eric A. Seiff of the State of New York Commission of Investigation (SCI). "It's a low-risk, high-profit business." And he might have added: largely untaxed.

The rising tide of crime has created a strange kind of symbiosis. Law enforcement agencies, for example, are developing a kind of vested interest in crime. The more horrendous the statistics become, the bigger their operating budgets. The security industry has a vested interest, too. Demand for everything from the simple rent-a-cop business on out to the most sophisticated electronic gear is booming to the point where the industry is now grossing about $2.3 billion a year.

The insurance companies are doing all right, too. Since 1973 premiums written on inland marine coverage, attached to goods moving in transit, have shot from roughly $950 million to better than $1.4 billion. The amount of money spent on home owners coverage (fire, burglary, theft and liability packages) has climbed from $3 billion to better than $5.2 billion in what is basically a cost-plus business. There have been a few rough patches. Commercial burglary and theft insurance, for example, has traditionally been one of the industry's steadily profitable lines. Some underwriting losses began to show in the mid-Sixties, but they helped to trigger a spate of rate increases and higher deductibles that pushed the line well back into the black.

Some of the quantum jump in property crime rates is related to the spread of drug addiction. Many of those arrested for theft or burglary have also been busted for narcotics offenses, but the junkies are being crowded out of a business where the really big scores are increasingly made by professionals.

"When I started out in this business as a young officer in 1946," says James O. Golden, director of the Criminal Conspiracies Division of the Law Enforcement Assistance Administration (LEAA), "a burglar was a burglar. You could usually identify him by his m.o. Now they've become more sophisticated."

Signs of that sophistication show in

the series of major thefts that have rocked the art world *(see box p. 58)*. It takes a certain amount of savvy to defeat a security system in the successful Topkapi-like raid made on San Francisco's M.H. deYoung Memorial Museum, for example, and even more savvy to figure out how four unmistakably hot 17th-century Dutch paintings can be worked into legitimate or quasi-legitimate distribution channels. There are increasing signs of sophistication, too, in the ways whole consignments of goods are being stolen to order.

"It's seasonal, just like legitimate business," says one FBI man. "Two months before Christmas, you know they're going to start hitting things like kids' walkie-talkies and other kinds of toys, clothing and liquor." In the spring it's air conditioners and lawn mowers, and year-round high-value, easy-to-dispose-of items such as stereo and color TV sets, furs, meat and foodstuffs.

The LEAA estimates that organized crime—known as "LCN" or La Cosa Nostra in the trade—figures in about 25% of all theft. Individuals identified as "soldiers" in crime families keep cropping up in stolen stocks, bonds and currency cases, for example, that require a certain amount of expertise to engineer.

Equally, of course, a lot of the crime that never gets into the statistics is amateur stuff that seems penny ante, but probably totals in the billions. Shoplifting, for example. Schools are forever getting ripped off. Tape recorders, computers, typewriters, musical instruments, photographic equipment and clothing are all fair game.

Hospitals get hit pretty hard, too. Interns about to depart for private practices steal stethoscopes and other equipment. Nurses and other staffers take home towels and sheets. Bank clerks in hock to bookies or the finance companies simply walk off with cash. A vault teller, for example, slipped $168,000 in a brown paper bag past a security guard with the explanation that he was taking his pet rabbit to the vet.

The Department of Commerce insists that the rip-off of business by employees has reached "epidemic" proportions. "Businessmen mistakenly assume that most inventory losses are caused by shoplifters when actually employees account for the major portion of inventory shrinkages," this government agency maintains.

Inventory shrinkage is a polite term for losses that may run, again by Commerce Department estimate, to more than $6 billion a year. A lot of that $6 billion is stolen strictly for home consumption—impulse purchases, as it were. Some of the swag gets redistributed through street peddlers *(see box, p. 61)*, however, and some of it is small-scale opportunism at work, like the

Conrail's piggyback yard, largest in the world, in South Kearny, N.J.

"Where there's honey," shrugs one official, "you've got to expect flies."

You want it, I'll get it for you

"Epidemic" is one of the mildest terms investigators are using these days to describe the rash of thefts that are plaguing the art world. A series of lightning-like attacks on four major museums seem to be an escalation of a virus that up to now has afflicted mainly private collections and galleries.

The museum victims: the Metropolitan Museum of Art in New York; the Art Institute of Chicago; and in California, the Santa Barbara Museum of Art and the M.H. deYoung Memorial Museum. There have been recoveries in the Santa Barbara and Metropolitan thefts, and the latter seems to have been more of a prank than a snatch-for-gain. The three Cézannes missing from the Art Institute and the Rembrandt and three other paintings missing from the deYoung are valued in excess of $4 million.

"Madame Cézanne in a Yellow Armchair," by Cézanne

Art objects everywhere have become targets. News of the four museum thefts was still fresh when New York City police disclosed that four prestigious Madison Avenue galleries had all been relieved on the same day of valuable items. Producer Otto Preminger and Lehman Brothers partner Paul E. Manheim are among the well-known private collectors who have been hit, probably with inside help of one kind or another. In Houston, a Tintoretto that is valued at between $150,000 and $200,000 is stolen from an exclusive private school and returns as part of a plea bargain.

As with most other kinds of thefts, law enforcement officials know they are being told about only a fraction of what vanishes. Some dealers, worried about publicity, swallow their losses in silence. So do many museums, particularly if a piece is uninsured. Curators don't like to admit that they can't protect what is, in effect, a public trust. If a piece is in storage—as were the Cézannes, for example—it is often a case of out of sight, out of mind.

Perhaps 50% of art reported stolen is recovered, according to one expert. But Robert Volpe, the New York City police art crime specialist, says the rate is much lower. The report-no-evil syndrome means there is a considerable amount of unrecovered art not reflected in the statistics.

The gap between reality and reporting makes it impossible to state the size of today's stolen art market. Bonnie Burnham, executive director of the International Foundation for Art Research, puts the figure at around $25 million annually—maybe as much as 35% more than 1976.

It's another example of outlaw man operating as economic man. A lot of growth comes from publicity about the demand—and prices—for quality art. Thieves, and the fences they work for, read newspapers, too. "There's a general awareness that art is growing in value," says Burnham.

Many law enforcement officials feel, in fact, that some thefts are fingered by those few unscrupulous appraisers, auctioneers and dealers who know the market very well and who are not above fattening their profit margins with a bit of fencing.

It's also clear that some dealers find it easy to shut down their sensibilities when a piece of hot merchandise comes along.

Who's on the buy side of such deals? In the case of easily identifiable items like the Art Institute's Cézannes, the ideal buyer might be a less than scrupulous individual of some means and taste who doesn't mind possessing his treasures in private. **—R.P.**

INDULGE YOURSELF. IN A NEW MONTE CARLO.

Imagine yourself, for a moment, in a new Monte Carlo.

The available removable glass roof panels are off, unlocking the sun.

Behind the wheel, you feel a sense of intimacy with your surroundings, in an interior engineered for space, comfort and quietness. You sit amidst elegant upholsterings and abundant luxury.

As you drive, a road-tuned suspension winnows out harshness. Bumps are smoothed by coil springs computer-selected for your car. Front and rear stabilizer bars and steel-belted radial ply tires transmit a precise, gratifyingly firm feel of the road as miles pass smoothly and quietly under you.

Now turn imagination into reality.

Test drive the new Monte Carlo. Reward yourself with the experience of a personal luxury car designed to look, drive and feel apart from the ordinary.

Think of yourself.

And put a little distance between yourself and the crowd.

Chevrolet

MONTE CARLO

Now that we've launched our new Great Lakes ore carrier, you might think it's full speed ahead.

Not yet. New facilities like this multi-million-dollar ore carrier (it's our second and a third is under construction) help make Bethlehem more efficient and more profitable. So, naturally, we'd like to go full speed ahead on other new technology, where and when it's needed.

In recent years, the steel industry has found it difficult to generate sufficient funds to invest in all the newer and more productive facilities desired. Steel imports dumped into our country, soaring costs, and heavy environmental demands have all taken their toll on profits.

Solutions to these and other problems will help us generate additional funds for capital investment...help us adopt new technology wherever practical to cut our costs and improve our profitability. Bethlehem will continue to seek those solutions.

"Getcher Criss-yun Die-or!"

In the shadow of great emporia, "Hey, getcher Criss-yun Die-or!"

Belts, cashmere scarves, wool caps, socks, prints, designer tops, pots and pans, stuffed animals, calculators, earrings, hair dryers, briefcases—name it and the street peddlers have it. And they have it much to the chagrin of their competitors—establishment retailers who can't afford to button up their inventory in a cardboard box and run at the first sign of trouble.

In some places—New York City, for one—the competition is so hot in the shadow of emporia like Macy's, Gimbels, Korvettes and Alexander's that the big-name retailers have called for a crackdown. It's almost as though they'd forgotten (or remember only too well) the dynamism of their own pushcart origins.

Rain or shine or threat or summons, the peddlers are out there, clinging to their urban turf like limpets to a rock. When it rains, they hustle umbrellas and plastic raincoats. When the lunch hour is sunny and every office typing pool is on the browse, peddlers really swing: "Hey, getcher Saint Law-rent! Hey, getcher Criss-yun Die-or!" Another chunk of the subterranean economy in full cry.

The establishment complains of the flea market atmosphere peddlers carry in their wake along with litter and some of the most blatant sales hype this side of the Casbah. Some of the hype suggests that the alleged 14-karat gold chains and the Bolivia Electro watches at $15 a crack have, in the vernacular, "fallen off the back of the truck." The peddlers don't like to answer questions. "What are you, a cop?" asked a black teenager who had set up his *al fresco* shop under the scaffolding of the renascent Hotel Commodore at Lexington Avenue and 42nd Street.

Law enforcement officials think that some of the stuff that moves on the streets is indeed hot, but not much of it. "There's a little swag out there," says one FBI agent, "but most of those people buy directly from regular trade channels that specialize in peddler goods. The 'off-the-back-of-the-truck' hype is supposed to make the stock look cheap."

Is the hype really hurting establishment retailers? It may be just a flea bite, but no one can say how much it stings. If the 25,000 or so peddlers estimated to be working the New York City streets, for example, grossed as much as $100 a day (a conservative estimate is probably half that), the $250,000 doesn't look too big against total retail sales of over $100 million a day. Most of the peddlers are ethnics. Some of them, if the cities' acculturation mechanisms are still working, may one day wind up becoming tax-paying establishment retailers themselves. **—R.P.**

pliance stores, jewelry stores, coin and gun shops and realty companies."

Theft is so pervasive that it's hard to say, anymore, where the line gets drawn between the good guys and the bad guys. Many fences operating under legitimate cover, says the LEAA, often try to curry favor with cops, prosecutors and judges by selling to them at deep discount. Some fences operate with a virtual grant of immunity from the police as a tradeoff for information on who is stealing what—information that helps improve the clearance record of burglary squads, whose "productivity" is often judged on the number of arrests they make. Law enforcement officials like Eric Seiff argue that crime wouldn't be such a big growth business if legitimate business didn't have a big stake in it. "Stolen goods on the shelves," he says, "mean bigger profit margins."

One insight into how willing seemingly legitimate businessmen are to nibble at stolen goods emerges from an experiment the SCI ran recently with the help of a pair of "informants"—one posing as a fence, the other as thief-fence. The focus was the wholesale health- and beauty-aids market (everything from cosmetics to cold tablets) in New York City.

The sell operation started with the informants' offering 17 wholesalers a good buy on supposedly stolen quantities of Clairol Nice 'n Easy hair coloring, Revlon's Charlie cologne, and Burlington Mills' panty hose.

The scenario called for the informants to announce right up front that they were peddling hot merchandise. The tapes show that they did so. Here's the way a telephone call with one prospective buyer went.

Informant: Hello, Eddie, this is. . . .

Eddie: From who?

Informant: Uh, from Nice 'n Easy. D'ya remember?

Eddie: Yeah, where the helluvya been?

Informant: Uh, been trying to make another contact.

Eddie: Yeah, you get it?

Informant: I've been able to get a driver who has a guy on a platform who's stealing it, so I've got five pieces for ya.

Eddie: Five cases?

Informant: Yeah.

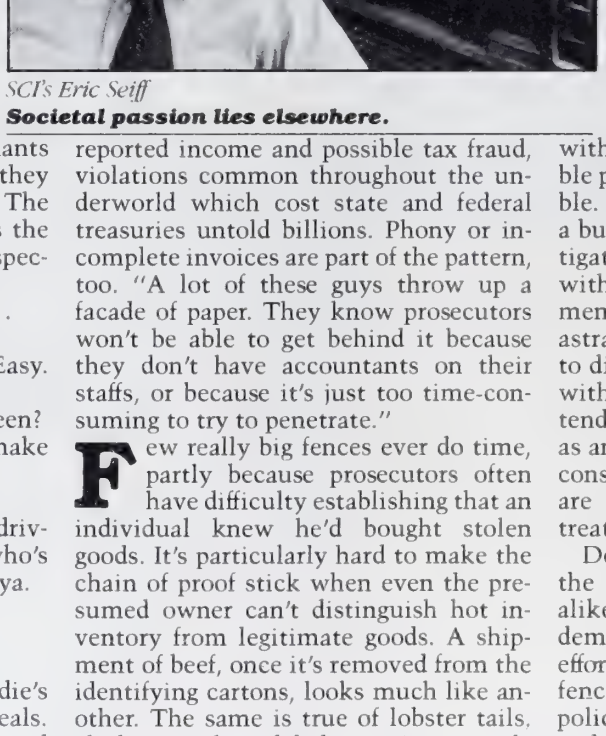
Eddie: An' what numbers?

Over a period of five months, Eddie's firm and 16 others were offered deals. Nine of them actually made buys and two others indicated a willingness to buy up to a trailerload of the stuff. Nobody turned an offer down on the grounds that the goods were stolen. The propositions that fell through did so either because the wholesaler was already overstocked with the product or couldn't find a buyer for it.

Entrapment? The SCI started with a working hypothesis that "seemingly legitimate businessmen play a crucial role in the redistribution of stolen property." And certainly the price was right: $35 to $45 a case on Nice 'n Easy, for example, or about 15% to 35% below wholesale. Some of the buys were for cash, no invoice required; others were paid for by check, invoice required.

When SCI accountants descended upon the informants' unwitting clients, they found some rather eclectic record-keeping habits. Nice 'n Easy. In some instances there was no record at all of a cash outlay or a purchase. In others the paperwork was rudimentary—invoices with torn billheads that reflected quantities and prices but no product names, no seller's identity.

In the accountants' view, the off-the-books transactions carried a whiff of unreported income and possible tax fraud, violations common throughout the underworld which cost state and federal treasuries untold billions. Phony or incomplete invoices are part of the pattern, too. "A lot of these guys throw up a facade of paper. They know prosecutors won't be able to get behind it because they don't have accountants on their staffs, or because it's just too time-consuming to try to penetrate."



SCI's Eric Seiff

Societal passion lies elsewhere.

Few really big fences ever do time, partly because prosecutors often have difficulty establishing that an individual knew he'd bought stolen goods. It's particularly hard to make the chain of proof stick when even the presumed owner can't distinguish hot inventory from legitimate goods. A shipment of beef, once it's removed from the identifying cartons, looks much like another. The same is true of lobster tails, clothing without labels, precious metals that have been melted down, jewelry that has been cut up or stripped of its setting, or any of the hundreds of high-value items that pop up on the hit lists. Even TV sets that carry serial numbers are hard to identify, law enforcement officials complain. The numbers are there not for inventory control but to help dealers keep track of repairs d under warranty.

The trade knows exactly how hard to prove knowledge of stolen goods. Seiff likes to talk of the sales manage a women's sportswear wholesaler pushed the "Who, me?" defense to ab dity. The cops picked up the manage Manhattan after he'd bought 200 r coats from a friend. The transfer be after the manager's son rented a tr and parked it by a diner. While the lingered over his coffee, two individ got into the empty truck and drove When they came back some time lat *voilà*, the vehicle was loaded with promised rain gear.

The sales manager, says Seiff, st fastly denied suspecting the coats w stolen even though he conceded: a) his friend was in the business of sel cigars rather than waterproofs that the manufacturer's label been removed from the coats that payment had been made cash at the diner; d) that a time method of delivery had not b agreed upon when the deal was gotiated; and e) that the rainc changed hands at a place unc nected with either man's plac business. Unusual billing and de ery methods like this are typic explained away by a seller's nee keep the source of his merchan hidden and prevent competit for suppliers.

Proof of guilty knowledge i difficult to establish that leg mate-seeming businesses cau with the goods typically have little t ble plea-bargaining their way out of t ble. One of the wholesalers tripped u a buy operation run by Eric Seiff's in tigators, for instance, had been char with fencing—in another case—a sh ment of pharmaceuticals that w astray. He was permitted to plead gu to disorderly conduct instead and got with a $150 fine. Many judges, in f tend to look upon receiving stolen go as an offshoot of white-collar crime. consequence is that fences, when t are caught, generally get much ea treatment than the thieves they servi

Deterrents that don't deter are on the reasons fences and their suppli alike are flourishing. The LEAA demonstrated, though, that concentra effort can put many thieves (and so fences) behind bars. Five years ago l police, with the help of LEAA mo and equipment, began running a serie more than 60 undercover "sting" op ations in 39 cities. The concept, presu ably named after the popular motion p ture with an eye to maximum public exposure, is simple enough: It take thief to catch a thief.

Freighted with concealed videot and sound equipment, the cops set

fencing operations and spread the that they were willing to pay top for good merchandise. In New City, for example, the "UCC Co." ot humor for undercover cop) and similar ventures pulled in a total of nillion worth of stolen property in ears' time.

lot of the swag recovered was the usual: cameras, jewelry, guns and stolen government checks ht at 10 cents on the dollar). But a e of new automobiles turned up ht for $250 apiece), as did a couple deric Remington bronzes valued at l of $100,000. The Buffalo, N.Y. , in another sting operation, picked Rembrandt valued at $250,000 that een stolen six years earlier from the t Museum in Bayonne, France.

g operations around the U.S. have resulted in 4,600 arrests and— s to the hard evidence of video- -an extraordinarily high conviction f 90%. The effect may only be short but LEAA contends that property has dropped visibly in at least one- of the sting cities.

sting gambit is a response to the voiced complaint that traditional methods don't contain crime. The have management problems of own. Their primary mission is to vith the muggings, assaults, rapes, ers and other street crimes that up only 6% of all reported crime. job absorbs most of the manpower, g a corporal's guard to cope with roperty crimes that make up the preponderance of reported crime.

rationale behind that deployment ically political. "The emphasis is hting violent crime because that's the societal passion is," says Eric "Theft is underpursued because the ncy is to fight the fire that's right front hall."

at's the answer? Law enforcement ls say that business could help and itself, with product markings erial numbers—to make it easier to that goods have been stolen.

the real problem goes deeper than numbers, down to the very nature odern society. We live in an era the civil rights of individuals are respected and violent punishment otect society is in disrepute. At the time we live in a society so afflu- so prolific, that theft tends to get ged off. You might cut off a thief's in an older, poorer society for steal- e tools with which a man earns his or the bread that feeds a family. TV set or trailerload of raincoats? nonviolent theft is tolerated and the s accepted as just one more element e steady and little-understood up- trend in prices called inflation. As Kelly's Pogo said: "We have met nemy and he is us." ■

Of the 5 Great Liqueurs in the world only one is made in America.

Wild Turkey Liqueur.

Scotland has Drambuie. Ireland has Irish Mist. France has Cointreau and B&B.

Now America can boast its own great native liqueur: Wild Turkey Liqueur created in Kentucky by the originators of America's finest native whiskey, Wild Turkey.

Wild Turkey Liqueur is the "sippin' sweet cream" of liqueurs. It's made to be savored slowly after dinner. Or as a mellow accompaniment to an evening's conversation. You've tasted the great liqueurs of Europe. Now taste America's great one— Wild Turkey Liqueur.

"Any computer company that helps major banks stay on the move and independent retailers stay competitive is more than a computer company."

Robert W. Kleinert, President
The Service Bureau Company

Just standing here watching the activity at Girard Bank's rooftop heliport in Philadelphia, I sense the commitment to American business that has made Girard one of the nation's major financial institutions.

Girard Bank's commitment is supported, in part, through its use of time-sharing and data services provided by The Service Bureau Company (SBC)—an important part of Control Data Corporation.

Take for instance, cash management—a vital function in today's business environment. Girard is using SBC's time-sharing services to enhance sophisticated cash management models Girard builds for customer studies and consulting.

Working with SBC, Girard has also increased the marketability of its financial analysis system. SBC put the system on its time-sharing network and is making it available to other users throughout the country for credit evaluation and other financial functions.

Another example: Girard Bank, because of its association with SBC, is able to make available to its commercial customers SBC's wide range of computing services—everything from payroll, accounts receivable, accounts payable and general ledger to labor distribution and personnel reporting.

"Control Data not only helps banks widen their business horizon, we're also helping independent businesses thrive in an ever more competitive environment.

"EFT Data Services, another part of Control Data, working through local banks offers credit authorization and check verification services to independent retailers anywhere. Now, even L. L. Bean Inc., the well-known mail order and retail firm selling outdoor sporting specialties, can instantly verify credit card and personal check purchases in both mail order and their retail store in Freeport, Maine—just like major chains.

"Data services for banks, credit checking services for independent retailers...for more information, write to Control Data, HQN11I, P.O. Box 0, Minneapolis, MN 55440. Control Data, a company meeting these and other important needs, worldwide."

CONTROL DATA CORPORATION

More than a computer company

Loeb Rhoades, Hornblower's Tokyo branch is making a name for itself by flouting the customs that govern brokerage houses in Japan.

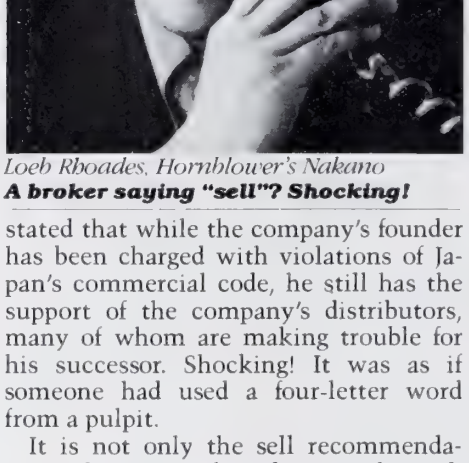
Daring to be different

By Norman Pearlstine

THE JAPANESE like to say, "The stake that stands up gets hammered down." True to such passion for conformity, Japan's major brokerage houses, companies like Nomura, Nikko, Daiwa and Yamaichi, routinely turn out research that reads as if it all came from the same printing press. The same companies get touted over and over. The market is always about to go up or, at worst, hold even. A *sell* recommendation? Never. Shift into cash? Much too jarring and impolite.

That penchant for not rocking the boat has helped create a nice little niche for one American-owned interloper, the Tokyo branch of Loeb Rhoades, Hornblower & Co. Its research department, headed by Hisamichi (Hank) Sawa, a 34-year-old Japanese who got his M.B.A. from New York University, is making a name for itself by regularly writing hard-nosed reports on the Japanese market and, when it thinks the facts warrant it, by telling its customers to unload a stock. In the last couple of years it upset many members of Japan's tightly knit financial community by recommending that clients dispose of such well-known stocks as Sony, Olympus Optical and Marui Co., a large retail chain. In all three cases Sawa's sell reports proved accurate. He first suggested selling Sony in July 1977 when the stock was trading for 2,410 yen. By last October it had fallen to 1,350. In April 1978 he said: Dump Olympus. It was then selling at 706 yen; six months later it was down to 621. As for Marui, it was trading at 990 yen last May when he urged its sale. Early last month, it was down to 840.

More recently, Loeb Rhoades issued a detailed sell report on Yamazaki Baking Co. that chronicled the lingering management problems created by a feud between the company's current president and his brother, who founded the company and was its chief executive until he was ousted a few years ago. The report



Loeb Rhoades, Hornblower's Nakano
A broker saying "sell"? Shocking!

stated that while the company's founder has been charged with violations of Japan's commercial code, he still has the support of the company's distributors, many of whom are making trouble for his successor. Shocking! It was as if someone had used a four-letter word from a pulpit.

It is not only the sell recommendations, however, that distinguish Loeb Rhoades from its competition. Its buy list is also well regarded, as is its analysis of Japanese market trends. It is also, according to Finance Ministry sources, one of the more profitable foreign brokerage operations in Tokyo. (Merrill Lynch, which has the oldest and largest foreign branch in Japan, is said to make more money, but it has many times more salesmen than Loeb Rhoades.) Interestingly, Loeb Rhoades is one of the few foreign firms whose operations in Japan are completely staffed by Japanese.

The driving force behind the Loeb Rhoades Tokyo branch is Shigeru (Shig) Nakano, its aggressive, 41-year-old director and general manager. Nakano began his career as a salesman and researc Yamaichi Securities Co. but left i seven years to join The Coca-Col (Japan) in 1968 as a financial an While there, he learned iconoc American ways and met Hank who had joined Coke just after retu to Japan from New York Universit

The two men later moved to th kyo office of Baker Weeks & Co., Nakano sold U.S. securities to Jap institutions and Sawa was a fin analyst. Sawa joined Loeb Rhoad chief of research in 1976, and in 1977 Nakano joined him there.

When Nakano arrived at Rhoades, the branch, which had o in August 1974 (it had operated representative office for 17 month fore that), was in bad shape. It had run by a foreigner who knew a lot the investment banking busines very little about selling securities i highly competitive Japanese mark a result the office was consistently red. Within nine months Nakano turning a profit and has kept it i black ever since.

Nakano says he was able to tur Loeb Rhoades office around after ing that to succeed it had to operat Japanese firm. He scrapped the company's commission system for men and started paying fixed salari way Japanese brokerage houses do bonus system was also restructur that it is now based largely on the o overall production rather than sole individual performance, a Japanese-collectivist approach. Finally, he h sembled a tightly knit staff in v many persons, including secretaries tinely work 12 or more hours a da sometimes six days a week.

About one-third of the Tokyo bra revenues comes from selling U.S. s ties to Japanese institutional and in ual investors. The rest comes from ing Japanese stocks and research them to overseas and domestic inv and from underwriting foreign ye nominated issues and domestic e issues. The dollar's decline over the year has made it hard to sell U.S. s in Japan. But Nakano says he and other salesmen have succeeded in s bonds and longer-term growth stoc Japanese institutions seeking a mo ternational portfolio; rumors about Tokyo earthquake pushed some Jap insurance companies into the U.S. ket last year to cover their bets. recently, Loeb Rhoades has been s oil stocks like Atlantic Richfield Standard Oil of Ohio, as well as e related issues like Schlumberger an ker Drilling, to Japanese institution

PRESENTING JAGUAR FOR 1979.

THE LATEST AND THE BEST IN A LONG AND ARISTOCRATIC LINE.

979 Jaguars are the finest expression to of our uncommon and uncompromis- pproach to building great luxury cars. e luxury is deep and so well thought-out he Jaguars come to you complete: there o factory options whatever. Real leath- its, thermostatically-controlled heating ooling, stereo AM/FM radio and tape m: it's all there, adding to the notable inherent in all Jaguar cars.

t, as ever, the finest expression of any ır motorcar is the way it moves.

e 1979 Jaguars have the incredible re- se of electronic fuel injection teamed either the double overhead-cam Six in the XJ6 sedan, or the aluminum V-12 in the XJ12 sedan and the S-type. And Jaguars have the surefootedness of four-wheel independent suspension and power disc brakes on all four wheels. They have power-assisted rack and pinion steering and an overall feel for the road that is rare, indeed, in luxury cars.

Another uncommon feature of the 1979 Jaguar is its warranty: for 12 months, regardless of mileage, your Jaguar dealer will replace or repair any part of the car that is defective or that simply wears out, provided only that the car is properly maintained. The only exceptions are the tires, which are warranted by the tire manufacturer, and the spark plugs and filters, which are routine replacement items. Even then, if the plugs or filters are defective, Jaguar will replace them.

There has never been a better time for you to own a Jaguar, for the simple reason that there has never been a better Jaguar than our 1979 edition.

For the name of the Jaguar dealer nearest you, call these numbers toll-free: (800) 447-4700, or, in Illinois, (800) 322-4400.

JAGUAR

Jaguar Rover Triumph Inc. Leonia, NJ 07605

Although selling institutional investors in Japan and the U.S. isn't all that different, Nakano says he uses a very different strategy when selling to Japanese individual investors. "In Japan, no individual wants to hold a stock more than six months," he says. "Short term means one to three days." So Nakano pushes what he calls "special situations"—low-price, speculative issues or companies that might rise on the fact or the rumor of takeover action.

While Nakano spends most of his time selling U.S. securities to the Japanese, Sawa and his research staff are busy providing foreigners with information about the Japanese market and Japanese securities. The Nikkei Dow average hit a record high of 6212.61 Jan. 31, but since then it has fallen to about 6000. The fall in recent weeks primarily reflects uncertainty about international events that might affect Japan, such as the curtailment of oil supplies from Iran.

Sawa says the market is likely to stay at its present level for the next couple of months. After that, he says, its behavior will depend more on Japan's inflation rate than on any external events. *If* it looks as though Japan will have double-digit inflation this year, he says the market could fall to about 5600. He says, however, it is more likely that inflation will be brought under control later in the year and that the market could rise to at least 6500 by year-end. In other words, he is predicting that it will, in either case, sell in a relatively narrow range.

Sawa recommends that non-Japanese playing the Tokyo market increase their cash position over the next few months and that they restrict their investments to a balanced portfolio of between 35 and 40 stocks, including about a half-dozen, such as Kirin Brewery and Mitsubishi Plastic, for short-term trading. Lately, he has been urging investors to invest less heavily in consumer-oriented issues, since he expects consumer spending to be sluggish over the next four or five months, and to increase their investment in issues that are likely to benefit from increased capital spending. In mid-March he dropped Kashiyama & Co., a manufacturer of ready-made suits, from his recommended portfolio and added Amada Co., a machine-tool maker, and Fujitsu Fanac, a maker of numerical control machines.

To play the Tokyo market, increase your cash position, invest less heavily in consumer issues and look more closely at stocks likely to benefit from increased capital spending.

The Loeb Rhoades analyst also suggests that investors should pay les tention to issues influenced by p works spending, since the schedule crease in government spending on p works is less for 1979 than it wa 1978, and less attention to issues a ed by interest rates since he thinks i est rates appear to have bottomed o

Sawa says he also favors some "ex related issues that are benefiting the yen's recent softening in relati the dollar." Among his favorites is on Inc., the maker of cameras and ing machines. Although Canon's has risen recently, he says its multip a consolidated basis of 11 is still enough to justify further investmen

Other favorites include Hitachi ell, a partly owned Hitachi subsi that makes a broad line of mag tapes and related products, and Uny Japan's sixth largest supermarket ch

Perhaps the most interesting about this Loeb Rhoades operation i the advice it dispenses but its impre success in the Japanese marketp Note the subtle blending of Japanes American psychology. The product has an American look to it: blunt, est, not particularly tactful. The or zation itself is quite Japanese—in pensation, in motivation, in perso Can such a blend of techniques co the secret to opening up the Japa market to other American firms? ■

Behind every great Western temporary is a dedicated Western manager.

When you have vacation workload problems, let Western's professional managers be your personnel support team.

Many of our managers have been on your side of management so they have a particular understanding of vacation help needs. All have extensive experience recruiting and assigning many types of personnel: secretaries, file clerks, product demonstrators, assemblers... you name it! They test and interview carefully, so you know you'll get the right people.

Contact us in advance to schedule vacation replacements. We're in the white pages. Call today and ask for the helpful free brochure "Order Exactly the Temporary You Need."

"Call the chief, Tommy! I think I've found our copying bottleneck!"

The meeting's about to start... and the copies aren't ready yet. We've got a fast cure: A Kodak copier that turns out 4200 fine-looking copies an hour—that's 70 a minute! Already collated, if you like. And stapled, too, automatically, at the push of a button.

People are telling us it's the best quality in the business. A few of these machines in your offices can end a lot of bottlenecks. And the service is Kodak quality also. We'd like to demonstrate.

Write: A. Angert, Eastman Kodak Company, CD9338, Rochester, NY 14650.

Kodak copiers can unplug your bottlenecks.

The magazine industry defied the experts by booming and made Consolidated Papers one of the most profitable companies in the U.S.

Supercompany

By Sharon Reier

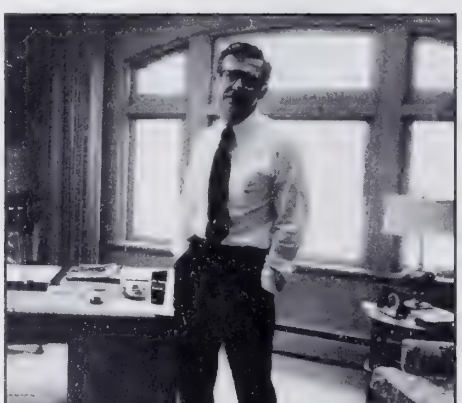
"We thought the magazine business was a dead duck," says George W. Mead II. So did a lot of other people. Except for smaller, specialty magazines, the printed word couldn't compete with color television for audiences and for advertisers. Everybody knew that. Everybody, that is, except for the audience and the advertisers. The magazine industry made a staggering comeback. The number of magazines of all kinds published in the U.S. exceeds 13,000, more than ever before. Last year 102 general consumer magazines accounting for 90% of advertising revenues sold over 115,000 pages of advertising, up 35% from 1973. In January 1979, ad pages sold were up another 10%. New magazines are starting at a dizzying pace and old ones, *Life* and *Look* prominent among them, are being revived.

And George Mead, who at 51 bears an uncanny resemblance to Clark Kent both in looks and manner, is smiling broadly. George Mead is chairman of Consolidated Papers, Inc., headquartered in little Wisconsin Rapids, Wis., the third generation of Meads to run Consolidated.

Consolidated gets over 90% of its earnings from coated, light-weight paper used primarily by magazine publishers and commercial printers. With overall sales of $387 million, Consolidated is a midget in the U.S. paper industry compared with International Paper, St. Regis, Georgia-Pacific, Boise Cascade or Mead (no relation). But it is a major factor in magazine paper, with an estimated 15% of the market.

George Mead is smiling because business is so good that when *Life* came back to life last October, he didn't have any paper to sell it; all of his output was spoken for. In fact, Consolidated is buying paper in Europe to supplement its own production and selling that paper, it says, at a loss in order to fulfill some of its commitments.

Consolidated management gets no high marks for foresight about this remarkable turnaround; it, too, was worried about the future of its chief customers. So much so that it made an unsuccessful attempt to diversify into carbonless carbon paper, only to have that product obsoleted by the copying-machine industry. It also hired Lawence H. Boling away from Scott Paper in order to move Consolidated more deeply into the heavier coated papers used for annual reports and brochures. Boling stayed on to become president. But credit Consolidated: It didn't panic; it didn't sell out or make hasty efforts to get into fast food or savings and loans or some other unrelated diversification.



Consolidated Chairman George Mead
No foresight, but no panic either.

To be sure, there was a string of bad years. From 1968 through 1972 Consolidated was regularly squeaking by with earnings that rarely exceeded 5% on stockholders' equity.

No more 5% returns for Consolidated. Last year earnings rose 66%, to $44 million ($8.36 a share)—a return of 24% on shareholders' equity. Compare that to International Paper's 11.7%, St. Regis' 11.9% and Boise Cascade's 14.2%.

This year the paper market is stro than ever. While the reported pri coated magazine stock is $600 a publishers pay as high as $900 a overseas—when they can get it. S analysts predict that Consolidated c earn $10 a share this year, $13 by 19

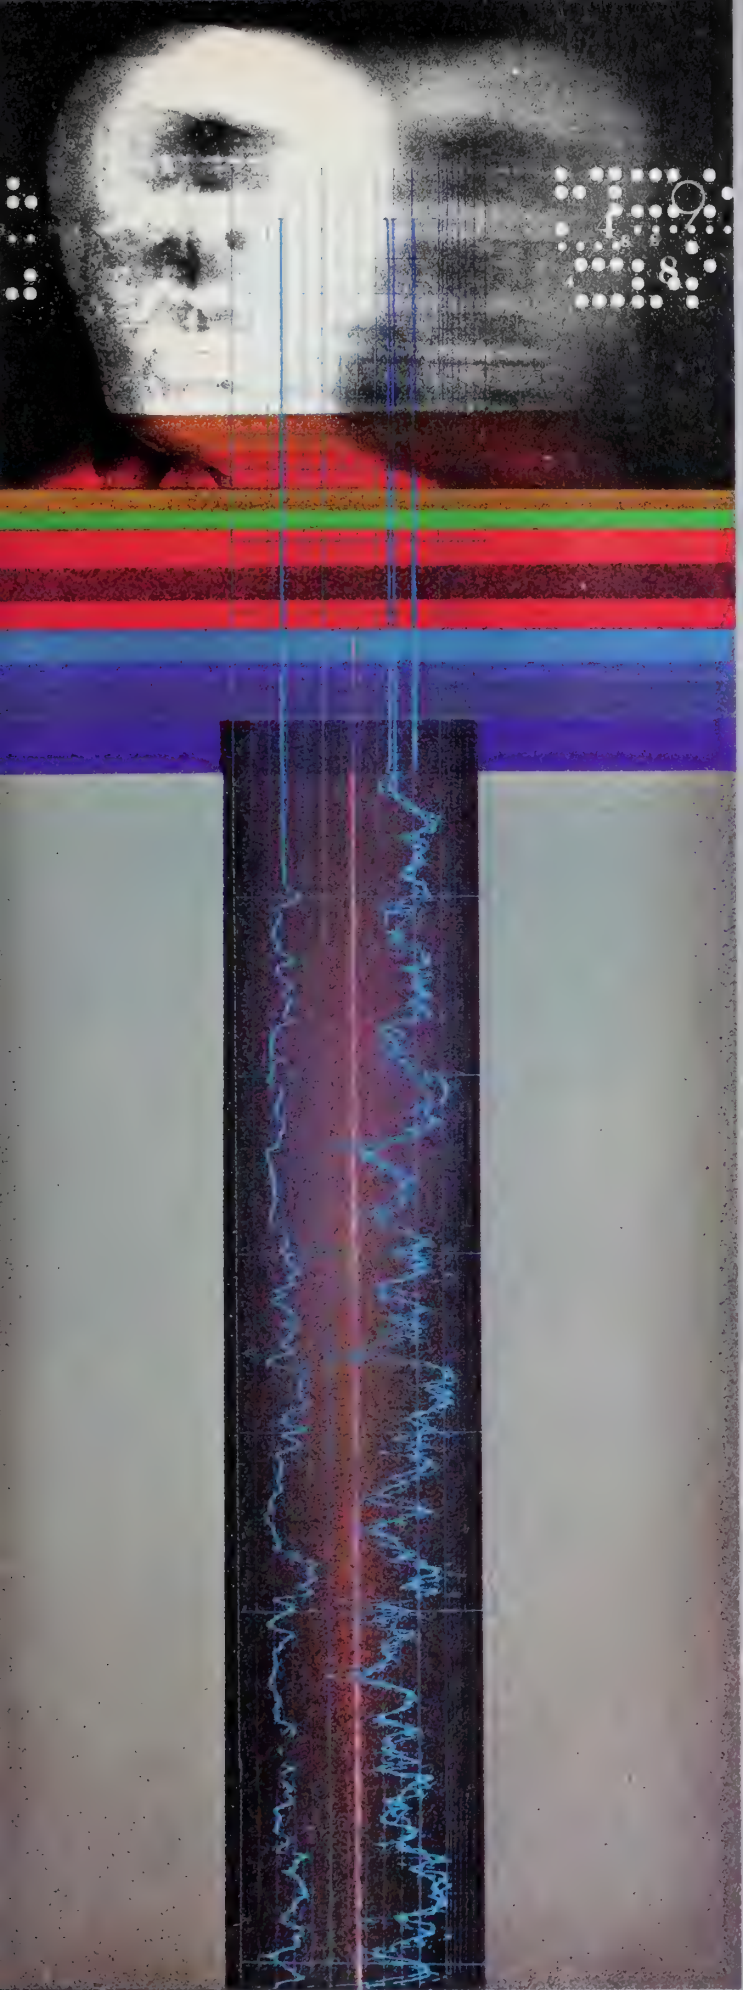
During the mid-Seventies, Consol ed had to live with a stock price that well below its book value; a take artist could have had the company huge discount. But that was one w Mead did not have. He and his fa own or control 43% of the 5.2 mi shares. Of the 12 directors, 6 are M Because of Consolidated's ultracons tive financial stance, there we enough bankers to direct a merge order diversification. Chalk one u ownership-management.

Conservative is putting it mildly. I industry where debt-to-capital ratio 30% and more are common, sma Consolidated has only $27.6 millio long-term debt in a total capital struc of $240 million. In an industry w overexpansion has been a chronic ease, Consolidated has gone very slo Its first new machine in 17 years, cos close to $64 million, will start spe out product this fall. The way profit pouring in now, Mead will be able to for the huge new machine out of flow and without incurring much a tional debt. The conservatism ap also to Consolidated's pension func where vested unfunded pension lia ties are amortized over 10 years, as c pared with 20 and even 30 years at companies.

With profits of the kind Consolid and its competitors are reaping f magazine paper, you can bet there wi plenty of expansion in the years ah U.S. capacity for light-weight, coate per will increase 24% between now the end of 1981. However, that ex sion will do little more than close the between demand and supply, accor to Mead, who notes production from new machine is already spoken for. sees no prospect of oversupply at l until the mid-1980s. After that? don't plan ten years out," says Bol "When we get beyond three years ou begin to giggle and get nervous."

Consolidated's stock price has sponded to the good news by doub since the start of 1978. But it still sel only six times probable 1979 earning Mead concerned? Not that you w notice. If he has a worry at the mom it is how to put all that cash flo productive use, without getting into businesses.

"This is an operating industry," Mead, a Yale-educated chemist and e neer. "You can't sit on top of a towe Manhattan and think lofty thoughts." that, both he and Boling chortle. All way to the bank. ■



Imagine tomorrow 1,000 feet deep.

And awfully wet.

We see science extending the petroleum age further than man thought possible even a decade ago. America has entered a new era of computerized seismic and well-logging technology, improved secondary and tertiary recovery, and drilling in very deep water offshore. Much new oil and gas remains to be found beneath as much as 1,000 feet of ocean. And we have the technology *today* to produce it tomorrow.

At Mobil, we're making waves offshore. In the Gulf of Mexico, where we've spent some $1.3 billion for leases since 1970, our drillers came up with oil or natural gas, or both, in 64 of our 167 new tracts (with 38 others still to be tested). We found the biggest oil field yet in the North Sea. And we're pioneering seabed producing units invisible from the surface.

But even imaginative business initiatives can be drowned in overzealous environmentalism, misguided national policies, and government over-regulation. Which is why we repeatedly take our case to the people. Why we remind Americans there have been no more than four major oil spills associated with the more than 23,000 wells drilled off U.S. coasts (and even these were cleaned up with no permanent environmental damage). Why we make it clear our country can have *both* reasonable environmental protection *and* more energy, with the jobs energy brings. Why we champion a phase out of petroleum price controls to help avoid energy shortages in the '80s and '90s.

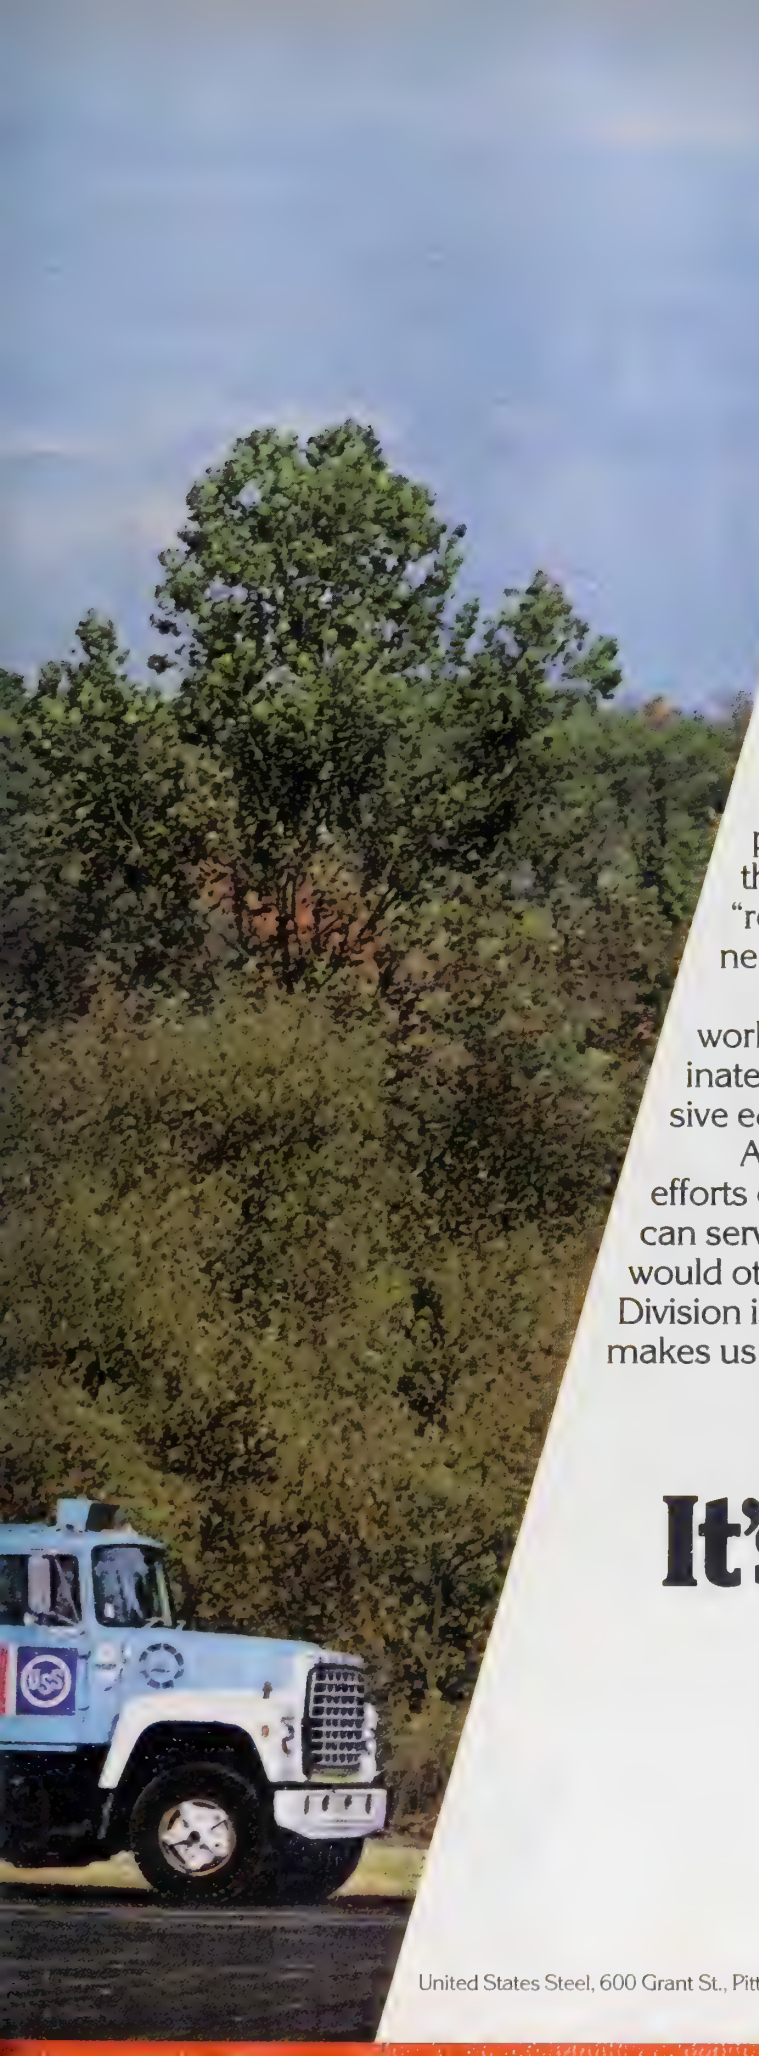
For thousands
of customers,
our "retail" division
performs
a vital service.
STEEL



Many manufacturers order steel from our mills in vast quantities, hundreds or thousands of tons a month. That's the most efficient way for them to buy.

But other times, customers may require only a few tons for immediate delivery and that order may not be practical for a mill to process.

Furthermore, many customers don't have the equipment to slit, shear, saw or burn their steel to the sizes needed in their manufacturing process.

The solution: our U.S. Steel Supply Division. It buys quantities of many kinds of steel from the mills, and stores and processes it in 28 service centers around the country. From this inventory, steel is "retailed" to customers in the amounts they need, when they need it.

These services enable customers to work with smaller inventories and often eliminate the need to make investments in expensive equipment.

All this means that through the combined efforts of the mills and service centers U.S. Steel can serve a great many more customers than would otherwise be possible. U.S. Steel's Supply Division is more than a much-needed service—it makes us a stronger company.

Service. It's one of our strengths.

Vive l'hélicoptère!

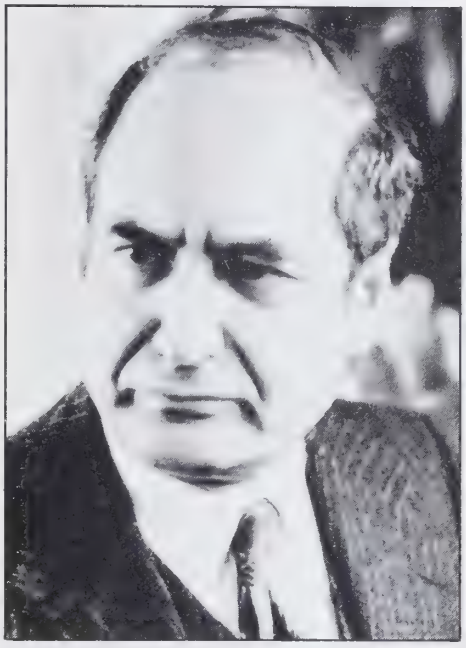
By Lawrence Minard

HESE HAVEN'T BEEN good years for the Mitterrand brothers, Jacques and François. As a leader of the ch Left, François, 62, went into se when the French bourgeoisie ral- ast year to the cause of private prop- and handed victory to Valéry Gis- d'Estaing's center coalition. Fran- younger brother, Jacques, 60, met wn Waterloo when the state-owned ète Nationale Industrielle Aerospa- (SNIAS), which he heads, was un- to sell three of its eight supersonic cordes after SNIAS and British Aero- e produced 16 of the sleek white iants.

t for Jacques at least, all is not lost. ast one division of his $2.2-billion-a- nationalized aircraft company is ing the French flag flying and mak- nice profit at the same time, its -million-a-year helicopter division quartered in Marignane, outside eilles. SNIAS is the world's third st maker of the versatile craft, after ron's Bell Helicopter division and ed Technologies' Sikorsky Aircraft ion.

Bell and Sikorsky standards, SNIAS iew factor in world helicopter com- ion. It got off to a good start building amed Alouette during the Algerian but exported nothing until 1968, sales were just $200 million. Last however, exports—mostly to the and Europe—accounted for about of the division's $585 million sales. old, SNIAS has produced around helicopters, *vs.* 23,500 for Bell and for Sikorsky. It has 19% of the et to Sikorsky's 25%, Bell's 30%.

used to be that generals were heli- rs' best customers. But since 1970, ig growth has come from corporate atives. The man who runs the heli- r division under Mitterrand is Fran- Legrand, who left a military career 962 to spur on SNIAS' helicopter



Aerospatiale's François Legrand
Flying hard against Sikorsky and Bell.

production. Legrand figures that the non-Russian world's military helicopter fleet climbed 16% between 1970 and 1978, to 21,000 ships, while the civilian fleet more than doubled, to 14,000. He believes the military fleet will grow at less than 3% annually through 1985, while the civilian fleet will grow at between 6% and 8% per year. "We think the [civilian/military] aircraft mix will be 50-50 by 1985," he says.

Mitterrand and Legrand have learned something from SNIAS' Concorde setback: Sell the medium and low ends of the market, not the high-priced end. Legrand's biggest hope right now is on SNIAS' new Ecureuil (or, "Squirrel"), six-place runabouts designed to compete against Bell's 206 series. The AStar model, which Legrand hopes will capture big hunks of the North American market, comes powered by a 615-horsepower turbine engine made in the U.S. by Avco's Lycoming division. A more powerful model, the TwinStar, will be officially introduced in 1981; it is powered by two 420-horse turbines from GM's Allison subsidiary. Legrand confidently asserts there is no visible competition for the TwinStar, yet.

Borrowing such concepts as injection-molded plastic bodies and mass-production economies of scale from the automobile industry, Legrand can profitably sell the six-place AStar at just $252,000 a copy (and TwinStars at $510,000); Bell's five-place 206B JetRanger III model goes for $225,000 while its seven-place 206L-I LongRanger costs $362,000. Thus is SNIAS putting on competitive pressure. "What we understand," says Legrand with more than a little pride, "is that Bell was forced to stop its planned price increases on the 206 when we introduced our AStar." Legrand has already delivered 50 AStars since he began commercial production last year, and is working to fill orders for 350 more. Production capacity is currently 10 per month, will expand to 22 (including TwinStars) by midyear and hit 30 a month in the early 1980s. At Bell, capacity is 45 helicopters a month.

Legrand does have his headaches, labor being a major one. His assembly-line workers earn around $250 for a 42-hour week—low by U.S. standards but high enough by French standards that Legrand is forever looking for ways to motivate his work force. Listen:

"In France now, workers get four weeks vacation in summer, plus another week off in the winter to go skiing. Most of them have reached a standard of living where they aren't really interested in making any more money." So much for "cheap" labor.

How do you motivate workers who aren't interested in more money? Legrand's solution: Try psychic rewards.

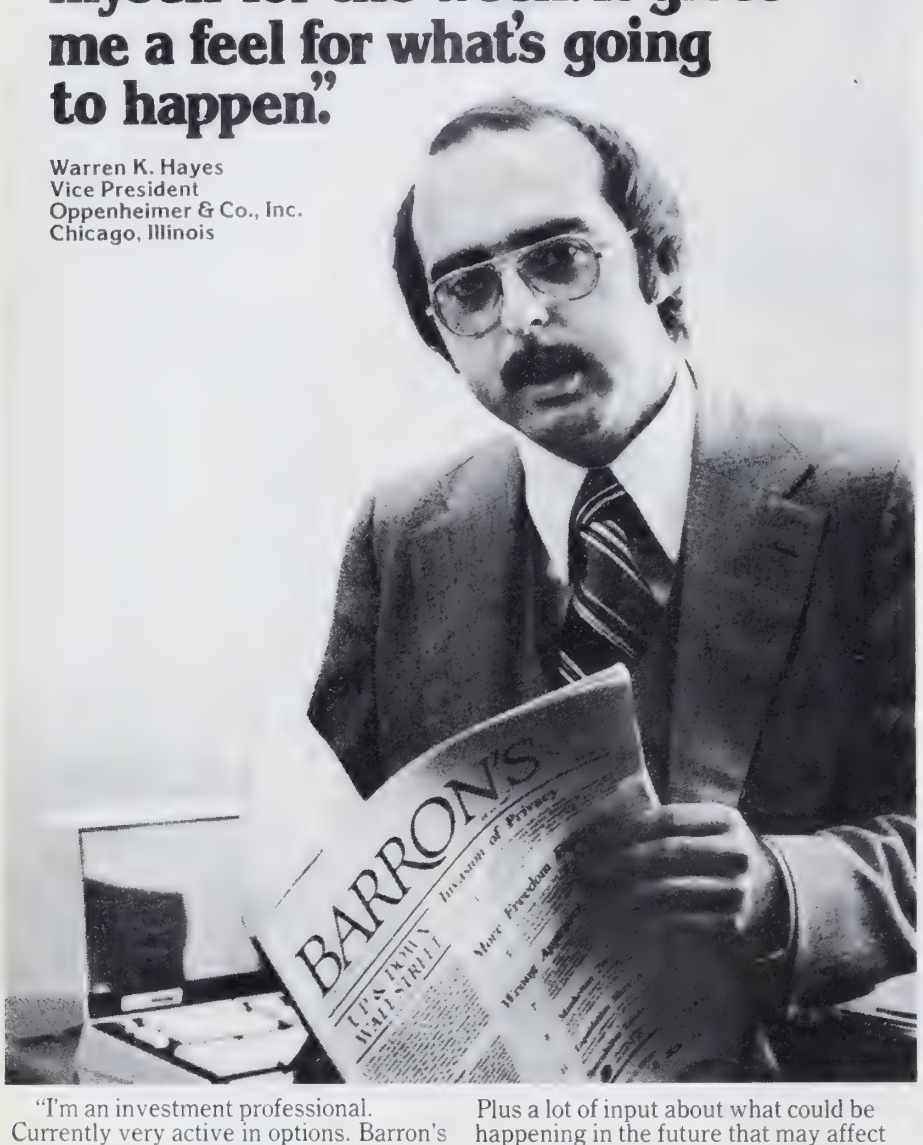
Borrowing from Volvo's Kalmar experimental factory in Sweden, Legrand recently introduced the concept of autonomous team assembly. A group of workers assembles a complete AStar from the ground up. There are no foremen, and workers can go to the canteen whenever they like. Legrand gives each team a production quota; filling the quota ahead of schedule means a team's members can repair to their favorite bistro, go skiing or to the beach.

To introduce competition among teams, Legrand uses the Japanese technique of posting teams' productivity rates in the hangars, all plotted against each other. It's still experimental, but there are signs it is working: SNIAS helicopters' 7,800 workers account for 21% of SNIAS' work force, but 26% of its revenues and probably a great deal more of its profits.

How's SNIAS' *airplane* division making out, now that Concorde production has closed down? Not badly at all, thanks

"I read Barron's to prepare myself for the week. It gives me a feel for what's going to happen."

Warren K. Hayes
Vice President
Oppenheimer & Co., Inc.
Chicago, Illinois



"I'm an investment professional. Currently very active in options. Barron's keeps me up to date on new techniques, regulations, and what's happening in the entire field.

"In addition, I handle arbitrage, convertible bonds and special situations. Barron's timely articles and in-depth research help me in all these areas.

"But basically, I use Barron's to prepare myself for the market week ahead. Not only do I get a summary of the past week's happenings, but also statistics that I'll be referring to through the week. Plus a lot of input about what could be happening in the future that may affect my decisions today."

For financial insight—and foresight—there's no publication to match Barron's. Whether you're a professional investor or an individual investor—you need our depth of reporting, our breadth of statistics, our ever-probing view of every investment vehicle. And you need them every week. Look ahead with Barron's. Over one million readers do.*

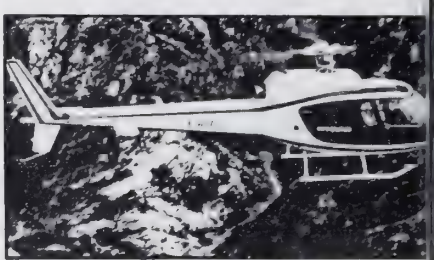
to the $33 million-a-copy Airbus, joint venture of SNIAS, the U.K. Germany, which competes with Donnell Douglas' DC-10 and Lockhe L-1011. SNIAS airplane division offic in Toulouse say they have already sol received paid options on 180 Airbu and have received letters of intent purchase 60 more. Eastern Airli recent order and paid options for 3 the wide-bodied 244-seat A-300 c (plus options on another 25 of a sma version) will probably push product close to the breakeven point—good n indeed for General Electric, which s plies most Airbus engines, and for P & Whitney, which will provide the p er for the 12 planes recently ordered Scandinavian Airlines System.

Back in Marseilles, François Legr has the same dream held by every seri helicopter man: a technological bre



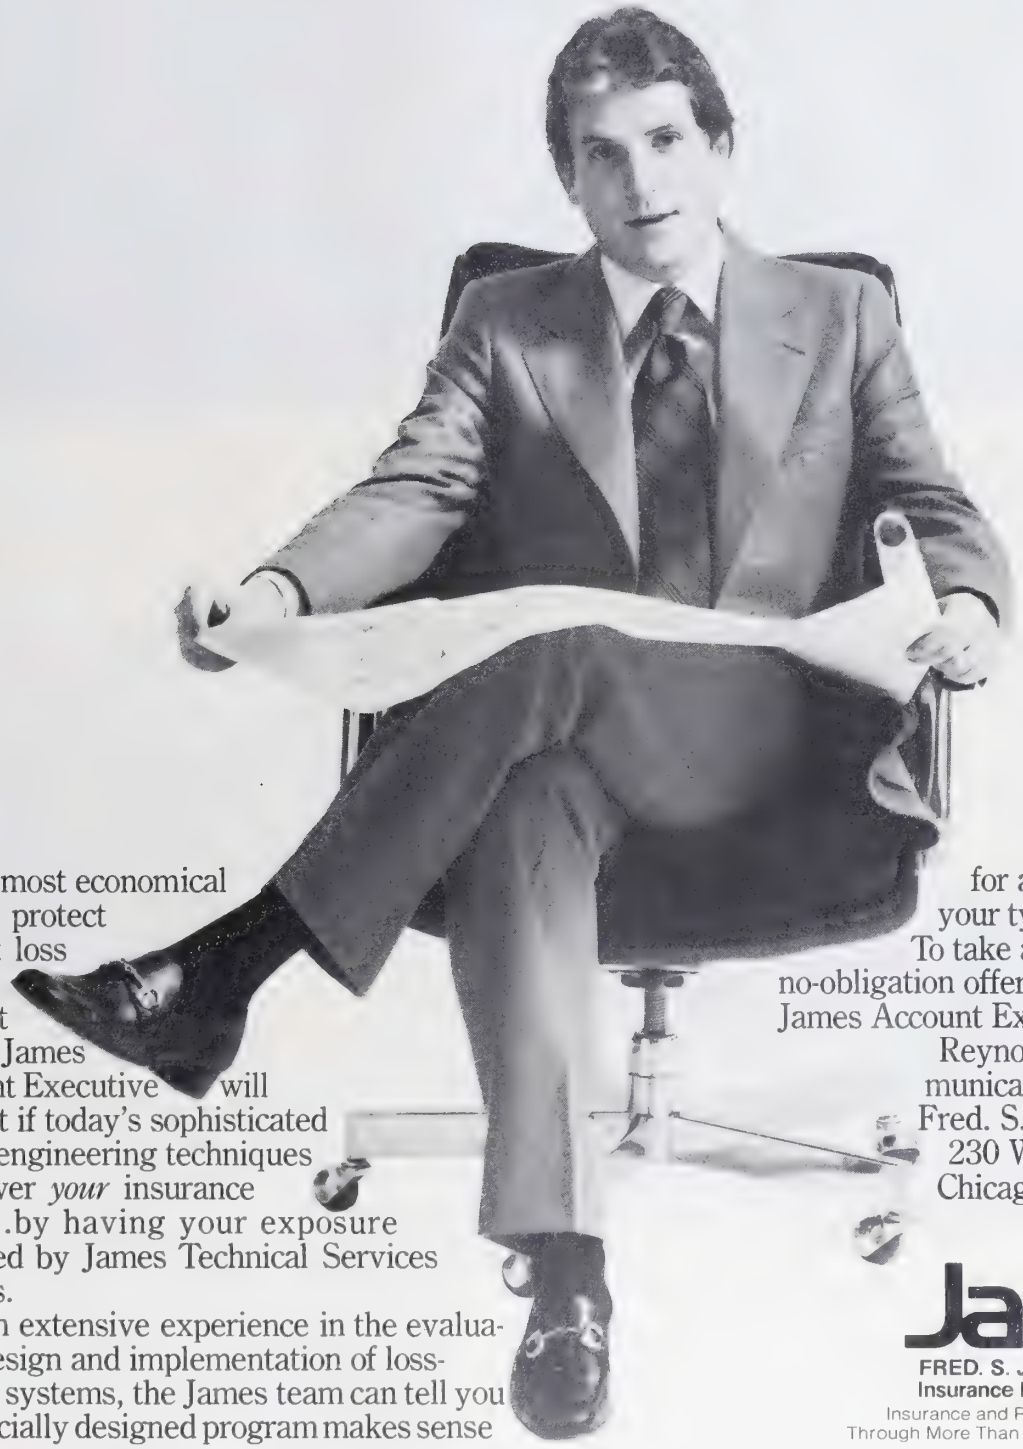
Aerospatiale's Ecureuil AS 350
It still can't compete with Cessnas.

through that will enable helicopters compete in price against Cessnas, Bee crafts and others in the $2.1 billion ci ian fixed-wing general-aviation mark But the dream is elusive. Says Legra "To be competitive with fixed-wing helicopter must be priced at no m than 50% above the cost for the equ alent passenger space of the fixed-w plane." Unfortunately for helicopters, AStar sells for over eight times m than a $29,000 Cessna 172.

What's the problem? Definitely technology, says Legrand: "It's purely economical problem of producing a l cost engine, since engines are typica two-thirds of the cost of a helicopte Legrand adds that because of its li weight and relative simplicity a Wan engine probably offers the best ho "But we'll have to wait until the au mobile industry develops and mass-p duces it at low cost."

So no matter how you slice it, the c rate helicopter is still at least a h decade away. Therefore Legrand is ke ing his Perrier-bottle green eyes on competition at hand. He is somew worried by Japan, where Kawas Heavy Industries Ltd. produces helic ters under licenses from Hughes, Boe and Germany's Messerschmitt-Bölk Blohn. But, he concedes, the Americ are still the team to beat: Bell in civilian market, Sikorsky in milit sales. Good news for America's batte commercial pride. ■

Can modern safety engineering reduce your company's insurance costs? Your James Account Executive will find out for you–fast.



The most economical way to protect against loss is to prevent it. Your James Account Executive will find out if today's sophisticated safety engineering techniques can lower *your* insurance costs...by having your exposure analyzed by James Technical Services experts.

Finding new ways to

Lockheed knows how.

"Biggest advance since the autopilot."

That's one widely held opinion of an exclusive fuel-saving system now being installed in many L-1011 TriStars.

Called the Lockheed Flight Management System, it senses altitude, speed, and other flight factors. Then it can act automatically to control the engine throttles for best fuel-use efficiency at all times during flight—takeoff to landing.

Flight management control panel

Though a new feature, the system isn't just for new planes; it can easily be added to existing L-1011s. And the savings, over the life of each plane, could total millions of dollars.

Making aircraft lighter.

Since the 1930s, most aircraft have been structured of strong, lightweight aluminum. Future generations of aircraft may also be made mostly of aluminum, but of a very different nature.

A new technology being explored by Lockheed uses powdered aluminum, alloyed with such elements as iron, lithium or cobalt, to create lighter, stronger and stiff metals than can be achieved with conventional alumi technology.

Results indicate this 'new aluminum' could reduc present-day jetliner weight by 10%. That in turn means savings of millions of gallons of fuel over each aircraft's life, a big benefit in energy-short years.

Aluminum lithium alloy magnified 1,000

For this new-material process, Lockheed scientists even had to employ astonishing techniques for turning the powdered aluminum and alloys into superior metal. After heating and melting example, the mixture is rapidly cooled *a million tim faster* than the cooling rate used with standard aluminum ingots.

Down the road: liquid hydrogen.

Lockheed scientists are deep into a NASA-sponso study of a future aircraft, powered by a clean-burnin liquid hydrogen, that could cruise at a flashing hyper speed of about 4,000 mph, or six times the speed of so

Because liquid hydrogen can be made from coal even water, its future use in aircraft could eliminate need for scarce, expensive petroleum.

The aircraft would cruise at altitudes as high as 12 feet and have ocean-spanning range. Its 200 passen

, U.S. military and corporate aviation saved more
0 million gallons of fuel, or better than $1.5 million.
at's just the beginning. The number of JetPlan users
e savings are both growing steadily.

Stretching wings.

Longer wings mean reduced drag and consequently a substantial cut in fuel use. But among big wide body jetliners, only the Lockheed L-1011 TriStar can add nine feet of wingspan without costly structural redesign.

That's because of the L-1011's advanced technology, in this instance an exclusive system of Active Control ailerons. Controlled by computers, these ailerons will act automatically to reduce the structural loads on the lengthened L-1011 wings.

Longer wings for less drag

The longer wings and Active Control ailerons will mean a healthy savings of fuel when they enter airline service in 1980. And they'll also help the L-1011 have the smoothest ride of any jetliner through gusts and turbulence.

When it comes to devising farseeing programs to meet the growing fuel crisis, Lockheed knows how.

Lockheed

A Diamond made of wood?

Nearly 70% of everything we make begins as trees. Over 1.4 million acres. We also take the trees we harvest farther than commodity forest products companies.

Into consumer goods, for example. Playing cards like Bicycle,® Congress® and Tally-Ho.® Diamond® matches. Cotton swabs. Vanity Fair® paper towels, tissues, napkins. Paper plates. Finished lumber.

What else is different about Diamond? In the last six years we've nearly doubled our sales—to over $1 billion. We now operate over 100 building supply home centers.

We've paid stockholder dividends for 98 years in a row. And our dividend yield for the last 5 years was the highest among all forest products companies.

Write for our quarterly and annual reports.

DIAMOND INTERNATIONAL

733 Third Avenue, New York, N.Y. 10017

irman and Chief Executive Officer William L. Wearly
made perfectly logical decisions but so far events have taken an illogical turn.

as Ingersoll-Rand lost its once magic touch?
r is it merely suffering from growing pains?

Like capital goods? You'll love Ingersoll-Rand

By Jean A. Briggs

WHAT'S GONE WRONG with Ingersoll-Rand? The shares of America's premier capital-goods pro-er sold last month at barely half their 6 high and lower than during the k market panic of 1974.

he problem is not earnings *per se*. er a dip in 1976 and 1977, Woodcliff e, N.J.-based Ingersoll-Rand's earn-s per share hit a new record last r—$6.65 on sales of $2.3 billion—and uld rise another 10% this year to 25 or so. Why, then, is this blue chip npany, which has almost always sold a substantial premium to the Dow es industrials, now fetching less than en times earnings in a nearly eight-es-earnings market, actually below its conservatively stated book value?

The essential problem is that Wall Street expected more of Ingersoll-Rand. Look at the figures: In the 1960s Ingersoll-Rand earned 17% on stockholders' equity while its chief rivals earned perhaps 11%; last year I-R returned just 14.4% while competitors like Dresser Industries and Gardner-Denver did much better. On net margins the story is much the same: I-R used to be a leader; now it is merely average. Even Chairman William L. Wearly is disappointed: "Our earnings were up 13% last year. I'd rather they were up 18% "

That Ingersoll-Rand's earnings growth has slowed down can, of course, be blamed on the relative weakness of capital spending by American business in recent years and by serious recessions overseas where I-R sells much of its output. The company geared up for big growth, but big growth wasn't there. The comparative loss of profitability is more worrisome, however, because it reflects a tremendous increase in competition. Take portable compressors, a line in which Ingersoll-Rand has long excelled. Says Wearly, "In 1940 there were six manufacturers of portable compressors in the U.S. By 1960 there were 13 and by 1968 there were 18."

Wearly, a hard-driving, dedicated man of 63, explains how this apparent loss of profitability came about. His immediate predecessor, Robert Johnson, took over in 1959 shortly after the regime of an octogenarian who had run the company for 42 years. Johnson went after growth. Until then, Wearly explains, the company's strategy had been to run plants at capacity, put no new money into them and to sell an excellent product at a premium. The result was that I-R's short-term profits were at the expense of long-term growth. "We were holding a price umbrella over the heads of our competitors," he says. "They were getting the growth and we weren't."

Johnson began changing that, and Wearly, who took over in 1967, has continued to build for the future. The new strategy involved lowering prices and building efficient new capacity to meet the demands of a growing market. It also involved developing new products. The company opened a research laboratory in Princeton, N.J. in 1965 and began acquiring companies in related businesses.

This was a sharp reversal. Where the old management had emphasized profits today rather than growth tomorrow, the new management was penalizing today's earnings by providing for the future. Unfortunately, just as the new strategy was beginning to ripen, the entire world economy turned soft in the wake of the energy crisis of 1973-74 and capital spending slowed down. Ingersoll-Rand was stuck with too much capacity and too much inventory. Once again it was out of phase with the economy. Companies that might have been expected to invest in plant and equipment deferred their plans. Meanwhile, environmental laws, some of them ridiculously strict, were passed; when companies started spending again it tended to be for pollution control devices rather than for the gas compressors, pumps and pulp-mill equipment which Ingersoll-Rand specializes in.

Wearly, convinced that a turn had to come, kept expanding. He spent $40 million in 1973, $85 million in 1974, $126 million in 1975 and $107 million in 1976. He put huge hunks of that money into plants to grind out coal mining equipment, a logical move in the face of the energy situation.

Ingersoll-Rand's new continuous coal-cutter
Sorely tried, but still keeping the faith.

Equally logical was I-R's powerful drive for overseas business. In the Sixties it built big overseas plants in England, Italy, India and Spain. It also intensified its efforts to export from its U.S. plants, especially after the quadrupling of oil prices. "The task in those days," Wearly recalls, "was finding ways to recycle petrodollars." Between 1972 and 1975 alone, Ingersoll-Rand's international sales—exports and plants abroad combined—rose from $300 million to $700 million, going from about 34% of sales to 42%. I-R had become a multinational.

But in 1976, international business went flat. Wearly alternately blames himself and Washington. He talks at length about the antibusiness atmosphere that developed in Washington about that time—cutting export incentives, attacking multinational corporations, and forcing American companies to adhere to a much stricter code of business ethics than their European and Japanese competitors practiced. He also says that President Carter's carping at Brazil's antiterrorist efforts hurt Ingersoll-Rand in that important market. The same "human rights" stance, Wearly says, cost I-R business in the Soviet Union.

But Wearly doesn't accept excuses either from himself or from his executives. "We should have known enough not to get caught. We should have read the turndown. The signals were there. We should have pulled in our horns. Instead, in spite of all the things [happening in Washington] we said, 'Yeah, but it isn't going to hurt us.' " I-R had to write off several million dollars in foreign inventories in 1976. The company's international business has not fully recovered yet.

Like many other companies, Ingersoll-Rand was a victim of the notorious FASB-8 that forces unrealistic changes in overseas income statements because of changes in the value of the dollar. These cost 70 cents a share in 1976 and $1.09 in 1977—the bulk of the decline in earnings during those two years. Analysts point out that rivals, such as Cooper Industries and Dresser, were able to avoid such losses. "Ingersoll-Rand didn't act quickly enough to limit its exposure," complains one. In 1978 the company did act to limit the exposure. "One thing we did," explains Vice Chairman David Garfield, "was pay off a loan we had in Swiss francs." The result is that last year currency translation did not materially affect net.

One of Ingersoll-Rand's greatest disappointments was in coal mining machinery where it probably ranks second. "The coal mines were a real disaster," says Wearly. Last year's coal and railroad strikes just deepened the wound. "We were just about out of business for four or five months," he says. "If we hadn't had that bad thing in international, we probably would have swallowed the coal mine thing and not talked much about it."

Clearly, most of I-R's problems arose from situations outside of management's control. It did the logical things—pushing overseas, building extra capacity for coal mining machinery. But political events took a turn that was, to say the least, illogical. Less forgivable is the fact that the company lost a few rounds to competitors. In the 1960s Cooper was developing a new kind of compressor for the pipeline market, one run with jet engines. It worked with Pratt & Whitney, then with Rolls-Royce and ended up with the lion's share of the market. gersoll-Rand developed a competit product, but, unfortunately, it didn't well. Last year the company finally g few big orders for this product. O however, was in Iran and Wearly doe know now whether that order will honored. "We stopped work on it," s he, "but they might say, 'What did do that for? We want the equipment.'

Another problem was the excess startup costs of a big new plant in Bra Says Wearly: "It cost us a lot of mone 1978. It was a real disaster. But w crying about the wrong thing if we about that."

These setbacks, some self-inflict some not, explain why Ingersoll-Ran profit margins have clined, its earni growth slowed and stock fallen out of fa These problems, howe are basically short-run may be that investors paying too much att tion to them and too li attention to the powe position Ingersoll-R has built in a busin that, sooner or later, boom.

No matter what par the capital-goods busin booms, I-R is going to getting its share. It sell home builders, au mobile and aircraft m ers, utilities, the chemical, paper and t tile industries, you name it. Its produ range from door locks to rock drills multimillion-dollar compressors. can help a less developed country deve its natural resources, then build its ind try; when it becomes affluent we can s sell it products," says Wearly.

As for the immediate future, 19 looks fairly good. The coal and the r road strikes are history. "The coal bu ness won't be what we anticipated se al years ago, but it's kind of danc along now," says Wearly. Now the c per industry is recovering, construct remains stronger than expected most of the problems at the Brazil pl are solved. The company, he points o is now growing into its capacity.

Operating across industries around the world, with a vast catalo products and a solid reputation for qu ity, Ingersoll-Rand has got what world needs. A 10% earnings increas not bad in a year when capital spend is not expected to increase by mu Looking beyond 1979, if I-R can get profits back—not to the unattainable l els of the Sixties but to the level of 19 73—earnings of $11 or $12 a share wo be reached easily. The only real quest is: Can it achieve that by the time We ly, now 63, retires? ■

Let your mature taste lead you from the finest premium Scotch on up to the most expensive 12-year-old Scotch in the world. The Glenlivet. The ultimate in Scotch.

Most premium Scotch is blended and depends on several whiskies for taste and smoothness.

Yet the unblended character of The Glenlivet is noble enough to stand alone. In this distinctive Scotch whisky you'll experience an exceptional smoothness and full-bodied richness, unmatched in all other premium Scotch.

Try the taste beyond premium Scotch.

The Glenlivet
Unchanged since 1824.

THE TASTE BEYOND PREMIUM SCOTCH

Anticipating an

Although the concept of loss control is universally accepted, in practice it often fails to receive adequate attention. But when loss control programs are professionally planned and managed, major cost reductions can be achieved.

A brief review by INA of an insurance topic of interest to business executives.

Among the nation's numerous plants producing synthetic rubber, one in Louisiana has an unusual distinction. The accident rate at this plant was 85% lower in 1978 than the most recent national average for all plants in its industry, while the severity of those accidents that did occur, measured in terms of lost work days, was only 11% of the national average.

Was the plant just lucky? Not likely. Behind the statistics is an impressive story of dedication to loss control – specifically to safety measures that protect employees from injury and their employer from financial loss.

In every category of risk today, loss control is becoming a professional discipline. In addition to occupational safety and health, it is being applied successfully to all kinds of property risks and to liability exposures in general, including such high-risk areas as product safety and medical malpractice.

Taking infinite pains

Loss control has been said to consist largely of an infinite capacity for taking pains. It is true that a successful program is usually made up of thousands of details, each perhaps seemingly insignificant. Is the control valve on the water pipe for the sprinkler system kept open? Are the warning lights on a lift truck in operation? Has a new employee had a hearing examination? Should a guard rail be installed around a conveyor belt?

If such details are to be of concern to personnel throughout an organization, that concern must originate at the top, with management itself, and must be steadily maintained. The indispensable ingredient in successful loss control, specialists agree, is management commitment.

Most loss control programs start with a review of operations and the identification of actual

Preventing Losses

and potential hazards. Then goals are set up and comprehensive counteraction is initiated and monitored. Data is collected on all losses incurred and the results compared with earlier experience. At the synthetic rubber plant that achieved an exceptional record in occupational safety, all of these elements are incorporated in the plant loss control program.

For example, employee training is stressed. All supervisors are required to take a course in safety given by a safety engineer. Every new employee gets an overall safety orientation, followed by individual job safety instructions.

Active participation in the safety program is required at all levels. Each month, the safety engineer meets with a central safety committee made up of the seven top operating officials of the plant. Following that meeting, each department head conducts a departmental meeting with his supervisors.

In turn, the supervisors meet weekly with their work crews to discuss safety problems and take whatever action may be necessary.

Inspections, inspections

No day goes by without its share of inspections to determine whether rules are being followed and safe conditions maintained. Each supervisor makes a daily informal housekeeping inspection, with observations and the corrective actions taken reported by memorandum to the department involved. Every week, formal inspection tours of each department are conducted by groups of hourly employees who work there. Every month, individual members of the safety department scrutinize all operations throughout the plant. And every quarter, the same kind of intensive examination is made by groups of salaried personnel in each department.

Thus all plant personnel, from the plant manager on down, take a direct, first-hand interest in seeing that loss control works.

And now, the payoff

In addition to the purely human benefits deriving from an effective loss control program, the economic rewards can also be impressive. Every dollar gained through loss prevention goes straight to the bottom line.

Moreover, when loss control results in demonstrably lower risks, insurance premiums are also likely to be lower.

INA has been a major factor in the success of numerous loss control programs as part of its insurance operations. And ESIS, an affiliate, provides loss control and other services to companies with self-insurance programs, as well as sponsoring the International Safety Academy.

* * *

The Insurance Company of North America was founded in 1792 in Independence Hall, Philadelphia. Today it is the largest component of INA Corporation's international network of insurance and financial service companies. In property and casualty insurance and risk management services, life and group insurance, health care management, and investment banking, INA and its affiliated companies offer a unique combination of products and services to business and industry around the world.

INA insurance products and services are available through selected independent agents and brokers. For an informative booklet on current trends in loss control, write INA, 1600 Arch Street, Philadelphia, Pa. 19101.

An industry committed to loss control

One example of the results attainable through loss control is provided by the U.S. airlines. By adhering to their own rigorous safety procedures, in addition to those called for by government regulations, the airlines have achieved steady reductions in their long-term accident ratios and have compiled an outstanding safety record.

INA

The Professionals

"At National Distillers, ChemLink helps us marshal our money faster and control it better. Thanks to Chemical Bank, and Chemical bankers like Peter and Jane."

F. Donald Brigham, Treasurer, National Distillers and Chemical Corporation.
Photographed at the Houston plant of U.S.I. Chemicals— a division of National Distillers and Chemical Corporation

"Tight control of company cash has long been one of the top priorities of financial officers everywhere," says F. Donald Brigham, Treasurer of National Distillers, the diversified chemical, liquor, wine, metals and textile company. "ChemLink, Chemical Bank's computerized financial management system, has made it easier for us to manage the movement of our money by giving us more timely information about the cash in our banks. And by facilitating short-term investing, it has helped produce savings that show up in hard dollars on the bottom line.

"We have 48 disbursement accounts across the country. To fund our local bank accounts we used to telephone our disbursement banks and give verbal instructions—a slow, error-prone process that generated a lot of paperwork. Now, we just type our instructions on a terminal and get automatic execution via ChemLink. We also get virtually instantaneous hard copy confirmation.

"Now, look at another situation that's just as illustrative. We have 32 lock boxes in 18 cities. Through ChemLink, all those deposits are now concentrated into Chemical Bank via depository transfer checks. Thus, ChemLink makes it possible for us to know today what money will be available for investment tomorrow. Again, for far fewer dollars than what it used to cost us to concentrate money by wire transfer.

"Chemical's determination to maintain a position of leadership in cash management is evidenced by th bank's commitment to existing services and to adding more advanced capabilities to the ChemLink system

"As well as by knowledgeable people like Peter Bartko, our accoun officer, and Jane Arkedis, our cash management specialist, who've mad it their business to know what our needs are. And their advice is invaluable."

At Chemical Bank, experienced people like Peter and Jane are an important factor in building a relationship as successful as this one. But s are the knowledge and professionalis that result from continuing leadershi in worldwide cash management. All which you'll discover as your relation ship with Chemical evolves.

s the recent upsurge in the market over-ced domestic oil and gas stocks? That's ing the wrong question.

How high is high?

By Howard Rudnitsky

STATISTICAL SPOTLIGHT (FORBES, 5, 1977) Peter Treves (of Treves & waxed enthusiastic over domestic Canadian oil and gas stocks. gh late February the oil and gas s listed along with that article l, on average, 18%. More recently, ver, they have been performing spec-rly. For example, Petro-Lewis d 30%, from 9¼ to 12, in one week. ves spends his winters in Florida We phoned him there and asked if these stocks still had potential. He led. "Yes, I noticed on television a of Wall Street experts recommend-domestic oil and gas s," he said. "I'm glad they caught on. No, I don't this group is played out. stocks have gone up dra-ally—like Dome Petro-which has doubled, or nd Oil, Shenandoah and But stocks like Tosco, y and Forest Oil are still values.

is Superior Oil," he said. ot an appraised net worth nn S. Herold's *Petroleum k* of $615 a share and sells 46." So too, he thinks, number of Canadian oil anies.

ves also pointed at the rate ich smaller companies are bought by larger ones—Diamond by Bow Valley, Petroleums by Petro-la, Austral by Superior. Or e selling off properties, shland, or liquidating en-like Shenandoah. Either hey were worth consider-more to the buyers than they had been selling for market.

l Treves: "That trend will ue. Oil and gas are one of the three basic ways of investing to protect yourself from inflation, the others being gold and real estate—if it's well run and well located." Gold? Not now: "Oil and gas are as good as gold and, in the long run, probably worth more."

Geoffrey Hertel, vice president and head oil analyst at Houston's Rotan Mosle Inc., agrees with Treves. "True, a number of large oil and gas companies have had sizable runups, and may have gotten ahead of the market," Hertel says. "But there are still others around, second-tier ones, that haven't discounted the increasingly attractive situation."

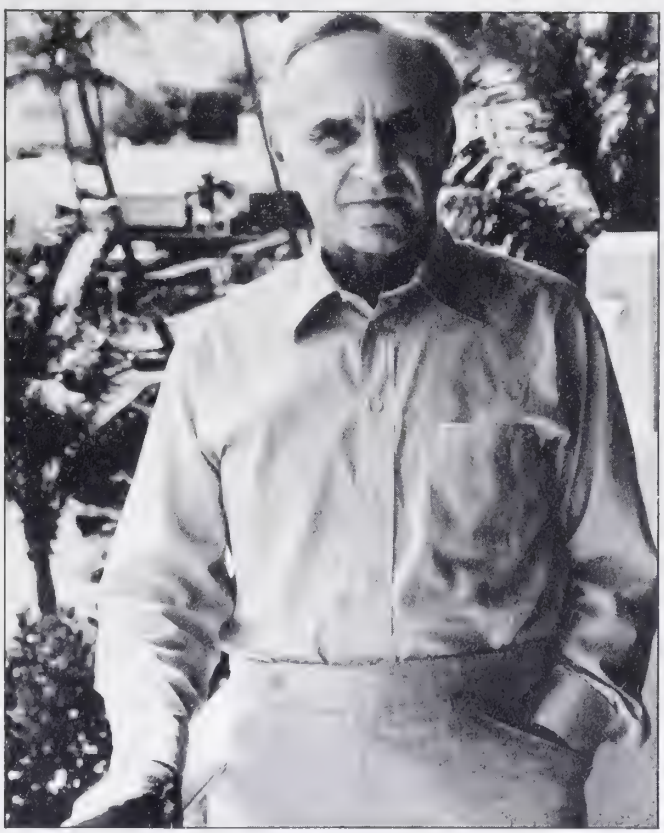
Hertel feels the market hasn't yet discovered stocks that "aren't pure energy, what I call half-breed or dual-operation companies. Like Santa Fe Industries, Union Pacific, DEKALB AgResearch, Seagram, Reynolds (R.J.) Industries, Freeport Minerals, Mountain Fuel, Centex and Burlington Northern." These traditionally nonoil companies have all acquired oil, gas or uranium reserve positions, much of them in North America.

Take Union Pacific, says Hertel. "It's getting more than half its earnings from energy today and it's rapidly developing its coal and oil resources. Or Seagram Co. Everyone thinks of it as a liquor company and it sells for $30 a share and a low multiple. But its growing oil and gas reserves today are conservatively worth $20 to $25 a share alone. So you're getting the rest of it for next to nothing."

Donald C. Samuel, president of New York's Energy Fund, has 35% of his fund's $195 million assets invested in oil, gas or petroleum stocks like Getty, Mesa and Texas Oil & Gas. Samuel is also intrigued by Coastal States. Says he: "It has big gas reserves up in Montana's Williston Basin and it hasn't gotten much publicity." True, the stock is up from 13 last fall to 20. But Samuel points out that Coastal is in the process of spinning off its long-troubled Lo-Vaca gas-gathering division to its shareholders. The division has a worth of about $6 to $7 a share on the market on a when-issued basis. Since Coastal is selling at about $20, that would mean what's left is worth $13 to $14. Samuel thinks it's actually more like $18 to $20.

That's not unique, Samuel says: "Gas-finding incentives are now well in place with the passage of the Natural Gas Policy Act. So companies are looking for gas and finding it. For example, Apache Corp. had some major finds recently, and reported its proven oil and gas reserves have increased revenues by $20 a share." A portion of that will be added to its break-up value of $20, and yet Apache shares were recently selling for only $25.

Last issue in Psyching The Market, columnist Srully Blotnick pointed out that speculative-minded investors were getting itchy: The boys and girls were looking for a "story" to get excited about. They may finally have found one in oil-in-the-ground companies. If so, it matters not whether such stocks are fairly valued. They could well be to 1979 what gambling stocks were to 1978. ■



Peter Treves at work in his Florida home
Oil and gas are better than gold.

As good as gold?

It's mighty comforting these days when a producing company has most of its oil and gas reserves in the ground in Nor America—as these 56 companies do. It's even more comforting when a company's stock is selling at or below appraised net wor and the producers' cash earnings are rising at a fairly rapid pace.

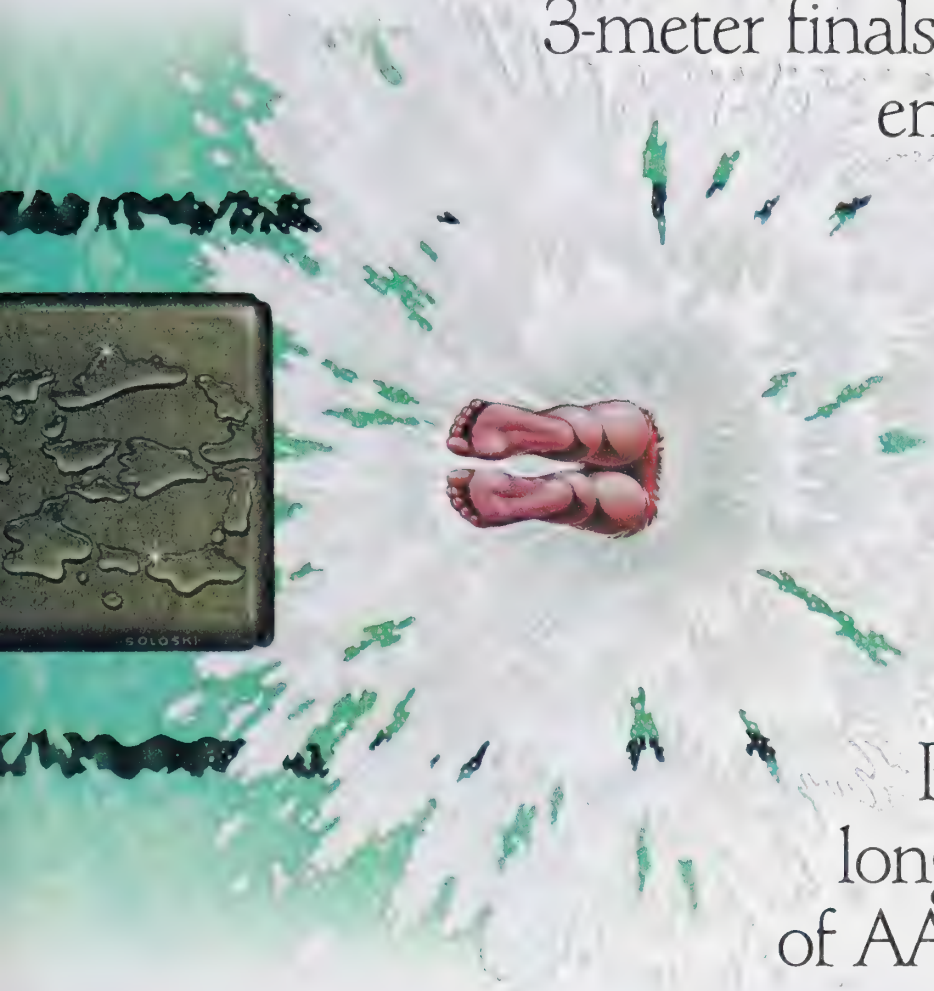
It's a long way down to the top.

It starts with bellyflops and bruises. Over fifty practice dives a day. Every morning from age 7. And to get from the neighborhood pool to the 3-meter finals takes years of encouragement from coaches and parents and the Amateur Athletic Union. Phillips Petroleum is a long-time sponsor of AAU swimming.



And now we're getting behind AAU diving. Giving thousands of eager young athletes a chance for glory. Because it takes a lot of getting to the bottom to make it to the top.

AAU PHILLIPS 66

Boston is a graceful blend of tradition and innovation. Residents of the area are proud of its past and excited about its present. How does America's best-selling magazine meet their varied interests?

"I enjoy good writing."

Audio-visual consultant Fred Bauer's hobby is Marblehead, the picturesque village on Boston's North Shore. A member of the Planning Board, he also serves as drummer in Glover's Regiment, which bore the town's standards during the Revolutionary War. And TV Guide? "I like the interviews. As a writer, I enjoy good writing," he told us. **"The more people know about television, the more they can treat it intelligently.** When something is that powerful, you learn how to use it."

In New England, they've never taken things for granted. And television is no exception. In fact, their interest in knowing more about it has never been greater.

TV Guide holds a town meeting on that subject every week. For America's largest magazine audience—over 43 million adults. Our readers think television is too important to take at screen value

America reads

TV Guide® and the TV Guide logo are registered trademarks of Triangle Publications, Inc.

"Television plays a valuable role in augmenting the education process," notes Dr. James P. McIntyre, vice-president for university relations at Boston College. **"It's very useful to have TV Guide's insight,** particularly in this age of being bombarded by electronic media."

Lobster fisherman Jack Snow, his wife Lynda, and their two children live in nearby Salem. "TV Guide's unique—where else would you go?" says Lynda. "There's always something interesting to read. **It's not just a thing you pick up and put down."**

Ruth Morey was historic Lexington's first woman selectman. Currently publicity chairman of its Historical Society, she had this to say about TV Guide: **"There've been a couple of articles recently that were sufficiently critical to please me.** I like the critical articles, because they're critical and I'm critical, and I think I'm not alone in my thoughts."

On a swan boat in the Boston Public Garden, ballet dancer and teacher Annette Brown told us: "TV Guide fulfills a function. **It helps enlighten people.** It gives both sides to a story, and I think that keeps it balanced."

So they pay close attention to all that TV Guide has to say about it.

Advertisers want America to react to what they have to say, too. They want action from every ad dollar they spend. That's why so many are speaking out in TV Guide—America's liveliest marketplace.

Speak up. Sell to America in America's best selling magazine.

TV Guide.

TV GUIDE®
TRIANGLE PUBLICATIONS, INC

There's nothing old hat around an up-to-date firehouse.

It had a long run, the old familiar style in fire hats. The one taking over typifies a whole new generation of progress. Give a firefighter improved things to work with, and he can be a more effective guardian of life and property.

Some of the "improved things to work with" are municipal and industrial fire engines custom-built by FMC. Their latest engineering innovations provide greater safety for firefighters, and faster attack action at the scene of a fire.

FMC also manufactures the fire retardent chemicals, Kronitex® and Durad®. They are used to reduce the combustibility of many types of vinyls, and to prevent hydraulic fluids from flash-igniting in industrial use.

Tell us your needs. FMC serves worldwide markets for food, agricultural, and packaging machinery, agricultural chemicals, petroleum and fluid control equipment, systems engineering, construction and mining equipment. Write FMC Corporation, 200 East Randolph Drive, Chicago 60601. Or call 800-621-4500 (in Illinois: 312-861-5900).

FMC

ank Rooney, high priest of specialty retail-g, is rediscovering discounting—but as usu- he has an angle.

Melville Corp.: discounting with a difference

lle CEO Francis C. Rooney
Melville's most reluctant decision—and one of his best.

By Phyllis Berman

REMEMBER THE OLD DAYS when mother went from store to store to do her grocery shopping—to the butcher, the baker, the greengrocer? If you do remember you are either safely past 50 or were born in Europe. The supermarket now provides low-markup, convenient shopping and the specialty foodstore is today almost an anachronism.

But over the last decade specialty stores in nonfood retailing came back. The old-line department store has been steadily losing ground to boutiques. To compensate for this, even the department stores are breaking their businesses up into collections of small shops.

Listen to Francis C. Rooney, president and CEO of Melville Corp. and one of the smartest retailers in the U.S.:

"It's not what you sell or where you sell it," says Rooney, 57, a small, soft-spoken, dapper man in a pin-striped suit. "It's defining your business, and knowing your customer with your eyes closed—McDonald's is a great example of a specialty retailer.

"On the other hand, look at Chock Full O'Nuts. When they had the best damn cup of coffee and cheese-and-nut sandwich in town, they had a great business. Then they put in pie à la mode. Then soup. I walked by the other day and they've got this sign: 'We have the biggest hamburger in town.' Now, that's just losing sight of your business."

Melville, an old-line shoe retailer and manufacturer, has, under Rooney, developed specialty retailing to a fine art. And with exceptionally impressive results. With a five-year average return of 26.4% on shareholders' equity, Melville Corp. ranks with out-front companies like Petrie Stores, Wal-Mart and Edison Brothers in profitability (FORBES, *Jan. 8*). Its profitability has far outpaced that of the nonspecialty retailers—Sears, Penney's, Macy's, Federated Department Stores. It nets over 10% pretax in a business where half that figure is considered pretty fair. Its sales have grown close to 18% a year over the past half decade and totaled $1.7 billion last year.

Rooney did it by spinning off new store concepts from old ones, each new one clear, simple and sharply defined. First he turned Melville's utilitarian but unexciting shoe line, Thom McAn, into a high fashion, youth-oriented shoe chain. Then he opened Chess King, a string of 326 young men's fashion stores. Next came Foxmoor, a women's junior apparel store. Through acquisition he added other lines, some far afield, like the CVS drug chain. Each Melville store is located in a shopping center, but all are separate. Don't sell shoes and clothes under the same roof, Rooney preaches. Define your business, know your customer. Clarity of offer. People would

Shopping-center-based CVS Drugstores
It's not what you sell or where you sell it; it's defining your business.

rather buy trendy shoes in a trendy shoe store just as they prefer to eat their hamburgers in a hamburger store.

Is Rooney now breaking his own rules? In 1976 Melville acquired Marshalls, Inc., a largely northeastern chain that carries all kinds of name-brand clothing, and he has expanded it into a 55-unit, $260 million operation. Instead of piggybacking on shopping centers as Melville's other stores do, Marshalls are in 30,000-square-foot freestanding buildings.

But Rooney hasn't abandoned his successful formula; he has simply broadened it. Marshalls, too, has a clear image—not for product but for pricing. It's a place you go for bargains because it stocks only manufacturers' overruns, closeouts and end-of-season merchandise. A bargain store, in short. The people who go there may not know precisely what they are going to buy, but they do know they want to save money. And they do. For example, recently shoppers could have found Bergdorf Goodman suits for 50% off, the usual Marshalls discount.

It's a concept tailor-made for consumers who are made inflation-conscious every time they pick up their newspapers or turn on their TVs: Beat inflation by buying deflated merchandise.

It seems to work; in the three years since Marshalls was acquired its sales have more than doubled; in seven years they will be $1 billion, says Marshalls President Frank Brenton, who has just joined Melville from a catalog outfit.

This switch from the specialization policy that made Melville rich is Rooney's way of changing with the times, something he must do because his innovations of the Sixties are facing limits in the late Seventies. As the population levels off, suburban growth and shopping center development slow along with it. Only about 400 to 600 new U.S. shopping centers will open this year (*vs.* 1,230 in 1973), and some developers think available square footage will start to shrink as early as 1981. Melville, which has been opening 400 of its shopping-center-domiciled stores a year for the last five years, has been forced to pick up other stores' leases, or to open new facilities in expanded centers. But their freestanding Marshalls stores, low-rent converted supermarkets, will not be affected by this crunch.

Then, too, the old-line department stores that spent much of the Sixties worrying about catalog merchandisers finally discovered specialty retailing. Allied Stores picked up the Bonwit o ation from Genesco, for example, no Bonwit Teller alone but for Plymo Shops, Genesco's specialty operat which it plans eventually to expand tionwide. Woolworth is developing specialty retail operations; Dayton H son acquired California's Mervyn's.

To convince you that Melville is really changing its basics, tho Rooney refers to his latest ventur "specialty discounting"—emphasis "specialty." He is not just hairsplitti

Rooney's Bostonian father owne sole and heel factory, and young Fr came to Melville as a shoe designe 1953 and worked his way up to pr dent. When founder Ward Melville tired in 1964, he was so reluctant to his company over to a *stylist* that he in viewed seven outside candidates.

In the end the old man reluctantly cluded that Rooney was indeed the choice. It was a lucky decision becau was precisely Frank Rooney's awaren of fashion that made Melville what today—a leader in specialty retai that, in a very broad sense, is noth more than a throwback to the shopk ing that prevailed a century ago, be the days of mass distribution. ■

WESTERN UNION CORPORATION 1979

Report from Number One Wall Street

The Irving tie to the Winter Olympics.

The official bank.

When the XIII Olympic Winter Games come to Lake Placid in 1980, Irving will be there as the official bank. It's an international banking role for which Irving has ample credentials.

We do business in more than 120 countries where we are banker to major commercial banks, central banks, governments and leading corporations.

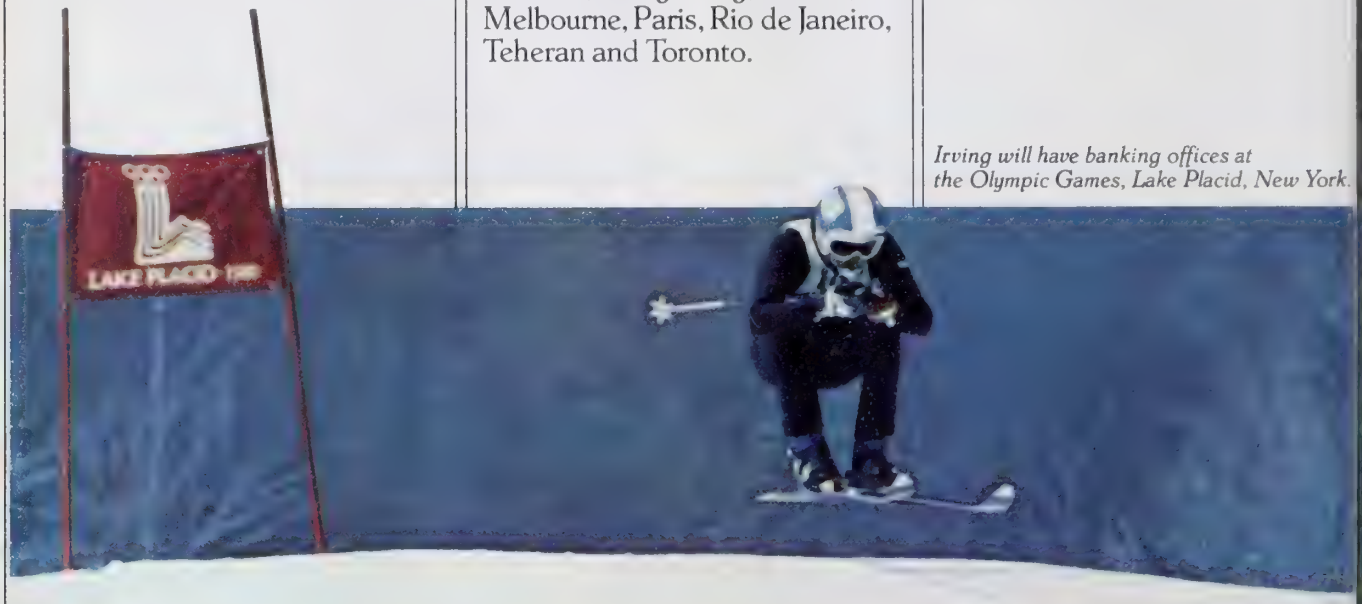
Irving international specialists handle trade, project and syndicated financing on a worldwide scale. And we provide lines of credit, advances, acceptances and both short- and medium-term financing in all major foreign currencies.

Our overseas expansion continues.

Milan is the home of our newest fully staffed branch office. It adds another key financial center to our international network which includes branch offices in London, Frankfurt, Milan, Tokyo, Taipei, Singapore and Grand Cayman. Plus representative offices in Beirut, Buenos Aires, Caracas, Hong Kong, Manila, Melbourne, Paris, Rio de Janeiro, Teheran and Toronto.

In other words, in addition to our strong U.S. banking position, Irving is a major factor on the international banking scene.

Banking, personal style. Just as we're getting ready to serve an international gathering at Lake Placid, we're ready to serve customers anywhere in the world. You'll find that our style is very personal: personal commitment and personal attention. We think that's unique. Perhaps you will, too.



Irving will have banking offices at the Olympic Games, Lake Placid, New York.

Irving Trust Company. Unique. Worldwide

estment genius Warren Buffett knows a od thing when he sees one but so does Matty roun. This time Matty got there first.

Matty Moroun plays to win

By Allan Sloan

SST, BUDDY, wanna buy a bridge?

That line will get you a lot of funny looks in New York, but no laughing in Detroit, where a local ing tycoon is in the midst of buying cal toll bridge.

at's more, he's going to make a e on the deal because of quirks in ax laws and the joy of leveraged g.

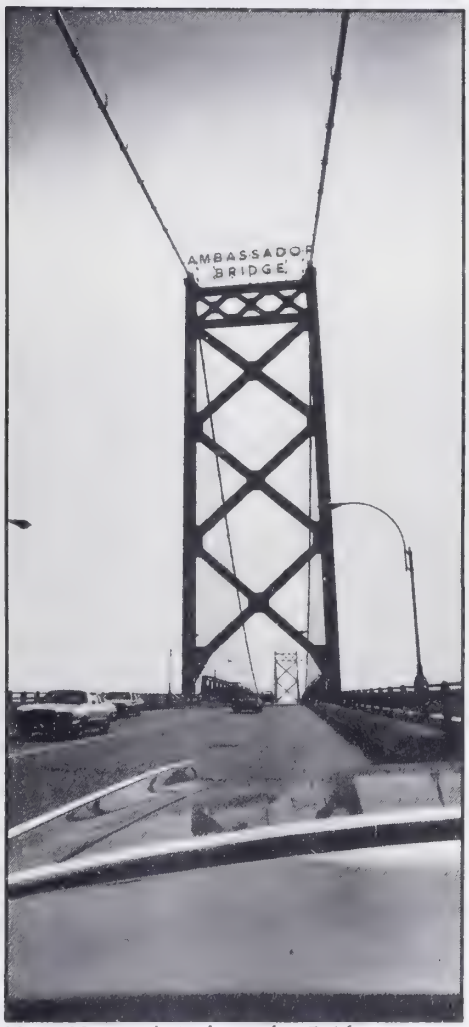
en the last paper has been shuffled, anies owned or controlled by the sive Manuel J. (Matty) Moroun will paid something over $30 million to he Ambassador Bridge, which spans etroit River and connects the Mo- ty with Windsor, Ontario.

e bridge is unusual—the only stock- r-owned international toll bridge of onsequence left in the U.S. It's still holder-owned because the Canadi- vernment, which takes the bridge eriously, has fouled up any number empts by private investors to buy oroun, however, seems to have a way around that.

e bridge's competition is another ge animal—the nation's only sig- nt stockholder-owned tunnel, runs under the Detroit River and ned by the Detroit & Canada Tun- orp.)

winning the great Detroit bridge Moroun will have bested one of ation's premier investors, Warren t's Blue Chip Stamps, which also for the bridge. Blue Chip's Wesco cial Corp. subsidiary tendered for it International Bridge Co. at $20 e 1977, but Moroun subverted the r by buying heavily on the open et and forcing the price of bridge any shares as high as $24.

he process, Moroun got his hands ey blocks, including the 63,000 s (5%) owned by Philip Carret's er Fund, which had owned the for decades at an average cost of



Matty Moroun's Ambassador Bridge
With any luck, a neat inflation hedge.

$7. Carret himself tendered some personal holdings to Buffett, but fiduciary duty is fiduciary and Pioneer Fund's shares went to Moroun at higher prices on the open market.

By Dec. 31 of last year, Buffett's Blue Chip and affiliated companies had garnered 315,800 shares (24.9%), including stock it had bought in private deals before making its tender offer. Moroun was up to 311,675 shares (24.6%).

Last month Buffett threw in the sponge, selling his bridge stock to a Canadian corporation financed by Moroun for $24 and getting Moroun to agree in writing to buy out the remaining shareholders at $24 or $25. Buffett and his friends are not exactly suffering; they recorded an aftertax gain of well over $1 million. Still, nobody likes to lose even when he gains in the process.

The secret to Moroun's being able to offer such a high price is that the bridge is worth more to a private individual than it is to a publicly owned company that reports earnings. Here's why:

The bridge is being depreciated at just $22,600 a year because its tax basis was set at $2.6 million in 1939, the year the bridge company emerged from bankruptcy. The low depreciation charge helps Detroit International Bridge's earnings, but its net cash flow suffers.

Moroun isn't talking, but his SEC filings show clearly what he's up to. If Moroun can put a tax basis of $30 million on the bridge and depreciate it over 25 years—which his lawyers say he plans to do—that produces straight-line depreciation of $1.2 million a year.

Then look at cash flow. In 1977, its last normal year—there was a toll collectors' strike in 1978—the bridge produced a pretax cash flow of $4.7 million.

Moroun has about $6 million in cash and is borrowing $25 million from the Toronto-Dominion Bank to finance the deal. Some $3 million is due Dec. 31, and Moroun can take that from the bridge company's cash on hand. The rest of the loan is due in blended interest and principal installments of $3.3 million annually for eight years, with the remainder to be repaid in four further years. Subtracting the loan payments from the bridge's cash flow leaves $1.4 million, most of it offset by depreciation. So Moroun stands to make a hefty profit. With any luck he should have his $6 million back in five years or less and end up in ten years or so owning the bridge absolutely free and clear. A nice way to beat inflation!

Who is Matty Moroun, and how did he get so smart and so rich? Not many people in Detroit know, and those who do aren't telling. All that's known is that Moroun's name is pronounced maroon, like the color, and that his Central Cartage Co., based in the Detroit suburb of Sterling Heights, Mich., does a volume of $150 million to $200 million a year. He and his family own the whole thing.

Moroun himself is 47, and the son of T.J. Moroun, said to be a patriarch of Lebanese origin.

If Matty Moroun offers to sell you a bridge someday, it might be a good idea to listen. But Moroun seems to like buying better than selling, especially when he has leverage and the tax laws working for him. ■

A seasoned growth company, like Pall Corp., is one that can come up with repeated innovations—no matter how tough it gets.

The breakthrough point

The Up-And-Comers

Pall Corp. President Abraham Krasnoff
Those who were paying attention could see that things were changing.

WHAT HAPPENS to a smallish company in a high-technology industry when the market for its main product line suddenly collapses? It must innovate again, of course, but how, when the cash flow to support the research effort dries up? Remember all those companies with "on" at the end of their names that strutted briefly across the stage and then disappeared?

This is when most of the companies that brokers have been calling "the next Xerox" get acquired by larger corporations or sink into obscurity, contenting themselves with a slow-growing, low-profit specialty business. Transitron, Technicare, International Rectifiers and the old Scientific Data Systems went this route. Rare indeed is the small company that emerges from that first big setback with yet another breakthrough innovation, more successful than its predecessors. This is the company with genuine technical excellence. It has passed the critical test for long-term survival.

Pall Corp. of Glen Cove, N.Y. has met the test. A producer of fine filters for the aircraft, electronics, chemical and pharmaceutical industries, it has sales of $88 million and a return on equity that has averaged 22.3% over the past five years (on a par with International Flavors and Fragrances and Philip Morris). Its earnings growth rate since 1974 puts it in the same league as Levi Strauss and Sch berger. By last year, when the com earned 29.3% on equity, long-term had been cut back from nearly 42 capital in 1973 to under 6% of ca and the stock had climbed from 2½ recent high of 32⅜—a fancy 14 1978 earnings.

Yet as recently as 1972 little Pall looked like it might not be long fo world. For eight long years in the l ing middle and late Sixties its ear had been barely marginal. For custo its narrow product line had mainl then-depressed aircraft industry. I leveraged itself to the hilt to ente high-technology fiberglass bus against far larger competitors Owens-Corning. Its modest divers tion attempts had failed. Its sales only $26.5 million, its pretax p $600,000. The future looked bleak. but by no means unusual fate for a fo glamour stock that had sold for 60 t earnings in the Sixties.

"People may have said 'Here's a pany in trouble' back then, but who were paying attention could se product mix changing," says Pall I dent and Chief Executive Abraham noff, sounding like the accountan once was. "We were heavily deper on the aircraft industry and that bus suddenly fell off in 1964, both com cial and military. We made mistak that point—mistakes of desperation said we know the aircraft industry, s acquired an airborne air-conditio and heat-exchange business that Co. was trying to get rid of. We know process industries, so we found a y line of sophisticated, difficult-to-m pumps." "Synergy" it was called t Synergy turned out to be no solu "We did terribly in both of those thin Krasnoff continues. "We were goin in apparently logical directions, bu didn't succeed in either. We just cou solve the marketing or technical p lems well enough to make money."

In hindsight the reason is clear. Corp. was trying to do too much. scientific brains of the company tered on founder and still-Chairman 64) David Pall, a doctor of physical ch istry. Pall was busy trying to devel new line of disposable filters. He ha time for the new ventures. "Had we we're going to turn Dr. Pall and every else into the pump business, I guess would have succeeded in mak pumps," observes Krasnoff, who has tained his layman's sense of wonde scientific innovation.

The company was an offshoot of search done for the Manhattan Proj Dr. Pall, who had worked on the proj had devised a way of taking stainl steel powder, heating it to just below melting point in wide trays, and then creating a seemingly ordinary steel sh

sufficiently permeable to act as a precise filter for corrosive chemicals under high pressure or exceedingly hot. It was a small market—about $1 million a year for Pall—but prosperous enough to enable the founder to turn his attention to developing fine woven wire cloth filters to protect the hydraulic systems of jet aircraft from malfunctions caused by microscopic impurities. The dawn of the Jet Age gave Pall Corp. a mighty boost and by 1963 it was doing $14.8 million. But while Dr. Pall was working on finding ways to develop disposable filters for even larger markets than jet aircraft, Pall Corp. was technologically leapfrogged by competitors in the original business, porous metal filters.

"When we decided that our thrust had to go in the direction of disposables we had really stopped doing development

"First," says Pall Corp. President Krasnoff, "if you're going to get along with a genius, you have to have some of the attributes of a chameleon, and some of an antelope."

work on porous metals," Krasnoff concedes. "We didn't have the time or talent to do both. We had to make a choice. So other people came along and made filters of metal fibers." The troubles multiplied. The development work was encountering serious problems, too.

Pall had started making disposable filters out of fiberglass. Shortly thereafter Pall filters began falling apart in the field and it turned out that their supplier, Owens-Corning, had changed the nature of the resin in the fiberglass. O-C turned a deaf ear to Pall's pleas that it make fiberglass the old way. "Brashly, we decided at that point that, if we couldn't get these people to do what we wanted, we'd do it ourselves," Krasnoff recalls, "much to the horror of Owens-Corning and St. Gobain, who threatened us with all sorts of mayhem if we manufactured fiberglass ourselves." So Pall built its own small but economic fiberglass plant, selling off the excess production as building insulation and even introducing new technology into the process. But that wasn't the solution, either.

In time, Dr. Pall and his researchers decided that disposable filters could best be made, not of fiberglass, but rather of a new paper, bonded with nonpolluting epoxy resins and then covered with a slurry of fine fibers. So fine are the pores of such filters (down to a half-micron in pore size, a micron being so small it takes 40 of them to be just barely perceptible by the naked eye) that they are used for bacteria removal in the pharmaceutical industry and to make "ultimate water"—the nearly 100% pure water needed to clean integrated circuit chips i electronic industry. However, it w until 1969—after nine years of eff that Pall Corp. finished designing i vative disposable filters, the new ma al that they would be made of an machinery to make them, built plants and set up a new distribution tem. That did it. It was the breakthr needed to get Pall Corp. moving a Pall's sales, which had stagnate around $26 million, suddenly jump $32 million in 1973 and have been i ing up at a lively pace ever since.

Why did Pall Corp. make it throug these vicissitudes to the breakthr point that has stopped so many promising companies? Because it r occurred to Dr. Pall and his fello searchers to do anything other tha to develop a better filter, no matter it took.

Krasnoff, who first came to Pall C in 1951 as a fledgling C.P.A. to t straighten out his brilliant neigh books, says he's learned a few th about how to develop a successful h technology company. "First," he "if you're going to get along with nius, you have to have some of the butes of a chameleon—and some o attributes of an antelope."

He's learned how to get the cri financing from banks and insur companies. "Your ability to show cl a plan of what's going to happen for s years in the future gets to be very, important," he says. So, Krasnoff came a salesman, selling the future t money people.

Another thing he feels he's learne how to manage an effective researc fort. You listen to all suggestions says, and then pass on them in a c mittee that comprises all corporate f tions: financial, marketing, enginee as well as technical. The same old ons keep coming back year after yea says, but that's a small price to pa the successes. "Every three or four y a new generation of research guys co up with the same filter idea for a market: a filter to solve the Navy's p lem of oil/water separator filter life. thing is a fiberglass tube. So it ough be easy. But it isn't. We've looked for 25 years and it can't be solved."

A happy ending at last? Not q What Krasnoff is not quite sure learned how to do is to replace hi and Dr. Pall and his top scientists—n of whom are in their late 50s or early "At some time over the next ten y we are going to lose probably the three minds in the filter industry," says. "That's something we have t concerned about."

In a way that's a good sign: Kras seems to have it made, but he's worrying. It's when you think that n ing can go wrong that something doe

A few years ago, we helped her see in the dark. With this, we can help thousands.

A few years ago, thousands of people suffering with a certain kind of night blindness finally had a glimmer of hope.

All of these people—suffering from the early stages of a hereditary disease called retinitis pigmentosa—were introduced to some special binoculars that let them see in the dark.

Trouble was, these night-piercing binoculars were rather bulky. And too expensive for most family budgets.

Well now, there's a less expensive pocket-sized model.

And this too was created by the people of ITT, with the Army Night Vision Laboratory and the Retinitis Pigmentosa Foundation.

Like the binoculars, the new device contains complex electronic circuitry that amplifies the available light, so it's visible to many retinitis pigmentosa sufferers.

They can see well enough to walk at night by themselves, without anybody's help.

And as for price, we're selling this device at just what it costs to make.

Not that it's exactly cheap. But to someone who needs one, it can be priceless.

The best ideas are the ideas that help people. ITT

you'd like to help, send your contribution to National Retinitis Pigmentosa Foundation, 8331 Mindale Circle, Baltimore, Md. 21207

Roy Ash is putting all his talent to work trying to turn stodgy Addressograph-Multigraph into sleek AM International. But is it enough?

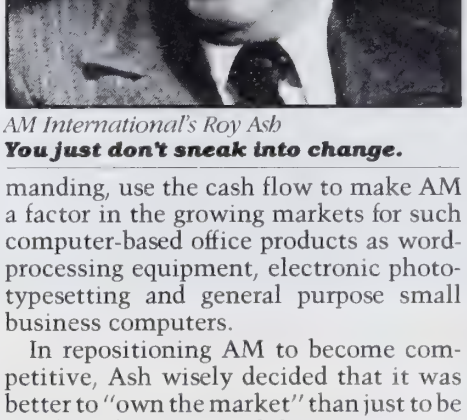
Up from the ashes

This company has been paddling around in a nice, comfortable Lake Mead, but now we've entered the Colorado River going with the current, and we've sure got to paddle fast. You need much more power-on sort of management, you just can't coast with the momentum. Every day, it's more power on. You'll go a lot farther, but you have to paddle harder.

THAT'S VINTAGE Roy Ash. To anyone who has followed Ash's career—cofounder of Litton Industries, two years in Washington as Nixon's and Ford's director of the Office of Management & Budget—such messianic zeal is familiar. These days, however, he isn't practicing his "power-on" wizardry on a high-flying conglomerate or a federal budget, but on Addressograph-Multigraph Corp., the 87-year-old maker of office equipment. His announced goal, however, is still pure Ash: nothing short of total corporate rejuvenation that will turn Addressograph-Multigraph, now renamed AM International, from a tradition-bound maker of copiers and duplicators into a fast-moving, high-technology outfit able to stand up to giants like Xerox, Eastman Kodak and IBM.

Ash has had two and a half years now to do what he frequently calls "changing the corporate culture" at AM. While he seems to be doing all the right things, the results so far are at best mixed. In fiscal 1977, ending July 31, AM reported a loss of $14 million resulting from writeoffs and reorganization, as Ash began stripping the company of its losing operations and corporate fat. Earnings recovered in 1978 to $21 million on $667 million sales, but dropped unexpectedly 13% in this year's second quarter. For the full year, earnings are estimated at $2.65 a share, only slightly up from the $2.54 earned in 1978.

Ash's strategy, when he became chairman and chief executive of AM in 1976, was twofold: Cut your losses and, since old Addressograph-Multigraph was short on the winners the marketplace was demanding, use the cash flow to make AM a factor in the growing markets for such computer-based office products as word-processing equipment, electronic phototypesetting and general purpose small business computers.



AM International's Roy Ash
You just don't sneak into change.

In repositioning AM to become competitive, Ash wisely decided that it was better to "own the market" than just to be another player, even if that meant competing in a small arena. "Business is creating niches," he says flatly. "Our objective is at any one time to be playing 10 or 20 games." But there are also other players in those games, many better-heeled than is. In word-processing (typewriter systems that permit the editing and storing of text) AM has only just introduced its product into a market dominated by Wang, Lanier, IBM and Exxon's Vydec division, with giant Texas Instruments expected to enter. Moreover, AM's word-processing products, introduced in 1977, have met with only so-so success. Although AM's new phototypesetting Comp/Edit system has been selling very well, AM's share of the total composition market is only 9%, and it faces competition from established products made by IBM, Eltra (Mergenthaler) and Compugraphic.

Life under Ash has not been easy. AM management that survives will you. To handle day-to-day operat Ash tapped James Mellor, an execu vice president at Litton (and an engi which Ash is not). Together they ph out the company's copier line, lea AM with no product in this ma Electronic funds-transfer termi which had become outdated, also w AM's much heralded 9000 lithogra copier also felt the ax, much to the tress of sales managers. The R&D partment was hit hard when Ash Mellor decided that an offset duplica system, five years in developm would cost twice the $10 million alr invested, and would still be no b than products already on the shelves

Assembly operations at the compa mammoth Cleveland plant were m to lower-cost plants, and Ash is looking for a buyer for that prop Headquarters staff was cut, and then again when Ash decided to move company to Los Angeles (across street from Ash's own office after he Washington). More heads rolled as wiped out AM's international divi and put both foreign and domestic s in the hands of product managers. last fall Ash reorganized the compa 12,000 people in the field so that the electronic products coming from will be handled by sales managers trai in selling computer-based products.

This reorganization, the company mits, was behind its second-qua slump. Ash agrees that the effect "traumatic, more than we anticipa People don't like to have their ca aspirations affected. But we absolu had to do it." Ash is acutely aware, m over, that continuing problems in company's basic duplicating busi will affect his whole corporate strat "We've got to keep making sure that cash-generating business isn't so versely affected by the organizatio change that it doesn't play its par paying the cost of our new products," worries. Warren Beck, an analyst w John Muir & Co, estimates that AM spending more than $1.40 a share new products, spending that won't sh up in earnings until at least 1980.

Despite these problems, Ash rema the optimist. "Many companies, in st ping down the company, exchange problem for another," he says. "T write off all of their assets and have many things written down that the n question is whether the balance sh will support the necessary liquidity t from there. We had all of our proble taken care of at the cost of just sligh less than one year's earnings." Even AM's return on equity in 1978, a g year, was only around 10%, well bel Pitney-Bowes' 20% or Xerox' 18%.

Using the cash thrown off by A

How to save up to 97% of the cost the next time you rearrange your office.

ll you need is the Westinghouse Open ffice System.

The traditional office wasn't esigned for change. So what happens hen you have to add people or equip-ent or make organizational changes? u have to move "permanent" walls, cut carpet, rearrange overhead lighting, wire, and reroute heating, ventilating d air-conditioning ductwork.

And pay from $6 to $25 per square ot to do it all.

/ith the Westinghouse Open Office, ou can do the same job for less than 5¢ per square foot.

And do it faster, with minimum sruption. No need to tear down walls; ou simply rearrange panels. And no eed to move heating, ventilating and r-conditioning ductwork.

Lights? Westinghouse Open Office Lighting isn't attached to the building; it's part of the system. Since you don't have to rewire, rearranging lighting can be done quickly and easily.

As your business changes or grows, you need an office that can keep pace.

It's flexibility like this that can make your business more productive by saving you time.

And more profitable by saving you money.

For detailed information, write Westinghouse Architectural Systems Division, 4300 36th Street, S.E., Grand Rapids MI 49508. Or call toll-free **(800) 821-7700.** In Missouri, (800) 892-7655. In Canada, call collect (416) 362-7796. In Geneva, Telex Westeast 27871.

SMALL'S
AUTO REPAIR

CLOTHES BY
H. MIDDLEMAN

BIGG'S ENTERPRISES

We don't eliminate the middleman.

Ahhh, pity the poor middleman.

Too small for a large duplicator. Too large for a small copier.

And not many copier companies offering him a lot of choices in between.

To Xerox, however, the middleman is not a forgotten man.

In addition to small copiers for the Mr. Smalls and high volume duplicators for the Mr. Biggs, we offer a selection of medium-size copiers just right for Mr. Middleman.

Copiers that print from computer fanfolds. Ones that reduce. Ones that copy from large originals.

Our 5400 even gives you a document feeder, two-sided copying and automatic sorting without resorting to a copier twice its size.

So now, being a middleman doesn't mean you have to settle for a copier company willing to meet you only halfway.

XEROX

Xerox is the Official Supplier of Copier/Duplicator and Facsimile Equipment to the 1980 Olympic Winter Games.

Call OPPD.
Ask for Tom Gage.

He'll deliver coal and nuclear generated energy to your new site.

Tom Gage is Omaha Public Power District's industrial development expert. He can show you that Omaha-Southeastern Nebraska is loaded with dependable electric power produced by western coal and nuclear fuel. OPPD's Fort Calhoun nuclear plant produced 51 per cent of the electricity used by District customers in 1978. In addition, another coal-fired unit will be in operation in 1979. This combination of present capacity and planned additions will ensure OPPD customers an adequate supply of electric power at reasonable rates. If you want specific answers to specific questions, give Tom a call at (402) 536-4347.

basic duplicating businesses (which still account for 44% of sales) Ash has been making acquisitions to fill AM's empty R&D pipeline. He has made six small ones over the last 18 months, predominantly in electronics and computer-related areas. But the big one—a $47 million offer for minicomputer maker Microdata—failed when a group of Microdata shareholders objected.

In addition, Ash is aggressively going after the so-called "quick print" market (those small shops where people come in off the street to have copying done) which has been growing 50% a year in machine placements. In the past, AM had concentrated on selling to large companies for in-house use, and gave this market away to competitors like AB Dick. Nor did the company take advantage of the market it created for supplies like paper or ink for its own duplicators; even today it gets only 35%. "This company was wedded to machines," says Alan Easton, vice president for communications. "Salesmen were rewarded more for selling machines than for supplies, but supplies are substantially more profitable."

Addressograph-Multigraph also largely ignored the rental business, Easton goes on, because its balance sheet was too weak to support rentals. Now, however, AM offers rentals to get products, particularly the new electronic products, through the door to the customer, offering attractive rental rates and applying a large percentage of that rental toward purchase. It has also set up its own off-balance-sheet leasing company to give the company more flexibility in leasing. Last year AM Leasing Corp. grew from $4 million to $40 million, and Easton thinks the figure will double this year.

In keeping with his philosophy of "niches," Ash is concentrating on selling phototypesetting equipment to small publishers, commercial printers and in-plant users. He is also expanding the company's micrographics division, where AM microfiche duplicators hold 80% of the market. In February AM was selected by Satellite Business Systems, the partnership among COMSAT General, IBM and Aetna Life & Casualty, to produce a high-speed computerized copier system to send copies via satellite.

But turning around a $600 million-plus corporation isn't easy, even for a man who prides himself on being able to turn anything around. What Ash found, when he decided to leave managing his investment portfolio (and attempting to write a book about the Presidency), had defeated two previous CEOs since the late 1960s. AM was a company which had gained industry leadership for its products and then never argued with success even while that leadership slipped away. Its stock, which had sold as high as $85 in 1969, was selling at around $9 when Ash came in. Return on stockholders' equity,

Old Cleveland plant; computer editor ***"The steps are right in front of yo***

which had been at 15% in 1968, plunged to 5%. Worse, its dominan its basic offset duplicating business being eaten away by the advanced tronic copier/duplicators from the of Xerox and IBM, while AM's mach were clanking, hard-to-operate, chanical throwbacks to earlier time

Ash is only too happy to tell you AM is a challenge—and that he is ha a great time: "It has to be fun bec your limit is only your own imagina and your ability to execute your idea hate to be in the chewing-gum busi because you can probably calculate total market and try to take it away somebody else, because you're not a to educate too many more peopl chew gum." But the company's litera makes it clear that it will not dis certain things—such as how well vidual products are doing—so fr though that may change if Ash's products catch on. Today 99% of operating profits still come from nesses it was in before Ash arrived.

Ash still insists that he regards hi at AM as that of a man mindin investment. He bought 300,000 n issued shares of AM on the day he came chairman, at $9 apiece. That million is now worth $6 million or per, so shareholders who stuck with have nothing to complain about. "W far from achieving any objectives," mits Ash. "We've just moved within last year or so from planning for it wi little bit of doing to a substantial amo of doing. We've now entered the Col do River and our job is to be fast dlers." What Ash has at AM is all fast paddler could wish for—or stand

WE RAN INTO A RUGGED ONE IN MEXICO.

The problem was a hard-nosed one caused by the devaluation of the peso in 1976. A very large retailer of household goods and clothing in Mexico found itself particularly hard hit – since all their assets were in pesos, while their liabilities were in dollars. Result: a devastating foreign-exchange loss of more than $60 million!

Bank of Boston quickly offered a helping hand. Together with a team of other involved banks, our international specialists worked out a financial restructuring for the company, including improved debt servicing. Not only did this assure them of being protected against another devaluation – they became more financially sound than ever, and are on firm ground today.

We're the bank that specializes in this kind of helpful, swift, and creative decision-making. Tough, international financing problems are right down our alley, and we have 10,000 people around the world to tackle them.

Bank of Boston is one of the leading banks in the world with strong facilities in 40 countries (and more than $2.0 billion currently committed to overseas lending). And in the U.S. we have full-service facilities (Bank of Boston International) in New York, Los Angeles, and Miami, as well as our headquarters staff in Boston who specialize in financing, factoring, leasing, foreign exchange, and all related services.

Where in the world can we tackle the next tough project for your company?

Put together in one chain drugs, hardware, clothing and sporting goods stores and what do you have? A hodgepodge? No, a highly profitable and fast-growing operation.

How Pay 'n Save grows 'n grows

BOB BUCHHOLZ, MANAGER of a Pay 'n Save drugstore near Seattle, made $37,000 last year. While managers with other chains might drool at that salary, it's almost average for the 182 Pay 'n Save store managers. Under the company's incentive plan, some make close to $50,000. Pay 'n Save has some pretty impressive figures to prove that this kind of generosity pays.

Seattle-based Pay 'n Save is a regional chain, concentrated in the Pacific Northwest and doing $619 million in sales last year. If it is relatively small as retailing chains go, Pay 'n Save is a giant in profitability. In FORBES' latest Annual Report on American Industry *(Jan. 8)* it ranked first among drug chains for sales and earnings growth over a five-year period, and its return on stockholders' equity over the same period was an excellent 20.5%, second only to Longs Drug Stores.

Obviously the incentive bonuses that put managers like Bob Buchholz into high tax brackets serve Pay 'n Save stockholders well.

Every employee, from the manager of a single store section to the CEO, gets a percentage of the profits from his department, store or division. "It's the carrot that makes them run," says soft-spoken M. Lamont Bean, 54, the company's president and mastermind of its growth.

Bean devised and runs one of the most flexible retailing operations in the country. Drugs are the biggest part of the operation, but Pay 'n Save is much more than just a drug chain. Follow a fairly typical shopper at Buchholz's shopping center. After buying drugs from Buchholz's Pay 'n Save, he or she might get some paint and plants at the Ernst home center next door; a tennis racket at the Sportswest store next to that; and some clothing at the Lamonts store at the other end of the mall. Without knowing it the customer has contributed four sales to the parent company's coffers, because all four chains and three others besides belong to Pay 'n Save.

When Pay 'n Save picks up a chain, like the Von Tobel's do-it-yourself home centers in Nevada, it keeps the chain's original name. "When you acquire a chain with a market identity," says Calvin Hendricks, the company's chief financial officer, "everything you acquire goes right to the bottom line." This saves the year or two it normally takes a new store to reach the black.

But the important thing about Pay 'n Save's diversity is this: It is a kind of modular approach to retailing. Each of the seven chains is a building block. If a new shopping center has little retail competition, Bean will put in a cluster of stores or a large combination store. If drugs are the only sure market, a plain Pay 'n Save drugstore will suffice. If a competing drug chain has a nearby store, the company can open a Bi-Mart, its no-frills, cut-rate drug chain which attracts a different type of shopper. With a hatful of names to choose from, a store is whatever name will have the most r nition in the market—regardless c merchandise sold. Rock Springs, has an Ernst store which sells dru well as hardware, to help establis Ernst name in the new Wyoming ket. Similarly, its Sacramento store plants, lumber, hardware and drug under the Pay 'n Save name.

The constant from store to store i 'n Save's management philosophy stresses the store manager's auton "There are many ways to run a suc ful drug chain; one is to control e thing centrally," Bean explains. "I do it that way, you don't need t $40,000 a year to your store mana But we're sending an executive to store, not a kid, and pretty near all c executive decisions are made in the On the average, 40% of a store mana salary depends on his bonus. If his doesn't prosper, he's back to base (which could be as low as $18,000).

Pay 'n Save's managers nearly al work their way through the ranks, ju Bean himself went from the stock to the manager's office of the first P Save drugstore in Seattle. Two cu vice presidents and one executive president started as clerks in the ori store. College graduates, recruited b company for the first time this must begin as sales clerks. "The s may have different looks and merc dise," Bean says, gesturing in his w paneled office, "but the fundamenta managing people are the same."

The first store was opened by B father, an ex-Safeway division mar and founder of a Seattle grocery chai an investment in 1947. The father is chairman of Pay 'n Save, but it wa

Sea water will force oil from the desert.

This 15,000-horsepower Ingersoll-Rand pump and nine others are moving treated sea water 60 miles inland for injection into a major desert oil field. There, the sea water restores underground pressure, boosting oil and gas production.

The pump shown, which weighs 55,000 pounds, was first factory tested. And severe tests they were: the desert environment in which these pumps are installed requires the utmost reliability. Since corrosive sea water is involved, special metal alloys are required.

Ingersoll-Rand's advanced technology meets that challenge and many more. As a result, some 4.2 million barrels of sea water per day are being pumped through the 60-inch pipeline and into the ground.

Around the world, many different Ingersoll-Rand machines are being used to meet a wide variety of energy needs. Such as our continuous coal miners and haulage equipment. Air and gas compressors. Centrifugal and plunger pumps. Tools and hoists. Drills. Gas and steam turbines.

We're helping innovative people capture and make better use of energy resources.

In fact, that's what we do best: supply the technological leadership to make ideas work. And we do it in a big way. Our sales in 1978 exceeded $2.3 billion

Write for our Annual Report or product literature. Ingersoll-Rand Company, Dept. 849, Woodcliff Lake, NJ 07675.

ENERGETIC IN ENERGY

Ingersoll-Rand

"The Continental Corporation oesn't insure a thing. But we have 39 subsidiaries and 25 affiliates that insure almost everything."

John B. Ricker, Jr., Chairman and President

"When you look at this map, you see countries. When I look at it, I see opportunities.

"I see opportunities for the $7 billion Continental Corporation to broaden its basic mix of insurance business and provide more services in more markets to meet growing insurance needs, worldwide.

"As a holding company, we direct the efforts of our subsidiaries and affiliates to underwrite as broad a range of risks as possible. And, by way of our international operations, to spread the risks around the world.

"And that's exactly what we're doing. Our subsidiary, The Continental Insurance Companies, is the seventh largest U.S. property and casualty insurer. Working through 13,000 independent agents, we insure everything from automobiles to giant tankers. We're big in life, accident and health insurance, too. And we also have companies that provide allied services to the insurance industry—like AFCO, the leading premium financing company, and Underwriters Adjusting Company, one of the top three claims adjusting firms in the U.S.

"We're a major factor in overseas insurance with operations in over 70 countries. In some places we participate directly in foreign insurance markets through branch offices, such as those in London and Singapore. In others, we engage in joint ventures with foreign companies, like Phoenix Continental, S.A., in Brussels. Or we hold part ownership of a successful local insurer, as in Ireland and Malaysia.

"Our range of reinsurance services is one of the most comprehensive in the world today. Headed by Continental Reinsurance Corporation and The National Reinsurance Corporation, our reinsurance operation is the third largest in the U.S. and the sixth largest in the world.

"And we're always exploring new avenues for diversification. New branches were recently opened in Tokyo and Hong Kong. We've even conducted discussions with representatives of the People's Republic of China. Our Marine Office of America Corporation, one of the world's largest marine insurers, now exchanges insurance services with The People's Insurance Company of China. Back home, we're taking full advantage of the new Insurance Free-Trade Zone in New York, the first of its kind in the U.S.

"Has our strategy paid off? It certainly has. In 1978, we reported record results in revenues, income, assets and shareholders' equity. Operating income rose to $303 million. That's a 21% increase over 1977.

"What's more, we're a company that has paid consecutive cash dividends since 1853—longer than all but twelve companies on the Big Board.

"As a leader in our industry, our goal is to continue to look for opportunities to spread our risks while expanding our services to the insuring public."

For our latest financial reports, write The Continental Corporation, Dept. B, 80 Maiden Lane, New York, New York 10038.

Pay 'n Save's Hendricks and Bean
"It's the carrot that makes them r

son who saw the potential back a start. The chain grew slowly for tw cades and branched out into hard stores in 1960. But it was during Bo recession back in the early 1970s growth really took off. With local ness weak, Pay 'n Save was able t pand in Seattle on the cheap, addin eral Pay 'n Save stores to its chain. Boeing recovered and Seattle with i 'n Save was well positioned to profi

Pay 'n Save's biggest expansion in 1976 and 1977 when it opened n new stores; digesting that expa hurt profits in 1977, but this past (ended Jan. 31) showed a rebound come grew 18% to $3.14 a share, o million. In addition, its 17 stores in fornia went into the black recentl the first time, and expansion east into the Salt Lake City and Wyo areas is going smoothly.

Bean has only one weak link i chain, the Lamonts clothing chain. was so dissatisfied with its 17 st uneven profits that last month he outside the company to find a new p dent for the division—much to the prise of the loyal Pay 'n Save ranks. bought a chain that had run out of Bean says. "We had very little expe in this area. Our first idea was, 'Bu hell, anybody can buy. We gotta sell came around to other ideas."

Will M. Lamont Bean's modula proach to retailing continue to wo Pay 'n Save spreads further from home base? That remains to be seen Bean is all optimism. He is talking a hitting $1 billion in sales within t years, and earnings could reach share or better. Not bad for a com that went into the 1960s with sales der $10 million and earnings equiva to 11 cents on the present shares. ■

It's not just one big simple world out there.

It's not just one big simple world out there, but many. Whether you have a single message for the whole world or many messages for many different markets, TIME can help.

For TIME offers reach, precision, and flexibility...worldwide.

There are 160 international editions of TIME. Big editions that go to Europe, Latin America, Canada, the Pacific. Other editions that can carry your advertising to regions, nations, even individual cities. And wherever it appears, TIME is the same influential news magazine that's read each week by 26,000,000 people around the world. Put your money precisely where your markets are.

For more information, call Dave Gibson, U.S. Area Director for the International Editions. (212) 841-4956.

TIME. The news magazine for the internationally minded.

The banks have always managed most of the pension funds cause . . . well, because they're the banks. But they can't take business for granted anymore.

It takes more than a sincere suit and a smile

Carl Hathaway of Morgan Guaranty
Head to head with his old boss.

By Cynthia Saltzman

WHEN CARL E. HATHAWA starting out at Morgan G ty Trust Co. of New York early Sixties, big corporate pensio clients used to come over to have with Longstreet Hinton, head trust department. "Over de Hathaway, now senior vice pres recalls somewhat wistfully, "they 'Well, Longstreet, how are we d And he'd say, 'Fine.' And that wo that." Past tense, of course.

The banks, headed by Morgan billion, still have an estimated 2 the $500 billion in U.S. pension But they can no longer satisfy th tomers with a lunch and a reas phrase. In fact, Morgan has lost clients and, since 1972, absolute sion-fund dollars. Citibank has als pension money; and Bankers Trus Chase Manhattan Bank, and Che Bank are reported to have had net defections last year.

Why the switches? With the pass ERISA in 1974, pensions became a not simply a moral, obligation. I corporation has $10 million to p pension benefits this year, and it million pension fund earns only 4 stead of 6%, the difference even must be made up. Further, says Pat Regan of BEA Associates, Inc., a r management firm in New York, companies, by miscalculating infl have both underestimated future pe obligations and overestimated th turns on their pension-fund investm

So today's pension world is a competitive one—of computers, c tants and ERISA. The clients are s ticated and watchful, ready to s their funds at the drop of a com printout. Since ERISA, diversifica among managers and types of i ments—has been the name of the

ng with restructuring personnel,

the banks have been restructuring techniques and following the major move from stocks to fixed-income securities, now more than 50% of all pension assets, compared with 25% five years ago. Wells Fargo Bank is a pioneer in modern portfolio theory and indexing. Morgan has set up several fixed-income funds and an international stock fund which had a 36% rate of return last year.

Some banks, like Bankers Trust, have gone into "master trusts," to act as custodians of the assets—keeping track of all the multiple managers, providing regular reports on performance.

At Citibank, Vermilye has also done more than add a few portfolio managers. Citibank now has a real estate fund, an international fund and a new $10 million fund using both fundamental and modern portfolio theory analysis.

The jury is still out on bank pension-fund performance. There was some progress last year: Citibank's stock fund had a return of 10%; Morgan's individually managed accounts averaged an 8.9% return. Over half the biggest banks' commingled funds surveyed by *Pensions and Investments Performance Evaluation Report* outperformed the S&P's 500—even if it was only 6.8% to 6.6%.

If the banks can continue to do that well, they will at least be able to hold their own. What company wants to take an account away from a bank with which it has had a long relationship?

Recent history suggests that relatively small pools of capital can produce more spectacular results, at least over short periods, than big ones. That gives the independent money management outfits something of an advantage. But what do you do when you are dealing with billions of dollars—as an AT&T or General Motors pension fund must do? Perhaps you use some of the smaller firms as a yardstick, but you still give the bulk of your money to people who are accustomed to dealing in huge sums. Says George Russell, of Frank Russell Co. Inc.: "Our clients may select a larger number of independent money managers, but the bulk of the money may still go to the banks, simply because the little oper-

All-Steel 8000 Series Systems Furniture:

New freedom of design for your office plan.

Consider the possibilities inherent in the 8000 Series. At one extreme, it is a complete system of integrated, modular components which you can combine to create immediately the total office plan you want.

At the other extreme, you can introduce 8000 Series components into your existing office piece-by-piece. The transition will be smooth because Series 8000 components are compatible with conventional free-standing furniture.

As growth, change, or relocation require, Series 8000 components can be rearranged quickly and easily to meet your new needs.

To learn how smoothly our 8000 Series Systems furniture can meet your present and future needs, write All-Steel Inc., Aurora, IL 60507.

money manager who is trying to recover after a well-monitored poor performance in recent years: "Most of the consultants who come in here haven't been in the business as long as the money managers have. They ask a lot of questions, but they don't know anything about managing money. They are trying to turn it into a science because they don't have the experience to practice it as an art."

George F. Russell Jr.—with his 90-employee Frank Russell Co. Inc.—is the original and biggest pension consulting firm. Russell and his staff of 40 consultants, based in Tacoma, Wash., have been called arrogant and arbitrary in their selection of money managers for his closed list of 40 corporate clients. Russell, whose clients include IBM, Xerox and J.C. Penney, defends himself: "There's a lot of resentment out there because there aren't that many skilled managers. The days are over when managers can operate in a closet without doing their jobs right."

Russell uses Boeing Computer Services to process performance information from a "universe" of over 500 monitored institutional and independent money managers. He and his staff produce quarterly portfolio profiles on a majority of them, plus debt-to-equity models and advice on real estate investment—all for the exclusive use of his 40 clients.

Russell isn't a "quant," one of the young consultants who do much of their monitoring by questionnaire and most of their evaluating by quantitative analysis. He says that 60% of his portfolio tion is qualitative—based on his tive attitudes about a manager's ter and reliability. Says the 46-y Russell, a man of measured state "About 75% of what is called r portfolio theory is smoke. Only substance."

Consultants like Russell look fo they call a "comfort factor" in a manager. Kenneth F. Brunke Jr., Chicago-based independent con who used to manage corporate p money himself, says that the final he makes for a client must be subj "A lot of pension sponsors out don't want a New York manage says. "Or they have ethnic prejud

As consultants have been instru

Many of the self-appointe perts are young and inex enced, but articulate in mysteries of modern port theory and other quantit portfolio evaluation t They speak a language the stragglers do not kno

Pension consultant Kenneth F. Brunke Jr.
Quantitative analysis, yes, but the final choice has to be instinctive.

in directing money away from m ment by the banks, they have bee ing fund sponsors toward splittin funds among a diversely talented of money men. Depending on a investment strategy, a consultant recommend a mix including two r ers noted for success with high stocks. Another might be chosen stick-to-itiveness with growth while still another might be cho market timing. The idea is to get balanced, overall performance an minimum return on investment.

The money men complain tha are being pigeonholed. Says one, pressure is on every manager to b dimensional. When you talk to a c tant you have to explain yourself i detail that you put yourself in a When you try to be flexible and ad the market they come back an 'What are you doing? You were su to be doing X and you are doing Y forget that the idea is to make m This same long-experienced manager thinks the pressure of th sultant's "comfort factor" is help create a timid stock market.

At any rate, the consultants are stay, if for no other reason than under ERISA, the use of one helps p the people responsible for pension from lawsuits ("We used the best available, didn't we?").

Will the growing power of the c tants help improve overall pensio performance? Probably not, but the certainly make it more competi and, in the end, more costly. ■

Grumman presents: one for the road.

The Grumman Flxible 870® transit bus.

Over the next decade, America will need more than 50,000 new transit buses. The Grumman Flxible 870® bus will go a long way toward meeting this demand.

It's the product of aerospace technology applied to the down-to-earth problems of building a better bus. The result is an award winning design with a range of features which are appealing to riders, drivers and maintenance personnel alike.

And it does so with the same reliability as every other Grumman product. From our aerospace systems like the F-14 Tomcat fighter, to such products as our Pearson yachts, Data Systems, and Sunstream™ solar energy systems for home and business.

We're Grumman. We're technology, performance and reliability. Grumman Corporation, Dept. GCP, Bethpage, Long Island, New York 11714.

The reliable source

Last year we ran a list of 100 companies where big earnings gains were likely. The stocks did very well. Here's our 1979 version.

Return of the golden ones

HOLLYWOOD'S SEQUELS to successful films are usually busts. We hope the same won't be true of our sequel in this space. Last year around this time we ran a list of 100 companies for which the analysts surveyed by Institutional Brokers Estimate System expected earnings gains of at least 25% over 1977.

The list was a smash hit. On average, these stocks rose 38%; the market as a whole was up less than 16%. Not ba

So, here's our sequel. To get on year's list a company had to be predi for a 25% gain; this year they need 36% gain. Mind you, these aren't growth stocks. Some of them will s good gains simply because 1978 wa extraordinarily poor year. Others, h ever, have good growth records.

Will this year's list do as well as year's? Sequels seldom do, but ther certain logic to aligning your inv ments with the trend of earnings.

The tables are pretty much self planatory. But if the column he "Variation in earnings estimates" m fies you, it needn't. What it shows is range of analyst estimates on the sto Where the variance is small, analysts pretty much agreed on what the earn will be; where the variance is big, t is less agreement. ■

PUT MAN THR HI

It's one of Dana's principles of productivity.

Once a year, all of Dana's division managers present their plans to an audience of their peers. Then they have to defend them. It's affectionately known as "Hell Week." But once through the ordeal, our managers have earned the right to run their own operations for another year.

Managers everywhere have the pressure of responsibility. At Dana, they get the authority and support that ought to go with it. It's part of what we call humanistic management, giving people the freedom to work well, to grow and to share the rewards.

You can see the results in our productivity. It's doubled in the last 7 years.

Productivity alone doesn't produce profits. But we're balancing our outpu of parts for the vehicular, service and industrial equipment markets we manufacture for. So, as well as increasing productivity, we've improved our earnings year after year.

And that's not bad for a bunch of people who've been through hell.

Dana Corporation, Toledo, Ohio 43697.

How does Wall Street look from Zurich? Swiss bankers loved U.S. stocks in the booming Sixties, but lost big with the dollar's decline. Now, cautiously, they're buying again.

The gnomes are nibbling

By Paul W. Sturm

DON'T BELIEVE those myths about Swiss bankers being different from the rest of us when it comes to investing. In the Sixties, when stocks went mostly straight up, they loved the U.S. market. They put nearly half their customers' money into Wall Street. They were bullish.

Legend has it that shrewd money managers outguess the averages. They buy when prices are cheap. They sell when prices are dear. That is—a legend. Swiss bankers were frolicking happily in the American market when it was rising, and they are avoiding it like the plague when it is down. They seemed to have done what so many of the rest of us did: getting in on the way up, staying out at the bottom.

Today these same Swiss banks have less than 10% of their money in U.S. equities. They loved American stocks at 18 times earnings; they steer clear of them at eight times earnings. Logical? No. But the stock market isn't logical.

You can't blame the Swiss, in a way, for they took quite a beating. The Dow Jones industrials are lower now than in the mid-Sixties. But that's not the whole story. Adjusted for the dollar's decline, the Dow is a shambles, down 60% since 1971 in terms of the robust Swiss franc.

As a result, many Swiss investment advisers have sworn off dollar-denominated assets completely.

Such disenchantment has a profound effect on American investors, because the Swiss play the international capital game with very big chips. Despite layers of nondisclosure, experts estimate that the nation's banks supervise some $300 billion in assets. Over half that money goes to the Zurich-based big three—Crédit Suisse, Swiss Bank Corp. and Union Bank of Switzerland—making each of their investment operations twice the size of Morgan Guaranty's billion trust department. Beyond there are more than a score of so- private banks, most of which limi services to portfolio management.

Switzerland's institutional inve of course, differ markedly from the counterparts. Their clients are w private individuals from aroun world instead of corporate pension or college endowments. As a result folio managers often get specific in tions about what kinds of invest customers do and don't want. P more than any other financial ad however, Swiss bankers influence foreigners think about U.S. investm And that influence has an impact Street brokerage houses, about which keep expensive local offic court them, estimate that on an day the Swiss money men accou over 5% of the trading volume o New York Stock Exchange.

For the moment, most of Zu once-burned investment profess aren't about to come rushing back U.S. stock market. But they are n *tempted,* and some are starting to *nib* U.S. bond markets. Kurt Meyer, wh pervises portfolio holdings from and Latin America for Union Bank in his office and punches up three-m money-market rates on a display t nal. Swiss franc deposits earn ½ that's right, a $10,000 deposit earn a year in interest. Deutsche marks about 4%, while dollar balances br over 10%. "The more people see rate differentials," he says, "the they'll have second thoughts abou holding dollars. Already, they can back three months and see the opp nity they missed."

Like most Swiss advisers, then, M is slowly shifting his customers' m into dollars. U.S. stocks? Not ye that may be his next move. "A money is ready to go into the marke very short time if people think in rates have peaked," says the head Zurich firm that manages about $ lion for several wealthy European ilies. "Last year we saw a 25% rise Japanese indices, and in 1979 the Jones could do the same—purely quidity reasons." What he means i there may be so much cash slo around that some of it will seep int stock market. Out of sheer boredo nothing else.

Dr. Christoph Gruebler, head o own investment advisory service man whose reputation rests on a sh decision to dump dollar holdings in says: "Simply stated, I think your két's rise over the next 6 to 12 mo will be far sharper than any decline dollar. I look for another 10% drop i averages, and then I'd be ready to p to 40% of my funds into well-k

Watching the market in downtown Zurich
Almost every local bank keeps NYSE quotes flashing in its windows.

Longer is shorter.

Change to our longer-lasting roll towel and shorten your towel maintenance time.

That's the idea behind Fort Howard's 850-foot roll towel. It's the longest roll towel in the business. Available in both bleached and natural stock. So you get more hand-dries per roll and fewer roll changes.

Our 850-foot roll is over 200 feet longer than the average roll towel. That means longer periods between maintenance calls. And added up over a year, the savings can be significant.

By teaming our 850-foot towel with our Commander I® cabinet, you can cut your maintenance costs even more. The Commander I is designed to eliminate "stub roll" waste, the unused portion you may be throwing away. So you use all the paper you buy.

Get the longest roll towel and shorten towel maintenance time. Call the Fort. Dial (312) T-H-E-F-O-R-T and we'll show you how to save.

n stocks like Eli Lilly and IBM." e was when Swiss investment like many U.S. portfolio manag- arked their money in top-tier se- s, content to ride the market for f necessary. That attitude no long- ails. "With the possible exception n, you can only make money to- ying equities on the swings," says ith Saurer, a member of the man- nt committee at Julius Bär & Co., 's largest private bank, its offices discreetly above an expensive y store. "Inflation means that nies pay taxes on fictitious profits, ey're not allowed to make the nec- writeoffs. So real values are stead- reasing."

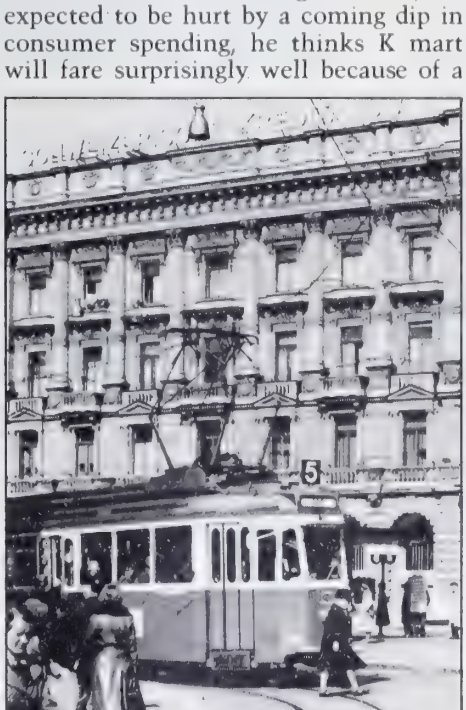
atch the next upswing and cash in at he sees as a strong market rise ill follow a peak in U.S. interest Saurer looks for convertible bonds ownside protection in the form of high yields. Two favorites avail- the Eurodollar market: an Ameri- an issue with an 8.4% return, just 24% above its equivalent val- ommon stock; and a Ford offering ields 8.2%, with an even lower nversion premium.

n his glass-and-aluminum head- rs just south of town, Gilbert de , who runs Rothschild Bank, is nturing into U.S. markets—but in imited way. "You could keep your on 48-hour call for 20 years and ly stay even with inflation," he is, not unaware of the fat double- terest rates now available on dol- posits. "So you've got to sense a portunity to switch to stocks." urer, de Botton now buys equities for short-term trading, and at the nt he thinks smaller domestic en- mpanies like Adobe Oil, Dorches- s and Mesa Petroleum offer good unities. "Obsolescence isn't a fac- th them," he says, "and they up nicely in the last oil crisis."

cally, then, most Swiss invest- professionals expect that for the ear or so Wall Street will rise faster ne dollar will fall. But, as we said, are like other people: When stock are cheap, like today, they are ous. Why *should* they be so cheap? Swiss are not exactly jumping in oth feet. "I want to protect myself earnings decline is stronger than pansion in multiples," says one who manages about $500 million andful of French customers. "I'd rather pay 18 times earnings for nberger, which will grow 20% a han 9 times earnings for some- lse that won't. If I'm wrong on my and the multiple drops by half, ars later earnings growth will have p the difference."

e are, of course, other approaches. Bank, a tiny institution known locally for its U.S. expertise, has, like many American investors, discovered the Sunbelt. "In your South and West we see a robust economy that impresses us very much," says Sibylla Sonnenthal, a partner who visits the U.S. regularly. "Then you get to Washington and New York and you wish someone would chop off the East Coast." As a result, her firm keeps a full-time scout in North Carolina who seeks out small, fast-growing public companies. At the moment, Rüegg clients hold such off-the-beaten-path stocks as Arkansas Best, a regional trucker; Ernest W. Hahn, a California shopping center developer; and Kentucky Central Life Insurance. "We do our own research because we want stocks we think will double or triple," she says. "That offsets any currency risk." A current pick: Great Lakes Dredge, which stands to benefit from new restrictions on the Army Corps of Engineers.

Such exotica, however, aren't as useful for the giant Swiss banks, which must think in billions, not millions, and their research departments regularly comb the heavily traded stocks for investment opportunities. At Crédit Suisse, Urs Enderle heads a six-man unit that specializes in U.S. equities, and the issues he picks go on a recommended list for the bank's legion of portfolio managers. Enderle likes what he calls "tarnished" blue chips. Schering-Plough, for example, trades at half the multiple of rival SmithKline, and he considers it a far better value. Similarly, he is enthusiastic about American Express despite the chorus of analyst complaints about its vulnerable credit-card and traveler's-check businesses. Among retailers, all expected to be hurt by a coming dip in consumer spending, he thinks K mart will fare surprisingly well because of a



Not all of Zurich's banks are anonymous
Its Bahnhofstrasse is the Swiss Wall St.

product mix that lacks big-ticket items.

Despite these pockets of optimism, Swiss money managers are far from bullish on America. Edwin Wydler runs the U.S. portfolio for Swiss Re, an insurance company with $6.3 billion in assets. A hefty portion of its funds are invested in Wall Street, not because Wydler is especially optimistic but because his company needs dollar holdings to cover its substantial dollar obligations. "As the last bastion of capitalism, the U.S. certainly isn't setting a good example," he complains. "Look at the auto industry. You've got fuel-economy regulations, price controls on gasoline and the Department of Energy printing ration coupons. The government is replacing the marketplace with central planning."

Dr. Peter Wälli supervises North American holdings in nearly $36 billion worth of pooled accounts for Union Bank, and he worries, too.

"We think your recession will be worse than most people assume, and at first the slowdown will help the stock market," he says. "The reaction, however, could be dramatic. Suppose the Administration panics with the primaries coming up and pressures the Fed to start churning out dollars? If the money supply jumps for a couple of weeks, there'll be another panic." Clucks Dr. Thomas Schlieper at J. Vontobel & Co., private bankers: "Carter has to improve his image to win the 1980 election; that means cheap money and high inflation."

So, what's new? Not much. Swiss bankers are like the rest of us. Worried about inflation in the U.S., yearning for more of what used to be called fiscal responsibility and seeing a smidgen of hope in the Sunbelt. As long as inflation remains high they are not impressed by the rising earnings of U.S. corporations; the earnings are not real.

Maybe the Swiss bankers are right. They weren't right, of course, in the Sixties and the early Seventies. Maybe they are wrong again. A lot of us hope so.

We'll conclude on a cheerful note: Dr. Hans-Conrad Kessler took a little list along last month when he spoke to a convention of well-heeled German doctors. Kessler is a senior vice president at Swiss Bank Corp. responsible for billions of dollars in investments, and his list sports 25 U.S. stocks—ranging from Boeing to Xerox—that would have netted their owners a handsome profit over the previous 12 months despite the dollar's sharp drop against the Swiss franc and German mark. "U.S. corporate earnings were up 20% in 1978 and dividends, 10%," he says. "Unfortunately, the market didn't react to this fantastic news. But we've changed our policies and we're buying American stocks."

If a few dozen other key people start thinking like that, we could have a flood of Swiss money on Wall Street. ■

What kind of accounting firm doesn't stop at the bottom line?

© 1979 Deloitte Haskins & Sells, 1114 Avenue of the Americas, New York, N.Y. 10036

The bottom line isn't the only thing you have to think about in your business.

And it shouldn't be the only thing your accountant thinks about.

In our view, an accounting firm owes a client something more than a signature for the annual report.

Just as important as that signature is some innovative thinking about your business, and ways to improve it.

Which means what, exactly?

Well, among other things it means helping you evaluate your internal accounting controls. (We have some unique decision tables that are useful in this connection—with the Foreign Corrupt Practices Act, you may well need them.)

It means having people who understand the accounting practices of your industry—and even more, who understand what your business is all about.

It means having the tax know-how to balance your depreciation deductions against your investment tax credits, and make the most of each.

At Deloitte Haskins & Sells, it means all this and a whole lot more.

When all is said and done, nobody who's anybody in business thinks only about the bottom line.

As accountants, we think our job is to go beyond it.

Deloitte Haskins+Sells

Beyond the bottom line™

"Every man for himself!" shouted the elephant as he danced amc the fleas. As old guidelines become increasingly irrelevant, so regional banks are beginning to feel like fleas.

Everyone is stepping into everyone else's turf

THE BANKING INDUSTRY, a relatively quiet backwater for decades, is in turmoil. Competition, from which banks previously were sheltered, is beginning to assail them on all sides. At the same time, banks themselves are getting new opportunities. The walls that previously enclosed banking are crumbling. The business is becoming a free-for-all.

Within a year you may find yourself doing some of your banking at Sears, Roebuck & Co. or at Boston's Fidelity Management & Research Co. Conversely, you may be doing your investment management business through bank-related Provident Capital Management Inc. of Philadelphia or Western Asset Management Co. of Los Angeles.

Deposit-taking has been the exclusive province of local banks since the McFadden Act of 1927 halted interstate banking. Consequently, a salesman from Citibank or Bank of America can travel from coast to coast offering to lend money. But he dare not accept a penny of deposit from a humble worker or a giant corporation outside the prescribed geographic limits of his home bank. Loan production offices—yes. Deposits—no.

Deposit-taking may still be restricted to banks and savings institutions in law, but in fact, the use of innovative techniques has permitted others to achieve the same result. For example, Sears, Roebuck plans to sell small-denomination certificates to attract public savings. With 20 million credit cards out, the retailer has a marketing head start. Is this deposit-taking? If not, what is it? You can already telephone Fidelity in Boston on a toll-free number and buy shares in a daily-income money market fund with free checking withdrawal. Cash balances awaiting reinvestment will earn interest comparable with current short-term money market rates. Merrill Lynch uses a cash management account concept to provide yield through a money fund. The client takes a small market risk if short-term interest rates change. Is Fidelity a bank? A brok house? A money management out is becoming something of each. M while, a suggestion by a Dreyfus executive to Citibank officials v make it possible for you to go to a bank teller machine and put mone or take it out of your Dreyfus m market fund.

And new opportunities are openi for the banks themselves. The scarcely a major city in the U.S. does not have offices where large o state banks offer loans, leases and in ment credit. Their Edge Act subsid may soon be taking some U.S. dep too. The influx of foreign banks h also serving to break down the ol riers between banking and other f cial services. Deutschebank, Germ largest, owns Atlantic Capital Co U.S. investment banking firm. Fi the largest European banks own partners Securities Corp., a memb the New York Stock Exchange. The

e stock market is probably reacting
e uncertainty that comes from the
kdown of the comfortable old certain-
of banking. Uncertainty is going to
in the rule in the banking business for
oreseeable future. The old certainties
based on things like the Glass-Stea-
Act, which is about as relevant to
nce in 1979 as the old blue laws are
ant to modern social conduct. Money
o longer money—something you
h, hold and pass on. It is just a number
computer somewhere, and if it
ges hands it does so as an electronic
ulse in a Marshall McLuhan-esque
d. Hence the uncertainty—which
y banks may not survive, while others
profit handsomely. ■

The 50 largest trust operations

Sluggish stock and bond market performances held back expansion of assets under trust management in 1978. Raiding of accounts by outside money managers also played a significant part in holding down the growth of assets under management. These factors, however, did not cut into earnings of trust departments, which advanced substantially.

1978 rank	Company	Market value of trust assets* (millions)	Trust department income— Total (thousands)	% change from 1977	% of total operating income

ear average equals a compounded annual rate: 1978/1974. † From continuing operations after security gains or losses excluding extraordinary items.
t interest income on a taxable equivalent basis as a percentage of average earnings assets. D–P: Deficit to profit. P–D: Profit to deficit. def: Deficit.
rowth based on year end assets. D: No dividend in 1978. E: No dividend in 1974.

BUILDING CONTROL.

How Honeywell's BOSS service helps Fidelity Plaza save — enough to run one-fourth of their building free.

(ou don't have to own a huge lding to benefit from a neywell energy management tem. In fact, you don't even e to own the system. Using SS, Honeywell's unique time-red energy management vice, the Fidelity Plaza lding in Oklahoma City es over 25% on yearly rgy costs.
ust a few weeks of energy ings pay for a full year of vice. And, as you'll see, that's y a part of the savings story.

ow BOSS can work for you.

Using advanced automation hniques, a highly skilled neywell energy manager is your building's total ironmental system—ting, cooling, lighting. He es it by remote control from neywell's BOSS command ter nearby.
Every day, around the clock, monitors energy usage, cks temperatures, starts and ps equipment. All according to a plan designed to fit your specific needs. He'll also report any equipment problems quickly for corrective action.

Count the ways you save.

Energy savings: 20 to 30% savings are common in most buildings with Honeywell automated control. With no sacrifice of occupant comfort.

Manpower savings: With mechanical systems operating automatically, your service staff can be assigned other duties such as maintenance. And your building's energy manager is on our payroll, not yours.

Equipment savings: Efficient usage and reduced running time extends the operating life of expensive mechanical equipment.

Administrative savings: BOSS logs and reports help you cut waste, manage manpower more efficiently, plan and keep to budgets. In total, you have closer, more cost-effective control of your building's operation.

Low cost, fast pay back.

Because you share this Honeywell control system with other buildings in the area, the cost of BOSS service is remarkably low. Like computer time-sharing, it requires no major capital investment. After moderate start-up expenses, you pay only one monthly service fee. All the rest of the savings go straight to your bottom line.

Get the facts — at no obligation.

Whether you should choose service—as Fidelity Plaza did —or buy your own Honeywell energy management system depends on your building's requirements. Let us give you the facts to help you decide. Write now to: Mr. J. H. Jester, Vice President, Sales and Marketing, Honeywell Building Services Division, Dept. 04D14, Honeywell Plaza, Minneapolis, MN 55408.

From the most complex computer systems to the simplest controls, providing better ways to help you control your business has always been our business at Honeywell.

Honeywell

Avon is tops in one kind of marketing. With the acquisition of Tiffany it is tops in yet another kind. And now. . . .

Avon calling . . . with acquisition still on her mind

By Nick Galluccio and Alyssa Lappen

DAVID W. MITCHELL, 51, Avon Products chairman and CEO, is walking a tightrope these days. Last year Avon's sales were up 22%, reaching $2 billion for the first time, and net profit hit a record $228 million, or $3.92 a share, up 19%. This year looks good again; analysts predict another earnings gain, this time of 12%, to $4.40. But Mitchell, who has been in sales and marketing almost all his working life, knows that the company's remarkable success selling cosmetics and toiletries door-to-door to middle-income families is neither foolproof nor cycleproof. To keep Avon at the top of the $8 billion industry is going to take new products, new marketing approaches and more money than it used to.

At the very pinnacle of its prosperity, Avon wants to avoid the kind of overconfidence that afflicted it in the early Seventies, causing its earnings gains to falter in 1973, stumble in 1974 and helped precipitate its shares into a downward spiral that carried them from 140 in 1973 to 19 in 1974. A good manager knows that the time to worry is when everything seems to be going well. David Mitchell, who joined Avon as an office clerk out of high school in 1947, shows all the signs of being a good manager.

With runner-up Revlon, Inc. and hosiery maker Hanes, now a division of powerful Consolidated Foods Corp., planning new cosmetics lines to be distributed through supermarkets, Avon is going to see big-time marketing power and products aimed at the same customers that the Avon lady has been selling at home. Needless to say, Avon is not just standing by and watching. Mitchell has got the company moving into new kinds of products and a major diversification. He is trying to get those Avon saleswomen to ring those doorbells harder and move more merchandise. That costs a lot of money, especially for a high-turnover sales force that has just come off a year of record output *(see box, p. 145)*.

A tip-off to the effort Mitchell has launched can be seen in what has been happening to pretax income as a percentage of sales. Normally in the cosmetics business, margins might be expected to widen with a big increase in sales. But last year, far from widening, Avon's margins actually fell a bit—to 22.6% from better than 23% in the two previous years. Nor has the sales boost led to increased cost efficiencies. Marketing, distribution and administrative costs were 43 cents on the sales dollar, just about the same as 1973-76.

When Mitchell moved up to CEO in 1976, he inherited the job of rebuilding a sales organization that had been decimated by the recession of 1974. Mitchell's predecessor, Fred G. Fusee, w chemist who came out of produc Around headquarters in those Avon's saleswomen were known r contemptuously as "ding-dongs"— ple who would accept low mon rewards because they worked fo love of it. Times were changing with them women's expectations the old management failed to u stand that. Didn't the multiple of its stock confirm that Avon's for was timeless and infallible?

But when sales collapsed durin recession as the discretionary incor Avon's customers vanished, so did of Avon ladies. When the stock ered, the magic went the way of fan

To turn things around, as Mit points out, Avon first tried cutting p instead of focusing on the sales "But it didn't work," says the tall, p spoken CEO. "The lesson we le was that we should put more m behind recruiting, incentive-boo and recognition of our sales force an try to superdiscount our products items we did sell were just not as p able as they had been in the past."

In short, Avon learned to respe salespeople and to understand that tivated sales force was more impo than pricing in its business.

To get his people to work their tories harder, Mitchell is cuttin number of households in a territory 200 to 150 on the assumption that ing the surviving doorbells more will produce more sales. That wa stick. The carrot was morale boosti

Avon also nearly tripled U.S. adv ing and promotion since 1973 and bled it overseas, where it gets over

Newsweek
INTERNATIONAL

data
center

The Source.

Introducing the Newsweek International Data Center—an exclusive and comprehensive media/marketing research resource for international advertisers.

There's never been anything quite like it—a computerized repository for the diverse media/market data so valuable to multi-national business: statistical tracks on major product use, market composition and media habits of key consumers.

But now there is.

We at Newsweek International have gathered together the major media/market studies of Europe, Asia, the South Pacific and the Middle East.

With retrieval access to this data in New York and London, we can immediately turn your media/marketing queries into hard, useful facts.

And at no charge whatsoever.

Exclusive and Extensive Data

Much of this data is exclusive to Newsweek International, like the Asian Profiles study of 1976. For the first time, those of you who market in the eight major cities of Asia have access to a definitive study of the lifestyles and media habits of Asian executives.

There's more. We've included data from other, equally reliable sources:

The recently completed Pan European Survey, perhaps the first—and certainly the most comprehensive—study of European executives which sets aside the limitations of national boundaries.

The Australia-wide survey of readership of magazines, by the Roy Morgan Research Centre

The McCann-Middle East media study ...the only definitive media research yet done in the Middle East.

All of this data is now available to you, without charge.

Telephone Link to the Data Center

You simply call your Newsweek International representative and pose your problem.

He then becomes the liaison between you and the Data Center. With startling immediacy, you'll have the information you requested on your desk, ready to feed into the decision-making process.

An Extraordinary Magazine Service

Only Newsweek International offers this unique service to the international marketing community.

As far as we know, there's nothing quite like it in all the world: a comprehensive media/market research bank open to international marketers without charge.

But then again, there's nothing quite like Newsweek International itself...a magazine of global scope and universal authority...received, read and responded to by nearly two million key international consumers each and every week.

And ready...with data and with prospects...to help you sell in any of these major world markets.

Grace Reiner, your Newsweek International representative in New York. Call 212/350-2556.

How to put your building on a strict Btu diet.

Energy, as we all know, is money. It disappears faster than we can put our fingers on it.

Soon, every one of us is going to have to start budgeting energy. The high costs of energy, as well as government regulations, are going to demand a strict accounting of the way our buildings consume energy.

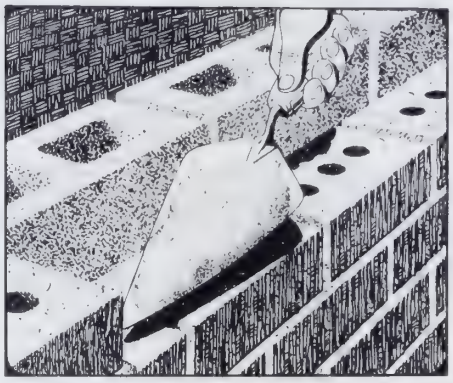
But there are ways to make a Btu stretch farther. We believe there are four important things that every business manager should know about cutting down energy expenditures:

1. *To do a good job of saving energy, you have to be concerned with the energy performance of the entire building,* not just a component like the walls, or a single system like heating and cooling.

Every facet has to be taken into account. The mass, or weight, of the walls, proper insulation, heating and cooling systems, air infiltration through doors and windows, water and lighting systems—all are critical.

Building performance standards that take this overall "thermal performance" (measured in Btus—British thermal units) into account are the best kind of standards. They give designers and builders freedom to use their skills and ingenuity. They encourage such things as proper solar orientation of buildings, reduced air infiltration and efficiently-sized mechanical equipment. A true "performance standard" simply sets an energy conservation goal, expressed as an energy budget for an entire building, and then permits that goal to be achieved by the designer, builder, and owner in whatever ways they can devise.

2. *We can use the sun's energy to cut energy costs.* There are both "active" and "passive"



solar collectors. "Active" solar collectors collect energy from the sun and then use mechanical equipment such as pumps or fans to distribute that energy. "Passive" collectors simply collect the sun's heat and hold it until it is released by radiation or conduction.

No materials serve as "passive" collectors better than masonry—brick, concrete block, stone.

Passive solar collectors have many advantages over active solar collectors. They have no working parts—nothing to go haywire. They are simple to design and build—and they are more economical.

3. *Massive walls of masonry, even when they're not designed as passive solar collectors, keep buildings warmer in winter, cooler in summer.* Because of their weight, or mass, masonry walls act like thermal blankets. In many cases, masonry walls will mean that heating/cooling systems can be reduced in size.

4. *Insulation is important when properly used, and when its limitations are understood.* We are still learning about the limitations. It's already clear that insulation is cost-effective only when used with restraint. After a certain point of thickness has been reached, the cost of additional insulation will no longer be recovered in energy savings.

And it's becoming clear that some assumptions made in the past about insulation are not justified. For example, there are indications from preliminary studies that in regions where more energy is expended in cooling than in heating, insulation used in the standard fashion in all walls may actually increase, instead of reduce, energy consumption.

One of insulation's limitations is that it affects only conduction—it doesn't affect air leakage, which is estimated to account for 25-30 percent of the thermal loss in buildings. A significant amount of air leakage occurs through windows and doors, so it's important to reduce the size of, and shield, these openings.

Masonry walls will further reduce air leakage because they are hand-fitted on the site (like custom-made suits) and thus are more airtight.

Furthermore, the effectiveness of insulation depends on the wall to which it is attached. Promoters who compare wall materials with insulation are making a meaningless comparison—the two have different functions, and one is not a substitute for the other.

Keeping to a strict Btu budget for your buildings is important today and will be even more so tomorrow. If you would like to know more about saving energy, write to International Masonry Institute, 823 15th Street, Northwest, Washington, D.C. 20005.

ge over Revlon when it comes to
ng a new product line to market.
he, "Revlon has to load up the
es, fill the warehouses, go out and
the girls behind the counter and
h a massive advertising campaign.
e have to do is take a photograph of
roduct, put it in the brochure, get the bottles, caps and labels ready—and start selling." It remains to be seen what vitamins will do for Avon's sales.

For years Avon clearly has lacked ways to trade up its customers, its markets and its image. Its average order size is now $7.50. Avon's recent acquisition of the six-store Tiffany & Co. jewelry chain may help to push it higher. Mitchell says he wants to expand the chain overseas and boost its mail-order and special-order business. But it is hard to believe that he would pay about $92 million, 16 times earnings, for a company that grossed only $73 million and netted $5.9 million without expecting some rub-off on the rest of Avon. The late Groucho Marx is supposed to have called another fashionable Fifth Avenue jeweler, Cartier's, "the Tiffany of the jewelry business." What Avon was paying for, in part, was that epigram.

A Tiffany cosmetics line would certainly open fancier doors than "Avon calling." And that name could get Avon a shot at the upper-income markets that Revlon gets into with Borghese—markets that don't collapse in recessions. Mitchell denies any such grand plans at the moment.

Whatever problems Avon may have, money is not one of them. The company has practically no debt, its equity stands at $740 million and it has $340 million in cash. So, Mitchell is looking to make a move a lot bigger than Tiffany & Co. He's talking these days about buying a "major" consumer packaged-goods company. "We want to get into the retail over-the-counter business in a big way," says Mitchell. "We're in the direct-selling and catalog business, and we think our shareholders should also have a piece of the pie from selling through supermarkets, drug and department stores."

With such a company rolled into it, Avon would have an impressive range of merchandising capabilities: Tiffany at the high end of the quality scale, Avon's middlebrow image and Unknown Co.'s mass-marketing organization. With its cash and borrowing power and a stock sufficiently recovered to sell at 12 times earnings in an 8-times market, Avon could handle a $1 billion acquisition—a feat not many companies could manage.

Avon's basic problem is that it is too narrow, both in product lines and in marketing outlets. The most hopeful thing about the company is that David Mitchell isn't letting his current success lull him back into the complacency that proved so costly a few years back. ■

Money isn't everything

Avon lady delivering cosmetics

Stereos and diamond chips.

let McNamara, 60, has toted her
on bag through a 263-home territory
San Jose, Calif. for the past 20 years.
1977 and 1978 she was the top Avon
resentative in the Santa Clara Val-
: She sold $29,000 worth of cosmet-
, toiletries, costume jewelry and
ts each year. For the roughly 40
urs a week she puts in during each of
on's 26 annual 2-week sales cam-
igns, she earned about $10,000 last
ar. From that, she paid social securi-
and income taxes and her business
erhead—between $35 and $70 per
mpaign for customer samples and
es catalogues, not to mention gaso-
e and telephone calls. A widow, she
pports herself entirely on Avon com-
ssions, which range from 20% to
% per item. Not terribly lucrative.

But she doesn't think only in mone-
y terms. "I love being my own boss," she explains, ding, "These people are my friends." Then, there are centives: "I survive for all the prizes I've won." Over the ars, she has received a refrigerator, clothes washer and yer, dishwasher, two stereos, two color televisions and a indfather clock, plus several U.S. savings bonds—$950 orth in 1978 alone.

A married Long Island woman, 45, sold $25,000 door-to-or last year by carrying samples and "wearing all the stume jewelry" when she went out. She earned a mere ,996 in commissions and spent more than 9% on "dem-" and sales books. But she too says, "I'm not doing it for e money. It's been a way of meeting people." She particu-ly likes the monthly sales meetings where new products e introduced, films shown and contests announced. Last year, she received many $10 cash bonuses, a crystal heart at Valentine's Day and $825 worth of bonds—along with some diamond chip earrings for Christmas.

But these Avon ladies are hardly typical. They are part of the elite President's Club, made up of about a quarter of Avon's 380,000-member domestic sales force, the most successful of whom grosses maybe $12,000. Each sells more than $6,500 retail annually, and together they account for more than 40% of Avon's sales. The pressure is always on for more: A club member must sell more than nonclub-members to win the same rewards.

The average representative is about 35, married, and sells roughly $4,900, at retail prices, per year. She takes home some $1,912, and out of that commission she pays her taxes, for her samples, sales books, travel expenses and telephone calls. She works part-time, usually because there are children at home. If she makes sales that equal less than $100 retail in a two-week campaign, Avon charges a $3 service fee to deliver her orders to her home. Perhaps that, along with relatively steep sample costs, is what keeps Avon's representative turnover rate at more than 100% a year. Some cosmetics industry analysts, in fact, estimate it runs closer to 150%.

Such turnover is costly and the psychic rewards will take an employer only so far in retaining sales help. Avon needs to give its salespeople more to sell so that they can earn fatter commissions. Costume jewelry, added in 1971, has captured about 35% of manufacturer-level sales in the U.S. The latest try, in test stages, is vitamins. Avon clearly needs more products—and more marketing diversification.**—A.L.**

C-E in the North Sea: We engineered the business end of the world's largest oil-production platform.

The central oil and gas production platform for the North Sea's Ninian Field. At 600,000 metric tons, it's the largest concrete structure ever floated.

Topside are 22 modules forming a fully-integrated process plant that holds all the production equipment for 42 wells, a helicopter pad, and living quarters for a crew of 120.

In all, 38 modules were constructed for Chevron Petroleum (U.K.) for their central and southern Ninian platforms. Thirty of these were the engineering and construction responsibility of C-E's Engineering Group and its associates.

But even this immense job tells only part of the story of C-E's qualifications for handling super projects—whether the challenge is in oil or gas, nuclear energy or environmental improvement.

A world of super projects.

Under way in Iraq is a $1.1 billion petrochemical complex for which C-E Lummus has design, engineering and construction management responsibilities in a joint venture with Thyssen Rheinstahl Technik.

The new Charles River Dam in Boston, Massachusetts, was designed by C-E Maguire to provide flood protection and environmental improvement for the entire Charles River Basin.

And C-E Power Systems is now working on 20 Nuclear Steam Supply Systems with a total value of more than one billion dollars.

We do more than handle the tough jobs.

For more than 60 years, we've been supplying equipment, technology and research to he produce energy, conserve it, and squeeze more use out of i

u make your bed . . .

in a name? In the mattress busi- everything," says Ernest M. Wu- president of Ohio-Sealy Mattress acturing Co. Wuliger has spent the ght years in a courtroom—shelling llions in legal fees in a nasty corpo- mily squabble—to make his point. fort was worth it, insists the dap- -year-old Wuliger, even though it pt his company's growth in limbo. -Sealy is one of 22 domestic and 8 manufacturers that made $301 n worth of bedding with the Sealy last year. Licensees pay a royalty of en 4% and 4½% of gross sales to rivately held licensor, Chicago- Sealy Inc. In addition to ten licens- ealy Inc. owns three factories it makes the innersprings.

iger's feud started in the 1960s Sealy Inc., using its "right of first l" under a prevailing contract, d Ohio-Sealy's bids to acquire oth- y licensees around the country and t the licensees for itself. In 1971 r sued Chicago Sealy, charging on of antitrust laws, price-fixing, cks and sweetheart deals with ers. During a four-month trial the rned into a corporate version of *As rld Turns*, as the once-harmonious family began to act more like the s.

ently, the U.S. Supreme Court re- to review an appeals court decision vored Ohio-Sealy in the suit. For

ealy's Ernest M. Wuliger
meaning to sibling rivalry.

Shigeru Okada of Mitsukoshi
A gingerly step toward trade via understanding, not politics.

Chicago Sealy—and other national franchisers—the case serves as a warning to ease up on a franchisee that wants to grow. For Ohio-Sealy: a $13.1 million windfall, with the prospect of more to come. Ohio-Sealy is seeking another $30 million in damages pending from an eight-count antitrust suit against Sealy Inc. filed in 1976. "The war will go on," promises Wuliger.

Ohio-Sealy, the only publicly held company in Sealy Inc.'s group, earned $3.3 million on sales of $46.9 million last year. But, beams Wuliger, "Now we're sitting on $16 million in cash and are looking to expand."

For expansion-minded Wuliger, whose grandfather founded Ohio-Sealy in 1907, the advantage of the Sealy trademark is clear: Sealy has over 20% of the U.S. bedding market, ranking with Simmons as one of the big two in the industry. "It's the pulling power of that name that counts," he says. Obviously, he means it.

Best foot forward

From the way Japanese cars, electronics, restaurants and even fashions and cosmetics have been doing in this country in recent years, you'd figure that a Japanese department store would fall into an eager market. Not so. The first major effort by retailing giant Takashimaya, a smallish department store that opened on Manhattan's Fifth Avenue back in 1958, is moving to a new location where it will cater to Japanese residents of the region, tourists and hardly anyone else.

That's why Shigeru Okada, president of Mitsukoshi Ltd., Japan's biggest and oldest department store chain, is coming into the U.S. market in a different way. Relaxing in his private apartment above Mitsukoshi's posh new arts and crafts gallery and restaurant on Manhattan's Park Avenue, he says, "We want this place to be an intersection of Japanese and American ideas." And then some, to judge from the eclectic assortment of objets d'art on display in Okada's quarters, including a sleeping Buddha, a set of 17th-century samurai armor, a Picasso, a Chagall, and an ivory-inlaid antique medicine chest.

But that's for the big spenders. Off-the-street trade in the main gallery will have to settle for a range of merchandise from an 18th-century Imari jar for $85,000 down to Arita serving dishes that go for $8 apiece, with a selection of screens, hand-painted kimonos and gold-plated lacquered boxes at $1,000 or more in between. Mitsukoshi's restaurant will serve top drawer Japanese cuisine for up to $50 a head.

Behind this rarefied entry into the U.S. is Okada's conviction, gleaned from a stint last year as the head of a Japanese government-sponsored "buy American" mission, that the "trade imbalance cannot be corrected with politics." First, says the 64-year-old merchant, "we must understand the life and culture of each other."

But where do these gingerly and costly steps lead? "We are not expecting to make money here." Not now at least, because, in his view, "The world doesn't want us to sell any more anyway." For the moment, then, Mitsukoshi is selling a lot of American goods in its 60 outlets in Japan, everything from potato peelers to Oscar de la Renta dresses. In the long

Faces
Behind The Figures

run, however, Okada and Mitsukoshi must look for the hands-across-the-sea approach to pave the way for a big and profitable presence in the U.S. So far so good. Even before the gallery opened to the public, a preview guest laid out $14,500 for a 16th-century jar.

Sweet music

CBS executives and stockholders have lately groaned over the sour notes coming from the company's phonograph record group. In fact, top management felt compelled to warn last month that the group's poor first quarter will help drop corporate net 40% to 50% below the same period last year.

Some of the problem stems from lackluster domestic sales and delays in the release of albums by such recording stars as Earth, Wind and Fire and James Taylor. Also hurting are manufacturing operations—the profitable business of making the discs sold by competitors. Recently CBS lost a lucrative manufacturing arrangement with major independent A&M Records to archrival RCA.

But M. Richard Asher, president of CBS Records International, is hardly singing the blues. Last year, CRI was responsible for about half of both the $947 million sales and $94 million operating income of the record group, and now, Asher says, profits have been running 9% to 10% ahead of last year.

Dick Asher of CBS Records International
Polylingual polyvinyl profits.

Long a leader internationally, CRI has nearly doubled in size since Asher took over in 1975. But the 47-year-old lawyer and onetime All-New England football star at Tufts University is hardly a *wunderkind*. "There already are some of those in our industry," he says. "When I played football, the halfbacks got all the publicity, but it was guys like us linebackers who held up the team."

About half of CRI's estimated 14% grip on the $3.5 billion foreign market comes from the sales of records by American performers. The other half, records by local artists, is the real cornerstone of CRI's success.

For example, Argentinian singer Julio Iglesias, a Latin American heartthrob, has sold over 1 million copies of his latest Spanish-language album, and he's also recorded it in French, Italian and Portuguese for another 750,000 copies or so in sales. Says Asher, "I love it. Julio wants to do his next album in English as well."

To offset rising distribution and talent costs, Asher is spending heavily to boost manufacturing efficiency. He has already spent over $20 million to replace outmoded facilities in England and plans to build a multimillion-dollar plant in Brazil, which might eliminate the need to farm out production of the discs. And in general he has done it all with his own division's money.

"We've become our own cash cow," chuckles Asher. "Hell, CRI's annual return on capital assets is over 30%."

Big wheel

With the price of gasoline already pushing 90 cents a gallon and heading for $1 in many parts of the country, the big Steyr Daimler Puch assault on the U.S. moped market seems to be well-timed. But it took a crisis to get Puch here.

SDP, the largest nongovernment-owned company in Austria (sales last year: about $800 million), makes bicycles, trucks, tractors, motorcycles, tanks, rifles, bearings and mopeds. In 1974 when Sears canceled its orders for bicycles from the company, Puch's then new management tapped Robert Yung, 45, a Peking-born naturalized American, to set up a subsidiary here to sell mopeds.

The first year's sales, 150 mopeds, were pathetic. But by last year Puch had captured 30% of the market, selling 90,000 of the two-wheeled motorized bicycles. That came to about $50 million, some 16% of Puch's worldwide sales.

What happened was that mopeds started to boom, not necessarily as transportation but as an expensive and h
promoted toy. At around $550 and
ally maintenance-free, a moped
seem to be somewhere between
Cuisinart and a $1,000 Betamax.

One flag.
Five continents.

When Farrell Lines acquired American Export Lines in 1978, it was the beginning of an American superfleet.

Each line had stars of its own, stars such as the GREAT REPUBLIC and YOUNG AMERICA, huge containerships that plow the Atlantic at 24 knots even when fully loaded; stars such as the AUSTRAL ENVOY and AUSTRAL ENTENTE that have been jumboized to carry a mighty 1708 TEU containerloads each, much of it in a unique refrigerated cold-holding capacity that's been specially developed for the shipping needs of the frozen meat and dairy producers of Australia and New Zealand.

American ingenuity has built up this fleet of modern ships to offer shippers more than 200 scheduled sailings a year, to more than 150 ports of the world—covering 5 continents. Service is not once in a blue moon, either. Most ports are on a regular weekly or semi-monthly schedule.

Fleet expansion is continuing, with four more ultra-modern, ultra-efficient ships being built right now at Bath, Maine and Sparrows Point, Maryland.

In addition to Farrell Lines Atlantic service between the East Coast ports and the East, West and South Coasts of Africa, and regular East and Gulf Coast routes to Australia and New Zealand, Farrell's new routes in its American Export Line's service to Europe, the Mediterranean, Middle East, South Asia and the Far East give you the opportunity to use Farrell Lines service to and from almost anywhere in the world. We've put our money where our flag is.

SDP, the largest nongovernment-owned company in Austria (sales last year: about $800 million), makes bicycles, trucks, tractors, motorcycles, tanks, rifles, bearings and mopeds. In 1974 when Sears canceled its orders for bicycles from the company, Puch's then new management tapped Robert Yung, 45, a Peking-born naturalized American, to set up a subsidiary here to sell mopeds.

The first year's sales, 150 mopeds, were pathetic. But by last year Puch had captured 30% of the market, selling 90,000 of the two-wheeled motorized bicycles. That came to about $50 million, some 16% of Puch's worldwide sales.

What happened was that mopeds started to boom, not necessarily as transportation but as an expensive and h promoted toy. At around $550 and ally maintenance-free, a moped seem to be somewhere between a Cuisinart and a $1,000 Betamax.

Puch's Robert Yung
Master of moped marketing.

Yung took advantage of the boo expanded the dealer network to im brand-name visibility. Last year models were sold in 2,000 outlet Yung plans to add another 400 this "Not only do we have to put acro brand identity," says the M.I.T.-t engineer, "but we have to suppo moped generically," meaning s mopeds in general, not just Puch's.

As practical transportation, the f of the moped is, at best, uncertain most logical place to use a moped urban areas which have relatively moving traffic—the moped's maxi speed, is 30 miles per hour. But areas are also where the safety pro are most severe. No one is sure, over, how many motorists will their climate-controlled autos for t posed moped.

Yung admits to no such doubt claims that 35% of all mopeds are being driven for nonrecreational such as commuting and light del "It's an intrinsically likeable prod he says. "The moped was a true dev mental market. We've really had to up its position within society, bus and the whole transportation netw

But if the public doesn't want t the risk of getting rained on, or los "prestige" of driving automobile won't matter how likeable the m are. Even so, the more than $165 m worth of Puch—and competit mopeds sold last year is not bad for a you hardly have to pedal. ■

One flag.
Five continents.

When Farrell Lines acquired American Export Lines in 1978, it was the beginning of an American superfleet.

Each line had stars of its own, stars such as the GREAT REPUBLIC and YOUNG AMERICA, huge containerships that plow the Atlantic at 24 knots even when fully loaded; stars such as the AUSTRAL ENVOY and AUSTRAL ENTENTE that have been jumboized to carry a mighty 1708 TEU containerloads each, much of it in a unique refrigerated cold-holding capacity that's been specially developed for the shipping needs of the frozen meat and dairy producers of Australia and New Zealand.

American ingenuity has built up this fleet of modern ships to offer shippers more than 200 scheduled sailings a year, to more than 150 ports of the world—covering 5 continents. Service is not once in a blue moon, either. Most ports are on a regular weekly or semi-monthly schedule.

Fleet expansion is continuing, with four more ultra-modern, ultra-efficient ships being built right now at Bath, Maine and Sparrows Point, Maryland.

In addition to Farrell Lines Atlantic service between the East Coast ports and the East, West and South Coasts of Africa, and regular East and Gulf Coast routes to Australia and New Zealand, Farrell's new routes in its American Export Line's service to Europe, the Mediterranean, Middle East, South Asia and the Far East give you the opportunity to use Farrell Lines service to and from almost anywhere in the world. We've put our money where our flag is.

In the Tradition of Great American Seamanship

FARRELL LINES
INCORPORATED

One Whitehall Street, New York, N.Y. 10004 (212) 425-6300

What makes Sheaffer Eaton Textron's kind of company?

• The complementary strengths of Sheaffer Pen and Eaton Paper, joined together by Textron to create a dynamic new organization.

• Additional revenues from attractive new product combinations, like the Write Match® line of coordinated stationery and writing instruments, and continued strong performance from individual product lines, like Sheaffer Targa® pens, Eaton At-a-Glance® appointment books, and Duo-Tang® school and office products.

• A combined marketing force highly experienced in the industry, selling Sheaffer Eaton products in more than 140 countries around the world.

These strengths make Sheaffer Eaton Textron's kind of company. Together with the basic advantages that Textron Divisions enjoy: manageable size...recognized market positions...sound technology ...experienced management...solid growth records.

We'd want to invest in these companies, if we didn't already own them. And we back our Divisions with a continuing commitment to new product development. For the last six years, Textron-financed R & D has totaled more than 20% of pre-tax income. It now exceeds $80 million a year.

For more information, write Textron Inc., Providence, R.I. 02903.

MONEY & INVESTMENTS

The Economy

More is less

RAW NUMBERS tracking auto sales are ng a good many economists uneasy, ially those who argue that only a ed slowdown in the pace of busi- —recession—will be a significant in checking inflation. Auto sales are d running strong. A closer look at the raw numbers actually repre- however, shows that the impact of g auto sales on inflation may be derably overstated. In fact, the be- r of auto customers may be anti- ionary in a very short time.

e chart below shows what's happen- Total domestic car sales are running annual rate of 9.2 million, slightly r than the pace last year at this The real strength, however, is in ubcompacts—the Chevettes, Fies- Omnis—at the expense of larger, er models. No great mystery here. gasoline headed toward $1 per gal- and ominous rumblings from OPEC sting increases considerably be- that in time—car buyers are get- ting serious about fuel efficient cars.

The swing toward subcompacts means, of course, a squeeze on carmakers' and dealers' unit profits. A Chevette, stripped, won't yield the profit of a top-of-the-line Chevy Caprice, loaded. But in the short run, at least, what's not so hot for General Motors will be good for the U.S. To the extent that inflation is caused by demands on capacity, the preference for small cars is decidedly anti-inflationary. Chrysler's subcompact Omni weighs 2,167 pounds, a standard-size Dodge St. Regis, 3,675 pounds. A reduction of 1,500 pounds of steel per car would come to about 7.5 million tons per year—5% of steel produced in 1978.

The economic implications, of course, go far beyond the demand for steel, aluminum and other raw materials. The subcompacts are far less likely to have automatic door locks, electric windows, power seats or other options on larger cars, with their gas-guzzling engines.

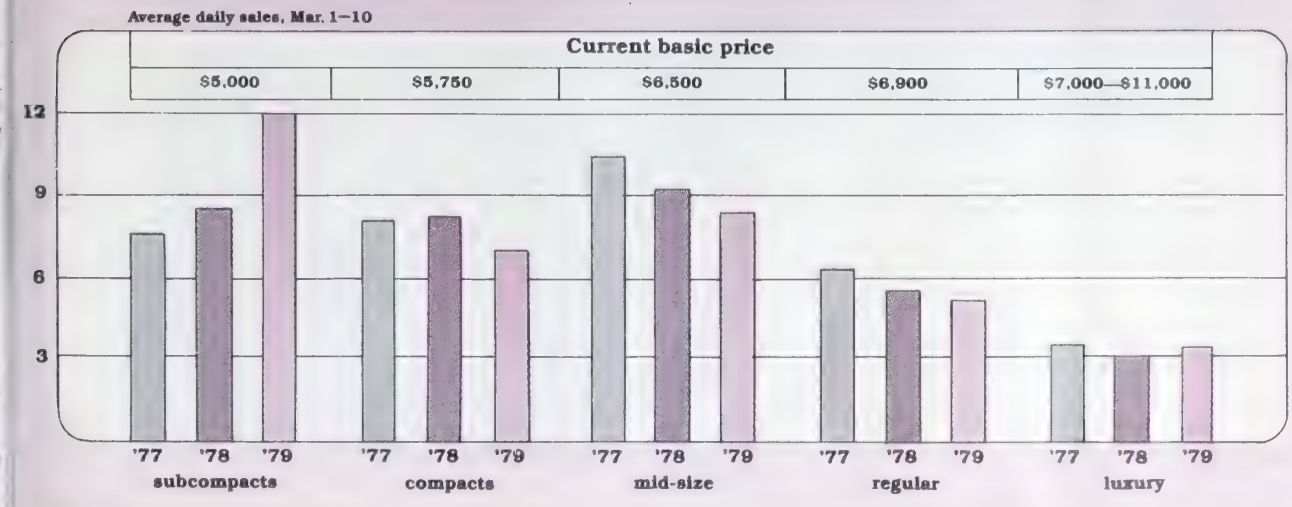
The rush to small cars will have other consequences. United Auto Workers' data show that while it takes 27 hours of labor to produce a standard-size car, it takes but 19 hours to produce a subcompact. In terms of labor as well as materials, then, it's clear that the trend works toward the easing of pressure on resources. How much easing might occur is harder to say; indeed, so fast has the rush developed that company economists are only now beginning to quantify what the subcompact boom will mean in man-hour and materials costs.

In addition to all that, of course, is the greater efficiency of the subcompacts. Granted, no amount of increased fuel economy because of lighter weight in the foreseeable future would fully offset the rate at which gasoline prices might climb, but consider what the inflationary effect would be if Detroit were not committed to designing cars and engines to get more miles per gallon.

At present, private cars on the road are burning up gasoline at the rate of 5.3 million barrels a day. Sources in Washington and in Detroit expect that next year passenger car consumption will actually fall a bit, despite more cars on the road. The key asssumption in that pleasant forecast is that a gradually increasing proportion of those cars will be subcompacts. ■

Boom, but no zoom

Auto sales are strong this year, but with considerably less inflationary effect than many suppose. The shift is to more fuel-efficient sub-compacts, resulting in lower average costs- and profits-per car.



You like high yields but you worry that bonds carry no protection against inflation. Convertibles may be your meat.

THE CASE FOR CONVERTIBLES

By Ben Weberman

BY ALMOST ALL the historical standards, bonds are cheap and stocks are cheap, but there are enough frightening uncertainties to give the boldest amongst us reason for pause. It is at times like these that convertible bonds look especially appealing.

A few people have made good money at relatively little risk by buying convertible bonds or preferred stock of sound companies at a time when the stocks are so bombed out that the market put no premium at all on the convertibility feature. The bonds, therefore, sell close to pure investment value.

There are lots of such bonds. Typically, the bond might be convertible into stock at, say, $50 a share. If the stock now sells at $12, nobody in his right mind will pay much of a premium over investment value for that conversion privilege. But the world turns. Today's underdog becomes tomorrow's top dog. For those patient enough to wait for the big turns in fortune's wheel, there is nothing to lose and much to gain by sitting with good bonds that carry seemingly valueless conversion rights.

Ashby Bladen, senior vice president for investments and the very smart portfolio manager for the Guardian Life Insurance Co. of America, has done very well over the years buying just such bonds. He reasons that if you wait long enough many stocks are going to come back—no matter how dismal their prospects look now. When they do come back, you can profit handsomely in the convertibles. In the meantime, you are making a very nice return by holding the bonds.

One of Bladen's recent coups was in Ashland Oil 4¾s of 1993. The issue was selling last year as low as $750 per $1,000 bond. The conversion price was $33.33; the market price of Ashland common was in the teens. The prospect for profitable conversion seemed hopeless. But then Ashland management suddenly started turning some of its assets into cash, and the stock shot up to 43, carrying the convertible bonds to $1,300.

Yes, you could have made a bigger return buying the common, but suppose management hadn't done that liquidating? Where would you have been then? You would have been a stockholder. With the convertibles, you could hardly lose. At $750, the debt yield to maturity was 7.65%. If the stock had continued to languish, you had a pretty good bond; once the stock took off, so did the bond.

Ashby Bladen is a rather close-mouthed man. He prefers not to have too much company in the business of buying bombed-out convertibles. He won't tell us what convertibles he likes now. Can't blame him, really. So, let's go to Wall Street where people get paid to come up with ideas that their customers can use. I talked with convertible bond experts at Merrill Lynch and at Bear, Stearns & Co., both firms active in the field. Here were some of their suggestions:

ARA Services has a 4⅝% convertible due in 1996 that carries a split BaBBB rating and sells at 65 to yield 8.53% to maturity. Its current yield is 7.12%. Each $1,000 par value debenture is convertible into 9.867 shares of common, but since the stock sells at only 38, conversion would bring only $381 in stock. So, you wouldn't convert *now*. You'd hold the bond for its good yield and high quality. But who is to say that sometime in the next few years ARA common won't again sell over 100—as it did repeatedly in the early Seventies? If it does, you have a handsome profit in the bond. the stock doesn't come back you st have a nice yield.

Here's something else to thi about. That ARA convertible bo pays $46.25 a year in interest; t same amount invested in the co mon stock would earn only about h that. So while you wait for the sto to go up, you are better off in t bonds, as far as income is concerne You also have a senior claim again assets if the worst should happen.

The daily bond tables are literal loaded with bank convertible bonds a time when bank stocks are selling the lowest multiples on record. Ci corp 5¾s of 2000 are an interesti example. As straight bonds they wou sell around 68; because they are co vertible into 24.39 common shar they currently fetch about 73½ a yield 8.4%. So, in buying them y sacrifice a bit of yield but look wh you get in return: If Citicorp commo now at 24, were to go back to where sold as recently as 1976—just short 40 a share—you would end up with very handsome profit. How han some? A capital gain of 40% to 50% top of your very satisfactory yield.

There are many such bank bonds mention the Citicorp bonds but yo own broker can suggest many more

Another interesting case is Gre hound Corp.'s 6½s of 1990, current yielding 9.75% to maturity. They a almost as good as the Greyhound 9¾ which are *not* convertible. True, t convertibles carry a lower rating—B rather than A. But to compensate that lower rating they are also co vertible—into 54.42 shares of Gre hound common per $1,000 bond, 18⅜ per share. With Greyhound sto currently selling at 11⅝, of course, y wouldn't convert; you'd continue hold the bond. But supposing the sto went to 20? Impossible? Not at all. I a good company and sold as high as in the early Seventies.

There are hundreds of such issu You can pick your own. The point very simple. If for no other reas than that inflation is puffing up cor rate profits, earnings will continue rise long term and eventually stoc will have to go up with them. As th happens, many bonds, whose conv sion privilege now seems valuele are going to become valuable. For t patient long-term investor, that's t best of all worlds: a high current yie and a substantial degree of long-ter protection against inflation throu the conversion feature. ■

Take a closer look at America's newest billion-dollar telecommunications system.

No ad can give you all the information you need to evaluate a dramatically growing company.

Many times, though, an annual report can.

That's why we'd like to send you ours. We're United Telecom, operators of United Telephone, America's third largest telephone system, United Computing Systems and North Supply Company.

While we can tell you here that United Telecom is America's newest billion dollar telecommunications system, our annual report can tell you how it happened.

It will also give you some insight to our astonishing growth from $130 million in annual revenues in 1966 to more than $1.4 billion today.

And best of all, it will give you an in-depth look at the people behind one of the major telecommunications companies in America—a company that has doubled its revenues in just 6 years.

Send in the coupon today. We'll have our annual report on its way to you in no time.

An affirmative action employer.

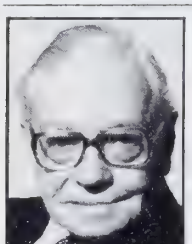
It's like screwing the lid on tight on a pressure cooker without turning down the heat—it will blow up sooner or later.

LIVING WITH INFLATION

By Heinz H. Biel



THE BATTLE against inflation is being lost. The Administration, as is to be expected, has a number of alibis that it uses to exculpate itself. After all, can Mr. Carter be blamed for events in Iran or for OPEC wanting a higher price for oil, which is now in short supply? And there is no way of speeding up cattle-raising, while Americans insist on eating more beef than ever before.

Such arguments sound very logical, but are they? To be sure, oil and beef are very important in our lives, much more so than, for instance, cocoa. But rising prices, regardless of reason, don't *cause* inflation. It is the creation of the wherewithal to pay those prices—the money and the credit—that does it.

We have done little to curtail that wherewithal. The Fed's tentative, almost timid attempts to put a brake on excessive credit expansion are not enough. Even a reduced federal deficit, in the $30 billion to $40 billion range, makes the whole effort seem hopeless. One can appreciate Mr. Kahn's frustration with his wage/price guidelines. He must feel like a paper tiger, but he knows that mandatory controls wouldn't work either. That is like screwing the lid on tight on a pressure cooker without turning down the heat—it will blow up sooner or later.

Like people in other inflation-ridden countries, Americans have learned how to live with constantly rising prices. What do you do with money that you know will be worth less, year after year, at an annual clip of close to 10%? You spend it and buy the things you know you will need and, if you don't have the money, you borrow as much as you can get away with. Because of our innate populist mentality, which favors the borrower and penalizes the lender, we keep interest rates lower than economic conditions warrant. That's how we foster inflation.

All this has tended to defer the arrival of an overdue recession and, thereby, has created the illusion of continuing prosperity. People rather like it that way, except those on fixed incomes. Of course, such conditions cannot and will not come to a good end. As we have seen, however, they can last for quite a long time. That is why politicians everywhere prefer to leave well enough alone and take an *après nous le déluge* attitude, hoping that they won't be in office anymore when the whole shebang comes crashing down in 19. . . .

Are investors finally coming to the conclusion that good common stocks give them at least a chance to escape or minimize the inevitable erosion of their money's buying power? This may well be the case. Although for a number of years results for many stock investors have been discouraging, it is an undeniable fact that earnings, dividends and book values have increased greatly, often matching, if not exceeding, the rate of inflation.

I continue to have misgivings about the stock market in the months ahead, and suggest maintaining a fair-size liquid buying reserve. Nevertheless, I view the longer-term risk/reward ratio as so favorable, that even a cautious investor should keep a significant portion of his capital in good equities.

Last month (FORBES, *Mar. 5*) I briefly mentioned the *Echlin Manufacturing Co.* (18), a major manufacturer of automotive replacement parts, primarily for use in electrical and brake systems. With an ever greater number of cars and trucks on the roads, this ha been a flourishing business, and Ech lin has made the best of it. All you ca say is that you wish you had know about it ten years ago, when Echli was a little company doing a volum of well under $50 million a year. Sale will be over $300 million in the cu rent fiscal year.

I have no doubt that Echlin growth will continue, but with th increase in size, the rate will slo down. However, there is an aspect t Echlin that explains the premiu multiple (about 12 times this fisc year's estimated earnings of $1.55 share) at which the stock is present selling. In a recent prospectus, cove ing the offering of 1.5 million com mon shares, the company says:

"Echlin has acquired the pater rights to the Wiegand Effect, a ne method for magnetic pulse generatio requiring no electric power. It is an ticipated that this technology wi have numerous applications in aut motive systems . . . and may hav broad applications in numerous oth fields, such as machine tool control security access systems and turn stiles, household appliance control process controls and in industry flo meter and counting devices. . . ."

The Wiegand Effect is in its deve opment stage and has not yet genera ed significant revenues. There can b no assurance that it can be develope on a commercial basis. I do not pr tend to understand the Wiegand E fect and it would be presumptuous t evaluate its potential. While it is obv ous that Echlin is in the process developing and incorporating th Wiegand technology into its ow products, it also has granted a sma number of licenses to others, inclu ing IBM, General Signal, Emerso Electric, Colt Industries, Robe Bosch (of Germany) and others. The companies are among the world most sophisticated outfits and the probably know very well what the are doing.

I am intrigued by the potential i Echlin. If Wiegand should turn into disappointment, as was the case wit the Wankel engine, the worst th would happen is that the investor pa a few points too much for the stock a very good company. I'd be willing t take that risk.

Although dividends have bee raised year after year, the curre yield is barely 2½%. Obviously th stock is not suggested for income-or ented investors. ■

Heinz H. Biel is a vice president of the NYSE firm of Janney Montgomery Scott

In today's nervous stock market, should you. . .

Buy? Sell? Do Nothing?

More specifically, what should you do NOW about these (or 1700 other) fast-changing stocks?

ATLANTIC RICHFIELD	EASTMAN KODAK	PFIZER, INC.
AT&T	GENERAL ELECTRIC	SEARS, ROEBUCK
BOEING	GENERAL MOTORS	SOUTHERN CO.
CARNATION	GULF OIL	TEXAS UTILITIES
CITICORP	OCCIDENTAL PETROLEUM	TEXACO, INC.
DOW CHEMICAL	PEPSICO INC.	TYMSHARE, INC.
EXXON	PITTSTON	UAL INC.

We've picked the 21 stocks above for illustration—from more than 1700 regularly covered by The Value Line Investment Survey—because each has recently been on the "most active" list and may therefore be of special interest.

The stock market, and the investment values herein, are now going through a great deal of rapid change. *This is no time to sit on your hands.* It is urgent, we think, that you check without delay every stock that interests or concerns you to see if it currently offers the investment credentials most important to you. To illustrate, let's look at the stocks listed above:

PERFORMANCE: Every one of these stocks—*at one time or another*—has offered the prospect of superior relative price performance. Right now, however, Value Line ratings suggest that 4 of these stocks should be avoided for the time being. On the other hand, we estimate that 4 of the stocks above will clearly outperform most other stocks in the next 12 months.

SAFETY: 10 of the stocks listed carry superior Value Line ratings for Safety, meaning they have typically demonstrated greater price stability than the majority of stocks. The other stocks on the list rate only average or lower on this score.

YIELD: The dividend yields of these stocks estimated by Value Line for the 12 months ahead range all the way from 11.1% to Nil. Six of the stocks offer yields below 4.9%. Only 7 stocks provide yields of 7.0% or higher.

APPRECIATION: Value Line's estimates of Appreciation Potential in the next 3 to 5 years for these stocks range all the way from a paltry 30% up to nearly 300%. Five stocks offer long-term potentials of 175% or higher.

(The data above come from a recent issue of The Value Line Survey. For actual investment decisions, be sure to see the *latest* weekly Value Line edition.)

WHERE ELSE CAN YOU GET ALL THIS?

Value Line gives you the key ratings outlined above, updated every week, for EACH of 1700 stocks—so you can make *coherent* comparisons of any stock against any others with respect to the investment attributes you care about. In addition, Value Line regularly presents comprehensive full-page Research Reports, with 15-year vital statistics, for each of 1700 stocks.

We apply the same quality and comprehensiveness of research and evaluation not only to virtually every "big name" stock (like the ones listed above) but also to more than a thousand "lesser" stocks—which make up a significant part of a great many portfolios.

We realize that when YOUR money is involved, an investment in U.S. FILTER can be just as important as the same amount in U.S. STEEL.

If you want to re-assess your stock portfolio with an eye to greater rewards and/or lower risks in today's unusual market. . . . if you want to make *rational* decisions about what stocks to hold, sell, or buy now. . . . we believe that no other source even comes close to providing the help that Value Line systematically gives you.

UPDATED EVERY WEEK

Every week, Value Line's new *Summary & Index* presents up-to-date ratings of EACH of 1700 stocks *relative* to all the others, as follows. . . .

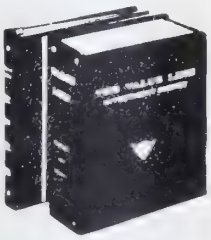
a) Rank for Probable Price Performance in the Next 12 Months—ranging from 1 (Highest) down to 5 (Lowest). We urgently suggest you *stay away* from the 400 stocks now ranked 4 or 5.
b) Rank for investment Safety (from 1 down to 5). If Safety is important to you, we suggest you concentrate on stocks ranked 1 or 2 in this respect.
c) Estimated Yield in the Next 12 Months. Every week we also present a "screen" of the 100 stocks with the highest yields, which recently ranged from 9.4% to 11.8%.
d) Estimated Appreciation Potential in the Next 3 to 5 Years—showing the percentage change from the recent price. Every week we also present a "screen" of the 100 stocks with the highest potentials, which recently ranged from 225% to 570%.
e) P/E Ratio and current price, plus estimated annual earnings and dividends in the current 12 months. Also latest quarterly results vs. year ago.

PLUS FULL-PAGE REPORTS

In addition to the weekly coverage above, each of the 1700 stocks is the subject of a comprehensive new full-page Research Report at least once every three months—including 22 series of vital financial and operating statistics going back 15 years and estimated 3 to 5 years ahead. About 130 new full-page Reports like this are issued each week. . . 1700 every 13 weeks.

SPECIAL INVITATION

You can receive the complete Value Line Investment Survey (with 30-day money-back guarantee) for the next 9 weeks for only $29—about HALF the regular rate—if no one in your household has subscribed in the past two years. And you get these two bonuses:



BONUS #1— Value Line's 2400-page *Investors Reference Service* including our latest full-page Reports on each of 1700 stocks—fully indexed and looseleaf-bound for easy reference, and systematically updated by new full-page Reports in the weeks ahead.

BONUS # 2— *Evaluating Common Stocks,* the 96-page "classic" by Arnold Bernhard, Value Line's founder and research chief, revealing methods of stock evaluation that took decades to refine. You KEEP this book even if you return the other material for your money back.

This subscription is tax-deductible if utilized to aid in the management of your investments.

To accept this invitation, simply fill in and mail the attached coupon today.

Source Capital's discount is about 7%. Fo the new investor that's better than paying an 8% load for a fund management that i unlikely to be better than Source's.

SMART FUNDS

By John Train

SOURCE CAPITAL is a $175 million closed-end investment company with the distinction of having the best performance record of any closed-end fund over the last five years.

The fund was floated in the glorious days of 1968 under the then-famous Fred Carr, who sank much of the portfolio into a goulash of private placements and special situations.

When the market (and the portfolio) came apart in the bear market of 1969, Carr was swept away, and in due course the principal outside voice became that of Warren Buffett, who in 1972-73 purchased a 20% interest through his Blue Chip Stamps vehicle, at a discount of 50% from net asset value and later sold it for a big gain.

An analysis of Source Capital's portfolio should be of interest to my readers. The fund's largest single position is De Beers, whose investment logic will be familiar to readers of this column, where it was recommended a while back at substantially lower prices (FORBES, *Jan. 22*). De Beers, which enjoys a virtual monopoly on gem diamond sales in the Western World, sells in the market for little more than the value of its inventory of gemstones and cash, with the mining business free, so to speak. It has shown a great ability to adapt to changing government conditions in countries outside of South Africa that have had hostile takeovers.

The next largest holding is H&R Block, which George Michaelis, the fund's president, considers a reasonably priced income stock. Block's growth may now be starting to revi after a year or two of comparati stagnation. (The question for a con pany with a huge excess cash pos tion, such as Block has built up, whether it can put the money to wo advantageously. This is far from ce tain.) The management of the fu hopes that Block's comfortable yie of about 6% will grow by over 10 compounded in coming years.

Source Capital's largest single pu chase in 1978 was a major position Levi Strauss & Co., which enjoys exceptional consumer franchise virtue of its famous name and reco nized position as the premier brand blue jeans. The company is branchi out into sportswear and the appar business generally. The 30% return its equity is outstanding. At 42, t stock sells for less than five tim current year's estimated earnings.

One of the fund's largest holdings Hillenbrand Industries (FORBES, *May 1976*), the leading manufacturer caskets through its Batesville Cask Co. subsidiary. Another of its subsi iaries, Hill-Rom, is a leading manufa turer of hospital beds and other equi ment for hospital rooms. This e tremely well-managed company h enjoyed outstanding profit margi and an earnings growth of 19% co pounded over ten years. Hillenbra recently made use of some of its su stantial excess cash to acquire Ame can Tourister, one of the two leadi American luggage manufacture Source Capital's Michaelis estimat that Hillenbrand's earnings will c tinue to grow at 14% compounded another five years, making the sto exceptionally cheap at a little o seven times earnings.

The fund made a new commitme in Federal National Mortgage duri the year. With an 8% yield and portfolio consisting of governme guaranteed mortgages, FNMA shou be a solid yield investment. It sells a 30% discount from the net value of

John Train is president of Train, Smith, Investment Counsel, New York, and the author of Dance of the Money Bees.

rtfolio of government-guaranteed ortgages. It has ample funds avail- e, given its government sponsor- p, to continue to buy mortgages at prevailing high rates. Source Cap- l's management points out that ce FNMA earns 18% on its own ity and distributes one-third of it as dividends, the remaining 12% it is reinvested should enable earn- s and dividends to increase by out 12% compounded. So the inves- has an 8% yield that should rise stantially faster than inflation.

Source Capital's only representa- n in the oil business is Getty. Mi- elis points out that at current ces one is buying the company at own book value, which works out a valuation of $1 a barrel for the oil the ground. Unlike almost any oth- oil company, Getty has no signifi- t debt. On the contrary, it has sub- ntial excess cash and has a strong itive cash flow. If a fair value for tty Oil's reserves is closer to $3 a rel than to $1, the company is sell- at a two-thirds discount from liq- ation value. In addition, the com- y is a cornucopia of other assets.

One of Source Capital's largest ups of holdings is banks: Detroit- k Corp., First New Mexico Bank- re, Hawaii Bancorp., Northeast corp and National City Corp. eveland).

o be safe, one should not own a npany that is dependent on con- nt appeals for capital from the mar- —as the aggressive money center ks are. One is, therefore, best off ning banks that limit their growth ing periods of expansion to no re than they can finance with in- ally generated funds. The hotshot ney center bank that is constantly ting newer and jazzier instru- nts to finance expansion into lit- known areas may be increasing its faster than its profits. Not so the e conservative local kinds.

n recent years Source Capital has in the market at about a 13% ount from net asset value; at the ment Source Capital's discount is ut 7%, among the lowest of the rsified closed-end funds. Still, for new investor, that's better than ing an 8% load charge for a mutual d management that is unlikely to etter than Source's.

ource Capital has a policy of dis- uting approximately 10% a year he net asset value of its common k from a combination of income capital gains.■

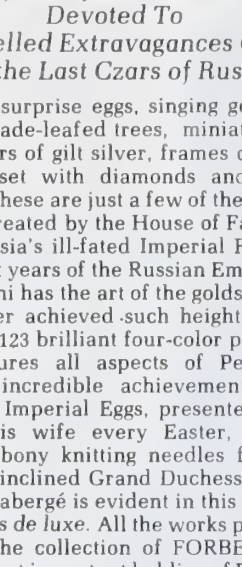
FABERGÉ
IMPERIAL EGGS
And Other Fantasies

Hermione Waterfield
&
Christopher Forbes



A Magnificently Illustrated Volume Devoted To The Jewelled Extravagances Created for the Last Czars of Russia

Gem-set surprise eggs, singing gold birds hidden in jade-leafed trees, miniature paddle steamers of gilt silver, frames of crystal and fans set with diamonds and ostrich feathers – these are just a few of the dazzling fantasies created by the House of Fabergé to amuse Russia's ill-fated Imperial Family in the twilight years of the Russian Empire. Not since Cellini has the art of the goldsmith and the jeweller achieved such heights of perfection. In 123 brilliant four-color plates this book captures all aspects of Peter Carl Fabergé's incredible achievements. From the fabled Imperial Eggs, presented by the Czar to his wife every Easter, to gold-mounted ebony knitting needles for a domestically inclined Grand Duchess, the full genius of Fabergé is evident in this selection of his *objets de luxe*. All the works presented are from the collection of FORBES Magazine, the most important holding of Fabergé's Imperial Treasures outside the Soviet Union.

In addition, the volume contains an invaluable guide to other collections of Fabergé open to the public, a catalogue raisonné of the Imperial Eggs, a foreward by Malcolm S. Forbes and an essay by Dr. Everett Fahy, Director of The Frick Collection.

This book, just published by Charles Scribner's Sons retails for $19.95.

For a limited time only, FORBES readers may purchase copies for only

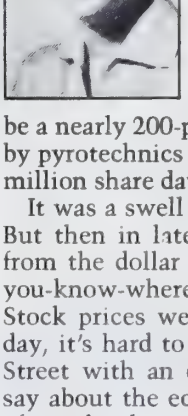
Stock Trends

My "Snake Belly Index" says spirits are ver low. So it's time for some serious shopping

SUPPORT YOUR LOCAL STOCK MARKET

By Ann C. Brown



EARLY LAST YEAR, when the DJI had fallen into the low 700s, I wrote a FORBES column exhorting readers to B-U-Y *(Feb. 20, 1978)*. About two weeks later the stock market began what turned out to be a nearly 200-point rise, punctuated by pyrotechnics like 50 million to 60 million share days.

It was a swell party while it lasted. But then in late autumn everything from the dollar to the Shah went to you-know-where in a hand basket. Stock prices were no exception. Today, it's hard to find anyone on Wall Street with an encouraging word to say about the economy or the future of mankind in general, for that matter. According to my "Snake Belly Index," spirits are about as low as they can get. All of which leads me to suggest that it's time once again for some serious stock shopping.

As you ready to mortgage the manse and throw all the money into a lengthy list of attractive equities, let me share a few "why-buy-now?" thoughts with you. First of all, I think the stock market has already discounted any recession several times over. The consensus this time last year was that the economic downturn would occur in the *first* half of 1979. As a result, institutional money managers bought little or no stock and, in some instances, even dumped millions of shares in anticipation of the big event.

Not only has the recession yet to take place, there is some question as to whether it will take place at all. As far as I'm concerned, the stock-selling (nonbuying) damage has already be done. Second, the gloomsday groupi have been predicting all along that t prime rate will go to 15%, corpora profits will fall, the dollar will resur its downward trend and that, in ad tion, mandatory wage-and-price co trols are lurking just around the corn At the moment, I'm hard pressed think of any new economic disast that someone else hasn't thought first. If, by any chance, one or two their prophecies fail to come true, t market could react quite positive Besides, it won't be long now bef the populace gets caught up in t election of 1980, and hot-air campai promises have a way of breathing l into deflated stock prices.

Topping my list of stocks to o for appreciation potential is a form recommendation, *McGraw-Hill* (2 Shortly after I mentioned the co pany in January, American Expr made a tender offer for the stock a price of $40 per share. A real brouha developed with accusations flying e ery which way, and the merger did take place. At one point, when looked as if it might, rumor had it th McGraw-Hill had several "wh knights" waiting to wrest it from t credit-card company's clutches prices of up to $50 a share. Whether not this was true is beyond me, b one thing I do know is that a lot attention was called to the compa and its excellent growth record. T basic earnings still look good—$2. per share estimated for 1979, up fr $2.57 last year. For 1980, $3.25 see reasonable. And there's always t possibility of another takeover tempt, which, for any number of r sons, might be more difficult for t company to turn down.

Three fast-food companies got cl bered during the latest in our series oil crises and are now back in a buyi range. *Church's Fried Chicken* (2 earned $1.65 per share in 1977, $2.

Ann C. Brown is executive vice president of the New York investment firm of Melhado, Flynn & Associates.

n 1978 and is expected to earn $2.77 his year unless the sheikhs shut off ll the spigots, in which case we'll ave more to worry about than stock rices. *Denny's, Inc.* (22) is down harply from its latest 12-month high f 35, even though 1979 earnings are stimated to be over $3 a share. And ny old friend, *Ponderosa System* (18), he steak chain, is now selling at almost half what it was a year ago, even hough shrewd observers are looking or $3.05 in 1979 *vs.* $2 in 1978.

Speaking of oil, I know some slick perators who are adding *Amerada Hess* (31) and *Santa Fe International* (29) o their portfolios. Amerada Hess has he refining capacity to turn low-riced high-sulfur crude oil into an nvironmentally acceptable end prodct. This year the company could earn 5.75 per share (fully diluted), up from 3.51 last year. The preliminary uesstimate for 1980 is $7 per share. anta Fe International, with its big histle Field exposure in the North ea, is anticipated to come in with 3.70 a share this year and perhaps as uch as $5.35 next year.

Finally, the broadcasting stocks as a roup look particularly inviting. This ear's earnings may be better than ost people think, due to the unexected buoyancy in the economy. lext year both the Olympics and the lection will be on as extra added atactions. At the moment, my three vorites are *American Broadcasting* 3), *Capital Cities Communications* (38) nd *John Blair & Co.* (27). So far, ABC as proved that it isn't going to fall part without Mr. Silverman, who left st year for NBC. In fact, ABC is still umber one in the ratings game. Look r around $5.60 to $5.80 in earnings r 1979 and $6.75 or more in 1980. s for Capital Cities Communicaons, I think it's one of the best-run mpanies in the country. The earngs have been outstanding—$2.91 in 977, $3.80 in 1978, with $4.40 estiated for 1979 and as much as $5.50 1980. Less well-known John Blair ould be a sleeper. The company is the rgest factor in the broadcast-station les-representation business, in addion to owning and operating broadsting stations itself. Currently, Blair in the process of acquiring three levision stations and has made it nown that it is looking for more. he company recently reported earngs of $4.42 for the year ended last ecember. This year $5 appears atinable, and I'll hazard a guess of ose to $6 per share for 1980. ■

$... Business Opportunities

Hundreds of listings of Prime Business opportunities will come to you in The Business Opportunities Guide plus a comprehensive monthly digest of informative articles, franchise information, sources for financing and the latest in quality: BUSINESSES FOR SALE, INVESTMENT OPPORTUNITIES, FRANCHISES & MONEY MAKING OPPORTUNITIES, from $500 to over $1,000,000 from across the U.S. and Canada. Make this small investment now, for a better investment in the future. To receive the next twelve monthly issues, just send $18.00 check or money order to:

FIDELITY GROUP Over $4 billion of assets under management

"WE ONLY HAVE ONE TEXAS"

People ask if there is really an energy crisis. Look at it this way. World oil consumption is 60 million barrels per day and is growing 5 percent each year. This means the world must find three million barrels of new oil production each day. Three million barrels per day is the amount of oil produced in Texas as its peak was 5 years ago. The problem is that it is not going to be easy to find a Texas-sized new oil supply every year, year after year. In just a few years, it may be impossible to balance demand and supply of oil unless we start conserving oil today. So next time someone asks: "Is there really an energy crisis?" Tell them: "Yes, we only have one Texas."

ENERGY CONSERVATION -
IT'S YOUR CHANCE
TO SAVE, AMERICA

Department of Energy, Washington, D.C.

Jim McManus might have become the to man at P&G. Instead. . . .

WHAT IT TAKES TO TURN AN IDEA INTO A BUSINESS

By Thomas P. Murphy

Just after James R. McManus opened the door of his new marketing consulting business eight years ago, he sat down with a venture capitalist to close the financing. McManus had already put $75,000 into the business and the venture capitalist agreed to put another $250,000 into it. They were going to be partners, a 50-50 split of the stock.

"Jim," the venture capitalist said, "my lawyer and my accountant tell me I'd be crazy to do this deal. They tell me I ought to have 51%."

Jim McManus pondered for an agonizing minute. Here he was with a fancy sounding name—Marketing Corp. of America—six employees who were counting on him, no clients, and this venture capitalist he hardly knew wanted control of the business. McManus swallowed hard and said no.

It was the best decision he ever made. MCA has done very nicely without that venture capitalist's money.

In 1971, the first year, pickings were lean, but the next year MCA had revenues of $600,000 and profits of $100,000. Just to bring you up to date, the company now has 153 employees, will do $45 million in sales this year and should make profits of about $4.5 million pretax. McManus, now 45, figures the company can grow 50% a year until the early 1980s.

Of course, you do not get a business to grow that fast just by selling advice, even when a typical client pays $150,000 for the advice. McManus was in the business of selling marketing ideas and he figured if they were any good, there was no reason w MCA could not take some of its o ideas and start businesses.

But first, just what is a market idea? Well, consider Ralston Purin problem. The company wanted give samples of its puppy food to n dog owners. How do you find th and how do you get samples into th hands cheaply?

MCA's answer was to approach market through veterinarians. made them an offer that few of th refused. Ralston put together a that contains, among other thing booklet carefully explaining how care for a new puppy. Since pet ow ers usually ask the veterinarian same questions, the booklet is a ti saver: "Just read the booklet, an you still have questions let me kno they could tell their clients. As for sample, you guessed it, there is a of Ralston's puppy food in the There was something for everyb in MCA's idea.

MCA now has two successful m ket-consulting businesses, but si each limits itself to a dozen client any one time, the company's growth has come from starting buying businesses based on market ideas. So far there are eight. These what have given MCA the kind growth it could never have achie by simply selling advice.

One of them, for instance, is a c poning business. MCA found it co buy newspaper advertising space wholesale quantities and, in effect tail the space to advertisers who coupons. The space was a li cheaper for the customers than if t bought the space directly, but the kicker turned out to be better rede tion. MCA will buy two facing pa in a newspaper, fill the space w coupons (23 cents off a can of So thing-or-other) and it finds that 3 of those coupons are redeemed at stores. A lone ad offering the sam cents off would average only 2.9%

Thomas P. Murphy heads a venture capital firm, Partnership Dankist, Stamford, Conn

mption. That .4% makes a differ-
ce to advertisers, and MCA has be-
me the biggest coupon distributor
the country, about 10 billion of
em last year.

So Jim McManus is sitting pretty, a
illionaire many times over and the
disputed boss of a thriving busi-
ss. Remember this, however: He
d to gamble heavily to get where he
McManus had been a "fast track"
n at Procter & Gamble after he
duated from Northwestern's busi-
ss school and he figured, maybe 30
ars out, he might even have a shot
the presidency. But P&G had a lot
"fast track" guys, and McManus
ooded that over those 30 years if he
d only one boss who really did not
e his taste in neckties he might not
ke it. So, he left P&G in the early
ties to go to work for a market
nsulting firm, which he left when
ey refused him equity—a piece of
e rock. At this point he took the
imate gamble and decided to go
o business for himself.

When he did so, he established two
ic principles, both of which grew
t of his experiences. One was to
ep the component units small so
t promising executives wouldn't
ve because they didn't have a
nce to run their own show. The
er principle was to give these ex-
tives a piece of the action. As a
ult, 37 of MCA's employees own
% of the business. McManus nor-
lly hires from the big marketing
npanies and pays no more than
y do, but he offers a bonus that
w averages 50% of salary.

He also has another plan for people
rting businesses for him. The latest
ture planned is 24 shopping-center
taurants. Their gimmick: fresh
ad. Uneasy about managing restau-
t help, McManus lured top operat-
people from fast-food chains and
e them 10% of the business.

As for Jim McManus, some old
ams are coming true. Just down-
am from his present riverfront of-
in Westport, Conn. he is rebuild-
an old warehouse into a plush new
dquarters for MCA. There are also
airplanes. As a poor farm boy in
sconsin, Jim McManus remembers
se airplanes that flew overhead on
ir way to Chicago and Milwaukee.
always wanted to fly one—always.
couple of years ago he got his li-
se, and MCA just acquired its sec-
plane. "They are really very effi-
nt," he assured me, "for a business
this one." ■

Why trading through a broker's branch office can cost you money.

Who benefits from branch offices? Investors who need advice and the broker salesmen who give it. But, if you are an investor who doesn't need a broker's advice, a branch office can be a costly middleman between you and New York where most stock transactions take place.

When you deal with Source, you eliminate red tape. You talk directly to our trading specialists who call your order to the Exchange floor. No salesmen, no secretaries and no teletype operators get between you and your transaction. You'll always be in contact and control. And you'll get fast, accurate executions and clearance.

Average Commission Savings at Source

Stocks	Options
53%	43%

Average percentage savings from the last NYSE fixed commission schedule in effect prior to May 1, 1975 on all trades executed through Source for a recent two month period.

By dealing directly with Source, you save from 30% to as much as 81% on commissions. (Commission savings on stocks average 53%; see chart.)

Along with savings and service you get maximum security. Your assets are fully protected by the resources of our world wide clearing organization and $500,000 in account protection.

So to cut red tape, as well as your trading costs, call for our free Commissions and Services brochure at **800-221-5338** toll free. In New York State call collect at 212-422-6000 Or mail in the coupon today.

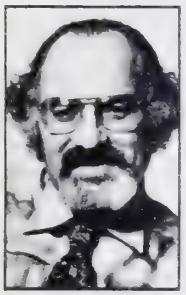
The cries of growth! growth! growth! from Wall Street apparently sounded more like wolf, wolf, wolf to the market's ears.

RAGAMUFFINS REVISITED

By Martin T. Sosnoff



SOME TIME AGO I said: "It is Wall Street's wisdom that the secondary issues must succumb to the narrowing of the gap between the growth and value segments. Further, if the market declines, the ragamuffins will fall out of bed; and if the market continues to advance, leadership will be passed along to the quality stocks."

This particular wisdom wasn't very wise. During the interim, the market has risen over 7%. The quality growth proxy of five issues that I listed has risen 9.1%. Meanwhile, the ragamuffins have risen over 16%. The cries of growth! growth! growth! from Wall Street's research bastions apparently sounded more like wolf, wolf, wolf to the market's ears. If it weren't for the star performance of Schlumberger, my growth list would have declined.

The bulls on growth must still shoulder the burden of proof that growth stocks are where to be in the 1979-80 markets. What happens if oil pricing bites deeply into West European economies and slows growth there? In many cases almost all the growth of our multinationals comes from abroad, and when Europe slowed down in 1973-74 these companies lost momentum. It could happen again.

The idyllic image of the professional investor finally taking off his crash helmet and blithely bidding up growth stocks is simplistic wish fulfillment on the part of the professional investor who longs for the more orderly universe of the mid-Sixties. Then, inflation coasted along at 2% and interest rates in excess of 4½% existed only in banana republics and darkest Africa. The growthmanship game was dismembered by the surge in interest rates and the minirecession of 1973-74. Today's environment reminds me too much of that period to accept the growth-again argument. Now as then the very few hardliners on interest rates are shouted down by the chorus of believers that the peak is now. In Washington, our inflation czar, Alfred Kahn, is perplexed by the runaway trend in wholesale and consumer prices. Nobody came close to projecting such double-digit trouble.

The January rally proved the pros are all too ready to jump the gun. As soon as they think interest rates are topping out and the economy faltering, the market booms. By the time the trend is obvious, it will be too late to jump in. Wall Street prospers while the unemployment rolls lengthen and overtime disappears for the guys in work shoes. So goes the consensus. Don't count on it. As long as the consumer sector shows meaningful growth in real disposable income, that major component of GNP will not falter.

Meanwhile, the leadership in Washington pussyfoots from disaster to (saster. The gradualist policy of t Federal Reserve Board gets us r where. While we are OPECed death, there is no coordinated lor range policy to reduce our dependen on foreign oil. President Carter, li the subliminal bulls on Wall Stre prays for recession. If only the who sale price index will behave, our dol will work higher. If only the consum will stop his rampage, selective cre controls will not be necessary. If o Europe will grow faster, our expo will accelerate. If only . . . if only if only. . . .

Someday, growth stocks will lead t market into the wild blue yonder wh Presidents shed their pragmatism a finally face the issues and, therel restore confidence in our country's ture. Today, anything short of a percrisis draws factional debate a inaction. High gasoline prices are litically inexpedient short term. W irritate General Motors, George Mea and the American public? Isn't it bet to coast along at 55 miles per hour?

Meanwhile, our country changes indirection and necessity, not by le ership. Maybe half the houses in ru Maine, New Hampshire and Verm are now burning wood, not heat oil. It is a sinful incongruity when most technologically advanced co try in the world has wood-burn stoves as a new growth industry. putting in two wood burners i glass-and-stone contemporary. Ob ously, it is only a matter of time fore firewood prices approach coal oil on a comparable BTU basis, and that time Wall Street will be talk about another growth industry.

For you emerging growth stock n vens, how about buggy whips? ■

Martin T. Sosnoff is chairman of Atalanta Capital Corp., New York, and the author of Humble on Wall Street.

The M.T.S. scorecard

Up 16.5%, the ragamuffins again beat out the growthies (a 9.1% rise).

Do you know anybody who is somebody in business who does not read Forbes Magazine?

Forbes: Capitalist Tool

*announcing:

the second national seminar on

Individual Rights in the Corporation

JUNE 24–26, 1979 • BILTMORE HOTEL • NEW YORK CITY

*hear:

THOMAS A. MURPHY
Chairman of the Board
General Motors

JOHN W. JOANIS
Chairman of the Board
Sentry Insurance

ROSABETH MOSS KANTOR
Professor of Sociology
Yale University

ROBERT COULSON
President
American Arbitration Association

SENATOR EDWARD M. KENNEDY
Democrat
Massachusetts

HERBERT MARKLEY
President, The Timken Co. and
Chairman, National Association of Manufacturers

ALEXANDER B. TROWBRIDGE
Vice Chairman
Allied Chemical Company

HENRY GELLER
Assistant Secretary
U.S. Department of Commerce

*featuring:

Over 40 sessions on employee privacy, expression and dissent, fair procedure mechanisms, and new modes of worker and management participation in decision-making. Also, case study presentations by two dozen leading companies of how they handle specific employee rights areas, including Polaroid, IBM, Aetna Life, General Electric, Corning Glass, Monsanto, Digital Equipment, Exxon, Pfizer, American Telephone and Telegraph, Standard Oil (Indiana), Citibank, TWA, Envirotech, St. Paul Companies, American Velvet, and Management Science America.

*sponsor:

The Educational Fund for Individual Rights, Inc., an independent non-partisan, not-for-profit foundation under New York law.

*seminar director:

DR. ALAN F. WESTIN,
Professor of Public Law and Government, Columbia University

CHECK BELOW TO RECEIVE FULL DETAILS AND PROGRAM, OR—SINCE SPACE IS LIMITED—USE THIS FORM TO REGISTER NOW.

Fees are tax-deductible, as an educational expense. They include all conference sessions, conference materials and special luncheons.

Please make your check payable to: Second National Seminar on Individual Rights in the Corporation, and mail to Luceil Sullivan, 10th floor, 22 East 40th Street, New York, New York 10016

Blessed are the young, for they shall inherit the national debt.
HERBERT HOOVER

The great man is not convulsible or tormentable; events pass over him without much impression.
RALPH WALDO EMERSON

Complacency is the enemy of progress.
DAVE STUTMAN

Anger is a prelude to courage.
ERIC HOFFER

'Tis known by the name of perseverance in a good cause, and obstinacy in a bad one.
LAURENCE STERNE

Muddy water let stand will clear.
CHINESE PROVERB

Heads are wisest when they are cool, and hearts are strongest when they beat in response to noble ideals.
RALPH BUNCHE

The price of greatness is responsibility.
WINSTON CHURCHILL

I feel the responsibility of the occasion. Responsibility is proportionate to opportunity.
WOODROW WILSON

The income tax has made more liars out of the American people than golf has. Even when you make a tax form out on the level, you don't know when it's through if you are a crook or a martyr.
WILL ROGERS

A man is rich in proportion to the number of things which he can afford to let alone.
HENRY DAVID THOREAU

Thoughts on the Business of Life

The man who is bigger than his job keeps cool. He does not lose his head, he refuses to become rattled, to fly off in a temper. The man who would control others must be able to control himself. There is something admirable, something inspiring, something soul-stirring about a man who displays coolness and courage under extremely trying circumstances. A good temper is not only a business asset. It is the secret of health. The longer you live, the more you will learn that a disordered temper breeds a disordered body.
B.C. Forbes

A man has no more character than he can command in a time of crisis.
RALPH W. SOCKMAN

Physical courage, which despises all danger, will make a man brave in one way; and moral courage, which despises all opinion, will make a man brave in another.
CALEB C. COLTON

It is courage the world needs, not infallibility . . . courage is always the surest wisdom.
WILFRED GRENFELL

Avoid letting temper block progress—keep cool.
WILLIAM FEATHER

More than 3,000 "Thoughts," indexed by author and subject, are available in a 574-page book at $11.95. Send check and order to: Forbes Inc., 60 Fifth Avenue, New York, N.Y. 10011. Add appropriate sales tax on New York State orders.

Taxes are not levied for the benefit of the taxed.
ROBERT HEINLEIN

In vain he seeketh others to suppress who hath not learne himself first to subdue.
EDMUND SPENSER

Than self-restraint there is nothing better.
LAO-TZU

The best cure for anger is delay.
SENECA

When angry, count ten before you speak; if very angry, 100.
THOMAS JEFFERSON

The control man has secured over nature has far outrun his control over himself.
ERNEST JONES

Activity makes more men's fortunes than cautiousness.
MARQUIS DE VAUVENARGUES

A Text . . .

For of whom a man is ove come, of the same is he brought into bondage.
II PETER 2:19

Sent in by Otto Gruber, Long Beach, C What's your favorite text? The For Scrapbook of Thoughts on the Business Life is presented to senders texts used.

No man is free who is not master of himself.
EPICTETUS

Faced with crisis, the man of character falls back on himself.
CHARLES DE GAULLE

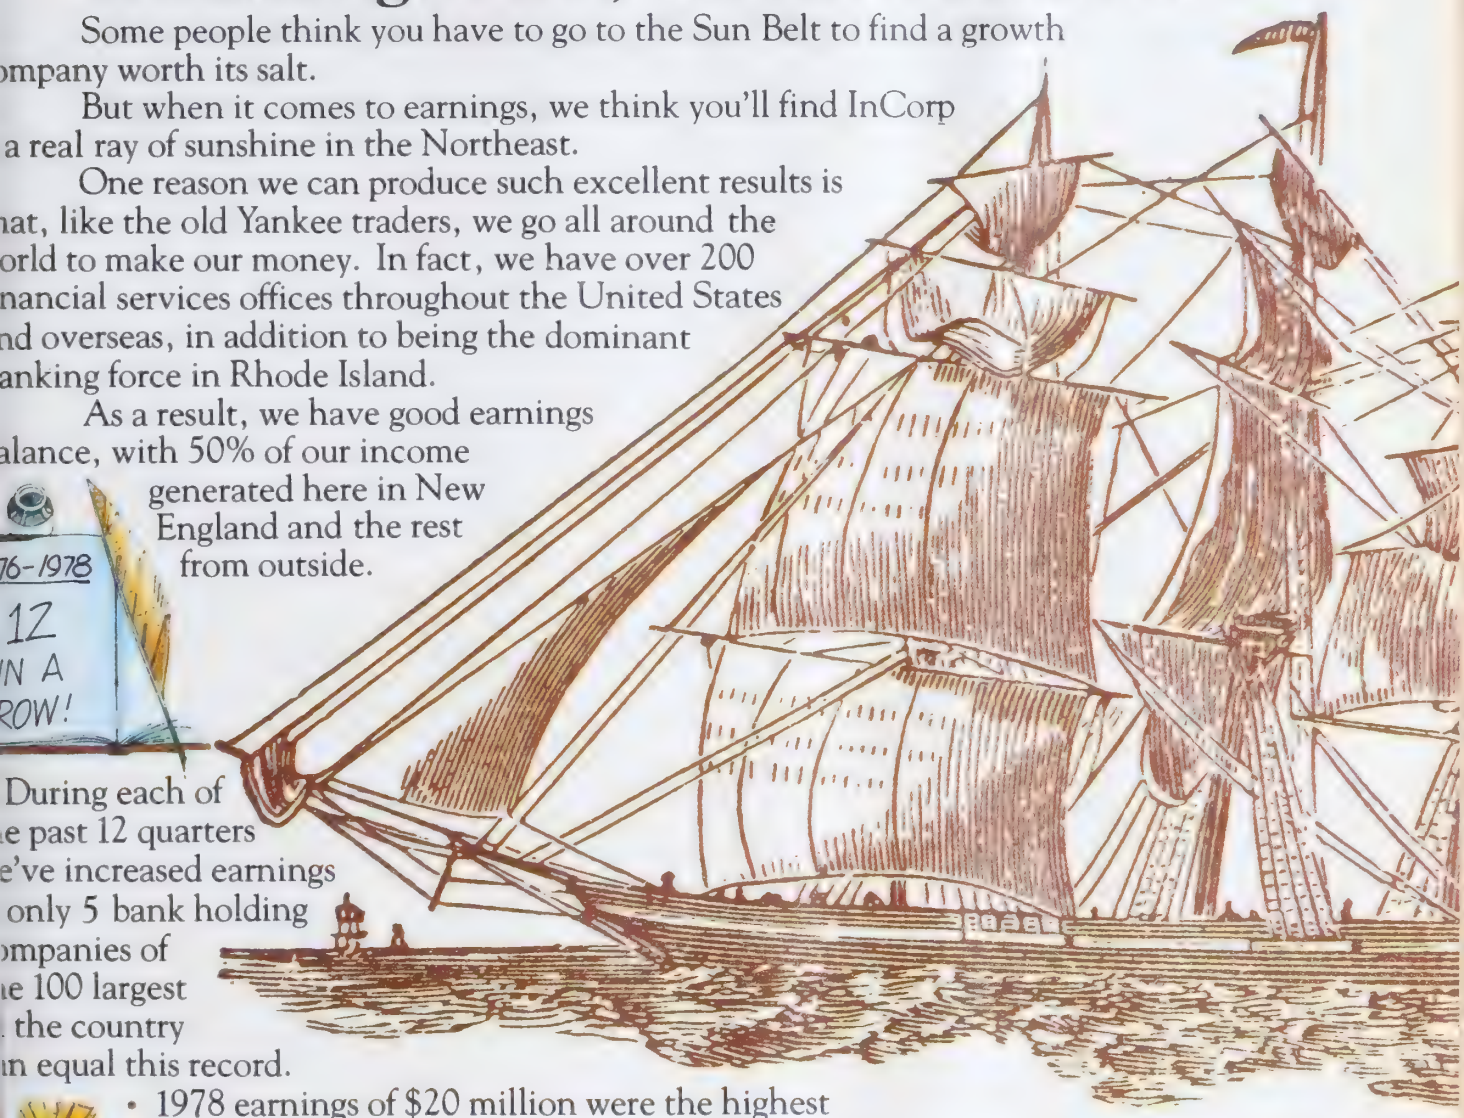
In the tradition of the old Yankee sea captains, we've gone quietly about the job of building a solid, worldwide business.

Some people think you have to go to the Sun Belt to find a growth ompany worth its salt.

But when it comes to earnings, we think you'll find InCorp a real ray of sunshine in the Northeast.

One reason we can produce such excellent results is hat, like the old Yankee traders, we go all around the orld to make our money. In fact, we have over 200 nancial services offices throughout the United States nd overseas, in addition to being the dominant anking force in Rhode Island.

As a result, we have good earnings alance, with 50% of our income generated here in New England and the rest from outside.



During each of e past 12 quarters e've increased earnings only 5 bank holding ompanies of ie 100 largest the country n equal this record.

- 1978 earnings of $20 million were the highest in our history.
- Regular dividend increases complement our record of never having missed a dividend since 1792.
- Return on common stockholders equity was 14.3% during 1978.

all adds up to performance you can count on.

At Manufacturers Hanover, tomorrow's way of business is already here...

"AN AIRLINE THAT OVERBOOKS TODAY MIGHT FIND ITSELF UNDERBOOKED TOMORROW."

FRANK BORMAN, PRESIDENT, EASTERN AIRLINES

Last year, overbooking grounded more than a hundred thousand passengers—on all airlines combined.

Airlines overbook because passengers with reservations don't always show up.

A VIEW ON AIRLINE OVERBOOKING FROM EASTERN.

And no-shows mean empty seats on a flight other people want, and lost revenues for the airlines.

At Eastern Airlines, we've developed a better way to help offset no-shows. It's called the Conditional Reservation. And, because of it, our record in honoring reservations is better than any of our competitors'.

With a Conditional Reservation, you know in advance that your preferred flight is already booked, and you might not get on—but that you'll fly free on the next flight with available seats if you don't.

Chances are good that you'll get the flight you want. Because 96 percent of those passengers who have booked a Conditional Reservation on Eastern have gotten on the flight of their choice—a total of nearly 2 million to date.

At Eastern, we know that providing good, personal service is just good business. And, if it takes an innovative idea—like the Conditional Reservation—to serve you better, we'll make that our business too.

After all, there are a lot of airlines you can fly besides Eastern. So, if we expect you to fly with us again, we know we can't leave you on the ground.

At Eastern, we know we have to earn our wings every day.

EASTERN

WE HAVE TO EARN OUR WINGS EVERY DAY

America, the beautiful.

Open any newspaper, listen to any newscast, eavesdrop on any luncheon conversation, and you'll get a load of what's wrong with this country.

Inflation. Unemployment. Crime. Corruption.

But there's still plenty that's beautiful about America. And our economic system.

Despite our problems, there are more well-paid, well-fed, well-clothed and well-educated people in America than anywhere else in the world.

Faults? Sure, we've got them. And problems, too.

But, honestly, can you think of any other nation better equipped to cure its faults and solve its problems than this one?

Maybe, the United States will never be Utopia. But we're working harder at it, getting closer to it than any other country in the world.

This G-440 Gradall® hydraulic excavator grades and turns more than 100 miles of unlined irrigation canals annually in Oregon, helping speed water flow through the canals and reduce weed growth. Since 1958, the Oregon Talent Irrigation District has used Gradall for all ditch maintenance work.

ULTRA THIN: Someday all watches will be thinner. Realtime does it today for $89.

f you own a digital chronograph now, it's nost likely too bulky and heavy. A man's vristwatch has traditionally been judged y the thinness of its case. The ultra thin vatches are the most expensive and the nost prized. For example, the new Citizen super thin watch sets a world tandard for thinness, but it costs $1200. he new Seiko Super Thin is over $5000.

WO QUARTERS

But now there's a new thin digital hronograph that represents a significant echnological breakthrough by Realtime. he brainchild of microcircuitry, the Ultra hin represents a radical departure. Slim nd elegant, the Ultra Thin is only 4 mm hin, and weighs only 2.5 ounces. Hold it ideways and you'll be amazed: it's as hin as two quarters! And its outstanding raftsmanship makes it rugged as well. 00% solid stainless steel case and and, not chrome or "silvertone." The Jltra Thin is also available with 5 microns f gold plating. The tempered mineral lass face crystal retards everyday cratching and dulling, so your watch will naintain its handsome appearance for ears. The band is fully adjustable, and eautifully proportioned to your watch's inner dimensions.

VATER-TESTED

he Realtime Ultra Thin is water-tested, o 2 ATM, or 60 feet of water pressure. Few chronographs can make this claim. Realtime takes perspiration, salt water, and high humidity with ease. You can run with it, swim in the ocean, or even sauna with it, and never worry about condensation or corrosion.

STOPWATCH

You'll get complete chronograph features as well. Day and date calendar with automatic month adjustment. Stopwatch to 1/100 second. Nightlight. Lap times, splits, and 1–2 finishes. Accuracy is guaranteed to within 5 seconds per month, though you'll probably find that your watch won't vary more than 1–2 seconds. Accuracy that makes Realtime equal to the finest marine chronometer —without the expensive price tag.

NO RISK

It's easy to order directly from The Sharper Image. Just call the toll-free number, ask for the operator and give your name and credit card number. Most orders are filled immediately. You're under no obligation until after you receive your watch, and have two weeks to examine it in the privacy of your home or office. If you decide to keep it, you'll be pleased to know it's covered by the Realtime limited one-year warranty on parts and labor. A convenient Realtime service-by-mail center does a good, careful job in the rare event repair is needed. The Ultra Thin never needs routine service, as there are no moving parts. If you don't wish to own the Ultra Thin Quartz Realtime, you simply mail it back as new for a prompt, courteous refund. However, prices keep going up, so order now. The Ultra Thin in solid stainless (#102) is $89. In 5 micron gold plating over stainless (#103) the price is $99. Either way you'll own an Ultra Thin chronograph that is built to the highest standards and combines the latest features in a rugged, thin timepiece.

ORDER NOW TOLL-FREE

Credit card holders may use the toll-free numbers below. Or send check. Add $1.50 delivery, plus sales tax in CA ($5.34 for stainless, $5.94 in gold).

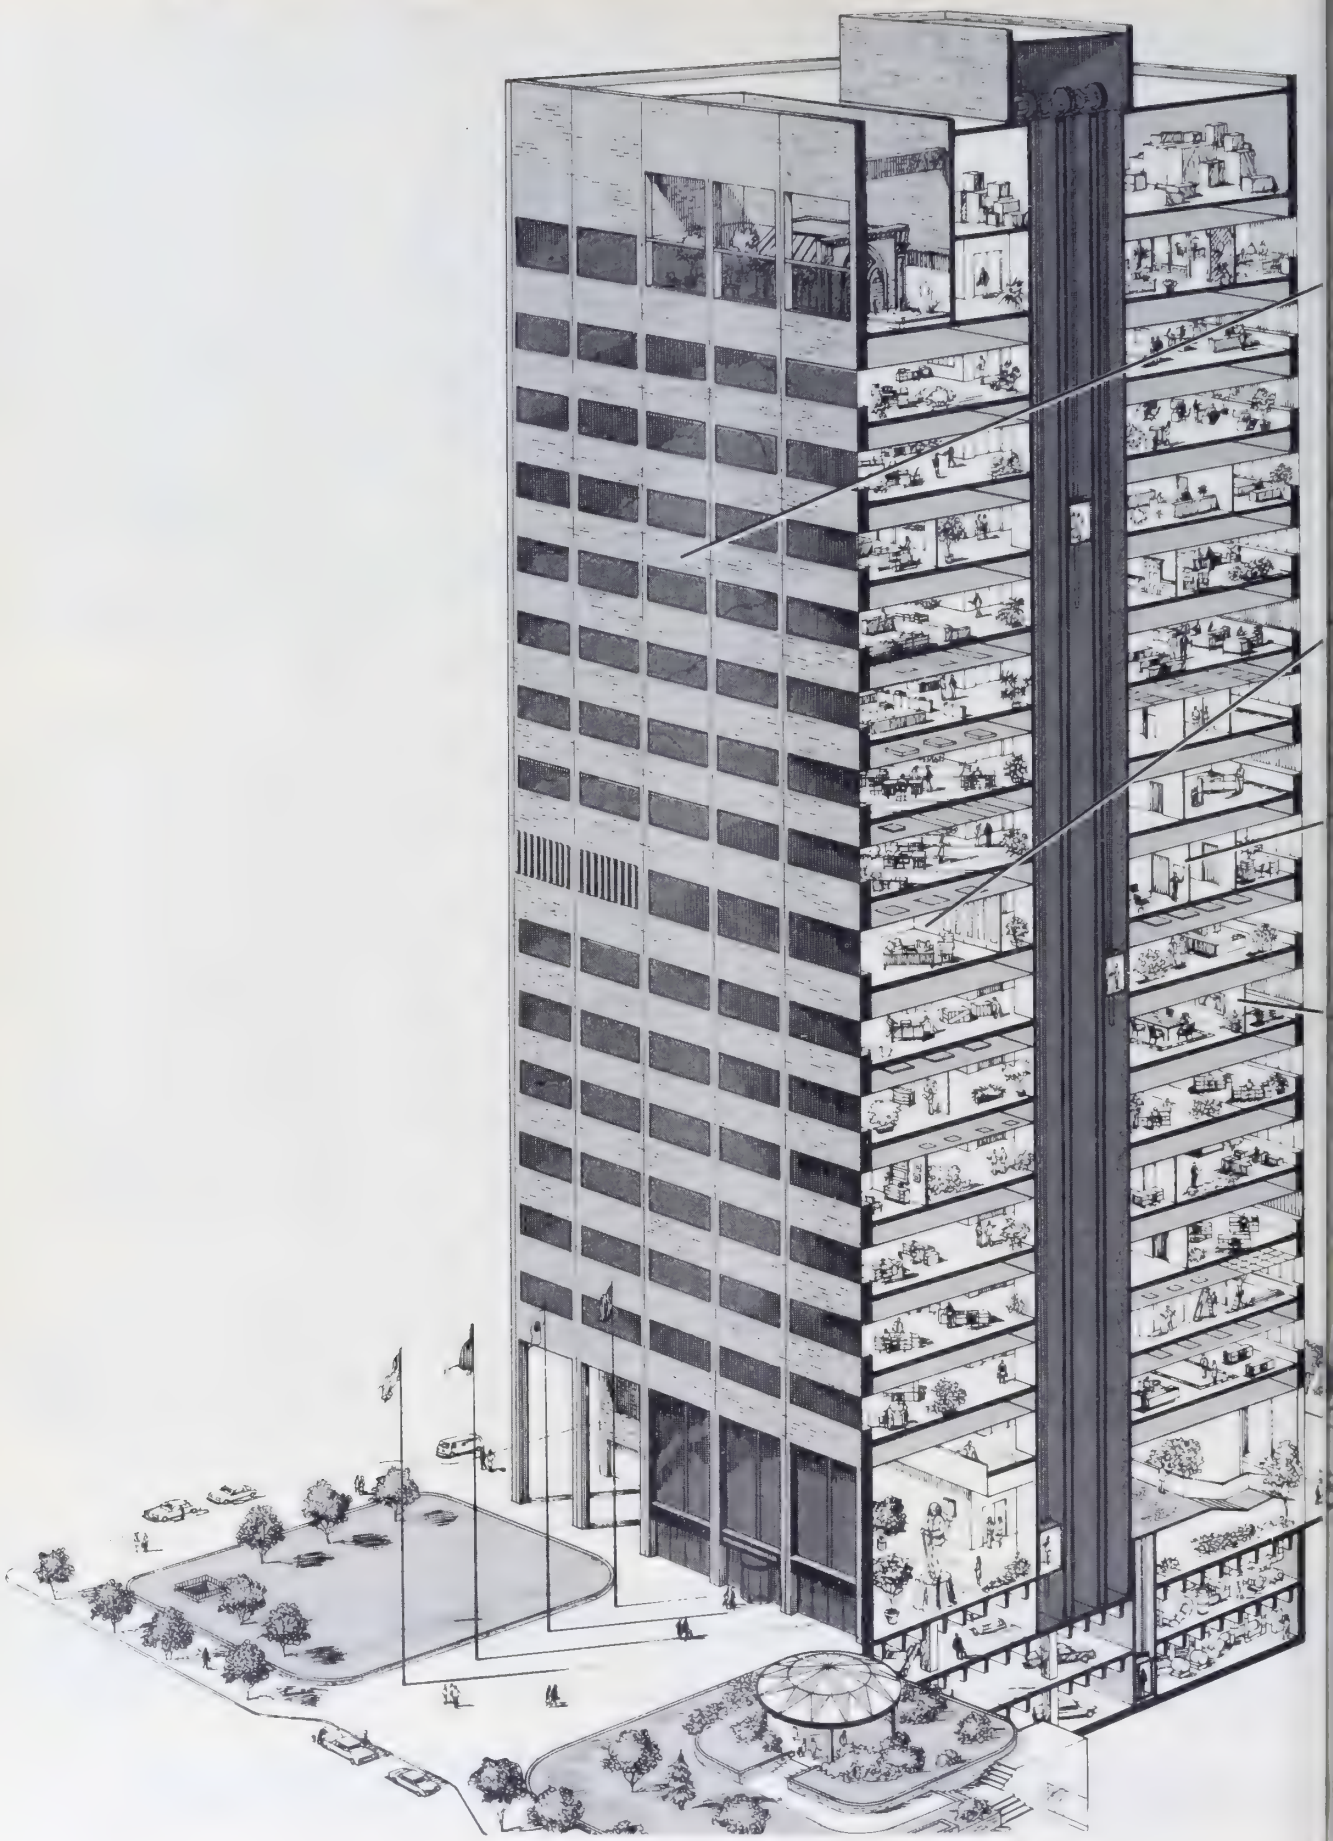
How Johnson Controls gives Jim Marki

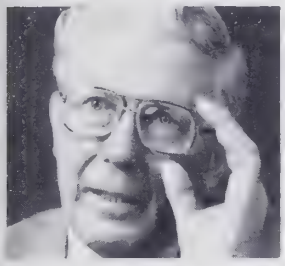


Your single source for design, manufacture, installation and service of automated building controls. Proprietary or time-shared. Energy management, heating, air conditioning, fire management, security and communications. © 1979 Johnson Controls, Inc.

otal control of Benj. Franklin Plaza.

Tell us about your building, Mr. Markin.

We have a commercial building, four years old. It has 20 stories above ground and three below. All told, 391,000 square feet. Rental space is divided among 50 tenants. The main tenant—that's us, Benj. Franklin Federal Savings & Loan—moved in during November, 1975. Our executive offices are in the building. It's a lot to keep on top of. But as owners and operators we must have total control over every square foot.



And do you have total control?

We built a Johnson Controls JC/80 computer right into this building. It was the first totally automated building in the Northwest. Heating, ventilating, air conditioning are all controlled by the computer. Our lighting, our security, including a card access system for the elevators after hours, is controlled by the JC/80. And not only is the building protected by sprinklers, but our JC/80 can locate a fire, call the fire department, and give evacuation instructions, too. I'd call that total control.

How much does the JC/80 save you?

We've always had the JC/80, so I have no previous figures to compare to. But I can tell you this. Rental rates are based largely on operating costs, and last year our rates went up less than 4%. That's a lot less than the rise in utility charges. And all systems are carefully monitored, 24 hours a day, by the computer, our building engineer, or his assistant. He doesn't even have to be at the console. The computer asks for him if there's a problem. This *has* to be a major savings in manhours. And we have new programs, new savings in the works.

New programs, new savings?

Take our meeting rooms. Things are happening there maybe three nights a week. Or maybe a tenant wants to work late. Used to be we had to heat or cool the whole building to use a floor after hours. But now we've programmed the JC/80 to deliver air to each floor individually. And added a start-stop program to save steam. And a demand-limiting program to cut electric bills. It's too soon to give you hard savings, but we estimate $950 to $1000 a month. I'll have to revise these savings upward, because I've heard our electric rates are going up 21.2%. Anticipated payback for these capital modifications is less than two years.

Do you have a service agreement with Johnson Controls?

We do. Johnson Controls is capable of handling all or any part of control maintenance, but we do a lot ourselves, because the computer frees up our building engineer. Johnson Controls is responsible for maintaining the vital legs of the computer system. They have the experience, the people, and the tools to do this job best. So we just leave it to them.

Lance Markin
Building Manager
Benj. Franklin Plaza
Portland, Oregon

JOHNSON CONTROLS

he total control company

Johnson Controls has the experience, the people, and the tools to design and install a total building automation system for your building. For information on how to get total control through automation, fill in this form and mail to:

Prosperity, but a heavy hand

Executive Editor Norman Pearlstine made nearly 30 reporting trips to South Korea over the past six years for the *Wall Street Journal* and the *Asian Wall Street Journal*. But none provided him with as much access to top Korean government officials and businessmen as did his most recent visit—his first since joining Forbes last year. In his two-week trip he met six cabinet members and top executives from more than a dozen of South Korea's largest companies. Those interviews convinced him the small Indiana-size nation is fast becoming a second Japan. His description begins on page 53.

Pearlstine also came away with impressions about political freedom that may surprise the casual reader.

"South Korea isn't a democracy, but the country is demonstrably more open than it was five years ago. President Park Chung Hee is an austere and aloof leader whose Confucian upbringing, experience as a school teacher and service in the Japanese Imperial Army during World War II make him uncomfortable with democracy. He believes that so long as Korea is weak, the alternative to authoritarianism isn't democracy but anarchy or foreign domination.

"In 1972 Park correctly perceived that America's commitment to the security of its Asian allies was beginning to wane under Nixon and Kissinger, and that prompted him to shore up his own position. After declaring martial law, he pushed through a new constitution which greatly expanded his control while limiting the power of the legislature and the rights of individuals. He also prohibited criticism of the new constitution and forbade student political protests.

"When S.K. Kim, a prominent South Korean politician and businessman, got out of line, he was dragged to the top of Namsan, the mountain which overlooks Seoul, where every hair in his prized moustache was pulled out, one by one. His cohorts got the message and stopped complaining. When Kim Dae Jung, who had unsuccessfully run against Park in 1971 (he got 46% of the vote) began to speak against the president overseas, he was kidnapped in Tokyo and dragged back to Seoul where he was tried and convicted on unconvincing charges. During the same period, South Korean businessman Tongsun Park began making payoffs to American congressmen.

"A lot of South Koreans, including students and parts of the sizable Christian minority, took to the streets to pro Park's new constitution and, by e 1975, there were so many demons tions that some observers thought might not last the year in office. But fall of South Vietnam, which sent a c through all of noncommunist Asia, sa his position as most of the populat fearing an increased threat from N Korea, rallied behind him.

"In the four years since the fal South Vietnam, Park's confidence increased and he has gradually rela controls on the South Korean pe When a scandal erupted last year government officials getting prefe housing, the South Korean papers ered it in detail. Similarly, they repo on Tongsun Park and Koreagate. R tively free elections for the National

Convicted on unconvincing charge

sembly were held last December. I that month, the government rele about 30 well-known political o nents, including Kim Dae Jung, prison. The U.S. State Department estimates there are under 220 poli prisoners—less than in many develo countries that get far fewer human ri lectures from Jimmy Carter.

"Despite these signs of increased litical freedom, the government sti often ham-handed, exercising co where it isn't justified and ign world opinion where it ought to be c ing it. But if the economy continue prosper and Carter doesn't withdra U.S. ground troops from South Korea nation's politics could soon be as vanced as is its economy." ■

Introducing the last word in First Class.

Today, with the development of our long-range 747SP, Pan Am can take you to places nearly halfway around the world non-stop.

But non-stop flying doesn't mean much without non-stop service.

So, for First Class passengers on our 747SPs, we are proud to introduce new ideas you won't find on any other airline.

Like our new Sleeperette® seat. When it reclines, the Sleeperette® stretches out to the length of four-and-a-half of our windows. Perfect for reading, enjoying stereo or getting a good night's rest.

Another First Class exclusive: a choice of banquette table-for-two seating or individual dining at your Sleeperette® seat. And, of course, superb international cuisine.

Whether you fly First Class on our 747SP with the Sleeperette® seat, or on our traditional 747, you'll experience the same high standard of service that our First Class passengers have always enjoyed.

You see, we want to be the world's first choice in First Class service.

See your Travel Agent or transportation department.

PAN AM

We fly the world the way the world wants to fly.

Volunteers wanted for unusual medical experiment

Step forward and you'll be asked to contribute something to America's medical system other than money:

Your say in how it's spent.

A radical idea for a society brought up on the belief that the medical industry alone knows what's best for us.

But for a society now spending almost 9% of its gross

national product on health care and paying more than *twice as much* for hospital care as five years ago, radical is essential.[1]

Congress established Health Systems Agencies in 1974.[2] Made up of consumers and health care providers, with consumers the majority, Health Systems Agencies are now functioning in every community.

But they need your effort to succeed. Are they worth it? Ætna strongly believes so.

While many Health Systems Agencies are still finding their feet, they've already found ways to cut the national medical bill by millions of dollars.[3]

By coordinating local medical systems, expensive duplication and concentrations of equipment and services can be avoided.[4]

The medical industry needs a second opinion. Congress has given you an opportunity to make it yours. For the address of the Health Systems Agency serving your community write to us at Ætna Life & Casualty, 151 Farmington Avenue, Hartford, CT 06156. Don't underestimate your own influence. Use it, as we are trying to use ours.

Ætna wants insurance to be affordable.

1 Between 1959 and 1976, personal health care expenditures increased almost twelvefold from $10.4 billion to $120.4 billion. Ten percent of the federal budget is now spent on personal health care, almost $34 billion in 1976 alone.

2 Health Systems Agencies were created as part of the National Health Planning and Resources Development Act of 1974. Their mandate is to improve the health of the American people: continuity and quality of health services; restrain increases in the cost of providing health services and prevent unnecessary duplication of health services.

3 In a recent survey by the American Health Planning Association, health planning agencies across the country reported that in one two-year period they were instrumental in preventing over $3 billion in capital investment for health care facilities. It's also important to note that there have been no indications that the quality of medical care has been impaired by their efforts.

4 It's estimated that 100,000 short term hospital beds stand idle—an idle bed costing almost 60% as much to maintain as one in use. Blue Cross recently noted that health care providers in southern California are reported to have ordered or installed enough $500,000 CAT scanners to serve the entire western United States.

LIFE & CASUALTY

Edited By John A. Conway

Fallout on Wall Street

The nuclear-plant breakdown near Harrisburg, Pa. has prompted investment sage T. Rowe Price to revise his brand-new model portfolios (FORBES, *Apr. 2*). Kerr-McGee was one of the 20 stocks in his natural resources group; Price says he has eliminated the oil and uranium producer and replaced it with Union Pacific. He says he is also considering selling UNC Resources, a producer of uranium and fabricator of nuclear fuel cores, and replacing that with Penn Central. Price, who has shunned railroad stocks for decades, has not changed his mind; Penn Central no longer runs a railroad but is in real estate, pipelines and entertainment and has a huge tax credit. As for Union Pacific, he calls it "a great natural resources company." Price adds he is "downgrading the future of nuclear energy." Interestingly, he has also become less bullish on oil, saying that it, like nuclear power, "is becoming more and more a political football." Specifically, he says, "I have reduced and plan to reduce my holdings of several of the oil stocks that have had very spectacular advances in recent months, including Dome Petroleum, which went from the mid-30s to 118; I have sold 25% of my Dome holdings. I expect to sell some of my Tosco, which cost me from $2 to $5 a share, and has gone as high as $15."

Washington's work

Federal watchdogs have begun a three-year review and cost study to determine how much and what kind of the government's work should be done by its own employees and by private outside contractors. Washington now farms out about $30 billion worth of contracts and spends another $10 billion to run 21,000 commercial and industrial activities on its own. The study will look at comparative costs and attempt to find where a switch from private industry to government (or vice versa) will produce a 10% savings. One yardstick to be used in the review assumes that federal retirement benefits amount to 20.4% of each worker's salary.

The GOP's money men

John Connally has picked up an important recruit in his bid for the 1980 GOP presidential nomination—David Packard, the chairman of California's Hewlett-Packard and deputy defense secretary under Richard Nixon. Packard was President Gerald Ford's chief money man during the 1976 primaries (but not for the actual campaign). Connally, the former Texas governor and Nixon's Treasury Secretary, says Packard will not be his top money man but "he'll be one of them." Another GOP hopeful, Tennessee's Senator Howard Baker, now has as a principal fundraiser Wall Street's Bernard (Bunny) Lasker, former chairman of the New York Stock Exchange and a perennial Republican money gatherer. (One exception: his support of Lyndon Johnson in 1964.)

The man they'll all have to beat for the nomination, Ronald Reagan, so far has not picked a finance chairman but expects to do so within a month. Meanwhile, old pro Lyn Nofziger, a top Reagan aide, is using direct mail to raise funds. The role of the "fat cat" big giver, Nofziger points out, is not what it used to be since the law now restricts individual political gifts to a top of $1,000.

John Connally

Does a bandwagon need money men?

Pressure at the pump

The OPEC sheikhs aren't the only ones out to raise the American motorist's gasoline bill. State legislators across the land are working on ways to increase their take from gas taxes or at least to maintain current revenues should conservation efforts succeed in cutting fuel consumption. One new system would change present state levies from a fixed amount of so many cents per gallon into a percentage. Washington has already put such a variable tax into effect, 21.5% on the wholesale price of fuel, excluding other taxes. Such an "inflation-sensitive" tax, as one official in Washington's Department of Transportation calls it, is also under study in Alaska, Georgia, Massachusetts, Minnesota, Monta New Mexico and South Dakota; a do other states are reported eyeing so variation of it. Percentage taxes mea of course, that every time OPEC tu the price screws, the states' bite wo also increase. About the only constan the gas tax picture is the 4 cent-a-gal federal one, which Congress gives no dication of changing and which po $8.5 billion a year into the federal hi way construction fund. The huge r building program begun under Presid Eisenhower will continue until 1986, ing in the remaining gaps and repai the stretches already built. The st will probably need funds to share a m part of rebuilding although, for the f time, they are eligible to get repair m ey from the federal Treasury.

From Dallas with love

A decision by a Dallas electronics firm build an $80 million microchip plan Ireland instead of Scotland could s more trouble for Britain's Prime Mi ter James Callaghan—and his own L don bureaucracy will get the blame. M tek, the Texas manufacturer, was or nally set for Scotland but Dubl Industrial Development Authority ca up with a better deal. The clincher ca when the Scots made a financial o that could have matched Ireland's, which collapsed when London's Dep ment of Industry refused the usu automatic 22% development gra (Diplomatically, L.J. Sevin, Most chairman, says only that the Irish di better sales job.) The plant, outside D lin, is slated to begin testing microp cessors shipped from Texas by the en the year and could grow into an op ation employing 1,100 within two ye Callaghan's problem is how Scottish v ers will react in the May general electi With the polls running against him, needs every vote he can get. His gove ment fell when it lost a vote of no-co dence amid debate over its handlin the "devolution" issue of granting lim ed Scottish independence.

Kind words for the Mafi

The Mafia is not the threat many l men say it is, a Hoover Institution sch ar at Stanford University concludes i new book, *The Business of Organi Crime: A Cosa Nostra Family*. The amou spent to fight organized crime may in fact be justified, writes Anne Graebner Anderson, a former U.S. J tice Department official with the L Enforcement Assistance Administrat (which funded her initial research). T

HOW TO SLOW THE RATE OF INFLATION

A VOLUNTARY PROGRAM WILL WORK, IF EVERYONE VOLUNTEERS.

General Motors has promised President Carter to keep within the wage/price standards he has set for large corporations. And we will keep that promise. Because it is the wish of the President, and because we believe he has embarked upon a comprehensive program that can succeed, given time and consistent dedication.

Everyone must help. President Carter has promised to reduce government spending, to reduce federal deficits, and to reduce government regulation. He is lessening the inflationary pressures of government on the economy. The budget he has submitted for fiscal 1980 is prudent. It will make a difference.

Obviously, the rate of inflation during recent months is still distressingly high. The need for everyone to follow the President's standards is more urgent than ever.

We have written to our suppliers, informing them of GM's commitment and asking them all to make the same commitment. We have also urged the chief executive officers of the top 500 U.S. corporations to send similar letters to their suppliers. In advertising, we are advising our customers to shop carefully, to get the most value for their dollar.

Inflation hurts everyone: rich and poor, big business and small, wage earners and, most dramatically, retirees and other people living on fixed incomes. The real value of everyone's income declines at exactly the same rate, whether it's the paychecks of our employees or the dividends we pay to stockholders or the checks received by people on pensions or social security. No one is spared.

The President has asked that wasteful regulation be eliminated and that the discipline of cost/benefit analysis be applied to all government regulation. Now, business must follow his lead, and not only major corporations, but all business.

Labor leaders, confident that business will follow the standards, can then ask understanding and flexibility in demands from union members. Consumers, too, can make a difference, buying carefully, shopping for the best values, using their market power to keep down the prices of everything, from commodities to cars.

The Joint Economic Committee of Congress has endorsed the voluntary program and called for incentives to increase investment and productivity. The consensus of this bipartisan group was that mandatory price and wage controls must be avoided. Experience proves such controls discourage investment, create shortages, and slow economic growth. Moreover, when such controls are removed, inflation returns at a more rapid pace than ever.

The inflation problem can be solved, but it will require perseverance, restraint, consistency, and the understanding of all concerned that small sacrifices now will spare us from severe sacrifices in the future. President Carter has set the course. We have only to follow his lead.

This advertisement is part of our continuing effort to give customers useful information about their cars and trucks and the company that builds them.

General Motors

People building transportation to serve people

One of these homeowners is thrifty, safety conscious, and a sitting duck for financial disaster.

He doesn't even know it. He thinks he's done his best to protect his home and his possessions. He hasn't.

Many people, like the man on the left, believe they have adequate homeowners insurance. But inflation has been pushing up the value of their homes. They don't update their coverage every year. So when disaster strikes, they are unable to fully recover their losses.

Rising replacement costs are one reason. In the last 10 years the cost of re-siding a home jumped 132%, re-shingling a roof 155%; and repainting a living room 142%.[1] In the last five years alone, the cost of building a new home has increased 63%.[2]

As a group of property and casualty insurance companies, we don't want you to be a sitting duck by not having your insurance provide full protection for your home. Check with your agent to be sure your homeowners policy reflects the amount of additional coverage inflation has made necessary.

Here's what we're doing to help protect you:

- Offering policies with a built-in inflation clause.
- Supporting strict building codes to reduce fire risk.
- Designing new coverages to meet the special insurance needs of older homes.
- Helping to develop safety standards which protect life and property.
- Operating special claims assistance and damage repair programs in times of catastrophe.
- Conducting fire prevention and arson control programs.

Here's what you can do to protect yourself:

- Re-evaluate your home insurance needs annually with your agent.
- Take a higher deductible if you can. It lowers your premiums.
- Install a smoke detector or burglar alarm. Many companies offer premium discounts for such devices.
- Get a receipt or appraisal for all major household items (furniture, antiques, jewelry, art). Duplicate it and keep it and all such records in a safety deposit box away from your home.
- Inventory all your possessions and take photos of each room to document what you have.

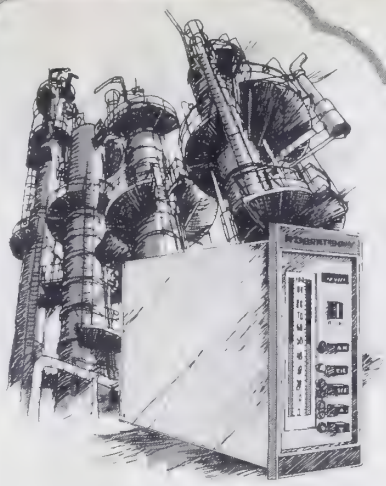
Parks had a 33% staff cut and free recrea- programs may start charging fees. mer schools have all but disappeared erly Hills may farm out its program to vate company). Home builders, who d for a boom, are screaming at new l charges for development. Rents are bing and rent-control propositions ife. (Los Angeles and Berkeley have dy voted curbs.) The fundamental ge is that Proposition 13 took away h local autonomy along with revenue Sacramento has become the one ce of relief. One consolation comes Bill Press, head of the state's Office lanning and Research, who thinks s-Gann will prove the strongest envi- nental measure ever voted. With s unable to provide services, he s, new subdivisions—and urban wl—will have to stop. ■



Robertshaw's unique controller cracks high cost barrier in process control.

Compatible with any computer, Robertshaw's new DCM-1000 can also stand alone to provide automatic digital control over a single "loop" in a variety of continuous processes, such as cracking petroleum. Using a powerful microprocessor, it offers more functions at a lower cost than any controller available today. This low cost module is a basic building block in a flexible system that can be easily expanded in cost-effective steps to control an entire process plant.

Controlling the cost of controls is a prime corporate objective at Robertshaw, manufacturing and marketing 10,000 controls and control systems worldwide. For details on lowering your process control costs, write to Robertshaw Controls Company, Dept. IIF, P.O. Box 26544, Richmond, VA 23261. Or call 804/ 282-9561. Exports: call Robertshaw International Operations, 804/ 285-4161.

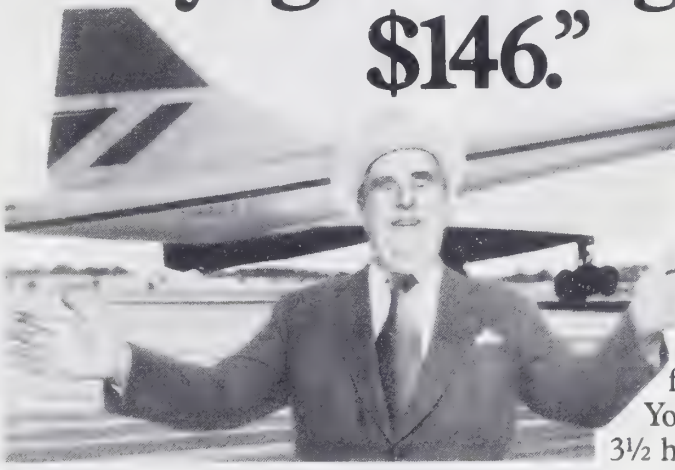
The Energy Control Company®

"Daylight saving time: $146."



For only $146 more than First Class, our Concorde will fly you from New York to London in 3½ hours. This not only saves you half the flying time, it really saves the day. You arrive feeling so rested and relaxed, you don't need a night—or a day—of catch-up time to get back into top form. Concorde has 12 flights a week from New York to London, 3 from Washington. It also flies from Dallas/Ft. Worth to London via Washington, and from London to Singapore via Bahrain. Call your Travel Agent, Transportation Department, or British Airways—tell them Robert Morley says you won't find a better way to buy time.

British airways

We'll take more care of you to Britain, Europe, the World.

WHERE WI
AND WHY.

Winners have always rented from Hertz.

Forty-three years ago, Franklin Delano Roosevelt used a fleet of Hertz cars to carry his election campaign across the country. And won.

If you had aspirations to the highest office in the land, wouldn't you go with #1?

Winners just naturally go with winners. That's why so many people at the heads of their fields today rent from Hertz. The Presidents of over 80% of the top 500 companies in America carry Hertz cards. As do many of the most important people in show business, sports, fashion and the arts.

Those who don't, probably don't, simply because they ride in limousines.

Nobody does it better than Hertz.

Hertz came up with the idea of renting cars in 1918. And we've been winning at it ever since.

If there's a service that can get you into or out of a car faster, or an idea to make renting a car easier, or an innovation that can make renting a car a more pleasurable experience, you can bet that Hertz not only has it, but probably introduced it.

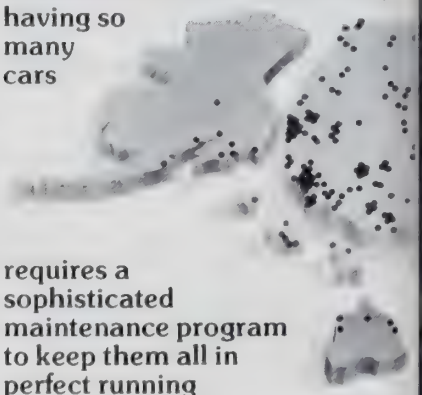
Add the fact that we have more cars, more locations and more people to serve you than anybody else, and the thought of renting from anybody else becomes unthinkable.

The largest fleet of cars in the world.

You only rent one car at a time. So is this really important? It's important.

Hertz has over 240,000 cars and trucks around the world. So if you want a certain kind of car in a particular place at the appropriate time, you do what winners do. Take the odds.

Hertz features Ford products o every size and description. From subcompacts to Thunderbirds to Continentals. Even Broncos and vans. But our fleet is so huge, we have it filled in with cars of other makes too. "Filled in" is somewh of an understatement. Our closes competitor features another mak of car. Yet we have even more of t make than he does. Of course, having so many cars



requires a sophisticated maintenance program to keep them all in perfect running condition. This is another reason winners rent from Hertz. We don' put them into losers.

Wherever you are, we are.

Winners get around. Which is of the main reasons they come to

HERTZ RENTS FORDS AND OTHER FINE CARS

NERS RENT.™

rtz in the first place.
Vith over 4,000 locations around
world, it's hard to find a place
ere you won't find Hertz. This
ans you can go practically
/where and pick up and drop off
ir car where it's convenient for
ı. Which is eminently more
ısible than picking up and
ıpping off cars where it's only
ıvenient for car rental
mpanies.

More people to serve you.

Hertz employs far more people
ın anyone else in the rent-a-car
siness. Not just because we're
ger. But because we offer many
rsonal services to our customers
the others
don't. For
example, at
our busier
locations, you'll
find Customer
Service
Representatives
who can rent you
a car before you
get to our
counter. Or
swer any questions you might
ve. Or provide directions you
d.

Since even Presidents of multi-
lion dollar corporations are
man, and therefore capable of
ning out of gas,
ting a flat, or
splacing their car
s, Hertz provides
hour-a-day
ıergency Road
rvice. Services
this require a
of people. And
rtz has them.
t we're not out
mpress you with
mbers. The pride
Hertz isn't the
e of the work force, it's the caliber
t.

One recurring theme in the mail
get from our customers is how
e and helpful Hertz people are.
ow do you train them to be that
y?," we're often asked. Well we've
ınd that you can't *train* anyone to
nice or helpful. So we just hire
nicest people we can find and do
everything possible to insure that
they stay that way.

Today, Hertz wouldn't be the
place where winners
rent, if it wasn't

also the place where winners worked.

**Winners belong
to an exclusive club.**

Carrying a Hertz #1 Club® Card offers you the world's fastest way to rent a car. It also tells other people that you travel in pretty fast company. The people who belong to it are in a hurry and have more important things to do than dawdle around airports and car rental offices.

If you rent a car more than two or three times a year, it could be the most worthwhile club you've ever joined.

Membership costs nothing. The advantage to you is that we keep all the information we need about you on file. So your rental agreement is filled out, ready and waiting, when you arrive at the counter. There's no waiting for a computer to slowly poke out all the details. You just show your credit card, your license, sign and go.

Hertz Express Car Return.

This is another time-saving service invented by Hertz. If you're a charge customer, you just drop your rental agreement in the Express Return box. We compute your statement and get it in the mail to you the same day. Used in conjunction with a #1 Club Card, Hertz Express Car Return can get you in, out, around and through airports as fast as O.J. Simpson. Or within a few seconds as fast anyway.

It costs no more to go #1 Class.

When you're the biggest and the best at what you do, people often get the idea that you should cost more. We should. But we don't.

If you check around, you'll find that we generally cost no more (actually, sometimes we're a little less) than our two closest competitors.

Of course, comparing ourselves to our "closest competitors" is all well and good for traveling

executives whose companies are picking up the tab anyway.

But what can we offer someone who just wants to take the family on vacation and save some money? A lot. In fact, our weekly "Touring" rates and weekend "Take-Off Rates"™ are competitive with all but the most cut-rate operations.

Not bad when you consider that you also get to take advantage of all the resources and services Hertz offers the President of the company you work for. Right down to being chauffeured to your car in a luxurious bus instead of a dinky little van.

After all, you only get one vacation a year. Why travel like a loser?

Hertz®

Follow-Through

Chicago's condo craze

"Condomania," a headlong rush to convert rental apartments into condominiums, was sweeping Chicago last year when FORBES *(Nov. 13, 1978)* called it "the fastest get-rich proposition to hit the Windy City since bootlegging." Gold Coast flats along Lake Michigan, worth $50 to $60 a square foot in 1977, were up to $100 to $120, and developers were talking of $200 a square foot. An apartment that rented for $360 a month in 1976 commanded $85,000 as a condo, with a 20% down payment and $808 a month in mortgage and maintenance charges. In late 1978 the Chicago area had 68,000 condo units, 43,000 of them in the city; in 1976, it had 10,000.

This real estate fever raged unabated into this year and even the Great Blizzard of 1979, which paralyzed Chicago under 76 inches of snow, failed to cool it. In February, with signs increasing that the City Council might finally act to impose a long-stalled moratorium on condominium conversions, it reached another peak with owners of an estimated 8,000 units "going condo." The city's last rental bastion, the 16-acre, 2,632-unit Sandburg Village on the near North Side, was among them. Early in February, realtor Arthur Rubloff and his associates sold Sandburg for $110 million. The 40 investors in the syndicate that bought it with backing from Continental Illinois Bank and Chicago's First Federal Savings & Loan included the far-ranging Pritzker family (Hyatt hotels, Maremont auto supplies, Hammond organs, etc.).

The Sandburg sale, however, may have spelled the end of condomania. It finally roused the city's newspapers and other media to erupt in editorial thunder protest the wiping out of Chicago's re al properties.

The City Council also found its vo at last and passed a 40-day moratori on any conversion that involved 30 un or more. That proved short-lived whe federal judge early this month tempor ily blocked the city from enforcing moratorium, terming it a "dramatic a draconian solution." But the City Co cil may have the last word and, m significantly, its action had the supp of Chicago's new mayor Jane Byrne, w termed the moratorium a "cooling period to stop the stampede." Jane By learned her politics as a protégée of late Mayor Richard Daley, and one Boss Daley's basic rules was that w the mayor wanted, Chicago got.

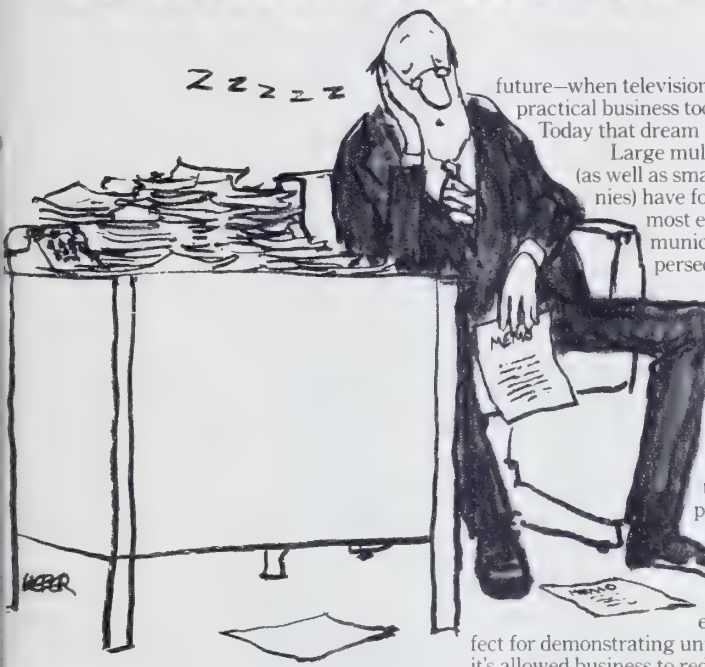
Luck of the Irish

"What luck for Chairman William Flynn of Zapata!" FORBES commente a report *(Feb. 19)* on how the oil-drill firm's $325,000-a-year chief execut had, with a last-minute maneuver, s mied an irate holder of 300,000 sha who was out to unseat him. The c became possible when Thomas Mel Evans, chairman of Crane Co. and a m ter of takeover strategy, called Flynn offered to sell him his 600,000 Za shares at $2 above the market price. accepting, Flynn had forestalled a po bly invincible takeover combination.

Flynn's peril was real enough. Ur him, Zapata's earnings had slipped f $30.3 million on $351 million reven in 1975 to $5.6 million on $521 mill in 1978. With that record, FORBES c mented, "the chief executive of m

Zapata's ex-Chairman William H. Flynn
Luck is a sometime thing.

IT IS NOW IMPERATIVE THAT AMERICAN BUSINESS FIND A MORE STIMULATING WAY TO COMMUNICATE WITH ITSELF.



Every day, American business spews forth a virtually endless stream of inter-office memos, conference reports, training manuals, brochures, telexes, phone calls, slide shows, letters, telegrams, direct mail pieces, annual reports, press releases and newsletters.

The average employee is deluged with communication.

And there is no way of telling how much of it is either ignored, forgotten, misplaced or summarily disposed of.

In short, American business is in the throes of a vast and complex communication crisis.

A problem that today—in an age of shortened attention spans and heightened communications costs—cries out for an efficient and imaginative solution.

Fortunately, we at Sony have spent the better part of two decades preparing and perfecting just such a solution.

It's an approach that transcends the paper avalanche, and actually manages to communicate in a riveting, arresting, persuasive manner.

We call it the Sony Video Communications System. And we believe it will have as significant an impact on American business—both large and small—in the 80's as the computer had in the 70's.

VIDEO COMMUNICATIONS: NO LONGER THE REALM OF SCIENCE FICTION.

For almost as long as television has existed, scientists, dreamers, and corporate soothsayers have speculated about the day—far in the future—when television would be used as a practical business tool.

Today that dream is indeed a reality.

Large multi-national corporations (as well as smaller domestic companies) have found TV to be the most efficient means of communicating with widely dispersed employees.

Insurance companies, fast food chains and major manufacturers—recognizing that people can learn from television in 1/6th their normal time—have saved untold amounts by putting employee training programs on tape.

Traveling salesmen, retail stores, and hundreds of other businesses have discovered video tape is perfect for demonstrating unwieldy products; it's allowed business to reduce sample inventories and cut travel costs.

Even doctors and lawyers have found ways to utilize the medium to their advantage.

Often for less money—and always with significantly more impact—than any other audio/visual medium.

At Sony, we offer not merely the equipment, but also the practical experience to tailor a video communications system to fit both your needs and your budget, forever keeping the great arbiter of all business innovations in mind: your profits.

AN INTEGRATED SYSTEM VERSUS THE PIECEMEAL APPROACH.

While there are any number of companies that build cameras or tape players, even the most advanced video equipment can become a morass of electronic junk unless it's put together in a coherent, sensible manner.

At Sony, before we talk about a single megahertz, we analyze your communications needs.

We meet with your people.

Look at your goals.

Study your logistics and budget.

And then—and only then—drawing upon our experience with literally hundreds of other companies, do we feel qualified to recommend a comprehensive video communications system.

Admittedly, our capabilities allow us to offer you anything from the simplest black and white video recorder to something approaching the CBS Television Network in size.

But being the only communications company in the world to produce the full range of video equipment, including video cassette players and recorders, cameras, monitors, editing units—even the video tape itself—offers several distinct advantages to the video neophyte.

There is only one company to deal with.

Only one service organization to call.

There is no need to worry that one piece of equipment is incompatible with another.

Or totally obsolete.

HARNESS THE GENIUS OF THE WORLD'S PREMIER VIDEO MANUFACTURER FOR YOURSELF.

Over the years, the name Sony has become synonymous with electronic innovation and quality.

In 1955, Sony marketed the world's first transistor radio.

In the 60's we introduced the miniature television set.

Sony Trinitron color television sets have often been heralded as the world's best.

The Sony Betamax is so innovative that several of our competitors are using our patents.

And today, our video communications systems are being used by over 800 different sized corporations, a handful of whom are listed below.

ENERGY CONTROL.

How Honeywell helps Rockwell save–enough to run 17 buildings three hours a day. Free.

Controlling energy usage at Rockwell International's Anaheim complex is a big job. Facilities of its Electronic Operations occupy 17 separate buildings—a total of 2.4 million square feet.

Yet here, a single energy management system, Honeywell's Delta 1000, now provides centralized control of heating, cooling and ventilating for the entire complex. Last year, in fact, Delta cut Rockwell's energy costs some $245,000—enough to heat or cool all 17 buildings for more than three hours a day. Free.

In less than two years the system will save its entire cost. After that, all savings go straight to Rockwell's bottom line.

Expect energy savings–with comfort.

Whether you have one building to manage or a group of them like Rockwell, a Delta system will control your building's energy-using systems the same way. Using software tailored to your needs, it verifies temperatures, meets changing occupancy schedules and operates heating, air conditioning, and lighting equipment for maximum energy savings. Without sacrificing the comfort of building occupants.

In hundreds of buildings large and small, Delta energy savings of 20 to 30% are common. But that's only part of the story.

More savings, plus better control.

Honeywell centralized building management brings substantial manpower savings, freeing your technical staff to maintain and improve your physical plant. More efficient operation extends the life of expensive mechanical systems. And better management information—via instant CRT displays and permanent hard copy records—keeps control of all decision making where it belongs: in your own two hands.

What Honeywell offers you that no one else can.

Delta 1000 is the product of Honeywell data processing technology and Honeywell's long established leadership in temperature control. No one else designs, builds, installs and maintains all major system components—from thermostats and dampers to computers. One totally responsible supplier backs up the reliability of your system, end to end, year after year.

We offer you the strength and stability of a large national manufacturer. Plus prompt and personal attention to local projects through more than 100 branch offices. Each is staffed with Honeywell hardware and software experts to work with you all the way. From planning and application to startup, customer training and operational support.

Conservation won't wait.

We're helping Rockwell save energy and achieve better building management control. Let us show you how we can help you. Write now to Honeywell Commercial Construction Division, Dept.04K14, Honeywell Plaza, Minneapolis, MN 55408.

From the most complex computer systems to the simplest controls, providing better ways to help you control your business has always been our business at Honeywell.

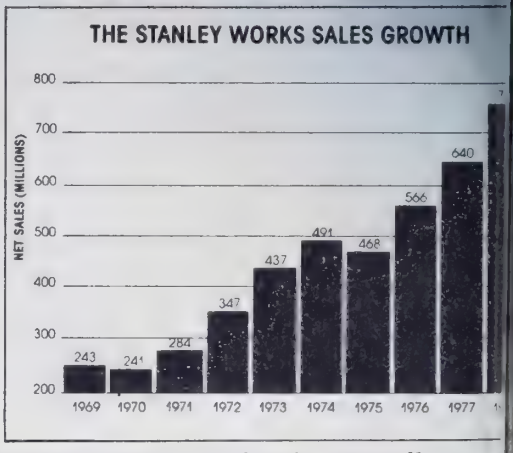
CLARK

THE DO-IT-YOURSELF INDUSTRY'S SALES PICTURE SHINES 3 TIMES BRIGHTER THAN TELEVISION.

Sales of television sets in 1978 reached an all-time high of $6.7 billion*, and 97% of all U.S. households now have at least one TV. But the tube isn't the biggest leisure activity Americans are putting their money into. At $21.1 billion**, the do-it-yourself industry tops it more than three times over, and has doubled in size in the last five years.

Stanley's early belief in the do-it-yourself generation has really paid off. Tight money has led to more people improving their homes rather than selling them. And the rising cost of professional help has led to more people doing their own maintenance and repairs. So, today nearly 3/4 of all Americans consider themselves do-it-yourselfers. Almost half have home workshops.*** Stanley has supplied them with tools, hardware, and drapery hardware; with new products like the "U-install" Garage Door Opener; and a growing library of "How To" plans. And, because do-it-yourself products are basic, lasting, and affordable, they tend to be both inflation-proof and recession proof.



So when we say "Stanley helps you do things right"™ we're talking about investing in Stanley as well as do-it-yourselfing. Our record supports our claim: 103 consecutive years of dividend payments, dividends that ha increased steadily for the last eleven years, and a 45% increase in the quarterly dividend rate in the last 21 mont For complete financial information write to: Thomas K. Clarke, Vice President, Finance, at the address below.

"OUR AIRPORT SHOWS THE RIGHT ATTITUDE FROM THE GROUND UP."

Amon Carter, Jr.
President and Publisher
Fort Worth Star-Telegram

"Airports can make or break you. Getting to and from... parking... luggage. So when we built Dallas/Fort Worth Airport, businessmen here were in on it from the ground up. And it shows.

"I can get from my desk to a departure gate in about 30 minutes. Make a business lunch in L.A. or New York and be home for family dinner. Or turn it around and have quick and easy fly-in meetings at DFW's on-airport hotel.

"Non-stop routes cover America. There's direct service to Canada, Europe, and South America. And Concorde flights to Paris and London. Along with multilingual services to help international travelers.

"Even little things like baggage claim areas work better. Because they're close to the gates, on the same level, and at the same terminal.

"And because of the weather, planes run year 'round. On time. Airline pilots have voted DFW the safest airport in the country.

"DFW makes it easy. Because it was built with the right attitude: that an airport isn't just for planes—it's for people."

Amon Carter, Jr.

For more information on the Dallas/Fort Worth Airport and other business facilities in our market, contact: Worth M. Blake, President, North Texas Commission, P.O. Box 61246, Dept. V, Dallas/Fort Worth Airport, Texas 75261. Or call: (214) 574-4430.

Somewhere around 400 B.C., a group of Celts quit feuding long enough to build a little village on the Danube.

In 800 A.D. it was christened Vienna and that made everyone Viennese.

Which meant the search was on for some nice music to dance to.

When Johann Strauss, Eduard's great-great-grandfather, came along and gave us the waltz 1,000 years later, we lionized him.

But our national quirk, best expressed by the attitude that life is a stage to play on, compels us to go with the disco as well.

It's this love of all things pleasant that gives us Vienna with eleven stately concert halls on the one hand and 50 acres of lively amusement park on the other.

A sophisticated night life after the sun goes down, the quiet beauty of the Vienna Woods after the sun comes up.

It also gives us Innsbruck. An incredible ski center in the winter. An incredible vacation area in the summer.

And Salzburg, called "The Rome of the North." Except that doesn't do it justice.

And Graz. You've never been to Graz?

Or taken a river boat down the Danube? Or driven over the roof of the Alps? Or encountered a hot sausage at a "Würstelstand"?

It's time. And it's easy.

Swissair, the airline of the Alps and representing Austrian Airlines, is your logical choice.

Just give them a call or see your local travel agent.

Meanwhile, if you'd like to know more about the pleasures of our country, drop us a line and we'll mail you some beautiful things:

Fact and Comment

By Malcolm S. Forbes, Editor-in-Chief

INCOMPREHENSIBLE: MOST AMERICANS DON'T COMPREHEND

hat soaring oil prices are *not* the result of U.S. oil company onspiracies, that the shortage of the stuff *is* real.

There's a price conspiracy all right. But it stems from our oaring imports and the rest of the world's constant increase in il usage. Libya, Iran, Iraq and other U.S. haters are ecstatic hat they've got us and the Free World by the energy throat.)ther oil sellers can't resist—and why should they?—getting a igger price by exporting less oil and gas.

So while our Governor Browns prevent Sohios from piping llaskan oil to inland and eastern refineries; while Schlesinger-ing Capitol energy administrators energetically rebuff Mexican sources and confound companies trying to get more out of our ground, we blithely continue compounding our nearly catastrophic energy situation.

Those gasoline station queues of six years ago are around the corner. So are $1-a-gallon prices.

And until most Americans stop stupidly blaming nonexistent oil company "conspiracies" and instead start demanding that we do the many quickly do-able things that can really help solve the crisis, it'll continue to get worse and worse and worse.

THE "DESIRED" BUSINESS SLOWDOWN IS ONE "GOOD"

that may result from this renewed energy *crise*: It will give such a kicker to the inflation rate that the whole economy is apt to dampen down and demand may cease chasing capacity.

. . . AND THE OTHER GOOD THING ABOUT OPEC'S

itest price rape of its totally dependent customers is in the est tradition of the ill-wind-blows-*some*-good. Though our nflation rate's ominously higher than ever, the dollar has rmly firmed because every country needs a lot more of 'em to neet the quantum oil price jump. The stuff has to be paid for in .S. bucks.

In addition to this greater demand for our innumerable dollars abroad, the demand for American goods continues stronger because they are still *very* cheap as a result of the dollar's long, deep depreciation. Too, the American market remains the hugest and most stable one, where the oil-rich can put their vast stockpiles of $$$ to work remuneratively and safely.

So, buck up. The buck's up.

GIVING UNASKED-FOR ADVICE TO MEXICO

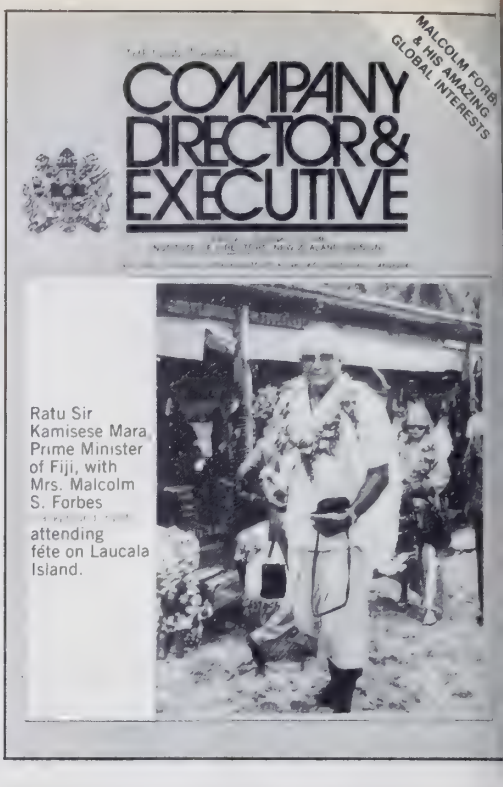
, we vehemently agree *(Fact and Comment, Dec. 11, 1978)*, no-no these scary oil-scarce days.

But, with humble and genuinely friendly intentions, we ould like to offer a suggestion to President Portillo of Mexico: wiftly crack down on Pemex, your government oil agency, nd make it compensate in a decent way the peasants on hose land vast oil reserves have been found.

Expropriating their farms—and further inciting them by lling behind in compensation payments—is the wrong way to go. Instead, let the peasants share a mite in this great, literally immense, good fortune. Such action would show that this Mexican government does believe in sharing the wealth of its people with its people.

Imagine, in Texas or Oklahoma or anywhere else in this country, how much of our oil, our gas or other natural resources we would have brought on stream if those lucky enough to own the surface turf were totally frozen out of the fruits beneath.

Reprinted from "The New Zealand Company Director & Executive," February 1979



Ratu Sir Kamisese Mara, Prime Minister of Fiji, with Mrs. Malcolm S. Forbes attending féte on Laucala Island.

HIS TINY ISLAND EMPIRE

A few of the following remarks, from an interview printed in The New Zealand official journal of the Institute of Directors, were made more in humor than in accuracy. With Editor J.D. Watson's tape recorder clearly shown in his hand, I can't deny I said 'em.—MSF

Malcolm Forbes, fast talker, faster traveller, even faster planner, the kind of man they write books about . . . deems it reasonable to spend a reputed $60,000 on a one-day "party" to mark the next stage in developing his Pacific paradise, a 4.7-square-mile island 160 miles off the main island of the Fiji Group which he sees only rarely—an event attended by the Prime Minister of Fiji, invited guests from Stateside and people from New Zealand and Australia.

Eccentric? Only in the sense that a man with all the needful is prepared to lay a fair bit of it on the line to back up a hunch that he can make still more money and confer a community benefit into the bargain. After all, the son of an Aberdonian printer (who established the forerunnner of today's prosperous FORBES magazine) must have a considerable canny streak in his makeup.

Laucala (pronounced Lauthala) Island came into Malcolm Forbes's possession when he bought it from Morris Hedstrom in 1972 for $1 million. He has poured money and equipment in to upgrade its economy, expand its development potential and bring prosperity for its inhabitants, who have increased from some 200 to about 350. In 1975, he threw his first shindig to celebrate the progress made up to then, travelling in his own golden DC9 jet sardonically named the Capitalist Tool. He doesn't own it any more.

Money Maker

"The Capitalist Tool was turned into capital," Mr. Forbes explained to me. "A year ago, a friend of mine, Mr. Kirby, the head of Westinghouse, expressed an interest in purchasing our plane because they had a big contract in Hawaii and he offered me $1 million more than we had paid for it. Since it was costing us almost $1 million a year to run, by being gracious and by saying yes, I instantly made $2 million, so that's the answer.

"I found that the food is better on a commercial airline, the pilots don't have to sleep as often, it took us three days to get here from New York, be it a long-range DC9 or not, and this way we leave New York and in less than one day we are in Nandi and Fiji. With the food being better and the service more reliable, the only alternative was to get a better plane, and that seemed an expensive solution, so we are out of the private airplane business."

Today, a jetty is being built at Laucala Island, it has an airstrip, crushed coral roads, new houses and a school built on the spot "with our own labour from blocks made here," a new copra dryer replacing the original one destroyed by fire and a power plant.

Fuel Saving

"Now," says Malcolm Forbes, smiling broadly, "we have the facilities to attract and keep good people, and enth siasm. Phase three is profitability and we think that to achieve it, with th economy of the island, is going to make all kinds of contributions to ou exchequer."

For starters, by using solid fuel (husk in the dryer the enterprise saves $1,000 a month—which is worth havin even for a millionaire.

"We are using the coconut husks a solid fuel with a fan business that enables us to do all the drying almost hours a day, where we used diesel fuel before. $1,000 saving a month or just that. When we get into producer gas with the shell business, which ma be a year down the road, we will only be using fuel for the vehicles on the island. That has gone very well because there are two ways to make mo ey. One is to spend less, and the other is to keep more of your income

"And then the crops—we were very encouraged by the corn; we will have five acres of kava under production. Most of the things we are doing should begin to bear fruit.

"We are even raising goats; they don multiply like rabbits, but they do multiply. We have them for both mil and meat, but principally meat. We are encouraged to think that '79 will be break-even year and '80 could begin to be profitable."

Forbes had spectacular plans to market a coconut cosmetic on a gran scale. It didn't work out. As Malcolm relates with candour.

"What has happened to that is very simple; we haven't been able to develop the market. It would mean

ɔping our own 500 tonnes of oil;
t would mean building our own oil-ex-
ction operation and being able to
rantee a uniformity of quality to
the approval of the Food and Drug
ministration. This is a tremen-
s administrative problem even for a
metic company like Max Factor
I know now more than I did then.
Cosmetics, just like perfume and
nany things, are purely a marketing, a
chological and advertising under-
ng. It has damned little to do with
t's in the tube or in the jar; it is
t women think is coming out of it
n they put it on their face, or
, or skin, or hair. That is an advertis-
and marketing problem, and all
are doing here is growing delightful
onut oil. I haven't said we are not
g to do it. Some day we are going to
e our own line of products.
We may not make any money on it,
we will have the fun of it. But
e is a price for fun. So the answer to
the idea and the enthusiasm ran
n this instance against the reality of
cosmetic marketplace—and that
big, tough and different business
n copra."

His Own

asked Mr. Forbes for details of the
tal structure. Does he have a
ding company linking his manifold

ey.

ing In

We have been putting in, instead
king out. We bought this land
an Australian company that
ceased spending money on the
place because the price of copra had gone down so much that they simply cut back on everything: The living conditions, spasmodic work, the extraction was short-range.

"We have both preached and measured American companies by whether or not they confuse the short run with the long run. Anybody can make a quarterly statement look very good if they stop spending money on R&D. If they are marketing, they can cut an advertising budget in half and, gee, their next statement makes the semi-yearly earnings look great, but the price is down the road. That's what we try to report on American companies—which measure, which vision, which range, what's at the price of what? We are applying the same thing here.

"So to answer people's questions, no, we are not going to philanthropically hand the island over. I don't know to whom it would be handed, I don't know if you would run it by commune or what-not. The way it is run now everybody knows that the manager is in charge, everybody knows that there is a better day's pay for a good day's work; there are all kinds of incentives, I think. The whole way of life and spirit has improved. I am not sure turning over the island lock, stock and barrel, and just leaving it would necessarily make it a greater paradise."

Millionaire host Malcolm Forbes keeps his cool while going on record with the facts ... and bestowing hospitality at his island hilltop home.

Optimistic Outlook

The incredible Mr. Forbes is an unabashed optimist that things will turn out well for the U.S. economy and the world in general.

"I think I don't share the pessimism that most of the American economists are expressing," he declares. "I think that is a source of hope when all those informed fellows get together on how dire things are going to be; it is a prelude to prosperity as a rule.

"I don't say that cynically—they just get so enmeshed in the statistics and the woods of facts and figures and forget that what got them all upset and what drove the stock market down was the prospect that we were going to slow down on inflation. So everybody said 'Gee, that means a recession.' It doesn't.

"The restoration of confidence in the dollar will come, and that will reduce the rate of inflation considerably when they know the Government *is* serious, and I think that the President is serious. I hope this time he will be consistent.

"All the things that have driven the market down and depressed a lot of economists are the things that are essential to restoring the value of the dollar and to slowing inflation. Inflation was something everybody worried about until suddenly they did something about it and then the same people said, 'My God, it's a disaster! We are going to have a recession.'

"It is fortunate that most people are not economists and they have more common sense. The restoration of confidence in the Main Street of the U.S. and the capitals of Europe is very real, so long as the President doesn't take his foot off the brake. I think really listening to economists is something students should do, so they know what *not* to practise when they are out in the wide world."

Pacific's Potential

Mr. Forbes is utterly sold on the potential of the South-west Pacific for the kind of development he has launched on little Laucala.

"Well, if we are fortunate we will be doing more of it here—I think so. I think the attitude is great, and I am not talking about superficial spirit. I think it is an extraordinary country, it is an appealing country to a lot of foreigners if they are not looking for instant return. As an investment area, where do you find comparable possibilities, potential, where small amounts of capital can have a great impact and where people have a positive attitude about it?

"I mean, in Fiji you can have all your political differences between competing parties, you can have that sort of vehemence which Americans thoroughly understand, but I don't think you have the threat of revolution and extremism. Compared to other parts of the world, Africa, some areas of South America, the alternative isn't the dictatorship of the Right or the Left, but who gets the steering wheel. It is in the framework of a democracy and of a people. I think there is a great sense that they are well off, everybody wants to be better off. The first sign of being well off is when you want to be better off. I think that prevails here."

ATOMIC ENERGY IS FURTHER BEHIND THE 8 BALL

Why? Because, quite aside from hard-core fanatic environmentalists, a growing number of people seem to have increasing doubts about the safety of such plants; about the safe disposal of atomic wastes; about the availability of adequate uranium fuel that would not also be subject to a cartel of foreign powers. Utilities themselves, for all these reasons plus pole-vaulting construction cost estimates, are canceling or postponing projected atomic power plants.

It's no use to say that nobody's yet died from an atomic plant accident. The fact that there have been a number of widely publicized leaks, fires and other accidents—though without fatalities—doesn't reassure an increasingly dubious public.

It's no use, either, saying that we "have to" have ato power to meet power demand. If the public *won't* hav other ways will be found to fill power needs, or pc "needs" will be reduced by the simple fact of not havin we want.

All this is not to say that atomic power has a dwind future. I'm simply pointing out that the glibly rosy forecas a geometric increase in this energy source have evaporated they won't be resurrected until the aforementioned probl are met with more convincing answers.

The heat's now on for more coal, less for atomic energy reduce our soaring dependence on OPEC oil.

NOTES FROM A TRIP THROUGH CHINA

By M.S. Forbes Jr.

In a discussion over China's modernization program during a recent trip in that country, a high Communist provincial official observed, "Of course, the U.S. became very rich selling arms to its allies during World War II."

When it was pointed out by members of the group I was traveling with that after 1940 the U.S. gave away arms to its allies, the man and his colleagues chuckled with disbelief. The smiles soon changed to expressions of shock when they realized that we were serious.

"Do you mean to tell us that the capitalists made those weapons for no money?"

"No, they were paid by the U.S. government."

"And where did the government get the money to do that?"

"From the taxpayer."

"Impossible!" the Chinese exclaimed. "You cannot expect us to believe that the U.S. gave so much material away." Their shaking heads deterred us from even attempting to tell them about the Marshall Plan. Although "capitalists don't give things away," these Chinese found it difficult to understand that capitalists' governments often do.

Virtually every shortcoming in China today is blamed on the Gang of Four. One realizes that these scapegoats make it possible for the Chinese to be so frank about backward conditions and their need for assistance from the U.S. and other Western countries.

One evening in Peking we attended a play depicting the difficulties of a provincial school during the Cultural Revolution. (The heroine was a teacher who wanted to continue giving students examinations and who later died because of her beliefs.) During the intermission, one of our guides explained to us that the Cultural Revolution had ruined Chinese education: "The standards were so low that the students learned very little."

When this writer jocularly observed that U.S. educational standards seemed to have deteriorated during the same period, the startled guide said, "But how could that happen? The U.S. didn't have a Gang of Four."

The centuries-old antagonism between China and Vietnam was underscored one morning when this writer asked a guide how the war was going. "There is no need to worry," he replied. "Unlike you Americans, we are not afraid of the Vietnamese. Unlike you, we will teach them a lesson."

Later, several of our group tried to explain to the Chinese why the Vietnam war had been so traumatic for the U.S. When one of us mentioned that some 50,000 American men had lost their lives, the reaction of the Chinese was, "Is that all? You mean to tell us that that could upset a great country like the United States?"

When it comes to sexual mores, the Chinese would do the Victorians and Puritans proud. Premarital sex is taboo. No contraceptives are available for single persons. The ultimate disgrace in Chinese society is for a woman to have an illegitimate child. Males in urban areas are not permitted to marry before age 27 (25 in the countryside); females, 25 (23).

A story told by one of our guides underlined how strict these conventions are. One of her classmates was unusually beautiful and had several boyfriends (a shocking situation, apparently). As was to be expected from someone so loose and pretty, the guide went on, she became pregnant. Before she was permitted to have an abortion, however, she had to name the father. Then both had to undergo harsh public criticism. Our guide concluded smugly, "No one would wish to marry her now."

One evening a handful of us (including an American who could speak Chinese fluently) made an unannounced visit to a city hospital. The hospital had all the attractiveness of a dank cellar. A glance at the floor showed that the spittoons were rarely used. There were eight patients to a room and they were dressed in their street clothes. Their bedding could hardly be described as antiseptic.

The American doctor with our group asked his Chinese counterpart if he could take a look at the X rays. The X ray of the first patient was found under a pile of papers in his bedside drawer, that of the second patient under the mattress, and the X ray of the third patient had been wrapped in newspaper and placed behind a picture on the wall.

A look at health facilities in underdeveloped countries does make one realize how well off we in the West are and makes the plethora of medical malpractice suits in the U.S. seem ironic.

By chance some of our group met several Chinese dissidents. The criticism of their country by these people was scathing. One of them said, "Your system is good. Ours is bad." When asked why he thought so, he replied, "How is it then that the U.S. has been able to do in 200 years more than we have done in 4,000?"

A scrapbook day.

One in a series of paintings by Joseph Csatari depicting Taft Broadcasting Activities

It was a happy day. A family day that brought everyone closer together. Tomorrow's memories, to be relived and enjoyed together.

Even though our name is Taft Broadcasting, our themed amusement parks host over 6 million people a year. Our radio and television stations serve eight major markets; and Hanna-Barbera, our television and motion picture arm, counts its audience in the hundreds of millions worldwide. Our success and profits grow in the expanding areas of family entertainment.

For complete information on our steady growth, write to Mr. John T. Lawrence, Jr., Taft Broadcasting Company, 1906 Highland Avenue, Cincinnati, Ohio 45219.

Imagine tomorrow not liquid, not solid.

We do.

Picture all the work accomplished by all the natural gas America has produced in its entire history. All the bread baked, homes heated, crops dried. Now picture twice that amount.

We think there's *that much* waiting to be found Under U.S. soil. Beneath U.S. waters.

Which is one reason why Mobil has spent more than $1 billion on Gulf of Mexico leases since 1970. A good investment, it turned out, for our natural gas finds have been outstanding. More than making up for declining production from older Gulf fields, they've boosted our offshore gas sales from the Gulf by some 80% during the 1970's, to almost 300 billion cubic feet a year.

Abroad, too, we've had that special touch with gas. Mobil's fields in Germany now produce over a fifth of all the gas that country uses. Liquefied natural gas from the huge Mobil-discovered Arun gas field in Indonesia is already moving to Japan.

Gas, of course, has had political problems: wellhead price controls that for more than a quarter century inhibited the search for new domestic supplies. And those problems aren't over yet. Which is why we speak out for measures that will ease complex gas regulations and encourage gas producers to do their real job—finding energy needed for a better tomorrow.

Camels kneel to let passengers on, but with buses people have to climb steps. Maybe the U.S. should switch to camels?

The strange case of the kneeling bus

By Fern Schumer

While President Carter is urging Americans to use less oil, his own bureaucracy and minority pressure groups have stymied progress in one of the most promising areas of energy saving, public transportation. Outside of a few metropolitan areas like New York, Boston and Chicago, public transportation can mean only the motor bus; subways and railroad lines are simply too expensive to build.

So why are the buses presently in use based on 20-year-old designs, crowded, smelly, with windows that won't open, air conditioners that don't work and heaters that won't stop? Designing a new and better bus would seem a simple enough problem in an age of computers and space travel. Nevertheless, for the last ten years progress in bus design has been stop and go—mostly stop. Here's why: The federal government decides what kinds of buses will be used.

Washington pays 80% of the cost for mass transit, and so federal bidding rules say that the lowest bidder gets the business. Since a new bus would cost more to build and develop than older models, no manufacturer could afford to develop new models; he would be priced out of the market.

The federal solution: a bus contest, with each bus builder—and there weren't many, with General Motors Corp. the biggest—to submit its design, followed by prototype building, testing and more prototypes. That was eight years ago, and the final decision is yet to be made. Ironically, the plan to increase competition has had the effect of lessening it.

The climax could come May 2 when manufacturers are to bid for the first major contract to build "Transbus" (short for Transit Bus), the bus of the future. But, hang on: There are only two manufacturers left in the bus field—GM and Grumman Flxible Corp. (American Motors pulled out of the transit bus business last year because of the confusion.) Grumman has announced it won't bid on the Transbus and GM hasn't decided yet. After Sept. 30 the government will only subsidize the Transbus and no one wants to build it.

GM's Rapid Transit Series bus

GM's advanced bus, which "kneels" at curbside to help the handicapped, costs about $110,000 each. Federal specifications for the "Transbus" would raise the cost to $230,000.

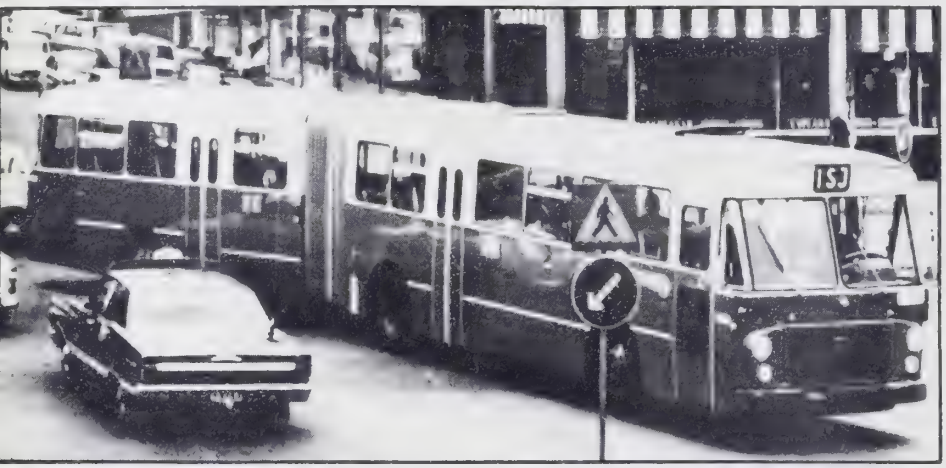
The Transbus, says GM, which built prototypes, is just too costly and technically unsound. The problem is a revolutionary design that makes the bus more accessible for handicapped passengers: The floor height is 22 inches and the bus "kneels" to 18 inches for boarding, and there's a front door ramp or wheelchair lift, too.

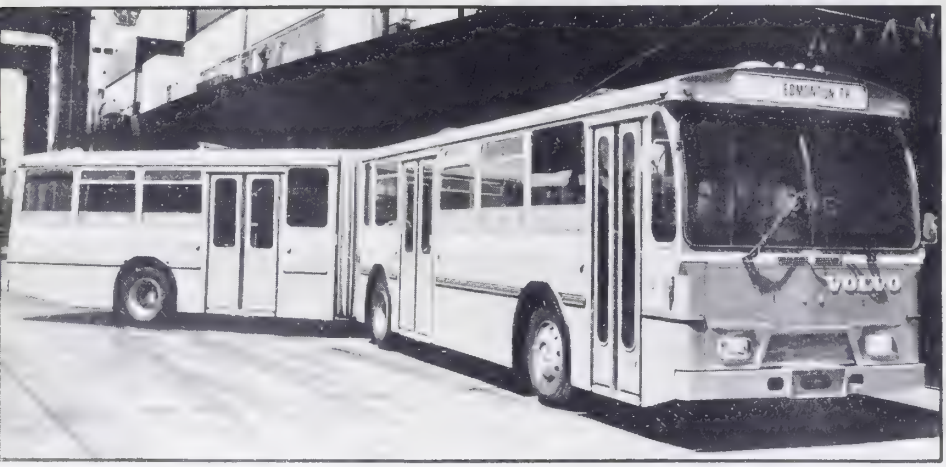
While the Transbus concept was being thrashed out, GM received government permission to build an interim "advanced design bus," which cost $80 million to develop and is now on the streets of Houston, Detroit and several other cities. Grumman Flxible, too, makes an advanced design bus which it wants to keep selling.

With so much money sunk in the advanced design bus, GM and Grumman do not want to start all over with the Transbus. Edward Stokel, director of public transportation for GM's Truck and Coach Division, wonders why a whole new design is needed for a kneeling bus: "Our present advanced design bus is everything the Transbus is. The only difference is that the Transbus has one less step, an extra rear axle, and its wheelchair lift is in the front instead of the rear."

He has a point: The Transbus would cost about $230,000 a copy as compared

Rear door of GM's "RTS" bus
In addition to the kneeling feature, GM's design accommodates a hydraulic wheelchair lift. In view of that, and all the time and money spent, GM wonders why it is being asked to start all over on a Transbus.





Articulated bus in use in Stockholm (above) *and test model in Canada*
Built by Volvo, each costs about $200,000 and gets 3 to 4 miles per gallon. Other articulated buses, which bend around corners, are made in Germany. But no foreign manufacturer—all are eligible to bid—can meet Transbus "specs."

with $110,000 for the GM advanced
sign bus.

Luring more citizens onto buses wou
seem to call for different solutions:
buses, little buses, special rush-hour
lanes that make buses faster than ca
More part-time workers to increase ru
hour service would help too. (Many cit
agree to hire only full-time worke
meaning eight hours' pay for three hou
work, which spirals costs and stints s
vice.) Obviously, more incentives
needed to get manufacturers more int
ested in the bus field, not fewer.

Thomas J. Bernard, president of Gru
man Flxible, says his company won't
on Transbus May 2 because "it is t
greatest risk any bus manufacturer cou
take. The contract specifications wou
only interest somebody intent on goi
out of business."

Foreign bus manufacturers may bid
the Transbus. While U.S. buses are su
posedly safer, Europeans seem to be w
ahead of Americans in bus design; ev
the buses in Red Square look snapp
than the typical General Motors dies
For example, the new articulated bus
which are being tested throughout t
U.S. (they bend around corners) ca
from Germany. But, no foreign manuf
turer now makes a bus meeting t
Transbus specifications. Nor is likely

Meanwhile, about 4,500 new buses
needed every year to replace old equ
ment. Many public transit authorit
have delayed orders until the Transb
issue is settled.

Not surprisingly, handicapped lob
groups see the Transbus as a symbol
their rights to equal access guaranteed
the Rehabilitation Act of 1973. Ma
handicapped leaders say they don't wa
special transportation because it carrie
stigma, a mark of inferiority. To lift th
supposed "stigma" they want the ta
payer to spend nearly a half-billion d
lars a year extra to build Transbus.

Today's America is a decentralized
ciety, living everywhere and headed in

t's still coup and countercoup at Beatrice oods. The king is now deposed—or is he? nd what of the peasants toiling in the fields?

The war of the succession

By Stanley H. Brown and Marcia Berss

THE DUST HAD just about settled after the last shakeup at Beatrice Foods Co.'s headquarters in Chicago hen Wallace Rasmussen, chairman and EO of the nation's biggest food com- ny, talked himself into another one. esult: At the annual meeting in June, eatrice's shareholders will meet the ird board chairman in 22 months.

After getting rid of a rival and potential ccessor, Rasmussen seemed finally to ve consolidated his hold on the com- ny when he persuaded the board last ecember to suspend the mandatory rule at would have forced him to retire at in July.

Then last month the board cre- ed yet another upheaval by re- rsing itself, reinstating Rasmus- n's July retirement and asking m to name a successor.

What happened? Hubris, the ide that challenges the gods. A ORBES article *(Feb. 19)* describing asmussen's coup quoted him as inimizing the contributions of rmer Chairman William Karnes, e architect of Beatrice's growth om a $250 million dairy chain to $5 billion conglomerate. That as too much for some board embers who began having seri- s second thoughts about the ived retirement rule. One out- le director said: "Let's just say e article was read by all the ard." Added another close ob- rver: "You just couldn't question asmussen's grandeur."

Grandeur or not, the man who rted out hauling ice in a dairy in ncoln, Neb. clearly had put his t in it. When the board met last nth at the Metropolitan Club on e 66th floor of Chicago's Sears wer, one outside member asked smussen, "Who would replace you today if you had to retire?" That's a question directors should and do ask these days if they're doing their jobs, but Rasmussen sensed that the question was more than hypothetical when he framed his reply: "If I left today, it would be Dutt and Eckrich; if I left in a year, it would be Dick Voell."

The meeting broke for a lunch of Boston scrod and more deliberation. When the directors filed back in they demanded that Rasmussen retire as originally scheduled, and then, 12 to 9, went along with his selections. James Dutt, 54, will be the next chairman and CEO, and Donald Eckrich the next president. (Passed over, Richard Voell quit the company, and two outside directors, both members of the nominating committee—Durward Varner, president of the University of Nebraska Foundation, and John Williams, chairman of the Williams Cos.—resigned, reportedly in protest over his treatment.)

Does that mean that Rasmussen's reign ends with his retirement in July? Probably not. For one thing, he retains his seat on the board till he's 68. For another, he now becomes chairman of the executive committee. But perhaps most important, Dutt is Rasmussen's protégé, for however long the mentor-protégé relationship lasts.

What has happened at Beatrice lately has its roots in the history of the company. Karnes, for all his energy and vision, was shortsighted about the "after me" problem. He named his own protégé, William Mitchell, as chairman and designated successor to Rasmussen when the latter was made president and CEO in 1976. That move didn't work because the two were antagonists from the start, and Rasmussen soon arranged a showdown with the board that resulted in Mitchell's 1977 resignation and his own elevation to chairman, along with the suspended retirement last winter.

At the time of the latest reshuffling last month, the board decided, in the hope of maintaining tranquility, not to drop those of its members who had reached the mandatory board retirement age of 68—including Karnes and his last president Don Grantham. In addition, three of its executives who were not slated for reelection will now also remain on the board. That bolsters Rasmussen, whose principal support has come from inside directors. But Beatrice has been under pressure from the Securities & Exchange Commission to increase the number of outside directors, and when the board finally decides that the air has cleared enough to replace those five, Rasmussen and his people will doubtless face a lineup less committed to present management.

However inadequate Karnes' provisions for his succession may have been, the sprawling decentralized enterprise he built has managed to thrive almost without regard to what was going on at headquarters. With estimated earnings of $260 million on sales of about $7.4 billion last year, Beatrice Foods has managed to keep the Meadow Gold milk, the Dannon yogurt and the Tropicana orange juice moving off the shelves as though Rasmussen and his adversaries were kissing cousins. The big question now is whether the turmoil in Chicago will begin to affect operations in the plants, the dairies and the warehouses. So far it hasn't. So far. ■

Beatrice Foods departing Chairman Wallace Rasmussen
He lost the battle of Beatrice. But the war?

Commonwealth Edison's nuclear problems have been financial rather than technological but Three Mile Island is still going to hurt.

Financial fallout

By Bob Tamarkin

FOR CHICAGO'S Commonwealth Edison—the nation's biggest supplier of nuclear-generated electricity—the recent Three Mile Island nuclear accident couldn't have come at a worse time. Long regarded as one of the best-run utilities, Commonwealth Edison, says Chairman Thomas G. Ayers, is in the grip of its "worst financial crisis" in his 41 years with the company.

Its problems are, fortunately, financial rather than technological, but the Pennsylvania mishap certainly exacerbates those problems. With $4.4 billion worth of construction under way, all of it nuclear, Tom Ayers faces the prospect of further delays in construction plus possible resistance in the market to future financing of a nuclear-oriented utility.

It doesn't help that Commonwealth will report a poor first quarter: Earnings will be down because the brutal snowstorms that afflicted Chicago plus shutdowns in one of its seven nuclear plants forced the utility to pay through the nose for outside power and additional coal and oil.

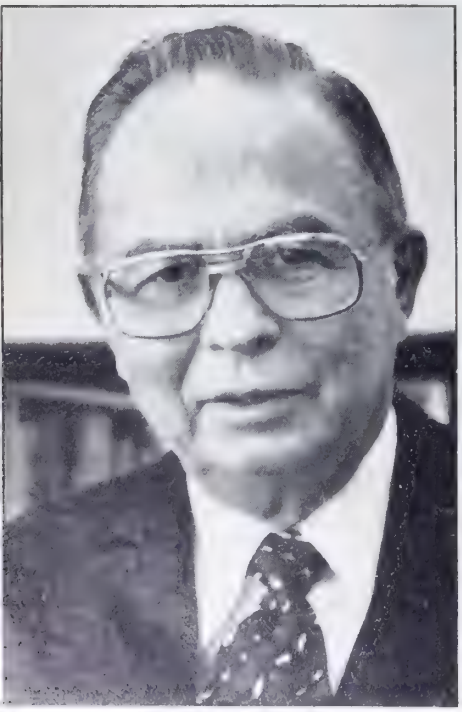
In January Moody's Investor Service lowered Edison's bond rating from AAA to AA because of the "strain of a continually escalating construction program" and a "delayed and disappointing decision by the Illinois Commerce Commission" for a rate increase. Last December the utility got $75 million of a $128 million rate increase requested in January 1978. The 3.1% rate hike had been Edison's first in the past 18 months.

Edison had hoped to finance 50% of the cost of its expansion externally. Even if it sells the $1.1 billion in vari securities it plans to sell this year would still be short $400 million.

Earlier this year, the utility mad common stock offering of $180 milli and sold $150 million of preferred sha in a private placement last month. placed another $50 million in pollut control bonds, and still has $300 mill of debentures in the offing. But under current rate structure, it is unable to o a planned $250 million in first mortg bonds without reducing its coverage 2.4 times pretax earnings, below the minimum set in its bond indenture. N is further equity financing palatable: T stock, yielding about 10% at the curr market price of $25 a share, is selli over $4 below 1978 book value.

Obviously, either Edison's expansi program or rate structure has to give. N many were surprised when Edison ea this month asked for another rate crease—least of all the analysts who ha repeatedly criticized Edison for not pu ing past rate requests hard. The requ of $452 million would increase ra 18.3%—the biggest single incre ever—for Edison's 8 million custome or about $4.50 a month for the aver household. What did surprise some, ho ever, was Edison's request that half t increase be available on an interim ba while the hearings for the full amou proceed. The interim increase, insi Chairman Ayers, "is absolutely crucial finance our business." The company ready has contingency plans to st work on some of its new plants.

Ayers claims that he was braced fo round of protests after what happened Three Mile Island but was pleasantly s



Commonwealth Edison CEO Thomas Ayers
His customers aren't worried.

Dresden I, Commonwealth Edison's first nuclear plant 50 miles west of Chicago
A year-long shutdown to chemically clean 19 years of nuclear crud.

rised that there was almost no back-
sh. In the week following the incident,
ys Ayers, Edison received only two
lls from worried customers: "It tells us
r customers still have confidence in us
d are not panicked." Chicagoans, ap-
rently, are happy with Common-
ealth's dependable, relatively low-cost
rvice. The problem is that anything
at may delay work on the six nuclear
ants now abuilding would prove ex-
emely costly, with interest rates as
gh as they are. In the long run, Com-
onwealth's consumers will probably
nefit because nuclear power plants are
eaper to operate than coal- or oil-fired
ants, but in the short run, the cost of
nstruction loans could be crippling.
The cost of building new nuclear plants
staggering. For example, a 1,000-
egawatt nuclear plant that took five
ars to go on line cost Edison $147
illion in 1970. If proposed today, the
me plant wouldn't be on line until 1989
six times the cost. In any project that
kes ten years to get into operation,
terest costs alone will at least double
nstruction cost—to say nothing of what
ntinuing inflation will do.
Despite the Three Mile Island inci-
nt, Ayers still hasn't altered his basic
sition on nuclear energy and expects
ommonwealth to go 48% nuclear by
983. "In 21 years and some 450 reactor
ars of U.S. operating experience, no
nployee or member of the public has
er been injured, much less killed, by
e operation of a commercial reactor,"
e says. But he concedes: "Confidence
s been shaken. When you oversell safe-
, an accident hurts your credibility."
A team of Edison nuclear engineers is
rrently at Three Mile Island assisting
decontamination procedures and look-
g for ways to improve Edison's safety
stems. (One of Edison's main stations
of a design like Three Mile Island, but
as built by another manufacturer.)
When he considers other energy
urces, Ayers becomes even more ada-
ant about nuclear power. "I don't think
l is an alternative any more; too scarce
d high-priced," he says. Last year Edi-
n produced 30.6 billion kilowatt-hours
th nuclear energy, or 45.5% of the
mpany's total electrical output. To
oduce the same output with coal, he
ys, would have cost Edison $365 mil-

fall back upon. ■

A smart Oklahoman is using Elsie the Cow to help solve the energy crisis.

A lot of manure

By Allan Sloan

IT WAS ONE of those "great" ideas—converting part of the nation's ample supply of cow manure into the equivalent of natural gas. James M. Samis, backed by Dallas oilman Clinton W. Murchison Jr. and inspired by a festive bottle of Scotch, had even picked out a great name for the venture: Calorific Recovery Anaerobic Process Inc., a corporate title with an evocative acronym.

Samis, a 53-year-old mechanical engineer, built a $3 million plant to convert 800,000 pounds of manure material a day—a typical feedlot cow excretes about 11 pounds of waste a day, plus 61 pounds of liquid—into 1.6 million cubic feet of methane gas, with fertilizer and cattle feed as by-products. The gas burns like natural gas.

The Natural Gas Pipeline subsidiary of Peoples Gas of Chicago was glad to buy the gas, and Samis didn't think he'd have any trouble selling cattle feed or fertilizer. Manure wasn't any problem, either, because Samis built the plant near large cattle feedlots at Guymon, in the Oklahoma panhandle.

The project was a natural outgrowth of the main business of Thermonetics, Inc., the Oklahoma City-based parent of the new venture. Thermonetics, owned mostly by Murchison with Samis as a junior partner, provides heating and cooling to three University of Texas campuses, using natural gas as fuel. Samis, afraid that Thermonetics might lose its gas supply, wanted to be able to make his own.

Samis was so happy about signing Peoples that he christened the new company on the flight back from Chicago to Oklahoma City as he, his lawyer and their wives rejoiced over a bottle of Scotch.

The plant works by mixing manure with water in a closed vessel, and letting it sit at a 95-degree temperature for ten days or so while anaerobic bacteria work on it. That produces gas, which is drawn off, purified and given to Natural Gas Pipeline. What's left over is either cattle feed or fertilizer, depending on how it is processed.

The only problem Samis had was that part of the plant, opened in 1977, didn't work right. Because the plant's manure is gathered by front-end loaders that scoop up everything and dump it into trucks, Samis says, "You had rocks and sand and fence posts that got into the manure. It cut holes in the pipes and pumps. We had to throw away every nut and bolt in the front end of the plant, and start again."

That cost another $2 million, says Samis, bringing the total cost of the venture to $5 million.

Now the plant is working better, and the problem's been licked, he says. "We've had a long, hard battle learning how to do this, and we've solved it." ■

Oklahoma engineer Jim Samis
His manure plant's working now.

What makes Union Camp profit leader of the big paper companies? In a word, timing.

Cyclical is as cyclical does

Union Camp's Sox Calder (left) *and successor Pete McLaughlin*

Not doing the wrong thing was as important as doing what's right.

"THE PAPER BUSINESS," says Union Camp Corp. Chairman Alexander Calder Jr., "has been branded as heavily cyclical, but it's not cyclical on the demand side. It's cyclical on the supply side." It's a significant point Calder is making and it helps explain why his Union Camp, the U.S.' tenth biggest paper company, remains the industry's most profitable major company.

In Wall Street's thinking the terms "paper industry" and "cyclical" are almost inseparable, but the fact is that demand for paper products in the U.S. grows at a fairly steady 3% to 4% a year, come what may. However, modern paper plants are so huge that whenever a new one comes on stream a big bulge occurs in supply somewhere. Bring on several at once, and you've got a glut coming. That means price-cutting, and, since demand is fairly inelastic, nobody really gains. This is very different from the kind of cyclicality that afflicts steel, say, or chemicals, or copper, where demand can fluctuate greatly year to year.

This being so, the last thing any paper manufacturer wants is to expand when prices are weak. On the other hand, you can make very nice profits if you happen to be in a product where demand has gotten even temporarily ahead of supply as it has in white papers recently (*see* "Supercompany," *Apr. 16*).

It's a tricky game, and Sox Calder—as he has been known ever since his aunt knitted him his first pair of socks—is very good at playing it. Two years ago linerboard—the stuff that's used in orange juice cans and corrugated boxes—was in big supply. Prices were weak. Yet Calder picked that moment to start building a $250 million linerboard mill at Montgomery, Ala. It was very big money for Union Camp, whose total capital at the time was only about $900 million. The timing looked bad, too. Competitors wondered what he knew that they didn't know. In fact, Calder has sensed the market exactly right. The glut had discouraged rivals from expanding and so, during the time the mill was building, the glut was vanishing.

Last month, with the completion of that Montgomery mill little more than a year away, linerboard prices were running at $235 a ton, up from $195 as recently as November. Supplies are tight, inventories are down from 7 weeks o to 4.8, and Calder doesn't doubt that h be able to sell his new mill's product at a good price as soon as it becor available.

"Our timing is pretty good on tha he says. "The mill was hard to just but it'll come in in a tighter market th we forecast. There's no way we're going to be operating at more than 9 of capacity for the foreseeable future."

The new mill not only will expa Union Camp's commitment to a prod that accounted for over 40% of its to paper output last year but, because it i modern and efficient, it could cut Un Camp's linerboard production costs $22 a ton. Assuming the market ho the impact on Union Camp's ove profits could be considerable.

It's decisions like these—apparen risky on the surface, but reflective c shrewd, careful reading of the dynam of the market—that have earned Un Camp, over the past five years, an av age 20.9% return on equity, 13.8% capital. The $122.7 million ($5.06 share) it earned last year on $1.2 bill in sales was somewhat under i amounting to only 17% on equity, bu still surpassed the industry average. bad year for Union Camp would b good year for many of its competitors

"Strategically," Calder says, "we been in the right segments of the pa business—packaging and bleached pers. Some of our greatest decisions ha been not to go into a commodity. stayed out of the tissue side, out of newsprint side. We don't have any c mills—other companies are shutt down their mills or selling them We've kept our major mills up to date

An even bigger plus in Union Cam future is in the maturing of its long-te program to put its 1.7 million acres timberland on a sustained-yield ba That program was mounted and brou to fruition by Calder's right-hand m Peter McLaughlin, president and pu tive successor when Calder gets arou to retiring. Union Camp began putti its woodlands under the plantation s tem years ago, planting and harvesti them as methodically as you would a other crop. "These plantations mature about 25 years," McLaughlin sa "They produce two or three times much fiber per acre as natural stands, we've got this surge coming. When th mature we could get 70% to 75% of c papermill pinewood requirements fr our own lands, versus less than a th today."

How big a plus that will be ev McLaughlin hesitates to guess. Uni Camp's wood costs, he says, run arou $60 a ton in the open market, as agai a linerboard price of $235 a ton. By usi its own wood, Union Camp could redu that wood cost by perhaps $20 a t

There will be other advantages. "One of the delights of managing woodlands," McLaughlin says, "is you do have choices as to how you market the trees and the timing of the cut."

"We have an option to start cutting almost any time," says Calder. "The question is, Should you let them go to 30 years? That goes back to what your guess is on the future value of the plywood and lumber that we sell—products that use more mature trees—and what the computer says about shortening the cycle, the time value of money, cutting down and planting again right now.

"There's one other factor we probably ought to admit," Calder goes on. "When you cut will depend in part on how bad you need the earnings. It's one part of our operation you can control."

This year Union Camp won't need to cut trees faster to keep earnings up. Quite apart from the booming demand for most of its major products, Union Camp's earnings will gain perhaps 40 cents a share simply from the absence of a nonrecurring charge of 19 cents a share last year and a nonrecurring energy tax credit of 21 cents a share this year. "We think this year has got to be good," Calder says, "and so have the next three or four years. It takes so long to get new capacity on stream we don't see how the current upsurge can prove to be any flash in the pan." Wall Street guesses of 1979 results range from $5.50 a share to $6.20.

With the Montgomery mill nearing completion, Calder and McLaughlin have begun to look for new opportunities to expand. "We've got to look at bleached paper," McLaughlin says, "because that's been an awfully good business for us, and though we just added 15% plus to capacity—spent $100 million—in bleached paper, we're about at the time where we've got to make a major increase in that business.

"We've got our long-term debt down to the point where some of the analysts say, 'You guys got no imagination on how to spend money.' Our debt is now 18% to 19% of our total capital. But we're not going to increase our leverage just for the sake of doing it." The timing will have to be right. Exactly right.

For all these reasons, Union Camp currently sells at ten times last year's earnings while the typical paper stock sells at only 8. Even in this market, there's a premium on good management. ■

Who would believe Kennecott Copper has much of a future? But spend a few hours with Tom Barrow, and you begin to believe.

A man who knows where he's going

By James Cook

A YEAR AGO, FORBES described the proxy fight for control of ailing Kennecott Copper Corp. as a battle of lightweights, between on the one hand Chairman T. Roland Berner, a second-rate conglomerator who runs Curtiss-Wright Corp., and on the other hand the third-rate management team that had run the once-proud Kennecott into the ground.

That sad saga may have a happy ending. Chairman Frank R. Milliken, Kennecott's old boss, retired earlier than planned and Curtiss-Wright's Berner, with less than 10% of the stock, has settled for a two-year truce and a couple of seats on the board.

With the two lightweights out of the way, Kennecott now has a heavyweight boss. He's Thomas D. Barrow, a big snowy-haired Texas geologist who left a senior vice presidency at Exxon Corp. to become Kennecott's chief executive last December. Now 54, Barrow was responsible for steering Exxon into what were, for it, the new fields of uranium, lead, zinc and copper. As a token of good faith, Barrow recently laid out more than $750,000 of his own money to buy 38,000 Kennecott shares, making him the biggest single stockholder.

Barrow, a multimillionaire, does not personally need the $365,000 base salary Kennecott is paying him. He would not have taken the job if he did not have confidence in the future of copper.

"I recognize the industry is cyclical," he says, "but within those cycles there are times when you can do something pretty good and this looks like one of them. Short term, there are some fundamentals—the level of demand, the availability of new supply—that make us think the price of copper will stay high for at least three or four years."

Last November when Barrow finally made up his mind to take over Kennecott's chief executive spot, the price of copper was still a mere 68 cents a pound. Today it's around 98 cents a pound and could easily go higher, Barrow says.

To put this price rise in perspective: In a typical year Kennecott produces roughly 800 million pounds of copper; so the recent price gain could mean as much as $240 million this year—$7.25 per Kennecott share. However, only a small part of it will come down to the bottom line. The fact is that at last year's prices Kennecott's mining operations were deep in the red, probably to the tune of $50 million or more. Offsetting that was the $25 million Kennecott earned from liquidating inventories of refined gold and silver, produced as a by-product of copper, and the $31 million it had earned from the Carborundum Co. which it had bought in the last days of the regime.

When the books were closed for the year, Kennecott showed a profit of $5 million, 15 cents a share. Not much to show for nearly $2 billion in sales and a book value of $41 a share.

Although Carborundum kept Kennecott in the black last year it never made sense—either as a corporate fit or in terms of price. As part of the two-year truce Barrow worked out with Curtiss-Wright late last year, Kennecott set up a committee to study the "divestiture of Carborundum and distribution of proceeds to Kennecott's shareholders as well as any alternative . . . which might provide for the repurchase of shares from, or distribution of dividends to, Kennecott's shareholders." What the committee will have to decide is not simply whether Carborundum *should* be sold, but whether it *can* be sold—for anything like the $572 million Kennecott paid for it.

Barrow has a pretty clear idea of what he thinks Kennecott's emphasis ought to be. "The basic asset Kennecott has," he says flatly, "is its copper properties"—the largest copper reserve in the U.S., 25% of total U.S. copper production, and three of the lowest-cost copper mines in the U.S.

The upsurge in copper prices over the past three months has, of course, transformed Kennecott's prospects overnight. Every 1 cent-a-pound increase in copper prices adds a theoretical $8 million to Kennecott's pretax earnings, and though bad weather and inflation will certainly

reduce that somewhat this year, Barrow nonetheless concedes that Kennecott ought to be able to hold onto a substantial portion of it. "Let's say," he says, "there's some reason to think we might get $3 million or $4 million *after taxes* for each cent-a-pound increase in price." Chances are Barrow is being conservative, but with copper prices up almost 35 cents over Kennecott's 63 cents-a-pound 1978 average, even that amounts to between $3 and $4.25 a Kennecott share, as much as $140 million altogether.

With profits of that magnitude in prospect, Barrow no longer expects Kennecott to have any difficulty financing the capital spending program he's come to see as essential for rebuilding the company. Barrow is confident that Kennecott can become the U.S.' lowest-cost producer and boost its earnings to between $12 and $15 a share by the mid-Eighties. That's a goal, Barrow says, not a prediction. "But I personally believe that we can and will attain it."

During the period when Kennecott's board was attempting to diversify, first through the acquisition of Peabody Coal Co. and then, when the FTC forced Kennecott to divest itself of that, through the acquisition of Carborundum, Kennecott's copper mining properties were starved for lack of capital. Peabody sucked up capital like a sponge, and what capital the mining division got went mainly into pollution control projects that were essential if Kennecott was to stay in business, but that yielded little or no financial return. With enough capital, Barrow believes, Kennecott might have been able to cut its costs to a level where it could go on making money even when prices were low—as Phelps Dodge did.

"We've seen some things we can do," he says, "to get the company in a position where it would be the low-cost operator, and can be profitable through bad times as well as good. We expect to make very good returns in good times, a little less than adequate returns in bad times, but on average, over a period of time, satisfactory returns."

Barrow talks about modernizing the concentrator at Kennecott's Utah division, spending $15 million to rework the tailings at its mothballed mine at Ruth, Nev. and laying out $300 million to modernize its Chino, N.M. operation, once the U.S.' lowest-cost copper producer. Barrow scoffs at those who deplore any further investment in copper. The Chino project, he says, will pay for itself inside of three years, the Nevada project inside of nine months. "We will become the lowest-cost company in the U.S. and among the lowest-cost producers in the world." When old management talked like that, people scoffed. When Barrow talks, you can't help but believe.

Barrow does not concede that Carborundum is for sale but he displays little enthusiasm for retaining it. It yielded Kennecott a mere $31 million last year, or 5.4% on its $572 million investment. Barrow concedes that Carborundum was a decent enough acquisition if you were determined to diversify out of copper, as Kennecott's board was for a decade. "If you're going to set that as a corporate objective," Barrow says, "Carborundum fits. It's been a fairly successful mediu size company. It had a good man—E Wendell—and a good track record."

But Barrow goes on: "In a well-r company, you constantly sort throu your businesses, add some and take so away. That's essentially how Bill We dell ran Carborundum, added and su tracted, added and subtracted, and tha how Carborundum achieved its grow pattern. I think it makes sense for company to do enough self-analyzing determine what are its strengths a what businesses does it have a compe tive advantage over somebody else For Kennecott to go into electroni would be a little foolhardy."

But when the talk turns to mining y can see where Barrow's heart is a where Kennecott's future lies under h direction—in mining, of course, but n just in copper. Kennecott already has prospering titanium operation in Queb and a thriving lead-zinc operation Missouri which is currently increasi its capacity by a third. It is also on t verge of launching a joint silver-copp mine in Montana in partnership wi Asarco, and it is nearing the time decide whether to put its North Caroli phosphate properties into production.

"Perhaps because I came out of a ge logical and exploration background, I n urally look for other metals that are akin copper but maybe work on different c cles," Barrow says. "Using the knowhc in the company to diversify through broad stream of minerals—I think tha clearly the direction to take."

Barrow concedes a commitment to commodity as vital and volatile as co per has its risks. In the early Seventi government price controls deprived t industry of the high returns of its la cyclical peak, but Barrow thinks th that is far less likely now that Kenn cott has abandoned the old produce price system in favor of one based the New York Commodity Exchan prices. Competitors have seen this as bid to recover its lost market share, a it certainly did enable Kennecott to i crease its market share from 13% 18% last year. But Barrow believes t principal advantage of such a system it undermines any government effort control Kennecott prices. Says Barro "We say, 'We don't set the price copper; the market sets the price copper.'

"We're not just in this for the ri because times are good," Barrow co cludes. "Our objective is to improve o position while we take the ride up." skeptic would say that Barrow w lucky—no sooner did he move into t executive suite than the price of copp started going up. But there is more to than that. Kennecott has had luck breaks in the past and has blown ther This time things could be different. ■

Kennecott Copper Chairman Thomas D. Barrow

Acquisitions notwithstanding, its basic strength was still in copper.

Harris technology on the job

Harris satellite communication system terminal in Ibadan, Nigeria

In communications, Harris covers a broad spectrum. With complete satellite communication systems, AM/FM radio and TV broadcast equipment, long and short-range two-way radios.

For developing nations, Harris satellite communication systems provide a quick and cost effective way to establish or expand nationwide telephone, TV, radio and other essential communication services.

Harris technology works worldwide — in communication equipment, information systems, government systems, semiconductors and printing equipment. For information, write: Harris Corporation, Melbourne, Florida 32919.

HARRIS

COMMUNICATION AND INFORMATION PROCESSING

MEMO FROM
MARSH & McLENNAN

Our clients include some of the country's largest companies—and many a lot smaller. And they all made the right move.

True—Marsh & McLennan's client list includes many giant corporations whose annual revenues reach hundreds of millions of dollars—and beyond.

But what many people don't always realize is that we also serve hundreds of other business organizations nowhere near that size.

The point is simply this: at Marsh & McLennan, companies of all sizes are equally well served. Which is as it should be, because all busi-

nesses, regardless of size, are exposed to many types of risk.

- A product could fail and injure a consumer, bringing a costly lawsuit.
- A warehouse fire could wipe out an entire inventory in minutes.
- There's even the risk of hidden loss caused by employees—"white collar" theft.

No matter your size, you deserve the best.

That's why so many companies come to us. Marsh & McLennan is the world's leading insurance broker. We've been solving insurance problems for companies of every size and type for over 100 years.

Some companies may hesitate to talk with us because they think they don't need a broker with the vast resources, skills, and worldwide capabilities that come with our size. We disagree. Very often, it's only the full-service insurance broker with a staff of experts, like Marsh & McLennan, that can get your insurance problems solved. Furthermore, in most cases, we will improve the cost and the effectiveness of your coverage program.

Just take a look at a few cases where our resources were brought into play for less-than-giant clients.

How we can help.

- Marsh & McLennan helped a precision metal-stamping company reduce its workers' compensation premiums by refiling and securing a classification that more accurately reflected their exposure.
- Marsh & McLennan's on-site flood survey and recommendations helped a textile manufacturer obtain flood insurance, even though his plant had previously sustained a serious uninsured flood loss.
- A Marsh & McLennan fire engineering survey developed low-cost protective recommendations that helped a chemical manufacturer obtain the full and adequate fire insurance he hadn't been able to get before.

In short, Marsh & McLennan clients get the best of both worlds. They receive personal attention, as well as the vast depth of experience and services from experts in over 80 offices across the country.

As you grow, we grow with you.

But almost as important as what we can do for you right now is what we can keep on doing for you as you grow. As your insurance needs expand, we're right there with the skills and service, depth and diversity—plus knowledge of those areas which may be unfamiliar to you.

This is especially important if you're opening a new facility in another state or launching a new product. New ideas, fresh perspectives, innovative answers to thorny insurance problems—these are the assets that only a major broker like Marsh & McLennan can provide.

Our policy is to see to it that each and every one of our clients is equally well served. Both those on the *Fortune 500* list and those far from it. Because from our point of view, *every* client is equally important.

To learn more about the ways we can help you, write to: Mr. Brian O'Rourke, Vice Pres., Marsh & McLennan, Incorporated, Dept. 800- FB, 1221 Avenue of the Americas, New York, New York 10020. Or contact our office nearest you, listed in the White Pages.

Our insurance experts apply the same skills to all our clients, no matter their size.

Marsh & McLennan

outh Korea's President Park Chung Hee
is no coincidence that the economy began to take off the year he seized power.

Twenty-five years ago South Korea was a "basket case" in dire need of U.S. aid. By suspending politics and manipulating an ancient culture, President Park is creating an economic miracle.

How South Korea surprised the world

By Norman Pearlstine

human life, economics precedes politics culture. —Park Chung Hee

WHEN THE PRICE OF OIL was abruptly icked up from $3 a barrel to almost $12 in 973, the U.S. responded by exporting ollars to pay the bill, the Japanese by xporting TV sets and automobiles and the epublic of Korea by exporting 100,000 uman beings to build cities and port cilities in the Middle East. By such ootstrap methods did this poor but developing economy overcome the oil shock and, while other developing economies stagnated or lost ground, resume an economic growth rate that has replaced Japan's as the wonder of the world.

The hows and whys of the Korean miracle—and the lessons to be drawn from it—may be the least covered major economic story of the decade.

It was only three years ago that the prestigious Brookings Institution published an exhaustive study, titled *Asia's New Giant*, that explained how Japan had come from nowhere to rival America's economic prowess. Meantime, Asia was quietly spawning a second industrial power—South Korea. Brookings has not gotten to South Korea yet, but it probably will. Within a dozen years this formerly dirt-poor nation expects to have an economy as large as France's is today. That would make it one of the world's ten largest economies. South Korea is already producing a substantial share of the world's textiles, shoes and electronic equipment. It will soon challenge America, Japan and Europe in basic industries like steel, autos and shipbuilding.

South Korea is not the only developing

country that is banging on the developed world's doors. Taiwan, Hong Kong and Singapore in Asia, Mexico and Brazil in Latin America, and Spain and Yugoslavia in Europe are also industrializing quickly. But nowhere have goals been more ambitious nor the achievement more substantial than in South Korea. A combination of strong leadership, good planning and hard work have overcome an absence of natural resources to keep real gross national product growing at about 10% a year since 1961, while manufacturing has risen about 17% a year. After World War II, South Korea, a onetime colony of Japan, was among the world's poorest places. But with growth rates like these, it could not stay poor forever. Its per capita income, which at $82 was roughly the same as mainland China's in 1961, rose to $1,242 last year, at least three times China's level. Total exports, which have risen an incredible 40% a year since 1961, reached $12.7 billion last year. Significantly, one-third of them went to the U.S., with which South Korea had a $1 billion trade surplus. South Korea "is perhaps the best example in the world of how trade can propel a nation toward prosperity," says Bank of America President A.W. (Tom) Clausen.

Signs of progress are everywhere. In Seoul, the bustling capital, pneumatic drills, earth movers and pile drivers combine to create a constant din. The city's 8 million citizens consider a 60-hour work week routine, and move at a pace that makes Tokyo's legendary workaholics seem in slow motion. In rural towns metal roofs and television antennas have replaced the scenic but leaky thatched roofs of a decade ago. New factory cities have sprung up—like Ulsan, where a new auto plant operates around the clock trying to reduce a several-month domestic backlog for shiny Korean automobiles.

All this is taking place within a system that sets its goals from the top but encourages private enterprise to carry them out. If it is not capitalism as we know it, neither does it bear any resemblance to socialism. Whatever it is, the Korean system works and is already generating business enterprises of global proportions and global ambitions.

Kang Jin-Ku, president of the giant Samsung group's electronics subsidiary that makes television sets and other consumer products, says its 1978 sales of $300 million include exports of $100 million. He is one of many Korean businessmen predicting sales and export increases of at least 50% in 1979. Does he worry about competition from Japan, Taiwan or elsewhere? Not nearly so much as he fears "the fierce competition from other Korean companies." Confirming South Korea's emergence as an industrial power, record numbers of foreign bankers have been streaming in—about 40 foreign banks have branches or representative offices, triple the number three year ago—offering money at bargain rates undreamed of in the early 1970s. Economic planners are trying to *restrict* 1979 real growth to 9% (to help slow inflation), but privately they concede it is likely to grow by about 11%.

Seoul, South Korea's capital city

Pneumatic drills, earth movers and pile drivers combine to create a consta

Does the typical South Korean have an easy or affluent life? Not yet—perhaps he *never* will. Kim Yung Gee, a 27-year-old auto assembler at the Hyundai Motor Co. in Ulsan, 200 miles south of Seoul, heads for the factory gate at 7 a.m., leaving his wife and two small children behind in a cramped, company-subsidized two-room apartment. Forty minutes l er he is at his post on the assembly lir ready to endure noise, dust and fum that would keep an OSHA inspector bu writing reports for a month. Kim wor 10 to 12 hours a day, six and sometim seven days a week. In return, he mak about $3,500 a year. That's above av age for Korean workers but much le than auto workers around the world ty cally make. Kim knows that compar with most citizens of the Third Worl he is fairly well off. Considering the ec nomic depths from which the count emerged, he is fortunate indeed.

n while 8 million citizens move at a pace that makes Tokyo's legendary workaholics seem to be in slow motion.

But what has come so far is mere arm-up compared with what South Ko-a is planning. The blunt-talking Kore-ns make no secret of their goals. Al-ough the rate of export growth will fall elow 20% a year as the economy ex-nds, total shipments are expected to ach $50 billion a year by 1986. Unlike e Japanese, who chalk up massive ade surpluses, the Koreans say overall ade will remain roughly in balance. outh Korea has already begun to tear wn some of its import barriers and has edged itself to achieve full-scale import beralization much faster than Japan has. In 1978, for example, the country imported 70,000 tons of beef—as much as its much larger and richer neighbor Japan did in 1977. "Imports keep our domestic companies competitive, are anti-inflationary, and help give us the capital goods we need to expand our own productive capacity," says Park Pil-soo, assistant minister for trade and commerce in South Korea's Ministry of Commerce and Industry. In 1986 South Korea's textile and electronics industries will still be important, accounting for exports of $10 billion and $9 billion a year, respectively. But machinery exports will also total $10 billion by 1986 as the nation begins to move toward more sophisticated, skill-intensive manufactured goods. Auto production, for example, which totaled only 200,000 units last year, is set to increase tenfold by then, well above Italy's present production, with more than half the new cars being exported. Many of these high-level exports will come from Changwon, a new city on Korea's southern coast, where more than 100 machinery factories will rise between now and 1981.

With only 37 million people, South Korea will never be as big or as varied an

economic power as Japan, which has three times its population. Still, by continuing to grow at 10% a year, it expects GNP to rise to $385 billion in current prices by 1991 and two-way trade to total $280 billion.

Are these goals realistic? It is hard to find Korean government officials or businessmen who think they won't be met. "The targets for 1986 and beyond are very good," says Chung In Yung, chairman of Hyundai International Inc., an affiliate of the Hyundai group, which is finishing construction of a $500 million machinery plant in Changwon. Chung says his own company, which has technical tie-ups with General Electric, will have sales of $5 billion a year by 1986. Does that seem absurdly high for a company that expects sales of just $700 million this year? Look again. Two years ago annual sales were only $100 million.

All that is pretty impressive for a country that only 25 years ago was reeling from the devastation of the Korean War, in which almost 10% of its population (and 34,000 Americans) were killed. Despite massive infusions of U.S. aid, the economy was going nowhere under then-president Syngman Rhee. People were so poor they ate the bark off trees to keep from starving. In Washington it was fashionable to think of South Korea as a "basket case that was destined to repose indefinitely on the U.S.' doorstep," recalls Kim Mahn Je, president of the Korea Development Institute, the nation's largest think tank.

It is no coincidence that South Korea first began to take off in 1961, the year a young general named Park Chung Hee seized power in a military coup. Many Americans now regard Park as a stone-face Oriental dictator whose primary interests are repression of his people and bribery of American congressmen. That image is as hard to alter as it is grossly lopsided, and it ignores Park's firm commitment to growth and his masterful management of the Korean economy. Without his leadership, it is extremely unlikely that South Korea's economic miracle could have happened.

Park says that in 1961 "I felt as if I had been given a pilfered household or bankrupt firm to manage." There was little in Korea's culture or its 4,300-year history to suggest its people would accept rapid industrialization. Korea was a Japanese colony from 1910 to 1945, and for three years after World War II what is now South Korea was controlled by U.S. occupation forces. Because of gross mismanagement industrial production fell sharply during the occupation, and it all but ceased from 1950 until the end of the Korean War in 1953. After the war Syngman Rhee was preoccupied with domestic politics and stressed defense at the expense of economic development. His rabid anti-Japanese feelings limited ties with Korea's most logical trade partner, and his obsession with reunification of North and South Korea got in the way of industrial growth. As for American aid, it was often channeled to Rhee's cronies and, according to President Park, it "was extremely tight-fisted toward the productive facilities that we desired and generous with regard to consumer goods we did not require."

It wasn't that Park, a soldier, was less aware than Rhee of the menace from the north. But in contrast to his predecessor, Park reasoned that a strong economy is critical to a strong defense—that soldiers and guns were useless without steel and machinery. Recognizing that Korea's Confucian traditions revere government service, Park relied heavily on the bureaucracy to implement his economic policies. In July 1961, little more than a month after taking power, Park centralized planning activities in a newly established Economic Planning Board and, to show the importance attached to planning, made its head the nation's Deputy Prime Minister. The EPB head still meets formally with the government's other economic ministers and with the foreign minister at least twice a week to discuss economic policies, and informally with the same men on Saturday mornings at an "Economic Ministers' Roundtable." Disputes among the ministers may be referred to Park himself or to economic officials within the Blue House, Park's executive office building. Park is not the kind of ruler who relegates economic decisions to subordinates.

Hyundai head Chung Ju Yung and wife
Hard-charger runs a $4 billion empire.

Leadership alone, of course, is not enough. Although the economy was a shambles when Park came to power, South Korea had already developed many conditions that made fast growth possible, given proper leadership. Few Koreans had any power during the prewar colonial period, but many of them benefited from watching the Japanese, s
Sakong Il, the Korea Development In
tute's research director. "Given
chance, they were ready to run their o
businesses." In addition, the Kor
War's destruction, together with th
ough land reforms imposed in the ye
before it, did much to eliminate the
tist social structure that has hobbled
many other countries' development
forts. Most important, Park found hi
self in charge of a well-disciplined, lit
ate people ready to go to work. (Edu
tion has always been important. A cr
program in place since the end of
Korean War has pushed the adult litera
rate above 90%, making it one of
highest in the developing world.)

Certain attitudes got in the way. I
example, merchants had little status
traditional Confucian society. Park s
ceeded in elevating entrepreneurs—es

better than one-upping the Japanes
Nonetheless, it is clear that many Sou
Korean economic policies and practic

have been imported directly from Japan. Korea's Ministry of Commerce and Industry is patterned closely after Japan's Ministry of International Trade and Industry. Its recently established General Trading Companies (GTCs) are deliberate copies of Japan's giant trading houses like Mitsui and Mitsubishi. Its five-year plans, heavily emphasizing exports of manufactured goods, bear many similarities to Japan's highly successful "income doubling" growth plan of the 1960s.

But it would be a mistake to carry the analogy too far. It is not for nothing that the exuberant Koreans are sometimes called "the Irish of the Orient." They are very different indeed from the diffident Japanese. And often similar forms can mask distinctly different substance. The term "Japan Inc.," for example, connotes a government-business partnership in which policy reflects consensus between equals. But "Korea Inc." means something very different. In South Korea the government sets the policies and businessmen follow. In this way, then, South Korea is an unusual blend of free enterprise and state direction.

The government's strongest weapon is its control of credit. Whereas large Japanese industrial groups often have their own banks and get funds from them, Park confiscated all privately held banks soon after taking power. Although Park has vowed that he'll keep them out of the hands of Korea's big industrial groups—aides say he thinks Japan's industrial groups are too powerful for that country's own good—top economic officials say that most of the country's commercial banks will make share offerings to the public in the early 1980s. Control, however, is likely to remain in the government's hands for years to come. The government can—and has—put companies out of business by shutting off their credit. It can also keep companies out of some fields or force them into others through its control of funds for expansion.

Inevitably, such centralized control invites abuses. South Korea is cleaner today than it was a decade or two ago, and there is less corruption there than in most developing nations. Nonetheless, many businessmen tell of forced payments to government officials. One common complaint: At year-end, major companies are expected to donate a portion of their profits to the Blue House. "This is a hidden tax," fumes one Korean businessman. "Our public servants are really public masters." This businessman believes the money is used for defense or other worthwhile purposes and that it doesn't go into President Park's pockets, but he still resents the assessment.

Other businessmen complain about government favoritism in awarding major projects. "It is more important to be a good lobbyist than a good manager," says one official in the Samsung group, whose

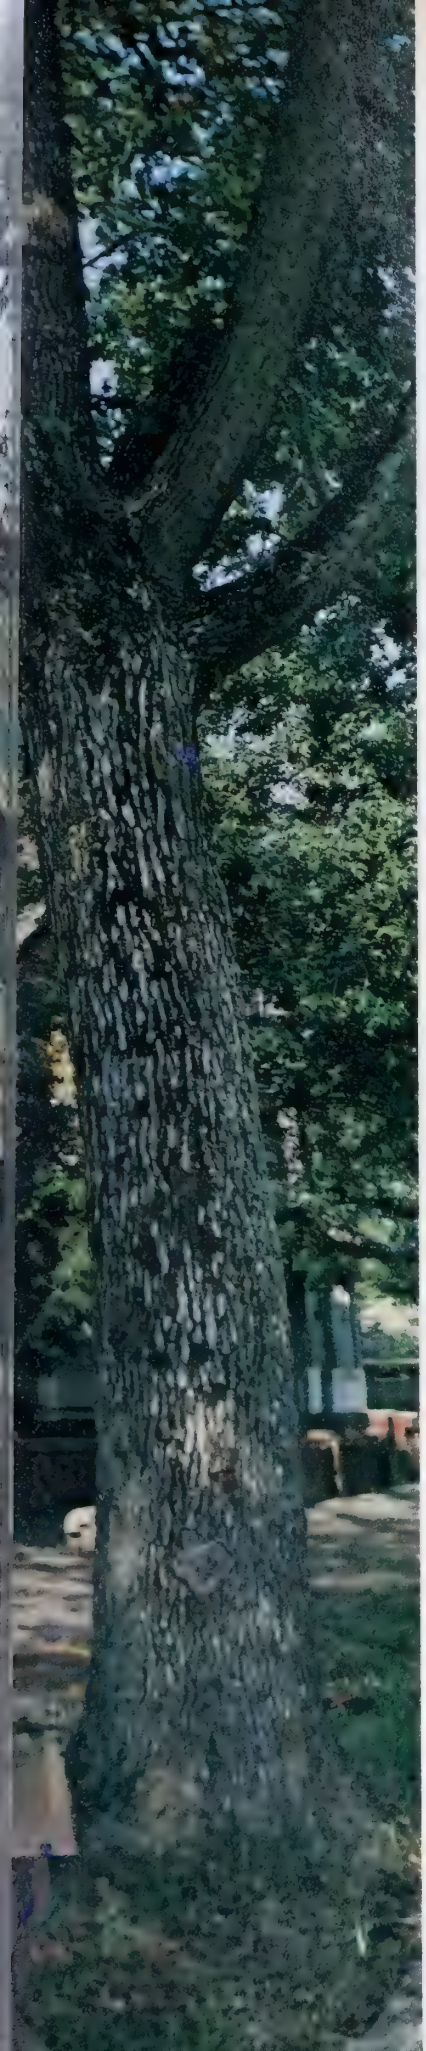
PHELPS DODGE
PD-X
250 FT.



In Savannah, they treasure the past and build for the future: Phelps Dodge copper.

Savannah, Georgia has some ambitious plans—to restore the homes of a 100-year-old inner city neighborhood without displacing the residents. It's an example for the entire country.

So is the choice in wiring material: Phelps Dodge copper building wire.

Copper is unbeatable as an electrical conductor. Easy to work, tough, long-lasting and, above all, safe.

With these timeless qualities, it's not surprising copper is the first choice for everything from telephone cable to magnet wire to plumbing tube.

Helping America meet its copper needs, Phelps Dodge mines an average of 600 million pounds of this versatile metal a year—nearly 20% of all U.S. production. And processes about a billion pounds into hundreds of useful products.

A supplier of copper for nearly 150 years, Phelps Dodge looks forward to the next 150.

- Virtually self-sufficient in copper, America needn't depend on foreign suppliers.
- Copper is easily recycled—and its salvage value has more than doubled in the last 25 years.
- Copper conserves energy, requiring about half as much as aluminum to produce, pound for pound.

If you, too, have ambitious plans, you owe it to yourself to find out more about copper. Write for our free facts booklet.

firm has often lost out to other big groups in bidding for government projects. In candid moments some government officials acknowledge that close ties with President Park can sometimes swing a deal. But they insist no company is ever awarded a major project unless the government is convinced it can do the job. That, they say, is what distinguishes Park from Rhee, his predecessor, and from many heads of developing countries.

Some of President Park's closest economic advisers say that he is more comfortable dealing with bureaucrats and military men than with entrepreneurs. They say he spends as much time as he does with businessmen because he realizes that Korea's continued growth depends upon them. Those businessmen he is close to tend to share his rural, poor background and to be hard-charging types willing to take risks for their companies and their country. No one more closely fits that description than Chung Ju Yung, who heads the $4 billion (sales) Hyundai group of companies. Like President Park, Chung came from a poor farm family *(see* FORBES, *May 1, 1978)*. When Chung was 18 he left home and walked to Seoul, where he sought his fortune. After holding a series of menial jobs, he saved and borrowed enough to establish an auto repair and trucking company, and in 1947 he founded the Hyundai Construction Co. In the early 1970s he decided to build South Korea's first big shipyard after the government indicated it wanted to become a shipbuilding power. Chung says he almost gave up on the yard when he had trouble lining up needed foreign financing. But he redoubled his efforts and finally got the funds after Park urged him on, saying Chung "shouldn't only try the easy things."

FORBES recently caught up with Chung at his sprawling Hyundai shipyard, which now employs more than 32,000 men building anything that floats—from cargo ships to tankers to semisubmersible drillings rigs. Although it was 10 p.m. Sunday and Chung had been out for more than 16 hours inspecting every corner of the yard, the 63-year-old chairman was wide awake and ready to talk. Nibbling on an occasional peanut but passing up the abalone, shrimp and other delicacies placed before him, Chung brushed aside any suggestion that South Korea might not reach its ambitious export goals for the years to come. Like many Koreans, however, he expressed bitterness about his country's mounting trade deficit with Japan, which rose to $3.3 billion last year. "We should be exporting as much to Japan as we import," he complained. But the Japanese discriminate against Korean products, he added.

Japanese restrictions, while serious, are only one of the problems the South Koreans face in trying to meet their ambitious targets. The South Koreans say they are shooting for only 2% of the world's exports by 1986. But that is almost twice their present level, and in certain industries, such as textiles and shoes, their exports account for a far larger percentage of world trade. As a result, the U.S. and other industrialized nations have already imposed strict protectionist measures against 43 Korean export items, including television sets, textiles and shoes.

Agriculture gives way to heavy industry
Historically, Korea seemed a poor bet for rapid industrialization.

The South Koreans have been trying to diversify their export markets, selling more to the developing world, and they hope that the heavy industry products they are gearing up to produce won't be so susceptible to protectionism. Hyundai Motor, for example, now sells autos in more than 40 countries, but not in the U.S., Japan or most of Europe. The trouble is that many developing countries have limited foreign exchange, making it hard for them to import goods in massive quantities. The Japanese, too, have dreamed of selling more products to the less-developed world and depending less on the U.S. and European markets, but progress has been slow.

So, hedging their bets, the South Koreans are trying to upgrade the quality of their exports, since most protectionist measures restrict volume but not value or price. Lee Dong Chan, chairman of the Kolon group, a major textile firm, says, for example, that by increasing the quality and the price of his goods he can boost dollar sales yearly by 25% through 1986 with only a 10% annual increase in volume. By doing so, he says, Kolon and other Korean textilemakers can keep their goods a cut above the low-cost stuff beginning to pour out of the developing countries in Southeast Asia.

Inflation and higher costs in South Korea could ultimately cause the country's manufacturers as many problems as protectionism might. Since 1960, South Korea's inflation has been at a rate of about 17% a year. South Korean wages have increased by about 30% a year over the past four years. But Korean wages are still well below those of Japan and other developed nations. College graduates with an engineering degree can make as much as $7,000 a year with the large Korean companies, but apprentices in textile and electronics factories still make less than 70 cents an hour, including housing and other fringe benefits. Besides, higher wages have one important benefit: They help create the domestic demand needed to get some new industries, such as autos, off the ground.

Although tensions between North and South Korea remain high, most foreign businessmen investing in the South don't seem very concerned about the possibility of renewed fighting between the two countries. If anything, they say that the recent normalization of relations between the U.S. and China, which is North Korea's most important ally, should lead to an improvement in relations between the two Koreas. What does worry foreign investors and thoughtful South Koreans, however, is President Park's failure to designate a likely successor or to establish the political processes necessary to assure an orderly transition should he die or leave office. The 61-year-old president is in good health and gives no indication that he plans to leave office anytime soon. But should he die unexpectedly, South Korea could be faced with a period of anarchy or uncertainty which, even if brief, could lift the risk of North Korean intervention in South Korean affairs.

If a single word could be used to describe the South Korean economic system as presided over by Park, it would be—pragmatic. Here implementation

ven more important than planning. Pri-
ate enterprise is desirable when it
orks, but when it doesn't, the govern-
ent has no qualms about taking over.

"It is important to understand that the
orean Miracle isn't a triumph of *laissez-
aire* but results from a pragmatic, non-
eological mixture of market and non-
arket forces," says KDI's Sakong Il,
ho, along with Boston University Pro-
ssor Leroy P. Jones, has just completed
book on business-government relations
South Korea. (That book, which ex-
lains the development of South Korea's
ntrepreneurs, should be of special inter-
st to other developing countries inter-
sted in spurring economic growth.) As
outh Korea's economy expands, many
usinessmen—including supporters of
resident Park, such as Hyundai's Chung
Yung—have begun to call for less bu-
eaucratic control and for more reliance
n the free market. South Korea's new
eputy Prime Minister and Economic
lanning Board head, Shin Hyon-hwack,
eems to support such moves, but it will
e difficult for the bureaucracy to give up
he power it has enjoyed for so long.
resident Park, however, has so far
hown an almost uncanny ability to
now when to lay hands on the economy
nd when to lay off, and there are some
ndications that he is beginning to favor
ess government control and more power
or the business community.

There is probably no country in the
orld that can react to an emergency as
ast as South Korea or is more willing to
orrect a mistake in planning once it is
ecognized. Typical was South Korea's
esponse to the 1973 oil crisis and the
974 world recession. Within three
nonths of the OPEC price hike, the gov-
rnment had announced a detailed plan
or fuel conservation. It subsequently
atched a comprehensive plan to get
nost of that money back by promoting
xports and construction activities in
he Mideast. It also increased foreign
orrowings sharply to cover an increase
n its trade deficit. As a result, real gross
ational product continued to grow at
% or more in 1974 and 1975. In 1976,
fter the recession ended, it grew at
4.2%, thanks largely to a 56% spurt in
xports.

"Our goal is unchangeable and will be
chieved by whatever means necessary,"
ows Park Chung Hee. Those words can
e heard from almost any head of a devel-
ping country these days. What distin-
guishes Park from the rest, however, is
he flinty pragmatism behind those
vords. That kind of determination
nakes South Korea a model for other
ess-developed countries, who prefer to
it around blaming their problems on
J.S. "imperialism," on multinational
ompany rapacity or on a lack of raw
naterials. It is also what makes South
Korea's future look so favorable. ■

"Capon puddenge, posset, mead—and a lift to London, too. Now that's the Club to join!"

British Airways Club Class™ was created especially for our Britain-bound full-fare economy business travellers. If you're one such, posset and mead aren't all we offer to raise your spirits.

There's separate check-in and boarding, a tranquilizing prospect for you who turn irked and restive in queues—lines, that is. And of course, a separate cabin. (That pampered feeling is beginning to take hold, I trust?)

Exclusive Elizabethan Service™ with special Elizabethan cuisine (superb meals olde English style). Complimentary cocktails, wines, and beers. *And* free movies and stereo. Perhaps I should find an excuse for a business trip myself.

If you find all this strangely appealing—as more and more people seem to—do join the Club. Call your Travel Agent, Transportation Department, or British Airways. Tell them Robert Morley put your name up for membership.

Where do you find the experience you need to trade with China?

Ask Chicago's Bank.

Whatever it takes financially to do business with the People's Republic of China, First Chicago is doing it.

Since January 1978, we've had a fully operative correspondent relationship with The Bank of China. First Chicago was the first U.S. owned bank to have one. And this relationship enables us to provide every banking service you need to trade with China.

During our first full year of experience, we negotiated hundreds of letters of credit ranging in size from ten thousand to tens of millions of dollars. For imports ranging from mineral ores to machine tools, from textiles to hand painted egg shells.

We've handled documentary currency collections for soft drinks and steer hides, tractors and tin plate, and countless other exports to China.

First Chicago has helped companies from all over America and the world get their message across to the Chinese. We've helped them contact the right agencies, locate markets and sources. We've assisted with negotiations and helped structure billion dollar proposals for our customers.

No other U.S. bank can provide this wealth of experience with China.

China is a land of opportunity for businesses of all sizes. To put First Chicago's worldwide financial force to work for you, phone Gregory Tallas, Vice President, at (312) 732-8513.

In America, or anywhere else in the world, ask Chicago's Bank.

You'll profit from our experience.

For years Tosco had nothing but bad luck and investors shunned it. Now it has more investor interest than management likes.

It's nice to be right

By Kathleen K. Wiegner

MURPHY'S LAW SAYS that if anything can go wrong, it will. For years Tosco Corp. was pure Murphy. Early into oil from shale, it spent over $70 million on shale research including demonstration plants, only to watch its hopes strangled in the mid-1970s by environmental constraints and government neglect. Tosco could ill afford the loss because, as a refiner with no production of its own, it was in the least profitable end of the oil business. Its profit margins last year were a tiny 1.5%, while some refiners make more than twice that, and it carries a debt load of $192 million, 66% of total capital.

So why is everyone at Tosco so smug these days? "On any Tuesday we run down the hall congratulating ourselves on having been right," quips Morton Winston, president and chief executive officer. For the moment, Winston's $1.2 billion company (after Ashland Oil, the largest independent refiner of gasoline in the U.S.) has indeed finally fallen upon good times. Murphy's Law in reverse.

While foreign oil supplies are being disrupted because of the Iranian crisis, Tosco's two major California refineries and one in Arkansas are sitting with about 95% of their crude supplies tied to domestic contracts, mostly from Alaska and California. "We have more crude under contract this year than we can refine," says Winston, smiling.

The demand for unleaded gas is soaring (35% of the market last year *vs.* only 5% in 1974) and Tosco's refineries are geared to making large quantities of the high-octane unleaded gas required by most new automobiles. As supplies of unleaded gas tighten and spot shortages begin to appear, Tosco's refineries are now running full out.

Last June the federal entitlements program was revised, easing a drag on Tosco's profitability that had caused a loss in the first quarter of last year.

Tosco President Morton Winston
More crude than he can refine.

As a result of this change and the surge in gasoline demand, Tosco's net jumped 43% in 1978 on a sales gain of only 9%. For the first quarter ending last month net should be around $10 million, compared with a $4.8 million loss in 1978's first quarter.

Little of this good fortune is attributable to just luck. "Some years ago Tosco reached three vital conclusions which have governed its development since then," says Winston, 48, a Washington lawyer before joining Tosco in 1964. "The whole thesis of our entry into refining was that there would be a shortage of refining capacity for the kinds of products our refineries produce. We bought plants that cost $500 to $900 a barrel of daily capacity that would cost $4,000 to $5,000 to replace today." Second, Tosco concentrated on developing a domestic supply of crude. "We could have cut that supply loose when we were being penalized by the entitlements program," says Winston, "but we felt it was our security." Events in Iran confirmed the dom of that.

Winston has been arguing for y that the loss of control by the U.S. jors over world supplies would lead t to begin regarding refining as an o ation that needed to make a decent p rather than simply as a means of get crude oil to market. (Refining mar have always lagged behind margins production, where returns on inv ment can run as high as 20% *vs.* 5% 10% for refining.) "We believed that fining margins would have to open," Winston. "We think that's happe now, more swiftly than we though would." Tosco's current numbers him out. For 1979 Tosco could poss triple last year's excellent showing earn well over $2 a share.

Even Tosco's pioneering in oil shal beginning to look good again, thank OPEC's most recent extortion. T 40% interest Tosco holds in 7,714 a of shale property in Colorado is on site of the nation's richest and most tensive shale reserve. Any immedi shale development is highly unlikely, there are as many as 600 million bar of recoverable oil in Tosco's shale, wh looks more economic every time so sheikh or dictator tightens the p screws. In fact, Winston claims that i no longer cost that is holding back sh but environmental constraints. wouldn't trust an investment in Colo do," says Winston bluntly, "with changing and inconsistent environm tal laws." If, however, Congress acts President Carter's new energy progra Tosco may yet reap the rewards of shale pioneering in Colorado. Wall Str is certainly interested. Tosco shar which sold around $5 only a few mon ago, recently hit 15—3.8 times book v ue and 18 times last year's earnings.

And not only Wall Street is impress Ashland Oil, flush with cash after liq dating some of its own oil properti cast covetous eyes on Tosco, and set o to buy 49% of Tosco's shares. A co recently approved an agreement un which Ashland would buy no more sto and would sell its holdings to Tosco, b Tosco has other potential suitors. Ap Oil Corp. owns approximately 9% of t stock. Winston recently tried to push antitakeover change but had to ba down when Apex, his biggest sing stockholder, objected.

Tosco remains a tempting target. Ev at today's high price, you could buy t whole company for about $300 million fairly cheap for $1.2 billion in refini revenues and a solid stake in shale. fact, any company that wanted to g into the energy business would fi Tosco attractive. To lose control just the moment of triumph for Winston a his associates—that would be the ul mate display of Murphy's Law! ■

Jack Bogardus, president, tells how A&A works from a client's point of view:

"If we're going to help clients protect current assets and safeguard future growth, we must be a full-fledged member of their financial teams."

"The business of managing corporate risks is in a state of constant change. Our response to this volatile environment is an ever-deepening commitment to act as extensions of our clients' financial departments. The challenge we face together is how best to ensure the client's business growth as emerging economic, technological, legislative and social forces come into play. To do this, we developed several highly sophisticated, computer-based techniques. Their applications are complex, but the result is simple: they help enhance the client's bottom line—now and in the future. And that's what we think our value as a team member is all about."

Working from a client's point of view is our way. From our top management to the men and women in over 110 cities here and overseas. That means working as allies, solving business problems together.

We think our dedication to acting as an ally of the clients we represent is a big reason why A&A has become a worldwide leader in the insurance and financial services business. We have the facilities, expertise and strength to act as effective allies. We work from a client's point of view, whether the corporation is large or small.

Alexander & Alexander
The Allies

For a glimpse of what might spring from energy decontrol, look what's happening in a corner of the natural gas market.

The deep-gas explosion

By James Flanigan

IN AUGUST 1977 a Chevron (Standard Oil of California) drilling crew northwest of Baton Rouge, La. was probing for gas in a deep well in what was once North America's continental shelf. At 21,346 feet they did not so much hit as gas hit them. It burst up, not through the drill pipe but through the steel casing around the pipe and out the hole at the incredible rate of 140 million cubic feet per day, enough to heat half of New Orleans in the dead of winter. Fortunately the gas did not ignite, so engineers were able to return to the rig, divert the gas flow and—ultimately—force the drilling mud to seal the casing four miles below the surface.

The strike was both good and bad news. The bad news was a $15 million writeoff of the exploratory well. The good news was the confirmation of a gas-bearing belt now known to stretch 200 miles across Louisiana called the Tuscaloosa Trend—so named because it was first identified geologically in Alabama. It is one of the hottest U.S. drilling areas today, not only for its unusually high success ratio (more than one producing well for every three wildcats drilled) and the size of the deposits found there by Chevron, Shell and Standard of Indiana's Amoco unit, as well as independents like Natomas, Central Louisiana Energy and Sabine Petroleum: It is also hot because the gas produced will bring—with government approval—the highest prices ever paid for natural gas in the U.S.

Leases in the Trend that once went for $12 an acre would bring $600 to $700 an acre today—if available. Shell is the largest leaseholder with over 500,000 acres; Chevron and Gulf each have some 300,000, Amoco 200,000. The Trend lies smack in the feeding area of the big pipelines to eastern markets. Thus, once gas is found, it converts quickly into cash flow: From two of its four deposits, Chevron now has 90 million cubic feet a day of production and some $70 million a year of revenues after only four years and $80 million of investment.

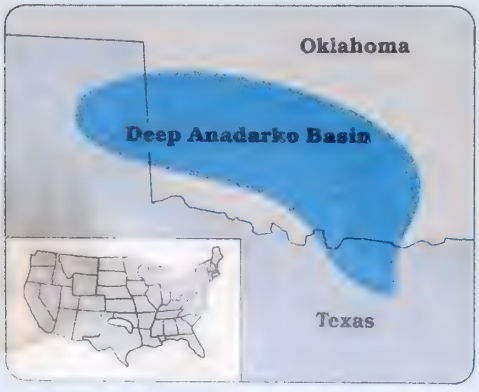
Though every square mile of Louisiana with the remotest promise of gas and oil has been explored countless times, the Tuscaloosa Trend is an energy frontier because of its depth. Almost all the 2.56 million gas and oil wells drilled so far in the U.S. have been to depths of 5,000 feet or less. But the Tuscaloosa, like western Oklahoma's Anadarko Basin or west Texas' Permian Basin, is a repository of natural gas at 16,000 to 20,000 feet or deeper. High costs, price control and ample supply from shallower wells discouraged past deep drilling: Even in 1978, five years after the Arab embargo, only 604—1.3%—of the 48,161 wells drilled in U.S. went below 15,000 feet.

But consider the prospects. Deep wells tend to be superwells, able to produce 5 billion to 6 billion cubic feet of a year, equal to 1 million barrels of Almost 200 such deep wells exist in Permian Basin, another score in sketchily explored deep Anadarko. In Tuscaloosa, Chevron has such a wel the Judge Digby field. A well-inform analyst, Charles M. Strain of Houst Underwood, Neuhaus & Co., belie that more than one Chevron well in False River field contains 200 billion bic feet of recoverable gas. Outside e mates put Amoco's Port Hudson fi reserves at 600 billion cubic feet. Explo tion men say the Trend as a gas area co contain as much as 5 trillion cubic fee

Overall, the careful, conservative tential Gas Committee at the Colora School of Mines estimates that 65 t lion cubic feet of gas may lie in just three deep zones mentioned—enough developed, to hike U.S. proven reser by 33%. Their development could ins that natural gas would continue to p vide a quarter of U.S. energy and wo carry the load until the arrival in middle to late 1980s of gas from Alas and, possibly, gas from coal.

Deep gas is easier than either of the needing neither costly new pipelines new technology. All that was needed, fact, was the sensible terms of the Natu Gas Policy Act of 1978, which sophis cated gasmen are lauding as "a roadma in the words of Houston's Mitchell En gy & Development Corp. Chairm George Mitchell. Though criticized complexity, the Act is really simple: T newer the gas supply or the greater t risk getting it, the higher the price t Act allows. The ceiling price of new discovered gas is now up to $2.15 1,000 cubic feet and rising 1% to 1.5% month under the Act's pricing formu The result? Drilling for gas wells was 33% in 1979's first two months, thou oil drilling was down 3.1%.

But deep gas is better off yet: It w soon have no ceiling price. It will deregulated as of Nov. 9, 1979 under S tion 107 of the Act—written in becau



Two great deep gas zones

The Anadarko Basin, left, is one of the U.S.' most prolific gas-producing areas, but its deeper zones are only now being actively developed. The Tuscaloosa Trend is a newly discovered belt of gas-bearing sands 18,000 to 22,000 feet beneath Louisiana. Getting to the gas is expensive because drilling per foot rises geometrically with the depth.

of a remarkable nine-year lobbying effort by one man, Robert A. Hefner III of Oklahoma City. Hefner is half-owner of GHK Co., a major Anadarko Basin leaseholder. For 20 years he and his partner David Kennedy pioneered deep drilling. In 1969, by drilling a well to the unheard-of depth of 24,453 feet, they hit a deposit of 21 billion cubic feet of gas. Their problem was that, with gas held to 20 cents per 1,000 cubic feet, their reserve would be exhausted before they could recoup their $6 million investment.

So geologist Hefner, then 35, a University of Oklahoma graduate and grandson of an Oklahoma Territory judge, hurried for price relief to the Federal Power Commission, which knew from nothing about deep gas. Predictably, the FPC asked Hefner for more data. Also predictably, it granted no relief.

For the next seven years Hefner supplied data—drilling records, geologic charts, hard evidence of hydrocarbon remains from Paleozoic times, up to 620 million years ago. He became a national expert on deep gas, convincing Colorado School of Mines' Potential Gas Committee that the deep Anadarko contained 50 trillion cubic feet of reserves. He also campaigned for Jimmy Carter in 1976.

When the natural gas bill was before Congress, Hefner lobbied hard—and intelligently—for deep drilling. "We didn't just sit around the offices of our home state congressmen," says Hefner, an athletically handsome, even patrician-looking wildcatter. "We spent most of our time talking to the Jacksons and the Kennedys, the Metzenbaums and Harts"—the opponents of decontrol. He succeeded: The Act deregulated difficult gas, including gas from formations below 15,000 feet—foreshadowing development of the vast 12,000-square-mile Anadarko under western Oklahoma and the Texas Panhandle.

Already GHK has a new contract to deliver 1 billion cubic feet of gas a year to Panhandle Eastern Pipeline with the price tied to the average terminal price of number-two heating oil in its intended markets. Panhandle will then subtract its transportation costs—25 cents per 1,000 cubic feet—to establish the maximum it is willing to pay at the wellhead. Currently that comes to $2.75 per mcf—the highest price ever paid for gas in the U.S., and the equivalent of $15.95 a barrel of oil. That is still under the landed price of imported crude but above the still regulated price (under $9.50) of domestic crude, whose deregulation President Carter now plans.

It is also the emerging market price for deep gas. In Louisiana, Southern Natural Gas is offering Natomas 110% of the number-two fuel-oil price for its output from the Ft. Pike field in Lake Pontchartrain. Florida Gas has offered Hunt Oil something above the price of number-two fuel oil for the output of its Profit Island field. Producers and pipeliners are negotiating protective clauses, mainly because the producers fear that the government could move to control fuel oil prices and thereby reintroduce controls on gas. As for the pipelines' ability to pass the higher gas costs on to distributors, there should be no problem under the Act: It permits the cost of high-priced deep gas to be rolled into the price of older, cheaper gas the pipeline delivers its customers, provided the deep gas price doesn't exceed 130% of number-two fuel oil price.

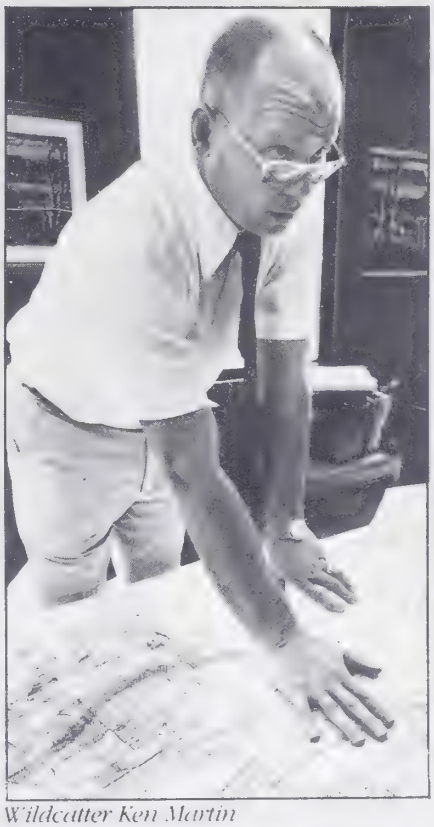
The new price of deep gas is double the price of the best West Virginia coal, but the government is clearly tempering its encouragement of coal use. "Though the Administration remains committed to the use of coal instead of oil or gas in *new* [his italics] boiler facilities over the longer run," said Energy Secretary James Schlesinger in an unusually clear speech in New York in January, "over the course of at least the next several years existing industrial and utility facilities will be provided every encouragement to burn gas instead of oil."

Those "several" years could stretch well beyond Schlesinger's or Carter's tenure, given the already apparent impact of the imminent decontrol of deep gas and the probable effect of the emerging decontrol of all natural gas. Today some 37 wells are being drilled in the Tuscaloosa Trend at an average cost of $5 million to $6 million per well (shallow wells cost around $250,000 each). About 75 wells are under way in the deep Anadarko Basin, at around $3.5 million each. Such wells are expensive because they take six months to drill under the best conditions and costs per foot rise geometrically as well depth increases. But at prices approaching $3 per mcf for gas, deep drilling has become about the hottest game in the country. ■

Tuscaloosa plunger

Ken G. Martin has it made, and Ken G. Martin needs money.

Both statements are true. Martin, 42, the owner of Martin Exploration Co. of New Orleans, is a geologist with 15 years in the trade and a moderately successful business that he started six years ago on $80,000 capital, mostly borrowed. His business was buying interests in depleting gas wells, profiting from price rises, then plowing back the profits. By 1977 he had enough reserves to borrow $25 million and go for broke buying leases in the Tuscaloosa Trend. Now he is the largest individual Trend leaseholder, with many of his 70,000 acres adjoining major gas discoveries.



Wildcatter Ken Martin
Has leases, needs money.

In a sense, Martin already has it made: The leases for which he paid an average $357 an acre would bring from $600 to $700 an acre today, for a cool $20 million profit. But developing leases, not selling them, is the way to the big time. So Martin is looking for the best deal he can get from a gas-hungry pipeline: a $50 million loan to develop his properties, with the pipeline getting to buy, at market, any gas he finds. The worst he can do is a farm-out—let another company drill his prospects in return for a half interest in the wells.

Martin, the son of a Southern Illinois University football coach, went to Louisiana State on a football scholarship. "When I think of where I've come from six years ago with $80,000," he says, "I'm prepared to take risks." The biggest risk is that he will drill nothing but dry holes in an area where the success ratio, counting development wells, has been 82%. And the reward? Billions in cash flow over 15 years if he hits big, $150 million easy from just one modest strike.

Martin has the distinct feeling that he is in the grip of destiny. "It's the kind of chance that comes once in a civilization," he says, surveying an office decorated—like many geologists' offices—with the artifacts of the American Indian civilization that went before. **—J.F.**

INFORMATION MANAGEMENT. DOES IT THREATEN THE WORK ETHIC?

The American work ethic has always assumed that if you worked hard, your efforts would be rewarded.

We wouldn't argue with that. But we would like to amend it a little.

The way we see it, working hard isn't nearly as important as working well.

Information Management isn't a way of sidestepping hard work. It's a way of making it more productive.

For example, there's no virtue in having to spend hours typing, retyping and re-retyping documents. So we make electronic typing systems that let you type, revise and retrieve information in a lot less time. Which gives you a lot more time to create and perfect it.

To make information easier to work with, we make a full range of copiers, duplicators and computer printers. Ones that not only reproduce, but can reduce, collate or even print in color.

To make information more accessible, we have Telecopier transceivers and communicating typewriters that transmit information crosstown or cross-country in minutes.

We even offer computer services that let you manage information without having to manage a computer.

So you see, Xerox information management systems are actually the epitome of the work ethic.

They work harder. So you can work better.

While politics got most of the attention, it was oil that was very much on both parties' minds in the Egyptian-Israeli peace negotiations.

Egyptian oil: a mirage in the desert?

By Yassin El-Ayouty

IT WAS NO ACCIDENT that oil was the last issue, but not the least, to be settled as an item on the Egyptian-Israeli peace agenda. Only a few hours before the scheduled peace treaty signing at the White House on Mar. 26, nobody was sure whether the issue of Sinai oil would be resolved. The Israelis were demanding first call on Sinai oil for their own needs; the Egyptians were resisting the demand. It was a veritable cliff-hanger which took a Sadat-Begin caucus to resolve, allowing the signing ceremony to take place on time. In this instance the Israelis had to give ground. Egypt now gets back the Sinai oilfields within seven months (the Israeli timetable was nine months and Egypt's was six) following exchange of treaty ratification instruments. Israel will get no preferential treatment as a purchaser of oil from Egypt but will be able to buy 2.5 million metric tons—about 50,000 barrels a day—from yesterday's implacable foe.

The old Arab proverb says, "You cannot give what you do not have." Does Egypt have enough oil to fill such a commitment? Or is that provision so oil-slippery that the U.S. will have to bail two Mideast friends out of the con quences of unmet contractual obli tions? "We now produce enough oil cover our internal needs and leave us export margin," Petroleum Ministry o cials told FORBES in Cairo. "Our to production, including the Sinai oilfie now under Israeli occupation, stands 530,000 barrels a day, which we exp to go to 1 million by 1982, provided keep on exploring." That's a retreat fr the original goal of 1 million barrels 1980, but it is still a lot of oil. If Egy produces from all fields, on land and o shore, nearly 25 million metric tons oil, it most probably could afford to s Israel, at OPEC prices, 10% of that p duction annually. Of course, as Egyp needs for oil soar, with the accelerat development in a peace era, so would t production volume need to rise.

There is a disconcerting euphoria th greets those who visit Egypt to report its struggle to modernize, develop a catch up with various technological a vancements in almost every sphere national life. Economically Egypt is bad shape. Yet from telecommunicatio to transport to housing to "the conque of the desert," Egyptian officialdo tends to produce overoptimistic report But Petroleum Ministry people are r freshingly frank and realistic.

"Is it true that Egypt, as has been r ported recently, is sitting on a huge o

...th worker at Abu Rudeis in 1975
...o and a half million metric tons of oil from yesterday's implacable foe.

Outstanding.

ecause of location and cultural affinity with Europe—a more fertile ground for modernization than Iran.

ke?" we asked Ibrahim Radwan, an miable geophysicist who is general anager of the Egyptian General Petro- um Co. (EGPC). In response to this old umor, Radwan chuckles softly. In im- eccable English, the 20-year veteran of l exploration says: "These are exagger- ions. There are no oil lakes either in gypt or elsewhere. What we have in vor of our oil expectations is our loca- on on the oilbelt that made Libya, for xample, an oil-producing country. But bya dug up 4,000 wells, and Egypt was ble to dig up only 200. If we are able to g 2,000 wells, then we could transform gypt into a significant oil-producing ountry." Understand this: Radwan was ot saying that Egypt is another Libya, hich produces 2.18 million barrels a ay. What he *was* saying is that, for his- rical reasons, Egypt has never been ex- ored with anything like the thorough- ess Libya has.

The EGPC benefits from President Sa- at's shrewd evaluation of the dampen- g effect of bureaucracy on productivity. e is supposed to have enjoyed many mes the quip that Egypt could over- me red tape only if the permanent ndersecretaries of every government inistry were executed. Sadat isn't seri- usly considering euthanasia of the bu- aucracy, of course, but he is often driv- n to distraction by its deadening effect n Egyptian life.

Accordingly, he has bypassed chauvin- tic and left-wing objections and al- wed, nay, encouraged, foreign oil com- panies to do the exploration rather than restricting the work to the government oil company. The result has been 53 agreements held by 22 operating companies representing 69 corporations with 17 different national registries. These are, besides the EGPC itself: U.S., Italy, U.K., France, Netherlands, West Germany, Japan, Australia, Spain, Sweden, Canada, Switzerland, Malaysia, Brazil, Panama and even the Cayman Islands.

Unlike Saudi Arabia, which is hard-pressed to spend what it earns from oil, Egypt is desperate for foreign exchange. She would be eager to export every barrel possible to earn dollars for industrialization and modernization of the economy.

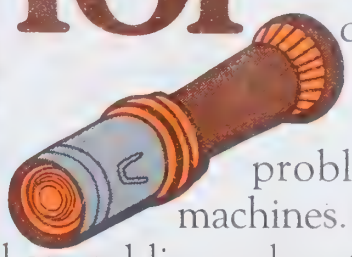
According to the Petroleum Ministry, the priorities for oil possibilities are ranked as follows: Gulf of Suez (onshore and offshore), Nile Delta basin, Sinai basin (the southern in particular), the Western and Eastern Desert basins (especially the former) and the Red Sea (onshore and offshore). Of course, this priority ranking is determined on the basis of both actual discovery and measurable prospects. For example, in the Gulf of Suez basin (22,000 kilometers onshore and offshore) so far 22 wells are operating in an area of proven deposits. In the 30,000 to 40,000 square kilometer area of the Delta basin which stretches into the Mediterranea hopes are high as a result of the discove of two natural gas fields (Abu Madi 1967, and Abu Kir in 1972).

The massive exploration effort is ove whelmingly dominated by U.S. co cerns. According to Egyptian gover ment statistics, it is estimated that exploration will cost these compani over $1 billion ($970 million for explor tion within eight years, plus $107 mi lion for contract signature bonuses pa to the Egyptian government).

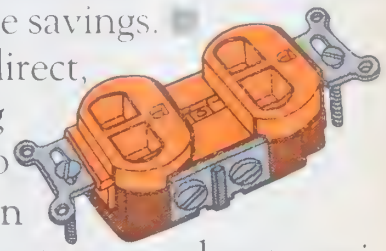
How can these companies be sure th one day the government will not tak over their operations once oil is disco ered and developed, especially sinc Egypt has a government-controlled c company? Of course, they cannot be al solutely *certain*. But Egypt's experienc with nationalization under Nasser wa sobering; this is, after all, one of the fe nations in the world to have swung t ward socialism and then found its wa back. "Enough damage to Egypt's econ my has already been done by previou acts of nationalization of foreign inves ments," says one high official. "This i now an open economy." You cannot, c course, put such assurances in the bank but no successor to Sadat would wi many political points by shouting slo gans of government ownership.

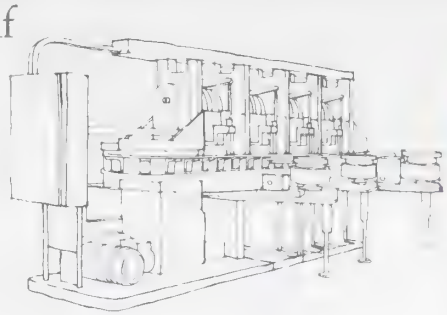
The Egyptian government seems to b leaning heavily on the Indonesian mode for petroleum development. Instead of th national sector participating in the devel opment of oil once it is discovered, thu

The machine that pays for itself



When you're in the business of assembling parts, you're in the business of holding costs down while keeping quality up. Which is a tricky business these days. Manufacturers have found the answer to the problem. Bodine in-line assembly machines. ■ Bodine modular machines have produced millions of small assemblies such as those shown here, products made in high volume to rigid specifications and yet at considerable savings. ■ With today's skyrocketing labor costs, both direct and indirect, managers hardly have to be persuaded of the wage-saving advantages of automated assembly systems. But they also must look hard at the possibility of long delays in changing over to new equipment, and they must worry about sacrificing quality control in their products. ■ Conversion even from a completely manual operation can be made swiftly and with a minimum of de-bugging time. ■ As for quality control, the simplicity of the Bodine drive system eliminates much of the need for monitoring and adjustment. Most of the motions of the system are timed and driven by the main drive shaft, and these include self-inspection features that keep constant tabs on output. ■ All of this adds up to higher production rates, fewer returns, and the elimination of costly major retooling for product changes. Which means savings added to savings. A Bodine assembly machine pays for itself. And then it starts to pay for itself all over again. ■ Write or phone Frank J. Riley, Vice President, The Bodine Corporation, 317 Mountain Grove Street, Bridgeport, Conn. 06605, (203) 334-3107.





Bodine
ASSEMBLY SYSTEMS

quiring a sizable initial investment on e part of the country concerned, a pro- uction-sharing arrangement was adopt- by the Indonesians. Hence, a company ploring for oil in Egypt is able to develop s oil discovery on its own, without any nancial commitment on Egypt's part. oduction-sharing (onshore, the percent- e is 80% for the national sector, 20% for e company; offshore, it is 70% to 30%) akes economic sense to an impover- ned economy.

Another reason Egypt welcomes foreign l companies is that it expects more than st petrodollars from the industry. There e important fringe benefits accruing to ypt as a result of oil exploration and velopment. The training and job-cre- on that are continuously undertaken by reign oil companies there are among the ost important. Also, at least 3,000 Egyp- n technicians are presently on loan to rk in oilfields around the world, includ- g Australia, Canada, even the U.S.

It would be a blessing, both to Eygpt and to the Western World, were this ancient land found to contain large amounts of oil. Unlike, say, Saudi Arabia, which is hard-pressed to spend what it earns from oil, Egypt is desperate for foreign exchange. She would be eager to export every barrel possible to earn the dollars she needs for industrialization and modernization of the economy. Egypt, moreover, in part because of her Mediterranean location and her cultural affinity with Europe, is far more fertile ground for modernization than is Iran.

Is the oil there? American oil industry experts enthusiastically assert that the Sinai has plenty of oil. As for the Western Desert basin, they don't appear to be quite as sanguine about its prospects for the time being. Yet Egyptian officials stick tenaciously to the argument that the Western Desert contains "the biggest and thickest deposits in Egypt," to quote geophysicist Ibrahim Radwan of EGPC. From President Sadat on down, everyone is keeping his fingers crossed. ■

he U.S. is stumbling in its efforts to create an il stockpile, but Europe and Japan aren't.

Too little for a rainy day

OVER THE PAST TWO YEARS, the U.S. Department of Energy has spent over $1 billion to create a strate- petroleum reserve. The plan will cost ny billions more by 1985, when the l amount—equivalent to about five nths' supply of oil imports—is sup- sed to be socked away in Texas and uisiana salt domes. So far, the ambi- us project has had more than its share foul-ups: Storage costs have doubled d the fill rate is running at half of rget levels. Meanwhile, there are no mps to provide access to the 70 mil- n barrels of crude that are now in the serve. That's only equal to about a ek's imports. U.S. oil companies, of urse, hold massive operating inven- y, but experts reckon only about one- nth of it—maybe 12 days of imports— an actual safety margin. The rest is eded just so the oil distribution system eps rolling.

President Carter's speech early this month made little reference to this important part of energy security. It seems a startling omission. "Compared with the U.S., Europe and Japan have more protection," says Edward Krapels, a Washington consultant who recently did a major study for the Rockefeller Foundation. Germany, for instance, has an impressive emergency store program that dates from 1966. The Bonn government has over 40 million barrels of crude stored in salt caverns—on a per capita usage basis, over three times the official U.S. cache—and it plans to add 40% more oil by 1980. Meanwhile, the Germans have sold the U.S. $30 million worth of salt-dome storage technology.

Besides the government stockpile, however, Germany has also forced private oil companies to build up reserves. That's something most major nations with oil storage schemes have done, though the idea is hardly popular wit U.S. companies, mainly on grounds inequity. German companies felt th same way. After a 13-year struggle, th compromise was a compulsory oil sto age organization. Companies pay un form storage fees based on their sal volumes, effectively passing stockpilin costs along to the consumer.

The goal of Germany's quasigoverm mental storage body is a 65-day supply. already holds over 90% of the amount- half in surface tanks and the rest belo ground in Germany and in souther France. "There are 20 of us here in Ham burg managing the whole industry stoc program," says August Kurz, a directo "Before, it took hundreds of people a over the country—two or three in eac company." DOE officials acknowledg studying Bonn's system in their searc for ways to finance the final 250,00 barrels of the U.S. strategic reserve.

In Japan, there has long been a coz relationship between the industry and th government agency responsible for ene gy, the Ministry of International Trad and Industry. A stockpiling law is on th books, and emergency reserves are a join government/industry affair. By the end c 1978, thanks largely to cheap loans an other incentives, the oil company elemen of Japan's reserve was on target at 84 days supply, half in crude, half in products. I addition, through a reorganized Japan Na tional Oil Corp., the government last yea bought 31.5 million barrels of crude fo storage aboard 20 supertankers. Beside stockpiling oil, this $500 million effor helped the country's depressed shippin industry and provided an outlet for th government's bulging dollar reserves. I 1979 the Japanese will spend $2 billio more for on-land storage depots and addi tional crude. Because surface storage site are scarce and prone to earthquake dam age, Japan too is looking at possibilities fo underground stockpiles and buying tech nology from Europe.

In France and Italy, where state contro of the oil industry has a long history laws compel firms to hold the emergency reserves. Italy even makes *consumer* custodians of its safety supply. Anyone with a tank holding 1,200 barrels or more must keep it one-fifth full at all times. I the U.S., the Office of Management and Budget has urged that similar user stock- piles be made part of the strategic re- serve. "You'd need a huge bureaucratic system to keep on top of that," says a DOE planner, "though it might make sense for major electrical utilities."

The U.S., of course, has an advantage over the Europeans and Japanese; it still produces about 50% of the oil it uses and about 70% of the total energy. But is this any excuse for second-rate strategic plan- ning at a time when the U.S.' daily *im ports* rival the daily production of Saudi Arabia? ■

From "pole" to "pole," Brazil is reaching new heights in petrochemicals. With the help of worldwide Citibank.

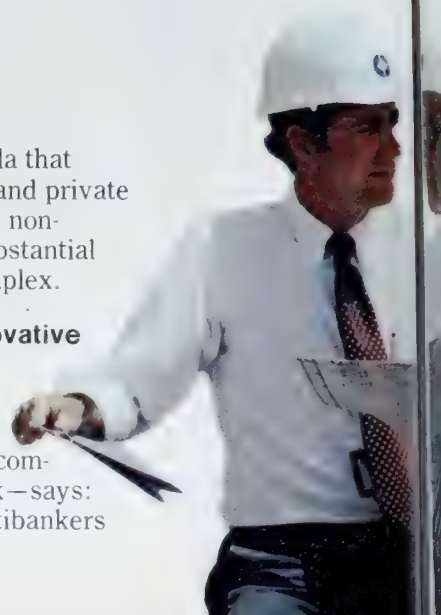
Towering distillation columns highlight a vast new petrochemical complex—or petrochemical "pole," as such a complex is called in Brazil—that is one of the largest simultaneously planned and constructed chemical installations in the world.

It is the second such pole to be built in Brazil—and the forerunner of a third. By supplying major impetus to a basic industry, these poles will effectively curtail Brazil's dependence on imports for much of its petrochemical needs, by making raw materials available for products ranging from plastics and pharmaceuticals to fibers and fertilizers.

Under a creative financing formula that coordinates participation by public and private sources of funds, both Brazilian and non-Brazilian, Citibank has provided substantial financing for the new $3-billion complex.

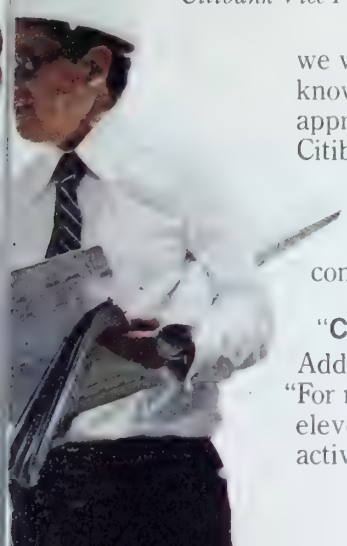
"We look to Citibankers... for innovative financing approaches."

Otto Vicente Perroni, President of Petroquimica do Nordeste S.A.—known as COPENE, and the major component company within the complex—says: "We know that we can look to the Citibankers



Citibank, N.A. Member FDIC

At COPENE's Camaçari site:
President Otto Vicente Perroni (right), with
Citibank Vice President Robert E. Cushman.



we work with not simply for funds, but for knowledgeable and innovative financing approaches." Adding further dimension to Citibank's participation are the skills of Citibankers who are specialists not just in petrochemicals, but in such related industries as plant construction and transportation.

"Citibank has actively participated..."

Adds Citibank Vice President Bob Cushman: "For more than sixty years Citibank, with eleven branches throughout Brazil, has actively participated in the country's development, providing both funds and financing expertise."

To customers large and small, multinational, regional or local, Citibankers bring the full resources and facilities of a leading international bank.

They bring, also, a continuing commitment shared by Citibankers everywhere: to work with insight and dedication toward the economic good and growth of every area Citibank serves, worldwide.

What is NCR up to now?

We're up to number one in department store point-of-sale terminals.

Your latest department and specialty store purchase, very likely, was "rung up" on an NCR point-of-sale terminal. The odds are in our favor because two-thirds of the terminals being installed are ours.

A leader in scanning—Perhaps your purchase receipt was produced automatically by an NCR wand reader which scanned the item's price tag. NCR introduced wand reading and has supplied more wand readers than anyone else. Also, NCR now offers the complete line of Optical Character Recognition (OCR) equipment a retailer needs for effective purchase order management.

Retailers depend on NCR systems—Why are we up to number one in department store point-of-sale terminals? Executives of such companies as Abraham & Straus, Montgomery Ward, Hess's and Seibu helped put us there. They depend on NCR systems for up-to-the-minute management reports, precise inventory levels and improved employee productivity.

Providing business equipment for almost a century—But helping department stores fight rising costs is nothing new for NCR. We've been doing it since the days when high-button shoes were in style. In fact, we've been in business for 95 years. Department store executives look for this kind of experience when they choose an EDP system.

Support where needed and when—And they look for support. NCR supplies it, with 16,000 highly trained field engineers around the world. This global support network is especially important to companies with plans for expansion.

Retailing is just one of the fields where NCR is the leader. We're also up to management's most exacting requirements in financial, commercial, industrial, health-care, education and government markets.

Now you know why NCR is a world leader in general-purpose computer systems.

NCR

'hat shall it profit a natural gas operation
)at does things right? Not much these days.

The high price of prudence

By Allan Sloan

AMERICAN NATURAL RESOURCES CO. was doing everything right at its Michigan Consolidated Gas subliary. It energetically promoted conser-tion, went out and found new gas sup-ies in Michigan, promoted the import Canadian gas, built huge gas storage lds and therefore had enough gas left er to bail out less prudent or less fortu-te utilities during the great gas short-e days of a few years ago. Is this any ay to run a gas company? Not in 1979, isn't.

Michigan Consolidated, which made ndy profits peddling its surplus gas dur-g the gas shortage, is choking on its rplus now because of the temporary tural gas glut. The result was that ich Con had terrible 1978, which will followed by a worse 1979.

Mich Con's problems are starting to rt ANR, a Detroit-based integrated tural gas company. ANR's coal, truck-g and other subsidiaries made up for ich Con's $18.1 million earnings de-ine last year, allowing ANR to show a rawny 1% increase in profits on a 16% crease in revenues (to $1.9 billion). But rring a miracle, Mich Con's problems ill drag ANR's earnings down this year, hich will be ANR's first year-to-year ecline since 1968.

During the days of gas shortages in 974-77, eager utilities besieged Mich on, begging for enough gas to avoid tting off service to customers. Mich on sold the surplus so adroitly—even anaging to stick other utilities with efty gas storage fees—that for most of e 1970s, Mich Con earned more mon-than the Michigan Public Service ommission authorized it to make.

That's a neat trick, especially in ichigan. The Michigan PSC, while not ngenerous, routinely takes a year or ore to decide major rate cases. Mich on tiptoed around the commission for ears, earning unauthorized profits but

ANR Chairman Arthur Seder Jr.
Too much is too bad.

insisting that each year's sale of surplus gas was "temporary." Mich Con filed only modest rate increase requests, and preferred to settle them expeditiously rather than litigate them.

In addition to its other talents, credit Mich Con with some foresight. It saw trouble ahead disposing of its surplus, and filed a big rate request in March 1977. And, looking for a place to put its surplus gas, it lined up a California utility to buy a whopping 100 billion cubic feet (bcf) in 1979-81. But the sale fell through, and the Michigan PSC took 19 months to rule on the rate request.

In September 1978, just as sales to other utilities were all but ending, the Michigan PSC approved new rates assuming Mich Con would be selling a large quantity of gas out of the state. The ruling damaged Mich Con two ways. One, it obviously couldn't earn a profit on gas it couldn't sell. And two, Mich Con couldn't even recover all of its basic operating costs, because the PSC spread them over 474 bcf while the company will do well to sell 440 bcf this year.

"Regulation has a very difficult time turning around that rapidly," concedes Daniel Demlow, chairman of the Michigan PSC. "Michigan Consolidated got caught with a [rate] case at a time we were talking about shortages, and it ended during a time of surplus."

That's not much consolation to Mich Con, especially because the plan to solve its gas problems with a single sale fell through last October, shortly after the PSC's rate order. Seeing that the spot market for selling surplus gas was going to soften, Mich Con signed Pacific Lighting of Los Angeles to a tentative three-year contract to buy 20 bcf of gas this year and 40 bcf annually in 1980 and 1981. That 100 bcf is enough to heat 625,000 typical Michigan homes for a year. But Pacific, using an escape clause in the agreement, pulled out, leaving Mich Con to choke on the surplus.

Mich Con's 1978 profits were $17.4 million, down from $35.5 million in 1977. ANR as a whole showed a slight increase—to $129.3 million, up from $127.4 million in 1977—because its gas pipeline subsidiaries had a good year, and because it had a $2 million gain on the sale of some coal properties.

ANR attributes at least $4 million of the 1978 Mich Con decline—about 18 cents per ANR share—to the gas surplus. That's dreary, but it's downright wonderful compared with Mich Con's prospects this year. The company faces almost a full year with inadequate rates. Lack of a market for the 40 bcf of supplies will reduce Mich Con's 1979 profit by at least $14 million, not counting the profit-depressing factor of the decreased shipments through ANR's Michigan Wisconsin Pipe Line Co. to Mich Con.

What does this mean to ANR?

"We earned $17 million (on Mich Con) last year," said ANR Chairman Arthur Seder Jr. "If we go down another $10 million and the pipeline doesn't go up that much, which it won't, you can do the arithmetic."

The only chance of avoiding an earnings decline this year, says Seder (pronounced "cedar," like the tree), is a pending court case that may allow an ANR subsidiary to take into income a $25 million (aftertax) reserve set up a few years ago. But, Seder notes, that's not real earnings. "The analysts will disregard that," he says, "and they'll be right." ■

British insurance broker Julian Radcliffe protects businessmen against nationalization, coups d'état, even war.

Profiting from political risk

LONDON INSURANCE BROKER Julian G.Y. Radcliffe, a man of lean, aristocratic bearing, won't write a policy on Cheryl Tiegs' legs or Jimmy Connors' tennis arm. But he will sell you something equally offbeat. As head of a leading firm in political risk underwriting, he'll provide coverage against nationalization by tinhorn dictators, contracts cancellation after a coup d'état or even war losses—provided, it says in the fine print, that the conflict does not involve two of the five major world powers or the use of nuclear weapons.

Governments have long sold limited forms of insurance to protect their own businessmen abroad. Washington's Overseas Private Investment Corp., for example, dates from Marshall Plan days. But only recently have private sector insurers offered political risk protection.

The commercial potential of such insurance, however, intrigued Radcliffe while he was a student of international relations at Oxford. His first job in 1970 was with a leading Lloyd's of London underwriter; and two years later, at an elderly 24, he formed Investment Insurance International, which he runs today as part of the oldline Hogg Robinson brokerage group. "What we've done at I.I.I.," he explains, "is to arrange facilities at Lloyd's to take political risk insurance on a regular basis."

Then, straightening a very proper detachable collar, he adds: "First, you must understand what we don't do. We don't pinpoint where political troubles are going to occur—even foreign offices and state departments can't do that. A businessman, however, doesn't want to know whether the risk in Malaysia is greater than in Nigeria. He wants to know about *his* particular risk in Nigeria.

"Very few countries are uninsurable, period. Uganda probably falls into that category . . . Lebanon, Ethiopia, Nicaragua. There are others, such as Turkey, where we can't quote for risks like exchange transfer. Or maybe Vietnam, where we could perhaps insure European companies but not American ones. The point is that the risk on a specific investment or contract is much different than the risk for an entire country, and in insurance the particular always takes precedence over the general. Look at Iran. Lots of projects are going to suffer a delay, and there will be big losses. But unless there's anarchy for ten years, many of those contracts will be renegotiated—and you're a lot better off if you're putting in something that's basic to the economy than if you're building palaces for the royal family."

Political risk insurer Julian Radcliffe
The specific outweighs the general.

A pin-striped Etonian whose great-grandfather was a leading insurance broker, Radcliffe ticks off a range of business political risks from high to low. At the top are contracts to supply military hardware, followed by oilfield equipment—since energy industries are often nationalization targets. Near the bottom are investments in, say, electronics plants that will create local jobs.

Since government-backed insurers write political coverage with numer restrictions and only for new inv ments, Radcliffe gets a steady flow requests for rate quotations from ins ance brokers. His green, leatherbou "order book" lists over a score of inqu ies for just one recent morning. Am them, with identities blurred for pri cy's sake: a Dutch builder worried ab a $12 million hotel contract in Senega European airline eager to protect its c tract for charter flights to the U.S.S. and a U.K. drug company about to ope small production plant in Portugal.

The most intriguing, a U.S. firm m ing $1 million worth of amplifiers mosques in a Gulf States emirate, p vides a good example of how politi risk policies work. "They're probal making those things specifically for t order," says Radcliffe. "But what if t government falls and the deal is c celed? It's a pretty stable country, thou the contract isn't one with real econo ic value. We'd probably offer coverage about 2% of the amount covered. E that won't be the full $1 million. Even the worst cases, losses are rarely abo 40% of a contract's value." So politi peace of mind might cost $8,000.

"In general our rates range from 0.1 up to 10% of the sum insured," Radcli goes on. "Our underwriters spend m time trying to balance their book th wondering whether the rate for a partic lar deal ought to be 3.7% or 3.8%. I country goes wrong, that's irrelevant; not, it's all profit anyway. Right n Lloyd's has over $500 million at risk about 100 countries. There are so high-rate nations where we don't wa any more business and softer ones whe we have plenty of capacity."

Radcliffe estimates worldwide priva premium volume for political risk cov age—excluding oil rigs, ships and a craft, which are protected under conve tional policies—at about $20 million a growing fast. About three-fourths of th is placed with Lloyd's, where his firm a major factor, and a few independe companies, such as New York's Ame can International Group, also offer poli cal protection. Even in optimum situ tions, Lloyd's can insure only up to $ million on a contract, or $40 million investments, which limits business. B capacity should rise as private sector u derwriting in the specialty grows.

Radcliffe himself isn't about to whi away the coming years of growth at h family estate near the Welsh border. H commands an army reserve squadron- expertise he put to commercial use b founding a second company, Contr Risks, to advise companies on personn security. Outside the office he is acti in Conservative politics and plays an a gressive game of squash.

Quite dashing for a straitlaced Britis insurance man who is still only 30. ■

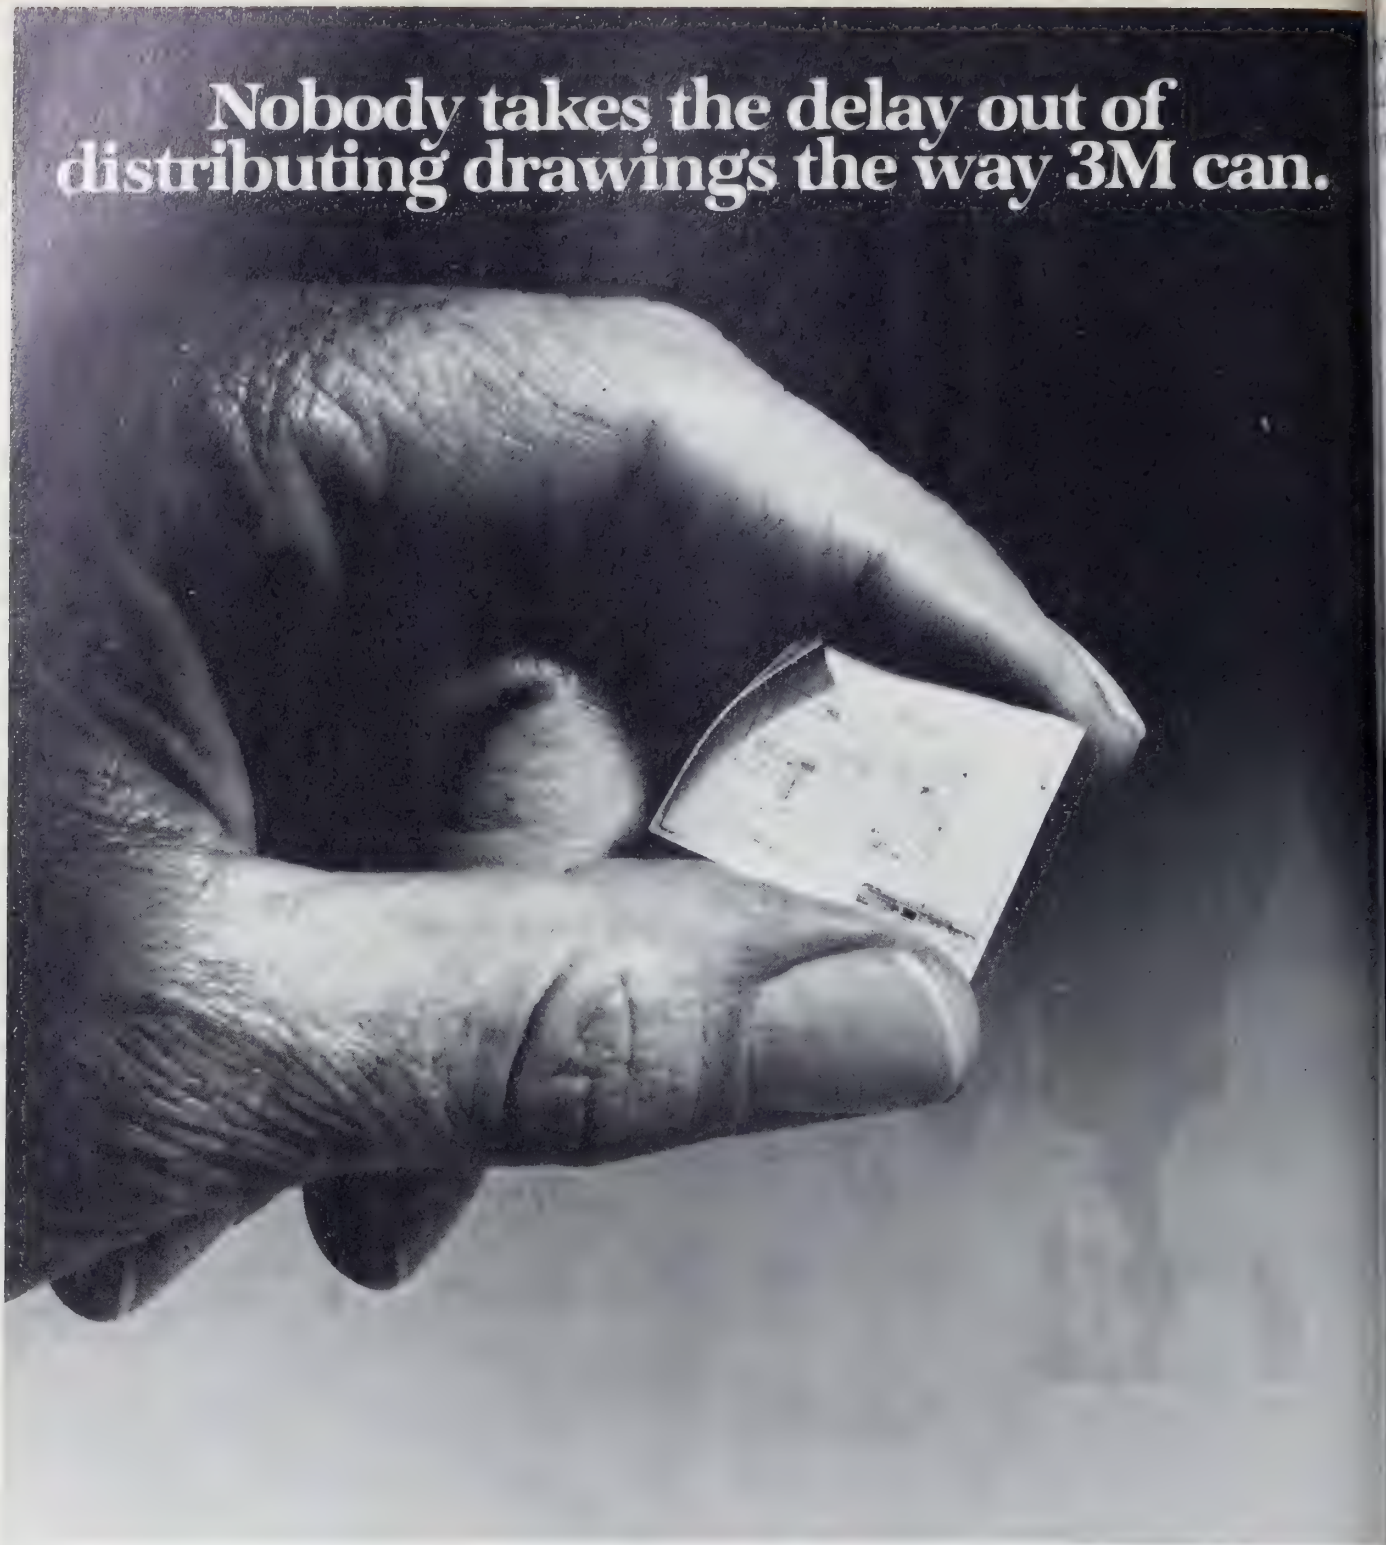
How a lot of Parisians get a really good steer from an industrial products company like Colt Industries.

There's one thing a lot of French cars have in common. And that's smooth steering—thanks to a special steering column bushing from Chromex S.A., a French unit of our Garlock Precision Oil Seal Division. Made from self-lubricating TFE and rubber sandwiched around a metal insert, the bushing provides the proper torque to translate steering directions to the wheels and back again—under virtually all road and weather conditions and at all normal speeds. This bushing is one of more than 100,000 industrial seals and components that make Garlock a respected name around the world. And Garlock is one of many names that make us a leading supplier to industry both at home and abroad. For our latest financial reports, write Colt Industries Inc, Dept. E, 430 Park Avenue, New York, New York 10022.

Colt Industries

Fairbanks Morse diesel engines • Fairbanks scales • Pratt & Whitney and Elox production equipment • Quincy compressors • Central Moloney transformers • Trent welded stainless steel pipe and tubing • Crucible permanent magnets and coil springs • Colt firearms □ Crucible specialty steels □ Holley carburetors • Chandler Evans fuel controls • Fairbanks Morse pumps □ Garlock industrial seals and components □ Menasco shock mitigation systems.

Nobody takes the delay out of distributing drawings the way 3M can.



A 3M Communication-by-Card System can cut the time it takes to deliver vitally-needed reproducible drawings, specs and ECN's from three days or more to one day or less. Prevent maintenance delays. And cut your operating costs as well.

The 3M system reduces each bulky engineering drawing to microfilm and mounts it on a compact data-bearing tab card. It's so fast, you can see the complete results 45 seconds later. Then, even more quickly, it makes inexpensive duplicate cards to distribute to every department where you now need a drawing. Call your local 3M Business Products Center. Or write Micrographic Products Division, 3M Company, St. Paul, MN 55101.

e Chessie-Seaboard merger pairs a healthy lroad with a troubled one. But don't as- ne Chessie's getting the worst of the deal.

An unequal partnership?

oard Coast Line Chairman Prime Osborn
homegrown management wasn't good enough to do the job.

As of mid-April, the shares of Chessie System, Inc. sold around $30 while those of Seaboard Coast Line Industries Inc. brought $27. Yet the merger recently proposed for the two giant railroad systems calls for Seaboard shareholders to get 1.35 shares for every Chessie share—shares that would presumably be worth $40.50 with Chessie selling at 30. The merger, moreover, gives each group of stockholders an equal share of the new company.

Chessie has been an extremely well-run company, while Seaboard has been a laggard. Why reward poor management with a premium price? The answer is that Seaboard is turning around bit by bit, and by the time the merger is accomplished—*if* it is accomplished—close to three years will have elapsed. By then, Seaboard, which last year earned only $4.64 a share, could easily be earning over $10 a share.

A few years ago, not long before he took over as chief executive of Jacksonville-based Seaboard, Chairman Prime F. Osborn III, now 63, took a good and long-overdue look at the company he'd been working for for more than 26 years and decided he didn't like what he saw. Seaboard's debt was increasing steadily and so were gross revenues, but the bottom line looked increasingly slack. Between 1972 and 1977 revenues had risen over 60% but pretax profits hadn't budged. This in spite of capital spending that totaled close to $1 billion over the past five years. This is a familiar enough story in railroading, but Seaboard is different. It serves one of the fastest growing sections of the U.S.—the booming Southeast. The Southern, which serves much the same area, has done much better. Between 1971 and 1977, for instance, when Southern's total tonnage rose 38%, Seaboard's was up only 7.8%, and that of its Louisville & Nashville affiliate, 8.8%. Where Southern managed to increase its earnings 89% over the past five years, Seaboard's earnings dropped over 10%. "We figured we ought to bring a greater percentage down to net," Osborn says, "and be sure our market penetration was going to increase."

Though Osborn is too tactful to say so, he clearly decided that the basic problem was management and that Seaboard Coast Line's wasn't good enough to do the job. Osborn himself supplanted Thomas Rice as SCL's chief executive two years ago and as chairman last spring. As SCL's other top managers retired, Osborn had begun replacing them with new men drawn not from within but from outside the company.

President Paul Funkhouser, 55, and Welborn Alexander, vice president-sales and marketing, came from the Penn Central. Richard D. Spence, president of SCL's L&N affiliate, came from the Southern Pacific by way of Conrail. Rob-

ert Hampton, SCL's new financial vice president, came from Salomon Bros.

Seaboard's management deficiencies stemmed in part from the 1967 merger of the Seaboard Air Line and Atlantic Coast Line, from which the present company emerged. For nearly a decade after the merger was first proposed, the company's management development program was stymied. "There was a period of a decade," Osborn says, "when everything was kind of standing still. We tried not to hire additional people. We did conduct some management training, but not as extensive as it would have been otherwise." The upshot was that the merged company never realized its promise. All too often, Seaboard failed to provide the service necessary to confirm its place in the market, and was so absorbed in shaking down its merger that it failed to anticipate the problems that were developing on the L&N.

Osborn has now plugged most of the gaps in Seaboard's top management, but too late to prevent the L&N's problems from surfacing publicly. Over the last two years, the L&N has been hit with a series of derailments, including two that rank as major catastrophes. The latest—involving a shipment of chemicals—last month threatened an 80-square-mile area around Crestview, Fla. L&N often seemed so ill-maintained as to be virtually running on its ties, and the Federal Railroad Administration finally imposed safety regulations that restricted L handling of hazardous substances. shippers began complaining of de rating service, and last summer the ordered Seaboard to supply 100 loc tives to the L&N and threatened to it over $1 million for failure to mai an adequate car supply. In 1978 the lost money for the first time in 46 y a loss that helped cut the consolid company's 1977 earnings record of million back to $68 million.

Last year's troubles, however, ma the considerable progress Osborn been making in reorganizing the pany. He has been gradually consol ing Seaboard, the L&N and their sm affiliates into a single integrated sys known as the Family Lines. Purcha and public relations have already centralized, and so has the traffic de ment—sales, marketing, pricing. counting is now being centralize well. The idea is to get the benefit merger without having to pay the p in restrictive labor agreements that a mal merger would involve.

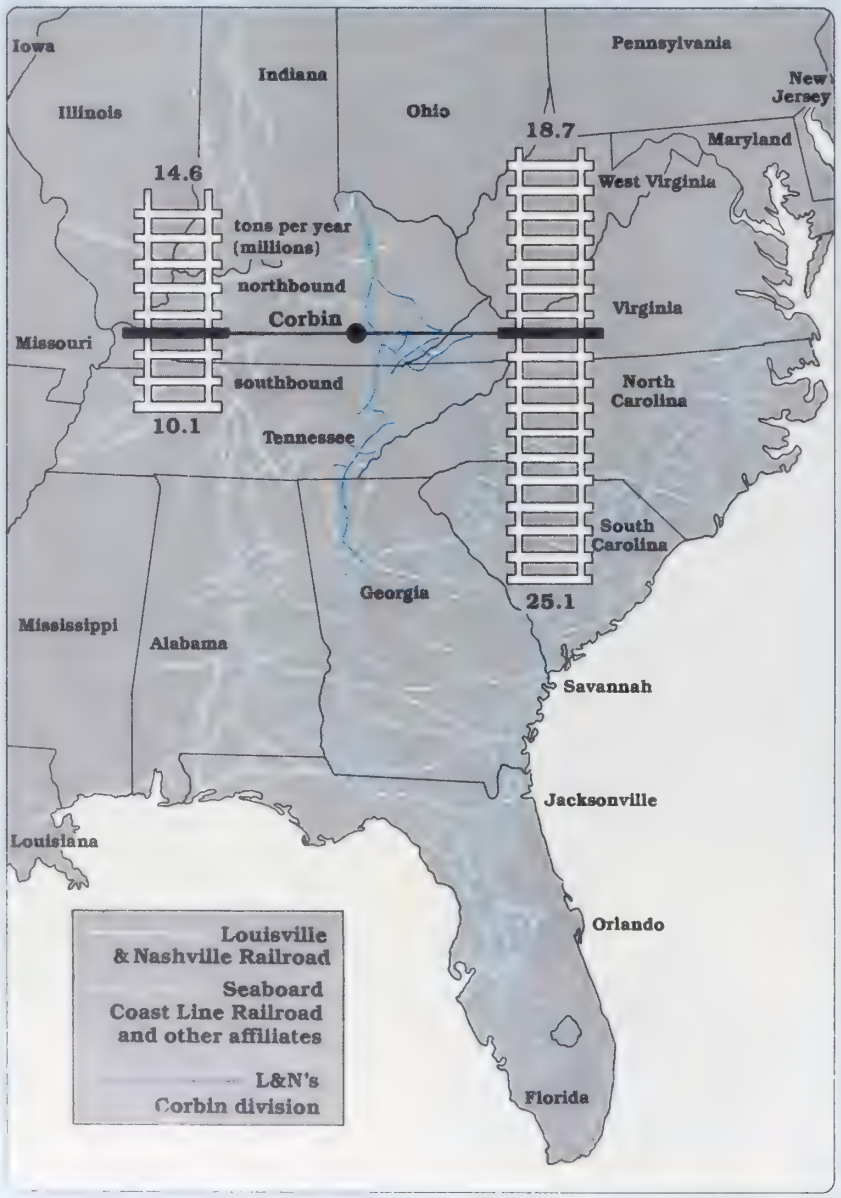
What this has meant, among o things, is that traffic now moves m efficiently and economically through the system. In the old days, each of Family Line railroads would attemp keep the longest haul for itself, so traffic moving onto the L&N at N Orleans bound for the Carolinas by of Atlanta would go the long way rou moving north to Birmingham before ing turned over to the SCL for transs ment to Atlanta and beyond. These d such traffic moves directly to Atlanta, the L&N at Montgomery onto the W Point route to Atlanta, then onto SCL itself. "We save a full day in mov it that way, and two yardings," says born, "and make a more efficient ro and a more economic haul."

Under Marketing Vice President Al ander, SCL is actively trying to cultiv the traffic it makes a profit on—co modities like grain, paper, phosphate and actively discouraging traffic which it does not, like aggregates, sa and gravel. And this means the SCL h to begin marketing its services. Thou the Family Lines serve the grain belt Indiana and Illinois, for example, L& never got any export grain business p marily because it never posted an exp rate. It does now, and the result was t last year the company handled 69 exp unit-trains—what Alexander expe will be the beginning of a big new bu ness. In its piggyback business, it's perimenting with back-haul rates exempt commodities like peanu "We're projecting," says Alexander, 20% increase in total units over the ne five years."

The main focus of management atte tion these days is Seaboard's troubl L&N affiliate. The third largest coal c

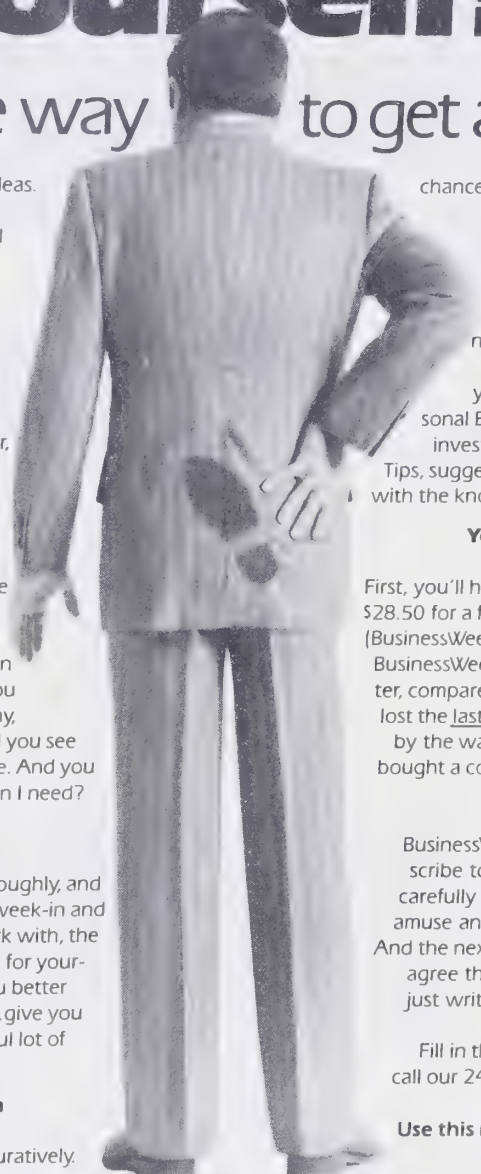
Coal corridor

A decade ago, coal traffic on the Seaboard Coast Line's Louisville & Nashville affiliate moved mainly northward out of Corbin, Ky., over a heavy-duty double-tracked line to Cincinnati and the big utility markets beyond. By 1977, the pattern had unexpectedly shifted, and the bulk of L&N's coal traffic now moves southward over a high-cost single-track line to the Knoxville and Atlanta gateways. Result: Booming growth brought heavy losses rather than soaring profits.



stop kicking yourself!

(It's not the way to get ahead.)



You go to a meeting. Everyone has lots to say. Ideas. Opinions. Asides. Finally you chip in your two cents worth. Only to find your "news" is as cold as yesterday's mashed potatoes. You think to yourself,

"I could kick myself."

You're called upon to make a really important decision. Restless nights. You toss and turn. Sort out the options. Then, based on everything you know, you make up your mind. It's a bomb! Your data turns out to be incomplete. You mutter,

"I could kick myself."

You've got the money to invest. And you should. After all it's for your family. So you bet a bundle. And even before you get your broker's commission bill, the "sure thing" starts down the drain. Again,

"I could kick myself."

You can probably add examples of your own like these. Times when you've really blown it. You did your best but no cigar. "Never again," you say, "NEVER AGAIN!" But then you look around and you see other people who never seem to make a mistake. And you wonder, "where can I get the kind of information I need? I'm tired of cussing and coming in second."

Welcome to BusinessWeek!

No other business reading so succinctly, so thoroughly, and so reliably gives you the information you need week-in and week-out to keep on top of the people you work with, the job you handle, and the security you're building for yourself and your family. BusinessWeek will make you better informed all-around...help you avoid mistakes...give you more confidence, more savvy...and take an awful lot of worry out of your working hours.

Here is just some of the information BusinessWeek delivers.

BusinessWeek ranges the globe, literally and figuratively. There's no such thing as local business anymore. The price of a barrel of oil in Saudi Arabia can have its effect in a lumber camp in Canada. And BusinessWeek doesn't want you kicking yourself anymore because you didn't know about such things. BusinessWeek gives you the big picture.

BusinessWeek separates the nitty from the gritty. Which simply means that with its staff of writers, researchers and editors and correspondents all over the map and the information resources of McGraw-Hill behind it, BusinessWeek can winnow out the information you need to know. If a thousand relevant numbers all add up to an increase in the prime rate to 13%, BusinessWeek will do all the calculations for you. And only give you the number you need.

BusinessWeek purposefully divides up each week's editorial menu into departments. Gives you a chance to pick out those areas of greatest interest and to program your reading.

BusinessWeek takes a hard look at everything that's going on. But it also takes a long look at what those happenings mean—in simple terms. Some people call it perspective, prescience, prognostication. We just call it good business journalism.

BusinessWeek recognizes that there are two of you. Every issue carries a popular feature called Personal Business. And it's just that. Everything from how to invest in art to where to spend your next family holiday. Tips, suggestions, admonitions, facts and fancies. And always with the knowledge that there's more to life than 9:00 to 5:00.

You'll have no kicks coming when you subscribe to BusinessWeek.

First, you'll have no kicks about the price. Compare the price—$28.50 for a full year—to any other business expense you incur. (BusinessWeek is probably tax deductible.) Compare the cost of BusinessWeek to a lunch with a customer or colleague. Or, better, compare the price of a subscription to what you may have lost the last time you missed the boat. (The basic $28.50 price, by the way, saves you $36.50 over what you'd spend if you bought a copy every week on the newsstand. Thought you'd get a kick out of that.)

We are so convinced that you'll get a kick out of BusinessWeek, that we invite you to try it without risk. Subscribe today and when the first issue comes, go through it carefully and critically. See if you don't find plenty to inform, amuse and perhaps amaze. Do the same with the next issue. And the next. Then after you've tried three issues, if you don't agree that there's a wealth of information in the magazine, just write "cancel" on our invoice and be under no further obligation.

Fill in the coupon below. Today. Or for even faster service, call our 24-hour TOLL-FREE number. It's time for you to stop kicking yourself.

Use this no-risk order form...or call toll-free (24-hours) (800) 523-7600 (in PA., (800) 662-5180).

BusinessWeek
1221 Avenue of the Americas
New York, New York 10020

Yes, I'd like to profit from BusinessWeek. Please enter a subscription in my name at the regular one year rate of $28.50* (a $36.50 savings from the newsstand price). If, after reading the first three issues, I decide BusinessWeek does not live up to your promise, I'll write "cancel" on your invoice and owe nothing.

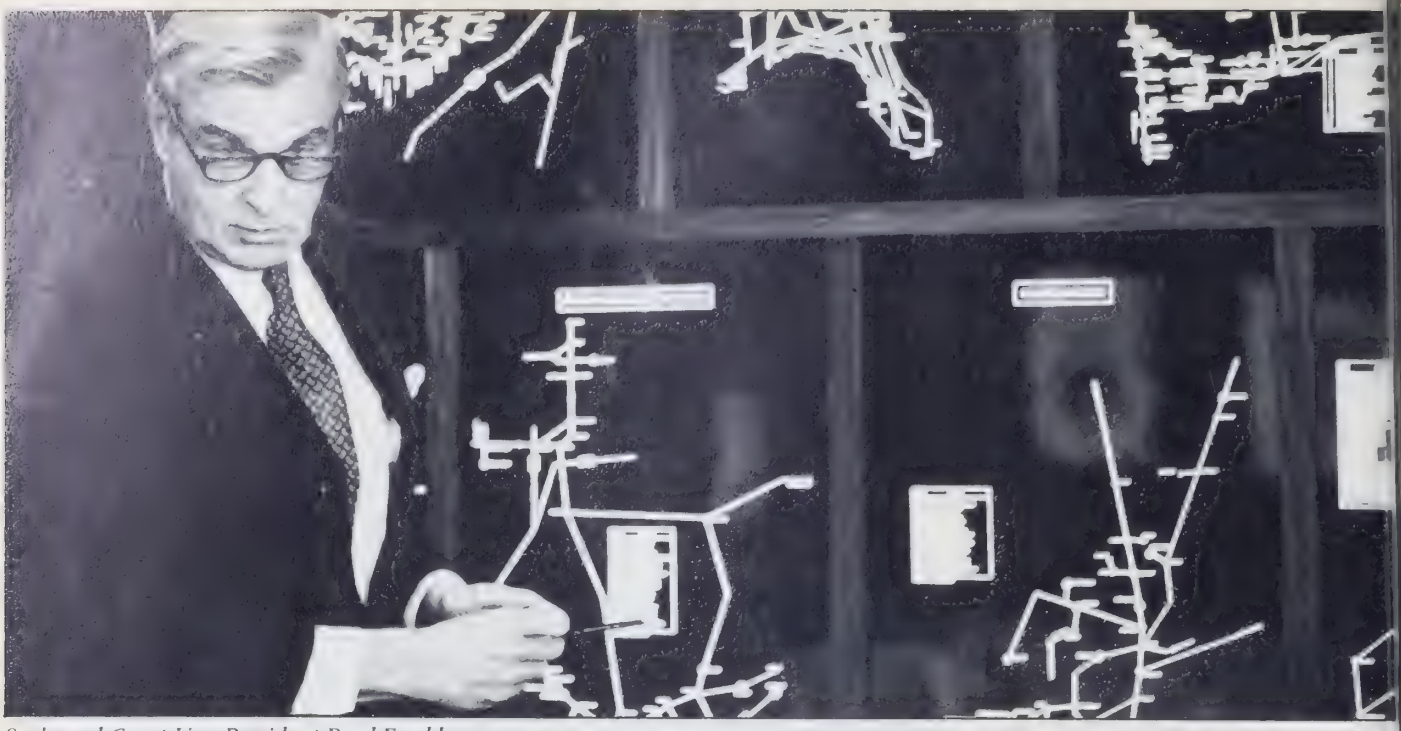
McGraw Hill



Seaboard Coast Line President Paul Funkhouser
"When 50% of your traffic doesn't pay its own costs, you've got a company in trouble."

rier in the industry, L&N is more heavily dependent on coal than any other major railroad; last year coal constituted 66% of L&N's originated traffic and 50% of its total traffic, up from less than 37% a decade ago. But far from proving a blessing, so far L&N coal has proved to be a curse. Coal boomed in the wake of the 1973 oil embargo, and L&N was totally unprepared to handle it.

Up until then, close to 60% of L&N's coal traffic moved north out of the East Kentucky coalfields over a heavy-duty line built specifically to carry it. The rest moved south, over a single-track light-density line through Knoxville and Atlanta *(see map, p. 84)*. But the energy crisis changed all that. Suddenly utilities in the Southeast began turning from oil and natural gas to coal, and L&N's traffic went through the roof. In four years its total tonnage increased 36%, with southbound traffic up 68%.

L&N didn't have the locomotives to handle the traffic and it didn't have the cars. Two locomotives could move 125-car trains over the gentle grades to the north, but it took five locomotives to push 70-car trains over the mountains to the south. L&N couldn't handle all the traffic that swamped its line, and its rates were so low that, as costs began skyrocketing, it couldn't make any money on what traffic it did handle. Those rates had been set by the competitive pressures of the energy market back in the Sixties; and when the market changed, L&N had been unable to change with it.

Compared with the two other major coal carriers in the East—both of whom ironically were confronted with *falling*, not rising, coal traffic—the L&N's rate levels were absurdly low. Its coal revenues averaged $3.57 a ton in 1977, *vs.* $4.68 for the Chessie System, $6.06 for the Norfolk & Western. If L&N's rates were at Chessie levels, L&N would have earned $67 million more than it did last year. But L&N's rates were not, and as traffic continued to mount, profits began to dwindle rapidly, and by year-end L&N was $32 million in the red.

L&N moved 58 million tons last year, but even that was 10 million tons short of the growing demand, which will probably hit 90 million tons by 1983. L&N's only hope of being able to meet that demand is a massive five-year $425 million rehabilitation and modernization program, involving 187 new locomotives, 7,500 freight cars, miles and miles of new siding and double-tracked and upgraded line.

But how to raise $425 million?

With a 54% debt ratio, L&N could not borrow the money, and it could not earn enough to finance the expansion internally either. So last fall it finally turned to the ICC with a landmark petition to raise its coal rates by 22%—enough not only to cover its costs but also to yield it a modest return on investment. The new rates were not exactly extortionate. They would yield L&N only 101.1% of its fully allocated costs.

L&N's utility customers screamed bloody murder, but the ICC approved the rates anyway—subject to later review and possible refunding. Between the 22% increase and last fall's general freight rate increase, L&N's revenues from coal will average $4.61.

"The rate increase," says President Paul Funkhouser, "will give us the financial base and the internal earnings to
forward with the $425 million progra
It should give us the earnings base

What can you do with a man like Salvatore Caravetta? His capers with Torch light bulbs, cynically marketed in the name of helping the handicapped, are a scandal.

Rascality springs eternal

By Robert J. Flaherty and Tedd A. Cohen

If you or your spouse should get a strange telephone call one day from a self-proclaimed handicapped caller begging you, often tearfully, to help the handicapped by buying some light bulbs inspiringly marketed under the Torch brand name, be assured you are not alone. Some 100,000 Americans get such calls monthly, and millions have paid over $70 million for the bulbs in the last 5 years. Many have taken the bait, unaware they were paying a high price for a substandard product. Torch has had more lives than a cat. The one constant, in all its reincarnations, is that most of the benefits have flowed not to the handicapped but to a healthy, wealthy New Jerseyite named Salvatore M. Caravetta and his associates.

Now 52, Caravetta was still in his late 30s back in 1965 when he first proved that he could prey upon the compassion of the average American housewife to his own considerable profit. He could do so by selling his light bulbs by telephone, using handicapped or allegedly handicapped callers to make his pitch. To this end he set up American Homelight Corp. in 1965, changing its name the following year to Brighter Homes.

In most respects the operation was a rip-off from the start—the piteous calls by handicapped workers playing upon their handicaps and their need, the bulbs that were priced at about three times the level of standard General Electric, Westinghouse or Sylvania bulbs available in any supermarket, and then, since telephone sales must be on credit, the bombardment of pleading (don't make us take away the commission of a handicapped person) and then letters threatening to ruin the credit of customers who were slow to cough up. Fictitiously, the company claimed links to national credit rating services, banks, retail stores, gas stations, even local bars.

For a while at least the bulbs themselves were of decent quality, made by an excellent little New Jersey company named Duro-Test Corp., but Caravetta soon changed that. Instead, in the late 1960s he shifted to a new supplier, Beta (pronounced "better") Lumination Co., which was secretly owned by Caravetta himself. Unfortunately, the new bulbs—all "guaranteed to last five years"—were of abominable quality. They produced a substandard amount of light for the electricity they used; they often became dim to the point of uselessness. Worse, because of poor production procedures they frequently burned out in days or even minutes, instead of the 3,500 hours they were supposed to last. After Caravetta's ownership of Beta Lumination was exposed, he felt impelled to sell it in 1974.

Such were the products hawked by Caravetta's sales staff of "handicapped." As revealed in the State of New Jersey's 1974 Investigation of Profit-oriented Companies Operating in a Pseudo-charitable Manner, some of the doctor-certified "disabilities" were: acne, excess weight, nervousness, hernia, hay fever and dislocated shoulder. How many were there? To keep the telephones manned by 600 employees meeting Caravetta's rigorous order-producing standards required hiring about 6,000 handicapped per year—a 1,000% turnover.

As consumer complaints poured into the New Jersey state government, the head of its charitable frauds bureau discovered some interesting corporate changes at Brighter Homes Corp. In 1968 Caravetta had sold Brighter Homes to a New York-based interdenominational church, the Stratford Retreat House, organized in 1964 by New Jersey radio preacher Reverend John Crew Tyler. Soon after the merger Reverend Tyler changed the operation's name to Torch Rehabilitation Organization; despite later modifications, it was to carry the word Torch (for The Organization to Conquer Handicaps) in its name from then on.

The advantages of the new setup were many. For one thing, telephone rates were lower for a business affiliated with a church—especially important for a telephone solicitation business. Postal rates were also lower, equally important where deliveries were made by mail. Moreover, Torch no longer had to pay federal taxes and was exempt from some states' income and franchise taxes. Because Torch was now part of a church, many buyers felt they had to pay even when taken—bad debts and requests for bulb replacements fell sharply. Sales soared to $4 million, and profits, estimated by Torch's accountant at $228,000 pretax before acquisition by the church, jumped to $1 million in 1970.

For the insiders, the advantages were even greater. In effect, the sale to the church had been a bonanza for the original owners. Caravetta—as owner of over 50% of the predecessor corporation's stock—plus his

associates including sales boss Michael Gabriel and financial man John J. Callery, had sold the company to the church for about $5 million, about 22 times pretax earnings, to be paid plus interest over 15 years. Thus the original owners made a killing as the church became a tax shelter to turn ordinary income into capital gains. For good measure, the church took out a $1 million life insurance policy on Caravetta, who also owned most of the light bulb manufacturing company, all of the company that arranged for Torch's printing and part of the credit company (which he sold to an associate in 1972).

A sweet setup, too sweet to last. Various other state regulatory agencies joined those in New Jersey in looking at Torch with increasing interest and hostility. An Internal Revenue Service inquiry frightened Reverend Tyler into fleeing abroad, where he dropped from public view. His church, which once claimed 10,000 souls, is now down to about 50. By late 1970 Congress had closed the loophole that allowed churches to run unrelated businesses like Torch tax free.

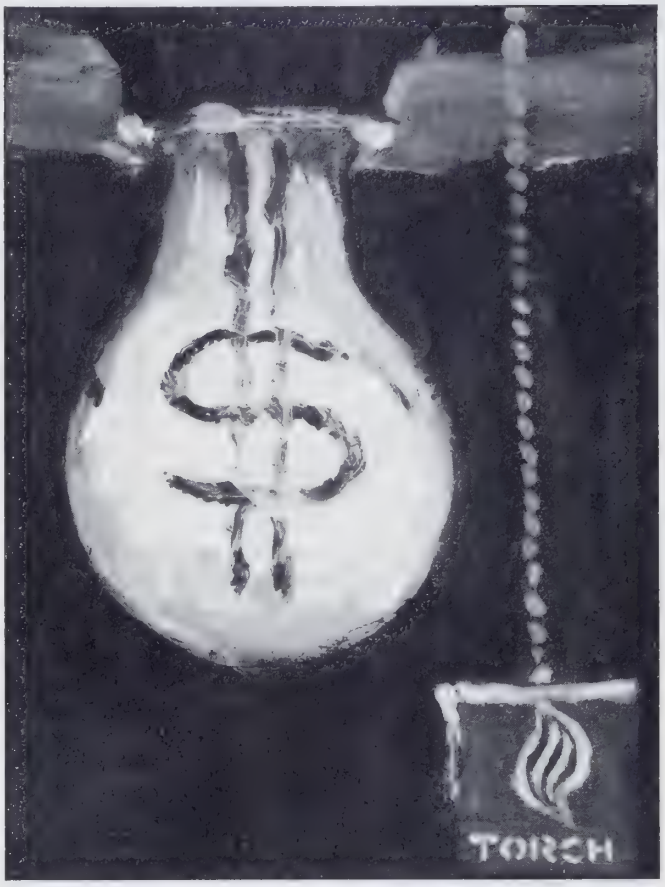
Around the time Tyler fled, a new personality entered the picture, Harold Russell, Oscar-winning actor and disabled veteran, who has hooks instead of hands lost in World War II and who was—and still is—chairman of the President's Committee on Employment of the Handicapped. Russell was named president of Torch in 1972. Advertising began to appear showing Russell with a pen in his hooks, carrying the copy "Call me lucky"—lucky, that is, to be carrying on such great work.

But two years later Harold Russell resigned. "I left Torch because I didn't like the smell," says Russell. "Caravetta was holding back important things and not discussing changes with everybody. As president I was making $25,000 and working on selling programs. I was horrified to learn that Caravetta was making $100,000. I also discovered his own company was making the light bulbs. I thought we were getting them from some established company."

In 1973 the IRS filed suit against Caravetta and the other original shareholders claiming that the "sale" to the church was not genuine. The case has not yet been tried because of delays, usually pleas of illness by some key defense witness or lawyer. After millions had been paid under the contract with the church, the publicity from the New Jersey and other investigations sharply reduced profits. Torch had to discontinue selling in both Michigan and New Jersey.

The church sold the light bulb operation to a new company, but the church was too shaky to recycle the cash flow it received. But Caravetta is nothing if not resourceful. He and his attorney devised a plan to buy back the light bulb operation . . . so it could be resold yet again.

Ordinary income could be tax-sheltered into capital gains once again. First, the church, now paying corporate income taxes and unable, therefore, to pay over its contracted 70% of pretax profits, was near default on the contract. Then



Caravetta and his associates, for an undisclosed sum, plus canceling the remaining paper debt, reacquired the light bulb operation and resold it to a new entity named Torch Products Corp. run by one of Caravetta's middle managers, a polio victim named Joseph Maira, and owned at least technically by the handicapped sales employees. The selling price was $1 million, to be paid by 1984 and bearing 4% interest.

Joe Maira insists, "The new Torch has nothing to do with what went on with the old one. In 1984 we'll be completely free. Give us a break. I look forward to your story like a threatening storm. It's so unfair, not only to me but to all our 600 handicapped sales employees. Do you realize how hard it is to get a job that pays even the minimum wage when you are handicapped? Torch can be something special if we get the chance."

How different is the new Torch? Sales are over $6.5 million, but aftertax profits are under $100,000. Importantly, M is making a much greater effo through newspaper advertising and si lar means—to hire legitimately ha capped people. For another, all sh outstanding are held by handicapped ployees who receive one share for e year of employment. Some 289 emp ees now own under 1,000 shares of authorized 6,050; the rest are unissue a shareowner leaves the company, must sell his shares back at an appra value, currently about $5. If Torch valued at Caravetta's $1 million sell price, each authorized sh would be worth over $160.

On the other hand, the r Torch's top management sides Maira includes old Ca vetta cronies Mike Gabriel, charge of operations and sale a salary of $53,000, and Jo Callery, who makes $40,000 the top financial man. And ery year the new Torch is ol gated to pay Caravetta and other original Torch own $97,500 plus interest as part the purchase price, money t Caravetta, of course, gets tax as a capital gain.

What is almost more distu ing is the way the new To continues some of the dubio practices of the old. For exa ple, the new Torch still carr the old life insurance policy Caravetta, originally $1 milli but now declining as the note Caravetta is paid down. And t company still buys its bul from the same old inadequa source that Caravetta sold c rather than switching to a fir rate supplier. With a better bu the shockingly high free-l placement figure of 20.7% of bulbs shipped could be sharply reduce Until 1983 some of the manufacture cash flow still goes to Caravetta to p off the purchase price.

And what of the central character, Sa vatore M. Caravetta? Needless to say, refused to be interviewed by Forbes, pr ferring to be represented by a smoot talking attorney. But Caravetta, living a mansion in Essex Fells, N.J., still flou ishes. He has even achieved a kind fame among official investigators. M chael R. Siavage, executive director New Jersey's State Commission of Inve tigation, is certainly no friend of Torch "Torch Products should not be allowe to sell in New Jersey, and I'm happy the stopped," he says. But he adds that f keeping up with the tax laws, adaptin corporate forms and managing to sta well within the periphery of legitimac Caravetta ranks among the three be adversaries he has faced in six years government service. ■

How to put your building on a strict Btu diet.

Energy, as we all know, is money. It disappears faster than we can put our fingers on it.

Soon, every one of us is going to have to start budgeting energy. The high costs of energy, as well as government regulations, are going to demand a strict accounting of the way our buildings consume energy.

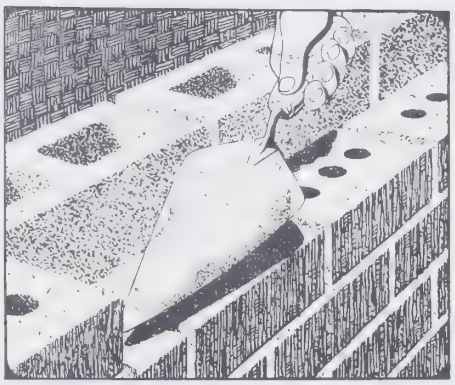
But there are ways to make a Btu stretch farther. We believe there are four important things that every business manager should know about cutting down energy expenditures:

1. *To do a good job of saving energy, you have to be concerned with the energy performance of the entire building,* not just a component like the walls, or a single system like heating and cooling.

Every facet has to be taken into account. The mass, or weight, of the walls, proper insulation, heating and cooling systems, air infiltration through doors and windows, water and lighting systems—all are critical.

Building performance standards that take this overall "thermal performance" (measured in Btus—British thermal units) into account are the best kind of standards. They give designers and builders freedom to use their skills and ingenuity. They encourage such things as proper solar orientation of buildings, reduced air infiltration and efficiently-sized mechanical equipment. A true "performance standard" simply sets an energy conservation goal, expressed as an energy budget for an entire building, and then permits that goal to be achieved by the designer, builder, and owner in whatever ways they can devise.

2. *We can use the sun's energy to cut energy costs.* There are both "active" and "passive"



solar collectors. "Active" solar collectors collect energy from the sun and then use mechanical equipment such as pumps or fans to distribute that energy. "Passive" collectors simply collect the sun's heat and hold it until it is released by radiation or conduction.

No materials serve as "passive" collectors better than masonry—brick, concrete block, stone.

Passive solar collectors have many advantages over active solar collectors. They have no working parts—nothing to go haywire. They are simple to design and build—and they are more economical.

3. *Massive walls of masonry, even when they're not designed as passive solar collectors, keep buildings warmer in winter, cooler in summer.* Because of their weight, or mass, masonry walls act like thermal blankets. In many cases, masonry walls will mean that heating/cooling systems can be reduced in size.

4. *Insulation is important when properly used, and when its limitations are understood.* We are still learning about the limitations. It's already clear that insulation is cost-effective only when used with restraint. After a certain point of thickness has been reached, the cost of additional insulation will no longer be recovered in energy savings.

And it's becoming clear that some assumptions made in the past about insulation are not justified. For example, there are indications from preliminary studies that in regions where more energy is expended in cooling than in heating, insulation used in the standard fashion in all walls may actually increase, instead of reduce, energy consumption.

One of insulation's limitations is that it affects only conduction—it doesn't affect air leakage, which is estimated to account for 25-30 percent of the thermal loss in buildings. A significant amount of air leakage occurs through windows and doors, so it's important to reduce the size of, and shield, these openings.

Masonry walls will further reduce air leakage because they are hand-fitted on the site (like custom-made suits) and thus are more airtight.

Furthermore, the effectiveness of insulation depends on the wall to which it is attached. Promoters who compare wall materials with insulation are making a meaningless comparison—the two have different functions, and one is not a substitute for the other.

Keeping to a strict Btu budget for your buildings is important today and will be even more so tomorrow. If you would like to know more about saving energy, write to International Masonry Institute, 823 15th Street, Northwest, Washington, D.C. 20005.

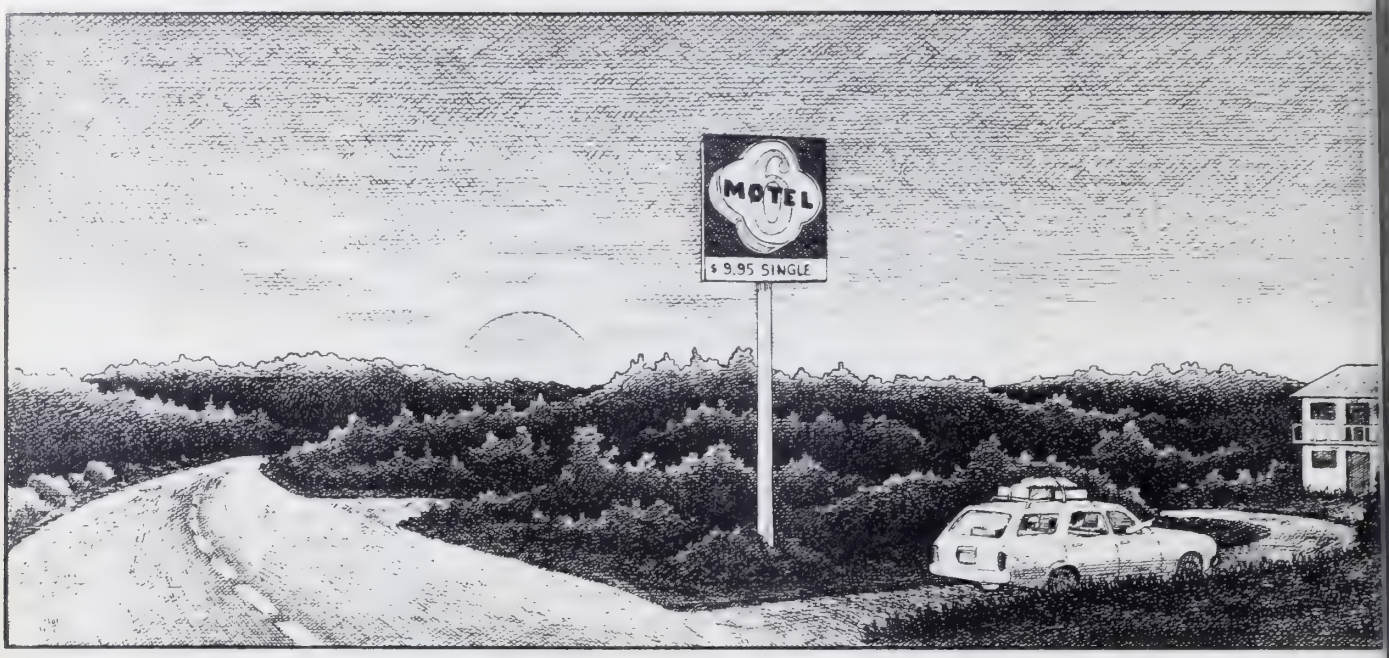
You shouldn't have t
decent place t



This disarmingly simple idea has turned City Investing's Motel 6 into the nation's leading budget motel chain.

For too many Americans, spending the night in a conventional motel can mean spending a big chunk of their travel budget.

That's why we're not conventional.

Motel 6 has grown into a thriving national chain on the strength of one simple idea:

A decent place to spend the night doesn't have to cost the average American family as much as a night on the town.

What Motel 6 has to offer.

Attractive surroundings.

Clean rooms, completely carpeted. With a big double bed, shower, vanity and generous closet space.

Courteous employees to ensure a pleasant stay.

Full air conditioning (except for a few motels in cool climates where you don't need it).

A TV (but only if you want it, and then for only 75¢ a day).

A swimming pool in most locations.

Everything, in fact, except frills.

All for the same low rates ($9.95 single, $13.95 double) throughout the country. And throughout the year.

Providing a decent place to spend the night makes Motel 6 an ideal stop on any itinerary. Especially for the budget-minded family, school or scout group,

ay resort rates for a pend the night.

travel club, salesman on per diem allowance, or retirees on a fixed income.

How can Motel 6 offer all this and stay in business?

Common sense is part of the answer. A belief in basics is another.

For example, we stick to uniform construction methods, adapting them only slightly to fit the locale.

This doesn't mean stinting on quality. Instead, it means continual refining.

And learning from past experience, rather than starting from scratch with each new location.

At the rate we're expanding, disciplines like these are vital. Not only to keep costs in line, but also to forecast expenses intelligently.

We've also worked out a way to standardize the design of our motels. Easy maintenance and low overhead are engineered right in.

With the 285 locations we will have in 1979, these savings mount up. And we can afford to pass them on.

As travel costs go up, getting down to basics in the motel business seems to be paying off.

Last year, as a matter of fact, more than 12 million road-weary motorists boosted Motel 6 occupancy rates to record levels.

And helped boost Motel 6 earnings to record highs.

The management philosophy behind Motel 6 guides the profitable growth of all City Investing operations.

Our companies profit from good ideas.

In housing, we plan and develop entire communities. We're a major builder of single-family houses and mobile homes.

In manufacturing, the talents that have made us world leaders in the production of steel shipping containers and heating and air-conditioning equipment also enabled us to introduce the *Sun Set* and *SunDirector* solar water heating systems.

In insurance, we're a major property and casualty underwriter, specializing in policies tailored to business needs.

Ideas that meet basic needs are central to City Investing operations. And will help us grow to $5 billion in revenues in 1979.

For ideas that may profit you, just clip the coupon.

John Herndon, Vice President,
City Investing Company, Department D,
767 Fifth Avenue, New York, New York 10022

Next time you spot a well-dressed Englishman, check his handmade suit respectfully. It just might be leased.

Custom-tailored loopholes

By Paul W. Sturm

On London publisher Allen Levy's birthday recently, to enhance the festivities, his employer picked up the tab for a new $400 custom-tailored suit. There'll be another later this year—plus a dozen handmade shirts.

Such bespoke duds aren't free, of course: Levy pays about $60 annually to lease each suit from New Cavendish Books, where he is a director and part-owner. The company writes off the cost as a business expense. And after two years, Levy is given each suit—which has little secondhand value anyway.

That, simply stated, is the latest executive survival gimmick in struggling Britain, where successive governments have raised the marginal tax bite on salaries to 83%. Such stratospheric rates put a premium on clever accounting. Creative interpretation of a three-year-old revenue law makes leased executive haberdashery possible. "A nice little tax dodge," says Douglas Hayward, a tailor just off Park Lane. "But most clients keep it quiet. They don't want people to know they're wearing company suits." Especially not feisty union members whose only corporate clothing may be a $10 pair of overalls.

Tailors on Savile Row, London's center for discreetly expensive menswear, hope the leased suit will become as popular a fringe benefit as the executive dining room and company limousine. Companies now own nearly 25% of Britain's cars, which gives U.K. automakers a boost that tailors could use, too: Low pay and high taxes leave the average English businessman about half the net income of his European and U.S. counterparts. Spending on apparel, as a result, has dwindled. Levy, for example, earns just $17,000 gross—less than $12,000 after taxes—and figures that without leasing it would cost 20% of his take-home pay to outfit himself properly.

With their clientele so beleaguered, no wonder London's custom men's shops report that over three-fourths of their present business comes from foreigners. "At any airport in the world, you know when a plane from England has landed by all the ill-fitting, scruffy clothes," says Fred Lintott, who runs H. Huntsman & Son, where suits sell for over $1,100.

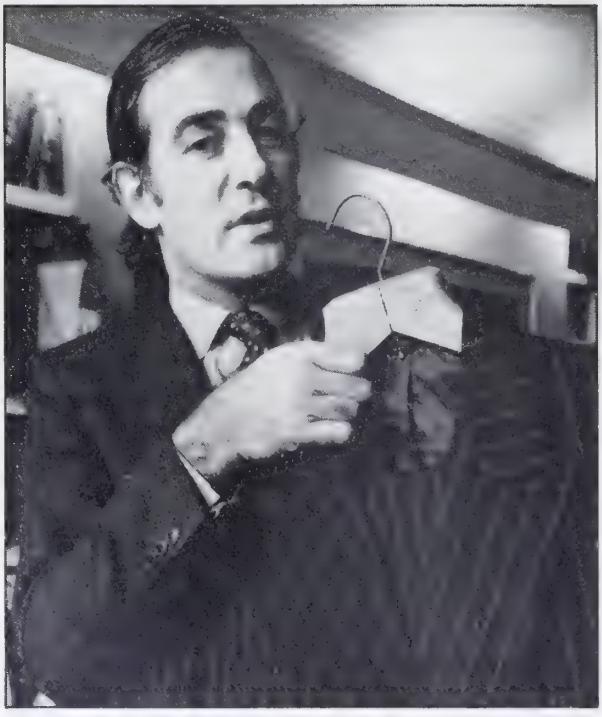
Though tailors love the idea of company-financed suits, shirts, ties and even shoes, such plans are highly controversial. Perhaps 500 firms are using versions of the leasing scheme, necessary because an outright gift of clothing would subject the recipient to tax on its value. Only a few entrepreneurs like Levy even admit to the practice. Big corporations remember the troubles at BOC International Ltd. sev years ago when stories about its le executive furniture hit the press. "N ing illegal, but imagine the reaction or shop floor," says Nigel Bryant, who h the compensation unit at managem consultants Inbucon Ltd.

There's also the worry of a tap f the tax man on one's finely fitted ha shaped shoulder. In the U.K., who p what depends largely on the local enue agent's personal interpretatior regulations. "Companies used to cov lot of school fees," says Tony Ver Harcourt, personnel manager at n chant bankers Keyser Ullmann. "T the popular press wrote about that, left wing put on the pressure and w went out to the inspectors to stop How? As always, in secret guida notes issued by the Inland Revenue.

No official attack has yet b launched on suit leasing. And it see unlikely that a Tory government, i should win the election next mon would begin by eliminating a tax br the previous Labor government let sta Nonetheless, British tailors are bus stitching together their defense. "Co panies must require their people to w these garments for business purpo only," explains Robert Bright, directo the 150-year-old Wells of Mayfair. "O 4 million workers get uniforms for th jobs. We're just dealing with the high level. Besides, if we want British ind try to get export contracts, it is v much in the country's interest for managers to dress well."

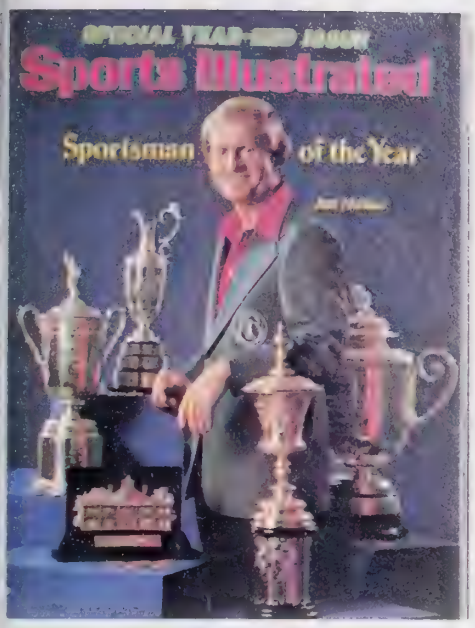
At Hilditch & Key, Alec Finch clai to have done business with nearly 1 corporate customers, and he is perha London's leading exponent clothing as an executive frin benefit. Finch doesn't wrap his guments in all-wool patriotis "Never in the past would a Jerm Street tailor have been involv with lawyers and accountants," says, "but now that takes up abo half of my time. Our system mak everybody a crook, but at least lea ing suits is better than compani fiddling the money and slippi people cash."

Could U.S. businessmen get aw with similar sartorial tax shenan gans? There's no clear answer—e cept that the lower 50% maximu rate on earned income cuts the i centive here. "You might be able deduct for a special blue 'IBM' suit says a House Ways & Means Co mittee attorney. "But for custo tailoring the whole amount ought be taxable, including rental pa ments." But a Price Waterhou accountant is intrigued: "We oug to research this, read the Supre Court cases," he says with a gli "It needs scrutiny." ■



London publisher Allen Levy checks company-owned suit
A stitch in time that saves taxes.

You want the people who want Sports Illustrated.



These are the facts. Sports Illustrated is a tremendously efficient advertising medium for reaching *men*—more efficient than the other newsweeklies, more efficient than other male-oriented magazines.

More efficient than the other newsweeklies, Playboy, Penthouse, Business Week, and The New Yorker in reaching men who are 18-49, with household incomes over $25,000. More efficient than the other newsweeklies, Playboy and The New Yorker in reaching men 18-49 owning homes worth $75,000 or more.

The fact is, 68% of the men Sports Illustrated reaches cannot be reached through any other newsweekly.

Source: 1978/1979 Simmons Market Research Bureau, Inc.

You want the people who want to read a story about Ted Turner, a millionaire sportsman who's become bigger, and a bit louder, than life. People who are bigger than life are worth knowing.

Which is what makes the 16 million mere mortals who read Sports Illustrated each week want to know exactly what makes Ted Turner loom so large.

16 million people come happily to Sports Illustrated each week because they know that our stories are written with as much style and personality as the subject they treat.

You want the people who want to look at a photograph of Jeff Lowe risking his neck on a 40 foot wall of ice. You almost want to look away from the photograph above, but you can't. Because for a second it's *you* hanging there. And your heart is in your mouth.

This photograph is a moment in time that Sports Illustrated brought back alive from the world of sport. That's another reason why people want what's in Sports Illustrated. And if your product or service is in Sports Illustrated, we think they'll want it, too.

Sports Illustrated

People want what's in it.

Just because a stock sells for less than $10 a share doesn't mean it is junk. It may be a real bargain and due for a big move.

Statistical Spotlight

Gold among the garbage?

SINCE 1974 Oppenheimer & Co. Inc.'s Norman Weinger has been using his computer to screen out stocks which are statistically cheap. An accountant by training, Weinger became intrigued with the market and switched to Wall Street. At first he lost money following tips but soon began applying his own judgment and training to stocks. As an accountant he had learned that businessmen who bought companies cheap did well, while those who overpaid didn't. So he decided to use his computer to pick out screens of cheap stocks. One definition of cheap: under $10 a share.

Weinger claims stocks "trapped" under $10 contain "gold among the garbage." That's because most institutions won't buy stocks whose total capitalization is under $100 million or under $10 per share. "The idea is anything selling that low looks like garbage, and The Street has a cliché, 'if it looks like garbage it is garbage.' " Furthermore, if a stock is under $5 a share it can't be margined and even the individual speculators won't touch it.

However, once a low-priced stock goes over $10, he says, the buyers sit up and take notice. Thus when such stocks break above 10, they tend to rise faster.

To keep the size of his list manageable, Weinger applies three criteria—all based on his experience as a practicing C.P.A.

Rule 1. All the stocks must sell under tangible book value—with all goodwill, etc., deducted. Because of inflation you can't replace most solid assets at less than double book. Buy a stock at h book and you will make a 300% gai someone tenders at replacement cost. buy a stock whose price equals liq assets and you get all the fixed ass brand name and management free.

Rule 2. Capitalization must be un $100 million. This is because he want avoid institutional competition.

Rule 3. Each stock must pay a c dividend, no matter how small. "I d care about the cash," he says. "But dir tors worry about lawsuits and few dir tors would dare okay a dividend if company were in danger."

To Weinger, the interesting aspect his under-$10 list is that it shows h Wall Street goes through fads. Once list was filled with gambling stocks cluding Resorts International Inc. a Bally Manufacturing Corp. Now it filled with construction compani REITs and retailers.

Oppenheimer's last list came out December. FORBES stiffened the Opp heimer & Co. criteria in using the b kerage house's list for our own catalog under-$10 stocks. We demanded that stock must yield at least 4% from dividend and must sell at a 1.6 ratio book value to stock price. Of the seven stocks listed below, 65 met those criteri

Not all these stocks will escape fr no-man's-land, but among those that we can safely predict there will be so spectacular gainers. ■

The bargain basement

Stocks selling under $10, under tangible book value, most yielding at least 4% and with a ratio of book value to price of at least 1.6.

Witco

You'll find Witco listed on the N.Y. Stock Exchange under the symbol: WIT.

K mart will soon pass a milestone in retailing, and Sears—the nation's largest retailer—is not going to like it a bit.

The Streetwalker

K mart's fast track

SEARS, ROEBUCK Co. has been the nation's largest retailer for so long, both in merchandising volume and profits, that it's hard to break the habit of calling it number one. But some key Wall Street analysts believe Sears could be surpassed in at least one key area—merchandising profits—by the end of 1980.

The Goliath of Chicago netted about $356 million after taxes in domestic merchandising (and $921 million overall, including its Allstate Insurance and other subsidiaries) on $18 billion in sales last year. But savvy observers like Suzanne R. Holmes of Loeb Rhoades, Hornblower and Terence McEvoy of Oppenheimer think that fast-growing K mart Corp., adding its growing discount chain, has a good chance of passing Sears in retailing profits in the next two years or so—despite smaller revenues of under $12 billion.

K mart last month reported record merchandising earnings—an estimated $325 million for the U.S., Canada and Puerto Rico—on those revenues. In contrast, says Oppenheimer's McEvoy, "Sears gets roughly 60% of a total $921, billion from nonretailing." Those operations, while at record levels, are cyclical, says McEvoy, "and the up-cycle peaked in 1978 for Allstate's huge auto insurance operations."

Nor do many analysts think Sears' merchandising has permanently turned around, despite fourth-quarter earnings gains of 50%. Says one: "Sears' Christmas quarter looks good only compared with a very poor one in 1977. They should have done even better."

Says Oppenheimer's McEvoy, "The fact is, in February and March of 1979 Sears' sales were off by about 8% and 11.7%. That can't go on much longer without their having to cut gross margins to improve sales."

That, says McEvoy, and the possibility of a slowdown in the fourth quarter, could substantially slow Sears' retailing earnings recovery. McEvoy expects Allstate to wind up with moderately lower earnings. The result: Sears' overall earnings will be lucky to equal last year's $2.86 a share. Says he: "Despite its 6.1% yield, I wouldn't buy Sears. I don't feel it's accepted the fact that it's a mature retailer. Management recently indicated it intended to increase market share in the next three to five years. I think they can't achieve this without cutting into margins."

Why do McEvoy and Holmes like K mart's prospects more, even though its yield currently is about half of Sears' and it, too, would be hurt by a slowdown?

A key factor, says Holmes, "is the way K mart structured itself differently right from the start. It's still paying off today. Sears and J.C. Penney Co. typically go into regional shopping malls, with all their high costs and services. That doesn't enable them to be as price-competitive. K mart is *outside* the malls and isn't part of that higher-price syndrome. It draws because of price. That becomes increasingly important in today's inflationary environment."

Too, she says, "K mart has much less exposure to hard goods than Sears. They won't be hurt at all by insurance the way Sears will be in 1979 and 1980. So I look for about a 10% earnings gain for K mart this year and 13% over the next three to five years."

McEvoy puts it more bluntly: "Why should I pay 7 times earnings for an insurance company's earnings growth when I can buy an insurance company for 4 or 5 times earnings? True, K mart today sells for 9 times earnings. But I can see K mart's dividend doubling again in two to three years and a total return of nearly 15%, *vs.* about 9% to 10% for Sears." That's assuming Sears doesn't make a major acquisition outside of retailing that would aid its growth.

K mart can easily increase its dividend because, alone among the major mass merchandisers today, it is a generator of excess cash. It has lots of higher-margined older stores maturing and has been opening roughly 170 new ones each year. Says Suzanne Holmes: "I predicted a few years ago they would have an excess-cash problem and it will only grow. They're so big now that all but a big acquisition would be meaningless, and I don't expect one." Thus, even K mart is beginning to mature—but at a higher growth level than Sears'. So increasing the dividend may be more than an option; there may not be much choice.

Doesn't anybody have a good word for Sears at 20¾ recently (down from a high of about 60 in 1973)? Yes. Edward A. Weller, retailing analyst at New York's Sanford C. Bernstein & Co., Inc. But even Weller, who recently reported on Sears, starts out sounding bearish. Management, he admits, has been indecisive and is still doing things wrong—selling receivables at the wrong time, looking for cost savings where they may not be that meaningful—like headquarters and distribution. He thinks Sears is trying to be the Sears of the 1960s and that's impossible. "But starting next year I think Sears' earnings will be able to grow for the next four years at 12% to 13% annually," says Weller. "Allstate earnings will grow at 14% and Sears' retailing profits, at 11% to 12%."

In other words, Weller is looking ahead. Says he: "It's not that sales will grow rapidly after that—they'll grow around 7% to 8%. However, management will manage to move up retailing margins from 7% last year to over 8% by the early 1980s. That's still below the highs of around 10% in the 1960s."

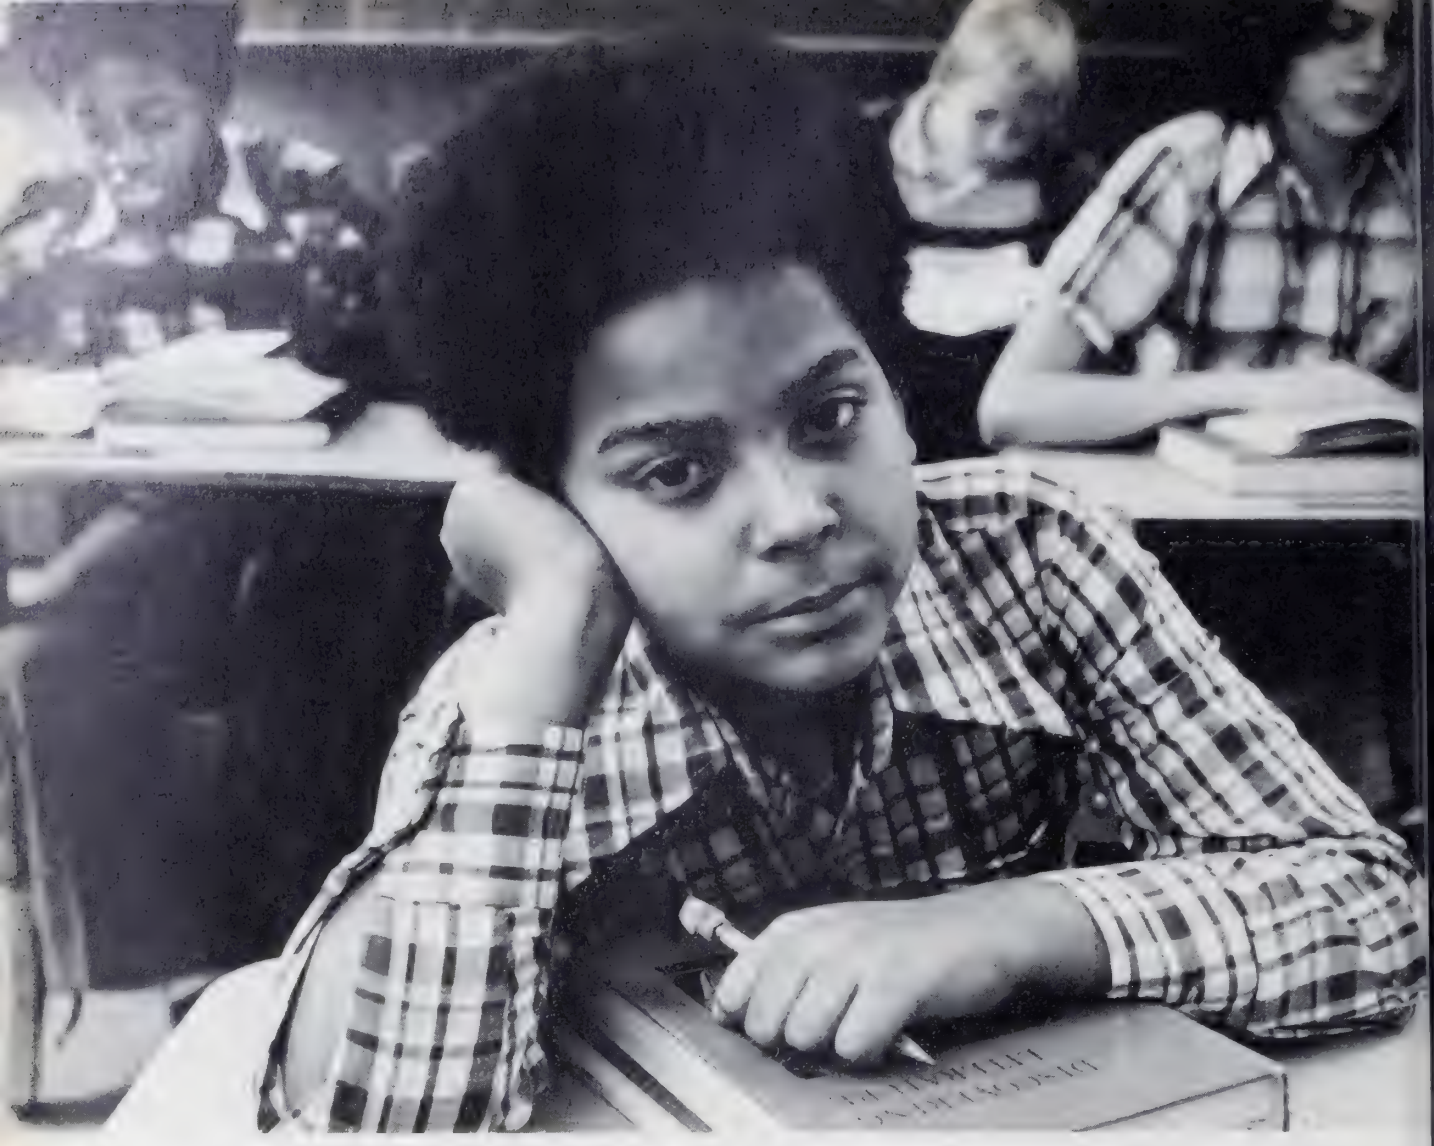
How will Sears accomplish this? Here Weller isn't very convincing and in the end admits it's partly intuition. "When everyone is that bearish on a company like Sears," says he, "it's time to look for the positives. It will take time to develop. Sears stock is only for the patient investor, but 6% [yield] isn't too bad."

Maybe. But only if inflation moderates from its 10% range and Sears shows signs it knows how to merchandise profitably in the not too distant future.

Actually, says Holmes, it won't be merchandising savvy that will help Sears' earnings next year, but declining interest costs. If short-term interest rates come down substantially, she says, Sears could pick up $75 million to $100 million in earnings, while interest costs for K mart are insignificant since it doesn't finance its receivables.

But that's a big "if," she says, "and that would only delay the day that K mart catches Sears."

Otherwise it's K mart, soon to be the new retailing earnings champion. ■



Why Johnny can't read . . .

The failure of so many of our children to learn the basics is so widespread in America today that there are thousands like Johnny who graduate from school without even being able to read.

But Jimmy and many others like him in the New Orleans Elementary Schools are learning how to read and a lot of other skills with the help of Mastery Learning Systems from Westinghouse.

Developed by educators and applied by Westinghouse engineers and systems specialists, the Mastery Learning System employs an effective combination of teaching aids, techniques and strategies – whatever is required to stimulate interest and help students learn the basics.

In addition to testing and measuring step-by-step progress, a computer system helps the teacher manage the class efficiently and inform the students how much they learn each day rather than how much they didn't learn.

and Jimmy can

Most important, Mastery Learning instills a sense of pride when the students realize they can succeed.

The system works. It works so well in their elementary schools that New Orleans is adopting Westinghouse Mastery Learning Centers™ for use in their secondary schools as well.

Mastery Learning Centers.™ Just another way Westinghouse directs its energy into helping America.

Westinghouse

A powerful part of your life.

Xomox made a bundle by spotting the potential in someone else's product and exploiting it to the full. But can it do it again?

A tough act to follow

The Up-And-Comers

Xomox Chairman Frederick A. Godley (left) *and C. Lawson Reed*
"It's a fussy product—a beautiful product to build a small company on."

SOME OF THE MOST SUCCESSFUL small companies in the country won't be among the great independent industry leaders of tomorrow simply because the guiding concepts that gave them birth don't stretch further than the minds of their aging founders. They are great companies for a season only—unless fresh entrepreneurial blood implants a new, viable reason for being.

Xomox of Cincinnati, Ohio (sales: $69 million) may be just such a company. Its hugely profitable product lines (specialty valves) are fast maturing, and new, internally generated products are painfully slow in surfacing. Its cofounders, worth at least $21 million in their own right, are approaching retirement age and have yet to resolve their estate problems. Now Xomox, like Muhammad Ali returning for one more title fight before retirement, is off searching for "synergy" through acquisitions in closely related fields. It may find that often-elusive synergy. But, perhaps more likely, someone else will come along and acquire Xomox. How much longer this superb company remains an up-and-comer is a question whose answer lies solely in the minds of its cofounders.

Frederick A. Godley and C. Lawson Reed, Xomox' cofounders (and cochief executives), owe their success not to repeated scientific breakthroughs—which, after all, are rare in most industries—but rather to painstaking everyday application engineering, aggressive marke and common business sense qui learned and deftly applied. In a hi fragmented commodity business, took someone else's new product and learned how to exploit its full po tial at enormous profit, virtually f scratch.

The lessons began early. Scarcely Godley and Reed started up their spe ty valve company back in 1956 w they were called on the carpet one da James Coombe, president of the Will Powell Co., a far larger and compe valve company from which Reed had resigned. Coombe gave them some serving "advice" that nonetheless tu out to be one of the cornerstones of t success. "Mr. Coombe gave Lawson me a lecture on pricing, which was of the very tricky things in the e days," Godley recalls. "He said, 'D ever come into the market with a product and underprice your competi All you're going to do is make him re ate, and he's in a far better position a established company to compete v you pricewise. Set your prices above Even though you may think you're m ing a very large profit on the product, because you don't yet have the overh that is going to be necessary to grow company.' It was one of the best pie of advice we received."

Had Xomox been just another gar variety valve company, like the 300 ers then in business in the U.S., it wo have been horrible advice. The World valve business, currently $4 bill a year, has been basically a commo business for years. Progress in valve sign, while significant, has proceede a glacial pace. After all, the little l valves dug up at Pompeii, which Vesu us buried in ashes in A.D. 79, look pre much the same as those we use today

For most companies in the indus then, Coombe's advice would h amounted to the usual threat a big co pany gives a small company—don't to undercut *me* . . . or else!

But Xomox was different. Xomox l a superior product, particularly well s ed to the then-booming petrochemi industry. Godley and Reed had spotte new valve design, invented by a n named Deas Sinkler, at a chemical ind try trade show in Philadelphia. The va was an ordinary plug valve, one of oldest types of valves in existence. A p with a hole in it is inserted into a ca alloy body. One-quarter turn and valve is alternately open or sh Sinkler's innovation was to insert a T lon sleeve into the body before insert the plug into the sleeve. To Godley a Reed, then in their mid-30s, this offe the promise of more complex inter configurations (because the Teflon sle could be molded into shapes it wo have been very costly to achieve throu

achining), no need for lubrication (because Teflon is a constantly slippery surface) and, most important, access to the burgeoning petrochemical market (since Teflon, a tough fluorocarbon, is inert in the presence of corrosive chemicals like hydrochloric acid).

"It was a beautiful product about which to build a small company because it's a fussy product," says Godley. "If you like that Teflon and just insert it in here, the normal expansion and contraction that occurs with changes in temperature would soon cause it to leak. We reconditioned the Teflon sleeve so that it will 'flow' the way we want it to flow with changes in temperature. We provide expansion spaces for it. That's what we got our patents for."

But that's hardly the kind of advantage one could expect to exploit profitably for over 20 years. After all, Sinkler had taken earlier versions of his idea to the competing Duriron Co. And E.I. Du Pont was aggressively offering technical assistance

was hardly the kind of advantage one could expect to exploit profitably for over 20 years. After all, Sinkler had taken earlier versions of the idea to competing Duriron Co.

the use of its new material, Teflon, to all comers.

But Godley and Reed were hungrier than most of their potential competitors. "The big companies, like Crane's valve division, the William Powell Co. or Lunkenheimer, weren't sure this product was here to stay," says Godley. "Also, their people didn't *want* to get into it. It was too much trouble. There was a sizable investment in molds and plastics."

Starved for capital even more than most startup companies, Godley and Reed spent all their money on marketing and product development—subcontracting everything else. Reed focused on product development and eventually manufacturing in Cincinnati, Godley on marketing in New York City. The arrangement, which continues, worked surprisingly well. The two have been good friends since their school days at Hotchkiss and Yale and have uniquely complementary talents and personalities. (Their wives, who also went to school together, even managed to get pregnant simultaneously.) One of the fortunate by-products of this separate but equal partnership was a weekly stream of detailed status reports that provided their banker, Central Trust Co. of Cincinnati, with a superb information flow. "He knew as much about the company as we did, really," says Godley. The banker liked what he saw.

gy: Price above the competition. Xom which has enjoyed a stunning 29.6% erage return on equity for the past f years, has the signal distinction of h ing been about that profitable right fr the start. "It's what you absolutely m have," says Godley, "to provide you w the working capital to grow a compan

To be fair, the two engineers had m than a little help from their friends, n bly E.I. Du Pont. "We leaned very heav on them in the beginning," says Godl "I remember we were calling on Army Chemical Center and we hac doubting Thomas who wouldn't beli a lot of things about Teflon. Well, Pont had said, 'Any time you wan reference, feel free to refer people to t telephone number.' So we gave the low this number. Mr. Irénée du P answered the phone. He happened to an application engineer in that divisi Our doubting Thomas was absolut overwhelmed by this response." God got the business.

"Du Pont had said about T lon, 'Feel free to refer peop to this telephone number.' we gave the number to doubting Thomas. Mr. Iren du Pont answered the phone

But Reed and Godley were innovat in their own right. They started expc ing, for example, within two or th years after starting the company. "La son had grown up in Switzerland and h a good command of German and Fren and I had some French," says Godl "and we decided that there was an ava able market abroad. The internatio market was a little bit behind the U then, so we were really able to get in the ground floor. Our competitors w not there." So, almost from the sta Xomox typically got roughly half of sales from overseas—the more profita half, at that. "It's meant that we've be able to grow far faster than we wou have if we'd just been in the U.S. m ket," says Godley.

Modest, meticulous men by nature, seldom occurred to Reed and Godley look beyond the potential of that Tefl sleeve plug valve. "There are just infin variations of this design," says Godl affectionately poking his pencil into t guts of a Xomox valve. Sinkler depart shortly after they got under way, to pu sue other ideas. Godley and Reed scar ly noticed. "He was off in ten differe directions," says Godley. "We had c hands full with this. It was just a matt of exploiting a good idea. We started making these in small designs up to inches. Then we went step by st through the 4-inch, 6-inch, 8-inch, 1 inch and 12-inch sizes—all the sar

When you can isolate your best international prospects

It really is a small world

Whether your marketing program dictates the broadest possible coverage, or the pinpoint accuracy of market-by-market advertising, the regional editions of Newsweek International bring the cream of the international business community to the top.

You can select the precise geographic areas where your sales opportunities exist: all of Europe; the Common Market only; East Asia, excluding the Philippines; just Korea...There are 47 regional editions available, allowing you to direct your advertising messages to the precise audience you need.

As our circulation grows (faster than any other international medium) our high-profile demography holds—even climbs. That means you reach more people who are real prospects; and you increase your efficiency by concentrating on the regions you need.

It's a unique combination...high-prospect density the world over... pinpoint editions to eliminate waste.

Both in an atmosphere of editorial authority and impact.

You find it in one magazine.

concept but each with different designs and different problems. At one point we had several thousands of models."

The shoemaker didn't *always* stick to his last. Godley and Reed also heard the siren calls of diversification and synergy in the Fifties and Sixties. "At one point we went into marketing, with the hope of later manufacturing, a mist eliminator—a specialized filter developed by Monsanto to filter out micron-size particles. We had visions of being in everybody's fallout shelter because it could eliminate dust particles from the air. It turned out, however, that the product had not been developed to the point we had been told it had and so we turned it back to Monsanto."

There were also plenty of offers of "assistance." "I guess the hardest thing over the years was to say no," says Godley of all the merger offers Xomox has received. "In the early days a company came to us and offered to market our product. At that time we were doing only half a million dollars and they offered to guarantee a volume of several million if we would give them exclusive marketing rights in the U.S. It was awfully attractive but we realized that we would be giving away our company. There were many such decisions."

But Godley and Reed have their problems. Xomox, not even 25 years old as a company, already has a maturing product line. "There's no question about that," Godley freely admits. "Our patent position is fairly strong but keeping ahead of the pack is becoming harder. There's a motive for diversifying and acquiring other companies."

Xomox already has a maturing product line. "There's no question about that," says Godley. "Our patent position is fairly strong but keeping ahead of the pack is becoming harder."

Earlier attempts at diversification have proven tougher to pull off than expected, however. In 1970, for example, Godley and Reed decided that automation was upon them and that actuators—powering devices for valves, typically pneumatic—looked like an attractive market. "We had this new idea for a vane-type actuator, a very simple but (again) fussy, difficult-to-make product—actually a paddle between two identical clamshell housings. Developing this took us far longer than we ever anticipated but it's proven to be an excellent product and one that we're really starting to exploit."

Xomox also has a small medical products business, an industry the company has been flirting with for years. It developed an artificial heart valve but abandoned it for lack of engineering time marketing ability. Du Pont brought mox an artificial hip-joint product which needed Xomox' Teflon knowl and that in turn, through personal tacts, led to a business making bone stitutes for the middle ear. It's gro rapidly but Godley says he's deba what to do with it.

What interests Godley at the mor is $17 million (sales) Atwood & Mc (A&M), which Xomox bought last from Foster Wheeler. A&M m valves big enough to walk through both fossil fuel and nuclear power pla "They're in the high-temperature, h pressure applications that complem what we're doing in the low-pres end," says Godley. "They're a l bit lower than our overall profitab but we feel it's the kind of situa that can be brought up." He's sc nizing other possible acquisitions the fluid flow area "for product market synergism."

Familiar words those, and a fam cause. Today Godley and Reed are b 59. Estate problems? "It's always a p lem one worries about," Godley rep "The solution is as yet undetermin Would Reed and Godley sell out if right offer came along? "Yes, it's po ble," Godley replies quietly. Then adds quickly, "But this company is for sale." **—Geoffrey Sm**

"That's a Butler building?"
Yes, that is a Butler building.
In fact, you probably see beautiful Butler buildings all the time and don't know it.
Because Butler buildings offer total design flexibility and can be as tasteful and dramatic as any building.
Yet, they also give you all the important time and money savings of systems construction.
To learn more about energy-saving Butler buildings, call the local independent contractor who can build one for you. See "Butler Mfg. Co. Builder" in the White Pages. Or write Butler Mfg. Co., Dept. B-397, BMA Tower, Kansas City, Mo. 64141.

Eltra Corp. seemed headed for trouble when it got its comeuppance in two major product lines. But the worst seems to be over.

How to succeed by failing first

YOU'VE SEEN IT HAPPEN again and again: The historic leader in a product area goes to sleep at the switch, and upstart rivals move in on the strength of a technological development or a marketing change.

So it was with New York-based Eltra Corp. Its biggest single area is electrical products, which in the last fiscal year (ended Sept. 30) accounted for 71% of its just over $1 billion sales and 65% of its $48 million net. The largest single unit in electrical products is Mergenthaler Linotype Group, which has been taking its lumps for years now. Mergenthaler once totally dominated the typesetting business with its so-called hot-lead machines, but it was slow to develop "cold-type" computer typesetting systems to which newspapers and magazines have been switching in recent years because they are cheaper and easier to use. So Mergenthaler soon found itself sniped at by fast-moving but smaller competitors like newcomer Compugraphic.

A second major Eltra operation—and virtually its only one in consumer products—is sneakers. Eltra got into that game when it bought Converse Rubber Co. in 1971. At the time, it was the largest maker of athletic shoes with sales of $60 million. By 1974 those sales spurted to $164 million, boosted in part by a portion of the B.F. Goodrich footwear division, which was bought in 1972. But then foreign manufacturers like Puma, Adidas and Nike ran away with the fast-growing new market for quality rubber footwear used for both running and street wear. By fiscal 1977, Converse's sales had dipped to below $130 million on which it was making a puny 0.8% margin after taxes.

So Eltra, with two of its largest operations in hot water, was obviously in trouble itself, right? Wrong, because of the way the company responded. Mergenthaler was indeed slow to develop a computer typesetting system. But in due course it brought out its own, which it proceeded to market with its matchless marketing knowledge of the field. Soon Mergenthaler was getting some 75% of its sales from overseas, much of it through British and German subsidiaries, both of which supply a foreign market that is growing by 20% to 25% a year. Now Mergenthaler is starting to pay more attention to the U.S. domestic market, growing at about 10% a year.

Chairman Jack Keller (left) and President Dick Loynd of Eltra Corp.
Protecting their turf in a changing marketplace.

"We've probably reached a peak on growth rate but not on total market," says Joseph A. (Jack) Keller, Eltra's 60-year-old chairman, who was Mergenthaler's president when he was 39. "There are really two [domestic] areas to look at: the replacement market for big installations looking for second-generation equipment, and the smaller newspapers, design studios, and so forth, which in numbers is a terrific market. There's a lot of virgin territory there."

As for the Converse operation, Eltra has been selling less and enjoying it more. "We have designed several new shoe lines t the new style and market for qua shoes," says Eltra President Richard Loynd. "We're not going to be in the end of the business. It just doesn't m any sense for us." It does not, w Converse already has 26% of the qua (more than $10 a pair) athletic shoe m ket, plus an impressive 54% of the bas ball sneaker market. The new line training and running shoes, at $25 to $ pair, could capture perhaps 10% of market. The margin in Converse's s business, while still relatively low, nea doubled between fiscal 1977 and 1978

The result of Eltra's efforts in its t problem areas can be seen in its figu for fiscal 1978: per-share earnings 12% over the preceding year on a 10 gain in sales.

Not quite all that improvement is tra able to computer typesetting and sne ers: Eltra also has had some successful n ventures, such as the manufacture of rect-current motors in England. " asked our customers here who have op ations in Europe if they'd be able to use motors in the products they make o there," says 51-year-old Loynd. "Th said they'd like to, and now that operat is reaching a respectable size."

For the next few years, Keller and Loy have set three major goals for the co pany. One is to incre electrical products sale a percentage of t sales—a result of Eltra's lief that electricity is energy form of the fut because of the diversity fuels from which it can generated. The second g is to achieve at least a 1 average annual growth earnings per share m sured over any five-year riod. The third is to br return on equity up to 1

The first of th goals—raising the p centage of electrical pr ucts sales—is a pres fact. The second, a five-year average 10% or better gains in earnings share, is still in the balance, though year's 12% gain could be a start. A finally, return on equity improved year but was still only 13.4%.

Notably missing from the goals sales targets. "We want the flexibility take a step backwards," says Keller, ing Eltra's willingness to slash the end of Converse's shoe business. " just decided, the heck with our egos being a $2 billion business," says Loy "That's not what makes us run. We got other targets."

What to do when those are met? " other ones," says Loynd. "They'll h to be tougher and different. You ca manage without them." ■

THE 1979 FORBES ANNUAL REPORT ADVERTISING SECTION

This special section contains a wealth of information which is available free to FORBES readers.

A basic principle for successful investing is the careful analysis of the wealth of information contained in company annual reports. These corporate reports provide one of the most detailed and authoritative sources of information on a company's performance over the past year. The annual reports from the companies participating in this section can be a tremendously valuable tool for sound investment planning.

This special FORBES Annual Report Advertising Section makes it easy for you to obtain as many of these reports as are of interest to you without obligation. Simply circle the numbers of those companies that interest you on the postpaid card provided. FORBES will process all requests and forward them directly to the companies involved, who will send you their annual reports directly. Please allow a reasonable amount of time for processing.

me companies seem not to be for sale even the price is right. Do stockholders have the ght to know in advance management's atti- de to a proposed takeover?

A modest proposal

By Richard Phalon

T USED TO BE that when Wall Street's risk arbitrageurs got stung on a take- over deal, they'd swallow their losses professional silence. No longer. The itrageurs are becoming activists, too. n the forefront is Guy P. Wyser- tte, the resourceful 38-year-old former rine Corps captain whom the Bache up Inc. paid $864,855 last year for ng right on almost every major merg- r takeover deal that crossed the tape. e his dozen or so peers in the pressure ker world of arbitrage, Wyser-Pratte kes his money by working the eads between the market price of a k and the premium a raider is willing ender for it.

goes like this: $40 is offered for a k selling at $30; the issue moves up 35. At this point thousands of share- ders, weary of sitting with the stock, unwilling to gamble that the takeover go through. How do *they* know what n management's mind? Enter the ar- ageurs. They make a calculation: Will tender offer succeed? If it will, there handsome return to be made by ing up the stock that the timid hold- want to unload at $35 and selling out onth or so later at $40. (The return, ualized, would be 170%.)

he potential rewards are great, but so the risks. "Stockholders are getting en," Wyser-Pratte says, by self-serv- managements whose major concern hanging on to their own jobs. "If a of companies have 'not for sale' signs them, when were stockholders told? l," he continues, "who would have ght the stock if a company has a 'not sale at any price' sign on it? The lic has a right to know."

Wyser-Pratte's outburst is, of course, -serving, but he does have a point: If a nagement is determined to remain pendent at any price, shouldn't that be disclosed to stockholders along h other pertinent data?

In an unparalleled public display of indignation, Wyser-Pratte tried to get that point across at Gerber Products Co.'s annual meeting. The arbitrageur's indignation was understandable. When the baby-food producer, currently trading at around 29, turned down an offer of $40 a share from Anderson, Clayton & Co., Wyser-Pratte and his clients lost money.

The meeting was just a warm-up. Wyser-Pratte took the unusual step of reinforcing his rhetoric with a Bache-financed stockholder's suit against Gerber and its directors. It was dismissed last summer.

The decision was no great surprise. Both federal and state judges tend to give management plenty of room in determining whether there has been an objective exercise of "sound business judgment" in a merger turndown. Many state courts have been so lenient in interpreting antitakeover statutes as to remind one of the storied battle for control of the Erie Railroad in the last century, when Jim Fisk and Commodore Cornelius Vanderbilt tried to nullify each other's attacks with their own kept judges.

The Gerber ruling left Wyser-Pratte fuming, so that when American Express Co. took a run at McGraw-Hill, Inc. early this year, he was already on the activist *qui vive*. Wyser-Pratte says he paid around 31, on average, for the 46,900 shares of McGraw-Hill he bought for the Bache account. He took a paper loss of about $150,000 when the market fell after the publishing company succeeded in beating off Amexco's final bid of $40 a share. The Bache arbitrageur looked into the possibility of starting a proxy fight to reverse the McGraw-Hill rejection, and evoked some resonance from some institutional investors with a thus-far unsuccessful request for a poll of McGraw-Hill shareholders on the offer.

Wyser-Pratte, who still holds a chunk of McGraw-Hill stock, clearly hoped his activist role would help generate some active support from institutional investors with a big stake in McGraw-Hill. Tender offers tend to remind pension fund managers that they have a fiduciary responsibility to do the very best they can by their clients. "If we had the opportunity to tender [McGraw] at $40 per share," said Russell Murphy, a senior vice president of Boatmen's National Bank of St. Louis, "it would be very difficult to justify not doing so."

Threatened managements dislike and fear arbitrageurs, whose interests tend to be with the would-be acquisitors. Many tender offers, in fact, are structured so that the arbitrageur can turn a profit. Thomas Mellon Evans, for example, the wily 68-year-old chairman of Crane Co., has been in the takeover game longer than most. He is the first to admit that working out a deal with the arbitrageurs finally cleared the way for Crane's hotly contested acquisition of Medusa Corp., a Cleveland-based amalgam of cement and construction services. By dealing directly with the arbitrageurs, Evans picked up 514,000 shares of Medusa in a single afternoon that enabled him to push through the merger.

Still another example of arbitrage power, unabashedly oriented to quick profits, shows in the latest activist caper—the proxy fight that Carl C. Icahn has opened against the management of the Tappan Co. Icahn, a 43-year-old self-described "lone wolf," has been in the arbitrage business for about ten years now, and is the Mansfield, Ohio appliance manufacturer's single biggest shareholder.

Icahn, together with the brokerage firm he controls, Icahn & Co., owns 7.2% of Tappan's common. Icahn has made no secret of what will be on the top of his priority list if he gets elected to the Tappan board: persuading his fellow directors to solicit takeover bids "at a price to Tappan shareholders well in excess of the current market price." Tappan is a company in transition with a spotty earnings record, and it has been trading at well below book value—characteristic of most takeover candidates.

The whole situation puts the business community squarely in a quandary. On the one hand, it feels threatened by the takeover wave, much of which is motivated by purely financial considerations rather than by underlying good business sense—bargain hunting, to be exact. But on the other hand, businessmen realize that any restrictions on the way a stockholder can dispose of his shares will only further depress an already sick stock market. Reflecting this quandary, business is showing little support for Senator Edward Kennedy's bill to ban all large mergers.

Maybe Wyser-Pratte has something when he says managements should be obliged to declare what their attitude is toward takeover bids so that shareholders can make their buy or sell decisions accordingly. ■

Five ago Bradford G. Corbett, 40, bought the American League's Texas Rangers and turned it into a pennant contender. But even after increasing attendance at the club's Arlington, Tex. home ball park from 600,000 in 1973 to 1.4 million last year, the team showed a loss. Then, this month its opening game against the Tigers in Detroit was snowed out.

"I want out of baseball," says Corbett, a transplanted New Yorker. "It's become too expensive. The contingent liability is tremendous." He's talking about the cost of those multimillion dollar player contracts. He'll get his wish—some co-owners want to buy him out.

But the Rangers, of which he owns some 5%, is only one of Corbett's problems. Robintech, which provided initial capital, is in worse shape.

Back in 1967, using a Small Business Administration loan, Corbett and some associates founded Universal Pipe & Plastic Co. in Hillsboro, Tex. In 1970 they merged it with American Stock Exchange-listed Robintech.

By 1974 Robintech was earning more than $7 million on $67 million in sales and returning 30% on stockholders' equity. Corbett decided then to expand both his vistas—by buying the Rangers for $9 million and by building a vinyl chloride resin plant for Robintech in Painesville, Ohio.

The resin plant opened to a collapsing market. In 1976 Robintech lost $6 million on $88 million in sales and debt jumped to $38 million, for a debt-to-equity ratio of 1.3-to-1. Though the company turned a profit in fiscal 1978 (ending June 30), by Dec. 31 the red ink was back.

All is not lost. Corbett and his associates hope to sell their Robintech stock to West German chemical company Chemische Werke Huls, which bought 20% of it last year. The Germans came up with $6 million in term loans and convinced Robintech's banks to up its credit line to $18 million from $15 million. That helped Robintech better manage its $53 million in debt, though debt-to-equity is now 1.6-to-1.

Corbett, who owns 78,613 shares—3.6%—of Robintech, wants $17.75 a share for stock that recently sold at $11. But even if the Germans pay the market, Corbett's stock is worth around $884,000, which will keep him in peanuts and Crackerjacks till he connects again.

Bradford G. Corbett of the Texas Rangers
Thrown out at home?

Marshall McDonald of Florida Power & Light
Grandfathered out of a year in the slammer.

Power play

Until the middle of last month, Marshall McDonald, Florida Power & Light's chairman and CEO, wasn't sure that he wouldn't wind up in jail for violating the coal conversion provisions of the Fuel Use Act of 1978. At least he was talking about the possibility with a straight face.

At issue were the regulations promulgated by the U.S. Department of Energy to put the act into operation. McDonald's problem stems from the fact that FPL has never used coal—a lot less economical than natural gas and imported oil—in any of its generating plants. The law, enacted in November, prohibited "new" power plants from burning ei oil or gas. The DOE then proposed se al definitions for a "new" plant, inc ing a cutoff date of April 20, 1977; plant running then could continu burn oil or gas.

With three new plants that went operation after the cutoff and two n under construction, none of which c use coal, FPL was looking at the pros of having to invest something like billion—double its capital rate ba over five years to convert four of plants, replace the fifth and shut t down in the meantime. The operatio a nonqualified plant after May 9—un exempted by the DOE—would h made top executives like McDonald ble for up to one year in jail.

McDonald says that the cutoff was not in the works at all when the was passed. "As we understood it," the 61-year-old lawyer and onetime man turned utility executive, "the o nal intent was that all oil-fired pl signed, committed or under construc would be 'grandfathered' in." But w the draconian rule came down, FPL the rest of the industry hung tough armed themselves with all the PR lobbying muscle they could find.

Last month the DOE came up with grandfather clause that McDonald w ed. The barrage of information and litical pressure, including photograph plants the bureaucrats said did not ex apparently turned the trick. Says Memphis native, who came to FPL president in 1971, "I'd like to think t responded to logic, but they responde the political pressure." Either way, doesn't go to jail.

ip M. Hawley of Carter Hawley Hale
immer view of the energy crisis.

Will power

ring the 1973 energy crunch, Philip Hawley, president of $2.1 billion Car- Hawley Hale Stores, devised a plan t would allow him not only to keep stores open their usual hours but also cut down on energy use. The key: "We nd that huge amounts of electricity uld be saved by cutting down on light- ," he says. The plan is working so well Los Angeles that Congress wanted to ar all about it last month.

The city's Department of Water & wer had wanted to implement such ergency measures as rolling black- s, mandatory business closings and like. Instead, argued Hawley, "set gets and leave it strictly up to the ple. If a man wants to run two TV sets hours a day and keep his lights off, e. If someone else wants to turn off his and keep the lights on, fine."

A nine-man city energy committee set at Hawley's suggestion drew up the n. Reductions of 10% were required of idences and industrial properties, h 20% cuts required of commercial ldings. Penalty: a fine of 10% to 50% he utility bill; the penalties were nev- levied. Within a week, usage was cut % and stayed there more than five nths. Even today the city still uses s power than it did prior to 1974.

Now the 53-year-old merchant wants see his plan adopted nationwide. "My n has been tested in a very difficult area," he said last month, "where there has been a love affair with energy. It worked. I think if you tell the people what is expected and give them targets, they will work to achieve them."

The secret to the plan, says the athletically built, gray-haired Hawley, is fairness—that is, no exceptions. "The newspapers came along and said they should be exempt," he recalls. "We said, 'No.' " And no for retailing too; his own industry took a 20% cut.

Pass the port, please

Manuel Zarraluqui, managing director of London's 300-year-old Croft & Co., aims to make sipping an after-dinner port the next U.S. beverage craze—if not like the recent bubbly Perrier and lime, then at least like almond-flavored amaretto liqueur. "No one," he says, "has ever promoted port seriously in your country. Right now, the market is very small, but we're going to change that." Croft, a subsidiary of Grand Metropolitan, Ltd., the $3.7 billion-a-year U.K. conglomerate that also peddles J&B Scotch and Gilbey's gin, will soon launch what Zarraluqui calls a "substantial long-term campaign, complete with television commercials," aimed at boosting business here.

The potential is heady stuff. Americans import only 70,000 cases of port annually, *vs.* over 1.2 million cases of sherry. About half of the latter is Bristol Cream and its purveyor, John Harvey & Son, is Zarraluqui's former employer and present archrival.

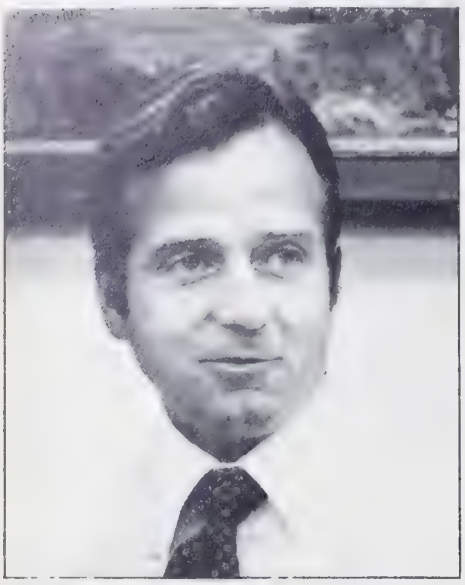
In 1967, when Zarraluqui switched companies, Croft was a stodgy port trader, long on prestige and short on profits. Zarraluqui quickly launched a sherry line, and since then his Croft Original has zoomed to second place behind Bristol Cream in the $300 million U.K. sherry market. No minor accomplishment in a sedate industry that thinks in generations, not decades.

Despite his name—"absolutely 100% Basque"—43-year-old Zarraluqui wasn't born to the wine trade. He studied economics and accounting in Barcelona, and that's the perspective he brings to the potential of the U.S. market. At premium prices, branded ports and sherries can yield gross profits of nearly $11 a case, among the best margins in the liquor business. "Americans go for two kinds of drinks, 'pops' and 'classics,' " he explains. "Once you build a market for a classic like port, the demand is very stable." Thus, from a revenue base of under $125 million, Harvey's, which through its importer Heublein, Inc. has promoted its sherry here since 1957, now produces an estimated 15% of the profit at its parent Allied Breweries, Ltd., a $2.8 billion-a-year company.

Zarraluqui sees two factors aiding him and his U.S. distributor, Liggett Group: First, liqueurs and cordials are the fastest-growing segment of the U.S. beverage market, expanding by 25% annually; second, the trend toward wines and other "lighter" drinks is increasing. "Besides," he adds, "at a sophisticated dinner party today, the host provides cognac for the men and liqueur for the ladies. That takes three or four bottles. With our port, one bottle satisfies everyone, and at $10 it's the least expensive of the lot."

Manuel Zarraluqui of Croft & Co.
He wants the U.S. to take a sharp turn to port.

Faces
Behind The Figures



Peter Ueberroth of LAOOC
Water polo was an easier game.

Sink or swim

In 1956 Peter Ueberroth had his heart set on winning the Olympic trials in water polo. He never made it, but he got something that may turn out even better—the job of president/managing director of the 1984 Olympic Games to be held in Los Angeles.

Remembering the fiscally disastrous Montreal games, the Los Angeles Olympic Organizing Committee (LAOOC) wanted a successful businessman who could run a money-making operation. As founder and chief executive officer of $109.5 million California-based First Travel Corp., Ueberroth had the experience the LAOOC wanted and he was willing to take a pay cut—from the $400,000 a year he says he currently takes out of First Travel, to $130,000 this year.

Ueberroth has a tough race to run. Los Angeles backers of the Olympics have continually promised the taxpayers that the Olympics will cost them nothing. "The question everyone is asking is can we have a quality Olympics and still run it in a fiscally positive manner," says Ueberroth, who certainly knows current business lingo. Listen to this: "If some overwhelming pressure was brought to bear that would cause the games to have a negative impact on the taxpayer, I would not participate in that scenario."

Pressures to spend too much for posh facilities ran up Montreal's tab to $1.5 billion and discouraged other cities from bidding for the games. In fact, Los Angeles was the only serious contender for the 1984 events. "The Olympics must be run like a business and run well economically," says Ueberroth.

That may be easier said than done. While Los Angeles has a wealth of sports and housing facilities on the campuses of UCLA and USC, not all of them are, well, Olympian. At the moment Ueberroth has no budget, but the networks have put up $3 million in deposits for the right to negotiate for the games. "The key thing that has to happen early on is to bring public the plans so people can see the budgets, income and expenses," says Ueberroth. Perhaps Ueberroth ought to keep in mind that in 1932, the last time Los Angeles hosted the Olympics, it showed a profit of around $1.3 million.

Ruffing it

"Hoarder," "crackpot," "doomsayer," are words Howard Ruff, 48, knows well, because over the years they have been used to describe him. But to the 50,000 subscribers who dole out a total of nearly $5 million a year for *The Ruff Times*, his the-worst-is-yet-to-come newsletter, he is virtually a cult hero.

"We've struck a chord across Middle America," proclaims the buoyant and smooth-talking Ruff. He has also struck it rich, he might add, churning out homespun wisdom in his twice-monthly newsletter, two best-selling books and weekly TV show, *Ruffhouse*, televised on nearly 60 stations across the country.

Ruff's inflation strategy is hardly original. It involves putting money into Treasury bills, money market funds, gold, silver, diamonds, real estate, as well as tering and stashing away a year's su of foodstuffs. The food is a hedge ag galloping food prices but—more im tant—against famine and hunger And heaven help the hungry marau who try to break into Ruff's cach rural Alamo, Calif. He has a gun t fend himself.

Sheer nonsense? The 200,000 pe who bought Ruff's first book, *Famin Survival in America* (published in 1 don't think so. Nor do the buyers o new book, *How to Prosper During the ing Bad Years*, which zoomed to nu five on *The New York Times* best-selle within a month of publication. And about the 5,000 devotees who flock the three-day *Ruff Times* annual con tion in February in Anaheim, Calif.

Economic paranoia is big busi these days (FORBES, *Mar. 19*) and p prophets like Ruff are cashing in. year Ruff's company earned a pr profit of $1.5 million. This year, he profits will be greater, what with ventures, such as a barter exchange tem, a board game called "Life Is R and a monthly tape recording espou Ruff thoughts, used by 361 subsc discussion groups in the U.S., Can Guam and Mexico.

A professional baritone who once on *The Ed Sullivan Show*, Ruff has be stockbroker and has hovered around fringes of the self-help game before head of an Evelyn Wood speed-rea franchise that failed and as a wholes of vitamins and diet supplements 1968 he was broke. Then he discov inflation. He began the newsletter years ago and found out what a business doomsaying can be. ■

Bill Miller stands firm

THING everybody agrees upon:
s are rising much faster than any-
would like them to. Beyond that
is Babel.
hen the country is bordering on stag-
n as it is now, no one would nor-
y expect the monetarists, followers
ilton Friedman, to argue for a tight-
g of the money supply. One would
ct neo-Keynesians, the people who
und President Carter, to argue
st letting interest rates rise, lest the
be hurt and overall demand exces-
y dampened. Both groups' policy
mmendations would be predictable.
t this time even that certainty is
d us. The Friedmanites are urging
ral Reserve Chairman G. William
r to ease up on the money supply.
neo-Keynesians are urging him to
en the screws even further.
nder why people are confused?
re's what is going on:
owth in the monetary base has slowed down to an annual rate of about 5.2% since October, well below the 9% average rate that has prevailed for years. That means, in monetarist terms, that money isn't being created fast enough to validate rising output and, therefore, production will shrink along the road. That's how monetarists reason. A group of the country's leading monetarists who meet as the "Shadow Open Market Committee" to second-guess the real FOMC has concluded that "further reductions in the annual growth rate of the money aggregates at this time—tightening—would be a mistake." They want to see expansion in the monetary base for the year ending August 1979 reduced to 8%. Prolonging the current slow growth rate will deepen the recession that is at hand, they believe.

Citibank's economics department, a bastion of monetarism, sees gross national product expansion halting by the fourth quarter with "a true monetary restriction in the making." Real growth would turn down in the fourth quarter *(see chart)* and continue on that course through the first half of 1980, according to Citibank's projection.

Meanwhile, back in the neo-Keynesian camp, attention has shifted from stimulating demand to cooling inflation.

Using the technique of leaks and press briefings, Blumenthal, Schultze and McIntyre have been putting steady pressure on Fed Chairman Miller to tighten the money supply further.

Tight money? What kind of *populism* is that? Ah, but intellectuals never lack reasons. The neo-Keynesians have a nice rationalization. If inflation is at 10%, they argue, a 12% nominal interest rate is only 2%—that's cheap money, not expensive borrowing.

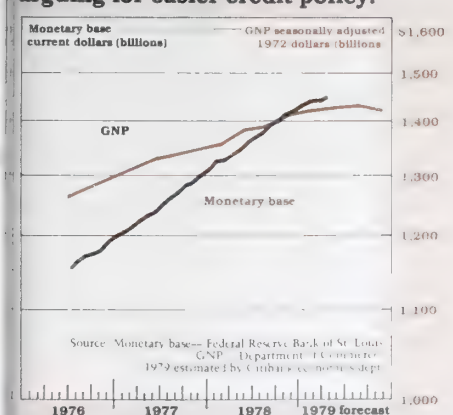
So, Chairman Miller is getting conflicting advice from economists of the two leading persuasions. But as a businessman rather than an ideologue, Miller is following his own counsel. His experience, his feel for business, tells him that the economy is starting to slow down. He understands that the Administration's economic people are asking him to rescue them from the results of their own folly. It was Congress and the White House, not the Fed, that made massive giveaways to the farmers, to Social Security recipients, to the steel industry, to low-paid workers in the form of a higher minimum wage—and who fueled inflation by running vast budget deficits when the economy was in high gear.

As an experienced businessman, Miller is resisting this pressure because he understands the current rate of interest is already pinching business hard; the theoreticians may rationalize about "real" versus "nominal" interest rates, but the fact is that interest has to be paid in actual dollars, not in inflation-adjusted dollars.

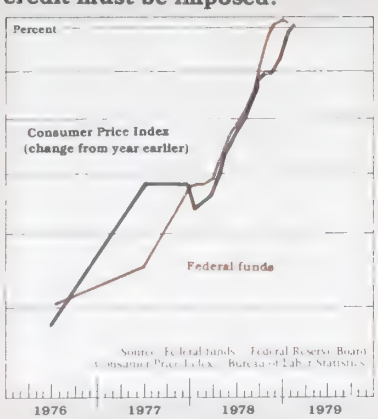
Miller has said many times that he is going to keep a steady but restraining hand on Fed policy and not be swayed by conflicting arguments and short-range movements. He clearly means it. The crescendo of demands that Miller "do something" will certainly mount. But expect interest rates neither to rise nor to drop sharply over the next few months but to come down gradually as the economy slows and inflation eases. ■

Role reversals

Monetarists, fearing that sluggish money growth will pull the country into recession, are now arguing for easier credit policy.



Fiscalists caution that to cool demand and slow inflation, higher interest rates and tighter credit must be imposed.



Beware of the sinkers and floaters. Perhaps the simplest thing is to put your money in long-term Treasury bonds.

PLAYING HIGH YIELDS

By Ben Weberman

SUPPOSE YOU WANT to lock in some of those juicy yields—9% and a big fraction—that are currently available on high-quality industrial bonds. What do you do? Simply go out and buy 20- or 30-year issues? It's not that simple. You may think that you've locked the yield up for decades only to find that bonds can be called away from you much sooner. Just when your 9.5% rate of return starts to look good in a market where new bonds are selling to yield, say, 8%, you are likely to receive a letter from the company saying they are paying off your particular bond. You will get your cash back and will have to reinvest at prevailing rates of 8% or so.

Today you receive 9.4% on 30-year Aa-rated Continental Oil 9⅜% debentures due in 2009 or 9.4% on A-quality General Mills 9⅜s due also in 2009 or 9.85% on Aaa-rated Ford Motor Credits due in 2004.

The trouble is that debt issues such as these have sinking fund requirements. A certain number of bonds must be retired every year prior to maturity in order to avoid the potential crisis of having to roll over a big issue maturing all at once, especially if the maturity coincides with a period of tight credit when long-term funds are not generally available.

The $200 million Continental Oil 30-year issue, for example, has a mandatory sinking fund of $10 million a year. That would retire most of the debt before maturity, for an average life of 20½ years. That's still not too bad, but there's a further hitch.

Investment bankers have been convincing issuers that high interest rates should not deter them from coming to market. A new "optional sinking fund" payment technique can be utilized to call bonds quickly if the borrower wishes. This sinking fund is for the protection of the *borrower*, not of the investor. What it does is permit the issuer to pay off double the mandatory amount, and possibly more, in any one year. For Continental, the sinking fund payment can be 250% of the required amount. That means that if interest rates fall low enough, Continental can use this feature to pay off bonds rapidly, bringing the average life down to 12 years instead of 20½.

The 9⅜% General Mills debentures have this same accelerated sinking fund feature, as do the $150 million J. Ray McDermott 9⅝s of 2004 and the $75 million Hershey Foods 9½s of 2009. If you buy any of these bonds you should be aware that you may end up with relatively short-term investments. And your capital gains potential may be limited accordingly.

A completely different choice is presented by the floating rate notes that so many banks are now issuing. They have a long-term maturity, extending out to 2004 in most cases. Where they differ from bonds is that the interest paid on the notes is reset every six months on the basis of a premium yield over the prevailing six-month Treasury bill.

The floating rate feature makes these 25-year obligations sell more like a six-month money instrument than a long-term credit. Investor appetite for them is seemingly insatiable. The first major offering of this type was a Citicorp note due in 2004 with the interest set at 1.05% over the bond equivalent of the six-month bill rate through 1984, then 1% through 1989 and thereafter 0.75% over the bill through maturity. Furthermore, for the first five years, the minimum rate is 7.5%, dropping to 7% for the next fi years and then to 6.5% for the r maining life. From plans to rai $200 million, Citicorp ultimate went up to $500 million.

Initially, the Citicorp floaters a paying 11.05% to April 30. With si month Treasury bills at 9.40% as th is written, the next six months' i turn should be in the 10.95% zor For the smaller investor, the Citico debt is available in $1,000 units whi the money market certificate mir mum is $10,000.

Because its yield is calculated eve six months and because most buye think of it as a money market instr ment, not as a long-term credit, tl note does sell above and below 10 Since it was first issued Jan. 31, tl Citicorp note has traded as high 100¾ and as low as 99⅜.

If you are considering buying tl Citicorp notes, remember that wh the bottom falls out of the mon market and interest rates decli sharply, you will find your paymen going down every six months, too.

One alternative—which is turnir out to be immensely popular—is variation that Continental Illino Corp., the Chicago bank holding cor pany, has devised. Its floating ra notes are of short maturity, comir due in 1987, but are convertib through May 1, 1986 into 8½% d bentures due in 2004. Initial pla called for marketing of $100 million these convertible, floating rate note Orders far in excess of that amou have been placed.

In return for this conversion priv lege, the rate on the floating notes wi be only 0.50% above the bond equi alent return on six-month Treasu bills rather than 1.05% as with th Citicorp issue.

The sacrifice in yield is the insu ance you pay for protection against sharp decline of interest rates, but r member, these debentures carry th usual options for extra payment c sinking funds. The average debentu may be redeemed long before 2004.

If you are confused by all this—an who wouldn't be—the simplest thin and maybe the best thing, is to pu your money in long-term Treasur bonds. These yield 9% and most a protected against redemption befo maturity. The remainder cannot b redeemed until five years prior to m turity. The yield may be a bit less tha with some of these other bonds bu the quality, the marketability and th call protection all are there. ■

Ben Weberman is economics editor of FORBES *magazine.*

Either they're charging too much or we're not charging enough.

The same kind of men who read Time, Newsweek and Sports Illustrated read Playboy. Only a lot more of them read Playboy.

You be the judge.

Just look at how many fewer men you reach for every dollar you spend when you advertise in Time, Newsweek or Sports Illustrated. And how many more men per dollar you reach in PLAYBOY.

To put it in real numbers, you reach 8 million men in Sports Illustrated, 9 million men in Newsweek, 10 million men in Time. And 14 million men in PLAYBOY.

To put it in real dollars, combined with real people, you reach 4 million fewer men for 22,525 more dollars in Time, 5 million fewer men for 4,295 more dollars in Newsweek, 6 million fewer men for just about the same dollars in Sports Illustrated.

Playboy men.
More of the best prospects than Time, Newsweek or Sports Illustrated.

But, some people may ask, aren't the men who read the newsweeklies better prospects than the men who read PLAYBOY? Aren't they better educated? Don't they hold better jobs? Don't they earn more money?

Four good questions. With four good answers. No, no, no and no.

What's your target market? How about college-educated men 25 to 49? There are 14 million such men in the country. 16% of these men read Sports Illustrated. 22% read Newsweek. 25% read Time. 31% read PLAYBOY.

How about business or corporate officers 25 to 49? There are 8 million such men in the country. 13% of these men read Sports Illustrated. 17% read Newsweek. 19% read Time. 23% read PLAYBOY.

How about men 25 to 49 with household incomes of more than $20,000 a year? There are 12 million such men in the country. 16% of these men read Sports Illustrated. 20% read Newsweek. 22% read Time. 28% read PLAYBOY.

Playboy men. More buyers for more products than Time, Newsweek or Sports Illustrated men.

But, some people may ask, don't the men who read those magazines buy more than PLAYBOY men?

Another good question. With another good answer. No.

PLAYBOY men buy 4 of every 10 pieces of stereo equipment men buy, 1 of every 3 imported cars men buy, 3 of every 10 bottles of scotch, gin, vodka, rum and wine men buy, 1 of every 3 expensive cameras men buy, $34 billion worth of life insurance last year alone.

PLAYBOY men buy more skis than Sports Illustrated men. PLAYBOY men buy more new cars than Newsweek men. More PLAYBOY men own stock than Time men.

And it's that way in virtually every product category and compared to every newsweekly, sportsweekly or men's magazine.

PLAYBOY men are—without question—one of the most powerful buying forces you can find in any one place, at any one time, anywhere.

Because PLAYBOY is one of the most powerful selling forces you can find anywhere.

Now, you tell us. Are they charging too much? Or are we charging too little?

Does this mean you should advertise in Playboy?

Yes. If you want to reach more of the best prospects for less money.

The Playboy reader. His lust is for life.

Cancer is often curable.

The fear of cancer is often fatal.

If you're afraid of cancer...you're not alone. But some people are so afraid that they won't go to the doctor when they suspect something's wrong.

They're afraid the doctor might "find something." This kind of fear can prevent them from discovering cancer in the early stages when it is most often curable.

These people run the risk of letting cancer scare them to death.

American Cancer Society

With oil said to be in short supply and oil prices at undreamed-of levels, it is surprising that investors have neglected coal.

A COMEBACK FOR COAL?

By Heinz H. Biel

ADMINISTRATION officials, especially guidelines czar Alfred E. Kahn, are understandably miffed by a 26% rise in fourth-quarter corporate profits. One has to concede that gains of such magnitude make it more difficult to talk labor and business into staying within the narrow limits of permissible wage and price increases. Nevertheless, just taking the naked figures as reported and calling corporate profits exorbitant and excessive would be misstating the facts.

It is generally agreed that such earnings tend to be overstated during a period of virulent inflation. Depreciation presently being charged would not be adequate to provide funds for replacing facilities that wear out or become obsolescent. There are good arguments for replacement cost accounting, which not only would give a more accurate picture of *true* profits, but also would save a lot of taxes.

In many instances, however, the effect on the bottom line might be devastating. It would make management appear in a bad light, infuriate stockholders and deter new investors. It's quite a dilemma, with no ready solution in sight. Nevertheless, there is no way to avoid the embarrassment caused by the unexpectedly steep rise in last year's fourth-quarter profits. While they are certainly not "too high" by any reasonable standard and bear no responsibility whatever for the prevailing high inflation rate, those profits do pose a difficult public relations problem for the Administration's regulators.

I also suspect that this year's first-quarter oil company profits will cause similar embarrassment. While it is possible that these good earnings may be due to favorable circumstances beyond their control, it will not be easy to avoid the impression of some hanky-panky in the oil business.

With oil said to be in short supply as a result of Iran's sharp production cutback, and with oil prices reaching undreamed-of levels, it is surprising that investors have neglected coal, the one energy source that is plentiful in this country. That is, they neglected it until the incident at Harrisburg cast a cloud over the future of nuclear power. The negatives of coal are strong. Coal mining is capital intensive as well as labor intensive. The labor situation is so miserable—a 111-day strike last year and an incredible number of "wildcat" strikes in 1977—that investors have not been overly anxious to put vast amounts of needed capital into this industry. Besides, there are price uncertainties as well as never-ending problems and delays because of ecological considerations.

Yet, if we can't get enough oil and have qualms about nuclear energy, we will have no choice but to fall back on coal. I expect coal profits to perk up before long. Such major companies as *AMAX* (54) and *Continental Oil* (34), not to mention *Occidental Petroleum* (21), all of whose profits were adversely affected by their coal divisions last year, should be beneficiaries this year. The first two are desirable holdings, but Oxy is a bit too unpredictable for my taste.

Now that *Diamond Shamrock* (22) has swallowed Falcon Seaboard at what would seem to be a rather hefty price, there are not many fair-size independent coal producers left. Because their 1978 and 1977 results were distorted by the effect of strikes, stocks like *Pittston, Eastern Gas & Fuel* and *Westmoreland Coal* seem grossly overpriced in relation to recent earnings. However, given a fair degree of

Heinz H. Biel is a vice president of the NYSE firm of Janney Montgomery Scott.

abor peace, as well as firm prices, a eturn to the much more satisfactory rofit levels of the 1975-76 period is a istinct possibility. These stocks, as ell as *North American Coal*, whose rofits held up remarkably well last ear, have speculative attraction.

I have not mentioned *Emhart Corp.* 35) for well over a year. This should ot be taken as an indication of di-inished affection. The company has ved up to all reasonable expecta-ons. Of course, it would have been mart to have sold the stock at last mmer's high of 45 and repurchased at this year's low of 33, but if it was ought for investment, I can see no ason for regrets.

There appears to be no question out Emhart's continuing progress at pace that is comfortably above the % to 10% inflation push. With its ar-end backlog at $409 million, me 29% higher than the year be-re, a good gain in sales seems as-red. It is a little early to make more an tentative earnings projections r this year, but a range of $6.50 to ssibly as much as $7 does not seem reasonable.

Being in healthy financial condi-on, Emhart can afford to be liberal ith its shareholders. Therefore, if rnings develop in line with my ex-ctations, the present $2.20 dividend te may be lifted once again before e end of this year. Since 1972 per-are earnings more than tripled; the vidend rate did almost as well. Can yone say that this stock, selling at a ultiple of six and yielding more than % is not fairly priced?

I have also not mentioned *Aetna Life Casualty* (45) for some time. The ock proved to be a satisfactory in-stment since I first wrote about it this column (FORBES, *July 1, 1977*), t payoff time may be near. Last ar's earnings were spectacular at .58 a share, up from $7.76 in 1977 d $3.91 the year before. Dividends ve been raised apace. No wonder e stock rose to an alltime high, and 3-for-2 split is imminent. You uldn't ask for more. Or could you? It ems to me that all the good news we e likely to hear for quite a while is t. Earnings are at a cyclical peak d will probably be flat this year. It is ue that this high-quality stock is lling at an extremely modest multi-e of barely five times earnings, but ar-term prospects are not likely to mulate speculative enthusiasm. In y book Aetna is a solid *hold*, but no nger a strong *buy*. ■

INVESTORS

Are you unhappy with the way your account has been handled?

We are a strong, highly professional, research-oriented brokerage firm; we have all been principals at larger firms. We do our own research, and we believe that opportunity generally lies in discovering stocks that are little known or misunderstood — often before they fit the screens of major institutions — and then holding onto them so long as the fundamentals are intact.

We don't play fads. We rarely buy stocks where we don't know the management. We stay very close to the stocks we like. We are reasonably patient. The enemies of investment performance in our view are greed, fear, and inadequate research.

If you're interested in experienced and attentive money management by principals of our firm, please write or call:

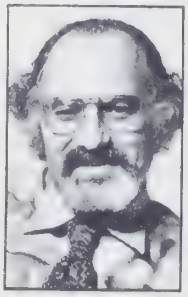
Over $4 billion of assets under management

When the banks are selling stocks to buy objets d'art for their clientele, you know the bottom of the market cycle is close at hand.

LOVE ME, BUY ME OUT

By Martin T. Sosnoff



A VENERABLE trust company brags about committing 20% of its clients' assets to material goods—to Oriental carpets, Civil War coinage, weather vanes, all in mint condition, of course. I read the full-page ad Sunday morning and flashed back to an old ploy for a rainy day in the threadbare Forties. If you were a poor Manhattanite, you didn't take Orientals to Parke-Bernet for auctioning, but hauled your banjo down to the hock shop on Third Avenue under the El, and it was good for a sawbuck. A musician friend of mine stored ten banjos in his closet, the equivalent of a hundred-dollar cash reserve, and we all breathed easy for knowing it was there when it was time to pass the hat.

The flight into worldly goods is overdone today. A warehouse of silk Kashan carpets gathers dust, not interest. If you guess wrong, prices can drop 20% at auction year to year. At the last auction I attended, prices averaged below the presale estimates, a leading indicator of toppiness.

By now, everyone knows the institutional investor has spent the last ten years paying for his craziness of the late Sixties. Very little new money has gone into stocks in the past few years, and equity ratios of 75%, common as late as 1972, are history. The new conservatism finds billion-dollar asset pools hovering in the low 50s, a function of asset value shrinkage and cash flow earmarked for fixed-income securities. Whereas nobody blinked when they fought over growth stocks at five to ten times book value, today nobody cares that entire industries sell at 60% of book value or even less on a replacement cost basis.

I have written recently about the savings and loan industry, and we hit pay dirt. The entire market sells at a sharp discount to replacement costs. Instead of warehousing fine Persian rugs, we should be squirreling away stocks. Equities are the new material goods. Paper assets now are cheaper than real assets in a world where the inflation neurosis has permeated the psyches of not just the very rich but you and me, too. When the banks are selling stocks to buy objets d'art for their clientele, you know the bottom of the market cycle is close at hand.

Who are the real money managers? A delicate question worth reflection. The professionals spent ten years painting themselves into a corner for their reckless disdain of value. Now, when stocks *are* cheap, there are few buyers left. I just read two 40-page studies that prove conclusively there is no cash flow available for the market. Foreign investors still fear the dollar's demise, and the pension funds won't increase equity exposure because of their poor past performance. Individuals ditto, and mutual funds have no incremental green stuff—it is all going to the money market fund operators. Stocks can't go up when prime bonds yield almost 10% and the new-issue junk is pegged at 13%.

But, there is a new breed of money manager padding through the bush and nobody has focused on his hunting prowess. He is none other than the faceless corporate executive with excess cash flow from operations or a business such as insurance underwriting, which throws off enormous amounts of cash earmarked for securities investment. In the old days, much of this capital was earmarked for municipal bonds or for a diversified portfolio of bonds and equities. No more. An enormous crap game started when Henry Singleton of Teledyne tapp the investment portfolios of his insu ance subsidiaries and bought 20% more of a handful of sizable entiti such as Litton, Walter Kidde, Broc way Glass, *et al*. If you own 20% more of something these days, yo consolidate your share of earnin even if you never see the money the form of upstreamed dividend Rising earnings with a story crea higher stock prices.

Sometimes the corporate buyer welcomed by the incumbent ar sometimes he is spurned. A 20 ownership eventually can lead to takeover at a reasonable price or it ca culminate in the discomfiture of cold bedpartner's buying his way o of white slavery. The initial impul to buy real assets at a discount rin so true.

The discovery of this new corpora game, "love me or buy me out," so f has led to nothing but profits for th aggressor. Lomas & Nettleton tak out Reliance Group rather than pu Saul Steinberg on its board. Gibralt Financial tried unsuccessfully to kee Kemper and Reliance from buying u 25% of its equity. Gibraltar's stoc moves to a premium price/earning ratio. Ticor moves to thwart a tak over by American General Insuranc and finds a sweetheart merger partn in Pennsylvania Life; then Souther Pacific comes along and tops the bi Add 100% to the market value of T cor. Reliance Group, Kemper, Kidd American General, *et al* file handsfu of 13Ds on a variety of enterprises- banks, savings and loans, whateve Concentration of investment asse below book value rather than divers fication at a premium is the them Employing such brutal leverage lea to *quid pro quos* and finally profits mergers. How much better than r maining a silent investor with a dive sified portfolio. Silent investors ar silent losers.

Money managers are bound to pic up this ploy. Why shouldn't we a take positions of 5% or more in th capitalization of undervalued and ur derowned properties? Why be a silen investor in General Electric an American Telephone? All you get is box lunch at their annual meeting an a chance to ask one question that yo already know the answer to. If yo own 5% or more of a medium-siz company you can walk into the pres dent's office, take off your shoe an pound on his desk. He has to listen. coherent dividend policy takes shap

Martin T. Sosnoff is chairman of Atalanta Capital Corp., New York, and the author of Humble on Wall Street.

here are stock splits; acquisitions for anagement's aggrandizement are lashed. Otherwise, concentrated oldings find their way into unfriend- hands and the ins are turned out.

The new wave of concentrated in- stment has very bullish overtones r the market. Entire industries find much higher level of valuation based n their eventual envelopment by or liverance from the insatiable Mi- ses. Savings and loans, title insur- ce, oil and gas plays, life insurance, en airlines are in. The list will wid- n before long to include all the natu- l resources and basic industries such the metals, which sell well below ok value and replacement cost. A stinguishing characteristic of the esent markets is that money con- nues to flow out of heavily owned stitutional stocks.

I anticipate the next question: How n one play the music sheet while ome burns? The news is all bad. ho is to say when the Federal Re- rve Board's policy of gradualism will ol things off? So far, it is a disgrace- l failure. Nobody believes inflation ill subside. The consumer buying nic goes on and the corporate sector edgy. Raw materials prices are scary d a riotous materials inventory nge comparable to that of 1974 could velop industry. The smartest thing e Fed has done in the past year is its cent capping of the six-month sav- gs certificate. The action came three six months before expected, clearly gnifying housing as the sacrificial mb this cycle. It could cool things off, t don't count on it. If it doesn't ork, the hard-liners on interest rates ill be right and as investments, ocks can't compete with prime nds at 10½%—9¾% is bad enough.

In short, until the economy cools f, this is a market for speculating on keovers or undervalued industries, t for investing for the long pull in iciently priced, institutionally held ocks. The corporate manager has arned this game of buying assets on e cheap; the professional investor ts on the fence, scared silly and go- g nowhere with his blue chip stocks udently diversified—just as the ok says.

The speculators, like the King Mi- s crazies, sometimes die in rags but few of them may also end up sur- unded by eight-zero domains. The eculator at least has a chance of nproving his capital position. In in- tionary times like these, to be pru- nt is to be a sure loser. ■

My data strongly suggest that, for all the differences between then and now, we are indeed back to 1966.

WILL HISTORY REPEAT?

By Srully Blotnick

SOMETHING fascinating has been happening to the sample of 1,100 investors that I follow. Over the last 12 months there has been a dramatic increase in the quantity of capital they have available for investment. Why is that? And where did the money come from?

To begin with, investment capital first forms in your mind, not in your bank account. Most of the investors I study had let $10,000 to $95,000 spend many years sitting in ordinary savings accounts. When I asked them what the money was for, they replied: "It's for a rainy day."

When interest rates soared in the past, only a small percentage rushed to find a way to make more on their "rainy-day money." Only 24% did in 1970, while 27% did in 1974. That the rate of inflation was higher than the interest rate they were collecting bothered them, but not enough to do much about it. It was rainy-day money. Having it was what counted. It was investors with large sums, in or near major cities, who most actively sought higher rates of return.

Over the last year a drastic change has occurred: The introduction of high-yielding certificates of deposit pegged to Treasury bill rates caused a radical revision in the way my investors view their rainy-day money. Previously dormant, the money has slowly but surely become *activated.*

"It is not investment capital," 74% of my sample told me in February 1978. "It is there for an emergency." But when I asked the same question in early April of *this* year I got a quit different answer: 81% had reclassifie their rainy-day money into "invest ment money."

At first glance that may not seem very meaningful shift. But unless miss my guess, it will prove to be fact of enormous importance. A pow erful financial force is shaping up, on that I believe will be responsible fo determining the direction of stoc prices over the next three years.

Here's why I think this conceptua change is so important:

Stocks are cheap only if there i money waiting to buy them. The fac that the public is sitting on a lot o idle cash—as it is—does *not* mean th public is ready and willing to buy. Th money must first come to be seen b its owners as investment capita That is precisely what my data ind cate is now happening.

The way it works is this: If yo were given $100 a day, every day, an it was money you didn't need, whe would you feel you had enough t invest? The average answer given b the investors I track was approx mately $3,600. Each person had threshold value, a point beyon which he suddenly said, "Now I hav enough to go ahead." Not every su plus dollar people have do they vie as investment capital. Yet, beyond certain point, that's what all of may become. As one put it, ' wouldn't invest $2,900, but $3,000 o more, I would."

Two factors are currently respons ble for raising or lowering that thresh old. The first, a pulling force, is exer ed by the availability of high-yieldin CDs. The second, a pushing force, the high rate of inflation, whic means that there is a significant op portunity cost attached to just lettin your money sit in a savings account

As we've said, the pushing forc was *not* sufficient in the past to mak more than approximately one-fourt of the investors I study move. But th

Dr. Srully Blotnick is a practicing psychologist and author of the new book, Winning: The Psychology of Successful Investing.

combined push-pull effect of the two has indeed been strong enough to cause tens of billions of dollars to currently become activated—that is, reclassified in its owners' minds as investment capital.

The last time a shift of this magnitude occurred in the way people view their money was in the period from January 1961 to October 1966. (Six years instead of one: Financial events ripple through the investment world far more quickly now.)

The pull during that six-year span was because of the increasingly high yields on T-bills (nearly 6%!) and the spread of a growing number of exciting stories of easy profits to be made on stocks. People reclassified themselves as investors and their rainy-day money as investment capital. Having activated their money, they used it to attack once no recession appeared. The average of $8,400 they had in their savings and checking accounts went chasing after Amex, o-t-c and especially new issues. In 1967-68 the market, as measured by the Dow Jones industrials, came close to doubling and many stocks did a great deal more than double.

Fueled by the massive influx of new investment money, the market for those smaller stocks soared. As it rose, so did the expectations of the people playing the market. By late 1968 the average of my sample expected to double his money in about nine months, the highest level of expectations I have recorded in 17 years. By contrast, at the 1970 low the average of my investors expected 2.3% per annum.)

Are we headed for a repeat of the frenzied investment atmosphere of 1967-68? My data strongly suggest that, for all the differences between then and now, we are indeed back to 1966 in terms of investor sentiment. In short, unless the recession everyone is predicting turns out to be a depression (in which case some of the now-activated billions will be needed to buy food and pay the rent), the money will do now what it did then—move from activated to attack status and pour into stocks.

When that happens, the excitement will spill over from the gold and gambling stocks into a whole range of speculative equities. That day may not be far off. The rainy-day money has already become investment capital. The next transformation—of investment capital into speculative money—is only a question of time. ■

It is very clear that farmers saw the high prices cattlemen were getting and decided they wanted to join the parade.

HOG PRICES HIT IN THE CHOPS

By Stanley W. Angrist

JUST WHEN you started to believe that inflation would force you to give up eating meat, along comes the U.S. Department of Agriculture March Hogs & Pigs Report. It has to be some of the most pleasant reading since Richard Smith's *The Dieter's Guide to Weight Loss During Sex*. It was crammed full of good news for everybody except hogs and hog farmers. Well, you can't please everybody.

The report caught the market by surprise for a number of reasons. First, it reported that the number of market hogs had increased 11.7% over last year. More importantly, the number of hogs kept for breeding is up 20.1%. This report confirms what few in the trade had suspected: Hog farmers are expanding their production massively. It also suggests that hogs that should have been marketed during the December-to-February period were withheld for breeding.

The weight breakdown *(see table)* also suggests market hogs on farms ready for slaughter in the April-through-June period should increase by at least 8%, perhaps by 10%. (This figure is deduced by examining the percentage increase in the heavier hogs listed in the table.) The breeding herd and farrowing intentions showed a greater year-to-year increase than the market hog inventory. ("Farrowing" is the term farmers use to describe the act of giving birth for hogs. "Farrowing intentions" is an indication of the amount of breeding that farmers intend for their hogs.) It is very clear that hog farmers saw the high prices cattlemen were getting for their animals and decided they wanted to join the parade. (Their zeal to increase the size of their crop will have the usual effect: It will produce rain on their parade in the form of lower prices.)

The "intentions" listed for the March-to-May and June-to-August periods are perhaps the most interesting numbers in the report. The March-to-May farrowing intentions are up 24% while those of the June-to-August period are up 19%. Those numbers can only be interpreted to mean a lot more hogs are on the way. That parade of hogs should keep pork prices stable, and (with a little bit of luck) perhaps even lower this summer.

A number of analysts have been intrigued by the unusually wide margin that cattle now commands over hogs. Indeed, the premium has reached as high as 25 cents per pound in recent weeks. There is a great temptation to view such a spread as money in the bank and, therefore, to buy the hogs and sell the cattle. Admittedly, compared with recent years, this is a very large premium for cattle over hogs. But as Merrill Lynch points out in a recent analysis, this premium should be compared with periods in which grain supplies were ample and the cattle herd was not being liquidated, such as in 1970, 1971 and 1972. During portions of 1971, hogs sold at less than 50% of cattle. For all of 1971 cash hogs averaged 57% of live steer prices. (The current ratio, using the June contracts, is around 68%.) Thus hog prices (varying between 60% and 70% of live steer prices) are not out of line, and doing a hogs/cattle spread is not a particularly risk-free trade.

The high price of beef will, I believe, encourage the trend toward increased pork and chicken consumption at the expense of beef. For the U.S., per capita consumption in 1977 was: beef 125.7 pounds; pork, 61.8 pounds; and chicken (primarily broilers), 41.1 pounds. In comparison with 1976, per capita pork consumption was up 3.6%, chicken was up 1.9%, while beef consumption was down 2.8%.

If cattle versus hogs seems too risky at this time, what methods are available to capture profits from this increased supply of pork? The most obvious one is simply to go short the live hog contract. I would use the August option and I would not risk more than 1½ cents ($450) on any contract.

A more reasonable strategy, it seems to me, would be to use a spread of long June/short August. I would try to put this spread on with August no more than 200 points under June. I would risk no more than 70 points ($210 per spread) from my entry point. I believe that the spread could easily go out to 400 points premium June for a $600 profit per spread, giving a reward-to-risk ratio of 3-to-1. The margin on a short position in hogs is $1,000 while a spread requires a margin of $500. Spread commissions are about $60. ■

Stanley W. Angrist is a professor at Carnegie-Mellon University, and the author of Sensible Speculating in Commodities.

The Mar. 1 Hogs & Pigs Report

More hogs are on the way, which should provide some restraint on rising beef prices.

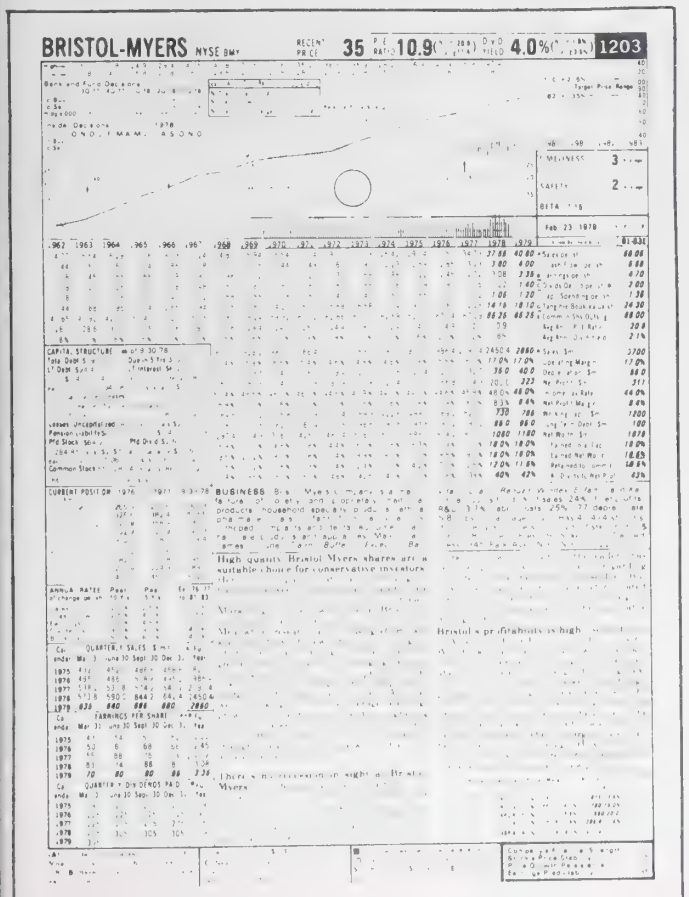
We make this special offer because we've found that **a high percentage of new subscribers who try Value Line stay with us on a long-term basis.** The increased circulation enables us to keep our subscription fees to long-term subscribers lower than would otherwise be possible.

Under the special trial offer you will receive the 2400-page Investors Reference Service (illustrated above) at no extra cost. You'll receive all the new full-page reports to be issued in the next 9 weeks on the more than 1700 stocks and 91 industries regularly monitored by The Value Line Investment Survey. **Filing takes less than a minute a week. All this material is so organized in your binder that you can quickly turn to a continually updated report on almost any leading stock.**

This is a sample full-page report of one of the 1700 stocks regularly reviewed by Value Line, reduced from 8½ x 11"



BRISTOL-MYERS NYSE BMY

Thus you'll find it convenient to have The Investors Reference Service at your fingertips whenever you need facts and figures, as well as Value Line's projected performance ratings on more than 1700 widely held stocks in 91 industries.

In the **Selection & Opinion** section, which accompanies your weekly reports, you'll also get analyses and forecasts of the national economy and the stock market . . . guidance on current investment policy explaining Value Line's bullish long-term position on the securities markets . . . plus Value Line's specific stock selections.

Take advantage of this special introductory offer—and receive, as bonuses without extra charge, the 2400-page Investors Reference Service and the "Evaluating Common Stocks" booklet, which explains how even inexperienced **investors can apply thousands of hours of professional research to their own portfolios by focusing on only two unequivocal ratings, one for Timeliness (Performance in next 12 months), the other for Safety.**

This subscription is tax-deductible if utilized to aid in the management of your investments.

If economic policy shifts dramatically, there is no reason why the Dow couldn't reach 1500, sometime in the 1980s.

MICKEY MOUSE SYNDROME

By Richard B. Hoey

WHY HAVEN'T stock prices dropped sharply in the last several months as inflation has been exploding? For one thing, corporate profits have been strong. But a more important reason is that credit has been relatively easy. An inflow of foreign liquidity has eased credit in the U.S. money markets since January, and the Federal Reserve has done nothing to sop it up. In addition, the existence of huge cash reserves in the stock portfolios of institutions has bolstered market sentiment.

I'm convinced that foreign exchange flows have a powerful impact on the U.S. stock market. In October 1978 currency investors were selling dollars aggressively. This drained liquidity out of the U.S. credit markets and helped drive the stock market down. The recovery of the dollar in November and December did little to help the stock market because the currency's rebound seemed very hesitant. Only heavy central bank intervention ensured a rising dollar; currency investors continued to fear high U.S. inflation.

But by early January, the dimensions of the OPEC oil problem became obvious. The foreign exchange markets shifted their attention from inflation to energy supply. Energy-rich countries saw upward pressure on their currencies, while the currencies of energy-poor countries declined. Thus, the dollar and the pound rose while the yen sank.

Because of the energy situation, funds flowed into the dollar in early 1979. These new buyers of dollars bid aggressively for CDs, driving down interest rates on short-term paper. As often occurs, ease in the credit markets was accompanied by an upward bias in stock prices.

I fear, however, that the stock market is now vulnerable either to renewed dollar weakness or to a Federal Reserve decision to restrict credit.

The behavior of the dollar is keyed to U.S. energy and economic policy. Controls on U.S. oil prices have stimulated U.S. oil consumption and imports, worsening our balance-of-trade deficit. As a result, the nation has been going deeper into debt to Arab sheikhs every year in order to feed our appetite for oil. Our fuel import bill rose from $8 billion in 1973 to $43 billion last year and could hit $65 billion to $70 billion by 1981.

The overall outlook for the dollar and the stock market for the next year, and the next decade, therefore, is keyed to economic policy and energy policy. Terrible economic and energy policy has become a bipartisan tradition in the U.S. Democrats and Republicans have taken turns in mortgaging the future by shortsighted policies. That's why the stock market has been flat for the past decade despite sharp increases in earnings and dividends.

If we persist in such shortsighted policies, the stock market might be flat for another decade. But if economic policy shifts dramatically, there is no reason why the Dow Jones industrial average couldn't reach 1500 sometime in the 1980s.

The crucial policy question is whether the government will shift from its disastrous policy of stimulating demand to encouraging the growth of supply by incentives to capital spending. We need both direct incentives for capital spending and incentives for investing in common stocks. When stock prices are low, companies can expand easily by buying other companies, rather than building new plants. Higher stock prices push them toward new capital spending.

America has begun to take on certain of the characteristics of a banana republic. In those countries, savings are hoarded rather than invested in productive enterprises. There's nothing immoral about putting your savings in diamonds, gold or antique Mickey Mouse watches. But when a whole society develops inflation hedge psychology, the growth of productive capacity slows down; that's the curse of Latin America. The tax laws must be changed to make financial saving and stock ownership more rewarding than hoarding tangible assets. Providing funds for expansion of productive capacity is somewhat more valuable to society than feeding an inflation in the price of Mickey Mouse watches or stimulating gold production in South Africa. Lower capital gains taxes are only a first step in the right direction. Taxes on investment income should be indexed so that only gains in excess of the rate of inflation are taxed. That would stimulate the growth of U.S. productive capacity.

While you're waiting for reform of the economic system, there are still some good values in the stock market. My favorites include a number of stocks selling at four to five times next year's estimated earnings. I list some of those favorites in the accompanying table. Any of these stocks are vulnerable to a market decline, but each one of them has the potential to move significantly higher over the next several years. But watch the dollar like a hawk—another crisis would be a clear signal to sell stocks. ■

Richard B. Hoey is a vice president and investment strategist at Bache Halsey Stuart Shields.

Good value

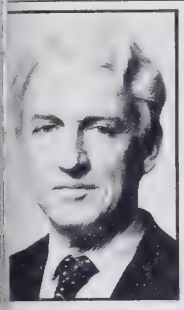
While you're waiting for Dow 1500 the stocks listed below offer good opportunities to play the market.

Company	Current price	Estimated EPS 1979	1980
Western Bancorp	26	$5.30	$6.1
ITT	29	5.30	6.1
Security Pacific	28	5.85	6.6
Coastal States Gas	22	3.85	4.4
Flagship Banks	12	2.20	2.8
Kaufman & Broad	9	1.70	1.9
Moore McCormack	34	7.00	8.0
Ponderosa	19	3.75	4.4
American Greetings	12	1.90	2.1
Chessie System	30	5.50	6.0
Lone Star	23	4.50	4.5
Norfolk & Western	24	4.50	5.6
Pennzoil	37	6.00	6.0

Growth stocks, selling near their alltime low premiums, are still the place to be.

ANOTHER LOOK AT GROWTH

By John Train



IN THE LAST YEAR and a half I have recommended the purchase of specific growth stocks on six occasions, and have recommended no sales. IBM was recommended on five of the six occasions and Schlumberger on four of them. No other stock was mentioned more than twice. Taking median prices, IBM has advanced from about 240 to 320, or one-third, and Schlumberger from about 95 to 105, or two-thirds.

I find that in all I recommended 21 stocks (too many, perhaps), all of top quality. Eighteen are up, one is slightly down, and two are unchanged. If you had bought one share of all 21, you would have paid about $990. The lot would now be worth about $1,220, or a gain of a bit over 23%.

More recently I did a whole column on De Beers, the only issue so singled out, but which I wouldn't call a growth stock. It's also up about 23%.

I think that the safest approach is to continue with the same philosophy for the time being. The stocks have advanced, sure, but their earnings have grown too, so the multiples haven't risen much. Growth stocks are still selling at close to their alltime low premiums compared with the general market. They are still the place to be. I mean, of course, growth stocks that really are growing and that aren't selling for excessive prices. Many excellent stocks are selling at multiples below their own earnings growth rates. Most "official" growth stocks are "old champs": Their growth is slowing but their prices are high because of their visibility. One should be a bit more original than simply to buy stocks on the basis of past reputation.

For the average FORBES reader there is more difficulty and risk than reward in buying lower-quality issues—companies with uncertain long-term prospects. Leave that to the pros. Stick to companies with long, steady growth rates, excellent business franchises, sustained high profit margins (net of realistic depreciation) and strong balance sheets. Above all, buy enterprises that are making their money in *cash*, not taxable accounting "profits" on which the company pays tax but which don't find their way to the bank. Look carefully at the "Sources and Use of Funds" statements in the annual reports you will be receiving.

De Beers ADRs

A number of readers have asked how one calculates the yield on De Beers ADRs. It's anything but simple.

Foreign investors buy South African securities in terms of the Financial Rand (formerly the Securities Rand), whose quotation fluctuates according to supply and demand, and is currently around 80 cents. But dividends are repatriated at the Commercial Rand (formerly the Free Rand) rate, now floating around U.S. $1.18. That means you buy the stock with cheap currency but get dividends in more valuable currency. (Principal is repatriated at the Financial Rand rate at the time of repatriation.)

U.S. investors can credit South Africa's 15% withholding tax against their U.S. taxes by filing Internal Revenue Service Form 1116.

U.S. reporting services often quote yield figures for De Beers ADRs that may confuse investors for three reasons: 1) They reflect the date the stock goes ex-dividend, not the date when declared or the date when paid; 2) they ignore the value to the investor of the tax credit; 3) they tend to round figures downward, for conservatism.

De Beers pays two dividends a year. The 51-cent "1978" dividend figure on my stock quotation machine, for instance, was calculated as follows:

U.S. $0.403	Final payment for 1977 (declared first week in March 1978; stock ex-dividend last week in March; paid in May)
+0.23	First payment for 1978 (declared first week in September; ex-dividend last week in September; paid in November)
$0.633	
x .85	Deduct 15% South African withholding tax
$0.538	
– .02	ADR fees (1 cent per payment)
$0.518	Yield before rounding down
$0.51	Rounded-down yield figure

It is logical for the services to ignore the tax credit, since the yield is a cash matter, and they can't go into one's tax situation; the taxpaying investor, however, should understand it.

Here's an illustration of its effect.

De Beers has announced that its final payment for 1978 will be Rand 45 cents, or about U.S. 53 cents at the current Commercial Rand rate. The true aftertax yield works out as follows, assuming the investor is in a 50% (U.S.) tax bracket:

U.S. $0.23	First payment for 1978 (R .20), paid in November 1978.
+0.53	Final payment for 1978 (R .45), paid in May 1978
$0.76	
x .85	Deduct 15% South African withholding tax ($0.114)
$0.646	
– .02	ADR fees (1 cent per payment)
$0.626	Correct yield figure
x .50	Deduct 50% U.S. tax
$0.313	
+0.114	U.S. tax credit equal to $0.114 South African tax withheld
$0.427	Net return

A 50% bracket investor thus receives 43 cents per ADR selling for 6½, or a 6.57% aftertax yield.

An investor who pays no tax receives .626 cents on each ADR, or a yield of 9.54%.

These yields are lower than those cited in my column, since the stock has appreciated substantially since then. It's still attractive. ■

Chief executives spend more time than subordinates realize in studying qualifications and watching such men as deserve promotion.
WILLIAM FEATHER

The recipe for perpetual ignorance is: to be satisfied with your opinions and content with your knowledge.
ELBERT HUBBARD

Do not try to entrap others with your haughty knowledge. To your wide surprise, they will entrap you with their lengthy ignorance.
SRI CHINMOY

You do ill if you praise, but worse if you censure, what you do not rightly understand.
LEONARDO DA VINCI

Success often comes from not knowing your limitations.
FRANK TYGER

You've no idea what a poor opinion I have of myself—and how little I deserve it.
WILLIAM S. GILBERT

I love criticism just so long as it is unqualified praise.
NOEL COWARD

When the king retires at night his crown rests on a nail fastened to the wall. Why, on a nail, which is nothing but a common object? Why not on a minister's head? Because the minister might take himself seriously and believe he is the king. No such danger with a nai
ELIE WIESEL

Presumption is our natural and original malady. When I play with my cat, who knows if I am not a pastime to her more than she is to me.
MICHEL DE MONTAIGNE

Farrah smiled. Jimmy grinned.

And America celebrated its 200th birthday. Gathering the strength and resources to meet the challenge of tomorrow. While renewed vigor and vitality lit the nation, Avco helped lead the way into a new era of confidence.

Confidence for the millions who fly in airliners, helicopters, and executive aircraft powered by piston and gas turbine engines from Avco Lycoming.

Confidence for people in five nations, whose lives are a little easier with loans from Avco Financial Services.

Confidence for Paul Revere life insurance policyholders in all fifty states and Canada. And for thousands living in Avco Community Developers' award winning residential communities.

Confidence for fifty years. From consumer loans and insurance protection to research and manufacturing. Where Avco leads, confidence follows.

Today, consumer loans from Avco Financial Services help make higher education possible.

AVCO CORPORATION

Where Avco leads, confidence follows.

Raytheon invented this new way to pop corn.

Our microwave popcorn popper is new. It's one of the latest accessories developed by Raytheon engineers to help Amana Radarange® microwave oven users enjoy microwave cooking to the fullest.

But, there's an interesting story behind our new popcorn popper. Because, in a way, we've now come full circle with our involvement in microwave cooking.

Back in 1945, in a Raytheon plant on the outskirts of Boston, an inquisitive, self-taught genius named Percy Spencer made a remarkable discovery. When popcorn was placed in a field of microwave energy, it popped! And microwave cooking was born.

A billion dollar baby.

The first Radarange microwave ovens were fo commercial and institutional use, a market pioneered and developed by Raytheon.

Then, in the mid-60's, Amana joined Rayth The resulting combination of technical skill a appliance know-how set the stage for a break- through in home cooking, and in 1967 Amana introduced the first 115-volt countertop micro oven for home use.

4096

l years ago.

The rest, as they say, is history. Today, the rket for microwave ovens exceeds $1 billion a r. And Amana continues as a solid leader in industry.

But Raytheon's appliance business is much re than microwave cooking. From Amana—ctric ranges and cooktops; energy-saving rigerators, freezers, and air conditioners. From loric—another Raytheon company—gas and ctric ranges, plus the revolutionary new com-ation microwave-electric MF range. Together, y make Raytheon one of the country's larger major appliance manufacturers.

Major appliances—one of five basic business areas at Raytheon. The others are electronics, energy services, heavy construction equipment, and educational publishing. For copies of our latest financial reports, please write Raytheon Company, Public Relations, 141 Spring Street, Lexington, Massachusetts 02173.

RAYTHEON

RCA launches television's first 4-hour video cassette recorder.

When television becomes more versatile, it's only natural to find RCA right there.

The SelectaVision video cassette recorder is the first video cassette recorder with a 4-hour capacity on a single cassette.

Viewers can tape any program off the air, replay it at their own convenience – and use the same cassette again and again for additional recording. They can record from one channel while viewing another. A built-in timer makes it possible to tape up to 4 hours automatically while everyone is asleep or away. There is even a black & white camera option that enables anyone to shoot a home-grown television special.

RCA is marketing this exciting new consumer product at a highly attractive optional retail price – and with heavy promotional and advertising support. The goal: to carve out a significant share of what promises to be a billion-dollar market.

From home entertainment products to Coronet floor coverings, from Hertz rental cars to weather satellites, RCA is dedicated to innovation, quality and steady growth. © 1977 RCA Corporation

The many worlds of RCA
